Taking another item which is still cheaper, the foreign value is 35 cents each. The landing cost is 4 cents. The specific duty is 20 cents, and the ad valorem duty is equivalent to 16 cents. Allowing a profit to the importer of 20 per cent would be 15 cents, and that would make a total of 90 cents, and the domestic cost is $1.66.

The rate required to equalize the first of these would have been 129 per cent. The actual rate given, including the 20 cents each and the 45 per cent ad valorem, is equivalent to 95 per cent. In the case of the second of these it would require 152 per cent to equalize the foreign selling price, with profits, with the American selling price.

The Senator has spoken several times of the fact that these foreign prices are liable to increase; but I call attention to the fact that while according to the figures in the Reynolds report the landed cost without duty last August was 35 cents each, when the same article was landed in April, 1922, it was only 20 cents each; so if we were to make the ad valorem duty measure up to the present requirements, we would have to add 40 per cent to our 95, and make an equivalent duty of 135 per cent.

I bring these facts into the RECORD for the purpose of showing, first, that the compound duties and the equivalent ad valorem are far from what would be required if the prices should be continued either as indicated in the Reynolds report or as indicated in the last importations. We have discounted that condition enormously, and I think the rates are certainly none too high.

Mr. JONES of New Mexico. Mr. President, I do not care to repeat what has been said regarding other items dealt with precisely as the Senator from North Dakota has dealt with this item. I have produced evidence here as to the conditions in Germany which are directly opposed to the inference which the Senator would have us draw from the facts which he has stated. There is no evidence here as to why those increases have been made. There is no evidence as to the value of the German mark when the first transaction occurred, and none as to that value when the second occurred. Unquestionably, however, there was a vast decrease in the value of the mark between the two transactions. But since the last of those transactions prices have trended the other way, and we have the distinct statement here that Germany has passed a law which will prohibit the exportation of cutlery except on a gold basis, and that the prices are going to be fixed; that after the 1st of September none will be permitted to be exported at a lower price, even though contracts have been previously made, but any contracts made since the 15th of May must be made upon the basis of the pre-war price plus 25 per cent in some cases, and 40 per cent in others. These prices are trending upward; and upon every class of cutlery here we have considered thus far I have had the price given from the people engaged in the business, prices brought up to date, and they are increasing rapidly all the time.

It seems to me that we come back again to the old proposition that it is a pitiful spectacle to see the Congress of the United States trying in this peurile fashion to deal with that situation in Germany. It should not be dealt with in that way. It means an absolute embargo as against all other countries.

I do not care to discuss the matter any further. We have talked about these things in connection with the cutlery schedule, and I hope at least that Senators understand the situation and will appreciate just what is being done.

Mr. MCLEAN. Mr. President, the Senator has called attention to the cheap cast-iron scissors. These scissors in August last were laid down in this country at 68 cents a dozen. In April last the same scissors, No. 9300, the 5-inch scissors, were laid down at 32 cents a dozen, less than half of the August cost; and the American price of the comparable article is $2.75 a dozen.

Mr. JONES of New Mexico. Mr. President, will the Senator let us know, then, what rate of duty this will make upon those cast-iron scissors?

Mr. MCLEAN. The rate of duty is far from sufficient.

Mr. JONES of New Mexico. But does the Senator want to put that kind of a duty upon cast-iron scissors, which are made in this country by machinery and which are exported in normal times to the rest of the world in competition with the world—a duty of 4 cents apiece on scissors, which he says will be imported at 22 cents a dozen? There is a duty of 200 per cent, and then it is followed by an ad valorem duty of 45 per cent, making a duty of about 250 per cent upon the little cast-iron scissors; and if the price is what the Senator says it is, my proposal would be 2 cents apiece, or 24 cents a dozen, on scissors that cost only 22 cents a dozen. That would be over 100 per cent, and then there is 45 per cent ad valorem to follow.

Mr. HEFLIN. Mr. President, did I understand the Senator to mean that this would increase the price of a pair of cast-iron scissors 4 cents each, which would be one-third of the cost of a dozen of them?

Mr. JONES of New Mexico. Hardly one-third of the cost of a dozen of them.

Mr. HEFLIN. Four cents is a third of 12. Three times four is 12.

Mr. JONES of New Mexico. Four cents each would be 48 cents a dozen; but the price per dozen is 22 cents, as I understand, which would make the duty itself more than twice the value of the scissors.

Mr. MCLEAN. Thirty-two cents a dozen, I will say to the Senator, was the April cost.

Mr. JONES of New Mexico. Thirty-two cents a dozen? If they are taxed 4 cents apiece, and 12 in a dozen, how much will that amount to?

Mr. MCLEAN. I suppose if they gave them away, or laid them down at 2 cents a dozen for the purpose of destroying the American industry, the rate would be still higher.

Mr. HEFLIN. Mr. President, does the Senator mean to say that this tariff rate would increase the price of these scissors 48 cents a dozen?

Mr. JONES of New Mexico. The duty would be 48 cents per dozen and 45 per cent ad valorem.

Mr. HEFLIN. On top of that?

Mr. JONES of New Mexico. On top of the 48 cents per dozen.

Mr. HEFLIN. Mr. President, it is very plain that the Finance Committee of the Senate are levying taxes here now purely for the benefit of certain manufacturers. I had no idea a little while ago, when I was talking about these steel scissors and the other higher grade of scissors, that they were going to come down and tax cast-iron scissors, the cheapest kind of scissors, the only kind, it seems, that the common people are going to be able to buy under Republican rule. Now you have laid on these cheap scissors a tax of 4 cents apiece, and the tax amounts to a burden upon every person who has to buy these things—a little here, a little yonder, a little over there, a little over here—until the tax sum that each taxpayer has to pay on the necessities of life is going to be something enormous.

Mr. President, when this monstrous bill goes into effect I should like to have some way of ascertaining just how much tax each individual has to pay under it. I wish there were same way, whenever he bought this article or that article, that he could find out what the tariff rate was on it, how much the retailer had put in his price because of the tariff tax, because of the excuse given him to increase his price, and let the consumer figure that out and see how much at the end of the year his expense account had increased. I call upon him to keep such an account.

I want to say to the Senators on the other side, when the good wife goes down to the store to buy various things and

she puts down a list of the manufactured things she has to buy and notes the increase in price by reason of an unjust tariff tax, she will say to the old man as they sit around the fireside, "I must have a much larger expense account. Whereas we bought last year this manufactured article for that much and this for that much, it has been greatly increased by tariff taxes." And the old man will say, "What am I to do? How am I going to meet these increased expenses? What provision did they make for me? Have they made it easy for me to make more money? Have they enabled me to earn more money? What have they done to build me up to meet these burdensome conditions? Nothing; absolutely nothing."

Mr. President, before I sit down, I want to comment on what occurred in this Chamber a moment ago with reference to cash registers. It has been disclosed that last night there was held in this city a conference of some of the very wealthy manufacturers of this country who are to be greatly benefited by this tariff bill. They came here and had a conference with the leaders of the Republican Party, the machine men, who gather up contributions for campaign purposes. They had these men sitting in a council chamber with them way late in the night discussing ways and means for raising money to conduct the congressional campaign, men who are benefited by the provisions of this bill, one of them the chief of the greatest cash-register concern of the United States. The Senator from Mississippi was commenting on the fact that that man was there, of course, expected to contribute a large sum and no doubt did, and the Senator from Ohio has told us that he said to him that he did not want any tariff tax on cash registers. Who ever heard one of these trust barons admit that he had been caught with the goods? Of course, he would not admit it now. He would come down here and expect to contribute, and he would rather not have it go out that he was contributing for that reason, but would like to have people think he was contributing for some other reason, separate and aside from that.

We caught them with the goods, and the Senator from Mississippi rose here, in the Senate of the United States, and asked those who sit here from the various sovereign States of this Union to give unanimous consent to reconsider the vote by which the price of cash registers was to be increased and objection came from the Republican side. Think of that, Senators. Then he moved to reconsider it and you defeated that motion. If the great cash register maker of the United States, who sends his goods into the four corners of the earth, does not want this tax, in the name of high heaven in whose interest do you levy it? Certainly the consumers of cash registers have to pay this additional tax, and certainly they do not want to have to pay it. Now, then, if the man who makes them says he does not need it, why are you levying it? In whose interest do you demand this tax?

Mr. President, it is too plain. A wayfaring man, though a fool, could understand it. The Senator from Ohio and some others were just about to "spill the beans" for these fellows who are going to have the prices of their cash registers increased by reason of this tariff tax do not want this tax taken off.

If you had not levied this tax against the American consumer you would not have gotten the promise of the checks last night. They would have torn those checks up on to-morrow if they had read in the newspapers that we had reconsidered that vote, and had taken the tax off. They would have said, "For that, the whole thing is off," and they would have just torn your checks up and thrown them away. And the robber game goes on.

You are going to increase the price of cash registers, where they gather in the coin from the poor of the country, taxed to death under this bill, and now you come, under the enthusiastic pleading of the Senator from Connecticut [Mr. MCLEAN] and put a tax of 4 cents each on every pair of cast-iron scissors bought in the United States. Who uses those cast-iron scissors? People who are not able to buy the best scissors. You are putting a tax upon the very poorest class of people in the country. It has always been true, and it is true now, that the Republican Party does not levy any taxes against the mighty rich, but you levy your taxes against those who have the least power of resistance, the unorganized mass of people, and then trust to this other crowd to get together, as they did last night, and furnish you money to purchase newspapers to poison public sentiment and form public opinion just before election and fool the people again.

Senators, the signs out in the States are that the people are waking up. God speed them in the business of waking up.

The PRESIDING OFFICER. The question is upon agreeing to the amendment offered by the Senator from New Mexico [Mr. JONES] to the committee amendment.

The amendment to the amendment was rejected.

The amendment as amended was agreed to.

The next amendment of the committee was, on page 74, line 24, after the word "cents," to strike out the following:

and not more than $1.75 per dozen, 15 cents each and 35 per cent ad valorem; valued at more than $1.75 per dozen, 20 cents each and 35 per cent ad volorem: *Provided*, That all articles specified in this paragraph, when imported, shall have the name of the maker and beneath the same the name of the country of origin die sunk conspicuously and indelibly on the outside of the blade between the screw or rivet and the handle,

and to insert:

per dozen, 20 cents each and 50 per cent ad valorem: *Provided*, That all articles specified in this paragraph, when imported, shall have die sunk conspicuously and indelibly, the name of the maker or purchaser and beneath the same the name of the country or origin, to be placed on the outside of the blade, between the screw or rivet and the handle of scissors and shears (except pruning and sheep shears), and on the blade or handle of pruning and sheep shears and clippers.

Mr. JONES of New Mexico. Mr. President, on page 75, line 7, I move to strike out "20" and insert in lieu thereof "10."

As I have stated repeatedly, I have been perfectly willing to have reasonable duties imposed on imports, and in this case I am going to try and see if I can not get something high enough to satisfy everybody. I wonder if a rate of 225 per cent would be enough to satisfy the people on the opposite side of the Chamber. That is what I propose now. On scissors valued at more than 50 cents per dozen the committee proposes to place a duty of 20 cents each and 45 per cent ad valorem, so that scissors costing 60 cents a dozen will have a specific duty of 20 cents each imposed on them and 45 per cent, which amounts to 445 per cent. I am willing to meet Senators on the other side with a reasonable rate and so I propose only to change the numeral from 20 to 10 so that the duty would be reduced from 445 per cent to 245 per cent, and upon that I ask for the yeas and nays.

Mr. MCCUMBER. Before taking the vote, so that the RECORD will show the basis on which this duty is laid, I shall first ask to have printed at the conclusion of my remarks a table on scissors, taking 14 importations, and the prices of each of them, showing what the spread is. The spread ranges all the way from the very lowest, which is 97 per cent, the only one less than 100 per cent, up to 518 per cent, as between the American and the foreign importing price.

Then following are the items which I put in the table and ask to have printed, which show the average rate, the foreign value, the landing charges, the specific duty, the ad valorem duty, the landed cost plus 20 per cent, the total, and the domestic selling price.

Taking them all together, the foreign values average $2.18 per dozen. The landing charge is 17 cents. The specific duty is $2.40. The ad valorem rate is 98 per cent, which would make the landed cost $5.73. Adding 20 per cent to that for profit, which would amount to $1.15, we would have a total of $6.83.

The domestic selling price is $6.91. It would therefore require 156 per cent to equalize the average rate. The percentage which we have given is very much less than that, and, as I have already shown, the importing costs are very much less as to some of these at the present time than they were at the time when the Reynolds report was made.

I renew my request to have this table printed.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

TABLE 1.—*Scissors.*

Importer's No.	Selling price (dozen).	Profit.	Landed cost (dozen).	Domestic selling price.	Domestic No.	Spread.
		Per cent.				*Per cent.*
9160-7"	$3.75	188.4	$0.98	$3.16	211A	222
9300-3"	2.75	216.2	.68	2.75	4017N	300
117-4"	2.75	172.2	.79	2.15	4007	172
9400-4"	3.00	55.4	1.50	6.20	35N	313
113-5"	3.50	84.2	1.48	5.04	4059-5"	269
582/6"	15.00	97.8	5.96	11.75	348	97
153-7½"	16.66	322.8	3.06	11.40	447½	305
2610GM-7"	16.15	144.3	5.19	10.70	2447	106
951-4SP	4.25	102.3	1.63	6.90	464	145
102-3½P	2.50	100	.97	6.00	464½	518
123-4" P	3.35	100.1	1.30	6.40	364	392
950-3½"	3.60	113	1.31	6.50	773	396
4460-4"	10.00	96.4	4.00	10.97	574½	174
5695-5½"	8.25	99.2	3.25	7.95	815	145
Average			2.29	6.97		204

The spread, as shown in the above table between the landed cost (not including duty) and the domestic selling price, ranges from 97 per cent to 518 per cent, and averages for all the items 204 per cent.

Following are the items included in Table No. 1, averaged, and the rate of 20 cents each and 45 per cent applied, allowing the importer 20 per cent overhead and profit. This rate almost exactly equalizes the competitive difference:

TABLE No. 2.

Bracket.	Rate.	Foreign value.	Landing charges.	Specific duty.	Ad valorem.	Landed cost.	Plus 20 per cent.	Total.	Domestic.
Over 50 cents per dozen.	20 cents each and 45 per cent.	$2.18	$0.17	$2.40	$0.98	$5.73	$1.15	$6.88	$6.91

Mr. JONES of New Mexico. Mr. President, we have several times this afternoon had similar statements made, and there can be only one purpose in making those statements—to have the Senate and the country believe that these prices in Germany are being reduced. I submit that outside of St. Elizabeths, or a few other institutions, there is no person who has studied the situation or attempted to inform himself as to it who believes that prices in Germany are being decreased, measured in gold or measured in marks. Every bit of information we have is to the contrary.

I read here last night from the report of the Commerce Department showing the vast increases in labor, increases in living expenses, increases in iron, increases in cotton yarn, and other commodities, and how rapidly they have been increased during the last few months, and for the Senator from North Dakota, in his sanctimonious way, to repeat that statement that he has been making it seems to me is trifling with the intelligence of Senators and the official information. He, of course, is not telling an untruth, but it shows that the bases of his statements are unfounded, or the inferences from the statements which he makes are unjustified. He takes some prices made up several months ago, when the mark was worth more than it is now. He takes prices since then converted into terms of a mark no one knows the value of; but we do know that prices in Germany are increasing, and every economist in the country appreciates the importance of the increases. Again I am going to call attention to some of these increases. We find that in October, 1921, the index figures of living costs in Germany, taking 100 as the basis in 1920, have been increased to 184; in November, to 247; in December, to 303; in January, 1922, to 320; in February, to 352; in March, to 435; and in April, to 525. Thus, in those few months the cost of living in Germany has increased over 500 per cent.

The price of pig iron prior to the war was 79½ marks. In January, 1919, it was 314 marks; in May, 1920, it was 2,350 marks; in November, 1921, it was 2,700 marks; in December it was 3,891 marks; March 1, 1922, it was 4,744 marks; and on April 1, 1922, it was 6,264 marks.

That is the cost of pig iron and the other various classes of iron, and in the face of that to tell me that the cost of these metal products is decreasing is to trifle at least with my supposed intelligence.

Now, take steel—iron and steel prices, copper and zinc sheet. The record shows they have increased from 100 marks or less up to between 7,000 and 10,000 marks, not only increased as much as the mark has depreciated in value, but increased far beyond that in price measured in marks. Eighty times and 100 times as many marks to buy a ton of steel now as was required prior to the war. These increases have been coming along most rapidly and precipitously and in an accelerated way hardly to be comprehended, and yet Senators would have us get the idea that the cost of these things in Germany is decreasing.

There is no information regarding the economic situation in Germany which would justify any such inference. It shows that the prices which have been reported to the distinguished Senator from North Dakota offer no test. Where is the man who believes that prices in Germany are decreasing as measured in marks or as measured in gold?

Mr. President, on yesterday I asked that the tables to which I referred be published as an appendix to my remarks, but the printer was not able, for lack of time last night, to do so. I now repeat the request, not only as to those tables to which I have referred, but the list over on the next page of this report. It seems to have been a little mutilated by the printer, but it can be made out yet, I am sure. I ask that all those tables which appear in the commerce report of June 5, on pages 647 and 648, be published as an appendix to my present remarks.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[From Commerce Reports, June 5, 1922.]

WESTERN EUROPE.

(Alan G. Goldsmith, Chief, Western European Division.)

CURRENCY DEPRECIATION AND PRICE INCREASES IN GERMANY.

(Commercial Attaché C. E. Herring, Berlin, April 22.)

The relation between currency depreciation in Germany (particularly since the sensational mark decline in October and November, 1921) and price appreciation and instability is obvious. However, the impossibility of conducting German industry or trade on anything but a speculative basis under present conditions is not perhaps fully appreciated. The extent to which binding contracts are affected should also be fully understood by American purchasers of German goods, because it has become increasingly difficult during the last few months to guarantee prices for future delivery, or to observe them if promised.

This was a subject of considerable complaint by Americans and other foreigners at the Leipzig Fair, where manufacturers generally declined to offer firm prices, except for limited quantities of goods already in stock. Even where a manufacturer covers his purchases of foreign raw materials immediately by the sale of finished goods, calculated (though not necessarily to be invoiced) in dollars or sterling, other variable factors make future price changes almost inevitable. For instance, in many German industries no wage agreements are made for a longer period than one month. Continual wage advances, together with the steady increase in public-utility rates (which have not yet resulted in an entire elimination of the operating deficits), and the advances in the price of coal and other domestic raw materials make exact calculations most difficult.

A further element of insecurity is the system of levying export supplements, intended to bring the price of German exports closer to the prevailing price in the importing country. Theoretically this principle is justified from the standpoint of national economy, and of course it results also in additional protection for manufacturers in other great industrial nations. The difficulties of effective administration are great, however, and there have lately come to the attention of this office a number of instances in which the export supplements have so increased the price of goods destined for export to the United States that contracts have not been concluded.

EFFECT OF DEPRECIATED EXCHANGE.

American importers of German goods must realize that a system of shifting prices is inevitable in Germany so long as the violent fluctuation and the consistent depreciation of the mark continue. They must also remember that no system of selling in dollar or other high-exchange currencies can relieve German manufacturers of the virtual necessity of changing prices, and that there is an inevitable speculative element in any considerable purchases of German goods for future delivery.

The recent decision of the Leipzig Reichsgericht, obligating parties to accept goods at higher prices, provided the court considers the amount justifiable, increases the insecurity of foreign buyers. They can still protect themselves, of course, against forced acceptance of goods at prices too high for profitable resale or use in their own factories by specific stipulation against a price increase exceeding a certain percentage, now that they can no longer avoid the contract by virtue of a general clause (Preise Freibleibende clause) leaving both seller and purchaser free to avoid the contract if prices are changed. There is no assurance, however, that any American importer can resell German goods in the United States at a calculated percentage of profit, relying upon delivery at an agreed price.

INCREASED COST OF LIVING.

The following table shows the increased cost of living in Germany since last October, together with the fluctuation in the exchange rate of the German mark:

Items.	Basis of comparison.	1921			1922			
		October.	November.	December.	January.	February.	March.	April.
Frankfurter Zeitung index of wholesale prices (77 commodities)	100 (1920)	184	249	303	320	352	435	525
Reichsteuerungszahlen index of retail prices of commodities in budget of family of 5	100 (1914)	1,146	1,397	1,550	1,640	1,989	2,300	.....
Kuczynski budget for family of 4 (weekly expenditure in marks)	28.80 (1914)	386	509	557	548	627	789	.....
Calwer family budget (weekly expenditure for food for family of 4, in marks)	15.81 (1914)	418.12	473.89	514.63	548.85	674.39	778.96	.....
Average exchange rate (marks per dollar)	4.20 (1914)	147.20	255.54	188.67	191.81	207.82	280.00	.....

INCREASE IN PRICE OF PIG IRON.

Since May, 1921, the German price of pig iron has shown a steady increase. The following table shows the price of this commodity in 1921 and 1922, as compared with the pre-war price.

[Marks per ton.]

Items.	Pre-war.	Jan. 1, 1919.	May 1, 1920.	May 1, 1921.	Nov. 1, 1921.	Dec. 1, 1921.	Mar. 1, 1922.	Apr. 1, 1922.	Over pre-war prices.
									Per cent.
Hematite	79.50	314.50	2,350.50	1,816.00	2,700.00	3,891.00	4,744.00	6,264.00	18
Pig iron I	75.50	250.00	1,790.50	1,560.00	2,200.00	3,326.00	4,212.00	5,549.00	13
Pig iron II	70.50	249.00	1,789.50	1,484.00	2,124.00	3,250.00	4,130.00	5,437.00	16

IRON AND STEEL PRICES—COPPER AND ZINC SHEETS.

As in the case of pig iron, the German prices for iron and steel have shown a steady increase during the past few months. This increase is shown in the following table:

[Marks per ton.]

Items.	Pre-war.	Oct. 20, 1921.	Dec. 1, 1921.	Mar. 1, 1922.	Apr. 1, 1922.	Over pre-war prices.
						Per cent.
Ingots	82.50	2,435.00	3,830.00	5,320.00	7,170.00	30
Blooms	87.50	2,655.00	4,130.00	5,770.00	7,775.00	33⅓
Sheet bars	97.50	2,725.00	4,330.00	6,085.00	8,200.00	26
Billets	96.00	2,725.00	4,230.00	5,945.00	8,010.00	26
Shapes	110.00	3,150.00	4,930.00	6,920.00	9,325.00	27
Merchant bars	97–99	3,200.00	5,030.00	7,050.00	9,500.00	44
Hoop iron	105.00	3,585.00	5,530.00	7,750.00	10,580.00	50
Wire rods	117.50	3,500.00	5,430.00	7,515.00	10,265.00	31
Thin sheets	125.00	4,400.00	6,680.00	9,375.00	12,770.00	53
Medium sheets	110.00	4,300.00	6,930.00	8,910.00	12,140.00	65
Heavy sheets	105.00	3,500.00	5,630.00	7,805.00	10,650.00	52

The price of copper sheet was 5,475 marks per metric quintal on October 30, 1921. Since that date the prices have been as follows: November 30, 9,350 marks; December 31, 7,550 marks; January 30, 8,000 marks; February 28, 8,500 marks; March 4, 9,500 marks; March 31, 12,200 marks; and April 22, 11,700 marks.

Although the increase has not been so large as in the case of copper, the price of zinc sheet also was considerably higher on April 22, 1922, than on October 30, 1921. The prices per metric quintal of zinc sheet since last October have been as follows: October 30, 2,079 marks; November 30, 3,826 marks; December 31, 3,826 marks; January 30, 3,319 marks; February 28, 3,319 marks; March 4, 3,619 marks; March 15, 4,340 marks; April 22, 5,405 to 5,445 marks.

PRICES OF COAL, COKE, AND LIGNITE.

The prices in marks per ton of Rhenish-Westphalian coal, coke, and lignite during February, March, and April, 1922, and the price of coal quoted for delivery in September, 1922, as compared with the pre-war coal prices, are shown in the following table:

[Marks per ton.]

Kind of coal.	End of 1913.	February, 1922.	March, 1922.	April, 1922.	September, 1922.[1]
BITUMINOUS COAL.					
Fat coals:					
Pit coal (14 per cent)	12.00	468.10	601.70	713.20	907.50
Large coal I (28 per cent)	13.25–14.00	617.00	791.60	936.90	1,194.30
Nut coal I, II, and III (30 per cent)	14.25	630.90	809.30	957.80	1,221.10
Nut coal IV (30 per cent)	13.75	608.20	780.30	923.70	1,177.40
Cooking coal (14 per cent)	12.25	477.50	613.60	727.20	925.40
Gas and flame coals:					
Gas pit coal (25 per cent)	12.50	491.10	631.10	747.90	1,031.40
Flame pit coal (24 per cent)	11.50	468.10	601.70	713.20	952.00
Nut coal I, II, and III (30 per cent)	14.25	630.90	809.30	957.80	1,221.10
Nut coal IV (30 per cent)	13.75	608.20	780.30	923.70	1,177.40
Large coal (28 per cent)	13.25–14.00	617.00	791.60	936.90	1,194.30
Dry coal:					
Pit coal (12 per cent)	11.50–12.00	463.60	595.90	706.40	898.70
Large coal (30 per cent)	14.25–15.00	634.10	813.40	962.60	1,227.30
Nut coal I and II (12 per cent)	16.75–18.25	705.80	904.80	1,070.30	1,365.50
Nut coal III (30 per cent)	14.50	667.40	855.80	1,012.60	1,291.40
Nut coal IV (30 per cent)	14.00	608.20	780.30	923.70	1,177.40
Anthracite nut I (even)	20.75	690.30	885.10	1,047.20	1,335.90
Anthracite nut II (minus 9 per cent)	24.75	777.10	995.70	1,177.50	1,502.80
COKE.					
Furnace coke (11 per cent)	15.00–17.00	682.70	878.10	1,024.40	1,308.10
Foundry coke (even)	19.00	710.30	913.30	1,059.60	1,355.00
Broken coke I and II (10 per cent)	21.00–21.50	815.70	1,047.70	1,194.00	1,534.10
LIGNITE.[2]					
Middle German Syndicate (32 per cent)	8.35	421.40	478.50	592.00	737.00
Rhine Syndicate (9 per cent)	7.65	279.30	368.80	451.30	555.00
East Elbe Syndicate	9.12				
Niederlausitz Group			478.50	550.00	739.00
Frankfurt Group		457.70	583.50	654.00	866.50
Forster Group			492.00	567.50	754.50
Goerlitz Group		393.20	502.50	579.50	766.50

[1] Prices quoted for delivery in September, 1922.
[2] The prices shown for lignite are average prices. The lignite prices for 1913 are the average for the entire year.

PRICES OF GERMAN CHEMICALS.

While the prices of chemicals have advanced slightly in Germany during the past six months, the advance has been less than in other items. The prices of chemicals since November, 1922, are shown in the following table:

[Marks per kilo.]

Chemicals.	1921		1922				
	Nov. 26.	Dec. 30.	Jan. 30.	Feb. 28.	Mar. 15.	Mar. 31.	Apr. 7.
Salicylic acid	81	72	85	99	110	125	138
Zinc oxide	29	21	26½	28	32	37	37
Sugar of lead	31	27½	29½	29	31½	34	34
Blue vitriol	24	18	21	31	26	30	33
Borax	36	26	28	33½	37½	41	42

PRICES OF GERMAN CHEMICALS—continued.

Chemicals.	1921		1922				
	Nov. 26.	Dec. 30.	Jan. 30.	Feb. 28.	Mar. 15.	Mar. 31.	Apr. 7.
Formaldehyde (40 per cent)	49	45	46	50	53	55	55
Caustic soda	30½	27	24	05½	27½	32½	33
Formic acid (80 per cent)	16	16	(1)	(1)	(1)	21	23
Sulphuric acid (60 per cent)	2	2	(1)	(1)	(1)	3½	(1)

[1] No sales recorded in the Hamburg market.

GERMAN PRICES OF BUILDING MATERIALS.

[Office of American commercial attaché, Berlin, May 2.]

The following are comparative prices of certain building materials in Germany for the period from July 1, 1921, to April 1, 1922:

Items.	July 1, 1921.	Nov. 1, 1921.	Mar. 1, 1922.	Apr. 1, 1922.
	Marks.	*Marks.*	*Marks.*	*Marks.*
Carbolineum, per kilo	2.00–3.50	3.15	5.30	7.15
Coal tar, per kilo	1.70–1.90	2.25	4.85	5.40
Tar board, No. 100, per 10 square meters	44.00	68.00	127.00	193.00
Insulation board, No. 80, per square meter	7.75	(1)	18.00	28.00
Zinc-plated wire netting, per square meter	4.50	9.00	21.00	22.50
Zinc-plated fence wire, 3.1 millimeters, per meter	.27	.60	[2] 18.75	[2] 22.50
Wire nails, 1 inch long, per kilo	6.80	9.65	22.50	24.70
Nails for slate roofing (black), per kilo	10.00	14.30	18.50	18.50
White lead color, ready for use, per kilo	16.00	29.00	35.00–39.00	53.00
Raw linseed oil, per kilo	14.00	27.00	47.50	65.00
Turpentine, pure, per kilo	22.00	46.00	76.00	115.00
Floor varnish, per kilo	27.00–32.00	28.00	56.00	76.00
Plaster of Paris, per sack of 40 kilos	15.00	15.00	29.00	53.75
Plate glass, transparent, quality III, 4/4b, 60 centimeters, per square meter	35.00	42.45	105.40	[3] 134.90
Square timber fir, building quality, per cubic meter at factory	600.00–750.00	1,150.00	2,250.00	4,500.00
Square timber, pine, building quality, per cubic meter at factory	800.00	1,300.00	2,400.00	4,800.00
Roof laths, 52S/300, per 30-meter lot	2.55	5.70	10.15	15.00
Crossed-lath fencing, per square meter	7.00	7.50	14.00	16.00
White limestone, per 10 tons wholesale	2,450.00	2,450.00	5,370.00	7,800.00
Common lime in sacks, per sack wholesale	15.00	20.00	42.00	65.50
Linseed-oil putty (100 per cent), per kilo wholesale	3.20	(1)	8.50	12.00
Cologne glue, per kilo wholesale	21.00	32.00	45.00	50.00–55.00
Lead pressure tubes, per 100 kilos	840.00	(1)	2,830.00	4,197.00
River sand, per cubic meter f. o. b. works	20.00	43.00	85.00	107.00
Sand for mixing concrete, per cubic meter f. o. b. works	30.00	22.00	95.00	107.00
Burned bricks, per 1,000 at works	400.00	400.00	1,050.00	1,200.00
Gravel bricks, per 1,000 at works	420.00	580.00	750.00	1,075.00
Slag bricks, per 1,000 at works	450.00	500.00	700.00	1,200.00
Chamotte, medium, 30/6½ centimeters, per sack	2,750.00	2,400.00	6,250.00	11,300.00
Kauber slates, 1/1, per meter wholesale	399.00	434.00	1,019.00	1,022.00
Portland cement, per 50 kilos	30.75	35.50	81.00	94.00
Flat roofing tile, per 1,000 at works	900.00	840.00–900.00	1,500.00	2,100.00

[2] Price per kilo.
[3] Price has been 182 marks since Apr. 14, 1922.

Mr. McCUMBER. I have no objection to the request of the Senator from New Mexico. Possibly by Monday, or sooner, if I can, I will show the rates of exchange, so they can be compared with the tables the Senator has presented.

All I want to say now in reply to the Senator, and then each of us will have spoken twice on the amendment, and I hope we can get a vote, is that what the American manufacturer is most concerned in is not so much what British labor or French labor is getting, but for what they are putting their product down in his market.

In the rates which I have given I have not stated anything that is false. I have taken the record from the importations,

both at the time of the Reynold's report and the latest, which was in April. I have shown in many instances a decrease from the time of the Reynold's report to the time at which the last imports came in. That is the real measure, because there is where the competition is going to be. Just what the future is going to bring forth, of course, I do not know.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from New Mexico to the amendment of the committee.

Mr. JONES of New Mexico. I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. DIAL (when his name was called). Making the same announcement as on the former ballot as to my pair and transfer, I vote "yea."

Mr. HARRISON (when his name was called). Making the same announcement as before, I vote "yea."

Mr. STANLEY (when his name was called). I transfer my pair with the junior Senator from Kentucky [Mr. ERNST] to the junior Senator from Massachusetts [Mr. WALSH], and vote "yea."

Mr. STERLING (when his name was called). Making the same announcement as on the last vote as to my pair and transfer, I vote "nay."

Mr. SUTHERLAND (when his name was called). Making the same announcement as on the previous vote with reference to my pair and its transfer, I vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the Senator from Massachusetts [Mr. LODGE] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

Mr. WATSON of Indiana (when his name was called). Making the same announcement as before, I vote "nay."

The roll call was concluded.

Mr. KELLOGG. I transfer my pair with the Senator from North Carolina [Mr. SIMMONS] to the Senator from Oregon [Mr. STANFIELD] and vote "nay."

Mr. HALE. Making the same announcement as before, I vote "nay."

Mr. McCUMBER (after having voted in the negative). I transfer my pair as upon the previous vote and allow my vote to stand.

The roll call resulted—yeas 18, nays 29, as follows:

YEAS—18.

Asburst	Harris	La Follette	Stanley
Borah	Harrison	Norris	Swanson
Caraway	Heflin	Overman	Underwood
Dial	Jones, N. Mex.	Pomerene	
Gerry	Kendrick	Sheppard	

NAYS—29.

Brandegee	Kellogg	Nicholson	Sutherland
Bursum	Keyes	Oddie	Townsend
Calder	Lenroot	Poindexter	Warren
Cameron	McCumber	Rawson	Watson, Ind.
Curtis	McKinley	Shortridge	Willis
France	McLean	Smoot	
Hale	McNary	Spencer	
Jones, Wash.	Newberry	Sterling	

NOT VOTING—49.

Ball	Fletcher	Myers	Simmons
Broussard	Frelinghuysen	Nelson	Smith
Capper	Glass	New	Stanfield
Colt	Gooding	Norbeck	Trammell
Crow	Harreld	Owen	Wadsworth
Culberson	Hitchcock	Page	Walsh, Mass.
Cummins	Johnson	Pepper	Walsh, Mont.
Dillingham	King	Phipps	Watson, Ga.
du Pont	Ladd	Pittman	Weller
Edge	Lodge	Ransdell	Williams
Elkins	McCormick	Reed	
Ernst	McKellar	Robinson	
Fernald	Moses	Shields	

The PRESIDING OFFICER. Upon the amendment of the Senator from New Mexico to the committee amendment the yeas are 18 and the nays are 29. There is not a quorum present. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Hale	McCumber	Shortridge
Brandegee	Harris	McKinley	Smoot
Bursum	Harrison	McLean	Spencer
Calder	Heflin	McNary	Stanley
Cameron	Jones, N. Mex.	Newberry	Sterling
Curtis	Jones, Wash.	Nicholson	Sutherland
Dial	Kellogg	Oddie	Swanson
Fernald	Kendrick	Overman	Townsend
France	Keyes	Pomerene	Underwood
Gerry	La Follette	Rawson	Warren
Gooding	Lenroot	Sheppard	Willis

The PRESIDING OFFICER. Forty-four Senators have answered to their names. There is not a quorum present.

Mr. McCUMBER. I move that the Sergeant at Arms be directed to procure the attendance of those Senators who can not afford to attend to their duties in the Senate.

The motion was agreed to.

The PRESIDING OFFICER. The Sergeant at Arms will carry out the order of the Senate.

The following Senators entered the Chamber and answered to their names:

Ashurst	Broussard	Caraway	Glass

Mr. McCUMBER. Mr. President, I should like to have the Sergeant at Arms report what he is doing in the way of procuring a quorum.

The PRESIDING OFFICER. The Sergeant at Arms will be notified to make a report.

Mr. McCUMBER. If the Sergeant at Arms can not bring Senators here, I desire to have a record of the reasons why he can not bring them here.

The PRESIDING OFFICER. The Chair will state to the Senator that the Sergeant at Arms has been requested to make a report.

Mr. HARRISON. Mr. President, may I ask the Senator from North Dakota a question? I got the impression, and I think a good many Senators did, both on the other side and on this side, that the Senator was going to ask the Senate to take a recess at 6 o'clock this afternoon; and some Senators left under that impression.

Mr. CURTIS. They left at 5.

Mr. HARRISON. They left at 5.

Mr. CURTIS. Yes; they left about 5 or half past 5.

Mr. McCUMBER. If we had had a quorum here up until 10 minutes of 6, we could have recessed.

Mr. President, understanding that there are Senators on the way who will make a quorum in a few moments, I withdraw the request for a report by the Sergeant at Arms.

The PRESIDING OFFICER. The request is withdrawn.

Mr. McCORMICK entered the Chamber and answered to his name.

The PRESIDING OFFICER. Forty-nine Senators having answered to their names, a quorum is present. The question is upon agreeing to the amendment offered by the Senator from New Mexico to the committee amendment. The yeas and nays have been ordered, and the Secretary will call the roll.

Mr. JONES of New Mexico. Mr. President, I desire to withdraw the request for a yea-and-nay vote on this amendment.

The PRESIDING OFFICER. Is there objection to the request of the Senator from New Mexico? The Chair hears none, and the request is withdrawn. The question is upon agreeing to the amendment offered by the Senator from New Mexico to the committee amendment.

The amendment to the amendment was rejected.

Mr. McCUMBER. I move to strike out "50," on page 75, line 7, and to insert "45."

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

NAVAL OIL RESERVE LEASES.

Mr. SMOOT. I ask unanimous consent that the message of the President of the United States, with the accompanying communication from the Secretary of the Interior, be printed in the RECORD in 8-point type.

There being no objection, the message and the accompanying communication were ordered to be printed in the RECORD in 8-point type, as follows:

TO THE PRESIDENT OF THE SENATE:

On April 29 the Senate adopted a resolution directing the Secretary of the Interior to furnish the Senate with certain documents, correspondence, papers, files, Executive orders, and all contracts for drilling oil wells on naval oil reserves of the United States, with all detailed information relating thereto. I am to-day in receipt of a letter from the Secretary of the Interior in which he advises me of his compliance with the resolution of the Senate, and in which he makes to me a full and comprehensive report, probably not contemplated in the resolution, in which he gives to me the details of the handling of all naval reserve petroleum matters up to the present date, including full explanation of the contracts for the disposition of oil and the necessity for such action as has been taken. The report, with the exhibits thereto attached, I am sending to the Senate herewith, with the hope that they may be referred to the Senate Committee on Public Lands for such ready reference and information as they will afford the committee in making the investigation contemplated by the Senate.

I am sure I am correct in construing the impelling purpose of the Secretary of the Interior in making to me this report. It is not to be construed as a defense of either specific acts or

the general policies followed in dealing with the problems incident to the handling of the naval reserves, but is designed to afford that explanation to which the Senator is entitled, and which will prove helpful to the country generally in appraising the administration of these matters of great public concern. I think it is only fair to say in this connection that the policy which has been adopted by the Secretary of the Navy and the Secretary of the Interior in dealing with these matters was submitted to me prior to the adoption thereof, and the policy decided upon and the subsequent acts have at all times had my entire approval.

WARREN G. HARDING.

The WHITE HOUSE, *June 7, 1922.*

—

THE SECRETARY OF THE INTERIOR,
Washington, June 3, 1922.

MY DEAR MR. PRESIDENT: On the calendar day of April 21, 1922, there was introduced in the Senate of the United States a resolution offered by Senator LA FOLLETTE, of Wisconsin, by which it was—

"*Resolved*, That the Secretary of the Interior is directed to send to the Senate—

"(a) Copies of all oil leases made by the Department of the Interior within naval oil reserve No. 1, and separately, naval oil reserve No. 2, both in the State of California, and naval oil reserve No. 3, in the State of Wyoming, showing as to each the claim upon which the lease was based or issued; the name of the lessee; the date of the lease; the area of the leased property; the amount of the rent, royalty, bonus, and all other compensation paid and to be paid to the United States.

"(b) All Executive orders and other papers in the files of the Department of the Interior and its bureaus, or copies thereof if the originals are not in the files, authorizing or regulating such leases, including correspondence or memoranda embodying or concerning all agreements, instructions, and requests by the President or the Navy Department as to the making of such leases and the terms thereof.

"(c) All correspondence, papers, and files showing and concerning the applications for such leases and the action of the Department of the Interior and its bureaus thereon and upon all the several claims upon which such leases were based or issued, all in said naval reserves.

"(d) And all contracts for drilling wells on naval oil reserves, date and terms of same, reasons therefor, and the number and date of the drilling of wells on private lands adjacent to oil reserves.

"*Resolved further*, That the Committee on Public Lands and Surveys be authorized to investigate this entire subject of leases upon naval oil reserves, with particular reference to the protection of the rights and equities of the Government of the United States and the preservation of its natural resources, and to report its findings and recommendations to the Senate."

This resolution was adopted by the Senate on April 29.

Notice of the resolution was immediately communicated to myself by telegram, and preparations begun to comply with the "direction" of the Senate. Suggestion was also communicated to me by telegram that the public press be given one of the latest contracts entered into concerning the naval reserves. In telegraphic communications to the department I signified my desire that the direction of the Senate should be fully complied with and my entire willingness to have all of the contracts made public immediately, provided the Secretary of the Navy and yourself acquiesced.

This proviso was made because of the fact that, under your instructions, I have been acting for the Navy, and these contracts embrace military plans of the Navy Department.

Upon my return from my western trip I ascertained that much progress had been made in preparing data directed to be sent to the Senate, and efforts to finally prepare the same have been continuous and most assiduous.

It may not be generally understood, as, of course, it is by yourself, that in handling matters of this character entirely distinct bureaus of this department are called upon not only for advice but for action. It consequently became necessary to search all the files of, first, the General Land Office, the Bureau of Geological Survey, the Bureau of Mines, the personal files of the Secretaries of the Interior, the records of the Mails and Files Division of this department, and so forth. This being also a matter in which the Navy Department, since the incoming of your administration, has been in constant communication with the Department of the Interior, it became necessary that we check up our files and correspondence with the records of the Navy Department.

The results of this work as completed will be found in the photostatic copies, and so forth, of the documents which we are sending to the Senate of the United States, and which aggregate between five and six thousand pages of matter so being delivered.

The records involved date back to the original orders creating naval reserves Nos. 1, 2, and 3, the first two located in the State of California, and the latter comprising what is known as the Teapot Dome, located in the Salt Creek oil field, in the State of Wyoming.

No report from this department has been requested or directed by the Senate, but in view of all the circumstances, and particularly of some speeches which have been made in the Senate of the United States, and public agitation, wild statements in the press, and so forth, I have thought it necessary to prepare this report to yourself that you may, if you see fit, transmit it to the committee of the Senate to which I am delivering the data requested in the resolution.

It may be informing to some of those who apparently have little or no knowledge upon the general subject to review shortly the history of petroleum reserves, including naval petroleum reserves as they have been established and as they exist.

Prior to February 25, 1920, title to the public lands of the United States containing or supposed to contain petroleum could only be obtained under the mining placer law. Under this law 20 acres formed the unit of a placer claim, with 160 acres, or eight units, to an association of eight locators, with no limitation upon the number of 160-acre locations which might be made.

As the value of petroleum was recognized through constantly increasing use, the policy of the administrative branch of the Government developed, and from time to time took the form of withdrawals of public lands supposed to contain petroleum, so that mining claims could not legally be located upon the same after the date of such respective withdrawals.

The first withdrawal of lands for such purpose was in the year 1865 by the then Commissioner of the General Land Office, through a letter to the Humboldt, Calif., local land office, directing that office, unless otherwise specifically instructed, to withhold from disposal portions of two sections of land. The next withdrawals were in the years 1900 and 1901, in California; September 27, 1901, in Wyoming; in 1901 and 1902, in Oregon; and a few others covering considerable areas in California, Oregon, and Wyoming. These withdrawals were all made by the Commissioner of the General Land Office. From time to time restorations were made, until in 1908 the greater portion of the land theretofore withdrawn had been restored. In 1908 and 1909 some withdrawals were made and some lands classified as oil and restored and some lands restored without classification.

In the latter part of 1909—in fact, on September 27—the orders known as the Taft withdrawals were made by the Secretary of the Interior. Those orders covered 3,000,000 acres in California and Wyoming. Subsequent withdrawals were made by the Secretary of the Interior, as follows:

October 12, 1909, 124,000 acres in Utah and 88,540 acres in Wyoming.
December 20, 1909, 87,474 acres in Colorado.
January 18, 1910, 147,887 acres in California.
February 2, 1910, 448,000 acres in California.
February 11, 1910, 9,109 acres in Wyoming.
April 8, 1910, 29,736 acres in Wyoming.
April 14, 1910, 407,314 acres in Utah.
May 4, 1910, 419,901 acres in New Mexico.
January 18, 1910, 3,600 acres in Wyoming.

These were designated as temporary petroleum withdrawals Nos. 5 to 17, inclusive. Some restorations were made during the period.

These withdrawals were all made under the Executive authority of the President of the United States, without direct legislative authority or confirmation.

On June 25, 1910 (36 Stat. 847), Congress enacted a law directly authorizing the President to make withdrawals of lands for classification and for various purposes, and confirming his authority as to the withdrawals already made. Following this, on July 2, 1910, the President confirmed and ratified the outstanding withdrawals and withdrew lands subject to the conditions and limitations of the act. This order covered 2,482,750 acres in California, 87,474 acres in Colorado, 314,720 acres in Louisiana, 419,901 acres in New Mexico, 74,849 acres in Oregon, 581,564 acres in Utah, 255,461 acres in Wyoming. Since that date there have been a large number of additional orders of withdrawal, as well as orders of restoration, all of which have been reported fully to Congress under section 3 of the act of June 25, 1910.

Many restorations were made from time to time as heretofore noted, but the total area remaining in the petroleum reserves under the different orders so reported by this department on December 1, 1921, was 230,400 acres in Arizona, 1,178,392 acres in California, 467,030 acres in Louisiana, 1,345,151 acres in Montana, 84,894 acres in North Dakota, 1,962,768 acres in Utah, 1,120,526 acres in Wyoming, a total of 6,612,138 acres.

[NOTE.—It is to be kept in mind that the areas given include lands title to which is not in the United States.]

There has been no direct ratification by Congress of these petroleum withdrawals.

NAVAL PETROLEUM WITHDRAWALS.

The naval petroleum reserves were created by order of the President, and out of the lands theretofore withdrawn as general petroleum withdrawals, and are as follows:

No. 1, September 2, 1912, 38,969 acres, in Elk Hills, Calif.

No. 2, December 13, 1912, 29,341 acres, in Buena Vista Hills, Calif.

No. 3, April 30, 1915, 9,481 acres, Teapot Dome, Salt Creek, Wyo.

Of course, the President of the United States under his Executive authority and under the provisions of the act of June, 1910, could at any time, when he saw fit, restore any of the lands withdrawn, and immediately upon the date of such restoral such lands, up to 1920, would have become, and such as were restored did become, subject to location and acquisition under the mining laws of the United States by private individuals.

Such large withdrawals of the public domain by Executive order from 1909 aroused great opposition in the public-land States, and Congress considered various bills providing for the disposition of such withdrawn lands, either by directing the restoration thereof or by providing some other method of acquiring title to or the development of the oils supposed to underlie the same, through sale, lease, or otherwise.

Proposed legislation reserving the lands to the United States in toto, or providing for the rental or lease thereof, the funds derived therefrom to be placed in the United States Treasury solely for governmental purposes, was strongly opposed in Congress by those who insisted that the States in which the lands were located should be entitled to at least a portion of the proceeds of such rentals or royalties, in lieu of the rights of the States to tax the same under State and municipal laws, as under the old practice said lands became the property of individual owners under the general mining laws.

The final result of such proposed legislation, opposition thereto, etc., was the compromise act known as the leasing act, under which we are now operating, adopted in February, 1920.

Under the terms of this act, among other things, individuals who claimed title, the right to patent, or equitable interests in any oil lands in the United States, including the withdrawn lands, were directed, within certain limits of time fixed in the statute, to present their claims to the Interior Department for adjudication. Provision was made for equitable consideration where a case made out was not considered strong enough to entitle the parties to a fee simple patent, and even where under the terms of the act equities were not considered strong enough to entitle the parties to prior leases upon the claimed land.

By section 1 of the act of February, 1920, it is provided that "deposits of coal, phosphate, sodium, oil, oil shale, or gas, and lands containing such deposits owned by the United States, including those in national forests, but excluding lands acquired under the act known as the Appalachian Forest act, etc., and those in national parks and in lands withdrawn or reserved for military or naval uses or purposes, except as hereinafter provided, shall be subject to disposition in the form and manner provided by this act to citizens of the United States," etc.

Section 35 provides for the distribution of all royalties, rentals, etc., as follows:

"Ten per cent to be paid into the Treasury to the credit of the miscellaneous fund; for past production, 70 per cent; and for future production 52½ per cent; to be paid into, reserved, and appropriated as a part of the reclamation fund created by the act of Congress of June 17, 1902, and for past production 20 per cent, and for future production 37½ per cent, to be paid by the Secretary of the Treasury after the expiration of each fiscal year, to the State within the boundaries of which the leased lands or deposits are or were located, said moneys to be used by such State or subdivision thereof for the construction and maintenance of public roads or for the support of public schools or other public educational institutions as the legislature of the State may direct: *Provided*, That all moneys which may accrue to the United States under the provisions of this act from lands within the naval petroleum reserves shall be deposited in the Treasury as 'miscellaneous receipts.'"

It is then further provided that all royalty accruing to the United States under any oil or gas lease or permit under this act, on demand of the Secretary of the Interior, shall be paid in oil or gas.

At the request of the present Secretary of the Navy to the Secretary of the Interior, and thereafter directly to the President of the United States, the President on May 31, 1921, directed the Secretary of the Interior to administer such naval reserves for the Secretary of the Navy. The Secretary of the Interior has proceeded under this order, in constant communication and consultation and cooperation with the Secretary of the Navy, and is so continuing at the present time.

Prior to the Executive order just referred to, in the discharge of my duties with reference to private claims within the two naval reserves in California, my attention was called to the drainage of oil and the depletion of the naval reserves in the two California reserves particularly. Evidently the attention of the officials of the Navy Department had finally been directed to the same subject, as shortly prior to the signing of this Executive order the latter department had given notice that bids would be received for the drilling of offset wells in naval reserve No. 1 along the entire north boundary of section 1, to offset the drainage, the extent of which was then unknown, because of the production of Standard Oil wells on the south boundary of section 36. These latter wells had been drilled and producing for some months or more, and were at the time very large and extensive producers of oil.

The bids received by the Navy at that time were, by your direction and that of the Secretary of the Navy, opened in this department, and in consultation with the Navy Department, its experts, and by the assistance of the experts of this department it was finally determined that the bid of the Pan American Oil Co. of 55 per cent royalty for such offset wells was the highest and best bid, and the contract for the drilling was tentatively awarded to that company. Meantime private claimants insisted upon their equitable rights, and there was transmitted to this department directly from your office a petition which had been in the archives of the Executive office for Executive adjustment of such private claims. This petition was filed in the office of your predecessor. At your direction I took the matter up and ascertained that the petition had been filed within the statutory limit and must be passed upon. In so doing I ascertained that the parties petitioners had expended very large amounts of money in the attempt to develop private claims, including all of section 1 and portions of other sections in naval reserve No. 1. My predecessors had determined that these claimants were not entitled to patents, nor to outright leases, and the petition in question had been filed requesting Executive action under the terms of the leasing bill of 1920. I presented to the highest bidders, the Pan American Petroleum Co., this matter, and my desire to obtain a release of all private claims upon school section 1 and other sections, and asked the cooperation of the Pan American Co. in arriving at some solution of the difficulty. It was finally agreed between the private claimants and the highest bidders, the Pan American Co., that if the drilling permits were awarded to the latter company they would, with my consent, surrender 10 of the 22 wells to be drilled in favor of the United Midway Oil Co. claimants upon the same terms of royalty—that is to say, 55 per cent—and the same terms of drilling as to time, etc. I agreed to a part of this course, provided the United Midway Co. would execute good and sufficient quitclaim deeds to the United States for all claim of right, title, interest, or equity in and to all of section 1 and the other sections covered by their claims, approximating something like 900 acres of land, thus obtaining a clear title to the United States as against such claimants and for the benefit of the Navy.

During the course of these negotiations I had reports from the petroleum experts of the Bureau of Mines, constantly in the field taking oil production for the Navy, both in reserve No. 2 and reserve No. 1. Shortly thereafter I made a personal visit to California, and there called into consultation Commander Landis, of the United States Navy, representing that department in oil matters, and our oil experts located at San Francisco and in the Bakersfield district. There was no divergence of opinion—in fact, entire unanimity—that the drainage from wells not owned by the United States Government constituted not only a menace but an actual and long-continuing loss to the Navy of its oils in both reserves, and that immediate steps were necessary to save any oils in any amount for the Government, and particularly for the Navy.

Naval reserve No. 1, in California, contains a total area of 37,760 acres. Subsequent to the setting aside of this reserve, a suit was decided in the Supreme Court of the United States

(251 U. S. p. 115), under which the United States recovered title to something more than eight sections of land as against the Southern Pacific Railroad Co., but the results of which left 6,760 acres out of the total acreage in this reserve in outstanding private titles, principally to the Southern Pacific Railroad and to the State of California. One school section situated near the center of the grant had long since passed to the State, been sold to the Standard Oil Co., and was producing through a large number of oil and gas wells enormous quantities of oil, and had been so producing for years. Another school section just without the boundaries of the reserve had also been acquired by the Standard Oil Co., thoroughly drilled, and was producing through a large number of wells.

Naval reserve No. 2 has a total area of 30,080 acres, of which 20,640 acres are covered by private holdings, the titles to which had long since been decided before the incoming of your administration, with the exception of the final adjudication as to the rights claimed by the one company. Of course it is understood, if not it may be so definitely stated at this point, that the private holdings referred to in both these reserves were being drilled, and many of them had been drilled for very many years.

Under the administration of your predecessor, a lease was made on 120 acres to the Consolidated Mutual Oil Co. in naval reserve No. 2 because, as is shown by the record, the remaining oil deposits were in danger of destruction by water intrusion. Leases were also authorized for similar or other reasons to the Boston Pacific Oil Co.

Prior to March 4, 1921, there had been drilled on patented lands within naval reserve No. 2, in the State of California, 408 oil and gas wells; on Government lands within the reserve, claimed under the mining law, 141 wells. On patented lands immediately adjacent to the reserve there had been drilled prior to March 4, 1921, 142 wells; on Government land adjacent to the reserve 33 wells; and despite wild statements to the contrary, as far as I have been able to ascertain, no marines of the United States Navy had been called out to prevent such drilling for any reason whatsoever, nor had any other force been used to preserve at any cost the oils to the Navy Department. It will be noted that the grand total of wells drilled in this one reserve aggregated 724 prior to the incoming of your administration.

Since March 4, 1921, there have been drilled on patented lands within the reserve 35 wells; on Government land claimed under the mining laws, 15 wells; and on patented lands adjacent to the reserve 8 wells, or a present grand total of 599 drilled wells within the reserve boundaries and 183 wells adjacent to the reserve boundaries. I also desire to call your particular attention to the fact that since the incoming of your administration there has been a total of privately owned wells and wells drilled upon claims under the mining laws within the reserve and immediately adjacent thereto of 58 wells as against a total, above referred to, of 785 wells drilled prior to the incoming of your administration.

In naval reserve No. 1 there had been drilled prior to March 4, 1921, on patented lands 32 wells; on Government land 2 wells, a total of 34. Under your administration there were drilled between March 4, 1921, and May 1, 1922, on patented lands 11 wells, and on Government lands 13 wells within this reserve, a total of 24. The 13 wells mentioned include those drilled under the advertisement of the Navy and those referred to in the matter of the adjustment and final disposition of the United Midway case. During the same respective periods there had been drilled on lands adjacent to the reserve within one-half mile of its boundary prior to March 4, 1921, on patented land 26 wells; on Government land 1 well, total 27. Subsequent to the incoming of your administration there were drilled upon these adjacent lands 29 wells upon patented land, and 8 wells upon Government land. To sum up, there had been drilled within and adjacent to both reserves prior to March 4, 1921, 785 wells, and between March 4, 1921, and May 1, 1922, 119.

In my examination into the question of drainage and losses to which my attention had been directed, as I have heretofore stated, I secured some very interesting data with reference to loss by drainage in various fields in the United States. This data is contained in a photostatic memorandum hereto attached, and marked "Exhibit A," and for those who are interested in this subject I think will furnish valuable information. This shows the effect of drilling on ultimate recovery, the data being obtained through careful study in the field extending over a long period of time. It embraces data with reference to the Adair pool in Oklahoma, the Bartlesville-Dewey district, Oklahoma, the Nowata district in California, the Buena Vista field in California, the Hewitt field in Oklahoma, and various other fields. It contains information as to the effect of distance on drainage, etc.

In connection with this general study I had specific investigations made by experts in the field with reference to the particular naval reserves Nos. 1 and 2 which are now under discussion. The memorandum containing the results of this study I am attaching hereto and marking "Exhibit B." It will be noted, as set forth on page 2 of the memorandum, that the estimate of the loss because of failure to drill necessary offset wells prior to February 25, 1920, in naval reserve No. 2 in California was, in royalty barrels, 1,000,000, and in royalty value, $800,000.

That the loss to the Government from failure to drill all necessary offset wells prior to March 4, 1921, was, in Government oil barrels, 3,400,000; in Government royalty values, $4,400,000. From the last page (3) of this memorandum it will be noted that the estimate of the total loss in reserves 1 and 2 for failure to drill all necessary offset wells between February 25, 1920, the date of the passage of the leasing bill, by which full authority was given by the Congress of the United States to cause such wells to be drilled, and March 4, 1921, was, in Government royalty oil, 2,400,000 barrels; in royalty values, $3,600,000. The combined estimates, based upon figures and all data obtainable and personal close observation of experts in the field checking production of wells, etc., noting the actual losses occurring through the lessened production of subsequently drilled wells under observation, is as shown in the conclusion of the memorandum on page 3, in Government royalty oils on these two reserves, 6,800,000 barrels; and in Government royalty values, $3,800,000.

It should be of interest to note at this point that under date of December 16, 1916, a report was made by one of the very noted oil experts of the United States, Mr. M. L. Requa, to the Navy Department, through Lieut. Commander I. F. Landis, retired, officer in charge naval petroleum reserves in California. Many other wells are being drilled under the command of the Government to protect against salt water and drainage, as herein stated, but as it requires six or eight months to put machinery on the ground and bring in a well, the foregoing data gives the number of wells drilled and production at this time. At the date in question there was in existence what was known as the Naval Liquid Fuel Board, of which Admiral Edwards was chairman, and that at the request of Admiral Edwards Mr. Requa prepared the memorandum in question. Mr. Requa was general director of the oil division of the fuel board, and while holding such position, as he states in a letter to myself, he personally handed a copy of this memorandum to the then Secretary of the Navy and urged that the latter should read it. I am herewith attaching to this report a copy of the Requa communication to Mr. Landis, marked "Exhibit C." I call your attention to Mr. Requa's discussion of the reserves of oil which should be provided for the future uses of the Navy. On page 4 of this report attention is called to the areas of unpatented and patented ground within Naval Reserves Nos. 1 and 2 in California. Particular attention is then called in detail to the conditions existing in these reserves, and that but little of the total area is free from some character of private claim. Mr. Requa states positively that in any event the unassailable holdings are, in his opinion, too scattered; that the development of both patented and unpatented lands has proceeded too far, and the probability of other lands going into private ownership in the adjustment of titles is too great to allow of serious consideration of these lands as a proper naval reserve. Mr. Requa calls attention again, particularly on page 7, to the matter of drainage and to the well-known fact that the area which may be drained by a single well varies with local conditions, and that, at best, the information upon the subject is obscure and involved in doubt. He states, however, that it is possible to draw general conclusions from studies which have been made in various oil fields, and sets forth the results of some of these studies in detail. On page 8 he states in a positive manner that in addition to securing oil lands and the consolidation of the same in blocks, it (the Government) must thereafter devise some efficient system of production, so that it may, at all times, have not only adequate storage on hand but be able to anticipate peak loads.

The point to which I call attention in referring to this exhibit is that as complete report as was possible to make at that date was made to the then Secretary of the Navy by Mr. Requa, as an official of the Government, at the request of his superior, and that the danger and the actual fact of the drainage and depletion was thus called to the attention of the Navy Department of this Government.

In the same connection, attention may be called to a letter of Hon. Franklin K. Lane, then Secretary of the Interior, addressed to various members of the then Cabinet, of which he

was recognized as not the least able, calling the attention of each specifically to the very matter of loss by drainage, and in which letter, among other things, he states:

"It is the universal testimony of the geologists that this land (referring to the California naval reserves), by reason of the let up of the gas pressure by the wells that are being pumped (producing) and the letting in of water and the constant pumping (producing) of patented lands, will be valueless in 15 or 20 years as any kind of reserve."

And he further states, particularly as to reserve No. 2, that—

"There will be no oil there of any magnitude in a few years. The land should be pumped now, or we will never find the oil where it is now."

The letter in my possession is addressed to Hon. D. F. Houston, Secretary of Agriculture, and the last line states that the writer is sending similar letters to Secretaries Baker, Daniels, Wilson, and Redfield. I am filing a copy of this letter herewith, marked "Exhibit D."

In passing from this immediate subject, it may be proper to state that in November, 1921, the reports from our experts in the field were of such a character that when assembled and accurately mapped it appeared that salt water was encroaching so rapidly in various producing areas of Naval Reserve No. 2 that in the judgment of the two departments it became necessary to speed up drilling programs with those holding preferential drilling privileges under the Government, and that successful action was taken to bring about such immediate results.

In July, 1921, it becoming apparent that a more active drilling program was necessary if the Navy was to secure oils from the two reserves, or, rather, should not continue to suffer great losses, the manner of the proper disposition of royalty oils was taken up between the two departments. The Secretary of the Interior in the course of the consideration of this question, suggested the desirability of effecting an exchange of the crude oil received as royalty for naval fuel oil, to be stored, without any cash outlay by the United States; that is to say, through such exchange that the Navy should secure containers, either cement or metal tanks, for the storing of such fuel oil, as well as the oil itself, the general suggestion being along the line that the parties with whom such exchange should be effected should construct such storage tanks at points designated by the Navy at a cost in oil to be agreed upon by the Navy officials, such tanks to be turned over full of naval oil at such points for the use of the Navy. On July 29, 1921, the Secretary of the Navy addressed a letter to the Secretary of the Interior with reference to this matter, adopting such suggestion, and requesting that the Interior Department should proceed as rapidly as possible with such plans. Shortly thereafter the Secretary of the Interior visited California, and in consultation with Commander Landis, who was representing the Navy on the ground, and in consultation with his own experts called upon various oil companies, some of which were paying royalties to the Navy upon oils from the two reserves and others of which were engaged in transportation and storing of oil, and in the general discussion it developed that through such proposed exchange the requested storage could be obtained for the Navy at any points which it may designate, the rates of exchange of crude for fuel oil in tanks, the latter as the property of the United States Navy, to be thereafter arranged. The Secretary of the Interior immediately made report of such negotiations directly to the President of the United States. Upon the return to this city of the Secretary of the Interior this general subject matter was discussed from time to time and a definite program finally agreed upon.

In a few words, as you will recall, Mr. President, the Navy desired tanks and oil, to be provided through such exchange to the amount of 1,500,000 barrels of oil in storage, at points selected by themselves, in the island of Hawaii.

In further consultation, the Navy Department, having no funds with which to secure the necessary preliminary and final construction in carrying out these plans, desired to have made, if possible, a contract, through which dredging harbor work, the removal of thousands of cubic yards of dirt and thousands of cubic yards of rock would become necessary, the construction of docks and wharves, and the construction of cement foundations and embankments, preparatory to the construction of the necessary storage tanks under specifications furnished by themselves. Of course, it will be understood that all this preliminary construction was necessary, because of the physical conditions, before oil could be loaded or unloaded and stored at the desired points. Minute plans and specifications covering more than 55 typewritten pages, accompanied by approximately 26 blue-print maps, plans, etc., were prepared by the naval experts and delivered to the Secretary of the Interior, with request from the Secretary of the Navy that immediate negotiations be entered into for the purpose of ascertaining whether it was possible to secure, through the exchange of fuel oil, the completion of this elaborate program of construction and the delivery of the necessary oil in the finally completed storage tanks. The matter was taken up by the Secretary of the Interior with various oil companies operating in the State of California, several of which submitted bids for all such work and the furnishing of such naval fuel oil. The contract finally accepted and entered into involves what would be the equivalent of a cash expenditure for construction alone of nearly $6,000,000. Of course, a copy of this contract is contained within the files being forwarded to the Senate committee, with the exception of the detailed specifications, blue prints, etc., which will, under no circumstances, be transmitted without your direct order to this effect. It will be readily understood by any considerate person that military policy would preclude such information being furnished unless transmitted by you under the seal of secrecy.

It may be said that in addition to the program already agreed upon, as evidenced by the copy of this contract, the further plans of the Navy call for the delivery of oil and the securing of storage facilities at various points on the Pacific coast and possibly elsewhere within the possessions of the United States.

As you will recall, Mr. President, the legal questions involved in the making of contracts for oil exchange for storage, etc., as just hereinbefore referred to, was discussed upon more than one occasion in at least a casual manner in Cabinet meetings. In considering such questions, both the Secretaries of the Navy and Interior had the advice of their authorized legal counsel and advisers, agreeing upon such legal questions.

On December 14, 1921, the Secretary of the Navy communicated in writing to the Secretary of the Interior, quoting from an opinion of the Judge Advocate General of the Navy, advising affirmatively as to the legality of the proposed contracts. Copies of this correspondence referred to, including the letter of December 14, 1921, are included in the files transmitted to the Senate of the United States.

The geographical situation of Naval Reserves Nos. 1 and 2 has been hereinbefore casually referred to. With reference to the oil development, it may be stated that there exists competition in these fields between some of the large companies of the United States, among others the Standard Oil, the General Petroleum, the Associated Oil, the Pacific Oil, the Union Oil, the Pan American, and others. There are four pipe lines upon Naval Reserve No. 2, with one pipe line owned by the Standard Oil upon Naval Reserve No. 1, other pipe lines adjacent to such reserve, and still another large pipe line building into Naval Reserve No. 1, with the prospects of still a third line entering such reserve.

These respective pipe lines lead to refineries upon the Pacific Coast and thus afford an opportunity for the Navy to dispose of its oil, at competitive bids, upon each of said reserves, to exchange crude oil at the well for fuel-oil certificates calling for delivery at the western seaports; or, if it so desires, to have its oil conducted as it comes from the well through such pipe lines, directly to the coast, at such points as may be reached, particularly Los Angeles and San Francisco.

It may be of interest to remark that the fuel oil obtained upon the western coast is not of the high test generally required by the Navy, but yet can be used, and is used, for naval purposes.

With reference to petroleum reserve No. 3, in Wyoming, of course, it is well understood that the geographical situation is entirely different. In an air line from the Salt Creek field in Wyoming to Los Angeles it is approximately 1,000 miles. By air line from said Salt Creek field to Norfolk, Va., and points north it is approximately 1,700 miles. No pipe lines connecting this field with either coast have ever been constructed. The only pipe lines in the vicinity of naval petroleum reserve No. 3, or in the Salt Creek field, is the one pipe line of the Midwest Refining Co., with a total length of approximately 50 miles, extending through the field and to the refineries of the same company at the city of Casper. To transport the oils from the Salt Creek field, which is now producing, and from that portion of the same known as petroleum reserve No. 3, it would be necessary either to use tanks mounted upon vehicles, which, of course, would be nonsensical, or to extend the present Midwest line a short distance and use it for transporting oils to Casper, from which point, however, the crude oil, or any products thereof, would necessarily be transported then upon tank cars of the railroads touching that place.

The facts, however, are that the present capacity of this pipe line is not sufficient to take the present production of the Salt Creek field. This situation will be discussed later.

In handling the oil properties intrusted by law to the administration of the Secretary of the Interior, as well as in handling the naval reserve properties, first intrusted by law to the same department and later authorized to be administered directly by the Secretary of the Navy, and yet later directed by you to be administered for the Navy Department by the Secretary of the Interior, we have used experts of two bureaus organized under laws of Congress of the United States for the purpose, among others, of assisting in such administration of oil properties.

The Bureau of Geological Survey is that bureau which, among its other many activities and duties, reports upon the geological structure, examines the surface and the formation within a given district. In the California fields, in the Wyoming fields, and in other States of the Union, in any district favorable for oil production, the evidences of the larger pools are generally disclosed by what are known as anticlines, domes, etc.

Where the work of the Geological Bureau ends—that is, in reporting upon the structure and likelihood of the ground containing minerals; on the general formation, and on the most favorable places for prospecting—then with such prospecting begins the work of the experts of the Bureau of Mines.

Naval reserves Nos. 1 and 2, as well as naval reserve No. 3, were finally created by Executive order, as hereinbefore disclosed, upon reports made by the Bureau of Geological Survey.

The Bureau of Mines, through its experts in the field, under the direction of the Secretary of the Interior, has charge of the supervision of drilling operations by lessees and others upon public lands; it is the duty of this bureau to see that possible encroachments of salt water are prevented in such drilling. It is the duty of the Bureau of Mines to check the number of barrels produced by each well in which the Government is interested; to test the oils therefrom, and to see that the proper royalties are received by the Government. In the performance of this last duty, they must make analyses from time to time, and particularly must ascertain the gravity tests of such oils, as the royalties recovered are based upon specific production and upon the gravity percentages. It is the duty of the Bureau of Mines experts to keep constantly in touch and to report upon possible depletion of undrilled areas by the drilling of adjacent wells, and in doing so, to pay particular attention not only to drainage of oil itself as affecting such lands but as to the decrease of the gas supply which may be over a much more extensive area than would be the drawing of the oil itself as contained in the sands. This decrease of the gas pressure may have an important and a very serious ultimate effect not only upon the present flow of oil from a well but upon the final percentage of oil extracted from the sands. These Bureau of Mines officials must familiarize themselves with the character of the oil-bearing sand, as upon its porosity, as well as upon other facts, may depend the rapidity of the depletion of the underground storage, both through the escape of gas and through the drainage of the oil itself.

It is of peculiar interest to note that from the experience of others engaged in the production of oil, and through the research and experiments and experience of the Bureau of Mines experts through actual tests in the field and checking tests in the laboratory, it has been stated, and is generally conceded as an established fact, that through no present known process of pumping, or through the natural flow of an oil well can more than 20 per cent of the oil contents of an oil sand be extracted. These facts have been pointed out in Bulletin No. 148 of the Bureau of Mines, issued in 1917, which bulletin, unfortunately, has proven of interest only to experts and has not been read generally by those who assume to know something of the oil question. This bulletin was written by Mr. J. O. Lewis, then with the Bureau of Mines; later chief petroleum technologist; and now with Smith-Dunn, of Marietta, Ohio, who hold the patents to the so-called Smith-Dunn, or Marietta, process for forcing compressed air into the oil sand and drawing it out through adjacent wells. In this process the air takes the place of the gas, and has definitely established the fact that gas is the principal medium in bringing the oil to the well, and its production, depletion, or waste must be considered in arriving at the possible production and at least at the term of life of the flush production of oil wells.

In considering the naval oil program—that is, the matter of the use of the naval royalty oils from the then production in reserves 1 and 2, and the use to be made thereof—the construction of storage therefor at strategic points and where the oil would not be wasted or lost but could be retained without fear of such loss above a fraction of 1 per cent for 10-year periods, it was mutually agreed between the Secretary of the Navy and the Secretary of the Interior that such program should be worked out first for such two reserves, and should not be extended to naval petroleum reserve No. 3, unless there was danger of loss to the Navy through drainage therefrom. The alarming conditions existing in the first two fields, as hereinbefore related, caused early attention, however, to be directed to the possibilities or probabilities of such drainage of the Teapot Dome, in naval reserve No. 3. There is attached hereto, marked "Exhibit E," a map of the Salt Creek field in Wyoming, showing the legal subdivisions of the lands therein, and over the same the contour lines of the geological formation with particular reference of the Salt Creek Dome proper and the Teapot Dome, supposed to be separated therefrom by a saddle, but supposed to contain, at approximately the same depth, the same oil-bearing sands developed in the main Salt Creek structure. Upon this map will be noted the line showing the division between that portion of petroleum reserve No. 8, now known generally as the Salt Creek, and that portion of the same reserve designated as naval reserve No. 3. This designation was made after examination by the Bureau of Geological Survey, which said examination and a report thereupon were made by Mr. C. H. Wegeman, then one of the principal official geologists.

In a subsequent report made in 1921 Mr. Wegeman, now in the employ of some private corporations operating in the Salt Creek field, called attention of his former associates of the Geological Survey, through a memorandum to that bureau, to the fact that he had made a very recent examination, and to the more accurate geological discoveries then made. In this more recent report, Mr. Wegeman calls attention to his map, published in 1918, and it is a copy of this map which is made Exhibit F, and to which I am now referring. Among other things, Mr. Wegeman calls attention to the fact that in the area crossed by what he now states is a pronounced fault, he had no observations originally showing that the beds dipped to the south. He continues:

"The facts which I had before me at the time of drawing the 1918 map could have been explained either by separate structure, as shown on the map, or by a pronounced fault. I did not at that time have evidence of the presence of the fault and so adopted the explanation of the separate structure."

I am attaching a copy of this last report hereto marked "Exhibit G," but direct particular attention to the fact that Mr. Wegeman states, in September, 1921, that—

"It is obvious that as wells are drilled along the northwest line of the naval reserve, part of the oil produced by those wells will be drawn from the naval reserve itself. As the amount of oil in the sand is reduced and the gas pressure also relieved the water which is present in the sand on the flanks of the structure below the oil will gradually invade the oil sand. It will advance into the lowest part of the structure first * * *. It will creep into the saddle between the two structures on the northwest quarter of section 28 and the east half of section 29. This invading body of water will gradually work its way entirely across the saddle * * *.

"The oil in the naval reserve in sections 21, 20, and 29 will gradually be reduced in amount, due to the drainage of the wells along the northwest line of the reserve (outside the reserve and within the present privately owned or leased area) and the presence of the advancing flow of water."

Mr. Wegeman then calls attention to what will happen in the northern part of section 33 by the invasion of water north of the geological fault, and which he states that he discovered, and summarizes to the effect that all oil north of the line of the saddle will be driven toward the main dome of Salt Creek, as oil is drawn from the sand by the wells then being drilled, and states that there is grave danger that oil will be trapped between advancing bodies of water, and that portion of the reserve north of the fault in section 33 will be drained and the oil recovery made difficult, and the total recovery be decreased by the invasion of water. It seems from this report, and the Heald report herewith also filed and marked "Exhibit H," that oils south of this great fault, if any, will be disastrously affected and losses will be incurred.

Following the consideration of this report, the Secretary of the Interior directed that a geologist be sent upon the ground to make an additional report. The directions of the Secretary were presumably conveyed to Mr. Heald by Doctor Smith, the director of the survey, and upon Mr. Heald's return, he, accompanied by Doctor Smith, made a verbal report to the Secretary. Later this report was reduced to writing and transmitted to the Secretary's office. I call attention to the fact that Mr. Heald finds that part of the reserve in sections 17, 20,

21, 29, 28, and 27 will presumably, but not certainly, ultimately be drained by wells outside the reserve, although he states—

"It is possible that faults known to exist, but whose magnitude and importance are not definitely known, will protect these last-mentioned fractions from drainage or flooding."

He continues—

"That at the present rate of production, a year or more must lapse before any part of the reserve is appreciably damaged," etc.

Mr. Heald then states that—

"If appreciable loss becomes imminent, due to intensive drilling near the line, fractions (within the naval reserve) should be leased in the order given" (by him).

And he concludes with the advice that no further leasing should be done, etc. I am glad to send this report up in full, as attached hereto, as I understand that some parties have claimed that they had information of a very reassuring character, and that because of the advice given, no lease of any area in the Teapot Dome should have been made. In this connection I may state that the Secretary of the Interior and the Secretary of the Navy were anxious to obtain the facts as nearly as they could be approximated from a surface inspection of the ground and for their information in considering such policy as they might mutually agree upon.

The official of the Bureau of Mines representing the United States Government in this district is Mr. F. P. Tough, chief oil and gas supervisor, who has official representatives checking oils, supervising drilling, making tests, collecting royalties, etc., all residing in Wyoming, and who every day during the year are actively in the field in the performance of their duties. To Mr. Tough instructions were given prior to September, 1921, and through him instructions given his subordinates, to make careful examination into the probable drainage of the Teapot Dome, or petroleum reserve No. 3.

Mr. Tough is a graduate of Columbia University in mining engineering, with a course in geology, and for six years was resident geologist for the oil properties of the Southern Pacific interests in California. The conclusion of the oil experts of the Bureau of Mines, communicated both in verbal and written memoranda reports to the Secretary of the Interior, was that much more grave and serious danger of losses by drainage through outside drilling existed and exists than appeared to be understood by the Bureau of the Geological Survey. Their experience upon the ground was and is that where faults occur, as they do occur in the similar structure and in the identical sands supposed to underlie the Teapot Dome within the present producing area of the Salt Creek field, such faults have not interfered at all with drainage and they have not caused a sealing of one pool of oil from another or from encroaching waters. I herewith file, marked "Exhibit I," memorandum report made by Mr. Tough, which brings up to date information heretofore obtained from time to time during our investigation. Because of the actual facts stated as above experienced, particularly as to the wells drilled in the Salt Creek field and the water level in relation thereto, this report, even if it be considered as conflicting with the reports of geologists and others, would be almost conclusive.

[NOTE.—February 18 report of A. W. Ambrose, chief, petroleum technology, Bureau of Mines, attached to Exhibit I as a portion thereof.]

I merely call your attention to the summary of conclusions contained in the last paragraph, wherein Mr. Tough states that from the specific data and evidence as given he considers it highly probable that along the major axis of the saddle between the Salt Creek and Teapot folds, at elevations of 2,100 feet or more above sea level, the second Wall Creek sand will be oil bearing, and therefore oil and not water will be found in this sand in the saddle.

Right here it is important to note, even out of order, that in the area originally supposed by the geologists and reported by them to be within the saddle and supposedly cutting off the one oil pool from the other, or immediately adjacent to such area, a well has recently been drilled which came in with a production of 1,000 barrels per day, and within a week increased its flow to more than 2,100 barrels. This well is located in section 20, township 39 north, range 78 west, within approximately a quarter of a mile of the north line of the Teapot Dome.

Having called attention to the general map with the contour lines superimposed, I ask your consideration now of a diagrammatic sketch marked "Exhibit J."

This is a hypothetical geological cross section of the Teapot Dome as it would presumably be exposed, and as it would be developed if the well formerly drilled by private parties upon the northwest quarter of section 10, township 38 north, and which reached a depth of about 430 feet, should be drilled to a total depth of approximately 4,500 feet.

I file herewith as Exhibit K, to be considered in connection with the two maps preceding, another diagrammatic sketch recently prepared from the geological reports and other information on file in February, 1922, and in this connection to the fact that the dotted line running along above the first Wall Creek sand, then crossing same within the area of the Teapot Dome, and crossing back again, shows the supposed structure and line of these same sands as obtained from information on file prior to February 22, including Wegeman and other original reports.

Exhibit L, following, is yet another diagrammatic sketch which would show the position of these sands as from the reports of Mr. Heald, the more recent report of Mr. Wegeman, and through the information furnished by Messrs. Fisher and Lowry. This sketch is intended to show the supposed faults, and so forth, referred to in these reports, and beyond which Mr. Wegeman and Mr. Heald do not think that the drainage would extend by drilling in the southern portion of the Salt Creek Dome or in the Teapot Dome itself north of such supposed fault.

Allow me to diverge for one moment at this point, Mr. President, to call attention to the fact that the total area in acres of the naval petroleum reserve No. 3, ordinarily known as the Teapot Dome, is a little more than 9,000 acres. Now, referring to the contour lines upon the map marked "Exhibit E," and following the same over naval reserve No. 3, the reports of the experts of this department are to the effect that the producing sands in the Salt Creek field, as known, as now producing, if they extend, as we all believe and hope, under the Teapot Dome, would be covered by an area, not of 9,000 plus acres, the total area of the reserve, but by an area of not more than 5,500 acres, and generally estimated as an area of 4,700 acres, covering the present known producing sands. It is hoped that the sand which has never been reached, shown in the hypothetical geological cross section sketch attached hereto, as believed to occur at a depth of approximately 4,200 feet, may be eventually developed and may be very productive. If so, then it is thought the entire area of 9,000 plus acres in petroleum reserve No. 3 may be actually productive of oil. By reference to the map marked "Exhibit E" and the dividing lines thereupon, and making a simple calculation of the approximate total area now admitted by the geologists to be in danger of and subject to drainage from drilling outside the lines of the reserve, it will be seen that such "danger" area amounts to approximately 2,000 acres. If this area is deducted from the total area of the reserve, the remaining total would be approximately 7,000 acres, while the productive area would be cut down proportionately, or in a larger proportion, as much of it is located upon the known slope of the dome.

I call attention to these facts (because in some quarters the large area supposed to be contained in the contract for lease of these lands has been often referred to) with the comment that the total area covering the known sands is either a little less than or approximately the same in area as the lease area authorized by the Congress of the United States to be made to one individual on Indian lands.

In addition to the supposedly exceedingly valuable property of the Government through its ownership of naval petroleum reserve No. 3, the Teapot Dome, the Government of the United States has vast property interests of present enormous value in its leases north of and adjoining the Teapot Dome area in the Salt Creek structure of the Salt Creek field. Under the provisions of the leasing law, leases have been made, and the production therefrom at the present time is, and for some time has been, 150,000 barrels of crude oil per month. You are aware of the fact that under the terms of the leasing law 10 per cent of the proceeds of this royalty oil must go into the miscellaneous receipts of the Treasury; 52½ per cent into the reclamation fund of the Treasury; and the remaining 37½ per cent be paid over at the end of each fiscal year by the Treasurer of the United States to the State of Wyoming for roads, schools, and like purposes. The situation as to pipe lines, etc., in the Salt Creek field has been casually referred to heretofore. The geographical situation is such that an absolute monopoly in the transporting, refining, and practically in the purchase of all oils in this field, both Government royalty oils and the privately owned oils produced by the lessees paying the royalty, must be handled through the Midwest Refining Co. There is no other outlet; the local market is more than supplied with gasoline, kerosene, etc., by that company, and the consequence has been and is, that by virtue of such geographical conditions, not only the oil production from such leases has been

curtailed to a total of approximately 40 per cent of such possible production per month or per day, but that the price received by such lessees and by the Government and the State of Wyoming has been very much less than prices paid for similar oils in other oil fields more favorably situated in the matter of competition and accessibility.

The Midwest Refining Co., and its associated companies, have always been perfectly frank and open and straightforward in their dealings with the Government in this field. They have recently applied for approval of a proposed plan of readjustment of their holdings in that field, which plan does not appear to be objectionable, but very probably in the interest of economical administration.

In connection, however, with such proposition they very frankly stated that they have been operating under a contract among themselves, and through which contract they were obligated to take and treat of the entire production of the Salt Creek field approximately 75 per cent from the holdings of the three associated companies, which would leave approximately 25 per cent to be taken from others producing oil. They have, in fact, been taking more than 25 per cent, and, as I have just stated, approximately 40 per cent, and they now state that in the rearranging of their business they have agreed among themselves that the production from their lands shall not be less than 55 per cent of the total field production; and I am frank to say that, considering the capacity of their pipe line and refineries, such proportionate allotment to their properties seems reasonable. They state very frankly that the tested production of "Salt Creek to-day is 110,000 barrels per day"; that the "Midwest Refining Co. has for several months been taking 40 per cent of the tested production of each producer," and "the capacity of its pipe lines at 800-pound pressure is 48,000 barrels per day"; that "from all oil fields in Wyoming and Montana the Midwest Refining Co. is purchasing 70,000 barrels per day."

As has just been shown, the undeniable facts, in so far as human judgment can ascertain them from expert evidence and otherwise, are that at least a certain portion of the north part of the naval reserve No. 3—the Teapot Dome—is now, or will be, disastrously affected through drainage by the drilling upon the lands outside the reserve, which drilling is now being carried on from day to day. Such drilling upon such lands is in accordance with the terms of the law itself, and those conducting such operations are protected by the law. This being the case, it is necessary immediately, or it is practically admitted by everyone claiming to know anything of the conditions, that it will be necessary in a comparatively short period of time to protect such threatened area, and that the only feasible method of such protection is to cause drilling operations of offset wells and the consequent production of oil from the Teapot Dome.

Now, what is to be done with such oil? In California we have competitive markets and we have oil pipe lines to the coast, through which the oil can be conducted to refineries, where the same can be refined and the naval fuel oils obtained for the use of the Navy. Or, as just stated, and as heretofore shown, we can sell the oils in the field at competitive prices or we can exchange, under competitive conditions, crude oil for fuel oil.

As shown herein, conditions are not similar in the Salt Creek field. It would become necessary either to add to the present overstocked oils by attempting to dispose of the oils so drawn from Teapot Dome in a market where competitive conditions do not exist, or to provide storage upon the ground for the same. Such storage would be a thousand miles from Los Angeles and 1,700 miles from Norfolk, with no method of transportation to either point, or any other seaport, except by transportation overland in tanks. In the next place, neither the Interior Department nor the Navy Department has any appropriations or funds which could be used or diverted for the construction of such storage. Therefore, the only possible method by which it could be handled would be to sell the oil for such price as it might bring.

The only other alternative would be to allow the present owners or lessees of adjoining lands to drain this area and to use for their own purposes the oils obtained therefrom without compensation to the United States Government or to the Navy.

These were some of the conditions which were necessary to be considered by the Secretary of the Navy and the Secretary of the Interior in determining the course to be adopted with reference to petroleum reserve No. 3.

We are now brought to the consideration of another phase of this case, and I may say a serious proposition, necessary for the mature deliberation and consideration of the Secretary of the Interior. This condition arose through the fact that many locations had been made from time to time by individuals under the then existing laws of the United States upon practically the entire area of what is now known as petroleum reserve No. 3, or the Teapot Dome. Claims have been filed within the periods of limitation prescribed in the statute with the Interior Department by some of such individuals, which claims were generally known and will be treated here as those of the Beljo Co. and of the Pioneer Oil Co. Such claims involved title to or claimed equities or priority rights in the following-described properties, to wit:

The north half of the southeast quarter (N. ½ SE. ¼); southeast quarter of the southeast quarter (SE. ¼ SE. ¼) and northeast quarter of northwest quarter (NE. ¼ NW. ¼) of section four (4); southwest quarter of the northeast quarter (SW. ¼ NE. ¼) and west half of southeast quarter (W. ½ SE. ¼) of section two (2); west half of northeast quarter (W. ½ NE. ¼) and southeast quarter (SE. ¼) of section eleven (11); all section fourteen (14); the north half (N. ½), the southeast quarter (SE. ¼), the north half of southwest quarter (N. ½ SW. ¼), and southeast quarter of southwest quarter (SE. ¼ SW. ¼) of section fifteen (15); northeast quarter of northwest quarter (NE. ¼ NW. ¼) and northeast quarter (NE. ¼) of section twenty-two (22); all section twenty-three (23); all in township thirty-eight (38) north, range seventy-eight (78) west, of the sixth principal meridian, Wyoming.

The east half of northwest quarter (E. ½ NW. ¼) and southeast quarter (SE. ¼) of section twenty (20); all of section twenty-one (21); southwest quarter of the northwest quarter (SW. ¼ NW. ¼) and southwest quarter (SW. ¼) of section twenty-two (22); northeast quarter (NE. ¼), north half of the southwest quarter (N. ½ SW. ¼), and southeast quarter of southwest quarter (SE. ¼ SW. ¼) of section twenty-nine (29); north half (N. ½) of section twenty-eight (28); northwest quarter (NW. ¼), west half of northeast quarter (W. ½ NE. ¼), and southeast quarter (SE. ¼) of section twenty-seven (27); east half (E. ½) of section thirty-four (34); southwest quarter of northwest quarter (SW. ¼ NW. ¼), west half of southwest quarter (W. ½ SW. ¼), and southeast quarter of southwest quarter (SE. ¼ SW. ¼) of section thirty-five (35); north half of northeast quarter (N. ½ NE. ¼) and southeast quarter of northeast quarter (SE. ¼ NE. ¼) of section thirty-two (32); north half of southwest quarter (N. ½ SW. ¼) and southeast quarter of southwest quarter (SE. ¼ SW. ¼) of section thirty-three (33); all in township thirty-nine (39) north, range seventy-eight (78) west, of the sixth principal meridian, Wyoming.

The southeast quarter (SE. ¼) of section twenty-nine (29); south half (S. ½) of section twenty-eight (28); southwest quarter (SW. ¼) of section twenty-seven (27); north half and southeast quarter (N. ½ and SE ¼) of section thirty-three (33); and west half (W. ½) of section thirty-four (34); all in township thirty-nine (39) north of range seventy-eight (78) west, of sixth principal meridian, Wyoming.

The northeast quarter (NE. ¼) of section four (4); all of section three (3); west half (W. ½) of section two (2); southwest quarter of the northeast quarter (SW. ¼ NE. ¼) and the west half of the southeast quarter (W. ½ SE. ¼) of section two (2); all of section ten (10); west half (W. ½) of section eleven (11); west half of the northeast quarter (W. ½ NE. ¼) and southeast quarter (SE. ¼) of section eleven (11); the north half (N. ½), the north half of the southwest quarter (N. ½ SW. ¼), and the southeast quarter of the southwest quarter (SE. ¼ SW. ¼) of section fifteen (15); southeast quarter (SE. ¼) of section fifteen (15); all of section fourteen (14); northeast quarter of the northwest quarter (NE. ¼ NW. ¼) and northeast quarter (NE. ¼) of section twenty-two (22); and north half (N. ½) of section twenty-three (23); all in township thirty-eight (38) north, range seventy-eight (78) west, of the sixth principal meridian, Wyoming.

Two classes of applications were filed by parties claiming rights. At least three of these applications, based upon specific facts, were made under the provisions of section 18 of the leasing act. The other claims were made under the provisions of section 18a of the leasing act.

The first class of these claims—that is, those under section 18—came on for hearing before my predecessor and were decided adversely by him on March 1, 1921, three or four days before the present Secretary assumed the duties of his office. The decision of Secretary Payne is set out in full in the record transmitted to the Committee on Public Lands of the United States Senate. The decision itself recites that the claims were based upon locations made in 1904, several years prior to the withdrawal of these lands by Executive order, and at least one of the locations dates back to the year 1890. Protests against the allowance of the claims was made through the Department of Justice by the Navy Department, the allegations being, among other things, that there was not a producing well on any of said lands, etc. The opinion recites

that a well was begun in December, 1917, and completed to a depth of 355 feet, and that pumping proceeded for 24 hours, with the daily production of 8 barrels of oil; that another well was begun upon these lands at about the same time and was pumped for two days, with a daily production of 6 barrels of oil; that another well was begun in September, 1914, completed to a depth of 456 feet, and that pumping from April 30 to May 3, 1918, disclosed an average production of 10 barrels per day; that another well produced by pumping in 1918, 3½ barrels per day; and that other wells were drilled said to produce oil, but with "no commercial production."

The opinion continues: "The department is not convinced from the showing that possession of these particular claims under the mining laws was continuously maintained, particularly prior to the withdrawal of the lands." He continues: "Decision upon that point, however, is deemed unnecessary at the present time." The opinion then recites the provisions of the section of the act invoked and holds that this was applicable only to wells producing or capable of actual production of oil in paying commercial quantities at the time of the enactment of the leasing act of 1920, and the decision is to the effect that "none of the wells hereinbefore described, in the opinion of the department, meets this requirement."

Following this decision the parties in interest filed a motion for rehearing, which motion was denied by Assistant Secretary Finney, and from such decision, made on April 28, 1921, the parties filed an appeal in the nature of a motion for the exercise of the supervisory power of the Secretary, and with said motion filed additional evidence.

This motion has never been heard and was pending during the time that the policy of the Navy and Interior Departments was being considered, as hereinbefore referred to.

In the meantime no decision had ever been rendered upon the application filed under the provisions of section 18a, which involved a very much larger area of ground. This application was therefore also pending during such consideration, and up to the date of the acceptance by this department of the deeds executed by the claimants to the Mammoth Oil Co. and, in turn, the deeds for the same properties executed to the Government of the United States by the Mammoth Oil Co. when filing its application for a lease contract.

While the motion for a rehearing and the motion for the invocation of the supervisory power, as above referred to, were never heard by the Secretary, I am frank to say that the decision as to the equities or rights of these parties under the statute as handed down by my predecessor did not in all respects coincide with my views as to the law applicable to this case, and certainly not wherein he holds that a production of 8 barrrels and 10 barrels per day is not commercial production such as contemplated in the law to which he refers.

It is a well-known fact that approximately 58 per cent of the total oil production of the United States is from wells producing 5 to 6 barrels and less per day. To have handed down a decision, however, revoking the decision appealed from and pending would necessarily have resulted in the drilling of additional wells immediately by the applicants and claimants. Of course, under such conditions the Navy would have been entitled to its portion of the oil. Equally, of course, it would have been confronted with the problem as to what to do with it. With no pipe lines, no competitive markets, with the congested condition existing such as has been referred to, the naval oils or the proceeds thereof would have brought comparatively small prices—at least 60 cents per barrel less than such oils were worth in competitive markets—and the proceeds would have been turned into the miscellaneous fund of the Treasury.

Therefore, Mr. President, the Secretaries of the Navy and the Interior were, in attempting to formulate the proper administrative policy for the preservation of the interests of the Government in the oils of petroleum reserve No. 3, the Teapot Dome, at the beginning of the year confronted with these conditions, to wit: First, that by deferring productive drilling in naval reserves Nos. 1 and 2 in California great and irreparable losses had been incurred through the drainage of the governmental land by wells drilled upon privately owned or privately held lands; second, that serious, and as we believed, immediate danger of material losses to the Government was impending through the drainage of an area approximating at least 2,000 acres out of naval petroleum reserve No. 3; third, that in the event of an attempt to protect by drilling offset wells in petroleum reserve No. 3 such production could not be effective because of the geographical and commercial conditions existing in the Salt Creek field, as hereinbefore set forth. We realized that conditions were entirely different, as I have explained, in the California and in the Wyoming fields. In the one, to reiterate, we had competitive bidding, competitive prices, competitive pipe lines, and water communication through such pipe lines. In the other, Wyoming, no competitive bidding, a geographical monopoly, no pipe line except to a railroad, and that of insufficient capacity to convey the then daily production by 50 per cent of the total being produced, no pipe lines from the railroad, no pipe lines to the water, and no possibility of the Navy using the oils except through the sale in such restricted and noncompetitive markets, with the proceeds to the miscellaneous fund, or some exchange to be worked out based upon the low price of the crude oils in the Salt Creek field and the acquisition of naval fuel oils when needed.

Therefore, upon more full consideration the Secretary of the Interior was advised to ascertain what best contract could be made to relieve the situation and to avoid the losses in petroleum reserve No. 3, and at the same time, if feasible, to provide a competitive market for the royalty oils of the United States Government already being produced in Wyoming.

Proceeding to a consideration of this subject, the Secretary of the Interior, from December, 1921, through January, February, March, and until approximately the 7th of April, consulted with various independent oil companies or the gentlemen who were at the head of such companies operating in the United States, outlining to each of these parties his purposes, as follows, to wit: To secure the construction of a pipe line leading from the Teapot Dome and the Salt Creek field in Wyoming to a communication with the great pipe lines reaching Chicago, the Gulf points, and the east coast of the United States. This was realized, of course, as rather a stupendous proposition, involving the construction of such line to some point such as Carrollton, Mo., where the connecting pipe lines would be found. The distance is estimated as between 800 and 1,000 miles, and the cost of such pipe line as between fifteen and twenty millions of dollars. The advantages to be obtained are obvious, to wit: In the event the prices to be realized in the field were not satisfactory, or in event the exchange ratio was not considered the proper one, through the pipe line such conditions could be overcome by the transportation of the crude oil itself directly from the well and through the connecting pipe lines to points in Chicago or even to the Atlantic coast, when sale could be made or satisfactory exchange procured.

The second requirement communicated to the various parties with whom the matter was discussed was that competitive field prices should be established in the Salt Creek field, so that as to royalty oils now being produced under contract with the Shipping Board higher prices could be obtained for the United States Government, and more funds for the Reclamation Service, the State of Wyoming, and the miscellaneous fund of the United States Treasury.

The third requirement which the oil men were notified must be met was that in exchange for oil storage reservoirs should be constructed, to be the property of the United States Navy, at such points as that department might select upon the Atlantic coast or in the island of Cuba or elsewhere, such construction not to necessitate a cash appropriation by Congress, which had never theretofore been made for any such purpose.

It may be frankly stated that this entire matter was conducted by the Secretary of the Interior, as indicated, through conference in his office in Washington with representatives of at least three of the great oil companies of the United States outside of what is known as the Standard Oil group.

It may be as frankly stated that no prejudice against any of the Standard Oil companies caused the Secretary of the Interior to refrain from calling those companies in, but he did not so call them simply because of the fact that the Midwest Corporation, in Wyoming, is generally understood to be a Standard Oil subsidiary, and then had and now has a monopoly of the oil production of the entire State of Wyoming.

Another matter which was fully explained to the different oil men and others with whom discussion was had was that there were certain outstanding private claims of record against portions of the area of the Teapot Dome and that in the matter of the consideration of propositions submitted or to be submitted by any companies or individuals in the carrying out of the prime purposes as just set forth equitable consideration would be given to that proposition, accompanied by quitclaim deeds to the United States Government covering all of such private claims.

On about January 1, while at my home in New Mexico spending the holidays with my family, I received a telegram from J. W. Zevely asking if I would remain there a few days longer, as Mr. H. F. Sinclair and himself desired to meet me immediately and present to me an application for a ruling with reference to deferred payments upon Indian lease lands in Oklahoma. Within the time limited Mr. Sinclair and Mr.

Zevely, with their respective wives, traveling in a private car, reached Three Rivers. They presented their particular problem for my consideration and secured from me a telegram to the department in Washington, calling its attention to a possible necessary modification of certain rules then in force.

These parties remained at Three Rivers, my home, for two or three days, residing upon their car and visiting with my family and myself.

The day that Mr. Sinclair left Three Rivers, he for the first time asked me if I were contemplating the opening up of the Teapot Dome. I answered immediately that I was considering the matter, but was yet awaiting final reports from the Bureau of Mines experts in that field upon the danger of immediate drainage. I was then informed that if the policy of the Navy and the Interior Departments was to open up this field he would be glad to consider making a proposition to the Government. I detailed to Mr. Sinclair exactly what I have heretofore set forth and which had theretofore been communicated to two or three oil men, as I have stated.

Shortly after my return to Washington, namely, on February 3, 1922, Mr. Sinclair and his attorney came into my office and presented me a paper stating that it contained an outline of what he was willing to do if he should receive a contract for the development of petroleum reserve No. 3. This memorandum is herewith attached, and marked "Exhibit M."

Various consultations were held between the representatives of the Navy, particularly Admirals Robison and Gregory, and between the Secretary of the Navy and myself, touching these matters, and I communicated to them the outline of the Sinclair proposition. I again had conferences here in my office with various oil men, and I outlined to each of these gentlemen generally the propositions as I was considering them, and to each of them the outline of the memoranda proposition of Sinclair. I particularly stressed the fact that Mr. Sinclair stated that if his proposition was considered favorably he would deliver all outstanding titles to the Government of the United States, and that if the parties with whom I was discussing the matter were not able to make better bids than the parties who might hold the titles, equitable consideration under the same conditions would be given to the latter.

The final conclusion of this matter, after almost continuous consultation between the Navy and the Interior Departments, was the formulation of a skeleton contract setting out the royalties which would be required, the exchange provisions and others, and containing practically the identical terms as finally embodied in the signed and executed contract now held by the Mammoth Oil Co. The details, however, were under consideration for many days, and consultations with other independent oil companies and their representatives were proceeding in the meantime. When attention was called to certain provisions with reference to pipe lines and connections, particularly frank statements were made by such representatives of well-known financial ability that although they could finance the proposition without difficulty, they could not enter into exchange transportation agreements such as were finally demanded and to which Mr. Sinclair acceded. The royalties offered by Mr. Sinclair were more than those offered by either or any other party during these discussions.

The transaction being finally completed, the contracts executed and delivered on April 12, I handed to the Secretary of the Navy his triplicate copy with a brief setting forth the contents of the contract itself, prepared for his ready information at his personal request after he had first gone over with me personally the contract and had executed the same.

Now, Mr. President, I shall refer to a matter which may be considered in the nature of a changed policy, to some extent, in the handling of the oils from the naval reserves and oils for naval use.

In the purchase of oils for current use and in the expenditure of moneys appropriated by Congress for such purposes the Navy Department has been seriously handicapped because such purchases must be made for delivery where they could be available, which, of course, means where the naval fuel oil can be delivered to the naval vessel.

Unfortunately no provision has heretofore been made for the securing of storage reservoirs, to become the property of the Navy, so located and equipped that the Navy might, as a purchaser in the markets taking advantage of a low market, store its oils, to be drawn from such storage as needed. The Navy has been compelled to make contracts with those who had oils for sale, generally covering six months' periods or more, to be taken when the seller proposes to deliver it, and through the temporary use of storage provided by the seller himself.

For the reasons hereinbefore set forth in detail, for the reason just given, and in what by the Navy is conceived to be the interests of true, genuine, efficient, and economical preservation of its own oils, the Secretary of the Navy, I presume under the advice of his experts and certainly with the cordial approval of the Secretary of the Interior, and, as I understand, with your equally cordial approval, evolved the policy of providing metal or other equally efficient storage at strategic points where the oil, as drawn from the naval reserves exchanged for the proper naval test fuel oils, can be stored.

It is an established or admitted fact that fuel oils stored in proper metal containers, or even in cement tanks properly constructed, will lose less than 1 per cent in volume and in quality in a period of 10 years' time. Therefore I may say that unless it had been established beyond any question of a doubt that naval oils in the ground would not be affected by drilling within the same field or neighborhood, it became the decided policy to withdraw such oils. At the same time it was and is the announced policy, meeting with your approval, as I understand it, that such oils, unless in case of vital necessity, shall not be thrown upon the market or used for current needs, but shall be stored as fuel oils to be retained as under the policy of the former administration, except that they should be so stored and retained at available strategic points where in a crisis the same could be and would be immediately accessible and available for the uses of the Navy in the creation of power.

The Congress of the United States has heretofore by legislation enacted no contrary policy. The Congress has created no reserves, nor has it legislated with reference to the same except through the acts heretofore cited in this connection. The Secretary of the Navy and the Secretary of the Interior, as administrative officers, deemed themselves under your direction responsible for the proper administration of the trust imposed upon them. The two departments have in the actions taken, and now reported in detail to you, as heretofore they have been reported and discussed from time to time both privately with yourself and in your Cabinet meetings, administered this trust as they understood it under the law, and as they equally well believed for the best interests of the country and particularly of the Navy.

In closing this extended communication it may not be improper to say that in the matter of the disposition of oils upon the withdrawn lands of the United States criticism has been incurred, and doubtless will from time to time be engendered. The records of this department will show that various contests between private claimants and others have been under consideration from time to time, and fairly well-verified rumor would indicate that a defeated party in said contest has, through some influence wielded in one or another way, been able to secure some benefit at the hands of the party through whom he has been defeated in what possibly he may sincerely have thought to be his rights. It may be possible that such cases have occurred in the Salt Creek field, Wyoming. Rumors have reached this department that one or more parties have claimed to be interested in some manner in all or a portion of the claims hereinbefore described, and to which the Government has by its contract with the Mammoth Co. quieted title in so far as the Government itself is concerned. Rumors of suits to be brought by, for, or against private individuals or companies for violation of some contracts or promises or agreements with relation to some of these claims have reached the ears of the Secretary of the Interior.

While as a lawyer deprecating litigation, and particularly when the object of the same may be other than a final legal conclusion of legal rights, yet it may be if litigation between such parties were to ensue in this case the clearing of the atmosphere might disclose the identity of some parties really in interest in newspaper and other agitation, and may result in disclosing the fact that, while prior to a full understanding of the results reached in the contract relating to the Teapot Dome, many perfectly sincere and thoroughly honest and conscientious people thought there might be something to criticize, as a matter of fact such criticism may have been largely brought about by parties interested in their own financial welfare in forcing not from the Government but from other parties some financial concessions.

I do not feel called upon to apologize for the length of this communication, Mr. President, because every word of it has been written that through you it may be given the widest publicity.

It has not been written in the slightest degree as an attempt at defense of actions or of policies. The writer recognizes no necessity for such defense. It is written in a frank desire that those entitled to know, and the public generally, who are, of course, so entitled, may have an explanation frankly and freely

and fully given of the acts, policies, and motives of at least one, and, speaking for the Secretary of the Navy, of two of the members of your official family.

I am, sir,

Very sincerely yours,

ALBERT B. FALL, *Secretary.*

The PRESIDENT,
The White House.

NAVAL OIL RESERVE LEASES (S. DOC. 210).

Mr. SMOOT. I submit a resolution and ask that it be read.

The resolution (S. Res. 305) was read, as follows:

Resolved, That the message of the President of the United States, with the accompanying communication from the Secretary of the Interior, and illustrations, in response to Senate Resolution 282, requesting certain information concerning naval reserve oil leases, be printed as a Senate document, and that 4,000 additional copies be printed for the use of the Senate document room.

Mr. SMOOT. I will simply state that more than 4,000 copies can not be ordered printed by a Senate resolution because of the fact that the cost would exceed $500. It requires a concurrent resolution of the two Houses to authorize a cost exceeding $500. I ask unanimous consent for the present consideration of the resolution.

The resolution was considered by unanimous consent and agreed to.

RECESS.

Mr. McCUMBER. I move that the Senate take a recess until to-morrow at 11 o'clock a. m.

The motion was agreed to; and (at 6 o'clock and 50 minutes p. m.) the Senate took a recess until to-morrow, Saturday, June 10, 1922, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

FRIDAY, *June 9, 1922.*

The House met at 12 o'clock noon and was called to order by the Speaker pro tempore [Mr. WALSH].

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Vouchsafe, dear Lord, Thy blessing upon us this day. Enlarge and intensify our thought of service to all the people. Let the highest standards always incite our motives. May all evil be suppressed. Grant that Thy spirit may go forth carrying with it stability to the weak, wisdom to the erring, and strength to the faltering. Arise, O God, with blessing in Thy shadow, for our country waits for Thee and needs the touch of Thy power. In Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate by Mr. Craven, its chief clerk, announced that the Senate had passed bills of the following titles, in which the concurrence of the House of Representatives was requested:

S. 2168. An act for the relief of Jesse C. Dennis and William Rhett Eleazer;

S. 3620. An act to authorize the construction of a bridge across Pearl River at Tilton, Lawrence County, Miss.; and

S. 3458. An act to authorize the Niagara River Bridge Co. to reconstruct its present bridge across the Niagara River between the State of New York and the Dominion of Canada, or to remove its present bridge and construct, maintain, and operate a new bridge across the said river.

The message also announced that the Senate had passed without amendment the bill (H. R. 11265) to authorize the maintenance of a bridge constructed across the Pend Oreille River at the town of Usk, in the State of Washington.

MUSCLE SHOALS.

Mr. McKENZIE. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Illinois rise?

Mr. McKENZIE. Mr. Speaker, as acting chairman of the Committee on Military Affairs I have this morning submitted a report on the bill H. R. 11903, known as the Muscle Shoals bill, and also accompanying that report are the views of part of the minority, prepared by Mr. WRIGHT, of Georgia. Mr. PARKER of New Jersey, one of the members of the committee, has prepared a minority report which I assume a number of other members will wish to sign. Mr. PARKER being absent to-day at West Point, I ask unanimous consent that any member of the Committee on Military Affairs may have five days in which to file minority views.

The SPEAKER pro tempore. The gentleman from Illinois asks unanimous consent that any member of the Committee on Military Affairs may have five legislative days in which to file minority views on the bill H. R. 11903. Is there objection?

Mr. GARRETT of Tennessee. Mr. Speaker, reserving the right to object, may I ask the gentleman if he is in a position where he can inform the House as to the probability as to when this bill will be considered?

Mr. McKENZIE. I will say very frankly to the gentleman from Tennessee that I am not able to give him that information. Personally I would be glad to see an early consideration of the measure.

Mr. GARRETT of Tennessee. Mr. Speaker, this, of course, is a matter of very large portent. There is a great deal of interest here and in the country. I had hoped that the gentleman might be in a situation that he could indicate whether it was purposed to pass—I assume it is to be considered under a rule?

Mr. McKENZIE. That is my understanding.

Mr. GARRETT of Tennessee. Is it the gentleman's purpose to ask for a rule at once?

Mr. MONDELL. Will the gentleman from Illinois yield?

Mr. McKENZIE. I yield.

Mr. MONDELL. It seems to me, Mr. Speaker, that it is impossible for anyone to say just now when this matter can be taken up for consideration. My present thought is that there ought to be some action taken at a reasonably early date, but until we have had a chance to read the reports and digest them and know just what has been suggested, it is difficult for anyone to say just when the matter ought to be taken up for consideration.

Mr. GARRETT of Tennessee. I, of course, am not asking that a date be fixed now, but I thought it perfectly fair that there might be given the House a statement as to the attitude toward it.

Mr. MONDELL. To be entirely frank with the gentleman, I do not think that anyone could properly say now that we would or would not take up the Muscle Shoals matter in the near future. I think that is a matter that must be decided after the reports are before us and have been digested. It is not a simple matter. There is an item on the military bill, put on by the Senate, proposing a continuation of work on the Wilson Dam. There is some question as to whether or no that appropriation ought to be provided and the work go on, or take up the Muscle Shoals reports and dispose of them. There are quite a number of possibilities in the situation, and I do not think anyone would be justified in saying now just what ought to be done or just when it ought to be done.

Mr. GARRETT of Tennessee. Mr. Speaker, if the gentleman will indulge me just for a moment, I do not think that the appropriation put on in the Senate providing for a continuation of the work has a necessary bearing upon the disposition of the report of the Committee on Military Affairs on the Ford and other offers which have been made.

Mr. MONDELL. It might have a very considerable bearing on it if after reading the report the situation appeared to be one with so many troublesome and difficult questions involved in it that we were not prepared to pass finally upon them; it might be found advisable to go on with the work temporarily. I do not want to create the impression that that is my view or the view of anyone. The situation is one in which just at this time I do not believe anyone would be justified in suggesting what we ought to do. The desire of gentlemen on both sides is to dispose of this matter finally just as soon as it is possible to do it in a proper way with proper consideration.

Mr. McKENZIE. If the gentleman will permit, in justice to the majority leader [Mr. MONDELL] it is proper for me to say that when we finally came to a conclusion on this matter in the committee we consulted him about the possibility of getting this up in the House for consideration. He said to me at that time that it would be impossible and improper to make any statement as to when it could be taken up until our reports were filed and Members of the House had an opportunity, at least, to read them.

I think that is perfectly fair, but in order to expedite matters under that law we got busy in our committee and prepared our report with just as great haste as possible. Otherwise, possibly we would not have filed these reports until Monday. But inasmuch as it was a matter of such great importance that Members of the House should have an opportunity to read the reports, I have undertaken the responsibility of filing these reports to-day even in the absence of some of my colleagues on the committee.

Mr. QUIN. Will the gentleman yield?

Mr. McKENZIE. I will.

Mr. QUIN. Do you not think that the Committee on Rules ought to give the Committee on Military Affairs a hearing as to when they should bring this out?

Mr. McKENZIE. It will be taken up to the Committee on Rules.

Mr. OLIVER. May I ask if the opinion of the Attorney General is filed with the report?

Mr. McKENZIE. That was filed with the report. It was included in the report along with the report of the Judge Advocate General of the United States Army.

Mr. GARNER. Will not the gentleman modify his request, so that it will not interfere with the consideration of this report in case it is desired to do so within five days? That is the customary way. I do not want those who are opposed to this measure to have the excuse for delaying its consideration.

Mr. McKENZIE. I have no objection to modifying my request accordingly.

The SPEAKER pro tempore. The gentleman from Illinois asks unanimous consent that the members of the Committee on Military Affairs may within five legislative days file minority views on the bill—H. R. 11903—concerning Muscle Shoals, not to interfere with the consideration of the measure. Is there objection? [After a pause.] The Chair hears none.

PENSIONS FOR STATE MILITIA ORGANIZATIONS.

Mr. LANGLEY. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 211.

The SPEAKER pro tempore. The gentleman from Kentucky moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 211——

Mr. LANGLEY. And pending that motion——

Mr. STAFFORD. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. STAFFORD. Has this bill been given any privileged status by a report from the Committee on Rules?

Mr. LANGLEY. I will say to the gentleman from Wisconsin that it has.

The SPEAKER pro tempore. The Chair did not hear the inquiry of the gentleman.

Mr. STAFFORD. It is whether this bill has been given any privileged status by a report of the Committee on Rules.

The SPEAKER pro tempore. The Chair is not aware of any rule being adopted giving this bill a privileged status.

Mr. LANGLEY. I was referring to the general rules of the House.

Mr. STAFFORD. Mr. Speaker, I make the point of order that the motion of the gentleman from Kentucky is not in order, the bill not being privileged.

Mr. LANGLEY. This bill was reported by the direction of the Committee on Invalid Pensions and from the floor.

Mr. MONDELL. Why is it not in order?

The SPEAKER pro tempore. The gentleman from Wisconsin will state the point of order. The Chair did not hear it.

Mr. STAFFORD. The point of order is that the motion of the gentleman is not privileged under the rules of the House. To-day is the second Friday of the month. Under clause 6, Rule XXIV, providing for the consideration of bills on the Private Calendar, we find the following language:

> On Friday of each week, after the disposal of such business on the Speaker's table as requires reference only, it shall be in order to entertain a motion for the House to resolve itself into the Committee of the Whole House to consider business on the Private Calendar in the following order: On the second and fourth Fridays of each month preference shall be given to the consideration of private pension claims and bills removing political disabilities and bills removing the charge of desertion.

I wish to call the attention of the Chair to the fact that the bill for which the gentleman asks unanimous consent for consideration in the Committee of the Whole House on the state of the Union is a public bill, not on the Private Calendar, it being found on the Union Calendar, and therefore does not come within the provisions of clause 6, Rule XXIV, providing for consideration of business on the Private Calendar.

Mr. CAMPBELL of Kansas. Mr. Speaker, the gentleman from Wisconsin evidently has overlooked paragraph 56 of Rule XI of the Manual, as follows:

> The following-named committees shall have leave to report at any time on matters herein stated, namely, the Committee on Rules, the Committee on Invalid Pensions, general pension bills.

That is the committee now reporting, and they are reporting a generai pension bill.

Mr. STAFFORD. Oh, Mr. Speaker, the distinguished chairman of the Committee on Rules confuses the purpose of the clause which has just been called to the attention of the Chair. It gives to the Committee on Invalid Pensions the privilege of making a report, but it does not give the committee the right to have the bill a privileged bill.

Mr. LANGLEY. Will the gentleman yield to me there?

Mr. STAFFORD. Surely.

Mr. CAMPBELL of Kansas. I think the gentleman from Wisconsin is answering himself, if the gentleman from Kentucky will allow him to proceed.

Mr. LANGLEY. I will, except that I want to call his attention to the fact that where the rule provides that a committee shall have the privilege of reporting at any time, that privilege is also extended to the consideration of the measure whenever it is brought up.

Mr. GARRETT of Tennessee. If the gentleman will permit, it seems to me the jurisdiction of the Committee on Invalid Pensions, which is made privileged in the rule, is as to legislation affecting the pensions of soldiers and sailors of the Civil War and the widows of such soldiers and sailors. That means, I had supposed, soldiers and sailors who were mustered into the service of the United States during the Civil War and, of course, the widows of such soldiers and sailors. This bill defines a new class of pensioners, persons who were not mustered into the service of the United States, and has not the privilege which would attach to any bill which would relate to the soldiers or sailors of the Civil War.

Mr. CAMPBELL of Kansas. I call the attention of the Chair to the fact that this class of bills has always been considered under this rule and reported as this bill by the Committee on Invalid Pensions. The militia of the State of Missouri was given a pensionable status under a bill similar to this and considered under paragraph 56, Rule XI—a bill reported from the Committee on Invalid Pensions. That was many years ago.

Mr. GARRETT of Tennessee. Does the gentleman say it was considered as a privileged bill? Of course, I know it came from the Committee on Invalid Pensions.

Mr. CAMPBELL of Kansas. Bills from that committee have always been considered as privileged when they involved general pension legislation.

Mr. GARRETT of Tennessee. My own recollection is—I may be in error about it—that this bill in the past has not been treated as a privileged bill. Of course, it has been hanging around here for 40 years. I do not recall that the question was raised at the last time it was considered.

Mr. CAMPBELL of Kansas. The question of the jurisdiction of the Committee on Invalid Pensions to consider a bill reported as a general bill by that committee has not been raised, because of the sweeping terms of the rule under which it makes its report, and, having reported the bill, it is called up under privilege.

Mr. GARRETT of Tennessee. It is not a question of jurisdiction that is raised here now by the gentleman from Wisconsin. The jurisdiction may be conceded. It is too late to raise that question. But it is a question of privilege and that which it involves. There are many bills over which the committee has jurisdiction that might not be privileged. Other committees at any time have the power to report privileged bills. For instance, the Committee on Ways and Means deals not only with matters that are privileged but also matters that are not privileged. The mere fact that certain matters under the jurisdiction of the Committee on Pensions are privileged does not make everything coming from that committee privileged.

Mr. CAMPBELL of Kansas. The gentleman will note that this is a general bill, specifically covered by the rule; a bill reported by the Committee on Invalid Pensions, and it is now called up as a privileged bill.

Mr. GARRETT of Tennessee. But it is not a bill to grant pensions to soldiers or sailors of the Civil War, or to the widows of soldiers or sailors of the Civil War. It is a bill to grant pensions to another class of persons who claim to have had military service.

Mr. CAMPBELL of Kansas. That is a matter to be decided by the Committee on Invalid Pensions, and having decided that it was within their jurisdiction and that it is a bill of a general character, it comes within the rules.

The SPEAKER pro tempore. The gentleman from Wisconsin [Mr. STAFFORD] makes the point of order that the motion of the gentleman from Kentucky [Mr. LANGLEY], namely, that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 211, is not in order at this time, and he directs the attention of the Chair to the provision in clause 6 of Rule XXIV, which pro-

vides in substance that on Friday of each week, after the disposition of such business on the Speaker's table as requires reference only, it shall be in order to entertain a motion that the House resolve itself into Committee of the Whole House to consider business on the Private Calendar in the following order: On the second and fourth Fridays of each month preference shall be given to private pension claims and bills removing political disabilities and bills removing desertion charges, and on every Friday except the second and fourth Fridays the House shall give preference to the consideration of bills from the Committee on Claims and the Committee on War Claims, alternating between the two committees.

The attention of the Chair also has been directed by the gentleman from Kansas [Mr. CAMPBELL] to the provision of clause 56 of Rule XI, which provides that "the following-named committees shall have leave to report at any time on the matters herein stated: The Committee on Rules on rules, joint rules, and order of business"; then, after enumerating several others, "the Committee on Invalid Pensions, general pension bill." The fact that this is the second Friday of the month would not make this motion in order under the provisions of clause 6 of Rule XXIV.

This bill, however, was reported by the Committee on Invalid Pensions on March 27 last, the Chair is advised, as a privileged bill reported from the floor with all points of order reserved. It deals with the pension act of May 11, 1912, by extending its provisions, not to certain specific individuals but to a class of proposed beneficiaries who heretofore have not come under the law relating to pensions.

The present occupant of the chair had occasion to pass upon a question somewhat akin to this when the bill relating to the monthly payment of pensions was reported. A point of order at that time was made, that it was not in order to move to resolve the House into Committee of the Whole House on the state of the Union for the consideration of that bill, because that proposed legislation was not within the purview of the language of clause 56 of Rule XI. The Chair at that time held that that language in the rule, namely, "general pension bills," meant bills or legislation general in character, as distinguished from bills of a private character or bills restricted in their purpose or effect. The precedents seem to hold that the right to report legislation at any time carries with it the right to have that legislation considered at any time, provided it is not in conflict with other rules of the House covering the procedure and precedence of legislation."

The Chair has examined the provisions of this bill—H. R. 211—and is of opinion that it is general in character, in that it adds another class to come within the benefit of the laws heretofore enacted for the payment of pensions; and that while it is not in order under the provisions of clause 6, Rule XXIV, it having been reported from the floor as a privileged bill under the provisions of clause 56, Rule XI, which would seem to be somewhat in conflict with clause 6 of Rule XIV, this latter rule should, in the view of the Chair, be held superior. This being a privileged bill, the gentleman from Kentucky [Mr. LANGLEY], in the judgment of the Chair, is entitled to make the privileged motion to resolve the House into Committee of the Whole House on the state of the Union for its consideration. The Chair therefore overrules the point of order.

Mr. LANGLEY. Mr. Speaker, pending the consideration of my motion, I desire to see what agreement can be reached as to the amount of time for general debate. I see the ranking minority Member [Mr. RUCKER] here, the gentleman from Missouri. I suggest that we limit general debate to two hours, one-half of the time to be controlled by the gentleman from Missouri, the ranking minority member of the committee, and the other half by myself.

The SPEAKER pro tempore. The gentleman from Kentucky asks, pending the motion, that the general debate be limited to two hours, one half to be controlled by the gentleman from Missouri [Mr. RUCKER] and the other half by himself. Is there objection?

There was no objection.

The SPEAKER pro tempore. The question is on the motion of the gentleman from Kentucky [Mr. LANGLEY] that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 211.

The question was taken, and the Speaker pro tempore announced that the ayes appeared to have it.

Mr. STAFFORD. A division, Mr. Speaker.

The SPEAKER pro tempore. The gentleman from Wisconsin asks for a division.

The House divided; and there were—ayes 70, noes 24.

Mr. STAFFORD. Mr. Speaker, I make the point of order that there is no quorum present, and challenge the vote just taken for that reason.

The SPEAKER pro tempore. The gentleman from Wisconsin makes the point of order that there is no quorum present, and objects to the vote for that reason. It is evident that there is no quorum present. The Doorkeeper will close the doors. The Sergeant at Arms will bring in absentees. The question is on the motion that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of H. R. 211. Those in favor will, as their names are called, answer "yea," those opposed "nay," and the Clerk will call the roll.

The question was taken; and there were—yeas 181, nays 58, not voting 190, as follows:

The result of the vote was announced as above recorded.

The SPEAKER pro tempore. A quorum is present. The Doorkeeper will open the doors.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 211) to extend the provisions of the pension act of May 11, 1912, to the officers and enlisted men of all State militia and other State organizations that rendered service to the Union cause during the Civil War for a period of 90 days or more, and providing pensions for their widows, minor children, and dependent parents, and for other purposes, with Mr. DOWELL in the chair.

Mr. LANGLEY. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. LANGLEY. Mr. Chairman, in previous Congresses I have discussed this question so many times that I shall take very little time now, as several other gentlemen desire to be heard. In order to economize time, I ask unanimous consent that I may revise and briefly extend my remarks in the RECORD on this bill.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent to revise and extend his remarks. Is there objection?

There was no objection.

Mr. LANGLEY. Mr. Chairman, I have now been a Member of this great body for nearly 16 years. Before I had that honor conferred upon me, while I was first a candidate for Congress, I promised the old militia soldiers and their widows and other dependents in my district that I would use every effort in my power to secure the enactment of the bill which is now before you. [Applause.] Year after year since I have been here this bill has been up for consideration either in the committee or in the House. In the Sixty-fifth Congress it was passed by the House almost unanimously. The bill provides, in brief, that these State militiamen and members of other State organizations who, although not regularly mustered into the United States service, nevertheless rendered service in the suppression of the rebellion under the command of Federal officers, shall be given the benefit of the existing pension laws, which now apply only to the cases of those who were regularly mustered into the United States service.

Inasmuch as a colleague of mine is going to cover the question, I shall not take the time to go into the history of the service of these organizations in detail. The report which I had the honor to submit to this body is quite elaborate and contains an elaborate statement of the character and importance of the service which they rendered to the Union cause. In the State of Missouri there were, as I recall it now, 110,000 of these militia soldiers. In the State of Kentucky there were 75,000. I believe that there was some foundation for the statement made by our deceased beloved colleague, former Speaker Clark, that but for the services rendered by these organizations the States of Missouri and Kentucky would not have remained loyal to the Union, and no one can tell what effect that would have had upon the fate of the Union cause and upon our history. I think the hand of Divinity was in it all. These men were armed and equipped by the Federal Government. In some instances the equipment was paid for first by the several States, but afterwards the United States Government reimbursed the States for those expenses, thereby recognizing the valuable services which they rendered to the cause of the Union.

The existing service pension law requires a minimum service of 90 days, as gentlemen are aware. This bill provides that it must appear that the beneficiary under this act has rendered that much service under the command of Federal officers and while aiding in the suppression of the rebellion. The saddest part of it all to me is that this Government has deferred so long this just recognition of the services of these patriotic men and their widows and dependents, and I feel——

Mr. ROSE. Will the gentleman yield?

Mr. LANGLEY. Yes.

Mr. ROSE. I have often wondered why it was that there has not been some bill presented to Congress providing for a general pension law that would take in all such conditions as the gentleman has called to our attention and do away with the thousands of private pension bills introduced every session and then die a natural death. This is not in any manner a credit to our lawmakers. Is it not possible to have a bill that would reach every person who rendered any service on behalf of the Government of the United States and pension him under our laws?

Mr. LANGLEY. I have been a member of the Committee on Invalid Pensions for 12 years. During that time I have consistently and persistently advocated the liberalization of our pension laws. If I had had my way about it, these militiamen and their widows and dependents would have been pensioned years ago. Our distinguished former Speaker, Mr. Clark, whose memory we all revere, said on the floor when discussing my bill, which passed the House in the Sixty-fifth Congress, that this bill ought to have been passed 50 years ago. As I stated before, I have always been in favor of liberal pension legislation.

Mr. RAKER. Will the gentleman yield?

Mr. LANGLEY. Certainly.

Mr. RAKER. What does this language mean: "Under the command of United States officers during the Civil War, and who actually rendered such service for a period of 90 days or more in any of the said military organizations during said war?" When did that period end, and would it apply to these pensioners?

Mr. LANGLEY. It applies to any service rendered during the Civil War.

Mr. RAKER. When did it end?

Mr. LANGLEY. I think it has been officially determined that the Civil War ended on April 9, 1865. There were portions of the country where belligerent conditions existed longer than that, but that is the date, I think, that has been officially determined by the Secretary of the Interior and by the courts as the end of the Civil War.

Mr. ANTHONY. Will the gentleman yield?

Mr. LANGLEY. I will.

Mr. ANTHONY. In regard to the service provision the bill reads "90 days or more in any of the said military organizations." That term refers to the military organizations.

Mr. LANGLEY. Yes.

Mr. ANTHONY. And it means that they must have served 90 days in a military organization under command of Federal officers.

Mr. LANGLEY. They might have served in different organizations and the total service amount to 90 days, which would give them a pensionable service.

Mr. ANTHONY. I understand. During the Civil War, during Price's raid up into northwestern Missouri, the Kansas Militia was called out and participated in the battle of Westport and served, some 30 days and some 60 days, and rendered valuable service. They had 90 days' service in the organization but only 30 or 60 days under command of Federal officers.

Mr. LANGLEY. They would not come, I think, under the provisions of this bill.

Mr. ANTHONY. I think they ought to.

Mr. LANGLEY. So do I, and I wish to say that if I had my way about it I would reduce the time to less than 90 days. It is a question of how far we can safely go, as the gentleman knows, and get the bill through.

Mr. ANTHONY. I hope the language will be made absolutely clear.

Mr. LANGLEY. That will come up in the consideration of the bill under the five-minute rule. The gentleman understands the difficulty that those who believe in liberal pension legislation have to encounter. I started to say a moment ago that the saddest thing about this matter to my mind is that the Government has waited so long before doing justice to these old fellows—which I am sure this body is going to do them to-day—that they are nearly all gone. Of the 110,000 of the Missouri Militia and 75,000 of the Kentucky Militia, practically all of them have passed across the river. I do not believe—of course it is impossible to determine it accurately—but I do not believe there will be more than 1,000 or 1,200 beneficiaries in the State of Kentucky.

The gentlemen representing the State of Missouri can speak of the situation there, but I do not believe there will be over 1,500 to 2,500 in that State that will be benefited by this bill. Of course, a great many who will come under this bill have drifted into other States, and they are expecting their Congressman to help pass this bill for them. The record of this bill is evidence, to my mind, of the truth of the old saying that republics are sometimes ungrateful.

I am glad to find what seems to be a practically unanimous sentiment in doing justice to these old soldiers and their widows, and I have every reason to believe that this bill when it reaches another body will be passed with no opposition.

Mr. HARDY of Colorado. Mr. Chairman, will the gentleman yield?

Mr. LANGLEY. Yes.

Mr. HARDY of Colorado. What is the amount of pension to be given them?

Mr. LANGLEY. They are to be given the same rate of pension under the same conditions as existing law, the act of May 11, 1912, and if there is any doubt about the act of May 1, 1920, applying to their cases, I am authorized by the committee to offer as a committee amendment a provision to include the act of May 1, 1920.

Mr. ROSE. Will the gentleman yield?

Mr. LANGLEY. Yes.

Mr. ROSE. I was very much pleased to hear the gentleman say that he is opposed to a minimum service of 90 days. I have always been in favor of a very liberal pension to every man who ever served the Government, and once on the floor of this House I made the statement that I would favor a law giving a pensionable status to every soldier if he served the Government for only one day. I think the gentleman has said that he would like to see the time reduced to 90 days, although he has not yet mentioned the minimum that would be satisfactory to him. For myself I would be satisfied with the service of one day. My suggestion was not favorably received by the House, but it struck a responsive chord in the hearts of many soldiers, as can be shown by letters in my possession.

Mr. LANGLEY. I think we ought to do everything in our power for the man who served our Government any length of time, but the gentleman understands the difficulties. I would not like to see an amendment adopted to this bill which would reduce the minimum service lower than that provided in existing law for regularly enlisted soldiers, because it would jeopardize the bill.

Mr. WOODRUFF. Would the gentleman be opposed to an amendment that would make it possible to give a man a pensionable status who had seen a combined service of 90 days under militia officers and Federal officers? I think if the gentleman would agree to that it would put the militiaman upon the same basis as the Regular Civil War veterans, which I think should be done.

Mr. LANGLEY. The gentleman will understand that while I am the ranking member of the committee, I am speaking only as an individual, and I would not at this stage of the proceedings care to agree to any amendment of that kind without conferring with the other members of the committee.

Mr. WOODRUFF. I am sure that if the gentleman would agree to that none of the other members of the committee would object.

Mr. LANGLEY. I am afraid the gentleman is exaggerating the influence of the gentleman in charge of the bill, but personally I see no objection to the amendment he suggests.

Mr. CHINDBLOM. Mr. Chairman, will the gentleman yield?

Mr. LANGLEY. Yes.

Mr. CHINDBLOM. Did these men render service to the Union cause under militia officers, or was their service to the Union cause rendered while they were under the control of Federal officers?

Mr. LANGLEY. They were under the general control of Federal officers. That is the limitation included in my bill.

Mr. CHINDBLOM. So that the militia service which they may have rendered was not a war service at all?

Mr. LANGLEY. Oh, yes; most of them served in the State, but many of them went out of the State, and I know a number of cases in Kentucky where they went down South and served, but others who remained in the State took the place of those who had to go out of the State.

Mr. CHINDBLOM. Did those in the various States render war service?

Mr. LANGLEY. Unquestionably they did, and the purpose of this bill is to recognize that service. In a great many of the Southern States, including Kentucky, they have passed bills pensioning Confederate soldiers. I have no objection to that; but here are these militiamen in the State of Kentucky, for example, who rendered the same kind of service for the Union cause that these men on the other side rendered for the Confederate cause. Yet the latter are receiving a pension and the former are not, but they help to pay the Confederate pensions. I think that is an indefensible condition of affairs.

Mr. RAKER. Could the gentleman tell us what action Congress took relative to the militiamen during the War of 1812? Were they given a pensionable status?

Mr. LANGLEY. I do not recall. A number of years ago I delivered an address on the historic phases of the pension system, going back to the beginning, but that is a good many years ago, and I confess that I do not recall exactly all the details.

Mr. CLARKE of New York. Can not the gentleman from Kentucky furnish the gentleman from California with a copy of that speech?

Mr. LANGLEY. Yes; I would be very glad to do that, if he wishes it.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. LANGLEY. Yes.

Mr. RHODES. I would like to answer the question of the gentleman from California.

Mr. LANGLEY. I yield to the gentleman from Missouri for that purpose.

Mr. RHODES. I desire to answer the question asked by the gentleman from California. I have reviewed the history of all pension legislation in the United States; and the militia soldier

of every war, from the Revolutionary War down to the Civil War, has always been given the same status that the Regular was given.

Mr. LANGLEY. I am glad to have my friend give the gentleman from California the information he desires.

Mr. Chairman, I reserve the balance of my time and yield five minutes to the gentleman from Missouri [Mr. RHODES].

Mr. RHODES. Mr. Chairman, I am pleased to support the bill H. R. 211 and hope to see it become a law without delay. The first bill I introduced when I came to Congress in 1905 provided for a pensionable status for the militia soldiers of Missouri that cooperated with the Union Army in suppressing the War of the Rebellion. I have had a similar bill before each session of Congress since that time during my term of service and have now a similar bill—H. R. 2257—pending. This bill seeks to extend the provisions of the pension act of May 11, 1912, to all loyal militia organizations in the United States that actually rendered military service under the command of Regular Army officers in suppressing the War of the Rebellion. Because of the unique position Missouri occupied during the Civil War we had a large number of these loyal militia soldiers in our State. While Missouri strongly sympathized with the South, yet she never seceded from the Union during that great struggle from 1861 to 1865. I therefore wish to review the part our loyal militia soldiers of Missouri took during the Civil War in preserving the Federal Union. However, before doing so I wish to give a brief résumé of the history of pension legislation in the United States.

Doctor Glasson, in his work on military pension legislation, defines a military pension to be—

> A regular allowance made by a government to one who has been in its military service, or to his widow or dependent relatives.

It occurs to me that his definition is so comprehensive that no further proof ought to be required of the soldier claiming the right to participate in the benefits of pension legislation than to prove he was in the military service of the United States. Since the Government has the right to demand the service of its citizen in time of war, it is but right that the soldier be cared for by the Government in old age and in adversity. I believe the paying of a pension not only to be a proper act of gratuity, which the world concedes to be right, but the discharge of an equitable obligation. Pensions in our country by various acts of Congress have been classified as "invalid pensions" and "service pensions."

An invalid pension is one granted the soldier on account of wounds or injury received or disease contracted in the military service. A service pension is one granted the soldier who has been in the service of a specified length of time, without regard to the question as to whether or not he incurred injury or disability in the service. Our country at various times has granted both invalid and service pensions to its loyal soldiers. The act of May 11, 1912, partakes of both the invalid and service pension features.

The policy of our Government to grant liberal pensions to its loyal soldiers is older than the Republic. The first general pension law written upon the statute books in the United States was enacted August 26, 1776. The law was consistent with the colonial system of pension legislation which had been practiced in the New World for more than a century. It provided half pay for life or during disability to every officer, soldier, or sailor who lost a limb in any engagement, or being so disabled in the service of the United States as to render him incapable of earning a livelihood. The first colonial pension law was enacted by the Pilgrim Fathers at Plymouth in 1636, and it was the first pension law enacted in America. Its provisions were very similar to the act above mentioned and contained these words:

> Every man who shall be sent forth as a soldier and returned maimed shall be maintained competently during his life.

You will observe the right of the Government to demand the service of its citizen in time of war is clearly set out in this language, as well as the duty of the Government to maintain its dependent loyal soldier. Washington was a strong advocate of pensions and advocated a policy so broad and liberal as to bring within its provisions all Regulars, volunteers, and militia forces, the only requirement being that the soldier must have fought against the common enemy in defense of his country.

Formerly pension laws were more liberal than now. March 23, 1792, a law was enacted providing that judges of courts of record—State, Territorial, and Federal—were authorized to take testimony supporting the claim of a soldier for pension. The judge thus taking the testimony was then required to transmit the same to the Secretary of War, whose duty it was to enter the name of the applicant upon the pension rolls if found worthy. The effect of this law caused much friction between the legislative and judicial branches of the Government.

John Jay, then Chief Justice of the Supreme Court, in passing upon an application for a writ of mandamus relating to a certain claim for pension under the act of 1792, in refusing the writ declared with great boldness the independence of the judiciary as a distinct and coordinate branch of government. Congress soon repealed this act and created other methods by which proof was to be made.

April 10, 1806, Congress enacted its first general and most liberal invalid pension law. The act provided pensions for all volunteers, State troops, and militia forces who served against the common enemy in the Revolutionary War. To this act I invite your special attention for two particular reasons: First, it provided specifically a pensionable status for the militia soldier and established a precedent for recognizing his services along with other loyal soldiers. In the second place, the result of this act was that regulations were established for the first time in the history of our country providing that an increase of pension might be granted by Congress in cases where justice demanded; in other words, that Congress might grant special pension bills.

The important point I wish to make in this connection is, the militia soldier of the Revolutionary War was placed upon the same plane with the volunteer and the regular, and with them given a pensionable status. By act of Congress approved April 24, 1816, Congress enacted an invalid pension law providing pensions for the militia soldiers who served in the United States Army in the War of 1812.

Many acts were passed recognizing the militiaman, and by general law approved February 13, 1871, the militia soldier of the War of 1812 was given a pensionable status. The act contained the following provision:

> "All surviving officers and enlisted and drafted men, including militia and volunteers, who served 60 days in the United States service in the second war with Great Britain" (War of 1812) were given a pensionable status. By act of March 9, 1878, the act of February 13, 1871, was amended by reducing the minimum service from 60 to 14 days, but in other respects was left as in the original act—that is to say, a militiaman who fought in the War of 1812 against the common enemy for 14 days was given a pensionable status. By act of Congress approved January 29, 1887, a pensionable status was granted the militia soldier of the war with Mexico, and contains the following provision: "All surviving officers and enlisted men, including marines, militia, and volunteers, who served 60 days in the Army or Navy of the United States in the War with Mexico shall be entitled to pensions."

Now, Mr. Chairman, I have cited a few of the many instances which show the militia soldier of every war through which our country has gone, except the great Civil War, has been recognized and given a pensionable status. The period of time, however, from the close of each war to the date of the various acts having varied from 23 to 56 years.

From the close of the Revolutionary War to the enactment of the first general militia pension law was 23 years. From the close of the War of 1812 to the enactment of the first general law which gave a pensionable status to the militia soldier of this war was 56 years, and from the close of the Mexican War to the enactment of the general law giving a pensionable status to the militia soldier of this war was 39 years. It has now been 57 years since the gallant Lee surrendered himself and what remained of his once proud army, on the 9th day of April, 1865, at Appomattox Courthouse, to the invincible Grant.

Has not the time fully come when we should recognize the service of the militiaman of the Civil War? To the many great and beneficent acts of the United States thus far achieved in the present century, let us add the recognition of our militia soldiers.

The loyal militia soldiers of Missouri were called into service by virtue of a special agreement entered into between President Lincoln and Governor Gamble, of Missouri. These organizations are known in the official war records as "Militia of Missouri," and of this militia force there were many militia organizations. These war records were completed and published in 1902 under Elihu Root, then Secretary of War, and are unquestionably authentic. These militia forces were under command of Regular Army officers, and that they rendered substantial service in suppressing the War of the Rebellion there can be no question.

By act of Congress dated March 25, 1862, the then existing pension laws were extended to the Missouri Home Guards, one of the militia organizations that was not mustered into the Regular Army.

By special act of Congress, February 15, 1895, the Provisional Missouri Militia was also given a pensionable status. Just why the Enrolled Missouri Militia, the six-months militia, the provisional enrolled militia, the Missouri Militia organized under

General Order No. 3, dated January 30, 1865, and all other loyal militia organizations were never given a pensionable status is not clear to me. In fact, there is no good reason why these loyal militia soldiers should not be accorded the same generous treatment that has been given all loyal militia organizations of all other wars. That is what this bill seeks to do.

Mr. HUSTED. Will the gentleman yield?

Mr. RHODES. I will.

Mr. HUSTED. If these units were actually part of the Union Army, what is the provision of the existing pension laws which excludes them from benefiting?

Mr. RHODES. The provision of existing law which precludes them from benefits is that they were not regularly mustered into the United States Army. In other words, they came into the Army by virtue of general orders issued by the War Department under agreements with the governors of the several States.

Mr. GRAHAM of Illinois. Will the gentleman yield?

Mr. RHODES. I will.

Mr. GRAHAM of Illinois. About what is the estimated number of these survivors?

Mr. RHODES. Well, the best information that we can get is that the total number of persons who would be beneficiaries would be about five or six thousand soldiers and widows.

First, let me call your attention to the agreement entered into between President Lincoln and Governor Gamble, and some of the reasons which made it necessary. To begin with, Missouri did not occupy the same position with respect to the Federal Government as did most of the other States of the Union, because Missouri was the very borderland between the North and the South, and party lines were so tensely drawn every citizen of the State either allied himself with the North or with the South or fled the country. It will be remembered the southern boundary line of Missouri is not only a geographical line which separates Missouri from Arkansas, but is a line which was of historic consequence for more than a quarter of a century prior to the great Civil War, and is recognized by historians as one of the pivotal points on which the peace of the Nation rested for 40 years.

The President realizing the necessity for holding Missouri in the Union, the reasons for which are unnecessary to state, was prompted to deviate from the well-fixed rules of military law and practice in dealing with the Missouri situation. President Lincoln, as Commander in Chief of the Army of the United States, had a right to make such Executive orders affecting the Army as the exigencies required. (See vol. 1, ser. 3, pp. 618–619, inclusive, of the Official Records of the Union and Confederate Armies.)

As a result of this agreement General Order No. 96 was issued by the War Department of the United States, which legalized the agreement, so far as the Federal Government was concerned, and reduced it to the form of military law by which these forces were to be enrolled, armed, equipped, and governed. General Order No. 96 is of record in series 1, volume 3, pages 565–566, inclusive, Official Records of the Union and Confederate Armies.

November 25, 1861, General Order No. 1 was issued by the Governor of the State of Missouri in which he published the agreement entered into between the State and the United States authorities, thus giving official sanction to the agreement on the part of the State of Missouri. (S. Doc. 412, 59th Cong., 1st sess., p. 23.)

The next step in carrying out the agreement was the appointment by the Governor of Missouri of a brigadier general of the Missouri State Militia, which he did within two days, viz, November 27, 1861, by appointing Brig. Gen. John H. Schofield, of the United States Army, who at once assumed command of all the militia of the State—Senate Document No. 412, Fifty-ninth Congress, first session, page 24.

These loyal militia soldiers forced into the United States Army remained in active service until March 12, 1865, thus serving two years and eight months, and many of them furnished their own horses and equipment. In addition to this, the State of Missouri has been reimbursed by the Federal Government for every dollar expended in the organizing, arming, and the maintenance of these loyal militia organizations.

To show you how President Lincoln approved the services of the Enrolled Missouri Militia, one of these organizations that will be given a pensionable status by this bill, I wish to quote from a letter he wrote October 5, 1863—Volume 22, series 1, part 2, page 604, Rebellion Records:

As to the Enrolled Missouri Militia, I shall endeavor to ascertain better than I now know what is its exact value. Let me say, however, that your proposal to substitute national force for the enrolled militia implies, in your judgment, the latter is doing something which needs to be done; and if so, the proposition to throw that force away and to supply the place by bringing other forces from the field where they are equally needed seems to be very extraordinary. Whence shall they come? Shall they be withdrawn from Grant, or Banks, or Steel, or Rosecrans? Few things have been so gratifying to my anxious feelings as when in June last the local force in Missouri aided General Schofield to so promptly send so large a general force to the relief of General Grant, then investing Vicksburg and menaced from without by General Johnston. Was this all wrong? Should the enrolled militia then have been broken up and General Herron detached from Grant to police Missouri? So far from finding cause to object, I confess to a sympathy for whatever relieves our general force in Missouri and allows it to serve elsewhere. I therefore, as at present advised, can not attempt the destruction of the enrolled militia in Missouri. I may add that, the force being under the national military control, it is also within the proclamation in regard to the habeas corpus.

A. LINCOLN.

In addition to this, President Lincoln, by proclamation dated April 16, 1863, suspending the privilege of the writ of habeas corpus in cases of persons in the military and naval service of the United States, brought all these loyal militia forces regularly into service, as shown by General Orders, No. 96, which is as follows:

General Orders, No. 96.

HEADQUARTERS DEPARTMENT OF THE MISSOURI,
St. Louis, September 17, 1863.

The proclamation of the President, dated Washington, September 15, 1863, suspending the privilege of the writ of habeas corpus in the cases of persons belonging to the land and naval forces of the United States, and other persons therein described, will be held to apply to all Missouri Militia called into active service under the orders of the department commander. By command of Major General Schofield.

J. A. CAMPBELL,
Assistant Adjutant General.

Just think of it, Mr. Chairman, soldiers called into active service by proclamation of the President, held in service by military authority, commanded by United States Army officers, and relieved from duty by general orders of the War Department; yet all these loyal militia soldiers have been denied a pensionable status up to this time. They were recognized as part of the great Union Army from 1861 to 1865, and are so recorded in the history of the Rebellion Records.

In addition to the above-mentioned militia organizations in Missouri, we had a number of independent companies that were de facto in the United States Army. I have in mind the John R. Cochran Independent Company C, that was ordered into active service August 10, 1863, and served continuously until July 8, 1865, under various reenlistments under General Orders, No. 3, mentioned at pages 227 and 229, Senate Document No. 412.

Something has been said about the probable cost to the Government on account of the passage of this bill. It will be remembered that it has been 57 years since the close of the Civil War and that but few of the old militia soldiers are living. According to Senate Document No. 412, the total enlistment of loyal militia soldiers in Missouri was about 24,000, with perhaps an additional 1,000 belonging to independent companies. Of this number there were many reenlistments, and of course some did not serve as much as 90 days. Hence it is safe to assume that the total number of these soldiers in Missouri who served as much as 90 days did not exceed 20,000. I have gone to every practical source for information on the subject and am of the opinion that not more than 1,500 of these soldiers are living to-day in Missouri who will be affected by the provisions of this act. There are only about four States in the Union that can be affected by this bill, and as Missouri has more than any other one State it is safe to assume there is not more than 6,000 all told, including widows, in the United States who will be affected by the passage of this bill. Suppose half of this number should go upon the pension rolls immediately at $70 a month and the other half at $50 a month. In that event the total sum would be about $350,000 monthly, aggregating a little over $4,000,000 annually. In the light of present-day expenditures, this is a very small sum indeed, and at the rate these old soldiers are dying this sum will entirely disappear within the next 5 or 10 years, at the outside.

We have expended one and a half billion dollars for compensation, hospitalization, and rehabilitation of our ex-service men since the close of the World War, and Congress will pass a bonus law giving additional adjusted compensation for these soldiers before the present session adjourns. So let us, before it is everlastingly too late, do simple justice to this class of our loyal soldiers who have too long been neglected.

Let there be no misunderstanding as to my position in my reference to what we have done for our World War soldiers. I have cheerfully supported every measure providing for their relief, voted for the bonus law we recently passed, and shall continue to support legislation in the interest of our ex-service men. In fact, I believe it to be the duty of the Government to sympathetically care for our soldiers of all wars. It will require the passage of this bill to constitute a well rounded out system of pension legislation consistent with the policy of this Republic. [Applause.]

Mr. RUCKER. Mr. Chairman, I yield 15 minutes to the gentleman from Georgia [Mr. LARSEN].

Mr. LARSEN of Georgia. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. The gentleman from Georgia asks unanimous consent to revise and extend his remarks. Is there objection? [After a pause.] The Chair hears none.

Mr. LARSEN of Georgia. Mr. Chairman, the late war, so far as I am concerned, coined a new word, "camouflage," but it remained for the present administration, and particularly the Attorney General, to show its practical peace-time application.

To my mind one of the most farcical performances which this country has ever witnessed was the pretended effort made by the Attorney General and his apparently dumb detectives to arrest John L. Phillips, the Republican referee for Georgia, on Saturday and Sunday last. It will be recalled that Phillips surrendered in Washington Monday afternoon.

It is not definitely known whether he came from his home in Philadelphia on that day for the purpose of enabling detectives to perfect the scheme of a fake arrest, in accordance with preconceived plans of the distinguished Attorney General, or whether it was for the purpose of quieting newspaper publicity.

It is practically certain, however, that so far as the Attorney General is concerned the whole scheme was for the purpose of diverting public attention from charges that were being made through columns of the press against himself. If you please, for the purpose of creating a smoke screen between the Attorney General and the public while a breastwork of deception could be erected to shield him from the uncomfortable darts of criticism hurled at him from every quarter of the country.

Yes; the performance of the Attorney General and his so-called detectives was a very remarkable one. It will certainly live in history. It reminds me very much of the name given to one of Shakespeare's plays, entitled "Much Ado About Nothing."

In this connection I desire to say that in my judgment every citizen of this country who attempted or intentionally defrauded his Government during its participation in the recent World War is morally and at heart a traitor, and deserves to be hanged higher than Haman.

It is not my purpose to protect Mr. Phillips or anyone else. If Mr. Phillips is guilty, he should suffer the penalty of the law, and if others are guilty, they should suffer the severest penalties that can be legally imposed. But, Mr. Chairman, it is my purpose at this time to call attention to what I believe is a scheme of the administration, especially of the Attorney General, not so much to prosecute Mr. Phillips as to shield himself from the public criticism that is being so well and fearlessly directed against him. I doubt whether Mr. Phillips will ever be prosecuted. I doubt whether he will be indicted. I doubt whether it is the purpose or intention of the Department of Justice, especially the Attorney General, to indict him. The future alone will determine this question. If he is guilty, I hope he will be indicted, but I doubt whether it was even contemplated that such should be done.

In my time, Mr. Chairman, I ask that there be read by the Clerk of the House an editorial appearing in the New York World, under date of June 7, dealing with the precise question to which I now address myself.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

A PROSECUTION OR A RED HERRING?

John L. Phillips, chairman of the Georgia Republican State committee, has been arrested under warrant of the United States Department of Justice charging him with frauds in the disposal of unused Government war materials; he has not been indicted by a Federal grand jury.

Mr. Phillips is not alone in declaring or in suspecting that the Department of Justice has outpaced its own grand jury in singling out for arrest a Republican politician who has been attacked on the floor of the House by Representative JOHNSON, also a Republican, in order to draw a red herring across a fresh and tempting trail. That trail leads back to the Department of Justice itself, and to its head, Attorney General Daugherty. It is a much more important trail than Mr. Phillips can have left, even if all that is charged against him shall prove true. The whole is greater than its parts; if there is no public confidence in the conduct of the Department of Justice all its works fall into contempt together.

Not often in the past has it been possible to suspect the head of the Department of Justice of instituting criminal proceedings for political purposes; never, perhaps, for the purpose of diverting attention from an Attorney General under attack. The department has criticized as dilatory, as conservative, as reactionary; but within the limits set by its nature and precedents it has been respected as approaching impartiality and disinterestedness as closely as any similar agency in history. To have such a high reputation wrecked, even temporarily, is a blow at the prestige of the Government.

That is the case to-day; it can not be denied, concealed, forgotten or lightened in gravity by any pettifogging device or diversion or delay. Nobody can have, nobody will have, confidence in the doings of the Department of Justice until the charges under which the Attorney General lies are fairly and fully investigated, not excused or ignored or evaded.

Mr. LARSEN of Georgia. Mr. Chairman, the action of the Attorney General and his detectives in trying to arrest Mr. Phillips appears to me to be as nonsensical and ludicrous as the answer of the mountaineer who went down to the seaside to spend a week end. When he got down there he met a lady who inquired of him, "Have you come down for the week end?" To which he replied, "No, madam; I have stomach trouble."

Mr. Chairman, it must be apparent to everyone that the arrest of John L. Phillips was staged with the view of obtaining as much newspaper publicity as possible.

The public was well prepared in advance for what the Attorney General did. For several days we were told that a great sensation was in store for the public; that some prominent official was going to be prosecuted, and prosecuted without gloves. These reports emanated from the Attorney General's office and were published throughout the States. Of course, we did not know who this great public official was. We never suspected, and we had no reason to suspect. But what happened? "The laboring mountain must bring a mouse," so it turned out that a Republican, away down in Georgia where there are no other Republicans to be offended, where there exists no Republican Party and never will, had been arrested. Of course, he was to be arrested as a part of the program, not for the purpose of prosecution, I fear, but for the simple and sole purpose of diverting public attention from the Attorney General.

The Attorney General had promised us some days before, according to reports appearing in the press, that he would start out on a prominent Democrat. Oh, yes; we were prepared along that line as a camouflage for the performance pulled off on Republican Phillips.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. LARSEN of Georgia. I wish the gentleman from Missouri would yield me five minutes more.

Mr. RUCKER. I yield to the gentleman five minutes.

Mr. LARSEN of Georgia. The Attorney General would have it appear that Phillips had been seen in the District Building, where the grand jury is investigating war frauds, several days previous and that he had fled the country to avoid arrest.

In this connection we should remember that on Thursday of last week the Rules Committee of the House rescinded its action favorably reporting the Woodruff resolution providing for a congressional investigation. The distinguished chairman of the committee, after carrying the rule around in his pocket for several days, if not for weeks, without reporting it to the House, changed his position on the matter, as did the gentleman from Minnesota [Mr. SCHALL], and thereby made it impossible for the Congress to order the kind of investigation desired by the country, and to which it is entitled.

With such an investigation the Attorney General would not be permitted to direct the scope of the investigation, the kind of testimony that should be developed. When the investigation was completed the public would feel that no one had been shielded.

The Attorney General would not be permitted to direct the matter in any way, and the public, who is, after all, a good judge of what is or is not proper to be considered in such proceedings, would be given full information and opportunity to see that no guilty party escapes justice.

Mr. CAMPBELL of Kansas. Will the gentleman yield for a question?

Mr. LARSEN of Georgia. For a question.

Mr. CAMPBELL of Kansas. What would be the effect of the judgment of the public, for instance, in the Phillips case, whether they decided him guilty or not guilty, whether he had defrauded or not defrauded, as compared with the result of a verdict of a grand jury?

Mr. LARSEN of Georgia. I understand that the resolutions offered by Mr. WOODRUFF and Mr. JOHNSON provided for a general investigation and not Phillips alone.

Mr. CAMPBELL of Kansas. Or any case.

Mr. LARSEN of Georgia. As it provides for a general investigation it will satisfy the demands of the public, to know and understand that the Attorney General, who is himself under fire, has not the opportunity and will not be given the opportunity to cover up testimony that might show the guilt of various parties throughout the country. We would then know the facts as regards Phillips, Jones, and other parties, both Democrats and Republicans.

Mr. CAMPBELL of Kansas. Will the gentleman yield further?

Mr. LARSEN of Georgia. I will.

Mr. CAMPBELL of Kansas. Does the gentleman think the public more interested in this sensational investigation by congressional committee than in criminal prosecution and any civil action for recovering the property and money?

Mr. LARSEN of Georgia. The purpose of the investigation is to institute criminal prosecutions. It is not for grandstand play. It is for the purpose of seeing that the guilty parties are prosecuted, and the gentleman from Kansas ought to know that fact very well.

Mr. BEGG. Does the gentleman know of any case, either under a Democratic or Republican administration, where a congressional investigation ever resulted in a man going to the penitentiary?

Mr. LARSEN of Georgia. Shall I understand from the question that the gentleman would make the statement that there are none?

Mr. BEGG. The gentleman knows my question. Will he answer it or will he not?

Mr. LARSEN of Georgia. I will answer it. Do not be uneasy about that. Does the gentleman mean to make the statement on the floor of the House that no man whose acts have been aired by an investigating committee has been sent to the penitentiary?

Mr. BEGG. I want the gentleman to tell me what committee of either party ever unearthed evidence that sent a man to the penitentiary.

Mr. LARSEN of Georgia. The gentleman from Ohio displays such a lack of common knowledge of the history of this country that I do not deem it proper to answer him, except further than to say that many a man who has been under the X ray of congressional investigation has been sent to Leavenworth.

Mr. BEGG. Who were they?

Mr. LARSEN of Georgia. The gentleman should read a little history.

Mr. BEGG. Who were they?

Mr. LARSEN of Georgia. Let the gentleman read a little history and then he will be better informed.

Mr. BEGG. It is no answer for the gentleman to make a statement like that. He can not produce the evidence, and he does not.

Mr. GRAHAM of Illinois. Mr. Chairman, if the gentleman will yield, I will say to the gentleman from Georgia that if the gentleman from Ohio will read the evidence before the War Expenditures Committee he will find evidence that would send certain gentlemen to the penitentiary.

Mr. LARSEN of Georgia. Yes. I am quite sure the gentleman from Ohio never read it or he would not have asked the question he did.

Mr. Chairman, the public is deeply concerned in this matter. The public desires to know and will not be satisfied with an investigation made under the instructions and direction of the Attorney General, who himself is under fire.

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. LARSEN of Georgia. Mr. Chairman, may I have five minutes more?

Mr. RUCKER. Mr. Chairman, I will give the gentleman five minutes more.

The CHAIRMAN. The gentleman from Georgia is recognized for five minutes more.

Mr. LARSEN of Georgia. Now, I want to call your attention to another performance. A determined effort has been made to bridle the press of this country. I am sorry to say that it has not all been done by the distinguished Attorney General, but the President, the Chief Executive of this country, has in my judgment undertaken to do a thing that Congress itself under the Constitution is not permitted to do. The Constitution provides that Congress shall pass no law that will abridge the freedom of the press, and yet the great Executive of this Government, the man who is supposed to execute the laws, criticizes the press because it has seen fit to comment upon the various charges that have been made against his distinguished Attorney General. The Attorney General is under fire, and the Chief Executive criticizes the papers that would dare to speak out and let the people know; the papers that would transmit to the public the information that is being given day after day in the Congress of the United States regarding his acts and doings.

What do you think of that?

Mr. CAMPBELL of Kansas. Mr. Chairman, will the gentleman yield?

Mr. LARSEN of Georgia. I will yield for a question.

Mr. CAMPBELL of Kansas. The gentleman has criticized the arrest of Mr. Phillips. Is it the contention of the gentleman that there is not sufficient evidence to warrant his arrest or indictment?

Mr. LARSEN of Georgia. I have indeed been very unfortunate if I have so badly failed to make myself understood as the question propounded by the gentleman from Kansas would indicate. I have not undertaken to pass upon the Phillips case. The gentleman heard the testimony in charges made by two distinguished Members of his own party, Messrs. WOODRUFF and JOHNSON, for both of whom I have a very high regard. Both are regarded very favorably not only by the Members of this House but by the people throughout the Nation. According to that testimony I would say yes; there is reason for it. I do not know whether Phillips is guilty or not, but the Attorney General should not try to obtain cheap publicity by waiting until a man goes off to Philadelphia, and when he should know very well where he went, have detectives running around to fake an effort to arrest him. Whoever heard of trying to catch criminals and advertise to the public in advance the intention to do so? Of course Mr. Phillips could have been arrested in Philadelphia, but he arranged his bond and came back to Washington to surrender. Such performance will not shield the Attorney General from the public criticism that is being so ably directed against him.

If he is going to arrest one party, why not arrest all of them? I want to see not only Mr. Phillips but all the others who are under charges investigated. I want everyone, as I said at the outset, who has robbed this Government to be punished. I desire that everyone who has defrauded the Governernment shall be placed under the X ray of investigation. I want the public to know who has defrauded the Government when the investigation is over; that it has been free of bias and prejudice. We can not expect such result of the Attorney General, who himself is under fire. If you will give the House an opportunity to vote on the resolutions of either Mr. WOODRUFF or Mr. JOHNSON of South Dakota, the country will get the investigation that is needed and will know the guilty parties without having to rely on the say-so of the Attorney General, who is himself in disrepute. [Applause.] Mulhall, of Baltimore, the notorious lobbyist; Martin and Lamar, of New York, known as the "Wolf of Wall Street," were all prosecuted and convicted as the result of inquiries begun in Congress. Why not uncover the facts at this time by such method and scatter the cloud of suspicion that hangs over the head of the Attorney General?

The CHAIRMAN. The time of the gentleman from Georgia has expired.

Mr. RHODES. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri?

There was no objection.

Mr. LANGLEY. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has 32 minutes.

Mr. LANGLEY. Mr. Chairman, I yield five minutes to the gentleman from California [Mr. OSBORNE], the only Member of this House who was in the Union Army during the Civil War. [Applause.]

The CHAIRMAN. The gentleman from California is recognized for five minutes.

Mr. OSBORNE. Mr. Chairman and gentlemen of the committee, the necessity for the legislation attempted by this bill is about like this: During the Civil War on several occasions our friends from the South fought their way into the Northern States, into Pennsylvania, and into all the border States, and some great battles were fought as the result. In the East here the Battles of Chancellorsville, Antietam, and Gettysburg were among the most notable. The country was very much alarmed about the progress of our southern friends, and the President called upon the governors of the Northern States for the assistance of their militia. They were called out as regiments of State militia for short periods or emergencies, and they got together as rapidly as possible. As a boy I saw many of these regiments leave Northern States for the front during the war. They were all equipped properly, and were taken South, and in many instances, and in fact in most cases, these regiments were regularly mustered into the United States service. They did good service and some of them suffered heavy casualties. However, the exigency was so great and the time was so short that in many instances, notably in Missouri, Pennsylvania, and other States, they were not so mustered into the United States service.

Now, under the rulings of the Pension Bureau and under the laws no one is eligible to a pension who was not regularly mus-

tered into the United States service and received an honorable discharge therefrom. The men who belonged to these regiments that were not mustered in were at an obvious disadvantage, and I presume that every Member here has had applications for pensions from members of these militia regiments, and, of course, they always met the same result. They can not be granted under present laws. It is the purpose of this bill to place those regiments that were not mustered in upon the same footing as those that were mustered in, where they served under United States officers. They will be subjected to the same restrictions as those now applied to those who were regularly mustered in and also to those who were in the regular national service. That is, they must have had 90 days' service under United States officers. There are now thousands of surviving soldiers who did not serve the full 90 days, and they are ineligible to pensions. It will not make anyone eligible to a pension who failed to serve 90 days, and its only purpose is to put these men who failed to be mustered in, through no fault of their own, on an even footing with those who were regularly mustered in. That is the sum and substance of this bill. It is a worthy bill and it ought to be passed.

The CHAIRMAN. The time of the gentleman has expired.

Mr. RUCKER. I yield 10 minutes to the gentleman from Michigan [Mr. WOODRUFF].

Mr. WOODRUFF. Mr. Chairman, I understand that while I was temporarily absent from the Chamber the gentleman from Georgia [Mr. LARSEN] discussed the J. L. Phillips case about which we have seen so much in the papers in the last few days. It will be remembered that Mr. Phillips was the moving spirit in the firm of Phillips & Stephens, the firm which handled the sale of surplus lumber for the Government following the war. It will also be recalled that in referring to this case Mr. Ernest C. Steward, of the contract audit section, said in a memorandum to his superior officer:

"Although over 15,000 contracts have been investigated and audited by our office, it can be stated beyond argument that the contract in question is one which for criminal ingenuity is surpassed by none."

It must not be forgotten that this same J. L. Phillips was, according to the Government auditors, guilty of defrauding the Government out of more than $1,800,000, and while this sum is small as compared to those involved in some of the other war frauds, yet it is rather a tidy sum, and if it is recovered, as it can be, it will help materially to meet the deficit which the Secretary of the Treasury says is facing us.

I hope the Department of Justice is not going to adopt as a permanent policy the course pursued in the case of J. L. Phillips. Last Sunday morning's Times published an article with a heading 2 inches high across the top of the front page stating that Mr. J. L. Phillips was about to be arrested. It seems they had not found him yet, notwithstanding the fact that he was known to have been in Washington for several weeks at least. I say I hope this is not going to be the permanent policy of the Department of Justice, because if they pursue this particular method of bringing culprits to justice it will probably result in a whole lot of them getting out of the country before the officers of the law can finally overtake them. I want to say, however, that in this particular instance I do not think any damage was done, for the reason that one week before this item was published in the press of Washington it came to me through three different and very reliable channels that Mr. J. L. Phillips had stated to some of his intimate friends that conditions had become such on the hill that he probably would have to be indicted, but that it would not go any further than that. I want to notify the Department of Justice here and now, and I want to notify the Members of Congress, that under the circumstances the J. L. Phillips case is one in which I am taking a great deal of interest, and I shall watch the development in that case very, very carefully.

Mr. Chairman, during the past month there has been a most belated but nevertheless a very feverish attempt upon the part of the Attorney General to whip into shape an organization for the prosecution of the war grafters. One ex-Member of the House and an ex-Member of the Senate, as well as a sitting Member of the House, have been retained to assist in this work. Other eminent members of the legal profession have been retained. Invitations to participate have been extended to still other eminent members of the bar. And it is announced that 50 rooms have been engaged in a building in Washington to house these prosecutors.

All this has been done after 14 months of inactivity upon the part of the Department of Justice. It has been done since April the 11th, the day upon which in a speech in the House I threatened the impeachment of the Attorney General if he did not promptly do his full duty in regard to these cases. It seems to me, Mr. Chairman, and it seems to the people of the country that these feverish preparations now going on have for their immediate object the lulling to sleep of an expectant public. That this eleventh-hour conversion was not without its effect upon the compliant Rules Committee of the House is shown by the action of this committee when on May 31 it met and rescinded its former action in favorably reporting the Woodruff-Johnson resolution calling for an investigation of the War and Navy Departments expenditures, the Alien Property Custodian's office, and the Department of Justice.

To show that an investigation by a select committee is as necessary to-day as it was two months ago, I propose to disclose by submitting a few additional facts. An investigation by a congressional committee must necessarily be of a nonpartisan character, as such committees are made up of members of both parties. The members of these committees are or should be held responsible for their actions in all things by their constituents, and in a matter so closely touching every fireside of the Nation any member would write his political death sentence were he to do other than give to this work the very best that was in him.

The hearings would be open to the public, and the newspapers could be depended upon to carry to every corner of the country the facts developed. A real investigation of any of these cases has in the past and would in the future produce evidence leading to other cases. As an illustration I will cite the experience of Capt. H. L Scaife, who was retained by the Department of Justice to investigate the air contracts and who resigned when he became satisfied it was not the purpose of the Attorney General to permit the Department of Justice to function in the war fraud cases. In making his investigations he found evidence which took him into other fields, and he developed fraud in connection with the Alien Property Custodian Office, the Shipping Board, the Ordnance and Quartermaster Departments of the War Department, and the sale of surplus war stocks. A real investigation, whether by the Department of Justice or a committee of Congress, would have similar results.

I believe the people of the country demand that every man guilty of fraud in connection with war contracts be brought to the bar of justice, and this can not be done without a most thorough and searching investigation. To show no such procedure is proposed by the Attorney General, notwithstanding his very recent display of activity, it is only necessary to quote from a statement he recently gave to the press. It is in part as follows:

> It is not until the audit comes from the department where the matter originated that the Department of Justice has any jurisdiction in the premises. The department has not the right to go to any other department of the Government and examine or audit its books or its claims.

Clearly this does not indicate the searching investigation called for by existing conditions. Instead it bespeaks a determination to investigate and prosecute only those cases officially brought to the Attorney General's attention by the several departments. Crooks on the outside could not long successfully perpetrate frauds upon the Government without the connivance of crooks on the inside. Many of the men in the departments who handled these war contracts are still in these departments, and it is safe to say that none of those who are guilty will bestir themselves to bring their culpability to the attention of the prosecuting power of the Government.

During the past two months in my speeches on the floor I have cited case after case which have lain in the archives of the Department of Justice for periods of time ranging from one month to more than a year without a step being taken to protect the public interest and to bring the guilty to justice. Not one charge I have made has been refuted. They have not even been denied.

Notwithstanding the fact that many months ago the Attorney General was urged to ask Congress for funds to carry on this work, he neglected to do so until after the gentleman from South Dakota [Mr. JOHNSON] and I had called the attention of the country to the deplorable conditions existing in the Department of Justice. Now, in his endeavor to convince the public he means business, he has gathered around him some men in whom I have confidence and some in whom I have not. The conditions would not be different were they all men of whom the entire country would approve, for no matter what their qualifications, no matter how enthusiastically they may enter upon this work, they are only subordinates, and as such must obey the instructions of the man who for 14 long months has failed to bring to the bar of justice one single war grafter and who still reserves to himself the power to say who shall and who shall not be prosecuted.

The action of the Rules Committee in rescinding its action takes from the House the power to say whether it desires a thorough cleaning up of this putrid mess. It takes from the membership of the House the right to go on record in this vitally fundamental matter. It takes from the people whom you gentlemen represent the representation which is theirs under our Constitution and laws, and it will not be countenanced by the American people. And, Mr. Chairman, I wish to prophecy again that when the Members of the House return to their constituencies and have the opportunity of discussing this question with their people they will come back here for the December session with a determination to get to the bottom of this mess. They will come back here convinced that a congressional investigation is the only thing which will do the work in the way it should be done, for such an investigation, properly conducted, would produce the evidence in practically all the war fraud cases, and an aroused public opinion would force the hand of even a reluctant Attorney General. [Applause.]

Mr. KING. Will the gentleman yield?

Mr. WOODRUFF. Certainly.

Mr. KING. Would not the gentleman think that a congressional investigation would be advisable if it should appear upon investigation that men who had been engaged in this crooked business since the war were being assigned by the War Department to assist some of our good friends who have been employed as attorneys to conduct these prosecutions?

Mr. WOODRUFF. Of course the investigation is necessary, for all those facts are known and other facts equally reprehensible will be shown by proper investigation.

Mr. Chairman, I ask unanimous consent to extend my remarks by inserting in the RECORD a letter mailed on May 6 to the Attorney General by the gentleman from South Dakota [Mr. JOHNSON] and myself. We have had the same experience in our correspondence with him as have other Members of this body—we have had no answer to our letter, of which the following is a copy:

WASHINGTON, D. C., *May 6, 1922.*

Hon. HARRY M. DAUGHERTY,
Attorney General, Washington, D. C.

DEAR SIR: In the New York Times of May 5 you are quoted as follows:

"There is little of interest to be said in regard to the articles appearing in the newspapers regarding the discussions in the Senate and elsewhere constituting an attack upon the administration and naturally an attack upon the Department of Justice. This may be expected from time to time.

"The real people behind this movement, aside from the partisans interested, have not yet shown their hands or their heads. Their activities are well known and their purposes are well known. In due time it will all be revealed."

And in private conversation with us you gave the same intimation.

If it is true that any individual, or combination of individuals in the United States or elsewhere is attacking you for personal or political reasons, the facts in the case should be given to the public and all fair-minded citizens will espouse your cause. Neither of us has received any intimation or knowledge from any source of any such unfair attack except through the news report above quoted.

At this time we wish to assure you that if the facts showing such unfair attacks are presented to us, and it can be shown that for personal or political reasons an attack is being made upon you or the Department of Justice, which would be in fact an attack upon the Government of the United States, we will be the first to come to your defense. If you have information such as has been intimated, we feel that you owe it to yourself, the Department of Justice, the administration, and the Government to place these facts before the Congress, and we tender our services for that purpose.

Very respectfully,

ROY O. WOODRUFF.
ROYAL C. JOHNSON.

Mr. Chairman, I wish to state for both the gentleman from South Dakota [Mr. JOHNSON] and myself that not once during our attacks upon the war grafters have we used information given us by other than men who served this country in uniform during the late war. I hardly think the Attorney General will have the temerity to challenge the loyalty or patriotism of men of this class. [Applause.]

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. RUCKER. Mr. Chairman, this bill is so obviously just and fair and right that I am not going to take time to discuss it. During the period of time that I have been a Member of this House every single Member from the State of Missouri, I believe, has at some time introduced this identical bill or bills similar to it. Our late Speaker, the lamented Champ Clark, time and time again pressed its passage upon the House. It has been too long deferred. Personally I know many now living in my district who served in these militia or State organizations. They are divided between the political parties, but are all good, valiant, brave, heroic men. Many of them are poor and have been waiting and trusting that the Government which they tried to serve and helped to serve would some day deal out belated justice to them. I am glad that this bill is under consideration, and I hope that it will receive in this House a vote that will inspire the Senate to prompt action when the bill gets there.

Mr. Chairman, in the course of my experience I have learned facts which are doubtless familiar to many other Members on this floor. A soldier may have served 60 days in the Army of the United States as an enlisted man. He may have served 30 days in the militia organization also, serving his country all the time; but his Army service was only 60 days, and therefore he is not pensionable under any statute we have. This bill ought to be amended so as to combine his militia service with his service as an enlisted man.

Mr. BEEDY. Mr. Chairman, will the gentleman yield for a question?

Mr. RUCKER. I yield to the gentleman from Maine.

Mr. BEEDY. How many men will be affected by this bill?

Mr. RUCKER. Very few, comparatively.

Mr. BEEDY. Has the gentleman any estimate?

Mr. RUCKER. No.

Mr. BEEDY. Are there 5,000 or 500?

Mr. RUCKER. I think 15 or 20 years ago it was estimated that there were five or six thousand in the State of Missouri, which I believe has about as many as any State. They all reside in two or three States.

Mr. LANGLEY. When we reported the bill four years ago it was estimated that Missouri, Kentucky, and the remainder of the States would furnish about 2,000.

Mr. RUCKER. Like the other Civil War soldiers they are dying rapidly. The amendment I propose to offer is in line 3 on page 2.

The bill now reads: "in any of the said military organizations during said war." I want to add to that, "or partly in such military organization and partly in the military forces of the United States," so that the several services may be combined.

Mr. LITTLE. Will the gentleman yield?

Mr. RUCKER. I will.

Mr. LITTLE. In the line above that it says, "who actually rendered such service for a period of 90 days or more." I have prepared an amendment which I thought I would offer striking out the word "such," so that it will read "who actually rendered service for a period of 90 days or more."

Mr. RUCKER. That is the same thing as my amendment.

Mr. LITTLE. Mine simply strikes out one word.

Mr. RUCKER. Mr. Chairman, I ask unanimous consent to extend and revise my remarks in the RECORD.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to revise and extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. RUCKER. Mr. Chairman, how much time remains?

The CHAIRMAN. The gentleman from Missouri has 18 minutes remaining.

Mr. LANGLEY. Mr. Chairman, I yield 15 minutes to the gentleman from Missouri [Mr. HAYS].

Mr. HAYS. Mr. Chairman, the bill now under consideration, H. R. 211, and reported as the Langley-Hays bill, proposes to give a pensionable status to the members of the enrolled militia and their widows or dependent children. Where these State troops served under Federal officers for 90 days or more in defense of the Union and were honorably discharged, it is proposed that they be accorded the same pension privileges as the Federal troops who saw like service.

No one can tell with certain accuracy just how many names will be added to the pension rolls by the passage of this bill. But one thing is sure: These veterans have been falling year by year before the remorseless scythe of time until their number has been pitifully reduced. According to the best estimate I can make from the varying sources of dependable information, not more than 5,000 people are alive to-day who will receive any benefit from the law we propose. When the Civil War was on the members of these militia organizations constituted a considerable percentage of the Union forces; but old age and disease and the wounds of service through 57 years since the close of the war have exacted an appalling toll from their ranks. The surviving members of the enrolled militia who will come within the provisions of the bill, and the widows of their deceased comrades, will probably not exceed 5,000 persons. Of this number approximately 2,500 reside in Missouri, about 1,000 are in Kentucky, and the remaining 1,500 are scattered through the other States that made the border line between the North and the South.

Many of the militia soldiers saw later service under reenlistment as regulars, and they are now entitled to pension con-

sideration as Federal troops rather than as State troops. Many of them rendered valuable service to the Union but were not attached to any United States organization nor under the command of any United States officer, and these would not come under the provisions of the bill. Many of them were in the service less than 90 days and would be barred on that account.

The additional expense to the Government in meeting the requirements of the bill will not be large at the beginning, and it will rapidly decrease from year to year. These people are all old now and not a day passes but some of them are called in death. I am sure the total cost of paying these new pension claims will be small as compared with the present outlay for relief accorded the veterans of our various wars. But the slightness or the greatness of the expense constitutes no valid argument either for or against the measure. The granting of these pensions is but a matter of common justice already too long delayed. If it is wise and right as a matter of national policy to pension needy soldiers who have offered themselves on the country's altar in time of national peril, then the members of these enrolled militia organizations are entitled to recognition. Who would challenge the beneficent wisdom of our pension system? Who would be willing to abandon the system because of the cost? If the pension system is right, and if the soldiers of the enrolled militia rendered the same service as other soldiers who have been granted pensions, why should their claims be discredited? What justice is there in paying one group and refusing another group whose claims are equally worthy?

From the earliest days of our history it has been the policy of our Government to show substantial gratitude to the men who have fought its battles. Our soldiers of every war have been granted liberal pensions. The bill we are considering today is not a proposal to create a new national policy. It does not seek to establish a principle original or unique. The principle involved in the bill has been a national policy with us since the birth of the Republic. General pension laws for the benefit of regular troops have immediately followed every war; and a recognition of the State military organizations has always come, although in somewhat belated legislation. The militia soldiers of the Revolutionary War were given a pensionable status under the act of Congress of April 10, 1806. The militia soldiers of the War of 1812 were given a pensionable status under the act of February 13, 1871. The militia soldiers of the Mexican War were given a pensionable status under the act of January 29, 1887. While a bill substantially like this one was pending in the House on June 3, 1918, Champ Clark made a speech upon it. In his opening sentence he said:

> This bill ought to have been passed 50 years ago.

And he concluded his remarks by saying:

> If the House wants to do justice long deferred, it ought to pass this bill with a whoop.

The Constitution of the United States vests in Congress the right to call into Federal service the State militia or other military organizations of any State. The act of Congress of February 28, 1795, which was reenacted in the last Revised Statutes as section 1642, and again by the act approved January 21, 1903, was construed by a unanimous opinion of the Supreme Court as vesting in and delegating to the President of the United States the authority to call into the Federal service the military organizations of a State. President Lincoln availed himself of this authority very generally in the border States. Such State troops as were called into Federal service were thereafter recognized as regular troops and came within the purview of subsequent pension legislation. The Missouri State Militia and the Provisional Missouri Militia, organized under an agreement between Governor Gamble, of Missouri, and President Lincoln, have been given a pensionable status under section 4722 of the Revised Statutes; and, by a joint resolution approved February 15, 1895, they were accorded all the benefits of the pension act of June 27, 1890. But the provisions of section 4722 afforded no benefit whatever to any member of the enrolled militia of Missouri, or of any other State, nor to any similar State organization.

Subdivision 3 of section 4693 authorized the granting of pensions to State soldiers who were wounded in action while serving under a United States officer, provided such pension claims were presented and allowed prior to July 4, 1874. This particular piece of legislation, however, is not now of any advantage to the ordinary State troops who served with the Union Armies.

Except for the law recognizing State soldiers directly called into Federal military service by President Lincoln, and except for the law which became a practical nullity in 1874, the American Congress has never enacted a line of pension legislation for those valiant and courageous men who went out under Federal officers and helped preserve the Union. The regular soldiers in the Federal Armies during the Civil War who were honorably discharged after 90 days of service, or who contracted disease or sustained injury in the line of duty, have been eligible to pension consideration from the beginning.

This bill does not seek to pension every man who joined a State military organization. In its scope it is limited to those who participated and cooperated with the military forces of the United States; it is limited to those who were under the command of Federal officers; and it is limited to those who had the full 90 days of service required of Federal soldiers who receive pensions.

These particular State troops fought in the same battles with the Federal troops; they were in command of the same officers; they marched side by side with them; they encountered the same foes and endured the same hardships; they showed the same courage and were inspired by the same patriotism. They received the same wounds as their Federal comrades, and many of them met death in battle or from disease contracted in the service. Many of them who are yet living have endured more than a half a century of pain and discomfort and disease from their exposure and privation in the war.

We are only asking to-day that the beneficent purposes of the pension system shall be general in their application. We ask that the benefit of the pension laws shall not be granted to some who are deserving and withheld from others who are equally deserving. We ask that our Government shall not only be generous but that it shall also be just, and that it shall no longer discriminate against these few surviving white-haired veterans who imperiled their lives and their health to save the Union.

In support of our contention that the enrolled militia organizations, in addition to being State troops, were serving the Union cause in the Civil War, I submit the views of President Lincoln. On October 5, 1863, the President wrote a letter to Charles Drake and others, of Missouri, in reply to a demand for the removal of General Schofield as commander of the Department of Missouri, and in reply to a request for disbanding the Enrolled Missouri Militia. The letter said:

> As to the Enrolled Missouri Militia, I shall endeavor to ascertain better than I now know what is its exact value. Let me say, however, that your proposal to substitute national force for the enrolled militia implies, in your judgment, the latter is doing something which needs to be done; and if so, the proposition to throw that force away and to supply the place by bringing other forces from the field where they are equally needed seems to be very extraordinary. Whence shall they come? Shall they be withdrawn from Grant, or Banks, or Steel, or Rosecrans? Few things have been so gratifying to my anxious feelings as when in June last the local force in Missouri aided General Schofield to so promptly send so large a general force to the relief of General Grant, then investing Vicksburg and menaced from without by General Johnston. Was this all wrong? Should the enrolled militia then have been broken up and General Herron detached from Grant to police Missouri? So far from finding cause to object, I confess to a sympathy for whatever relieves our general force in Missouri and allows it to serve elsewhere. I therefore, as at present advised, can not attempt the destruction of the enrolled militia in Missouri. I may add that, the force being under national military control, it is also within the proclamation in regard to the habeas corpus.
>
> (Signed) A. LINCOLN.

The Enrolled Missouri Militia served under the command of General Schofield and his successors from 1862 to 1865; they were armed and equipped by the United States; they were paid by the State of Missouri, but the State was reimbursed for the money thus expended by the act of April 17, 1866.

A hundred facts might be cited to show that the Federal Government recognized the enrolled militia of the States as being in fact, if not technically, a part of the forces fighting to preserve the Union. I will not detail further evidence to that end in this speech but will refer my colleagues to the very comprehensive report made by the Committee on Invalid Pensions in support of the bill. [Applause.]

Mr. LANGLEY. Mr. Chairman, I yield 10 minutes to the gentleman from Missouri [Mr. ATKESON].

Mr. ATKESON. Mr. Chairman and gentlemen of the committee, I am very much interested in the passage of this bill. My only excuse for inviting your attention for a few minutes to a little sketch which I have prepared is that I conceive it to be an argument in favor of this bill. I will not have time to read it all, but I will read what I think is most interesting at this time, and you will readily see what a peculiar interest I have in the passage of this bill.

Mr. Chairman, the bill under consideration, if it becomes a law, will probably affect the lives of more men and women in the sixth district of Missouri than in any other congressional district in the country. This bill is a tardy effort to do justice to a patriotic, loyal, and worthy class of men and women, too long neglected. But for the honor of the country it is better late than never. During the 57 years which have passed since

the incident at Appomattox the long line of the Enrolled Missouri Militia men has fallen one by one until now only a few remain to be blessed by the provisions of this bill. The loyal men known as the Enrolled Missouri Militia men were not boys when they were enrolled for military duty in the State of Missouri in the sixties. Many of them were at middle life then—married men with homes and families to protect; and, indeed, this was among the reasons for their enrollment and service, with the additional duty from time to time to resist and pursue bushwhackers, marauders, and invasions by the regular forces of the Southern Confederacy. They were not in the regular service of the United States, and yet they frequently served with the regular forces of the United States. They were not required by the terms of their enrollment to go outside the State; but within the State they were subject to all sorts of service—defensive and offensive. Their service and loyalty were so conspicuous that even President Lincoln is on record in approval of the service they rendered in the darkest hours of the Union.

For some unaccountable reason the brave men who mustered and fought whenever called out in defense of public and private property and to resist and drive out the irresponsible marauding forces of the enemy have never been given a pensionable status under the law, and the great majority of these faithful defenders of the Union have crossed over the Styx and now bivouac on the other side. Only a few remain to rejoice over this belated act of a Nation's recognition; and with outstretched hands, both men and women, all old people, many of them grandfathers and grandmothers, are asking this Congress to do this act of justice, thereby redeeming, as far as we can, the long and unpardonable neglect of as brave and worthy soldiers as ever wore a uniform or followed a flag for the right, in defense of home and country.

I have said that probably more of these men and women reside in my congressional district than can be found in any other single district; and I may be indulged a few moments for a brief review of conditions which make this statement plausible.

The sixth Missouri district was really the frontier battle ground of the Civil War—frontier both as to place and time. Long before secession had reared its ugly head; long before the Confederate States of America were organized at Montgomery, Ala.; years before Fort Sumter was fired upon, the war in the West—upon the frontier—known in history as the "Kansas War"—had raged over the virgin, flower-bedecked prairies of eastern Kansas and western Missouri.

Two counties of my district adjoin Kansas, and they were early involved more or less in the Kansas war. Disloyalty flamed up from the unbroken sod everywhere, and it was met everywhere by a determined loyalty to the Union and freedom. The fierce passion of secession ran riot over the sparsely settled plains, and in less than 30 days after Fort Sumter surrendered the Stars and Bars floated from an hundred-foot flagpole planted in the courthouse square of my home city.

When the Civil War actually broke out in 1861 and the irrepressible conflict was actually on, conditions grew worse and worse. The marauders were everywhere in southwest Missouri, foraging upon and terrorizing the loyal people. In north Missouri the notorious "Bill" Anderson was marching to and fro, destroying property and killing people as it suited him and his irresponsible organizations. Quantrell and his men marched out of my district to sack the city of Lawrence, Kans., and marched back into it to scatter to the four winds within and beyond it in Missouri. Hamilton, a soldier of fortune from Georgia, and his men marched out of my district on the 19th day of May, 1858, only a mile or two over in Kansas, and committed what is known in history and song as "The Marais des Cygnes Massacre." These were all irregular bands, of whose murderous deeds it is useless now to speak.

Then the regular forces of the Confederacy invaded Missouri under General Price and under General Shelby. Many real battles were fought, nearly all in the western and southwestern part of Missouri. Colonel Mulligan was captured at Lexington; Siegel was defeated at Carthage; General Lyon was killed at Wilson Creek, near Springfield; and a short time after, at Wilson Creek, just a little way over in Arkansas, was fought the battle of Pea Ridge, where the Confederate general, McCullough, was killed and the splendid army under him and General Price was defeated, and as a result of the campaign ending at Pea Ridge, planned by that heroic patriot and soldier General Lyon, Missouri was saved to the Union.

I quote from McClure's History of Missouri:

> After the battle of Pea Ridge many of the Missourians engaged in the early campaigns in Missouri on the side of the South returned to the State. Many of these operated in small bands and gave the State government and the Union forces in the State much trouble. Some of these bands observed the rules of warfare; others took no prisoners, but murdered people and burned and destroyed property without the slightest regard for any government or rules of any kind. They called themselves Confederates. Raids, massacres, and military reprisals followed one another in rapid succession. Neighbors were suspicious of each other. Brother was turned against brother. No man was safe, and frequently women and children suffered untold miseries. Feeling ran high. Men were almost driven into lawlessness. Many took advantage of the disorder to retaliate personal grudges.
>
> In all this strife two distinct kinds of warfare prevailed. One was the effort on the part of local Confederate leaders to recruit organized companies for service in the South and get them out of the State. These recruiting efforts were the cause of many small but desperate battles in the State, because one object of the Union forces was to prevent such recruiting. The other type of warfare was usually known as guerrilla warfare. It consisted of raids, destruction of property, and murders on the part of guerrilla bands, and the efforts of the authorities to kill or capture these bands. These guerrilla leaders had friends and relatives who aided and often concealed them. The Union forces were on the lookout for those who aided the guerrillas. Both the guerrilla bands and the Union forces were composed largely of citizens of Missouri. The hatred and desire for revenge aroused by this local warfare did not cease with the end of the war. Both groups engaged in the struggle continued to live in the State. For this reason feeling aroused by the Civil War lasted as it did in Missouri.

I mention these facts in passing to show the conditions which gave the Enrolled Missouri Militia a lot of exercise in defending their homes, resisting and pursuing the irregular and irresponsible enemy, as well as the regular and responsible armies of the Southern Confederacy. It requires no imagination to see that the Enrolled Missouri Militia, along with the other loyal army organizations provided for in this bill, endured many hardships in defense of the State and the flag of the Union.

Conditions were so bad in the border counties of Missouri, two of which are in the sixth Missouri district, which I have the honor to represent in this House, that soon after the Quantrell raid upon Lawrence, General Ewing issued his celebrated "Order No. 11," practically depopulating Jackson, Cass, Bates, and Vernon Counties, and they became "no man's land" for the remainder of the war. The people were compelled upon 15 days' notice, except as to a few localities near Harrisonville, Independence, and Kansas City, to go into Kansas beyond the first tier of counties or back into the second tier of counties in Missouri. In a few weeks after this "Order No. 11," now famous in story and art, was issued the homes and property abandoned by the settlers was commandeered or reduced to ashes.

But enough has been said to give some idea of the faithful and patriotic service of the Enrolled Missouri Militia men, and I hope there is no one in this House unwilling to see the few remaining properly recognized by the laws of this great reunited country.

Notwithstanding the bitterness and animosity which existed before, during, and for some years after the war, these ex-Union soldiers and ex-Confederate soldiers are now neighbors and friends, living in peace and love with one another, holding each other in mutual regard and esteem. Every vestige of hate and rancor has disappeared; and even what was formerly regarded as the fateful State line between Missouri and Kansas is now only a common highway, and the people residing on either side of it scarcely know it is a State line.

It is hardly necessary to state that the fierce passions of the war are so completely forgotten and forgiven that the State has for a number of years paid the ex-Confederate soldiers regular pensions; and the last regular session of our legislature, Republican in both branches for the first time since the reenfranchisement of the Confederate soldiers, and the State government Republican in all its branches, appropriated $275,000 deficiency to pay these ex-Confederates their pensions. Now, these men who followed the Stars and Bars and wore the gray, who fought against their neighbors and fellow citizens who followed the Stars and Stripes and wore the blue, in spite of the facts of history, are provided for by the State in some degree; but the men—the Enrolled Missouri Militia men—against whom they marched and fought have been ignored and neglected by the Government whose flag they upheld and whose uniform they wore. Can our country afford to be longer ungrateful or unappreciative of the mere remnant of the loyal Enrolled Missouri Militia and the other loyal organizations provided for in this bill, who defended our flag and helped restore our broken country?

This bill is a righteous bill, and I feel sure this House will see it in that light. Let us do justice before it shall be eternally too late. [Applause.]

Mr. LANGLEY. Mr. Chairman, I yield to the gentleman from Pennsylvania [Mr. GERNERD].

Mr. GERNERD. Mr. Chairman, I wish to state that I am heartily in favor of this bill. In Pennsylvania we had quite

a number of regiments that were formed to defend against the approach of the Confederate Army as it went into Pennsylvania, and that helped to locate the decisive battle at Gettysburg. I ask unanimous consent to extend and revise my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. LANGLEY. Mr. Chairman, I yield three minutes to the gentleman from Missouri [Mr. ROACH].

Mr. ROACH. Mr. Chairman, I entertain no doubt but what this bill will be approved by the House. I have no doubt that it will pass. If there is any delay in the passage of this bill, it will be in the Senate and not in the House. I hope the press of the country will let the people who are interested in this legislation, and who have been interested in it for many years, know who is responsible for the delay, if there is any further delay in its enactment.

This measure should have been enacted into law 50 years ago. I am not as familiar with the history of the splendid, valiant service that was rendered by the other State organizations that are included in this bill as I am with the history of the service rendered by the enrolled militia and other similar organizations of my own State. I do know that as to those organizations in Missouri great credit and honor is due, and this bill is meritorious and should be enacted speedily by this branch of the National Congress, as well as in the Senate. I hope that the Senate will be spurred into taking prompt action on the bill, as soon as we pass it in the House, which I confidently anticipate we shall do within the next hour or two.

I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. RUCKER. Mr. Chairman, I yield five minutes to the gentleman from Kansas [Mr. CAMPBELL].

Mr. CAMPBELL of Kansas. Mr. Chairman, I was more than interested in the remarks of the gentleman from Missouri [Mr. ATKESON], who lives across the line from where I live. He revived the stories of the early sixties which have been repeated in my ears ever since I can remember. When I went to Kansas the people were still afraid of the Missourians on the Kansas side of the line, and on the Missouri side of the line they were afraid of the Kansans. The Missouri Militia, as well as the Kansas Militia, were composed of as brave a lot of men as ever fought under any command. They rendered as great service during the war as any troops that were regularly mustered into the service of the United States. Many of them were sent outside of their States. Troops from Missouri and Kansas went down into Arkansas. Troops from Kansas crossed the line into Missouri to join the Regular troops and assist them. The acquaintance that I have had with many of these men personally has been of such a character as to elevate my estimate of the men who participated in that great war. The personnel of the men in the militia was in no sense inferior to those who were engaged as Regular troops. I am glad at this late day to see this bill acted upon here, having a prospect of an early right of way through the House. I hope to see the amendment suggested by the gentleman from Missouri [Mr. RUCKER] agreed to, which provides that the combined service with the Regular troops or in the militia making a total period of 90 days shall entitle a man to the benefits of the bill. The bill is one that has had, as was suggested here a moment ago, consideration in this House for many years. I regret that the mere matter of the numbers involved has from time to time prevented favorable action upon it. It has been thought that it was the duty of the States to make provision for these loyal troops who served under the States. That has probably resulted in delaying action by Congress on this measure. I hope that after its passage through the House it will receive early and favorable consideration in the Senate and soon become a law. [Applause.]

Mr. LANGLEY. Mr. Chairman, I yield five minutes to the gentleman from Ohio [Mr. BEGG].

Mr. BEGG. Mr. Chairman and gentlemen of the committee, again we are consuming a couple of hours' time in general debate on a bill, and the major portion of that general debate is not on the subject matter of the bill at all. We are compelled to sit here and listen to a discussion of the so-called dereliction of the Attorney General for about the fourth or fifth or sixth time. The gentleman from Georgia [Mr. LARSEN] consumed 20 or 25 minutes in suggesting things that the Attorney General might not do, and a careful reading of the gentleman's speech to-morrow I venture the assertion will not discover one single item of fact.

Mr. LARSEN of Georgia. Mr. Chairman, will be gentleman yield?

Mr. BEGG. I can not yield at this time. I shall yield a little later if I can get more than five minutes. The gentleman from Michigan, my good friend, Mr. WOODRUFF, has also made another speech, and you will have to say for that speech, as against the other one, that he does insert some so-called facts in his remarks. But it is not my purpose to defend the Attorney General. I do not think he needs any defense. He has always been able to take care of himself and can now. All appreciate, however, the unfairness of this attack on him at this time, as he is not permitted to come on this floor and answer his critics. Were he accorded that privilege I for one am sure gentlemen who are attacking him would not be permitted to get away with such glaring insinuations of misconduct as they are at present. He is not accorded the same courtesy as is given a prisoner at the bar of justice, namely, to be faced by his accusers.

It is not my purpose to criticize Members of the House because that is not my prerogative, but I want to call the attention of this House to this whole proposition as I see it. When the election was held and the Republicans were sent into the control of affairs of the Government I looked upon my election as an authority to come down to Congress and pass laws which were for the best interest of the whole country, and when that same electorate elected a Republican Executive, with his subordinates of his own choosing, I did not interpret that they sent me down here to accept or undertake to assume the responsibility for the activities of the President's Cabinet. In other words, I mean by that this: The American people, I believe, have confidence in Warren G. Harding's honesty 100 per cent. [Applause.] I believe they have confidence in his ability to-day 100 per cent more than they had when they gave him 7,000,000 votes of majority, and it surely follows that they must have some confidence in the acts of his Cabinet, for they logically become the President's own acts and responsibilities, and up to date against whom have the criticisms been hurled? Certainly not against the executive branch of the Government.

Mr. WOODRUFF. Will the gentleman yield?

Mr. BEGG. I can not yield at this time. I will go further and say I believe the American people have confidence in the acts which are committed by the subordinate officials of Mr. Harding, and if they have not that confidence the position I find myself in is only one of two things. If I bring myself to the point where I am willing to assail the acts of Mr. Harding's administration in an executive way in a year and six months after taking hold of the Government I then ought to be in a position where I am willing to say I am ready to support and help bring about the impeachment proceedings of those men because I know they are crooks. I want to ask the men who are assailing the administration officials, if they are willing to send through the mails what they say in this House?

Mr. WOODRUFF. I will say to the gentleman I will do that——

The CHAIRMAN. The time of the gentleman has expired.

Mr. WOODRUFF. If the gentleman will yield to let me answer, I will tell him I will do precisely that.

Mr. RUCKER. I yield five minutes additional to the gentleman from Ohio.

The CHAIRMAN. The gentleman from Ohio is recognized for five additional minutes.

Mr. BEGG. It is the easiest thing in the world by innuendo and insinuation to arouse the people's suspicion that there is something wrong. As I said in the outset, I hold no brief for Mr. Daugherty; he does not need it. He is a man of courage and conviction, and if he is so culpable and if he is so dishonest as to be guilty of one-half of what has been insinuated against him, Mr. Harding and the American people will find it out before very long. You gentlemen do not need to worry about that responsibility. You have enough to do to satisfy the people with your fitness.

Mr. WOODRUFF. Will the gentleman yield just there?

Mr. BEGG. And it would seem to me the rankest travesty on my own respectability if I, as a Member of this House, would support an administration like the gentleman from Georgia supported the Wilson administration, under which all the crooks flourished, as he now states, and my own Attorney General served two years without starting a single prosecution, for me now to cry "Stop thief."

Mr. LARSEN of Georgia. I do not insinuate, I speak outright.

Mr. BEGG. And insinuates that the Department of Justice has a lot of crooks in its administration from beginning to end.

Mr. LARSEN of Georgia. Will the gentleman yield?

Mr. BEGG. I can not at this time.

Mr. LARSEN of Georgia. I never insinuate anything. I state the facts.

Mr. BEGG. The gentleman did not state a single fact in his speech. I demanded he furnish evidence of the names of the men who have been found guilty and sent to the penitentiary as the result of congressional investigation.

Mr. LARSEN of Georgia. I gave the gentleman the names. These are three—Martin, Mulhall, and Lamar.

Mr. BEGG. The gentleman answered by asking a question of the gentleman from Ohio, and now gives the names of three men who were convicted but not because of any activity on the part of the present critics of the Attorney General.

Mr. WOODRUFF. Will the gentleman yield for just a moment?

Mr. BEGG. I will yield.

Mr. WOODRUFF. I want to ask the gentleman to make it plain to the House that I have not been guilty of any insinuation. The things that I have said are direct charges and not insinuations, and not a thing I have said has been denied.

Mr. BEGG. I squared that in what I said at the start. Let us look at this thing. We went through a war. That war was ended really November 11, 1918. The Democratic administration, with a Democratic Department of Justice, was in control. You went through that administration two and a half years, and I was in Congress when we had a Republican investigating committee, with minority men, who took up the facts. The old administration never as much as sent a department official to make an investigation to ascertain the truth of any of those findings, and, mind you, the Democrats were in power twice as long as the Republicans up to date. Did you, Mr. LARSEN, complain then? You kept still and said "Me, too," every time the President cracked the whip.

But to stand day after day and insinuate because the Department of Justice within 14 or 15 months has not put department officials in the penitentiary it means he is a crook. Give him a full rein, and I will say to you that Harry Daugherty, I know, will not quit on the job regardless of the man accused, but if he is guilty will bring him before the bar of justice.

He will not quit on the job, whether he is a Democrat or Republican.

Mr. KEARNS. Will the gentleman yield?

Mr. BEGG. I yield.

Mr. KEARNS. The gentleman has said that the Attorney General is giving attention to all the men who fleeced the Government during the last administration?

Mr. BEGG. All that were ascertainable from the facts.

Mr. KEARNS. Does the gentleman think that would be possible?

Mr. BEGG. So far as the facts can be ascertained.

Mr. KEARNS. There are so many of them.

Mr. BEGG. That may be true.

The CHAIRMAN. The time of the gentleman from Ohio [Mr. BEGG] has expired.

Mr. LANGLEY. I yield one minute more to the gentleman.

Mr. BEGG. Now, I would like to ask the whole Congress this: Will not the American people have as much confidence in the man who is honestly and fearlessly doing his duty, whether in an executive department or a congressional office? If the legislative end of the Government will attend to its business and pass the laws and let the Executive run this Government the next four years, we will get out of the chaotic condition the country was dumped into by the Democratic administration in the past and will receive the plaudits of a grateful people. Let me say again to my Democratic friends you can not divert the criticism leveled against your party for its dismal failures of your administration by crying crook and grafter against the present Republican administration, which has done more in one year to right your mistakes than you did in over two years following the war. [Applause.]

Mr. LANGLEY. Will the gentleman from Missouri yield to me one minute?

Mr. RUCKER. I yield one minute to the gentleman.

Mr. LANGLEY. Mr. Chairman, I have no desire at the present time to enter into the discussion that we have just been listening to. I have every faith that the Attorney General, who is, I happen to know, a faithful, honorable, efficient officer, will do his duty in these matters as he has heretofore. But what I am interested in most just now is to get this militia pension bill through the House and I hope my colleagues will help me do it. I am proud to see so much sentiment for the bill, which was not the case when I began this fight 15 years ago.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Be it enacted, etc., That the provisions of the pension act of May 11, 1912, and all acts amendatory thereof, be, and they are hereby, extended to include the officers and enlisted men of the State militia and other organizations of the several States of the Union that participated and cooperated with the military forces of the United States, under the command of United States officers, during the Civil War and who actually rendered such service for a period of 90 days or more in any of the said military organizations during said war, and who were honorably discharged therefrom or otherwise honorably relieved from duty under the order of proper military authority.

Mr. LANGLEY. Mr. Chairman, I offer the following committee amendment.

The CHAIRMAN. The gentleman from Kentucky offers a committee amendment, which the Clerk will report.

The Clerk read as follows:

Committee amendment: Page 1, line 4, after the word "thereof" insert the words "including the act of May 1, 1920."

Mr. LANGLEY. Mr. Chairman, just a moment. I offer this amendment with the authority of the committee, because at the time we agreed upon reporting the bill there was some question raised as to whether this language, "Act of May 11, 1912, and all acts amendatory thereof," would include the act of May 1, 1920, further increasing the Civil War pensions. In order to be safe upon it we decided to include this language.

The CHAIRMAN. The question is on agreeing to the committee amendment.

The question was taken, and the amendment was agreed to.

Mr. ELLIS. Mr. Chairman——

Mr. RUCKER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. RUCKER: Page 2, line 3, after the word "organizations," insert "or partly in such militia organizations and partly in the militia forces of the United States."

Mr. RUCKER. Mr. Chairman, just a moment. The purpose of this amendment, I think, is fair. A great many valiant, good soldiers served in the State militia probably 30 days under a Federal officer and then enlisted in the Federal service and served 60 days or less than 60 days. But the 60 days' service in the organized Army of the United States is not pensionable, and you can not combine the militia service with it. The purpose of this amendment is to combine the two, so that if a man served in the militia for 30 days and afterwards enlisted in the Army for 60 days, those two together would make 90 days and entitle him to a pension.

Mr. LANGLEY. I want to say, Mr. Chairman, that I have no objection to that amendment offered by the gentleman from Missouri.

The CHAIRMAN. The question is on the adoption of the amendment.

The amendment was agreed to.

Mr. CAMPBELL of Kansas. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Kansas offers an amendment, which the Clerk will report.

Mr. CAMPBELL of Kansas. On page 2, line 2, strike out the word "such," so that——

The CHAIRMAN. The gentleman from Kansas offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. CAMPBELL of Kansas: Page 2, line 2, strike out the word "such."

Mr. LANGLEY. The print of the bill I have here contains that word in line 10, on page 1. I see no objection to the amendment.

Mr. CAMPBELL of Kansas. I have Report No. 837.

Mr. LANGLEY. Anyhow, I have no objection.

The CHAIRMAN. The question is on agreeing to the amendment.

Mr. CAMPBELL of Kansas. I think it should come out. I think the reading of the bill might be construed that these men must have service under a United States officer.

Mr. RUCKER. Well, it does. That was the purpose of the bill. Because if they were not serving under United States officers they were not in the forces of the United States. But the amendment adopted by the committee fixed it in such a way that this amendment is not needed, I think.

Mr. CAMPBELL of Kansas. I feel quite certain that the amendment will clarify the intent of the bill.

Mr. RUCKER. The intent of the bill was to make pensionable those who served under a Federal officer in the Army during the war for a period of 90 days.

Mr. ROACH. Will the gentleman yield?

Mr. CAMPBELL of Kansas. I yield for a question.

Mr. ROACH. The word "such," as I read this bill, refers to the particular military organizations in which these veterans had served.

Mr. CAMPBELL of Kansas. Yes.

Mr. ROACH. It seems to me that in order to make it read properly the word "such" should remain in the bill. It refers especially to the several branches of the military organizations in which these men may have served, and it says that "such service," referring back to the military organizations in which they served, "shall be recognized by the Government in the payment of a pension." I believe it should remain in there, because if it is stricken out, if the word "such" is stricken out, it would so cloud the meaning of that language that it might be construed to refer to service in the branch of the regular recognized service as having to be 90 days.

Mr. CAMPBELL of Kansas. I fear that if the word "such" is left in it will be construed to require 90 days' service under a United States officer.

Mr. ROACH. That is just what I fear; that it would be construed to require that if it were stricken out.

Mr. LANGLEY. If the gentleman will permit me, in view of the language offered by the gentleman from Missouri [Mr. RUCKER], the word "such" ought to be left out. It seems to me it is surplusage.

Mr. CAMPBELL of Kansas. I think undoubtedly the word should be taken out, because it then leaves the reading, "and are hereby extended to include the officers and enlisted men of the State militia and other organizations of the several States of the Union that participated and cooperated with the military forces of the United States under the command of United States officers during the Civil War and who actually rendered such service for a period of 90 days or more." That leaves out the word "such."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

Mr. ELLIS. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Missouri offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. ELLIS: Page 1, line 8, after the word "States," strike out "under the command of United States officers"; also the comma before and after those words.

Mr. ELLIS. Mr. Chairman, my interpretation of this legislation is that it is intended to confer a pensionable status upon the officers and enlisted men of the State militia and other organizations of the several States of the Union that participated in and cooperated with the military forces of the United States during the Civil War and who actually rendered 90 days' service. I want to reach the exact proposition that the gentleman from Kansas [Mr. CAMPBELL] would reach by striking out the word "such." I want to put it beyond question or controversy, and I believe the Members of this House want to put it beyond question or controversy.

Mr. RHODES. Mr. Chairman, will the gentleman yield?

Mr. ELLIS. In a moment. As I understand, this language presents the argument that has been urged for this legislation not only before the committee of this Congress but before committees in former Congresses, to wit, that these men, very many of them, served not only in cooperation with the military forces but actually served under the officers of the United States. That is true, but here is the situation: Some of them served 60 days under the officers of the United States and did not serve the full 90 days under the officers of the United States. Some of them served perhaps 89 days under the officers of the United States. All of them served 90 days either under their own or United States officers in an effort to put down the rebellion. They fall under the definition of this bill in that they were engaged in cooperation with the military forces of the United States and served 90 days.

Now, I do not think that any Member of this House wants to put the burden on any of these men to show that their service for the entire 90 days was under the Regular officers. It would be unjust and unfair. It would defeat in very many instances the very purpose of this bill.

I do not want to take chances on merely striking out the word "such." Let us strike at the very root of the trouble. The bill is well framed, on the idea that there must have been service in cooperation with the military forces of the United States, and that it must have been for a minimum of 90 days. I have no objection to that. But I do seriously object, and I believe every man in this House will seriously object, to putting upon those men or the widows who survive them the burden of proving that that entire 90 days' service was under the officers of the Regular Army.

Mr. RHODES. My friend has stated that the purpose of the bill was to give a pensionable status to those men who cooperated with the Union Army. I would like to ask the gentleman if there were any other conditions under which this service was rendered except under the supervision and control of the United States Army officers? And if that is true, why is it not perfectly proper and wise to permit this provision to remain in the bill?

Mr. ELLIS. I understand there were other conditions. I have always understood, during the 16 years that I have been interested in obtaining legislation on this subject, that there were numerous instances where, in cooperation with the armies of the United States, some of these militia organizations served throughout an entire engagement or several engagements under their own officers. Many of them, of course, in many instances served part of the time under Regular officers. I hope this amendment will find favor with the committee. [Applause.]

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. RUCKER. Mr. Chairman, I dislike to put myself apparently in opposition to any provision of this bill, but I must do it, because I am opposed to the amendment offered by my colleague from Missouri [Mr. ELLIS].

I think we have gone quite far enough in this to provide here for a pensionable status for every man who served in the State militia and in the other armies of the United States as much as 90 days. The amendment offered would throw down the bars and make everybody pensionable who rendered any sort of service. It is one thing to make pensionable a good soldier, a brave man, who was loyal to his country. It is another thing—it would be a damaging and demoralizing thing—to pension men who were members of marauding parties and disorganized bodies who perpetrated all kinds of crimes. It would tend to confuse the public mind in communities where such organizations existed and would saddle on the real soldiers the ignominy of the acts and conduct of those men who did things that I do not care to repeat. I have heard of them, and my colleague from Missouri has heard of them. But I am as loyal to the real soldier as any man. If you put that amendment in the bill, the bill is doomed. It will never pass.

Mr. LANGLEY. Is it the gentleman's idea that this will greatly widen the scope of the bill?

Mr. RUCKER. It certainly will.

Mr. LANGLEY. The mere fact that a man cooperated with the military forces of the United States does not necessarily mean that he served with those forces.

Mr. RUCKER. Why, if you and I had gone into somebody's melon patch and taken a watermelon after nightfall we could say we were aiding the Federal troops. It will not do.

Mr. ELLIS. Will the gentleman yield?

Mr. RUCKER. Yes.

Mr. ELLIS. I want to say to the gentleman that if he will read the other requirements, the other specifications here, he will see that there is no danger of any man procuring a pension under this law who is not entitled to it. See what you have provided. You provide that the officers and enlisted men of the militia shall receive these pensions. You require that they must have been enlisted in a militia company or like organization; that they must have participated and cooperated with the military forces of the United States. They must have rendered service for the period of 90 days or more in a military organization. Now, we are concerned only with the one question whether during all of that 90 days' service to their country these men may have served under their own officers or must they all the time have served under the officers of the Army.

Mr. RUCKER. Under every pension law that has been enacted, every essential fact necessary to be shown in order to acquire a pension is a matter of record proof. Every essential fact provided for in this bill would be a matter of record. The Adjutant General has records showing the enlistment and service of every man in the militia. The unorganized or disorganized bodies of men that the gentleman speaks of have no records, and the Pension Department will be called upon to increase its force 100 per cent if this amendment should be adopted.

Mr. ELLIS. But your bill provides that they must be enlisted members of these organizations. They must be enrolled in these organizations.

Mr. RUCKER. They are enrolled.

Mr. ELLIS. They must have served as a part of these organizations.

Mr. RUCKER. But your amendment does not provide that.

Mr. ELLIS. Other provisions of the bill take care of that. This bill does not provide for camp followers, for raiders of

melon patches, or for anyone except soldiers who served 90 days in cooperation with military forces of the United States in putting down the rebellion. If this thing is insisted upon, you may exclude 80 per cent of the deserving militia men or their widows in Kentucky, Missouri, and Kansas who, after the lapse of 60 years, may not be able to establish this requirement as to United States officers.

Mr. RUCKER. Mr. Chairman, just one word. So far as my experience is concerned, it will not exclude one single man, and if the gentleman from Kentucky has excluded his people I know he will be sorry for it.

Mr. CLOUSE. Mr. Chairman, I move to strike out the last word. Of course, I think we are all interested in perfecting this bill so as to meet the ends of justice toward these old veterans of the Civil War. The gentleman from Missouri [Mr. RUCKER] is, of course, a friend to these men, as we all know here on the floor of the House; but I do think that the amendment offered to strike out the language "under the command of United States officers" is very essential. Let me illustrate by an example: At first the State of Tennessee voted to remain in the Union, but later another election was called and the State by a small majority voted to secede and go with the other Southern States. During that awful conflict that was waged for four years there were in the mountain sections of the State independent scout organizations who were not a part of the State militia, and in deed and truth not under the direct command of any military officer of the United States; yet they were rendering valiant service to the forces of the United States, as much so as if they had been on the firing line and in the ranks under command of an officer of the United States.

Mr. ELLIS. Will the gentleman yield at that point?

Mr. CLOUSE. Yes.

Mr. ELLIS. Those very men of whom the gentlemen speaks could not get a pension under this bill as it now stands.

Mr. CLOUSE. With this language in not one of those men, in my judgment, is entitled to the benefits of a pension. I have a case that is now pending before the Secretary of the Interior. Clabe Beatty was a member of Capt. David Beatty's command of scouts operating in the mountains of central east Tennessee. They were acting in conjunction with Federal troops under General Thomas. In 1870 an act of Congress was passed which granted these men an honorable discharge and put them upon identically the same footing as men who had served in the regular military forces. They were cooperating with General Thomas throughout his campaign in that section of the country; and it was essential to have these scouts there, because there were people going about robbing homes, robbing people of their grain, their cattle, their hogs, and their horses and carrying them away. The people in that section of the country were powerless, and General Thomas was anxious to have this company of independent scouts connected with the service, though they were not sworn into the service of the United States Army, and, indeed, under conditions prevailing in Tennessee after the State had seceded they were not members of the State militia. Would you deny these men any benefits accruing under this law? That is what the bill now does. The case I have in mind has been rejected, although they were given the benefit of this special act in 1870, and they have been rejected because the Pension Bureau now holds that in order to entitle a Civil War veteran to a pension he must have served at least 90 days in the military service and received an honorable discharge. These gentlemen to whom I refer can not now receive a pension and can not receive one under this act unless this amendment is adopted.

Mr. UNDERHILL. Mr. Chairman, I move to strike out the last word.

Mr. LANGLEY. May I interrupt the gentleman long enough to ask unanimous consent that debate on this section and all amendments close in five minutes?

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent that debate on this section and all amendments thereto close in five minutes. Is there objection?

Mr. LITTLE. I want to offer an amendment and talk about it a few minutes.

Mr. LANGLEY. As I understand, the gentleman from Kansas would have the privilege of offering an amendment. Very well, Mr. Chairman, I will ask that it apply to this amendment only.

The CHAIRMAN. The gentleman from Kentucky asks unanimous consent that all debate on this amendment close in five minutes. Is there objection?

There was no objection.

Mr. UNDERHILL. Mr. Chairman, the provisions of this bill as presented to the House by the committee are all of such a character that it requires an elastic conscience to vote for the bill even as presented. With the proposed amendment by the gentleman from Missouri attached to it, there would be absolutely no excuse for any Member of the House to vote for such a proposition. In other words, it legalizes highway robbery of the Treasury of the United States. That is about what it does. Furthermore, it is an insult to every Grand Army veteran in this country. You are going to open up the old pension question of pensioning every guerilla, giving him a legal status under the pension law. Where are you going to stop? Some of these were young boys who had a chance to enlist but did not go into the Army. Many of them, to speak plainly, dodged the draft, and yet you are going to legalize their pension status.

Mr. LANGLEY. Will the gentleman yield?

Mr. UNDERHILL. For a short question; I have only five minutes.

Mr. LANGLEY. I am desirous, as I said earlier in the debate, of enacting the most liberal legislation of relief of deserving soldiers and dependents who actually rendered military service required in this bill, but I am not in favor of jeopardizing the bill by adopting an amendment that may defeat it.

Mr. UNDERHILL. I am glad that the gentleman is opposed to the adoption of an amendment which would clearly kill the bill. If the amendment is adopted, the bill would certainly be killed, if not in this body, then elsewhere.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Missouri [Mr. ELLIS].

The question was taken; and on a division (demanded by Mr. ELLIS) there were—ayes 26, noes 28.

So the amendment was rejected.

Mr. LITTLE. Mr. Chairman, I present the following amendment.

The Clerk read as follows:

Page 2, line 6, after the word "authority," strike out the period and insert "and to include the officers and enlisted men of the Eighteenth Kansas Volunteer Cavalry and the Nineteenth Kansas Volunteer Cavalry honorably discharged."

Mr. LITTLE. Mr. Chairman, between the close of the Civil War and the beginning of the Spanish War in 1898 the United States Government enlisted only two regiments of volunteer cavalry. The gentleman from Kentucky makes a point of order. He did not say what it was, but I presume he means that they do not belong to the Civil War troops nor to the Spanish War troops, and so there is no way in God's world to take care of them.

Mr. LANGLEY. Will the gentleman yield?

Mr. LITTLE. Yes.

Mr. LANGLEY. What I had in mind was that this is a bill dealing with the Civil War legislation, and these men came into the service after the Civil War was over.

Mr. LITTLE. Here are two volunteer regiments, and the only ones in a generation that did not have a Civil War record or a Spanish War service. They do not belong to anything. Nobody cares anything about what happens to them, and the gentleman makes the point of order.

Now, Mr. Chairman, I will reply to the point of order by subpœnaing a witness, and let us find out whether it is right to do anything. I am reading from the official report of Gen. George A. Custer:

In General Custer's official report of this campaign he uses the following language:

"The point at which we found the Cheyenne village was in Texas, on the Sweetwater, about 10 miles west of the State line. Before closing my report I desire to call the attention of the major general commanding to the unvarying good conduct of this command since it undertook the march. We started with all the rations and forage that could be obtained, neither sufficient for the time for which we have already been out. First, it became necessary to reduce the amount of rations; afterwards a still greater reduction was necessary; and to-night most of my men made their suppers from the flesh of mules that have died on the march to-day from starvation. When called upon to move in light marching order they abandoned tents and blankets without a murmur, although much of the march has been made during the severest winter weather I have experienced in this latitude.

"The horses and mules of this command have subsisted day after day upon nothing but green cottonwood bark. During all these privations the officers and men maintained a most cheerful spirit, and I know not which I admire most, their gallantry in battle or the patient but unwavering persistence and energy with which they have withstood the many disagreeable ordeals of this campaign.

"As the term of service of the Nineteenth Kansas Cavalry is approaching its termination, and I may not again have the satisfaction of commanding them during active operations, I desire to commend them—officers and men—to the favorable notice of the commanding general. Serving on foot, they have marched in a manner and at a rate that would put some of the Regular regiments of Infantry to the blush. Instead of crying out for empty wagons to transport them, each morning every man marched with his troop, and—what might be taken as an example by some of the line officers of the Regular Infantry—

company officers marched regularly on foot at the head of their respective companies, and now, when approaching the termination of a march of over 300 miles, on greatly deficient rations, I have yet to see the first straggler."

When Gen. George A. Custer sends the heroes of that great organization before you for decent treatment and recognition they are met with a point of order. Is that a good argument against it? Which side do they belong to, the Spanish War or the Civil War? Where are you going to put them? From 1869 down they have never had any recognition. They have been "unwept, unhonored, and unsung" for 50 years. Gentlemen, here are two regiments. For the first time they come here and really get the opportunity to ask for decent treatment, which you are going to give the militiamen, and they are met with a point of order. I hope the gentleman will withdraw his point of order. I do not believe it is good; but if it is, I suggest to him that he do this honor to General Custer and the two splendid regiments and let them be treated as you are treating other militiamen.

SHERIDAN AND CUSTER.

I have already asked the attention of the House to what General Custer said with regard to the Eighteenth and Nineteenth Kansas Cavalry. I shall now call your attention to the reports on those regiments of Gen. Philip H. Sheridan, the greatest cavalry chief the world ever saw and one of the greatest Indian fighters we ever had on the border. General Sheridan said in his report of November 1, 1869, that in the last six years the Indians along that border had murdered more than 800 men, women, and children. The Seventh United States Cavalry and the Eighteenth and Nineteenth Kansas Regiments carried on the campaign against the southwestern Indians—the Cheyennes, Apaches, Kiowas, and the Comanches. The Eighteenth Kansas Cavalry was organized under a circular of June 21, 1867, from military headquarters for the Division of Missouri, and was mustered in at Fort Harker, Kans., from July 13 to 15, 1867, and mustered out there November 15, 1867. An epidemic of cholera attacked the Eighteenth immediately at Fort Harker, and 20 of them died.

Companies B and C fought the Cheyenne Indians on Prairie Dog Creek on August 21 and 22. Major Armes, of the Tenth United States Cavalry, commended the officers and men in the highest terms. They preserved the State of Kansas from further Indian depredations at that time. On August 30 Maj. H. L. Moore, of the Eighteenth, and his men fought the same Indians again. This gentleman was one of my predecessors in the Congress of the United States, having served in the Fifty-third Congress, and he afterwards served as commanding officer of the Nineteenth Kansas, being lieutenant colonel, I believe. The lieutenant colonels of both the Nineteenth and Twentieth Kansas have served in these halls. The campaign made by the Eighteenth Kansas in 1867 drove the Indians to winter quarters and left the frontier settlements of Kansas in comparative peace.

The following year the Nineteenth Kansas was mustered in by companies from October 20 to 29, 1868, at Topeka, and mustered out at Fort Hays, Kans., April 18, 1869—organized under authority of a telegram from the Secretary of War to Lieut. Gen. William Tecumseh Sherman, dated October 6, 1868. On November 5, 1868, the regiment moved from Topeka toward the Arkansas River, crossing at Wichita, marched southwest, and joined the Seventh United States Cavalry near the junction of Beaver Creek and North Canadian, 112 miles south of Fort Dodge, at the Camp Supply cantonment. Owing to severe snowstorms and the entanglements of the Cimarron Canyons, the regiment reached Camp Supply at the end of the month.

General Sheridan says:

The regiment lost its way, and, becoming entangled in the canyons of the Cimarron and in the deep snow, it could not make its way out and was in a bad fix. * * * It had been subsisting on buffalo for eight or nine days. * * * Officers and men behaved admirably in the trying condition in which they were placed.

General Sheridan tells of their march down the Washita, and says:

The snow was still on the ground and the weather very cold, but the officers and men were very cheerful, although the men had only shelter tents. We moved due south until we struck the Washita, near Custer's fight of November 27, having crossed the main Canadian, with the thermometer about 18° below zero. On the next day we started down the Washita, following the Indian trail; but finding so many deep ravines and canyons I thought we would move out on the divide, but a blinding snowstorm coming on, and fearing to get lost with a large command and trains of wagons on a treeless prairie without water, we were forced back to the banks of the Washita, where we at least could get wood and water. * * *

This was continued until the evening of the 16th of December, when we came to the vicinity of the Indians, principally Kiowas. They did not dream that any soldiers could operate in such cold and inclement weather, and we marched down on them before they knew of our presence in the country.

The result of this campaign was that Santanta and Lone Wolf, chiefs of the Kiowas, were taken prisoners, and by a threat of execution that tribe was forced to report at Fort Cobb, together with the Comanches and Apaches, and finally induced to go on their reservation.

From Fort Cobb the command marched to the base of the Washita Mountains and established Fort Sill, near Medicine Bluff. On the 2d of March following the Nineteenth Kansas Cavalry and the Seventh United States Cavalry, under the command of General Custer, went in pursuit of the Cheyennes. The course pursued was via Camp Radiminski, mouth of Elk Creek, to a point on North Fork of Red River, a few miles above the mouth of Salt Fork.

The Cheyenne trail was struck on Salt Fork on the 6th of March, 1869, and followed to the north along the eastern edge of the Llano Estacado until the 20th of March, when the Cheyennes were caught camped on Sweetwater Creek, about 10 miles west of the eastern line of Texas. This march was made practically without transportation or adequate supplies, and for the last few days the men subsisted on mule meat without bread or salt.

General Sheridan, General Custer, and Colonel Moore, with the soldiers of the Eighteenth Kansas, the Ninteenth Kansas, and the Seventh United States and Tenth United States Cavalry, rescued the women prisoners from the Indians in the Texas Panhandle and drove the Indians far into the Llano Estacado and preserved southwestern Kansas for all time, practically, from Indian assaults. They followed and fought the Indians in driving storms, at times with no resources but the buffalo they killed, and the obligations the Southwest is under to them have never really been acknowledged by the Government of the United States.

The most romantic feature of the campaign was the rescue of the women from Cloud County, Kans., whom they found in the Panhandle among the Indians, whom they beat after a fierce fight. Capt. John Q. A. Norton, of Lawrence, Kans., who is credited with marching alone against a Confederate battery, has told me personally the particulars of that episode, a tale that would do credit to the pen of a Dumas. As General Custer says in report:

In obtaining the release of the captive white women, and that, too, without ransom, the men of my command, and particularly those of the Nineteenth Kansas, who were called into service owing to the murders and depredations of which the capture of these women formed a part, feel more fully repaid for the hardships they have indured than if they had survived an overwhelming victory over the Indians.

Col. H. C. Lindsey, of the Twenty-second Kansas, in the Spanish War, was a sergeant major of the Nineteenth Kansas under Colonel Moore. Captain Norton, a soldier of the Civil War, then in 1869 a young lawyer at Lawrence, and an officer of exceptional courage and capacity and equipment, still lives at Lawrence, one of the foremost citizens of our great State, a soldier and a gentleman of the highest and best type, always gentle, capable, courageous, and chivalric.

THE ONLY VOLUNTEERS FROM 1865 TO 1898.

The Eighteenth and Nineteenth Kansas were the only volunteer soldiers that the American Government raised in a third of a century from 1865 to 1898. They performed a service that had as many difficulties as any of our veterans. They made a campaign as romantic and remarkable as a novelist could depict. They rescued from the horrors of Indian captivity the wives and daughters of those frontiersmen who made for us the great West and brought it into civilization. They have lived in patience for half a century without any fair or just expression of appreciation by this Republic for their excellent services. All that I ask now is that you give to them the same financial consideration that you give to other soldiers of similar accomplishments and similar heroism. Shall the fact that they were the only volunteers to serve their country on the battle field in a third of a century deprive them of just and equitable acknowledgment? Come, gentlemen of the House, let us not quibble about points of order, but let us do justice to those venerable men. Their days are not long upon this earth. Do not let them go before you have treated them with ordinary common sense. Their country has fought two wars since then, and these men have come down to us from a former generation and live that we may do the square thing by them and show that Republicans are not ungrateful.

The Eighteenth and Nineteenth Kansas have been followed by the Twentieth, the Twenty-first, the Twenty-second, and the Twenty-third Kansas, and by the One hundred and thirty-fifth United States and the Two hundred and fifty-third United States. It is over 60 years since the First Kansas, the advance guard of the Kansas army, filed past the great white throne, keeping time to the music of the spheres on every golden brick

in the hallowed streets of the new Jerusalem. Thus we have with us of those early soldiers of the plain only this thin and vanishing rear of the column. They say there is an end for all things mortal. Sometime the silver stars will dim and the luster of the tributes will fade and the hallowed flag will wither in the dust. Sometime the ghosts of the Grand Army of the Republic—and keeping step with them those of the Eighteenth and Nineteenth Kansas—with unseen arms reversed and banners trailing in the dust will march to the muffled music of fairy drums in the funeral procession of the last post of the Grand Army of the Republic, and marching with them off the scene will go the only volunteer regiments raised in this country from the Civil War to the Spanish War. Shall the Congressmen from other States miss this opportunity to stand at attention in respect to them before they go to answer the last great roll call?

Even now I can seem to hear them fighting again the battles in the snows with the Cheyennes, the Kiowas, the Apaches, and the Comanches, as they rehearse the story to their grandchildren and great-grandchildren. There is no greater human interest than that we have in those who have been on the old battle fields.

Come hither, Evan Cameron, and stand beside my knee;
I hear the river roaring down unto a wintry sea.
There's shouting on the mountain side, there's war within the blast,
Old faces throng upon me, old forms go trooping past.
I hear the pibroch wailing amidst the din of fight,
And my dim spirit wakes again upon the verge of night.
'Twas I that led the Highland hosts through dark Lochaber's snows,
What time the tartaned clans come down to battle with Montrose.

Those men must have had such thoughts in mind when the boys went off to Europe; gallant and lofty and noble spirits, they showed a high patriotism that the country should now recognize.

Mr. LANGLEY. Mr. Chairman, I reserved the point of order for the reason that this bill deals only with amendments to the existing pension law relating only to service in the Civil War, and also because our committee has no jurisdiction over a bill which deals, as this amendment does, with the Indian wars subsequent to the Civil War. In the report to the House I embodied the language which the gentleman from Kansas [Mr. LITTLE] read, because it was a splendid record of patriotic service, and if a separate bill were reported, coming from the proper committee, to increase the pension of these men I would gladly vote for it. However, I do not think it is germane to the pending bill, and, therefore, I must make the point of order, much as I regret to do so.

The CHAIRMAN. The Chair sustains the point of order.

Mr. CLOUSE. Mr. Chairman, I move to amend after the word "organizations" in line 6, page 1, by striking out the words "of the several States of the Union."

The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. CLOUSE: Page 1, line 6, after the word "organizations," strike out the words "of the several States of the Union."

Mr. CLOUSE. Mr. Chairman and gentlemen of the committee, I wish to say that I have conferred with the gentleman from Kentucky [Mr. LANGLEY] and also the gentleman from Missouri [Mr. RUCKER] with respect to this amendment, and I think it is acceptable to both the chairman and to the gentleman from Kentucky.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. CLOUSE. Yes.

Mr. LANGLEY. I can see where this might not affect the bill one way or the other, because the language is already there—

and cooperated with the military forces of the United States.

Prior to that the bill contains the following language:

enlisted men of the State militia and other organizations of the several States of the Union.

If I am correct about that, it would not affect the bill any. Of course these matters come up offhand and men must form their judgment quickly. What advantage does the gentleman hope to gain?

Mr. CLOUSE. With this language stricken out the bill will read:

extended to include the officers and enlisted men of the State militia and other organizations that participated and cooperated with the military forces of the United States under the command of United States officers.

Mr. ROACH. Mr. Chairman, will the gentleman yield?

Mr. CLOUSE. Yes.

Mr. ROACH. What other organizations would be referred to then, National or State?

Mr. CLOUSE. If the gentleman from Missouri will permit, during that awful period in the southern section of the country, and especially in Tennessee, which was the battle ground for many months during the last days of the great conflict, there were various organizations. United States Army officers would designate organizations to go out and scout for information, to keep track of and report the movements of the enemy. They were not inducted into the State militia, because we had no State militia in the State of Tennessee, and under this bill, unless a man is a member of the State militia or of an organization of the State, he could not participate under the provisions of the bill. By striking that language out, if he is either a member of the State militia or an organization such as was used throughout Tennessee, Georgia, Alabama, and the Virginias throughout that conflict, men who rendered just as great service to the Army of this Republic as those who were actually inducted into the service, he could participate in the benefits of the bill.

Mr. ROACH. If we strike out the words "of the several States of the Union," then, unless he was a member of the State militia, the words "other organizations" would not refer to State organizations at all.

Mr. CLOUSE. Absolutely not; but it would refer to any organization that rendered service with the military forces of the United States under a United States officer.

Mr. LANGLEY. Mr. Chairman, will the gentleman yield?

Mr. CLOUSE. Yes.

Mr. LANGLEY. Would the gentleman's amendment change the legal aspect of the bill in view of the language "enlisted men of the State militia and other organizations"? How can you conceive of a State militia and other organizations that are not organizations of the several States of the Union?

Mr. CLOUSE. It does not stop at "other organizations," but "other organizations of the several States."

Mr. LANGLEY. I understand.

Mr. CLOUSE. That relates to a State organization, whether it be military or some other character of organization. The object of my amendment is to strike out the words "of the several States of the Union," so that a member of any organization who can show that he actually rendered service and cooperated with the military forces under the command of a United States officer will share in the benefits of this legislation. If he is not entitled to it, I do not know of any who is.

Mr. LANGLEY. I do not see where the gentleman can help his cause by this amendment, as the bill in its present form takes care of just such a case.

Mr. BOX. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee a question. Can he tell me at what date the Civil War ended.

Mr. LANGLEY. April 19, 1865.

Mr. BOX. That was a few days after the surrender of General Lee?

Mr. NEWTON of Minnesota. The gentleman from Kentucky does not pretend that the Civil War ended on the 19th of April, 1865?

Mr. LANGLEY. No; I did not mean that.

Mr. NEWTON of Minnesota. That was the date of the surrender of Lee's Army, certainly not the date of the close of the war.

Mr. LANGLEY. There were sections of the country still under a state of war.

Mr. BOX. Mr. Chairman, the point I had in mind is suggested by what the gentleman from Minnesota says. I understand that officially the Civil War ended at a later date than the date of General Lee's surrender. After the General's surrender there came a period of reconstruction. A great number of men did police duty under the military governors and officers of the Union Army in the South during the period of reconstruction. I am wondering if the terms of this bill would include that class of men who served in that period after the surrender of General Lee and before the war finally and officially closed.

Mr. NEWTON of Minnesota. It is my impression, although I have not looked it up for some time, that there was a proclamation, either presidential or congressional, setting a date as the closing of hostilities.

Mr. BOX. Probably in 1866 or 1867.

Mr. NEWTON of Minnesota. I think it was in 1866. It would be my impression that this would run up to the date of 1866.

Mr. BOX. A large number of men of all classes, except that soldiers were rare among them, served under United States officers in the reconstruction period in the South; they seem to be included within the terms of this bill?

Mr. NEWTON of Minnesota. Offhand that would be my impression.

Mr. LANGLEY. I do not think it would include those men. It was not the intention of the author of the bill to include them.

The CHAIRMAN. The question is upon the amendment offered by the gentleman from Tennessee.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

SEC. 4. That title to pension under this act shall commence from the date of filing application therefor in the Bureau of Pensions after the approval of this act.

Mr. TILLMAN. Mr. Chairman, I move to strike out the last word. I am interested in the question raised by my friend, the gentleman from Texas [Mr. Box], and I want to ask the chairman of the committee, if I may, if he is quite certain that this bill will not allow any of these people a pension who after the war really closed did police duty in the South during reconstruction? I understand they are not to be beneficiaries of this act. Am I accurate in this statement?

Mr. LANGLEY. I will say to the gentleman that they were regular troops, the class to which he refers, and they are not covered by the law to which this bill is proposed as an amendment. The gentleman may recall there were a number of soldiers who took the oath of allegiance after they had served in the Confederate Army and then joined the Union forces, the First, Second, Third, Fourth, and Fifth United States Infantry, if I recall correctly. They were held not to be pensionable because they did not actually serve during the rebellion, although the war was not yet over in some sections of the country. I mention this to illustrate how the Pension Office has been construing the law and why I am sure the law would not include the class he mentions.

Mr. TILLMAN. That is my understanding of the law and of this measure.

Mr. LANGLEY. And I will add, if the gentleman will pardon me, that while I have not all the decisions in my mind now I was for several years a member of the Board of Pension Appeals, and I recall we rendered a decision, or perhaps more than one decision, on this question as to the actual legal date of the close of the Civil War for pensionable purposes; and I think that has also been adjudicated by the courts and that the Pension Office has well-established rulings on that question which will apply to these militia cases.

Mr. TILLMAN. I am very well satisfied with the gentleman's explanation. In truth and in fact the war closed at Appomattox, at least that was the time and place when we got tired of whipping you Yankees and quit fighting. I am anxious to vote for the bill. I did so when it formerly passed the House; it was then advocated eloquently by Speaker Clark, peace to his ashes; but I should not like to vote for a measure which would compensate the parties who went down and fattened upon the prostrate South after the war closed and who merely did police duty. These harpies stole everything that was not fastened down at both ends, and deserve neither respect nor a pension. Many of the men who would become beneficiaries of this measure, if it does not pension the parties above mentioned—and it does not, we are assured—were good soldiers. I have a large number in my district; many came from Missouri and located in Arkansas, and many of the Arkansas men at that time were members of the militia and did good service for the Government. I submitted some remarks upon this bill when it was before the House two or three years ago, and I do not care to repeat those arguments now. I think the bill has merit and should pass.

I regret, however, gentlemen, that you will not permit an amendment, which I have advocated and now advocate. I regret that this measure will not contain the legislation that I have heretofore proposed and now propose, that provision be made for the return to the people of the South, and to the surviving Confederate soldiers, the sixty-eight millions of illegally collected cotton tax, together with a reasonable interest on same. If you want to do one great big act of tardy justice incorporate this amendment in your bill.

As I have stated, there are many men in my State, confined largely to the third congressional district, interested in this measure. Gen. A. W. Bishop, at one time president of the University of Arkansas while I was a student there, was during the War between the States adjutant general of the State of Arkansas and prepared a report which was published and printed in 1867. The following "Historical Memoranda," regarding the Arkansas Militia, is taken from this report:

Prior to the organization of this militia the Union citizens of various parts of the State had acted together for their mutual defense. In the autumn of 1863, in accordance with orders from Major General Schofield, then commanding the Department of the Missouri, several companies of Union men were organized in northwestern Arkansas, the General Government issuing arms and ammunition and when on active duty furnishing them with subsistence. These companies were commanded as follows: In Washington County by Captains Bracken Lewis and Mackay; Benton County, Captain Mizer; Carroll County, Captains Gaddy and Walker; * * * There was also a very efficient company organized in West Fork Township, Washington County. * * *

* * * * * * * *

Captains Lewis and Mackay's companies took part in the defense of Fayetteville on the 3d of November, 1864, and all of these organizations rendered valuable aid to the Government, for which they have received no compensation.

In the spring of 1864, while the frontier division of the Seventh Army Corps were in the field cooperating with General Steele, it became necessary for the defense of Fort Smith and the Union men living in the vicinity to organize there also a local militia. Four companies were thus formed to do duty in the surrounding country, commanded, respectively, by Captains Turner, Smith, Gibbons, and Thomas, the battalion by Maj. Charles C. Reid. Companies were also organized at Ozark and other points on the Arkansas River. These companies likewise have never received pay for their services. At the same time the citizens of Fort Smith were partially organized and drilled, and precautions were taken against an attack upon the town, which was somewhat apprehended when the news reached it of the failure of the Red River expedition, and General Thayer, with the frontier division, was stubbornly falling back with General Steele to Little Rock.

In my home county, Sam Robinson and one of the Gilbreaths; in Madison County, Matt Grubb and others; in Carroll County, Mr. Willis Russell, of Green Forest, the fine old wife of Willis Russell, a former good citizen of that county, will be beneficiaries; in Boone County are several good men; John Starr, in Newton County, also will be a beneficiary; and all of them rendered good service. In other counties in my district are ex-militiamen who will be granted long-deferred justice in the way of a living pension during the few years remaining to them.

Mr. BOX. Mr. Chairman, I ask unanimous consent that I may proceed for two minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas? [After a pause.] The Chair hears none.

Mr. BOX. Mr. Chairman, the class of men that I have in mind are not Union soldiers. The Union man whom the old men in the South respect most is the man of his own kind whom he met on the battle field. They respect each other. They now regard each other almost as comrades. But there was a class of men, a numerous class, who never went with your father nor with mine, who never met either of them on the battle field, who fell in down there when our fathers had gone home to their families and to the work of rebuilding the ruins. These you certainly should not pension. They do not deserve a pension. I have an impression that the war did not officially close until some time, many months, after General Lee's surrender, some time in 1866 or 1867.

Mr. LANGLEY. That is true in certain portions of the country.

Mr. BOX. There were United States Army officers down there with all kinds of militia and police forces under their command. In the main they were a sorry, motley lot. The Union soldiers had gone home as fast as they could. The Confederate soldiers had gone home. Then gathered this class of men, such as always gather in such situations. In those years we had our darkest time. I desire to direct the attention of the chairman to that point, so we may be sure that this class of men will not receive the benefits of this legislation, if it is to be enacted.

Mr. LANGLEY. I will say to the gentleman that in extending my remarks I shall endeavor to include those decisions I have in mind, the exact citation of which I can not now give.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LANGLEY. Mr. Chairman, I move that the committee do now rise and report the bill to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the Committee rose; and Mr. WALSH having resumed the chair as Speaker pro tempore, Mr. DOWELL, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee, having had under consideration the bill H. R. 211, had directed him to report the same back to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

Mr. LANGLEY. Mr. Speaker, I move the previous question on the bill and all amendments thereto to final passage.

The previous question was ordered.

The SPEAKER pro tempore. Is a separate vote demanded on any amendment; if not, the Chair will put them in gross?

The question was taken, and the amendments were agreed to.

The bill as amended was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. LANGLEY, a motion to reconsider the vote by which the bill was passed was laid on the table.

EXTENSION OF REMARKS.

Mr. WALTERS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD.

The SPEAKER pro tempore. The gentleman from Pennsylvania asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

PRIVATE CALENDAR.

Mr. EDMONDS. Mr. Speaker, I would like to move that bills on the Private Calendar be taken up in the House as in the Committee of the Whole.

Mr. LANGLEY. Mr. Speaker——

Mr. EDMONDS. I believe that was the order of business.

The SPEAKER pro tempore. That was the order of business previously agreed to, that at the conclusion of the consideration of the pension bill it would be in order to continue consideration of the bills on the Private Calendar to which no objection was made. The bills on the Private Calendar are now in order for consideration. The gentleman from Pennsylvania [Mr. EDMONDS] asks unanimous consent that the bills be considered in the House as in the Committee of the Whole. Is there objection? [After a pause.] The Chair hears none.

MILITIA PENSIONS.

Mr. LANGLEY. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. LANGLEY. I am inclined to think, upon further consideration, that the title of the bill H. R. 211 should have been amended, in view of one amendment that was adopted. Can I at this time, by unanimous consent, have that corrected and amend the title to conform to the text?

The SPEAKER pro tempore. The gentleman from Kentucky desiring to amend H. R. 211 to conform to the text, without objection the proceeding upon reconsideration can be vacated and the title be amended to conform to the text. Is there objection to vacating the proceedings on motion to reconsider that was laid on the table with reference to H. R. 211? [After a pause.] The Chair hears no objection.

The gentleman from Kentucky [Mr. LANGLEY] asks unanimous consent that the title to H. R. 211 be amended to conform to the text. Is there objection? [After a pause.] The Chair hears none.

On motion of Mr. LANGLEY, a motion to reconsider the vote by which the bill H. R. 211 was agreed to was laid on the table.

PRIVATE CALENDAR.

The SPEAKER pro tempore. The Clerk will call the first bill on the Private Calendar, beginning at the point where the previous call terminated.

THOMAS B. SMITH.

The first business on the Private Calendar was the bill (H. R. 8264) for the relief of Thomas B. Smith.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 8264) for the relief of Thomas B. Smith.

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Thomas B. Smith, of Cheriton, Va., the sum of $185.66, to reimburse him for expenses incurred by him from April 20 to June 6, 1917, for travel performed by him while an ensign with the United States Naval Reserve Force attached to the Seventh Squadron, United States Navy.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. EDMONDS, a motion to reconsider the vote by which the bill was passed was laid on the table.

WILLIAM HOWARD MAY ET AL.

The next business on the Private Calendar was the bill (S. 2746) for the relief of William Howard May, ex-marshal of the Canal Zone; William K. Jackson, ex-district attorney of the Canal Zone; and John H. McLean, ex-paymaster of the Panama Canal, now deceased.

The SPEAKER pro tempore. Is there objection to the consideration of the bill?

Mr. STAFFORD. Reserving the right to object, as I read the report these three former officials of the Government on the Canal Zone were not under the law entitled to free quarters. Now, you are seeking to grant them the return of money that was taken from their pay for the rent of quarters?

Mr. EDMONDS. That was the decision of the authorities on the Canal Zone, but they went into court, and the court decided that they were not entitled to have the deduction for quarters taken out of their salaries.

Mr. STAFFORD. The gentleman will concede, however, that these three officers were not entitled to free quarters while occupying their respective positions?

Mr. EDMONDS. I will not concede that, because we simply took the report of the court. They went into court and the court agreed that they were entitled to this commutation of quarters.

Mr. STAFFORD. The court did not so hold. The court held that the executive officers did not have the authority to deduct the claim for rent from their salaries, but the court did not hold that they were entitled to free quarters.

Mr. EDMONDS. Is not that the same thing?

Mr. STAFFORD. Oh, no; far from it. The executive officers were exercising authority which the law did not give them the right to exercise, and yet these officers were obligated to pay rent for the quarters they were occupying.

Mr. Speaker, I ask that this bill be passed over.

The SPEAKER pro tempore. The gentleman from Wisconsin asks unanimous consent that the bill be passed over. Is there objection?

There was no objection.

ELIZABETH MARSH WATKINS.

The next business on the Private Calendar was the bill (S. 841) for the relief of Elizabeth Marsh Watkins.

The SPEAKER pro tempore. Is there objection?

Mr. CRAMTON. Mr. Speaker, reserving the right to object, as I understand the statement of facts in connection with this bill the injury to this girl occurred while she was a student in school?

Mr. EDMONDS. Yes.

Mr. CRAMTON. And it occurred because she volunteered to do certain work which she was not directed or expected to do?

Mr. EDMONDS. Well, she was detailed to do it or was allowed to do it anyhow, and received her injury while doing the work.

Mr. CRAMTON. The report would indicate that she was not detailed to do it, and that she was allowed to do it because there was no one there to forbid her doing it, and it was upon her own motion and initiative.

Mr. EDMONDS. I think that is true.

Mr. CRAMTON. And having received some injury because she was allowed to do something with a piece of machinery that was outside the scope of her employment, without any instruction to do it, it was some years thereafter before any claim was presented. In the meantime she had acquired a husband who was apparently interested in presenting the claim.

Mr. EDMONDS. That might be true.

Mr. CRAMTON. And the claim he presented was for $1,000, and the bill is for $2,500.

Mr. EDMONDS. The committee has made the same allowance for an injury of this kind as they have in other cases. It was thought the woman was pretty severely injured. Here is a picture of her. We feel under the circumstances she was doing governmental work and is entitled to some consideration.

Mr. CRAMTON. But the fact remains that it was not work she was directed to do or expected to do.

Mr. EDMONDS. I think the facts are as stated by the gentleman.

Mr. CRAMTON. And no claim was made for five or six years. And the committee has suggested to more than double the amount.

Mr. EDMONDS. It has passed the House several times, I will say to the gentleman, but never has passed the Senate afterwards. It has now passed the Senate and is up to the House. I reported it myself in 1915.

Mr. STAFFORD. Will the gentleman yield?

Mr. EDMONDS. Certainly.

Mr. STAFFORD. The gentleman says the claimant was performing Government work. As I read the report she was performing work for herself outside of the line of her employment completely.

Mr. EDMONDS. It was not her work. It was work the Government was supposed to perform.

Mr. STAFFORD. It would be a similar case if one of our clerks domiciled in one of the Government dormitories down

here were to go out and do something outside of her duties, using some electric iron or the like for ironing her wearing apparel, using machinery with which she was not acquainted and which was serviceable only to the skilled mechanics under the employ of the Government. Was she not an intermeddler, more or less?

Mr. EDMONDS. I do not know about that.

Mr. STAFFORD. Well, the machinery was in good condition. She got injured because she was monkeying around a machine with which she had no acquaintance at all, and now she is calling upon the Government to reimburse her for injuries received in consequence of her folly.

Mr. CRAMTON. Her husband calls upon the Government six years after the accident.

Mr. STAFFORD. Mr. Speaker, I ask unanimous consent that the bill may be passed over.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the next bill.

JESSE GOODIN.

The next business on the Private Calendar was the bill (S. 2664) for the relief of Jesse Goodin.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, will the chairman of the committee acquaint the House as to the policy of the committee in arriving at the amount of damages in a case of death resulting from carelessness of Government employees, in this case in the operation of a Government utility?

Mr. EDMONDS. This amount is all the people asked for. They did not ask for more, and we felt that that was a sufficient amount, and we gave it to them.

Mr. STAFFORD. What was the amount that the committee determined is a reasonable figure for payment for death in the way of damages occasioned by the fault of some Government employee?

Mr. EDMONDS. Five thousand dollars. That is our limit.

Mr. STAFFORD. I notice here in the next to the last paragraph of the letter of the Secretary of the Navy that—

The bill provides for the payment to the father of the deceased a sum of $2,500. The department has no means of determining whether this amount is reasonable and just under the circumstances, but it is of opinion that it is not excessive.

Mr. EDMONDS. All the parties asked for was $2,500. There were three or four parties injured or killed in this accident. Another bill will follow; it is on the calendar now.

Mr. STAFFORD. Here you are providing $3,000?

Mr. EDMONDS. Yes.

Mr. STAFFORD. What is the explanation of the difference in the amount?

Mr. EDMONDS. In the affidavits and papers presented to us $3,000 was the sum asked for. Three thousand dollars was the sum given by the Senate.

Mr. STAFFORD. Mr. Speaker, I withdraw the reservation.

The SPEAKER pro tempore. Is there objection to the present consideration of this bill?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Jesse Goodin, of Pensacola, Fla., the sum of $3,000 as full compensation for the death of his daughters, Alice and Lillie Goodin, on March 1, 1921, on account of having been struck by United States Navy (*N–10*) seaplane (A 2458) while piloted by John W. Alcorn, ensign, United States Navy.

Mr. EDMONDS. Mr. Speaker, I have an amendment which I would like to offer.

The SPEAKER pro tempore. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. EDMONDS: In line 4, after the word "pay," add a comma and the following: "out of any money in the Treasury not otherwise appropriated."

The SPEAKER pro tempore. The question in on agreeing to the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the third reading of the Senate bill.

The Senate bill was ordered to be read a third time, was read the third time, and passed.

On motion of Mr. EDMONDS, a motion to reconsider the vote whereby the bill was passed was laid on the table.

JOSEPH ZITEK.

Mr. McLAUGHLIN of Nebraska rose.

The SPEAKER pro tempore. For what purpose does the gentleman from Nebraska rise?

Mr. McLAUGHLIN of Nebraska. To proffer a unanimous-consent request.

The SPEAKER pro tempore. The gentleman will state it.

Mr. McLAUGHLIN of Nebraska. On the 21st of April, when the House was considering bills from the Committee on Claims on the Private Calendar, the bill H. R. 8448, Calendar No. 185, was the last bill objected to, carrying $75 for the relief of Joseph Zitek. I was informed that the bill would not come up to-day, and when it was reached I was not here to make an explanation. An explanation was called for and was not given, and the bill was passed over. I want to ask unanimous consent to return to it, so that I can make an explanation, and the bill may be passed.

It is a worthy case. There is no objection to it from the Post Office Department, or from the Committee on Claims, or from anybody else who knows the circumstances.

The SPEAKER pro tempore. The gentleman from Nebraska asks unanimous consent to return to No. 185 on the Private Calendar for the purpose of considering the bill H. R. 8448. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, a very small amount is involved, $75 only, but there is a principle involved. The gentleman from Nebraska says the Post Office Department has no objection to the payment of this amount. The claimant makes the representation that, by reason of the airship alighting on this field, five or six acres were damaged, whereas in the report of the Postmaster General it is said two or three acres would be a fair estimate. Of course, it is not an amount worth mentioning.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The SPEAKER pro tempore. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury is authorized and directed to pay to Joseph Zitek, out of any money in the Treasury not otherwise appropriated, the sum of $75.

Such sum is the amount of damages estimated as suffered by Joseph Zitek by reason of the trampling and mowing of his grain incident to the landing in his wheat field on May 29, 1921, of ship No. 170 of the United States Air Mail Service and of ship No. 180 of such service in aid of ship No. 170, the work necessary to the repair of the two ships, their resumption of flight, and the presence of a crowd gathered to view the accident.

With a committee amendment, as follows:

Page 1, strike out all of lines 6 to 10, inclusive; and, on page 2, strike out all of line 1 to line 3, inclusive.

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

Mr. EDMONDS. Mr. Speaker, I offer an amendment.

The SPEAKER pro tempore. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. EDMONDS: In line 5, after the figure "$75," add the following: "As compensation for damages done to the wheat field of said Joseph Zitek, near Ulysses, Nebr., on May 29, 1921, by airplanes of the United States Air Mail Service."

The SPEAKER pro tempore. The question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. EDMONDS, a motion to reconsider the vote by which the bill was passed was laid on the table.

ANNA M. TOBIN.

Mr. HUDSPETH. Mr. Speaker, I ask unanimous consent to return to Private Calendar No. 203, which is the bill (S. 2323) for the relief of Anna M. Tobin, independent executrix of the estate of Frank R. Tobin, deceased.

The SPEAKER pro tempore. The gentleman from Texas asks unanimous consent to return to Calendar No. 203 for the purpose of considering S. 2323. Is there objection?

Mr. CRAMTON. Mr. Speaker, reserving the right to object, in connection with that bill there appear in the report various references to an itemized statement of the damage done. The only statement given in the report repeatedly is that there was a damage of $1,000, and the bill is for $1,000, but no detailed statement of the actual damage appears anywhere in the report.

Mr. HUDSPETH. This bill passed this House in the last Congress, but failed of passage in the Senate, and I filed with the Claims Committee of the House an itemized statement, which was approved by the War Department and approved by the commanding general, showing that the damage was more than the committee allowed. The committee allowed $600 less than the itemized statement showed to be the damage sustained, which was approved by the War Department.

Mr. CRAMTON. Unfortunately, the report does not carry that itemized statement.

Mr. HUDSPETH. This report does not, but I filed it last year when the bill passed the House.

Mr. EDMONDS. It was in last year's papers, and the statement which the gentleman from Texas has made here is correct.

The SPEAKER pro tempore. Is there objection to returning to Calendar No. 203 for the purpose of considering the bill?

Mr. STAFFORD. Reserving the right to object, I notice that the report shows that the claimant declined to follow the suggestion of the officer before all this damage was done.

Mr. HUDSPETH. In what respect?

Mr. STAFFORD. By declining to permit the commanding officer to put a guard around this property, and that most of this damage occurred after the refusal of the representative of the claimant to permit such guard to be so placed. What equity has a claimant who declines to let the military authorities place a guard about the premises to protect them?

Mr. HUDSPETH. My recollection is that the owners of the property had a guard there that they were paying themselves, but notwithstanding the fact that this guard was there the soldiers depredated and destroyed this property.

Mr. STAFFORD. Let me read to the gentleman the report of the inspector, Major Taggart, of the National Guard, Seventh Division.

At the time of the original damage and complaint General Clements did offer to have the parties found upon the premises make restoration, but in the presence of the offenders the representation was made on behalf of Mrs. Tobin that she did not care that the boys should do this, but was anxious that a guard should be established about the premises for the protection thereof from further injury.

I beg the gentleman's pardon. I got the matter confused.

Mr. HUDSPETH. Yes; she asked for a guard.

Mr. STAFFORD. She asked for a guard, but Major Taggart says in his report:

General Clements is of the opinion that had he been permitted to handle this matter as he thought best, all future trouble should have been avoided and Mrs. Tobin saved the damage to her property and the expense of maintaining a civilian guard.

There was the owner of the property, Mrs. Tobin, declining to follow the suggestion of the commanding officer as to the proper method of guarding her property. Then after the damage is done she comes here and asks for reparation.

Mr. HUDSPETH. My friend is mistaken about that. She went to the general and asked for a guard. The general wanted to bring the boys up and prosecute them at the time.

Mr. STAFFORD. Why should not the general have been permitted to do that?

Mr. HUDSPETH. She did not want the boys prosecuted. She asked that they be not prosecuted.

Mr. STAFFORD. Yes; but the boys were under the command of the general.

Mr. HUDSPETH. That is true.

Mr. STAFFORD. They were in the Army.

Mr. HUDSPETH. But she did not want to have the young men prosecuted. She did ask the commanding officer to furnish a guard.

Mr. STAFFORD. If there is any obligation on the part of the Government it is by reason of the failure of our established officers to properly discipline their troops, but they were not disciplined because of the request of the claimant.

Mr. HUDSPETH. That is true. The kind-hearted lady asked that they be not put in prison, but she did ask the commanding officer repeatedly for a guard to be stationed around her property to protect it.

Mr. STAFFORD. But the inspector says that—

All future trouble should have been avoided and Mrs. Tobin saved the damage to her property and the expense of maintaining a civilian guard.

And now she is charging up to the Government what she thought advisable, after not allowing the commanding general to have his way.

Mr. HUDSPETH. The matter was presented to the board and approved. The War Department approved the claim, which was also approved by the commanding officer at the post.

Mr. STAFFORD. Where do we find any reference to the War Department?

Mr. CRAMTON. Where is there any statement that the War Department approved the amount?

Mr. HUDSPETH. I do not see it in this report, but I know it to be a fact that in a former report that was filed the War Department did approve this claim.

Mr. CRAMTON. Let me read to the gentleman General Sharpe's summary, stating that—

The damage sustained to the property of Mrs. Tobin is in the nature of torts, the depredations referred to being committed by individual soldiers without authority, and a claim for compensation for such damages can not be favorably considered by the department, the individuals who committed the depredations alone being responsible for the damages incurred.

Mr. HUDSPETH. That is true.

Mr. CRAMTON. General Sharpe further says:

The War Department has no jurisdiction in the settlement of claims for damages incurred to private property. Congress alone can grant relief in such cases. If the claim is presented to Congress it should be supported by an itemized statement of the damages incurred and definite information as to the cost of repair for each item claimed for. The papers in the case will be retained upon files of this office and will be furnished to Congress, or any committee thereof, upon due call therefor.

Mr. HUDSPETH. That is a mere statement that the War Department can not pay the claim, but the War Department did approve the claim.

Mr. CRAMTON. There is nothing to indicate that the War Department has approved this claim. The War Department referred the claimant to Congress.

Mr. HUDSPETH. As I say, the War Department approved the justice of this claim.

Mr. CRAMTON. We are entitled to see all of those papers.

Mr. HUDSPETH. If the gentleman had seen the papers that I filed he would see that the War Department approved it.

Mr. CRAMTON. The only papers that I have before me, or any Member of the House has, contains the general statement that there was a thousand dollars claimed.

Mr. HUDSPETH. I can only say that I filed the claim when the bill was before the House, and at that time it showed that the War Department had approved the claim.

Mr. CRAMTON. My reading of the report gives me the feeling that the amount of a thousand dollars is far beyond the actual damage.

Mr. HUDSPETH. The original bill provided for $1,600 and the Senate cut it down to $1,000.

Mr. STAFFORD. Mr. Chairman, I do not think the claimant has such a great equity here——

Mr. HUDSPETH. I think if the gentleman from Wisconsin understood the matter he would not make objection to the consideration of the bill. The soldiers took off this property to build buildings.

Mr. STAFFORD. We have the statement of the commanding officer that if he had been allowed to have his way this damage would not have occurred.

Mr. HUDSPETH. What was his way? He wanted to punish the soldiers, but Mrs. Tobin was very kindhearted and did not want them punished; did not want them sent to prison.

Mr. STAFFORD. The greater damage was done afterwards.

Mr. CRAMTON. At that time there was only damage to the amount of $75.

Mr. STAFFORD. Mr. Chairman, I think this should go over until we can find out what the Secretary of War says about it.

The SPEAKER pro tempore. Objection is made.

ED THOMAS AND PAULINE THOMAS.

The next business on the Private Calendar was the bill (S. 2666) for the relief of Ed Thomas and Pauline Thomas.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. STAFFORD. Reserving the right to object, the only damage that this claimant received is that she can not turn her left hand.

Mr. CRISP. Mr. Speaker, this is a bill introduced by Mr. SMITHWICK, who is out of the city. If the gentleman will read the report, he will notice that there was an airplane accident at Pensacola through the fault of a naval officer. It struck in a crowd and killed several people. The daughter of these claimants was severely injured and one of her hands permanently injured. The bill was introduced in the Senate carrying $5,000. The Navy Department said they thought the amount was excessive and suggested that the bill be reduced to $2,000, and with $2,000 they would approve of the bill. The bill passed the Senate carrying $2,000. Inasmuch as this claimant was injured without any fault on her part in the city of Pensacola by an airplane belonging to the Government, it seems to me that it is an equitable claim, and I hope my friend will not feel constrained to object. I have no interest whatever in the claim. It is a claim of the gentleman from Florida.

Mr. STAFFORD. The reading of the report indicates to me that $2,000 is rather excessive for an injury to the left hand so that she has difficulty in turning it.

Mr. CRISP. The gentleman is a lawyer and knows that pain, suffering, and anguish is an element of damage.

Mr. STAFFORD. Yes; but we only allowed $2,500 for pain, anguish, and injury where the injured person died. A minute ago we allowed $2,500 of compensation to assuage the pain and injury where two children were lost as a result of this same accident. Of course I recognize that there is some equity here, but I think $2,000 is a little bit excessive.

Mr. CRISP. My friend will recognize that the living will have to suffer more for the injury than one who is dead. The troubles of the one who is dead are over. The one who is living will need something to get along with.

Mr. STAFFORD. Well, this is the left hand.

Mr. CRISP. But the gentleman must recognize that she may be a left-handed person.

Mr. STAFFORD. Mr. Speaker, I thought the amount was a little excessive, but I will not object.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay to Ed Thomas and Pauline Thomas, of Pensacola, Fla., the sum of $2,000 as full compensation for injuries received and suffered by their daughter, Pauline Thomas, on March 1, 1921, on account of having been struck by United States Navy (*N–10*) seaplane (A 2458) while piloted by John Alcorn, ensign United States Navy.

Mr. EDMONDS. Mr. Chairman, I offer the following committee amendment.

The Clerk read as follows:

Line 4, after the word "pay" add a comma and the following: "out of any money in the Treasury not otherwise appropriated."

The committee amendment was agreed to.

The bill as amended was ordered to be read the third time, was read the third time, and passed.

On motion of Mr. CRISP, a motion to reconsider the vote whereby the bill was passed was laid on the table.

QUINCY R. CRAFT.

The next business on the Private Calendar was the bill (H. R. 10677) for the relief of Quincy R. Craft.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk reported the bill, as follows:

Be it enacted, etc., That there is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, to Quincy R. Craft, chief of office and fiscal agent, Forest Service, Department of Agriculture, the sum of $346.71, being the amount disallowed by the accounting officers of the Treasury in his account covering expenses incurred in the erection of a building at the Bessey Nursery of the Nebraska National Forest.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAUGEN, a motion to reconsider the vote by which the bill was passed was laid on the table.

HENRY M'GUIRE.

The next business on the Private Calendar was the bill (H. R. 10675) for the relief of Henry McGuire.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

There was no objection.

The Clerk read the bill, as follows:

Be it enacted, etc., That there is authorized to be appropriated for payment by the Secretary of the Treasury to Henry McGuire, or his legal representatives, the sum of $225.23 as full compensation for 9,385 feet board measure of lumber which, upon dates between September 22, 1909, and October 11, 1909, and at the specific request and direction of an employee of the Forest Service, United States Department of Agriculture, was furnished to one Hiram Campbell for use in the construction of a house to replace one owned by said Hiram Campbell which was destroyed on September 19, 1909, by fire originating from brush-burning operations conducted on national forest land by employees of the Forest Service.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. HAUGEN, a motion to reconsider the vote by which the bill was passed was laid on the table.

STEAMSHIP "VINDAL."

The next business on the Private Calendar was the bill (H. R. 8214) to compensate the owners of the American steamship *Vindal* for damages and expenses in repairing said steamship and to make an appropriation therefor.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, I wish to inquire of the gentleman who reported the bill the reason why the claimant was not allowed the privilege, as is customary, to seek his redress in a court of admiralty rather than have the committee determine the amount of damages, $3,295.

Mr. ROACH. Mr. Speaker, that was not considered to be necessary by the committee for the reason that the committee itself inquired particularly into the facts and merits of this claim. We sat as a court of admiralty ourselves and determined that the claim is meritorious, should be allowed, and that the claimant should not be put to the expense of employing counsel and going into court with a claim that is so patent upon the face of it that it proves itself.

Mr. STAFFORD. It is customary in these cases to allow the claimant to have recourse to the courts rather than for the Congress or the committee to assess the damages. That is the practice of the Committee on Claims. It may not be the practice of the Committee on War Claims.

Mr. ROACH. It is not the practice of the Committee on War Claims, and it is only one of two reliefs that may be granted to a claimant. Speaking only for myself at this time, I think that where the facts are simple and easy of ascertainment, as they were in this case, and were ascertained, it would be ridiculous to require the claimant to go into court and spend money to establish a claim that establishes itself. This claim was also made the subject of a very careful inquiry by the Navy Department, which made a report to our committee of the material facts bearing upon the claim. That report shows conclusively upon the face of it that the claimants are entitled to every dollar which the bill gives to them.

Mr. STAFFORD. The report that accompanies the bill does not contain any excerpt of or the letter from the Navy Department recommending this claim.

Mr. ROACH. It contains a statement upon the part of the committee that this claim does have the approval of the Navy Department. If the gentleman questions that statement I have the report of the Secretary here in my pocket. I did not want to incumber the record.

Mr. STAFFORD. What is the basis of the committee granting three and a half days' demurrage at the rate of $750 a day?

Mr. ROACH. The ship was actually detained from sailing that number of days, as shown by the report of the Secretary of the Navy. That matter was particularly inquired into in directing our inquiry to the Secretary of the Navy. Some question arose in the minds of the War Claims Committee as to whether or not that amount of demurrage charges was proper, and in order to settle the question definitely a special letter was written to the Secretary of the Navy, who informs us that this ship was under charter, that it was actually detained from sailing for three days and a half, and that that is the contract price in the charter agreement.

Mr. STAFFORD. Mr. Speaker, I withdraw the reservation of objection.

The SPEAKER pro tempore. Is there objection?

There was no objection.

The Clerk reported the bill, as follows:

Be it enacted, etc., That an appropriation of $3,295 be, and is hereby, made to Vindal Co. (Inc.), a New York corporation, owner of the American steamship *Vindal*, payable out of any unappropriated funds in the Treasury of the United States of America, to recompense the said Vindal Co. (Inc.), of New York, for damages and expenses due to a collision between the United States Navy barges *Washington* and *General Knox* and the said steamship *Vindal* while the said steamship was lying at anchor in the harbor of New York on Gowanus Flats, off Fifty-second Street, Brooklyn, on the 30th day of October, 1917, at about the hour of 6 o'clock a. m.; a naval board of investigation convened by the commandant of the third naval district having found that the responsibility for the damage to the said steamship *Vindal* rested solely with the United States Navy barges *Washington* and *General Knox;* that no blame for the said collision attached to the said steamship *Vindal;* and that the claim of damage in the sum of $3,295 is reasonable and just and should be paid; and the proceedings, findings, and opinion of the said board of investigation having been approved by the commandant of the third naval district and by the Secretary of the Navy, and the Navy Department having no funds out of which to pay for the damages caused to the said steamship *Vindal* as aforesaid.

With the following committee amendment:

Strike out all after the enacting clause and insert:

"That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, to Vindal Co. (Inc.), a New York corporation, owner of the American steamship *Vindal*, the sum of $3,295 in full compensation for damages and expenses due to a collision between the United States barges *Washington* and *General Knox* and the said steamship *Vindal* while the said steamship was lying at anchor in the harbor of New York, on Gowanus Flats, off Fifty-second Street, Brooklyn, on the 30th day of October, 1917, at about the hour of 6 o'clock a. m."

The SPEAKER pro tempore. The question is on agreeing to the committee amendment.

The committee amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. ROACH, a motion to reconsider the vote by which the bill was passed was laid on the table.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its chief clerk, announced that the Senate had passed joint resolution of the following title, in which the concurrence of the House of Representatives was requested:

S. J. Res. 204. Joint resolution to authorize the loan by the Secretary of War to the commander in chief of the United Confederate Veterans of cots for the use of the members of the United Confederate Veterans during the sessions of the national encampment of the United Confederate Veterans at Richmond, Va., from June 19 to 22, 1922.

LOAN OF COTS, ETC., TO CONFEDERATE VETERANS.

Mr. MONTAGUE. Mr. Speaker, I ask unanimous consent to take from the Speaker's table Senate Joint Resolution 204, to authorize the loan by the Secretary of War to the commander in chief of the United Confederate Veterans of cots for the use of the members of the veterans during the sessions of the national encampment of the United Confederate Veterans at Richmond, Va., from June 19 to 22, 1922. To be available, the resolution should be adopted speedily. It is in the usual form.

The SPEAKER pro tempore. The gentleman from Virginia asks unanimous consent that Senate Joint Resolution 204 be laid before the House for present consideration.

The Clerk will report the resolution.

The Clerk read as follows:

Resolved, etc., That the Secretary of War is authorized to lend 1,000 cots to the commander in chief of the United Confederate Veterans at their national encampment to be held in Richmond, Va., from June 19 to June 22, 1922, upon receiving a bond satisfactory to the Secretary of War to indemnify the United States of America from loss or injury to such cots, or any of them, such indemnity bond to be drawn by and approved by the Secretary of War.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Reserving the right to object, is the resolution in the usual form providing for the bond to reimburse the United States for any damages which may be done to the loan of this property?

Mr. MONTAGUE. I have not compared the resolution with others that have passed the Congress but the Senator who drafted it informs me that it is in the usual form. It does provide specifically that a bond shall be given to indemnify the United States and save the Government harmless.

Mr. HULL. Where are these cots?

Mr. MONTAGUE. I do not know as to that. They are under the control of the Army.

Mr. HAWES. Should not we know?

Mr. MONTAGUE. It is the property of the Army, and I suppose the Army people have it in charge.

Mr. STAFFORD. Last year and in prior years there was a similar resolution passed for the loan of cots for the national encampment of the United Confederate Veterans?

Mr. MONTAGUE. That is correct. These loans of cots have been made from time to time. Last year I think the number was 5,000, but I doubt this year if we will need 600, but 1,000 is the maximum in the joint resolution.

Mr. STAFFORD. I withdraw the reservation of the right to object.

The SPEAKER pro tempore. Is there objection to the present consideration of this resolution? [After a pause.] The Chair hears none.

The Senate joint resolution was ordered to be read the third time, was read the third time, and passed.

On motion of Mr. MONTAGUE, a motion to reconsider the vote by which the Senate joint resolution was passed was laid on the table.

RELIEF OF DR. O. H. TITTMANN (H. R. 6245).

Mr. NEWTON of Missouri. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Missouri rise?

Mr. NEWTON of Missouri. Mr. Speaker, I ask unanimous consent that the House return to No. 31 on the Private Calendar.

The SPEAKER pro tempore. The gentleman from Missouri asks unanimous consent to return to Private Calendar No. 31, for the purpose of the consideration of the bill. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, that bill has been before the House many, many sessions and has been objected to by Members present and Members absent.

Mr. NEWTON of Missouri. And no one had an opportunity to make a statement in regard to it.

Mr. LEHLBACH. Will the gentleman yield?

Mr. NEWTON of Missouri. I will.

Mr. LEHLBACH. It is my intention when this bill comes up for consideration again, whether now or at any other time, to make a point of order against it, which I think is valid, and it might be well to dispose of the matter at the present time.

Mr. STAFFORD. I wish to say to the gentleman that there has been delay in the consideration of the Private Calendar to-day by reason of the consideration of a pension bill, and there are many Members who are desirous of having their bills considered between now and the adjournment time of 5 o'clock, and I do not think we should take up the time of the House on this bill.

Mr. UNDERHILL. Mr. Speaker, under the circumstances I object.

The SPEAKER pro tempore. The gentleman from Massachusetts objects. The Clerk will report the next bill.

QUITCLAIM AND RELEASE CERTAIN LAND IN THE CITY OF PENSACOLA, FLA.

The next business in order on the Private Calendar was the bill (H. R. 9626) granting a deed of quitclaim and release to the Traders' Brokerage Co., a corporation, of certain land in the city of Pensacola, Fla.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none.

The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior is hereby authorized and directed to execute, acknowledge, and deliver, in the name of the United States of America, a deed of quitclaim and release to the Traders' Brokerage Co., a corporation organized under the laws of the State of Delaware, its successors and assigns, of all the right, title, and interest in and to lot 30, block 19, old city of Pensacola, Fla., according to map of the city of Pensacola, copyrighted by Thomas C. Watson in 1906.

The committee amendment was read, as follows:

Page 2, line 1, after the word "Pensacola," strike out "copyrighted by Thomas C. Watson in 1906" and insert in lieu thereof "platted by James W. Exum, deputy surveyor, in 1827.

The committee amendment was agreed to.

The bill as amended was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. EDMONDS, a motion to reconsider the vote by which the bill was passed was laid on the table.

EDWARD A. PURDY.

The next business in order on the Private Calendar was the bill (H. R. 10234) for the relief of Edward A. Purdy.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none.

The Clerk read as follows:

Be it enacted, etc., That the Postmaster General be, and he is hereby, authorized and directed to credit Edward A. Purdy, as postmaster of Minneapolis, Minn., in the sum of $1,948.48, said sum being the balance due the United States Government after a collection of $1,000 had been made on the bond and applied to the shortage of certain postage stamps and cash from the money-order funds embezzled or stolen by Christian H. Mackeprang from one of the branch post offices of the said city of Minneapolis, to wit: That certain branch post office located at No. 1501 Washington Avenue South, in the said city; and that the said Edward A. Purdy be, and he is hereby, released from payment to the Treasury of the United States of the said sum of $1,948.48, and every part thereof as such postmaster, and that his account in connection with the aforesaid station branch post office be credited with the said amount of $1,948.48 by reason of the aforesaid loss caused by the said theft.

The committee amendment was read, as follows:

Page 1, line 12, after the word "Minneapolis," strike out the comma and the remainder of the bill.

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read the third time, was read the third time, and passed.

On motion of Mr. NEWTON of Minnesota, a motion to reconsider the vote by which the bill was passed was laid on the table.

J. W. HARRELD.

The next business in order on the Private Calendar was the bill (H. R. 8025) for the relief of J. W. Harreld.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. HERRICK. Mr. Speaker, I object.

Mr. STAFFORD. Mr. Speaker, will the gentleman from Oklahoma reserve the right to object?

Mr. HERRICK. No; I will not reserve the right to object; I object.

Mr. STAFFORD. Has the gentleman any reason——

Mr. HERRICK. Yes; I have reason, and I object.

The SPEAKER pro tempore. The gentleman from Oklahoma objects.

Mr. STAFFORD. Objects to a claim of his own Senator.

ABRAHAM LEIBOVITZ.

The next business in order on the Private Calendar was the bill (H. R. 6926) for the relief of Abraham Leibovitz.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the present consideration of the bill? [After a pause.] The Chair hears none.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby, authorized and directed to pay and return to Abraham Leibovitz the sum of $500 paid by said Abraham Leibovitz to the United States on a judgment against him on the bail bond of Michael Taylor, who was afterwards captured and returned to the United States officers by said Abraham Leibovitz. The sum of $500 is hereby appropriated for said payment and return of said sum to said Abraham Leibovitz.

The committee amendment was read as follows:

Strike out all after the enacting clause and insert the following: "That the Secretary of the Treasury be, and he is hereby authorized and directed to pay, out of any money in the Treasury not otherwise appropriated, the sum of $500 to Abraham Leibovitz, of Philadelphia, Pa., which sum was paid by him to the United States on a judgment against him on the bail bond of Michael Taylor, who was afterwards captured and returned to the United States officers by said Abraham Leibovitz."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. EDMONDS, a motion to reconsider the vote by which the bill was passed was laid on the table.

MRS. M. P. RODGERS.

The next business on the Private Calendar was the bill (H. R. 4314) for the relief of Mrs. M. P. Rodgers.

Mr. EDMONDS. Mr. Speaker, the gentleman from California [Mr. RAKER] not being present, I ask unanimous consent that this bill be passed over.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

VALIDATING CERTAIN APPLICATIONS FOR AND ENTRIES OF PUBLIC LANDS.

The next business on the Private Calendar was the bill H. R. 10419, validating certain applications for and entries of public lands.

The SPEAKER pro tempore. Is there objection?

Mr. CRAMTON. Mr. Speaker, reserving the right to object, I would like to ask the gentleman from Indiana [Mr. BENHAM] whether there are any of these cases that involve any fraud on the part of the party now to be relieved?

Mr. BENHAM. Mr. Speaker, we are assured by Assistant Secretary Finney, at whose request the bill was introduced, that in every instance the claimant has a claim in equity, but, owing to slight technicalities of law, the department is unable to approve the claim without congressional action.

Mr. CRAMTON. All the items in the bill are recommended by the department?

Mr. BENHAM. Not only recommended by the department, but have been gone over very carefully by the subcommittee, and in any case where there was any objection at all they have been eradicated.

Mr. CRAMTON. Mr. Speaker, I withdraw the reservation.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized to issue patents upon the entries hereinafter named upon which proof of compliance with law has been filed, upon the payment of all moneys due thereon:

Additional homestead entry, Blackfoot, Idaho, No. 018220, made by Ora R. Brower, for the heirs of Henry Brower, deceased, on August 15, 1914, under the act of June 17, 1910 (36 Stat. L. p. 531), for the east half of the northeast quarter and east half of the southeast quarter, section 20, township 10 north, range 41 east, Boise meridian.

Homestead entry, Miles City, Mont., No. 033305, made by Susanna McLain, on December 9, 1916, for the west half of the west half of section 10, township 10 north, range 43 east, Montana principal meridian.

Homestead entries, Roswell, N. Mex., Nos. 035320 and 037120, made by Alma E. Squire, for the south half of the northeast quarter, southeast quarter of the northwest quarter, east half of the southwest quarter, north half of the southeast quarter, and southeast quarter of the southeast quarter of section 7, the southwest quarter of section 8, and the northwest quarter of section 17, township 9 south, range 30 east, New Mexico principal meridian.

Additional homestead entry, Pierre, S. Dak., No. 014332, made by Orlo W. Horsley on November 20, 1916, under the act of February 19, 1909 (35 Stat. L. p. 639), for the north half of the northeast quarter and north half of the northwest quarter of section 21, township 3 north, range 30 east, Black Hills meridian.

Homestead entry, Bozeman, Mont., No. 09094, made by Glenn Conklin on June 3, 1914, under the act of June 11, 1906 (34 Stat. L. p. 233), for a tract of land described as homestead entry survey No. 884.

Homestead entry, Durango, Colo., No. 07166, made by Alva John Burch on September 10, 1917, for the east half of section 9, township, 35 north, range 14 west, New Mexico principal meridian.

Desert-land entry, Evanston, Wyo., No. 06098, made by Enger K. Chrisman on March 22, 1919, for lots 4 and 5 of section 29, lot 1 and the northwest quarter of the northeast quarter of section 32, and lots 2, 3, and 4 and the south half of the northeast quarter and the southeast quarter of the northwest quarter of section 33, township 26 north, range 113 west, sixth principal meridian.

SEC. 2. That the entry hereinafter named be, and the same is hereby, validated, and the Secretary of the Interior authorized to issue patent thereon upon submission of satisfactory proof of compliance with the law under which such entry was allowed:

Desert-land entry, Phoenix, Ariz., No. 031411, made by Isabelle S. Forest on January 10, 1920, for the southeast quarter of the northeast quarter, section 23, township 14 north, range 4 east, Gila and Salt River meridian: *Provided*, That the payment of $1.25 per acre required under the provisions of the desert-land law shall be in lieu of the like amount at which this land was appraised when open to entry.

SEC. 3. That the Secretary of the Interior be, and he is hereby, authorized to allow the following application to make entry:

Homestead application, Phoenix, Ariz., No. 039571, filed by Frank D. Thomas for the north half of the southeast quarter, section 9, township 1 south, range 2 east, Gila and Salt River meridian, subject to the reclamation law, and to allow said entryman, in complying with the requirements of the homestead laws, credit for his residence upon, improvement, and cultivation of said land prior to the date of this act.

The following committee amendments were read:

Page 4, after line 21, insert section 4, as follows:

"SEC. 4. That the Secretary of the Interior be, and he is hereby, authorized to accept proof of residence of Mary E. Battles, formerly Mary E. Burdett, upon the homestead entry of her husband, Albert L. Battles, in lieu of residence upon her homestead entry, Portland, Oreg., No. 05473, made August 7, 1918, for the northwest quarter of section 11, township 7 south, range 2 east, Willamette meridian, in conformity with the election filed by her husband under the provisions of the act of April 6, 1914 (38 Sat. L. p. 312)."

The SPEAKER pro tempore. Without objection, the committee amendment is agreed to. The Clerk will report the next amendment.

The Clerk read as follows:

Page 5, after line 13, insert section 6, as follows:

"SEC. 5. That the Secretary of the Interior is authorized to issue a patent to Edwin Gantner upon homestead entry, Newcastle, 025304, embracing the west one-half section 26 and the north one-half section 27, township 52 north, range 74 west, sixth principal meridian, made by said Edwin Gantner, without requiring further residence."

The amendment was agreed to.

The Clerk reported the following committee amendment:

Page 5, after line 5, insert section 6, as follows:

"SEC. 6. That the Secretary of the Interior be, and he is hereby, authorized and directed to allow the additional homestead application of Otha Potter, Havre, Mont., No. 046297, as heir and legal representative of Rufus A. Potter, who was killed in action during the war with Germany, for the northwest quarter, the northwest quarter of the southeast quarter, the northeast quarter of the southwest quarter of section 26, the south half of the south half of section 23, and the east half of the northeast quarter of section 27, township 24 north, range 23 east, Montana principal meridian, subject to the act of Congress approved July 28, 1917 (40 Stat. L. p. 248)."

The amendment was agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

Without objection, a motion to reconsider the vote by which the bill was passed was laid upon the table.

The SPEAKER pro tempore. The Clerk will report the next bill.

NOLAN P. BENNER.

The next business on the Private Calendar was the bill (H. R. 3836) for the relief of Nolan P. Benner.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none. The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Treasury be, and he is hereby authorized and directed to pay to Second Lieut. Nolan P. Benner, Quartermaster Corps, National Guard of Pennsylvania, for services from August 1, 1917, to December 19, 1917, performed under instructions of commanding general Seventh Division, who, under date of July 20, 1917, ordered said Second Lieut. Nolan P. Benner to report to quartermaster, State Arsenal, Harrisburg, Pa., where he continued in service until notice of discharge, December 19, 1917. Amount of pay for aforementioned services was disallowed by the Auditor for the War Department because the records failed to show that he was held in service subsequent to July 31, 1917.

The following committee amendments were read:

Page 1, line 4, after the word "pay," insert "out of any money in the Treasury not otherwise appropriated."

Line 7, after the word "Pennsylvania," insert "the sum of $656.40."

The SPEAKER pro tempore. The question is on agreeing to the committee amendments.

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. GERNERD, a motion to reconsider the vote by which the bill was passed was laid on the table.

J. W. HARRELD.

Mr. GENSMAN. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman rise?

Mr. GENSMAN. To return to the bill numbered 223 on the Calendar, H. R. 8025.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, the gentleman who objected to this bill is absent from the Chamber. I wish to inquire of the gentleman, although I have no objection to the bill, if there was any reason in fact for the position of the gentleman's colleague [Mr. HERRICK]. Unless that gentleman is present, or the gentleman has conferred with him and he has withdrawn his objection, I do not think it is proper to return to the bill.

Mr. GENSMAN. I understand that this is the Congress of the United States and people are supposed to be present. I am always here, and the gentleman from Wisconsin is always here, and practically all the rest of the Members are always here, and I ask to return to the bill. I recognize the fact, if the gentleman will permit me, that it is personal prejudice against the Senator in this particular case.

Mr. STAFFORD. That may be true, but, nevertheless, under the circumstances I shall object.

EMMETT OTTO COONEY.

The next business on the Private Calendar was the bill (H. R. 9746) for the relief of Emmett Otto Cooney.

The SPEAKER pro tempore. Is there objection to the consideration of the bill? [After a pause.] The Chair hears none.

The Clerk will report the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to issue patent to Emmett Otto Cooney for the southeast quarter of the southeast quarter, section 34, east half of the east half, south half of the southwest quarter and southwest quarter of the southeast quarter, section 35, township 4 south, range 21 east, Willamette meridian, being the land embraced in his homestead entries 013424 and 015142, The Dalles, Oreg., land district, upon which he has submitted satisfactory proof of compliance with the provisions of the homestead law.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

Without objection, a motion to reconsider the vote by which the bill was passed was laid on the table.

RICHARD MURPHY.

The next business on the Private Calendar was the bill (H. R. 9916) to provide for the issuing of a patent to Richard Murphy for a certain tract of land in what is known as the Big Pasture of Oklahoma, and upon which he has made full payment of purchase price.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection to the present consideration of this bill?

Mr. WHITE of Kansas. Mr. Speaker, I wish to say, on account of the request preferred by the gentleman from Oklahoma [Mr. GENSMAN], that this bill has to do with a tract of land which he supposed and believed to be in his district. The bill was introduced by himself. It has subsequently transpired that the land is located in the district of his colleague [Mr. MCCLINTIC], and therefore in the interest of Mr. MCCLINTIC I ask unanimous consent that the bill be passed over without prejudice for the present.

The SPEAKER pro tempore. The Clerk will report the next bill.

MEDICAL SOCIETY OF THE DISTRICT OF COLUMBIA.

The next business on the Private Calendar was the bill (H. R. 10973) to amend an act entitled "An act to revive, with amendments, an act to incorporate the Medical Society of the District of Columbia," approved July 7, 1838, as amended.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection?

Mr. STAFFORD. Mr. Speaker, I do not think this bill should be considered under the Unanimous-Consent Calendar.

Mr. MILLSPAUGH. Mr. Speaker, will the gentleman yield?

Mr. STAFFORD. I will withhold the objection.

Mr. MILLSPAUGH. This bill was presented about two months ago, and was objected to at that time because there was a clause in it that was vague as to the question of a right to establish a medical school. That has been eliminated, and the bill has been redrafted, so that there is no chance for anything of that kind.

This society was incorporated in 1838 as the Medical Society of the District of Columbia, and until 1896 it licensed doctors; but at that time the law was changed so that it could not issue licenses any more, and it became just a medical society for the purpose of keeping the ethics of the profession pure and clean.

Then there were two societies. They consolidated, and they have constructed a building here in Washington. Under the charter as it now stands they have been compelled to hold the title to the building in trustees; and this amendment is only for the purpose of perfecting their charter, so that this real estate, this property, can be held in the name of the society itself.

Mr. STAFFORD. There is nothing in the rules of the House to prevent this bill being called up on District days or days given over to District business.

Mr. MILLSPAUGH. As the gentleman will understand, the District Calendar is very full indeed. I hope the gentleman will not make any objection, because this society has this building practically completed at this time.

Mr. STAFFORD. On Monday this bill can be brought up, if the gentleman and the members of the committee desire.

Mr. Speaker, I am constrained to object.

The SPEAKER pro tempore. The gentleman from Wisconsin objects. The Clerk will report the next bill.

DONATION OF GATES AT HEAD OF WEST EXECUTIVE AVENUE.

The next business on the Private Calendar was the bill (S. 3046) to donate the gates at the head of West Executive Avenue, in the city of Washington, D. C., to the Hayes Memorial Museum, Fremont, Ohio.

The title of the bill was read.

The SPEAKER pro tempore. Is there objection to the present consideration of this bill?

Mr. HILL. Mr. Speaker, reserving the right to object, if these gates are taken down it would seem that the donation of them to the Hayes Memorial Museum at Fremont, Ohio, would be perfectly proper; but I would like to know at first if it has finally been decided that they should be taken down. It seems to me these gates are a proper protection to Executive Avenue, on which the office of the President of the United States is located. I object to that being made an open-traffic street, thus taking away the protection to the executive offices that has been afforded by these gates for a generation.

Mr. BEGG. I would like to answer the question of the gentleman, having made an investigation of the very proposition that the gentleman from Maryland has questioned, namely, Are they to be taken down? I have a letter from Colonel Sherrill, in which he states that the War Department and the city commissioners and everybody connected with the operation of the government of the city have decided that these gates are a menace to traffic and that serious accidents with automobiles are liable to occur there, owing to the big posts. They were going to take the gates down and were going to junk them.

President Harding is a very good friend of Colonel Hayes, who is a son of ex-President Hayes. President Harding, if the Congress will approve, will give the gates to Colonel Hayes for the purpose of erecting them at the Ohio Archæological Park, which is a donation to the State of Ohio from the Hayes estate. The gates will be taken down and will be junked at the expense of the Government unless this bill is passed.

Mr. MOORE of Virginia. Does this bill require the gates to be taken down?

Mr. BEGG. No.

Mr. MOORE of Virginia. I understand the bill is conditional upon the gates being removed?

Mr. BEGG. The bill is for the purpose of permitting the President to give away Government property. The gates will be taken down without congressional action. I will be very glad to read the letter of Colonel Sherrill if the gentleman cares to hear it.

Mr. HILL. I wish the gentleman would read the letter.

Mr. BEGG. The letter is as follows:

WAR DEPARTMENT,
CORPS OF ENGINEERS,
OFFICE OF PUBLIC BUILDINGS AND GROUNDS,
Washington, D. C., April 22, 1922.

Hon. JAMES T. BEGG,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: The proposition of removing the gates at the head of West Executive Avenue has been up for the last couple of years on account of the great congestion of traffic in that avenue.

This matter has been considered by the President, the District Commissioners, the office of Public Buildings and Grounds, and all other agencies directly concerned, and all have agreed that these gates will

have to be removed. When it was determined that they must be removed an effort was made to find some one who would pay something to the Government for the privilege of taking the gates away, but it was found that no one would pay for the privilege, and, on the contrary, they expected us not only to give them the gates but to pay some one for taking them away.

After these bids were received Colonel Hayes came along with a proposal to have them turned over to the Hayes Memorial Museum, and made such a request of the President. The President referred him to me, and I informed the President that I thought there would be no objection to this procedure, in view of the facts above outlined. I feel quite sure that these gates as they are at present are a menace to the safety of the public, and I also feel quite confident that they are of no intrinsic value, and therefore think they should be given to the Hayes Memorial Museum and believe there could be no possible objection to unanimous agreement to turn them over for this purpose.

Very truly yours,

C. O. SHERRILL,
Lieutenant Colonel, Corps of Engineers.

Mr. MOORE of Virginia. If the gentleman will permit, I find that this is mandatory upon the Chief of Engineers. It not only authorizes but directs the Chief of Engineers to give these gates away.

Mr. BEGG. Wait a moment.

Mr. HILL. May I say that I wrote to Colonel Sherrill, and I wrote to the Chief of Engineers about it, because it seemed to me that these gates are a very proper protection to the executive privacy of the President. No attempt is made to take down Temple Bar because of changing traffic conditions. This bill says that the Chief of Engineers is authorized and directed. If these gates are to be taken down, I have no objection to their being turned over as provided in this bill, and if the words "and directed" are stricken from the bill I will not object to its consideration.

Mr. BEGG. I will accept that and offer such an amendment.

The SPEAKER pro tempore. Is there objection?

Mr. MOORES of Indiana. I object.

The SPEAKER pro tempore. The gentleman from Indiana objects. The Clerk will call the next bill.

PUBLIC-SCHOOL SITE IN THE STATE OF WASHINGTON.

The next business on the Private Calendar was the bill (H. R. 10841) authorizing the transfer of 500 feet of Indian land, in the State of Washington, for a public school to which Indian children shall be admitted without payment of tuition.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection?

Mr. CRAMTON. Mr. Speaker, reserving the right to object, I should like to have some information about this school proposition. If the author of the bill is not present, I will ask that it be passed over.

The SPEAKER pro tempore. Without objection, the bill will be passed over and the Clerk will report the next bill.

SENATE BILLS REFERRED.

Under clase 2 of Rule XXIV, Senate bills of the following titles were taken from the Speaker's table and referred to their appropriate committees, as indicated below:

S. 3458. An act to authorize the Niagara River Bridge Co. to reconstruct its present bridge across the Niagara River between the State of New York and the Dominion of Canada, or to remove its present bridge and construct, maintain, and operate a new bridge across the said river; to the Committee on Interstate and Foreign Commerce.

S. 3620. An act to authorize the construction of a bridge across Pearl River at or near Tilton, Lawrence County, Miss.; to the Committee on Interstate and Foreign Commerce.

S. 2168. An act for the relief of Jesse C. Dennis and William Rhett Eleazer; to the Committee on Claims.

HORACE G. KNOWLES.

The next business on the Private Calendar was the bill (H. R. 8656) for the relief of Horace G. Knowles.

The Clerk read the title of the bill.

Mr. STAFFORD. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. Will the gentleman withhold that a moment?

Mr. STAFFORD. I will withhold the point for a moment.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted to—

Mr. CROWTHER, for two weeks, on account of important business.

ADJOURNMENT.

The SPEAKER pro tempore. The gentleman from Wisconsin makes the point of order that there is no quorum present.

Mr. EDMONDS. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 4 o'clock and 55 minutes p. m.) the House adjourned until Saturday, June 10, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

633. Under clause 2 of Rule XXIV a letter from the Secretary of War, transmitting draft of a bill or resolution transferring from the appropriation "Arms, uniforms, equipment," etc., to the appropriation "Arming, equipping, and training the National Guard" for the fiscal year 1922 the amount of $175,000 (H. Doc. 337), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. McKENZIE: Committee on Military Affairs. H. R. 11903. A bill to authorize and direct the Secretary of War to sell to Henry Ford nitrate plant No. 1, at Sheffield, Ala.; nitrate plant No. 2, at Muscle Shoals, Ala.; Waco Quarry, near Russellville, Ala.; and to lease to the corporation to be incorporated by him Dam No. 2 and Dam No. 3 (as designated in H. Doc. 1262, 64th Cong., 1st sess.), including power stations when constructed as provided herein, and for other purposes; without amendment (Rept. No. 1084). Referred to the Committee of the Whole House on the state of the Union.

Mr. LANGLEY: Committee on Public Buildings and Grounds. S. 3163. An act to amend an act approved March 4, 1913, entitled "An act to increase the limit of cost of certain buildings, to authorize the enlargement, extension, remodeling, or improvement of certain public buildings, to authorize the erection and completion of public buildings, to authorize the purchase of sites for public buildings, and for other purposes"; without amendment (Rept. No. 1085). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. WHITE of Maine: A bill (H. R. 11964) to amend an act to regulate radio communication, approved August 13, 1912, and for other purposes; to the Committee on the Merchant Marine and Fisheries.

By Mr. KELLY of Pennsylvania: A bill (H. R. 11965) to amend the provisions of section 1101 of the revenue act of 1917, by striking out the provision which increased the rate on second-class postage, July 1, 1920, and July 1, 1921, and by making effective the rates provided in said bill for the period between July 1, 1919, and July 1, 1920; to the Committee on the Post Office and Post Roads.

By Mr. RIDDICK: A bill (H. R. 11966) defining the crop failure in the production of wheat, rye, barley, oats, and flax by those to whom the Government of the United States loaned money, under the act of March 3, 1921, for the purchase of wheat, rye, barley, oats, or flax for seed, and for other purposes; to the Committee on Agriculture.

By Mr. GOODYKOONTZ: A bill (H. R. 11967) to enlarge the powers of the juvenile court of the District of Columbia; to the Committee on the Judiciary.

By Mr. FOCHT: A bill (H. R. 11968) to amend an act of Congress approved June 18, 1898, entitled "An act to regulate plumbing and gas fitting in the District of Columbia"; to the Committee on the District of Columbia.

By Mr. MILLSPAUGH: A bill (H. R. 11969) to amend the Code of Law for the District of Columbia and provide for the incorporation and regulation of banks in said District; to the Committee on Banking and Currency.

By Mr. WALSH: A bill (H. R. 11970) to establish a bureau for the study of criminal, pauper, and defective classes; to the Committee on the Judiciary.

By Mr. ANDREWS of Nebraska: A bill (H. R. 11971) for publicity of contributions made for the purpose of influencing general or special elections at which Representatives in Congress and Members of the United States Senate are elected; to the Committee on Election of President, Vice President, and Representatives in Congress.

By Mr. MADDEN: A joint resolution (H. J. Res. 345) creating a commission to prepare plans for and to erect a monument in the city of Washington to the memory of Pietro Alonzo, and for other purposes; to the Committee on the Library.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BLAND of Indiana: A bill (H. R. 11972) for the relief of the heirs, assigns, and legal representatives of Peter Lisman; to the Committee on the Public Lands.

By Mr. FOCHT: A bill (H. R. 11973) granting an increase of pension to Caroline Candus Criswell; to the Committee on Invalid Pensions.

By Mr. GOULD: A bill (H. R. 11974) granting a pension to Emma A. Carl; to the Committee on Invalid Pensions.

By Mr. McPHERSON: A bill (H. R. 11975) granting a pension to Mary L. Speer; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11976) granting a pension to Cora Wilhite; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11977) granting a pension to Francis S. Gooding; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11978) granting a pension to Martha Kailey; to the Committee on Invalid Pensions.

By Mr. MICHENER: A bill (H. R. 11979) granting a pension to Elsie V. Reinhart; to the Committee on Invalid Pensions.

By Mr. MOORE of Illinois: A bill (H. R. 11980) granting a pension to Mary A. Wylie; to the Committee on Invalid Pensions.

By Mr. MORGAN: A bill (H. R. 11981) granting a pension to Adelaide Thacker; to the Committee on Invalid Pensions.

By Mr. SPEAKS: A bill (H. R. 11982) granting an increase of pension to S. Harriet Morris; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5960. By the SPEAKER (by request): Petition of R. W. Kingsley, 43 East Thirty-eighth Street, New York City, urging that before the United States as a Nation may declare war on any other nation the issue must first be submitted to voters of the Republic for their affirmative approval or disapproval; to the Committee on the Judiciary.

5961. Also (by request), resolution adopted by the Greater Chicago Federation, urging the third Sunday in June to be designated as Mothers' Day; to the Committee on the Judiciary.

5962. Also (by request), resolution passed by the council of the city of Pittsburgh, urging Congress to take early action for complete canalization of the Ohio River; to the Committee on Rivers and Harbors.

5963. By Mr. CAREW: Resolution passed by the council of the city of Pittsburgh, urging Congress to complete the canalization of the Ohio River; to the Committee on Rivers and Harbors.

5964. By Mr. CRAGO: Resolution adopted by the city council of Pittsburgh, urging that early action be taken for complete canalization of the Ohio River as planned by the Corps of Engineers of the United States Army; to the Committee on Rivers and Harbors.

5965. By Mr. DAVIS of Tennessee: Resolution of the Tennessee State Dental Society, indorsing Ford's offer for Muscle Shoals; to the Committee on Military Affairs.

5966. By Mr. KISSEL: Petition of Biochemical Food Products Corporation, Chicago, Ill., relative to freight rates; to the Committee on Interstate and Foreign Commerce.

5967. Also, petition of Henry Ford, of Dearborn, Mich., relative to his offer for Muscle Shoals; to the Committee on Military Affairs.

5968. Also, petition of city clerk, Pittsburgh, Pa., transmitting resolution adopted by the council of the city of Pittsburgh, urging Congress to take early action for complete canalization of the Ohio River; to the Committee on Rivers and Harbors.

5969. By Mr. MacGREGOR: Petition of Kate L. Weed and Edith Weed, of Buffalo, urging the United States to do all that justice and mercy require in behalf of the afflicted nation of Armenia; to the Committee on Foreign Affairs.

5970. Also, petition of John W. Wargin, deputy city clerk of Buffalo, transmitting a communication from the commissioner of public affairs re tariff on building material; to the Committee on Ways and Means.

SENATE.

SATURDAY, *June 10, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Hale	McKinley	Spencer
Brandegee	Harris	McLean	Sterling
Broussard	Harrison	McNary	Sutherland
Cameron	Heflin	Nelson	Swanson
Capper	Johnson	Newberry	Townsend
Culberson	Jones, N. Mex.	Norris	Underwood
Curtis	Jones, Wash.	Oddie	Walsh, Mass.
Dial	Kendrick	Overman	Walsh, Mont.
Dillingham	Keyes	Phipps	Warren
Elkins	King	Poindexter	Watson, Ga.
Ernst	Ladd	Rawson	Watson, Ind.
Fernald	La Follette	Sheppard	Williams
France	Lenroot	Shortridge	Willis
Frelinghuysen	McCormick	Simmons	
Gerry	McCumber	Smoot	

Mr. UNDERWOOD. I wish to state that the senior Senator from Florida [Mr. FLETCHER] is absent on account of illness. I ask that this announcement stand for the day.

The VICE PRESIDENT. Fifty-eight Senators have answered to their names. A quorum is present.

PROHIBITION ENFORCEMENT.

Mr. STERLING. Mr. President, quite recently the Manufacturers' Record, one of the leading business journals of the country, made a survey of the country to ascertain the value of prohibition and prohibition enforcement. The survey, I think, was quite complete. I have here a digest of the survey. I think, because of the great public interest in the matter, it ought to be printed in the CONGRESSIONAL RECORD, and I therefore ask unanimous consent that it be so printed.

The VICE PRESIDENT. Is there objection to the request of the Senator from South Dakota?

Mr. UNDERWOOD. I have no objection to printing anything in the RECORD that is for the information of the public, but in order that we may have an understanding of the weight of the digest, because in digesting an article it may be digested one way or another, I would like to ask who did the digesting?

Mr. STERLING. I am not able to say who did the digesting, but I think it is a fair digest because my attention was called to the original article in the Manufacturers' Record. I think it is a fair digest because it gives exact quotations from the article.

Mr. UNDERWOOD. I have no objection to the printing of it except that if we knew who digested the article we might know at what angle the work was built upon.

Mr. STERLING. I am not able to tell the Senator.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

PROHIBITION DECLARED A SUCCESS BY THE LEADING BUSINESS MEN OF THE NATION.

The Manufacturers' Record, one of the leading business journals of the Nation, recently made a survey of the country to ascertain the value of prohibition. Its effect on the economic, moral, and social life of the Nation is printed in May, 1922.

What the New York Evening Post says of the verdict:

"It is a total fallacy, of course, to suppose that prohibition came suddenly or was in any sense a product of the war. The prohibition movement became influential in the Middle West soon after 1880, quickly invaded the South, and had made 32 States 'dry' when the eighteenth amendment was ratified. Counting local option territory, by 1919 no less than nine-tenths the area and two-thirds the people of the United States were 'dry.' Nor was the movement against the saloon a mere 'moral-uplift' movement. On the contrary, the political motive—dislike of liquor influences—was decided, and the economic motive stronger yet.

"It is this economic element that the letters to the Manufacturers' Record emphasize. 'Unmistakable advantages and relief,' writes a Milwaukee farm-implement maker; 'drunkenness has lessened 100 per cent,' says a Tacoma steel manufacturer; 'the effect on labor and the saving of money have been wonderful,' testifies a Denver banker; 'trouble among employees from liquor has almost disappeared,' declares a Pittsburgh oil man; 'there is nothing which has so helped cotton mills,' says a Birmingham mill owner; and so runs the verdict from a hundred cities."

In a careful compilation of all replies received by the Manufacturers' Record on the prohibition question, the tabulation gives the following remarkable results in percentages to the total:

	Per cent.
For prohibition in some form	98.50
Against prohibition	1.50
For strict prohibition	85.50
For beer and wine	7.00
Against Volstead law or present regulations	1.25

	Per cent.
Wants Volstead law modified	.75
Advocates high license or Government control	1.00
Advocates dispensary system	.25
Undecided or noncommittal	2.75

"The most overwhelming answer ever given as to the value of prohibition as an economic and moral factor in advancing the cause of humanity will be found in these letters. With two or three exceptions they all believe in some form of restriction or regulation of the traffic in alcoholic beverages. The effort to break down the prohibition law with wine and beer as the entering wedge is vigorously assailed by educators, business men, and others."

BUSINESS MEN.

Judge E. H. Gary, United States Steel Corporation:

"Yes; results have fully justified prohibition legislation. I indorse the admirable expressions of President Harding on the question."

The expression of President Harding to which Judge Gary refers is as follows:

"In every community men and women have had an opportunity now to know what prohibition means. They know that debts are more promptly paid, that men take home the wages that once were wasted in saloons, that families are better clothed and fed, and more money finds its way into the savings banks. The liquor traffic was destructive of much that was most precious in American life. In the face of so much evidence on that point, what conscientious man would want to let his own selfish desires influence him to vote to bring it back? In another generation I believe that liquor will have disappeared not merely from our politics but from our memories."

Ex-governor and ex-United States Senator, cotton-mill owner, Birmingham, Ala.:

"There is nothing which has so helped cotton mills as the effect of prohibition on the cotton-mill families, and every cotton-mill interest, regardless, should stand by the prohibition laws.

"To repeat, the danger to the eighteenth amendment, to our prohibition laws, to this greatest predicate ever laid for human advancement, is not in the wildcatter, the booze flivver, the booze runner, not the man who makes money from whisky selling, but it is in that supposedly higher class of our citizenship who think they can not do without their gin rickey, their cocktail, their 'here's to you,' and the animal exhilaration that comes around the table or in a party when their tongues are loosened, from that class of people who from the very facts in the case will suffer the greatest consequences from this widespread lawlessness which they alone make possible."

Henry M. Leland, president of the Lincoln Motor Co.:

"In Detroit the favorable effects of prohibition are apparent to even a blind man, and this is despite the fact that we have a large population accustomed to drinking liquor. The salvation of our country is assured, because the great mass of common people obey this as other laws because it is the law of the land."

John B. Lennan, retired business man, Bloomington, Ill.:

"Results were excellent and are improving daily."

William S. Witham, organizer of 150 banks, Atlanta, Ga.:

"I find upon investigation that 90 per cent of our people have at last placed 'liquor' in the mad-dog class. Since prohibition came the pay envelope has gone to the wives and children of men who heretofore threw it on the counter of the flannel-mouth liquorite. I have not seen two drunken men where at least fifty before prohibition disgraced our thoroughfares."

C. C. Stoll, oil refiner, Louisville, Ky.:

"Prohibition was good for Kentucky. Even from a business standpoint I think the enthusiasm and impetus for business has been increased. That it has been of decided advantage to the laboring classes must be clear to all observers."

President W. S. Stone, of the Brotherhood of Locomotive Engineers, Cleveland:

"I find a marked improvement in the number of men who are saving their money and who own their homes or are buying their homes, and I find a decided improvement in the home life of the workers, due to the fact that the women and children have more food, more clothing, and better care in every way. Back of all that, the worker takes his family and goes to the picture show or to the park now, when he formerly spent his evenings in the saloon drinking and spending his money. Drunkenness has decreased at least 75 per cent among the workers."

He further expressed the idea that the "smart set" drinkers are parasites whom liquor is destroying, to the Nation's benefit.

S. S. Kresge, the great 5 and 10 cent store man, of Detroit:

"The result of prohibition is more thrift, bills paid better, homes happier and better provided for."

Manager Sibley, of the Birmingham Clay Products Co., reports that ever since prohibition there has been a steady and marked improvement in the moral, mental, and physical condition of the people, and that from the industrial standpoint alone the employers of Alabama have found prohibition one of their most valuable assets.

J. E. Edgerton, president and general manager of a large woolen mill in Lebanon, Tenn., and president of the National Association of Manufacturers of the United States:

"Thousands of homes have been built which would not have been built and millions of women and children have been provided with food and clothes who would have suffered for these necessities if there were no eighteenth amendment. Except for the absence of the open saloon, these days of reconstruction would be attended by conditions which would make much more difficult the task of rehabilitation."

President E. E. Swift, of National Bank of Auburn, N. Y.:

"There were some sixty-odd saloons in Auburn which were put out of business. Every store which was put out of business has been occupied by some legitimate commercial enterprise, with the exception of a few which are selling soft drinks. Not only this, but rents in the business portion of our city have advanced very rapidly, and owners of the stores formerly used for saloons are getting much more income from these places than ever before, notwithstanding the hard commercial times which we have all passed through during the past year. Notwithstanding a large amount of unemployment in our city, our bank deposits in Auburn have not suffered and the savings deposits have steadily increased."

C. A. Moffett, president Gulf States Steel Co., Birmingham, Ala.:

"Results since prohibition went into effect have shown a wonderful improvement in our employees, a large number of whom are colored people. The efficiency of the labor has been increased to a very large extent and the accidents around our plants have been reduced at least 75 per cent. The improvement has also been shown by a better satisfied class of workmen and their families. Numbers of them are buying homes and their families are much better dressed, and the general feeling of contentment among the wives and children is very marked."

A. B. Farquhar, of York, Pa.:

"Prohibition, notwithstanding violation of the law, which is more or less a passing phase, has proved to be of the greatest benefit to the country. The drinking of alcoholic beverages is, next to war, the greatest curse to mankind."

C. W. Galloway, vice president Baltimore & Ohio Railroad:

"The elimination of the corner saloon has without doubt materially improved the whole general situation, and I believe that is generally conceded. It has also been beneficial with respect to the character of work performed, and it can be fairly stated that in that respect much good has been accomplished."

M. M. McCall, president cotton mill, Opelika, Ala.:

"We think prohibition is of untold benefit both to the individual who is practicing it and to those who are dependent on him for support."

George M. Verity, president American Rolling Mills Co., Middletown, Ohio:

"Less lost time, less accidents, less incompetence, less carelessness and inefficiency, better work, better homes, more thrift, happier families, and sober and safer and more efficient men, who now are finding out what it means to really live where they formerly merely existed."

William U. Follansbee, manufacturer, Pittsburgh:

"Experiences have confirmed and strengthened our belief in the great benefits derived from the abolition of the liquor traffic, and we find a steadily increased acknowledgment thereof from all sections and from peoples in all conditions of life, and none are more appreciative of the benefits than those who are ordinarily designated as working people, as influencing the workmen themselves, their families, and their homes."

President E. T. Weir, Weirton Steel Co., N. Y.:

"Prohibition has been beneficial to the great majority of the employees in our mills; they have been more regular in their attendance at work; there have been fewer accidents; their health has been better; and their financial condition has been much improved."

L. N. Bowers, manufacturer, Binghamton, N. Y.:

"In an enterprise in which I was at the head, employing thousands of miners and laborers, the managers took a straw vote in 1921 among the women only, and in one precinct they cast 186 votes and 183 were for 'dry.' In other precincts they voted more than 95 per cent for the continuation of prohibition."

J. J. Phoenix, president Bradley Knitting Mills, Delevan, Wis.:

"As an employer of labor, it has been my province to watch the effects of prohibition upon our twelve to fourteen hundred people, and we find that the laboring man and his family have directly benefited. Better living, better clothing, cleaner and better social life, happier homes with more contentment, better and steadier workers, averaging more efficient and with less sickness and lost time, are some of the benefits to the workers and society in general."

W. H. Reid, steel manufacturer and banker, Tacoma, Wash.:

"Since prohibition became effective, we have not been troubled with a single disturbance on account of liquor in our plant. Drunkenness has been lessened 100 per cent. I would regard the repeal of this law as the greatest calamity that has ever befallen the United States of America."

A. L. Bell, Ridgeway Dynamo & Engine Co., Ridgway, Pa.:

"Those who formerly drank have more money to spend for useful things and for the pleasure of their families. As to the amount of drunkenness in this community, I give you the word of our chief of police that there is now about one-tenth the drunkenness we had with the open saloon."

R. M. Downie, a manufacturer for 40 years, Beaver Falls, Mass.:

"Prohibition was, in a sense, our principal gain from the Great War, and it is worth our present national debt twice over. Among other things it has moved our whole conception of national morals and conscience up to a level never heretofore attained by any other nation, and has cleared the way for permanent industrial prosperity as nothing else could have done."

A. D. Reynolds, Bristol, Tenn.:

"I wish to say in justice to the former dealers of liquor in Bristol they are making good, law-abiding citizens; some of them are conducting some of our leading business houses and are favorably regarded by our people generally. Several of them have joined our leading churches. I don't know of any instance in which they have encouraged violation of the law."

Louis F. Post, Washington, D. C.:

"The information that comes to me casually indicates a highly beneficial effect, that drunkenness—public drunkenness most certainly—is much less common now than it was when the distillery and the brewery interests had their way."

Charles Thaddeus Terry, of New York:

"It has relieved jails and poorhouses, to a very large extent, of their former occupants and resulted in a consequent decrease, as far as those purposes were concerned, in the taxation burdens of the various communities."

R. A. Schoolfield, a cotton mill man, Danville, Va.:

"The drinking of alcoholic liquor has greatly decreased among the working people, which means that they have increased in efficiency as well as in their living standards, and I can confidently say that the prohibition sentiment is stronger among our people than ever before."

President J. M. Young, of Sweets Steel Co., Williamsport, Pa.:

"Anything that has been said in favor of prohibition in days gone by, in my judgment, has been fully confirmed by the experience through which we are now passing."

David N. Lupton, manufacturer, of Philadelphia:

"Never in all history has any law been passed that has benefited mankind so much."

S. F. Bowser, manufacturer, Fort Wayne, Ind.:

"Only one man has lost his job with us on account of drink. We employ from 1,400 to 1,800 people and when the saloons were in operation out of this great number we would have something like the above happen more or less every week or two. Therefore, you see, the improvement has simply been marvelous."

President W. T. Beatty, of the Austin Manufacturing Co., Chicago:

"The present benefits, however, are worth one hundred times all they cost, and I would as soon think of returning to human slavery as of returning to the domination of the distiller, the brewer, and the saloon keeper."

C. E. Hutchinson, manufacturer, Mount Holly, N. C.:

"The practical results of prohibition in our section have been very beneficial from every point of view."

E. J. Lindsay, of Milwaukee:
"The advantage of the act seems to me beyond question. Drunkenness is not as common as before the act became effective, although there is much of it yet."
Arthur R. Baxter, manufacturer, Indianapolis:
"Having to do with the handling of workmen, I can see the wonderful difference now and before prohibition."
President F. N. Briggs, of the Interstate Trust Co., Denver:
"The effect of prohibition on labor and saving of money formerly spent for liquor has been wonderful. Savings deposits have increased more than 33⅓ per cent throughout the country."
R. H. Scott, Reo Motor Co., Lansing, Mich.:
"Since prohibition went into effect we do not see drunken men on our streets; neither do we hear of drunken men abusing their wives and children."
Charles Yorm, manufacturer, Canton, Ohio:
"On the whole, we are extremely pleased with the results, and we are confident if it was put to a vote of our men in our factory to-day, our factory would vote 'dry' by a large majority."
D. Seltzer, manufacturer, of Bellevue, Ohio:
"From the standpoint of industry alone, we feel that prohibition is more than justifiable, and we will continue to take as strong a stand against liquor as we ever have in the past."
J. C. Haswell, manufacturer, Dayton, Ohio:
"It is the opinion of local financial authorities that a very considerable part of the increase in the savings accounts were due largely to the closing of the saloon, etc."
Edward Freschi, manufacturer, Milwaukee, Wis.:
"I am not a prohibitionist myself, but look upon this matter purely from a scientific and common-sense standponit. I am convinced that the theory that the country in general would be benefited by prohibition has been proven in fact. I am positive that the benefits greatly overbalance the evils."
W. H. Thomas, manufacturer, Dayton, Ohio:
"There is no question in the world, in my judgment, that the adoption of the eighteenth amendment was one of the greatest pieces of advance legislation that has ever been adopted in our country."
Isaac F. North, president American Soda Fountain Co., Boston:
"Looking at prohibition from a purely economic standpoint, I think that all employers of labor, regardless of their personal opinion, will agree that it has been beneficial both to the workmen and business, but in my estimation the moral effect of it outweighs the economic side and is of vastly more importance to the country at large."
Frederick Fosdick, manufacturer, Boston:
"Comparison of arrests at the present time with arrests before the prohibition act went into effect show conclusively a tremendous advantage under present conditions. We are more than satisfied with the results so far of the law."
W. H. Foster, Youngstown, Ohio:
"The families of the working men are better cared for."
Walter B. Knight, cotton manufacturer, Willimantic, Conn.:
"The use of intoxicants has been greatly curtailed and workmen's houses and families are much better cared for."
E. P. Selden, manufacturer, Erie, Pa.:
"Prohibition has been a great success. Money that was formerly used to buy drink is now used for food and clothing and the betterment of the home."
Mayor James Logan, of Worcester, Mass.:
"Give the prohibition amendment a chance with proper enforcement of the law and in my opinion no man who has the best interests of our country at heart would consider for a moment going back to the old conditions."
J. R. Moore, manufacturer hosiery for years at Forest City, N. C.:
"I consider prohibition one of the greatest blessings to the human race that has come about within a generation."
E. C. Spear, treasurer Cheney Biglow Wire Works, Springfield, Mass.:
"So far as the effects of the Volstead Act on the labor situation is concerned, I believe there has been a very great improvement in the condition of the general run of the laboring men."
Huston Quinn, mayor, Louisville, Ky.:
"Savings accounts show a decided increase, e. g., in July, 1919, they totaled $18,000,000, to-day $27,000,000, or an increase of 50 per cent. In 1919, 6,172 persons were arrested for drunkenness, in 1920 the total was 1,053, and the arrests for grand larceny were 478 in 1919 and 313 in 1920."
Aug. W. Smith, president cotton mills, Greenville, S. C.:
"There is no law that has been enacted that has done the good that the prohibition law has. At first I was opposed to the prohibition law, but after seeing the effect on our people I am very much in favor of same."
President A. B. Bryant, of the First National Bank, Gardner, Mass.:
"I am firmly convinced that the Volstead Act has been the greatest step forward, morally and economically, in the history of the country."
Joshua Green, president Puget Sound Navigation Co., Seattle, Wash.:
"I consider prohibition an excellent thing for the entire United States."
Harry B. French, wholesale druggist, Philadelphia:
"Except among the so-called upper class, it seems to me that undoubtedly prohibition has inestimably benefited this country. This is evidenced in increased savings, even in spite of unemployment, increased efficiency, and the larger buying of products for amusement and cultivation."
B. F. Fancher, Fifth Avenue Bank, New York:
"My observation has been that far-reaching and important benefits have already been derived."
Treasurer R. A. Cochran, Maysville Cotton Mills, Maysville, Ky.:
"Before the coming of prohibition we had a saloon within a block of our factory, mainly supported by our employees. The boys are growing up without forming the habit of strong drink."
Treasurer J. P. Reeves, Chicago & Eastern Illinois Railway, Chicago:
"The saloons and central places for drinking are gone, the school for its propagation is shattered, and the habit-forming process reduced. Our American people can only benefit from prohibition."
D. H. Campbell, mining engineer, Iron River, Mich.:
"At our mines for the first nine months after the State of Michigan went dry the number of days of absence from work due to accidents fell off 68 per cent. My conclusions are that conditions are very much better under prohibition than they were under the open saloon."
H. S. Fredenburgh, secretary Gould Manufacturing Co., Seneca Falls, N. Y.:
"We believe that a large volume of savings deposits in this community as well as practically every other community in the United States, at a time when industrial workers are on short time and many out of employment, is indicative of the disposition on the part of these men to save money which was formerly spent for liquor, etc."
Vice President H. W. Coffin, the Alabama (Iron) Co., Birmingham, Ala.:
"Prohibition has been of great benefit to all employers of labor."
President Newton Doremus, Land & Loan Co., Red Bank, N. J.:
"There is a great satisfaction in the fact that the eighteenth amendment has resulted in thousands more of happy homes and a better day for women and children, as shown by the increased attendance in our schools and the higher standard of living enjoyed by them."
C. W. Malsland, rugs and carpets, Philadelphia:
"The ability of the working people to sustain themselves during the extended depression, such as we have had the last 18 months, is very largely due to prohibitory laws. Drunkenness is decidedly uncommon. We have one man in our employ who occasionally comes under the influence of liquor where we previously had fifty."
President Clarence H. Kelsey, Title Guarantee & Trust Co., New York:
"I believe with President Harding, as reported in this morning's papers."
President E. B. Thornton, Bedford Steam Stone Works, Bedford, Ind.:
"Our jail here now has no inmates, while it was full to overflowing when we had saloons. A drunken man in our city is never seen any more."
Asa G. Candler, banker, Atlanta, Ga.:
"None but one who is blind, deaf, and dumb can dispute the statement that prohibition in this or any other community has greatly benefited employers and employees."
President E. O. Gass, Scoville Manufacturing Co., Waterbury, Conn.:
"My experience is that our workmen are, almost without exception, in better condition both to render normal, efficient service and to resist disease. Their family life is better stabilized."
President Wm. J. Montgomery, Eighth National Bank, Philadelphia:
"Savings deposits in the bank with which I am connected are to-day the largest in its history, and I believe this to be the general rule. A man to-day under the influence of liquor is a very conspicuous person, and folks turn about and wonder where he got it. Before prohibition no attention was paid to such a person."
D. D. Bowsher, merchant, South Bend, Ind.:
"Merchants, business and professional men throughout the city, when they are taxed right down to give a careful opinion, is that business is better, collections are better, and the living conditions of hundreds of families are very much better."
Geo. F Cotterill, ex-mayor, Seattle, Wash.:
"There has been and is manifest on every hand abundant evidence of the beneficial effects of prohibition upon labor conditions, savings, betterment of homes, and better care of women and children dependent upon men who formerly spent freely for drink. Prohibition is at least 95 per cent efficient and will go on to 100 per cent with steadfast and determined law enforcement throughout America."
President T. J. Gillespie, Lockhart Iron & Steel Co., Pittsburgh, Pa.:
"Labor is more efficient. Men are saving their money and buying homes and supplying the needs of their families as never before."
Charles W. Garfield, banker, Grand Rapids, Mich.:
"We have innumerable instances in our city of the beneficial results of eliminating the saloons—in the promotion of thrift, better housing, improved domestic conditions, and happier women and children."
C. Edwin Michael, president Virginia Bridge & Iron Co., Roanoke, Va.:
"Prohibition, if reasonably enforced, is a great blessing to our people."
L. M. Bowers, retired (formerly employing many thousands of men), Binghamton, N. Y.:
"The home has wonderfully benefited, especially among the foreign laboring men; wife beating and brawls reduced almost to zero among that class."
William A. Schalpur, manufacturer, Minneapolis, Minn.:
"The crime wave now sweeping the whole world has no connection with liquor. It is the aftermath of the war and affects all nations."
Ex.-Gov. Samuel R. Van Sant, Minneapolis, Minn.:
"Savings-bank deposits show that the laboring people are now saving their money; their children are better fed and clothed and being better educated."
General Superintendent Lawrence, managing five large iron-ore properties in Michigan, says:
"The liquor traffic was a brake on the wheels of progress and like a millstone on the neck of our civilization." And adds that he "has optimism enough to believe that another generation will know but little of the evils of the liquor traffic."

PROFESSIONAL, SOCIAL, AND OTHER LEADING AMERICANS.

Raymond Robins, social worker and economist, Chicago:
"Prohibition has greatly increased the comfort, food supply, savings, and general well-being of the working people of the United States. Money formerly spent for liquor goes for food, clothes, books, the movies, and savings. Every mother can tell you the difference in the increased resources and comfort of the home. Prohibition is one of the oldest subjects of discussion and agitation in American politics. Two-thirds of the States voted dry by popular referendum before the passage of the prohibition amendment to the Constitution. More than two-thirds of each House of Congress voted to submit the amendment. Forty-six States have ratified this amendment. New Jersey came in the other day with a ratification delay of over two years. It was supposed to be the wettest territory in the United States. No political party dares to support repeal of the Volstead Act, much less the amendment. There will be several years of battle to finally break the back of the whisky ring, and then the liquor traffic will be as extinct as the dodo."
Dr. Harvey W. Wiley:
"I think beer is probably the most dangerous to health of all the pure ordinary alcoholic liquors. The bootlegging industry will gradually kill itself by killing off all its patrons. From the viewpoint of public health prohibition has been a wonder worker. I am not a believer in the use of distilled spirits as a remedy. Alcohol is never a stimulant but always a narcotic. My belief is that the death rate in such diseases as pneumonia and influenza is much higher where alcohol is used as an internal remedy than where it is not. Long since the medical profession has ceased to regard alcohol in some of its beverage forms as a remedy for tuberculosis, and it is now practically the universal belief that it is, on the other hand, an aid to speedy dissolution."

Dr. Emory S. Bogardus, Los Angeles:
"Has turned millions of dollars into more productive channels. Apparently one-tenth to one-third as much drunkenness now, dependent upon class of people concerned. The chief change has been the transfer of energy and money from destructive or low producing levels to higher levels."

Ex-Gov. Hugh M. Dorsey, of Georgia:
"Much of the money formerly spent for whisky is now being devoted to the support and education of families and the improvement of home conditions. Drunkenness is by no means as common at the present time as under the open saloon and free liquor-traffic program."

H. S. Dulaney, of Baltimore:
"I am quite sure that the effect of prohibition on the laboring man can not be anything but for his betterment. Drunkenness is not nearly so common as it was under the licensed liquor traffic.

Congressman S. D. FESS:
"Recent surveys made by those unfriendly to prohibition prove that it is a success. The first article of the New York Herald survey admitted that there was a decrease in the consumption of beverage liquor under the eighteenth amendment of 70 per cent. Another survey made through the Cosmopolitan Magazine states that the number of drinkers of intoxicants has decreased from about 20,000,000 under the license system to 2,500,000 under national prohibition. A policy of Government that makes such a showing is not a failure but a success. When prohibition is universally enforced and observed the results will be proportionately greater."

Dr. H. E. Robinson, professor pathology, University of Minnesota:
"That the people who have no self-control or knowledge enough to stay away from harmful stimulants should not be forcefully protected from their own indulgence is a monstrous proposition. We attempt to guard carefully other poisons with the approval of practically the entire body politic. I, for one, am perfectly willing to forego the use of this particular poison for the benefit of the entire race. I am particularly concerned with the effects of alcohol on the descendants of confirmed alcoholics and on the economic welfare of their families. So far as my limited experience can observe, economic conditions amongst the laboring classes are distinctly improved as a result of enforced prohibition. Drunkenness is certainly not as common at the present time as in the past, and while death and serious disabling diseases are quite often seen from drinking improperly prepared alcoholic stimulants, cases of acute alcoholism such as were so common in preprohibition days are practically abolished, except in the very large cities where enforcement of the law has been particularly lax."

Lewis Jerome Johnson, professor civil engineering, Harvard University:
"I believe that the mass of voters and their representatives now realize from their own experience that the liquor business can be granted no place in a would-be orderly society."

Dr. A. M. Barrett, director Psycopathic Hospital, University of Michigan:
"Those who are interested in the care and treatment of mental disorders have uniformly found a marked decrease of disorders due to alcohol during the last few years. To my personal knowledge wards formerly used for the care of alcoholic patients are now used for other purposes. There has been a great falling off in the admission of alcoholic mental disorders to the hospitals for the insane in this country. This fact alone is strong evidence of the benefits brought about by prohibition."

Frank M. Thompson, attorney general, Nashville:
"It has been my observation and I am dealing with the question constantly, that the exclusion of liquor and all intoxicating beverages by law has been a very great advantage to the laboring classes, as well as the manufacturing class."

Lawrence F. Abbott, president Outlook, New York:
"I think it is more than probable that 25 years from now the average American man or woman will no more think of taking alcohol habitually than they now think of taking opium habitually. If this state of things can be brought about in our civilization, it will be an enormous gain for social, moral, and efficient standards of life."

Mary Antin, author and lecturer, Wellesley, Mass.:
"The difficulties that have been encountered in enforcing the prohibition law are in my mind no argument whatever in favor of restoration of the liquor traffic. It was very difficult at one time to clear the seas of pirates, and yet that was not taken as an argument in favor of permitting piracy to endure. All the pains of readjustment that this generation may be subjected to will be but a small price to pay for the inestimable blessing of a world that shall have forgotten it was once under the sway of the drink evil."

Dr. Richard C. Cabot, Boston:
"I favor prohibition as strongly as I ever did, and I am certain that its good results are manifest in Massachusetts, despite the fact that we have as yet no local enforcement law."

Dr. Haven Emerson, former commissioner of health, New York:
"Nothing since the application of modern bacteriology to the control of communicable diseases will have so powerful an effect in reducing the incidence of disease and the general death rate as prohibition."

S. S. McClure, editor of McClure's Magazine:
"The results are favorable to prohibition. Our laws are inadequately enforced in all fields. We do as well in enforcing prohibition as the law against murder."

Ex-president of the University of Minnesota, Dr. Cyrus Northrup:
"There is less drunkenness and less drinking than formerly. More working men have deposits in savings banks. Families are better cared for."

Editor James Schermerhorn, Detroit, Mich.:
"What has been saved and conserved of health, wealth, and fireside content, comprises a more sensational story than anything ever printed about bootlegging. I go about a great deal and seldom see that most offensive of all sights—a besotted American, once an ever-present nuisance. The public drunk has vanished."

Attorney William S. U'Ren, Portland, Oreg.:
"It is impossible to estimate the benefit that prohibition has conferred on the wives and children of all the habitual drinkers, except those who are rich enough to think they can violate the law with impunity. There is not one drunk in Oregon now where there used to be one hundred in the days of the open saloon."

W. A. White, editor Emporia (Kans.) Gazette:
"I am glad to say that prohibition is succeeding in my part of the country."

Mrs. Mary E. Walley, president of the Mount Holyoke College, of South Hadley, Mass.:
"That the betterment of homes and better care of women and children of the men who formerly spent freely for drink are marked."

Editor Richard Lloyd Jones, of the Tulsa Tribune:
"Prohibition has put the country ahead financially and morally and increased efficiency. Credit has improved. Drunkenness is uncommon."

The superintendent of Battle Creek Sanatorium, Dr. J. Harvey Kellogg:
"Prohibition in the highest degree promotes human welfare and business prosperity. Drunkenness is now exceedingly rare, whereas formerly it was very common."

Amos P. Wilder, of the New Haven Journal Courier:
"We have seen the impossible come to pass in our time. One goes to a banquet of perhaps a thousand men and sees them spend hours without alcoholic beverages where five years ago each 'cover' was circled with glasses—spend hours without even mentioning alcohol."

Dr. Rockwell H. Hunt, director of the College of Commerce of the University of Southern California:
"In spite of exhibitions of lawlessness here and there, the beneficent effects of prohibition are being felt more and more. Literally millions of persons have quietly given up drink altogether, thus adding to their happiness and prosperity."

Ellen Hayes, retired professor, Wellesley College:
"Prohibition can already show a record of actual and far-reaching benefit."

President E. J. Stockpale, of the Harrisburg Telegraph:
"Drunkenness is not so common, and while there are unfortunate developments which are attributed to prohibition, these are frequently magnified for propaganda purposes and should not be taken too seriously in any consideration of the subject."

Editor George F. Milton, Chattanooga News, Chattanooga, Tenn.:
"I have noted a very marked improvement wherever I have been as to sobriety, industry, and better citizenship. I have seen the effects of liquor on the mountain whites, whose feuds and assassinations are increased in number by it. I have seen its effects in stirring the most bestial passions of the Negro, thus making the race problem more difficult of solution. With no liquor sold, it is hardly worth speaking of as a problem."

Dr. Eugene Lyman Fisk, medical director, Life Extension Institute (Inc.), New York:
"It is evident that there is more money being spent on the homes and savings are increasing. It is my opinion that we will see an improvement in the conditions as time goes on, as the old topers die off."

Dr. Henry King, President Oberlin College:
"The essential reasons for the policy seem to me still to be practically just what they were when the prohibition of the liquor traffic was up for vote. I have not been able to test from personal observation to any particular extent the comparative success of the enforcement of the law, but I expected that there would be difficulties at that point for some time."

Robert McMurdy, attorney, Chicago:
"My opposition to the liquor traffic has always been largely because of its demoralizing influence upon women. Prohibition has very greatly lessened this evil."

L. P. Hollis, social service and educational director for Victor Monaghant Co., Greenville, S. C.:
"There is no question as to the benefits of prohibition to the workers in our industries. In the South we have noted a wonderful change for the better along all lines of educational and church work, and the operatives are much more steady and of a higher type of character."

Attorney Preston A. Vaught, Mount Carmel, Pa.:
"The eighteenth amendment represents the greatest forward step in this generation and that historians will use it as a marker for a new epoch in the Nation's history."

J. Hammond Smith, School of Engineering, Pittsburgh:
"The enactment of our prohibition laws marked one of the greatest advances in the civilization that the world has ever experienced. The enforcement of these laws is the supreme test of the fundamental principles of our democracy."

Courtnay Guild, Commercial Bulletin, Boston:
"The only disappointment in national prohibition has been the disappointment of those who wished to see it become a flat failure."

President Frank L. McVey, University of Kentucky, Lexington, Ky.:
"In this community prohibition has had a marked effect in bettering the situation economically and morally."

Ex-Congressman A. M. Todd, Kalamazoo, Mich.:
"I intend to do everything I can to maintain the present prohibition law, which I consider the most important act of legislation in America for the present century."

Dr. E. V. McCollum, professor chemical hygiene, Johns Hopkins University, Baltimore:
"The passage of the eighteenth amendment marks the beginning of a new era in American history."

Charles B. Davenport, Carnegie Institute:
"That prohibition has been, despite all difficulties, somewhat effective is shown by the marked decrease in the number of alcoholics in institutions for the insane, the inebriate asylums, and the emergency hospitals, like Bellevue, New York."

Dr. James C. Egbert, Columbia University:
"Tremendous progress has been made in interfering with the unfortunate use of alcohol and that homes are maintained, women and children are cared for in a way of which we had no conception before the passing of the prohibition amendment."

United States District Judge Thomas J. Chatfield, Brooklyn, N. Y.:
"Prohibition has had a good effect upon labor, has caused the saving of much money which formerly was spent in saloons and for liquor, and that the wives and children of the men who formerly spent money for drink have in most instances benefited from the effects of prohibition. Drunkenness is far less prevalent than previously, but the few public cases of drunkenness receive much greater attention and advertising than formerly."

Senator ARTHUR CAPPER, of Kansas:
"I think the law is measuring up to the expectations of its friends. Our people have observed its operation first-hand for nearly half a century, and to-day I believe it is entirely conservative to say that fully 95 per cent of them look upon the prohibitory law as one of the greatest blessings ever bestowed upon the State by legislative enactment."

Dr. A. N. Halcomb, Harvard University:
"It has improved the conditions of home life. Particularly the conditions of life for women and children in homes where the money was formerly spent for drink. In this part of the country drunkenness is less frequent than before prohibition and crimes resulting from intoxication have greatly diminished."

Dr. Charles A. Peck, University of Tennessee, Knoxville:
"There is no comparison between the public drunkenness of the days before prohibition and that at the present time. This is naturally a moonshine district, but so far as I have heard the sentiment of the better class of citizens is in favor of more stringency rather than in favor of relaxing the enforcement of the prohibition laws."
President William Goodell Frost, Berea College, Berea, Ky.:
"The abolition of the liquor traffic is by far the most important forward step taken in our generation. The immediate results for good are much greater than I expected."
Dr. E. E. Montgomery, Philadelphia:
"No longer is it necessary to maintain wards in hospitals for the treatment of the victims of alcohol and those who walk the streets are impressed with the infrequency of drunken men."
President Frank B. Trotter, West Virginia University, Morgantown, W. Va.:
"The benefits of prohibition are seen on every side, and with 1,800 students under my paternal care I find that the discipline now with that number is not nearly so difficult as it was six years ago with 600."
President W. D. Weatherford, Southern College of Young Men's Christian Association, Nashville, Tenn.:
"I do not think I have seen a dozen in the city of Nashville since the national prohibition law went into effect."
Col. L. M. Mans (retired), Rockville, Md.:
"In my opinion drunkenness has decreased throughout every class of society."
Frederic Almy (retired social worker), Buffalo, N. Y.:
"Already savings banks, hospitals, police courts, and charitable agencies show notable changes, and, economically, wet countries will find it difficult to compete with a dry one."
J. E. W. Wallin, director Bureau of Special Education, Oxford, Ohio:
"An enormous amount of good has resulted thus far, but I am convinced that we can not adequately estimate all the influences of prohibition in less than 50 or 100 years."
Executive Secretary Walter S. McLaren, Institute of Politics, Williamstown, Mass.:
"The results of the measure have more than justified my belief that it would bring about an economic, social, and intellectual improvement in all our communities."
A. J. Wurts, professor of research, Carnegie Institute of Technology, Pittsburgh:
"Last summer I saw in the war-stricken towns and cities of Europe men and women of the middle and poorer classes sitting at tables on the sidewalks drinking beer and other liquors. They were spending their money on drink and then asking us for help, and I think we have been the more able to help because of prohibition."
Robert Fletcher, director emeritus Thayer School of Engineering, Dartmouth College:
"Why argue their question forever? We do not argue about murder, adultery, theft, and other crimes. The liquor traffic eventually involves all of these. It has ever been defiant of the laws."
The above quotations are characteristic from the hundreds of statements which were published. This testimony, gethered together by this great business journal, is a convincing document to prove that the eighteenth amendment and laws enacted pursuant thereto are accomplishing splendid results.

WHITE HOUSE POLICE FORCE.

Mr. JONES of Washington. Mr. President, on yesterday I entered a motion to reconsider the vote by which the bill (S. 3659) to create the White House police force, and for other purposes, was passed by the Senate. I am opposed to the bill. I do not think it is necessary, and furthermore I do not like the idea, at least by legislation, of making the President the chief of a police squad in the District of Columbia or anywhere else. However, I am not going to detain the bill here by the motion. It will have to pass the scrutiny of another body of the Congress and I feel that if it should pass that body too, I would be willing to give way in my judgment. I am in hopes that it will not pass the House. Therefore, I shall withdraw my motion to reconsider the vote by which the bill passed the Senate and let the bill take its course in the House.

Mr. KING. Will the Senator yield for a question?

Mr. JONES of Washington. I am through.

Mr. KING. Let me ask for information, does the bill take the control of the White House police entirely away from the District Commissioners?

Mr. JONES of Washington. It does. It makes the President the superintendent and head of that force.

Mr. KING. I am opposed to the bill, too.

Mr. JONES of Washington. It creates a separate police organization in the District of Columbia under the President.

The VICE PRESIDENT. Without objection, the motion to reconsider will be withdrawn.

GOV. W. P. G. HARDING, FEDERAL RESERVE BOARD.

Mr. HEFLIN. Mr. President, I ask unanimous consent to have read some brief extracts from an editorial in the Manufacturers' Record on the reappointment of the present governor of the Federal Reserve Board.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

THE NATION-WIDE PROPAGANDA TO SECURE RENOMINATION OF GOVERNOR HARDING TO FEDERAL RESERVE BOARD ENDANGERS THE SAFETY OF OUR BANKING INTERESTS.

"Business men throughout the country are being solicited by mail to write to the President and to Members of Congress and bring what pressure they can to bear in the interest of the reappointment to office of Gov. W. P. G. Harding, of the Federal Reserve Board. The campaign to create an artificial and untrue impression of a public demand for the retention of this official does not end there. It raises itself, in one form or another, at every convention of bankers, and even at commercial conventions, wherever they may meet. It generally takes the form of a resolution of indorsement and is presented in such a way and at such a time that earnest antagonism to it can not be organized. Moreover, bankers, and business men fear in many cases to speak boldly out in meeting, so great is the menace of later coercion.

"It is contended that the Federal reserve system and honest money are being attacked and that the preservation of neither is possible unless Governor Harding is retained in office. The campaign to keep him in his seat is obviously well financed, we do not know by whom. But we imagine that the reserve banks could easily do this and charge to their expense account, on which we think there is no check except the conscience of their officers.

"In the long history of human blundering, recorded and unrecorded, students will search in vain to find the record of a high financial official who, in any country, in any century, by any test, equaled in the profundity of its disastrous consequences the record of Governor Harding. He is not only indicted by the dead and bankrupt of his own country, but the paralysis of trade the world over, which has doomed millions to anguish, may be laid in large measure, and has so been laid by great economists, to the policies that forever will be identified with the Governor Harding stewardship.

"Time takes the measure of all humans. They can not escape its just and irrevocable verdict. It writes its judgments with the ink of fact on the parchment of current events, where all who have eyes to see can read, and being written so the record stands forever and forever. It is not within the power of the President by a reappointment, or of Bourbonistic financiers through propaganda, to blot out the indelible verdict. There is no authority under the sun that can make the sun stand still, there is no human hand that can hold back the tides, and there is no human brain, no human conspiracy, so subtle and so cute as to confuse the fundamental truth and wipe out from the record of Governor Harding the spots that are all over it. His incompetency has been overmastering. His conspicuous inabilities condemn him to future obscurity, not to further honors.

* * * * * * *

"Employed because he was supposed to be a financier, admittedly in the first great test of reconstructive finance he misconceived, misjudged, inaccurately and inadequately assessed the situation and permitted a condition to exist and grow worse which, the board has since admitted, ought surely to have been retarded. But moderation Governor Harding knows nothing about. He is an extremist. The greatest of inflationists, he became the greatest of deflationists.

* * * * * * *

"He knew no more than that cotton was bringing more than it used to bring when he banked in Birmingham. 'Our present task,' said a bulletin of the Richmond Reserve Bank, which is subservient to Governor Harding, 'is to proceed with the deflation of credits as rapidly and as systematically as possible.'

"But Congress in its wisdom had set up an agency to prevent just the catastrophe which Governor Harding had decided to bring about. The War Finance Corporation was in operation, and a debacle in prices could not be engineered in its entirety by the Federal reserve system if the corporation continued to function. Accordingly Governor Harding's alter ego, Secretary Houston, we believe illegally and we know disastrously, unceremoniously kicked the corporation and an act of Congress out of the back door at one and the same time. The directors of the corporation, some of them unwilling and coerced by Secretary Houston, on May 10, 1920, adopted this resolution:

"'*Resolved*, That at the request of the Secretary of the Treasury and pending further action by this board, the making by the corporation of further advances for export purposes, except pursuant to existing commitments, be suspended.'

"So sank the knife into the bowels of agriculture and national prosperity. Here was the Governor Harding policy out in the open, and it was a policy of death.

"We need not recount here the general cataclysm that resulted. We can not even discuss how it was that the great producing elements were kept in ignorance of the attack about to be made on them while certain better-informed financial interests made ready for the rainy day. Let readers look back for themselves to the newspaper statements made by Governor Harding when he went to New York in the memorable days of November, 1919, and compare them with his subsequent opposite

policy. Some men have thought that he was a victim lured into the trap.

"Nor can we here dwell on the multitude of incidents which in the aggregate made clear the Governor Harding policy and showed, as if pictured in the skies, the enormity of his economic blundering. Our purpose is rather to show how later events have completely demonstrated his incompetency.

* * * * * * *

"Liberty bonds were down in the eighties. Credit was almost not to be had. Commodity prices had dropped until all agriculture was panic-stricken. The mother herds were being killed on the plains. The South was planting what was destined to be one of the smallest crops of cotton in recent years. Bankruptcies were habitual. Not in a century had the people of the Nation been so low in funds, so low in spirit, so desperate, so hopeless. Hundreds of banks were being kept open only by subterfuge. Secret creditors' committees were likewise struggling to keep great corporations alive.

* * * * * * *

"Economic conditions were not strangling the world, bad as they were. The world, in fact, was in grave need. It could have consumed more than America could have produced. The strangulation was artificial. It was arbitrary policy that was strangling prosperity. It was artificial policy that was costing this Nation more than the war itself had cost. It was incompetence that had the United States by the throat—colossal incompetence.

* * * * * * *

"We say in all sincerity that there is no basic condition today warranting better times and better feeling now than there was in the period of greatest depression except this one thing—financial policy. The sources of credit had been dammed up by Governor Harding.

* * * * * * *

"Do not the times, in unanimous accord, cry out that the Jonah of finance be permitted to retire into private life?

"Who prostituted the national honor and put it in the position of repudiating its pledges in regard to Liberty bonds? Who poured filth on their integrity and drove them out of banks?

"Who practiced usury and utilized the infamous graduated interest rate to ruin country banks?

"Who, according to the Supreme Court of the United States, waged war illegally on State banks?

"Who permitted great bank palaces to be erected out of enormous profits taken from stricken industry?

"Who brought the Federal reserve system into disrepute and made necessary a fight by all good men and true against its manifold exactions?

"Between the economic concepts of Governor Harding and men such as President Harding and Secretary Mellon there is a great gulf. The former stands for hard times. He is the doctrine of cheapness. The snarl of whips on sweating backs for profit's sake, a cheap race ground down for cheap production, a belief that only from the poverty of others can a few gain riches and ease—somehow, so do we conceive the Governor Harding concept of fundamentally good conditions.

* * * * * * *

"It is, therefore, almost in the nature of an insult for any set of men, be they financiers or not, to ask that President Harding retain in office a man who in his elements is so utterly out of tune with everything that the President himself stands for and believes. The horsemen of the night do not work all in the day. Nor is it fair, on other grounds, that President Harding should harness his administration to a liability of such ponderous size as Governor Harding. In America, justly, it is not the custom to reward failure. Our laurels go to those who have earned them.

"* * * The way to save the valuable features of the Federal reserve system is not to retain in office the one man who more than all others is responsible for the disrepute into which the system fell. That would be but to nurse discontent and to force the whole banking question into a political campaign. If it ever gets there, there can be but one answer. In votes the banking element is not formidable. Only a fool would willingly toss a great technical question of this sort into the political arena. The way to save what is good in the system is to get what is bad out of the system. And the worst thing in the system, recent events have shown, is the governor of it. He has been the trouble maker and disaster's chief henchman."

* * * * * * *

Mr. McCUMBER and Mr. HEFLIN addressed the Chair.

The VICE PRESIDENT. The Senator from North Dakota.

Mr. HEFLIN. Mr. President——

Mr. McCUMBER. I yield to the Senator from Alabama. I see he was on his feet.

The VICE PRESIDENT. The Senator from Alabama is recognized.

Mr. HEFLIN. Mr. President, the writer of the editorial which has just been read at the desk is one of the ablest and cleanest Americans beneath the flag. He has devoted his whole life to the public interest, and has worked in season and out for the building up of the South and the West, and, in fact, the whole country, industrially, commercially, and agriculturally. Richard H. Edmonds is the fearless, able editor who pens this indictment against Governor Harding of the Federal Reserve Board. The country is under lasting obligation to Mr. Edmonds for the fight which he has made in exposing and condemning the disastrous and the deadly deflation policy of the Federal Reserve Board.

I wanted the editorial read to-day in the hearing of the press representatives, and I wanted Senators to hear the editorial read, for I want the country to be put upon notice that an organized effort is on foot by the forces of Wall Street, which profited by the distress of the South and the West. They made their millions out of the deflation policy of Governor Harding and they want to bring about his reappointment. I want the country to know that the same robber gang that used the Governor of the Federal Reserve Board to the detriment and injury of millions of American people have now the boldness and the effrontery to seek to have this man reappointed and are moving heaven and earth to that end. I want the people to know, Mr. President, what is going on here. Those back of the propaganda have already sent out the impression through the press that he is going to be reappointed. That is for the purpose of intimidating bankers; that is for the purpose of inducing them to court favor with Governor Harding. Many of the little bankers who have been choked practically to death by this deflation policy now are afraid to fight the reappointment of this man. They do not want him appointed. But the effort is made to make them think that he is going to be reappointed.

Mr. President, if the rank and file of the honest bankers of America could record their honest convictions to-day they would enter a protest against the reappointment of this man, but this other gang is using its power and working hard to overwhelm President Harding with the idea that the business interests of the country want this man reappointed. We shall see who has the ear of the President in this appointment—whether 75 or 80 millions of Americans who have been stricken down and robbed by the deflation policy or whether those who struck them down and robbed them will have his ear.

Governor Harding hails from my State, but I shall fight to the last his confirmation. From every standpoint he is an unfit man for this place. I am convinced that he is the handy instrument and subservient tool of Wall Street. I would not say that if I were not honestly convinced of the fact; but being convinced that he is such a tool, I will not sit silent in my place in this Chamber and permit the control of the greatest banking system ever devised to be again submitted to the manipulation, perversion, and trickery of the man who has served the interests of those who, like greedy vampires, have sucked the lifeblood from the body of American business.

Mr. President, the Washington Times of yesterday had a little notice to this effect:

> Despite rumors to the contrary, W. P. G. Harding is expected to be reappointed to his position as Governor of the Federal Reserve Board.

If he is named the country will have some startling revelations made to it, not in executive session. I am going to speak in the open, on the floor of the Senate, and I want the country to know the names of the Senators from the South and West and elsewhere who vote to confirm this man. I do not believe the President is going to reappoint him. I have reasons for believing that he is not going to reappoint him, and I will state those reasons if his name ever comes upon this floor.

I simply wanted to say this much now, Mr. President, that the country may know what is going on. I have never witnessed anything like it—a man whose policy is condemned by every honest banker in the country and every honest business man who knows the facts. I am not talking about those who profited by his pillage and plunder, those who have grown fat by reason of his policies. Of course they want to keep him in, because he is their agent. No man under the sun has served them so well, or would serve them so well in the future. Of course they want to keep him in; but what of the power that must safeguard the interests of the American people? It is unthinkable that the President would even consider reappointing this man to such a responsible position.

Why, Mr. President, they have gone in this propaganda to the extent of saying that I and some others who fought this man's policies are opposed to the Federal reserve banking system. When they say that they know that they tell that which is not true.

I have never opposed the system. I have never criticized it. On the other hand, I have praised it. I praise it now as the greatest banking system ever devised. A State banker asked me not long ago if I would go into it if I were in his place. I said, "Well, you must decide that for yourself. Under different management I think I would go into it. I think it is the greatest system in the world. It has been maladministered. It has a fellow at the head of it now who has administered it in the interest of a favored few to the hurt and injury of the many." He said, "Well, if they have a new head of this board and get a new start, I believe I will go in."

Mr. President, I stated on the floor of the Senate that bankers have written to me and other Senators have told me that bankers have written to them, saying, "Don't use my name, but this is being done, and that was done, by the Federal Reserve Board. If you use my name, I will be punished in so many ways, so please don't mention by name." Now, the President of the United States, Chief Magistrate of a hundred millions of people, is being asked to reappoint this man that honest bankers are afraid of and that Wall Street demands shall be reappointed. I want the country to know what is going on—that they are moving heaven and earth to try to get him reappointed, and I am hoping and praying that the President of the United States will not even consider seriously the reappointment of this man.

Mr. President, I ask unanimous consent that the editorial I had read may be printed in 8-point type.

The VICE PRESIDENT. Is there objection? The Chair hears none.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. Mr. President, I ask now to return to paragraph 358, page 75.

The VICE PRESIDENT. The amendment of the committee will be stated.

The ASSISTANT SECRETARY. The committee proposes, after the numerals of the paragraph 358, to strike out all down to and including the words "provided further" and the comma on line 24, and to insert the following words:

Safety razors, and safety-razor handles and frames, 20 cents each and 30 per cent ad valorem; razors and parts thereof, finished or unfinished, valued at less than $1.50 per dozen, 30 cents each; valued at $1.50 and less than $3 per dozen, 35 cents each; valued at $3 and less than $4 per dozen, 40 cents each; valued at $4 or more per dozen, 50 cents each; and in addition thereto, on all of the foregoing, 60 per cent ad valorem.

Mr. McCUMBER. On line 25, on behalf of the committee, I move to strike out "20 cents each" and insert in lieu thereof "10 cents each."

The ASSISTANT SECRETARY. In the committee amendment, on line 25, it is proposed to strike out "20" and insert "10."

The VICE PRESIDENT. The Senator has a right to modify the committee amendment.

Mr. McCUMBER. Now, Mr. President, I want to make just one general statement of explanation upon these razors. The committee struck out all of paragraph 358, as reported from the House, and the paragraph will now read, as I propose to amend it:

Safety razors, and safety-razor handles and frames, 10 cents each and 30 per cent ad valorem; razors and parts thereof, finished or unfinished, valued at less than 75 cents per dozen, 20 cents each; valued at 75 cents and less than $1.50 a dozen, 30 cents each; valued at $1.50 and less than $3 per dozen, 35 cents each; valued at $3 and less than $4 per dozen, 40 cents each; valued at $4 or more per dozen, 50 cents each; and in addition thereto, on all of the foregoing, 50 per cent ad valorem.

Mr. President, prior to the war there were being imported into this country an immense quantity of very cheap razors that were made for sale, not for shaving. Here [exhibiting] is an example of one of the razors that came into the country and were used mostly by those stores which advertised that for a given number of coupons upon purchases at that particular store there would be presented to the purchaser a razor. It is rather a nice-looking instrument to the view, but it was never intended to shave, and never would shave anything. It is an absolutely worthless thing; and if we could have a high enough duty to exclude it entirely I think it would be a benefit to the American purchaser. It is not even fit for corns. It would not shave anything more than the first attempt. It is made out of Bessemer steel, which is all right to make steel rails, but is absolutely unfit as a steel from which to make razors. It may be that the duties which we propose are somewhat high upon those razors that ought to be excluded entirely.

I desire to insert here a table, which I will mark "Table No. 1."

The VICE PRESIDENT. Without objection, it is so ordered.

The table is as follows:

TABLE NO. 1.—*Razors.*

Importer's No.	Selling price of imported article, United States.	Profit and overhead.	Landed cost.	Domestic selling price.	Domestic No.	Spread.
		Per cent.				*Percent.*
50§	$23.80	182	$5.62	$16.89	1-444	200
3007	10.00	36	4.82	13.30	0-434	176
1150	12.00	117	3.63	13.30	2-434	267
B100	21.00	86.5	7.51	17.05	0-644	127
101	21.00	86.5	7.51	17.05	0-644	127
10	23.52	250	4.74	18.20	9-444	284
1352	10.00	74	3.77	14.80	56-634	292
Average			5.37	15.80		194

The spread between the landed cost (not including duty) of the imported razors and the selling prices of the domestic razors, as shown in the above table, ranges from 127 to 292 per cent, or an average of 194 per cent for all of the items.

Mr. McCUMBER. The table shows the importer's number, the selling price of the imported article in the United States, the profit and overhead of the importer, the landed cost, the domestic selling price, the domestic number, and the spread between the domestic selling price and the landed cost.

Taking the first item, which is No. 50§, the selling price of the imported article in the United States was $23.80 per dozen, the profit and overhead is 182 per cent, the landed cost is $5.62, the domestic selling price is $16.89, the spread is 200 per cent.

In the case of the next number, the selling price of the imported article in the United States is $10 per dozen, the profit and overhead is 36 per cent, the landed cost of that article is $4.82, the domestic selling price is $13.30. That leaves a spread of 176 per cent.

I will not quote any further, but will simply say that the spread ranges from 127 per cent to 292 per cent.

I have here another table, which I will insert in the RECORD, which shows the German import and the English import prices, applying the rates which the committee have finally agreed upon. I ask to have this table inserted in the RECORD at this time.

The VICE PRESIDENT. Without objection, it is so ordered.

The table is as follows:

TABLE NO. 2.

The following table includes the average prices of the items in Table No. 1, grouped according to the rates of duty:

Germany, over $3 and under $4.		Germany, over $4 a dozen.		English, over $4 a dozen.	
40 cents each and 50 per cent.		*50 cents each and 50 per cent.*		*50 cents each and 50 per cent.*	
Foreign value	$3.53	Foreign value	$5.94	Foreign value	$5.94
Landing charges	.18	Landing charges	.51	Landing charges	.51
Specific	4.80	Specific	6.00	Specific	6.00
Ad valorem	1.77	Ad valorem	2.97	Ad valorem	2.30
	10.28		15.42		13.12
Plus 20 per cent	2.30	Plus 20 per cent	3.08	Plus 20 per cent	2.62
	12.58		18.50		15.74
Price of domestic razor, $14.05 per dozen.		Price of domestic razor, $17.30 per dozen.		Price of domestic razor, $13.30 per dozen.	

Plus 20 per cent is for importers' overhead expenses and profit.

Mr. McCUMBER. Taking those imported from Germany at more than $3 and less than $4, the duty on which is 40 cents each and 50 per cent ad valorem, the foreign value is $3.53, the landing cost is 18 cents, the specific duty would amount to $4.80, and the ad valorem duty would amount to $1.77. That would make a landed cost, without overhead or profit, of $10.28. Plus 20 per cent, which we have allowed for overhead and profit, or $2.30, it would give those razors a selling price in the American market of $12.58. The selling price of the comparable American article is $14.05, so that this duty would fall short of giving proper and full protection.

Take the German razor valued at over $4 per dozen. The duty is 50 cents each and 50 per cent ad valorem. On the average of all of these, the foreign value is $5.94. The landing cost is 51 cents, the specific duty is 50 cents each, amounting to $6 on the dozen, and the 50 per cent ad valorem would be $2.97. That would make it $15.42, and if we allowed them 20 per cent profit and overhead, which would amount to $3.08, it would bring the article up to $18.50 per dozen, while the domestic article is selling for a little less than that, namely, $17.30 per dozen. With a little less than 20 per cent, the article would sell for about the same. The English product would be brought to above the selling price of the American product, $15.74 for the English article landed, the domestic article selling for $13.20.

This gives a general view of the proposed duty and its effect upon the general classes of imported razors.

Mr. JONES of New Mexico. Mr. President, I want to express my appreciation for two things this morning: First, that the committee has brought in an amendment of its previous proposal, very appreciably reducing the rates of duty on some of these razors. Secondly, I wish to express my appreciation for something which I have been hoping for since we began the consideration of this bill. The chairman of the Finance Committee has presented to the Senate, in connection with this paragraph, the reasons for the rates of duty which the Finance Committee proposes. This I believe is the first time since we began the consideration of the bill that that has been done. I have rather caustically criticized the hitherto apparent intention of not explaining anything. I have felt that the committee owed it to itself and to the country to give some reason, whether well founded or not, for these very large increases in duty above the rates in the existing law, and in many cases above the rates in any law which we have ever had in this country.

I am going to demonstrate my appreciation by limiting the discussion of these items. I am enabled to do that by the course which the chairman of the committee has pursued this morning. He has given us at the outset the reasons which actuated the committee in doing what has been done, and again I want to express my appreciation for this very considerate act on the part of the chairman of the committee in offering his reasons, and also for the reductions which he has proposed this morning. There are some details, however, which I think it is important the Senate should know, and I shall very briefly refer to them.

In the first place, this paragraph as amended brings into the bill specifically a new item—safety razors and safety-razor handles and frames. Hitherto that class of razors and parts has not been specifically mentioned in any tariff bill. The original proposal of the committee was to impose a duty of 20 cents each and 30 per cent ad valorem, not only on the safety razors but on the safety-razor handles and frames, and now it has changed that to a specific duty of 10 cents each, which, of course, will be recognized as amounting to $1.20 per dozen.

The values of these razors are designated as all the way from 75 cents per dozen up to $4 per dozen, so the importance of this amendment, as it relates to the cheaper grades of safety razors, is very easily seen. In many cases it amounts to a reduction of more than 100 per cent of the foreign cost of the razor.

In considering the subject, I should like to inquire of the chairman of the committee what will be the ad valorem rate upon safety razors in the different classes which are ordinarily imported into this country?

Mr. McCUMBER. Safety razors are coming in now at about 10 cents each, foreign valuation. If we charged 10 cents each, that would be 100 per cent, and if we add 30 per cent, as we have here, it means 130 per cent.

Mr. JONES of New Mexico. The Senator says they are coming in at about a dollar a dozen?

Mr. McCUMBER. No; they are coming in at about $1.20 a dozen. Of course, that includes the case and all, as a Senator near me suggests. The committee have cut that down to 10 cents each and 30 per cent ad valorem, which is equivalent to 130 per cent ad valorem on razors of that price. That is the cheaper class.

Mr. JONES of New Mexico. The reduction of the 10 cents each which the committee proposes this morning of course would be a reduction of 100 per cent. I inquire, further, what the rate of duty is under the present law. Under what basket clause do those safety razors fall under the present law, and what is the present rate of duty?

Mr. McLEAN. Safety razors are found in paragraph 358, the same as other razors. The rate is 55 per cent ad valorem.

Mr. JONES of New Mexico. I want to call attention to the fact that so far as safety razors are concerned we are exporters of safety razors to all the countries of the world. They are made by automatic machines. It is true there have been some importations of safety razors, but they are safety razors of a very inferior quality, I am advised. So far as the general trend of prices of the better class of razors is concerned, I do not believe there is any reason to fear that the American producer can not compete with the world. He has been doing that in the past; he has been competing with Germany in other countries, and is doing it to-day.

It is true that Germany is producing a cheap safety razor that is finding a market in all countries, but that does not prevent the American manufacturer, so far as a reasonably good grade of razors is concerned, from meeting competition anywhere, and that is only in keeping with business conditions in our country. When there is a product which can be manufactured by machinery, and when there can be quantity production, America stands at the front of all the nations of the earth. Our inventive genius, our skill, our aggressiveness, our ability to organize are superior to those of any other nation. Our facilities, our resources, our material are unexcelled anywhere, and as to this article it is not only produced by machinery, but it is produced by automatic machinery, and there is no danger of competition in comparable articles anywhere on earth.

It has been said by the chairman of the committee that the cheaper safety razors ought to be excluded. I am rather inclined to agree with him. I think in many cases they are imposing upon the public by offering such razors. That certainly applies to the cheaper straight-handled razors. Whether it does or not with regard to safety razors, I am not especially informed, but I assume that must be the case. I am informed, as to the cheap blades of the safety razors sent over to this country from Germany, that they are worthless. They are certainly an imposition upon the people of the country, and as to those I am inclined to agree that we should virtually put an embargo upon them. We do not want to have our people deceived by such devices.

But when we come to the medium grades and to the better grades, there is no use in piling up the same kind of a duty there for the same purpose. The committee this morning brings in a reduction of the duty as to the very cheap razors, and I am inclined to think it is justified and should be done; in fact, I do think so, because what is left, I believe, will be great enough to amount virtually to an embargo on the cheap razors.

Mr. POMERENE. Mr. President, the Senator said something a moment ago about an embargo, but I did not understand exactly what it is on.

Mr. JONES of New Mexico. It is on the very cheap razor which, of course, does not serve, I think, any useful purpose in most cases. It has the effect of deceiving the buyers in many cases.

Mr. McLEAN. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. McLEAN. I have one of those razors landed in this country at $1.22 a dozen. If the Senator from Ohio would like to examine it, I will have one of the pages take it to him.

Mr. POMERENE. I was engaged on another matter at the moment and did not understand clearly what the Senator said.

Mr. McLEAN. I thought the Senator from Ohio inquired of the Senator from New Mexico as to the quality of the cheap razor he was discussing. I have one here and I would like to have the Senator examine it if he would like to do so.

Mr. POMERENE. I have not any objection to examining it.

Mr. McLEAN. I do not think it would shave anything but the purse of the man who bought it.

Mr. JONES of New Mexico. I do not know that I am going to make any special objection to the rate which the committee proposes upon the cheap razors. The rates are very greatly reduced from what they were originally. I think the rates were decidedly too high at first, but they have been very materially modified. At this time I am not disposed to make any objection, but when it comes to the better grade I think that the rate of duty is decidedly too large, and I shall offer some amendments there.

As to the safety razors, I do not believe we need any such high duties. I think we can compete with the world in safety razors.

Mr. McCUMBER. At least, if the Senator will allow me, if a safety razor that is worth anything can be brought into this country for 10 cents, landed here at 10 cents, it is not an imposition, I think, upon the average user of the safety razor if he has to pay another 10 cents and then add 3 cents on top of that, which would make it 23 cents. If the razor is worth anything at all, we certainly ought not to complain of the price that would make it cost at wholesale 23 cents and perhaps sell at retail for double the amount at least, or possibly 50 cents. It does seem to me that if it can be sold

for that we ought to have a duty that would arrest their importation. If it is not worth that price, it ought not to be imported at all.

Mr. JONES of New Mexico. The Senator will observe, however, that the rates of duties apply to all safety razors, and when we get up into the class of reasonably good safety razors we undoubtedly compete with the world. To put a duty of 10 cents each ad valorem upon grades which are useful to mankind and which are exported all over the world, it seems to me, is giving an opportunity to the producer of those razors in this country to oppress in a sense the people of the United States who use razors.

Mr. McCUMBER. Of course, if the Senator will again allow me, while we had a patent right upon the razor and it could not be manufactured by anyone else, we could export them all over the world and make enormous profits, and undoubtedly the Gillette Razor Co. did make enormous profits upon the razors under their patent rights. But now that the patent has expired I am very doubtful if that company or any other American company will be able to export any considerable number as against what they can be produced for in the foreign country. My understanding is that it would cost at least three times as much to produce in this country razors of the several kinds as it would cost in Germany or France.

Mr. JONES of New Mexico. Notwithstanding the statement of the Senator, the history is that we are exporting these razors in competition with the world. Just listen to some facts bearing on the razor industry. The last report of domestic production was in 1919, but in that year we produced in this country a little over $24,500,000 worth. We exported $2,300,870 worth and we imported $488,634 worth. That was of razors of all kinds.

Mr. POMERENE. May I ask the Senator to give the production in this country?

Mr. JONES of New Mexico. A little over $24,500,000.

Mr. POMERENE. In what year?

Mr. JONES of New Mexico. In 1919.

Mr. POMERENE. The Summary of Tariff Information states that the production of razors, safety and straight, was valued at over $5,000,000 in 1914. Has it increased so largely?

Mr. JONES of New Mexico. It shows that enormous increase in 1919.

Mr. McLEAN. Has the Senator the figures for 1921?

Mr. JONES of New Mexico. No; I have not the figures for 1921. In fact, no one has. We do not know what the production has been since 1919.

Mr. McLEAN. The Senator knows that this razor was covered by a patent in 1919 and since that time the patent has expired.

Mr. JONES of New Mexico. I take it that will not make any difference in the quantity of production unless it be to increase the quantity. Usually where an item is controlled by a patent it operates to restrict production and keep up the price.

That is the situation regarding the razor industry. I want to call attention to the question of prices and the tendency of those prices, as they come from Germany, of the better grades of razors. Prior to the war a razor which was a good razor—I suppose there is no better on the market, the "Red Injun" brand, No. 101—was sold at 24 marks 30 pfennigs. On January 1 of this year its price had increased in marks 3,600 per cent, or to 899 marks 10 pfennigs. On January 1, with the mark at 36, which is about one-third of a cent, that razor cost $3.23, foreign cost. If we add the present duty of 55 per cent, the amount of the duty would be $1.78. Then allowing 5 per cent for expenses and transportation, which would be 16 cents, the landed cost would be $5.17. On March 15 that razor had advanced 4,400 per cent above the pre-war price to 1,093 marks 50 pfennigs, and, calculated on the same basis, that would give a landed cost of $6.33.

On May 15 there was a further advance of 25 per cent, which would make the foreign cost $3.94, the duty of 55 per cent $2.16, and 20 cents landing cost, which would give a landed cost of $6.30. On May 15 an advance of 25 per cent would make the foreign price $7.22, the present duty $3.97, the landing expense 29 cents, making a landed cost of $11.48. The present American selling price of that razor, according to my authority, is $11.

Mr. McLEAN. May I ask the Senator what his authority is?

Mr. JONES of New Mexico. My authority is H. Boker & Co. (Inc.).

Mr. McLEAN. That is the same importer whom the Senator quoted yesterday?

Mr. JONES of New Mexico. Yes.

Mr. McLEAN. Now, let me call the attention of the Senator to the facts with regard to this particular article. I have them here. It is the "Red Injun" Boker razor, no better made. This razor was imported in August last at $7.51 a dozen. That is without the duty. The authority for that is the Reynolds report. Now, the experts who have the matter in charge report that the same razor was landed in this country in April, 1922, at $3.15 per dozen.

Mr. JONES of New Mexico. May I ask by whom?

Mr. McLEAN. By H. Boker Hardware Cutlery Co., the same authority that the Senator is quoting here and asks us to believe. The fact is they control this brand absolutely. Why they should deem it worth while to try to deceive the Senator from New Mexico in this matter I can not conceive.

Mr. JONES of New Mexico. Mr. President, of course I am at a loss to understand the situation.

Mr. McLEAN. I confess that I am. If the Senator will pardon me, while I am on my feet, here [exhibiting] is another high-grade razor, No. 10. By the authority of the Reynolds report—this is the information we get from the expert who was selected to give to the Committee on Finance as accurate information as could be obtained—this razor was landed in August last at $4.82 a dozen, and in April, 1922, at $3.08 a dozen.

Mr. JONES of New Mexico. Mr. President, I, of course, have nothing of a specific nature to offer in opposition to what the Senator from Connecticut has stated.

Mr. McLEAN. The rates proposed by the committee do not begin to equalize the difference in the production costs in this case.

Mr. JONES of New Mexico. I am constrained to believe, however, that there is something peculiar with reference to the particular importations to which the Senator has referred. We all know that prices generally in Germany have been increasing, and there must be something in connection with those importations peculiar to the transactions themselves. I can not imagine that there has been any such general occurrence as that to which the Senator has referred.

Mr. McLEAN. My information is—and I get it from the same experts who were employed by the Committee on Finance when the Underwood bill was framed, who, I think, are honorable men—that these importations were passed upon by the agent of Boker & Co. for comparability, the very firm which the Senator is quoting.

Mr. JONES of New Mexico. I, of course, have no other explanation than that which I have offered; but I should like very much to get from H. Boker & Co. some explanation of the situation, because the general trend of prices in the industries of Germany is not in that direction, as the Senator from Connecticut must admit, it seems to me. We have indisputable evidence that the trend of prices in Germany is upward on all commodities, and to say that there should have been a reduction in the price of razors, taking the dates of August, 1921, and April of this year, of what I believe amounts to 50 per cent or more in some cases, is inconceivable to me. It certainly is not consistent with the trend of business in Germany.

Mr. McLEAN. These figures were taken from actual invoices of goods which were imported into this country——

Mr. JONES of New Mexico. That may all be true.

Mr. McLEAN. And the Government collected the duty on that basis. I think that Boker & Co. owe the Senator from New Mexico an explanation.

Mr. JONES of New Mexico. I hope there will be an explanation of the colloquy which has just taken place.

Mr. McLEAN. I will say to the Senator, with regard to the cutlery industry, razors, shears, and penknives, that Germany is at this time making a special drive. There is no question about that; the imports so indicate. The imports of razors have almost doubled in quantity since the 1st of January last. In January last there were imported 67,000 dozen; in February there were imported 78,000 dozen; in March there were imported over 102,000 dozen; and in April there were imported 96,000 dozen. I submit to the Senator that the facts demonstrate that Germany is making a special drive upon these industries, and if the Senator has read the testimony which was taken before the Finance Committee of the Senate——

Mr. JONES of New Mexico. I heard the testimony.

Mr. McLEAN. He will realize that the razor industry especially is practically out of business at the present time. The concern in New York which ordinarily employs 700 men has only about 90 men at work at present, and they are working only three days in the week. The firm is just keeping their organization together. That applies to the manufacture of the better razors.

Mr. JONES of New Mexico. But the Senator realizes, does he not, that the present situation is only temporary?

Mr. McLEAN. Mr. President, the Senator must also realize that if the concerns in this country have to quit business and

dissolve, the American consumer will then be at the mercy of the foreign razor monopoly. If the domestic manufacturers are to have any relief at all, they must have adequate protection for the time being. We have been very moderate in the rates allowed; the manufacturers would clearly be entitled to higher rates than we have provided, and we would have been compelled to allow higher rates but for the fact that we have provided in this bill in the event the rates are not high enough that the industry may go to the President of the United States and secure reasonable protection. Reasonable protection is all we want, and the figures demonstrate that the rates here provided are lower than conditions to-day demand. It is too late to save a man after he is dead, and it will be too late to save this industry after the organization has been dissolved and the workers have found employment in other industries.

Mr. SIMMONS. Mr. President, will the Senator from New Mexico pardon an interruption?

Mr. JONES of New Mexico. I yield.

Mr. SIMMONS. I wish to ask the Senator from Connecticut a question. Did I understand him to say that the foreign razors were imported at $3.50?

Mr. McLEAN. The Boker razor was imported at $3.15 per dozen.

Mr. SIMMONS. They were not appraised at $3.15, but were imported at that price?

Mr. McLEAN. They were appraised at $3.15, and the duty was paid on that appraisement, as I am informed.

Mr. SIMMONS. They were appraised at the same rate as they were invoiced, then?

Mr. McLEAN. That is my information.

Mr. SIMMONS. I merely wanted to make the inquiry of the Senator.

Mr. FRELINGHUYSEN. Mr. President——

The VICE PRESIDENT. Does the Senator from New Mexico yield to the Senator from New Jersey?

Mr. JONES of New Mexico. I yield.

Mr. FRELINGHUYSEN. Here [exhibiting] is a razor that was imported on September 16, 1921, for 380 marks a dozen. The mark at that time was worth nine hundred and thirty-eight one-thousandths of 1 cent, so that the cost of that razor, foreign value, was $3.56 per dozen. The landing charge in Chicago, or at some other point in the West, was 18 cents. The specific duty at 40 cents each would be $4.80; the ad valorem duty of 50 per cent would be $1.78, making a total of $10.33, plus 20 per cent profit, or $2.06, or a grand total of $12.38 per dozen in this country. The wholesale selling price for the comparable domestic razor is $17.05. So that even with the duty of 40 cents each on razors valued at between $3 and $4, the duty falls short of being sufficient to protect American industry against foreign competition in that razor.

Here [exhibiting] is the invoice of the article. I may add that to-day the spread on that razor is a great deal wider because the mark is worth only about a quarter of a cent.

Mr. JONES of New Mexico. Does the Senator believe that that razor is coming in to-day at any such price as he has mentioned?

Mr. FRELINGHUYSEN. I have a memorandum of a large shipment of razors covered by the same bracket which recently came in which shows a great deal wider spread than in this instance. I think the information will be procurable later. Possibly the Senator would like to see the invoice price of the razor to which I have referred.

Mr. JONES of New Mexico. Mr. President, what is the price of the razor made in the United States which is comparable to the foreign razor to which he has referred?

Mr. FRELINGHUYSEN. The wholesale selling price of the domestic article is $17.05 per dozen.

Mr. JONES of New Mexico. That amounts to nearly $1.50 each and the foreign razor, as I understand, is sold for 134 marks. Is that correct?

Mr. FRELINGHUYSEN. The foreign razor sold for 380 marks per dozen.

Mr. JONES of New Mexico. I think the Senator probably misread the figures. The bill here was for only one-twelfth of a dozen. I think the Senator was mistaken to that extent.

Mr. FRELINGHUYSEN. No; it covers one dozen razors.

Mr. JONES of New Mexico. Here is the way the bill reads:

We sent you by one parcel post one pattern goods, postage 2,50, package 1,50, 4.

I suppose that means 4 marks.

One-twelfth dozen razors No. 1041, five-eighths oval, imitation shell handle, 400; 5021, six-eighths flat, bone handle, 380; 780.

That means 780 marks, I imagine.

One-twelfth of 780, 130 marks.

And adding 4 marks previously mentioned makes 134 marks for the one razor, if I am able to understand this bill.

Mr. FRELINGHUYSEN. The manufacturer who handed me the memorandum stated that the invoice was for one dozen razors at 380 marks.

Mr. WALSH of Massachusetts. What would be the equivalent in gold? It would be less than 1 cent apiece. There must be a mistake about it, for that is impossible.

Mr. FRELINGHUYSEN. Four hundred marks at 1 cent would be practically $4, or, at the equivalent of a little less than 1 cent, $3.56.

Mr. SIMMONS. Mr. President, the Senator said the mark was worth a quarter of a cent—not a cent.

Mr. JONES of New Mexico. The Senator is clearly mistaken, I think, because the bill as I read it means one razor, one-twelfth of a dozen; but, even at that, 134 marks, at 3 marks to the cent, would be about 45 or 50 cents for this razor.

Mr. FRELINGHUYSEN. At the time of that invoice the mark was worth a little short of 1 cent, nine hundred and thirty-eight one-thousandths of a cent; and 400 marks at nine hundred and thirty-eight one-thousandths of a cent is $3.56, which was the price per dozen of this razor. That is the statement that is made.

Mr. JONES of New Mexico. Mr. President, the Senator is certainly mistaken as to the bill being for a dozen razors. It states on its face that it is for one-twelfth of a dozen, and there can be no other explanation for it, it seems to me. Of course, however, the price of the razor as measured in gold at that time was very low, and if the mark was worth 1 cent at that time it has been greatly reduced since; and if these prices in marks had decreased proportionately of course the landed cost of such razors would be comparatively nominal. The general trend of these goods, however, is upward, notwithstanding what may develop here regarding these prices; and I am advised that at the present time these goods are not billed out in marks at all, that they are billed out in dollars, and that the price of the article has been fixed at 25 per cent above the pre-war price.

Mr. McLEAN. Mr. President, where does the Senator get his information?

Mr. JONES of New Mexico. I got that from an affidavit which I put into the RECORD night before last.

Mr. McLEAN. I understand that they are still being billed in marks.

Mr. JONES of New Mexico. They are not being billed in marks now except on a few trades which were made prior to the 15th of May.

Mr. McLEAN. Does this information come from Boker?

Mr. JONES of New Mexico. It does. I put the affidavit in the RECORD the other day.

Mr. McLEAN. His last invoice was billed in marks.

Mr. JONES of New Mexico. That is true, doubtless, on arrangements made before this law went into effect, and the old contracts are to be carried out—the contracts which were made, as I understand, prior to the 15th of May. If those contracts were what are known as firm contracts—that is, fixed contracts, regardless of the variation in exchange or price—they can still be billed out at the price agreed upon in marks before that date; but since the 15th of May no new contracts are being made, as I am informed, for any of these goods to be priced or billed out in marks, and by the 1st of September, even though there may be old contracts, they must be billed out in dollars, and the price will be the pre-war price plus 25 per cent.

Of course, if Senators on the other side of the Chamber are preparing this bill with the view of meeting this *temporary* situation, and are aiming it solely at the prices which have been presented here, I think they should not only go as far as they have gone but, if they are acting upon that kind of a situation, they ought to go even farther. If they are going to deal with it through a tariff, if they want to meet that German situation, and if it is as Senators would have us believe, their rates are not high enough yet. They do not meet that condition; but here is what they are doing: They are putting an embargo upon anything from England or France and they are not meeting the German situation.

Mr. SIMMONS. Mr. President, I want to call the attention of the Senator from New Mexico to the testimony of Mr. H. L. Henry before the committee, combating Mr. Boker's contention in reference to razors. He gives a quotation as to the price in this country, as I understand, of razors comparable with this that Mr. Boker was speaking about, to whose testimony he was replying. I understood the Senator from New Jersey [Mr. FRELINGHUYSEN] to say a few moments ago that the American-made razor with which he was attempting to compare this cheap German razor sold at $17, or something like that, per

dozen. I was glancing over the testimony of Mr. Henry before the committee, and, as I understood Mr. Henry, he was confuting some statements made by Mr. Boker with reference to the prices of German and American made razors, and in the course of his testimony he had occasion to fortify his own testimony as to the price. In quoting the price of the American-made razor Mr. Boker, as I understand, in his testimony sought to compare the German razor. Mr. Henry saw fit to incorporate in the record testimony from the J. R. Torrey Razor Co. to support his contention as to the price of the American comparable razor. Mr. Torrey does not fix the price at $18 or $17 or $16, either, in his telegram. Here it is:

Wishing to check that statement—

That was the statement with reference to the comparison of a German razor that cost $1.17 a dozen in American currency with an American-made razor. Here is what he says:

Wishing to check that statement and testimony, I talked with Worcester, Mass., over the phone last night, and I have here a telegram signed by the J. R. Torrey Razor Co., and I will read it—

Here it is—

Last quotation to Kastor, April 14, 1920, $4.05 per dozen. Last order, August 12, 1918, $3.70. If more information is wanted, wire or phone.

J. R. TORREY RAZOR CO.

As I understand that—and Senators have the book that I am reading from, page 1946 of the hearings before the Finance Committee, Schedule 3—the comparable American-made razor does not sell in this market, according to Mr. Torrey, for $17, but sold for $3.70 in 1918, and $4.05 in 1920.

It is mighty well, in considering these things, to see that you are comparing the foreign article with some American article of something like the same quality, something like the same intrinsic value; and I am quite sure that the Senator from New Jersey, in quoting the comparable American razor at $17, had some razor that was of very far superior quality to the German razor with which he was comparing it.

Mr. JONES of New Mexico obtained the floor.

Mr. FRELINGHUYSEN. Mr. President, will the Senator yield?

Mr. JONES of New Mexico. I yield.

Mr. FRELINGHUYSEN. I stated that the price of the sample which I submitted to the Senate was 380 marks per dozen. This invoice is an invoice submitting two sample razors and quoting the prices—one No. 1041, oval imitation shell handle, 400 marks; another item, No. 5021, flat bone handle, 380 marks; total, 780 marks for a dozen of each of those two types. One-twelfth of 780 marks is 65 marks, or, for two, 130 marks. In other words, this is an invoice quotation price, an official record, showing that Friedrich Ern & Co. offered to deliver those razors in America for 380 marks per dozen in September of 1921—a dozen of them. Three hundred and eighty marks at that time was worth $3.56, according to the computation of the exchange and verification by the appraisers, so that razor was quoted at $3.56 per dozen.

I have in my hand an American razor, comparable in quality and style, handed me by the appraiser. The domestic selling price is $18.20 a dozen. So, in presenting that illustration to the Senate, I am backed up by the invoice selling price; and the sample handed me by the appraiser, the expert who passes on these customs duties, shows that the American manufacturer, at a domestic selling price of $18.20 a dozen, has to compete with a razor selling for $3.56 a dozen, which, with this ad valorem duty, will carry a price of $12.38. I do not believe the Senate wants any better evidence than that.

Mr. SIMMONS. I want to ask the Senator one question, if the Senator from New Mexico will permit me. The Senator has exhibited one invoice, and only one invoice. Has the Senator any more invoices?

Mr. FRELINGHUYSEN. Yes; I have some more. If the Senator will wait until they can be figured, I shall be very glad to present them.

Mr. SIMMONS. I have no objection to waiting.

Mr. JONES of New Mexico. Mr. President, I am glad these colloquies have taken place. If there could be a demonstration of anything, it seems to me it has been demonstrated that the Congress of the United States is following some will-o'-the-wisp. It is out upon an adventure which can not result in any permanent good to the country or to the industries of the country. It shows how futile it is to attempt to deal with this problem by a tariff. It should be dealt with in some other way. It shows also upon what flimsy testimony, upon what uncertain testimony, we are called upon to act.

I just wonder how an unbiased mind would be affected by what has occurred here this morning. Considering the testimony which I have presented, considering the evidence which I incorporated in the RECORD yesterday evening, as to the upward trend, not only the upward trend but the upward course, by leaps and bounds, of prices in Germany, measured in marks and in gold, and considering the statements which have been presented here this morning, I just wonder how an unprejudiced mind is going to view this situation. Can anyone be impressed that this is a solution of the difficulty? Can anyone feel that this is really a hopeful attempt to deal with the difficulty? I wish that all Senators could have heard the colloquies this morning, and then that they should exercise their honest judgment as to what should be done. I do not think the proposals of the committee meet this situation at all. If the evidence which I have produced means anything, it means that you are soon to have an embargo even upon the goods from Germany. Certainly you will have an embargo upon the goods which are usually imported from England and France.

If you accept the statements coming from the other side, and all that they have asked us to infer from them, the country is going to be swamped under this great importation of razors from Germany. They are going to drive out of business every razor-producing concern in this country, and that notwithstanding these greatly increased duties proposed here.

All I can say is that the evidence which we have before us does not warrant action on the subject at this time.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER (Mr. STERLING in the chair). Does the Senator from New Mexico yield to the Senator from North Carolina?

Mr. JONES of New Mexico. I yield to the Senator.

Mr. SIMMONS. Does the Senator understand that the prices given us as to these German razors relate to the finer qualities of razors, such as that exhibited a little while ago by the Senator from New Jersey? That looked like a pretty fine razor. I was engaged in other matters, but I thought I heard something coming from the other side of the Chamber, when we first began the debate this morning, about some of these German razors being so poor that they would not shave at all.

Mr. JONES of New Mexico. Yes; but I am advised that the razor which was being discussed by the Senator from New Jersey is a good razor.

Mr. SIMMONS. It is an American-made razor?

Mr. JONES of New Mexico. The one he produced was a German razor, comparable to a good American razor.

Mr. SIMMONS. It is a razor that will shave?

Mr. JONES of New Mexico. Yes; it will shave.

Mr. SIMMONS. It is a German razor worth, at the foreign price, over $1 a dozen?

Mr. JONES of New Mexico. Yes; the foreign price of that razor is considerably over $1 a dozen.

Mr. SIMMONS. I see in this information furnished by the Tariff Commission, that of razors valued at more than $1 a dozen, in 1918 very few came in, but after the war, in 1920, only $375,000 worth came in, and in nine months of 1921 only $345,000 worth. It does seem to me that if you could buy these German razors, worth over $1 a dozen, as cheaply as they say they could be purchased, as compared with the American price, the American market would probably have been flooded with them this past year—that every importer dealing in razors would have had a pretty good supply for the American market. But it appears that those low prices did not attract very much attention from the importers of razors, in view of the fact that they imported in nine months of last year only a little over a quarter of a million dollars' worth.

The outstanding facts of the situation do not seem to fortify or even to justify the contention made here. There is something wrong about this comparison. That is the trouble about the whole thing; there is something wrong about the comparison of the articles.

But I want to suggest to the Senator from New Mexico, if he has not any further presentation he wishes to make, that we take a vote on this.

Mr. JONES of New Mexico. I merely wish to make one suggestion further—that I do not believe the Senate has sufficient information on which to act at this time. I shall not propose any amendments to this paragraph but shall content myself with voting against the proposals of the committee.

Mr. McCUMBER. Mr. President, I want to put one little statement in the RECORD, as to importations, which, I think, will at least be of interest to those who wish to investigate the subject.

In the calendar year 1921 there were imported into the United States 46,657 dozen razors—not parts of razors, but razors. That, in round numbers, amounts to 659,884 razors of a variety worth less than $1 per dozen. The importing price of the entire amount of razors was 67 cents a dozen, or 5½ cents each.

In the same year there were imported, of razors worth $1 or more a dozen, 119,883 dozen, which amounts to 1,428,596 razors. Those came in at $3.52 a dozen on the average, which amounts to about 30 cents each.

The total amount imported during 1921 was 2,088,480 razors. I have an idea that those which came in at 5½ cents each should not have come in at all, because the razor that is made that cheaply any place upon the face of the earth can not be intended for shaving purposes, but is intended only to increase the amount of sales in a general store by enabling them to offer the inducement of coupons.

I want the Senator to refer to the first three months of 1922. In that period there were imported 91,722 dozen razors, or 1,100,664 razors. If the importations come in for the balance of the year at the same rate we will have imported razors during the year 1922 to the amount of 4,402,656, and if we continue that for a year or two longer every American citizen of the whisk-broom variety can be shaving with a foreign razor.

Mr. President, while I am on my feet, I ask unanimous consent that when the Senate closes its session for this calendar day it shall take a recess until Monday at 11 o'clock.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. SIMMONS. Mr. President, I simply want to observe that in the statistics the Senator has just furnished the Senate he grouped all kinds of razors and gave us the total number of razors imported, without reference to the value of the razors. I was not doing that. At the time I took the floor we were not discussing all kinds of razors. We were discussing importations of foreign razors worth over $1 a dozen, and I gave the Senate the information furnished by the Tariff Commission with reference to the importations of that particular razor, the one under discussion.

If the figures are erroneous, I am not responsible for the error. The book was furnished us by the Finance Committee for the purpose of informing us and giving us the facts, and I read it just as it was written. There are several tables, one of "all razors, finished and unfinished." I did not read that. Then there is a table of "razors, finished, valued at more than $1 per dozen." That is the kind of razors we were discussing. I read those figures. The statement is to the effect that in 1920 there were only 67,516 dozen—I presume it is dozen, though it does not state—valued at $375,675. I gave it in round numbers a little while ago. For the nine months of 1921 the figures are 87,687 dozen, valued at $345,108.

Mr. McCUMBER. I think that is right. We have continued it up to the end of the calendar year, and at the end of the calendar year those above $1 per dozen amounted to 119,183 dozen, which multiplied by 12 would give us 1,428,596 razors. Their value, without going into the whole sum, I gave as $3.62 a dozen, or 30 cents each.

Mr. SIMMONS. I do not think that changes my figures very much. I have the importations for 9 months, and the Senator gave them for 12 months of 1921. It appears that they amounted to $433,404 as to the kind of razor about which I have been talking. So the argument I made a little while ago so far as this particular razor is concerned holds good. I think we ought to have a vote on the subject.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment of the Committee on Finance was, in paragraph 358, on page 76, in line 9, after the word "maker," to insert the words "or purchaser," and in line 10 to strike out the word "die-sunk" and insert the words "die sunk," so as to make the proviso read:

Provided further, That all articles specified in this paragraph, when imported, shall have the name of the maker or purchaser and beneath the same the name of the country of origin die sunk conspicuously and indelibly on the blade or shank or tang of each and every blade and on safety razors and parts thereof.

The amendment was agreed to.

Mr. McCUMBER. I believe that finishes paragraph 358. I understand that all the amendments to it have been agreed to now.

The PRESIDING OFFICER. All the amendments in paragraph 358 have been agreed to.

Mr. McCUMBER. Then, I ask that we may recur to page 84, paragraph 374, aluminum, aluminum scrap, and alloys.

Mr. JONES of New Mexico. Mr. President, may we not deal with paragraphs 359 and 360 before taking up paragraph 374?

Mr. McCUMBER. I think the committee are desirous of giving those two paragraphs a little further consideration. We try to meet each morning and to cover the paragraphs as much as we can, but we are a little behind. I hope the Senator will let us carry those over.

Mr. JONES of New Mexico. Of course, I defer to the desire of the chairman of the committee.

Mr. McCUMBER. Then, I ask that we proceed with paragraph 374.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 84, in line 18, before the word "plates," insert the word "coils" and a comma, so as to make the paragraph read:

PAR. 374. Aluminum, aluminum scrap, and alloys of any kind in which aluminum is the component material of chief value, in crude form, 5 cents per pound; in coils, plates, sheets, bars, rods, circles, disks, blanks, strips, rectangles, and squares, 9 cents per pound.

Mr. SIMMONS. Mr. President, I am going to ask the Senator from North Dakota to let that item go over. I was under the impression that the Senator from Utah [Mr. KING] had been investigating the item and was ready to discuss it, but I find there was some misunderstanding and that he has not done so. So I will ask the Senator from North Dakota if he will not permit that paragraph to go over. As I said, I was relying upon the Senator from Utah. I thought he had investigated that item and would be prepared to discuss it.

Mr. McCUMBER. The Senator has reference to paragraph 374?

Mr. SIMMONS. Yes. I find there has been a misunderstanding. The Senator from Utah did not have any notice that he was expected to look into it.

Mr. McCUMBER. May I ask the Senator if there is any objection to agreeing to the amendment in that paragraph? The only amendment is to insert the word "coils."

Mr. SIMMONS. Oh, no; not at all. Let the amendment be agreed to.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. KING. Let it be understood, if the Senator from North Dakota will permit, that a motion shall be made when we return to this section, after all the committee amendments have been agreed to, to reduce the rate and that we may reconsider the action of the Senate in inserting the word "coils," and include that in the general amendment for a reduction.

Mr. McCUMBER. That may be understood. I ask now that we may proceed with paragraph 375—metallic magnesium and metallic magnesium scrap.

Mr. SIMMONS. That is the paragraph which the Senator from North Dakota yesterday agreed with me might go over until Tuesday. I presume he has forgotten it.

Mr. McCUMBER. I can not keep track of all the agreements of that character which I make on the floor. If the Senator reminds me that that was the agreement, I will, of course, pass it over.

Mr. SIMMONS. That was our agreement in private conversation and not upon the floor.

Mr. McCUMBER. Very well. Has the Senator from North Carolina any objection to concluding paragraph 376?

The PRESIDING OFFICER (Mr. ODDIE in the chair). The Chair is informed that all the amendments to paragraph 376 have been agreed to.

Mr. SIMMONS. May I ask when paragraph 376 was agreed to?

The PRESIDING OFFICER. On May 22.

Mr. SIMMONS. In other words, it was acted upon at that time?

The PRESIDING OFFICER. It was.

Mr. SIMMONS. Very well.

Mr. McCUMBER. Then let us proceed with the next one—paragraph 376a.

The PRESIDING OFFICER. The amendment will be stated.

The READING CLERK. On page 85, after line 5, the committee proposes to insert a new paragraph, as follows:

PAR. 376a. Bismuth, 7½ per cent ad valorem.

Mr. SIMMONS. With reference to this paragraph I desire to ask the Senator from North Dakota if he will not give the Senate some information. That is a new provision in the bill. There is nothing about it in the House bill. I find no information upon the subject in any of the books that have been available to me. I presume, however, the Senator from North Dakota will have no difficulty in giving the Senate the reasons for putting this article on the dutiable list and at a rate of 7½ per cent ad valorem.

Mr. McCUMBER. Mr. President, I have just sent for the Senator from Utah [Mr. SMOOT], who has this particular paragraph in charge, and I think he will be here in a moment. We can pass that over until he returns, and I will ask that we go on with the next paragraph, if that is satisfactory to the Senator.

Mr. SIMMONS. Perfectly so.

The PRESIDING OFFICER. The next amendment will be stated.

The READING CLERK. On page 85, after line 6, the committee proposes to insert a new paragraph:

PAR. 376b. Cadmium, 15 cents per pound.

Mr. SIMMONS. That is in the same category as 376a. Paragraph 376b is a new subject upon which there is no information so far as I have been able to find. I would like to have some information presented to the Senate before a vote is taken. It is in the same category as 376a. It is a new item, which the Senate committee has engrafted into the bill, and upon which I find no satisfactory information.

Mr. McCUMBER. I will give the Senator a little information. Whether it will be satisfactory, of course I can not say.

Mr. SIMMONS. I do not know that it will be, but I would like for the Senate to have what information the Senator has.

Mr. McCUMBER. I will give such information as I have.

Practically the entire world supply of cadmium comes from Germany and the United States. The production in this country expanded enormously during the war owing to the shortage of tin. Whereas the output in 1914 had increased to only 90,000 pounds annually, 207,000 pounds were recovered in 1917. Since then the production has declined until only about 65,000 pounds were recovered in 1921. This production in output is in part attributable to the increased output of cadmium sulphide, which can be alternatively produced from the same material as the metal. The main factors in the situation are the large stocks accumulated between 1916 and 1918, which have not yet been disbursed, although consumption in the last year or two has exceeded production. The cost of production of cadmium is impossible to ascertain, owing to the fact that each of the five producing companies employ different accounting methods.

Cadmium is a by-product, most of it being obtained in connection with the treatment of zinc ores. It is evident, however, that none of the companies are able to recover the metal at less than $1 per pound, and the American selling price is nominally between $1.10 and $1.25 per pound. Some producers figure their costs for 1921 as high as $1.69 per pound.

Domestic manufacturers have asked the committee for a duty of 25 cents per pound, or about 30 per cent on the American selling price. In their argument they urged that this would be necessary in order to protect the raw-material resources of this country. Large quantities of cadmium have been wasted. The Geological Survey estimates that fully 600 short tons of cadmium accumulates annually in the various plants of this country. Germany has again entered the market and was offering this metal at 75 cents per pound in the latter part of 1921.

While at least 35 cents will be required to balance the price in Germany and the United States, the committee felt that 15 cents per pound would serve to stabilize the American industry, and as soon as consumption becomes a little more normal yield some revenue to the Government. Just prior to the war the average imports of cadmium ranged from 3,000 pounds in 1910 to 6,396 pounds in 1912, falling off again, however, in 1913 and 1914 to less than 2,000 pounds annually.

This briefly prepared statement presents in a nutshell the situation in reference to this metal.

Mr. SIMMONS. Then I understand the Senator does not have the foreign selling price for 1920, 1921, or 1922?

Mr. KING. The Senator from North Dakota stated that there was some of this commodity recently imported at 70 cents, but he did not give the date.

Mr. SIMMONS. Can the Senator from North Dakota give us the date when the importation was made?

Mr. McCUMBER. I have not the date here, though I could probably get it. I said it is stated in this brief résumé that—

Germany has again entered the market, and was offering this metal at 75 cents per pound in the latter part of 1921.

I have not the exact date when that offer was made.

Mr. SIMMONS. But the Senator has no figures as to the amount of the importations?

Mr. McCUMBER. I have not the figures as to importations.

Mr. SIMMONS. Probably I misunderstood him, but I understood him to say that there was some trouble with reference to the exhaustion of the raw material out of which this metal is made.

Mr. McCUMBER. No; I have not said anything about the exhaustion of the raw material.

Mr. SIMMONS. Did not the Senator make a statement, then, with reference to the inadequacy of the supply of the raw material out of which this product is made?

Mr. McCUMBER. I said this:

The production in this country expanded enormously during the war owing to the shortage of tin. Whereas the output in the year 1914 had increased only 90,000 pounds annually, 207,000 were recovered in 1917. Since then the production has declined until only about 65,000 pounds were recovered in 1921.

Mr. SIMMONS. What is our domestic consumption? Has the Senator any information about that?

Mr. McCUMBER. We evidently consumed at that time 207,000 pounds; and the tariff survey shows that in 1920 we produced 129,283 pounds. That was considerably less than the production of 1917, when we produced 207,000 pounds.

Mr. SIMMONS. Was not the production about equal to the domestic demand?

Mr. McCUMBER. There was very little imported, I will say to the Senator; but there was a big demand in 1920 when everything in the line of manufactures was booming.

Mr. SIMMONS. Then, nothing in the present situation as it has so far developed would call for any higher protective duty, but the committee is proposing to put this duty on in anticipation of something that may happen in the future.

Mr. President, I do not want to take up time on this item. I think that is an extremely unwise and unsound basis of tariff imposition, but it runs through this entire bill, and we shall not, I am sure, get that very unscientific and very unsound principle out of the bill. I do not wish to consume time in the discussion of an item of such slight consequence, its total value being very small. While I think the rate is high and that it is unjust to require the American people to pay this additional tax, it will be very small, and I am ready for a vote.

Mr. KING. Mr. President, if the Senator will yield to me for just a moment, I desire to say that it is obvious from the information which has been imparted and from the general information which some may have that there is no occasion for any duty whatever upon this product. It is by-product of the plants that are engaged in the smelting of zinc and lead. We know that we produce in the United States very large quantities of zinc and of lead. There is no reason why our production of zinc ore should not increase and likewise our production of lead ore. As a matter of fact, many of our western mines are only waiting a demand for lead products and for a revival of business, when the lead industry will again, it is to be hoped, enter upon a period of very great activity.

As I have stated, cadmium is a by-product. Certainly when a commodity is a by-product, resulting from the processes incident to the production of some other commodity, it should not carry the same rate of duty that would be imposed if it were what might be denominated a primary or an independent product, one which was manufactured or fabricated or developed or mined because of its own intrinsic characteristics and the use to which it was intended to be put.

Mr. McCUMBER. I want to say to the Senator with reference to the duty that it amounts, according to present prices, to about 13 per cent ad valorem. So far as cadmium being a by-product is concerned, of course it is also a by-product in foreign countries.

Mr. KING. My understanding is that under the act of 1909, and also the act of 1913, cadmium was on the free list.

Mr. McCUMBER. Yes.

Mr. KING. Then, does the Senator now contend that it carries a duty?

Mr. McCUMBER. It is proposed that it shall carry a duty of 13 per cent ad valorem.

Mr. KING. In what act?

Mr. McCUMBER. Under the duty proposed in the pending bill.

Mr. KING. The rate would depend entirely upon the price, of course.

Mr. McCUMBER. I stated the ad valorem rate under the present price.

Mr. KING. It is obviously unfair to select present prices as the basis for the imposition of tariff rates——

Mr. SIMMONS. Present American prices.

Mr. KING. Yes, present American prices, because everybody believes, with the exception of some of the big manufacturers who think they run the country, that there will be a diminution of the wholesale prices of many American products.

I want now to call attention very briefly to some information which I desire to go into the RECORD in connection with the vote upon the pending amendment. This metal, as I have stated, is a by-product, and our zinc and lead deposits in the United States are almost limitless.

It is employed in dentistry, in glass coloring; * * * also as a solder, and to some extent as a substitute for tin.

Cadmium, a by-product of the zinc-smelting industry, is recovered largely from the treatment of various residues and fine dust at zinc and lead smelters.

The fine dust is collected and is utilized in the production of this by-product.

Prior to 1907 Germany was the sole producer, the output in 1913 being 81,993 pounds of metallic cadmium.

But the situation has developed with respect to the production of this commodity much the same as the situation has developed with respect to the production of arsenic. Arsenic was, and is now, a by-product from the smelting of sulphide ores. Prior to certain injunction proceedings in the courts the arsenic was cast into the atmosphere, carried by the winds, deposited upon vegetation, and constituted a menace to the lives of the people; but through the improved methods introduced in many of our smelters it has been arrested, at least in part, and is now a product of the smelting process.

It is the same with cadmium. It also is a by-product of the reduction of lead and zinc ores. It belongs to the residium of the processes employed in the smelting operations of those two metals, and was at one time a waste material, but now, because of its value and the improved metallurgical processes employed in our smelting operations, it is being obtained, and of course there is a market for it. In 1918 six plants were engaged in the saving of this product.

Mr. McCUMBER. Mr. President, will the Senator yield to me, for I have to leave the Chamber in a moment, and I wish to answer one statement which he made a short time ago. I said that under present prices the ad valorem equivalent rate would be 13 per cent. The Senator replied that we could not expect present prices to continue. I find that the last price——

Mr. KING. Mr. President, if the Senator will permit me to correct him, the statement which I made was general. I said that no one, so far as I know, except some of the manufacturers who thought they had the country by the throat, expected that present high prices would be maintained. They, of course, wanted to maintain high prices, but I believed there would be a material reduction in the price of many of the commodities in use now in the United States.

Mr. McCUMBER. I was about to make a statement on the assumption which the Senator himself has made. I agree with him about that, and I stated, I think just a moment before the Senator came in, that cadmium was now being offered at 75 cents. In 1913, just prior to the war, it was coming in at 78 cents. Therefore, 15 cents per pound duty on the price of 75 cents would be equivalent to 20 per cent, and if the price of 78 cents which was in effect just before the war should be restored the ad valorem duty would be about 19 per cent.

Mr. KING. Mr. President, I do not know just what pertinency the observations of my learned friend has to the issue involved.

Mr. McCUMBER. My statement merely had reference to the probability of the product coming in at about what it was prior to the war, and was designed to bring to the attention of the Senator that it is now coming in at a rate a little less than it was in 1913 and to substantiate my statement as to what the equivalent ad valorem duty would be. In any other respect, of course, my observation is not pertinent.

Mr. KING. The point I was about to make was that as science develops, as improvements are introduced into our smelting operations and into the general business activities of the country—and we are not standing still; there is progress in all of our manufacturing development—prices in the very nature of things ought to fall. Only a few years ago it would require in certain lines of industry 200 men to do what one man with improved machinery may now do.

Take it in the cotton mills of Great Britain as an illustration. We have in many of the mills of the United States the finest, most improved machinery in the world, and in some of the mills one man will do very much more work than a larger number of employees in the British mills. So we have developed the cadmium industry in the United States as a by-product, and as our mechanical appliances and our smelting machinery and our metallurgical processes have improved we have gathered up what was formerly a waste product, and are utilizing it now to advantage, just the same as in the case of the by-products of our coke ovens. A few years ago we allowed perhaps the most valuable part of the coal in our coking operations to pass off into the atmosphere, and to-day we are wasting millions and millions of dollars annually in our reduction of bituminous coal to coke. That, I may add, by way of parentheses, is one of the sins of the American people—the sin of waste. We are wasting hundreds of millions annually in the various business enterprises and activities of the United States.

Mr. President, an educational campaign should be carried on against the profligate waste of the American people in their enormous development and progress and growth. We proceed upon the theory that nature is generous and bountiful, and that we may be profligate and wasteful and never be called to account. So here, in the case of this zinc-smelting industry, we have now a by-product; and there is no reason why cadmium produced in the manner I have indicated ought not to be sold at increasingly lower levels, and the rate at which it was sold before the war ought not to be the basis of our calculations in the future.

Let me just complete a little of this statement.

In 1920 the output in the United States was 129,283 pounds, valued at $151,261. Germany and the United States, with England a small contributor, practically supply the world's cadmium output. It is imported as metallic stick and as the pigment cadmium yellow. There were no imports in 1918, 1919, and 1920. During the first nine months of 1921 the imports amounted to but 101 pounds, valued at $216. That is more than $2 a pound, instead of 75 cents a pound, as was stated by the Senator from North Dakota. So, Mr. President, if the value before the war was 78 cents a pound, it is now, it appears here, more than $2 a pound.

Mr. President, this paragraph of course is a new one, introduced by the Senate committee, as I understand. It illustrates that somebody is always on guard here to protect all classes of industries and to insert somewhere in this bill a tariff. As stated in 1909, under the Payne-Aldrich bill, cadmium was free; in 1913 it was free; but we propose now to impose a tariff, the ad valorem equivalent of which no one can tell until we can decide just what the price of the product will be.

Mr. JONES of New Mexico. Mr. President, the Senator has been calling attention to one little item, and it seems clear that there is no information before the Senate regarding that item on which a duty may be based according to any theory of a tariff bill ever advanced by a political party or by Congress.

Mr. KING. I agree with the Senator.

Mr. JONES of New Mexico. Mr. President, since the discussions on this bill began we have endeavored in every conceivable way to find some basic principle for this legislation. We have utterly failed. We have, however, established a situation which shows that there is no uniform basis for this bill.

In the first speech which was made here by the distinguished Senator from North Dakota [Mr. McCUMBER] the statement was made that the majority of the committee had attempted to fix these rates for the purpose of equalizing the difference between the cost of production in the United States and abroad. The discussions had not proceeded far before it became clear to everyone that no such principle had been applied. At certain times, and in connection with certain paragraphs, the statement would be made that the rates did equalize this difference, but the facts which were shown made it clear that they had never attempted to ascertain what the difference in the actual cost of production was.

Then they came to the question of prices, using that as evidence of the difference in cost of production. They have been from time to time driven from that proposition, and we have found in many of these paragraphs, bearing the same rates of duty, brought together in a jumbled mass, a vast number of articles where the production costs vary, but a uniform rate of duty is fixed. It seems to me clear, if anything is clear, that this bill is a jumble of inconsistencies and that it is made up in the main in pursuance of the request of some interested party.

The discussion this morning in regard to cutlery, it seems to me, demonstrated that this situation could not be dealt with equitably at this time regarding the great mass of articles covered by this bill, and so I expressed my approval of a statement made in the leading editorial of the Journal of Commerce and Commercial Bulletin of New York, in which I find this statement:

"This bill ought to be sent back to the Finance Committee with orders to reconstruct it. Study of its terms has shown its dangers. It has also shown the difficulty of revision on the floor. The inefficient patchwork of the Finance Committee is a tribute to cowardice and opportunism, not an evidence of change of heart. Only by general revision from the bottom up will any tolerable or workable measure be obtained."

Mr. President, if no other thing has been accomplished by the discussions upon this bill, that at least has been developed through these discussions and the consideration of this bill; and so I say I agree that that is what should be done. This bill should be sent back to the committee, and kept in the committee until it gets information on which to frame some sort of a scientific bill.

Mr. President, without reading I ask that the editorial from which I have made a short quotation be inserted in full in the RECORD in 8-point type.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

[Editorial from the New York Journal of Commerce and Commercial Bulletin of Saturday, June 10, 1922.]

A TURNING POINT IN THE TARIFF.

"Not even the most casual reader of the doings of the Senate with respect to the tariff can question that the administration measure is at the cross-roads of its progress. It can not continue its purposeless and devious travels through legislative byways, but must decide between a turning that will take it more rapidly toward the statute book and a lengthy detour that now seems likely to overwhelm it in a morass of discredit. Advocates of the measure have pointed out that at the present rate the measure can not be adopted during the coming summer or autumn, and the traditional methods of 'speeding up' have largely failed.

"The only thing which has been believed likely to permit such an increase in rate of movement and allow the bill to score some real advance is reform of the schedules. That is now conceded, and hence the announcement made by the Associated Press that the Finance Committee is really rewriting the measure. Even the most besotted Members of the old régime in the Senate see that they can not 'put over' the outrage they had planned. Unquestionably the Finance Committee is making extensive changes from day to day, and it is perforce accepting more of them from other Members who can not face their constituents if they vote for the duties that had been proposed. It is true that some of the most glaring faults of the bill are being corrected here and there. The changes made within the past day or two in rates on some types of machinery afford an example of such modification.

"But can such changes on the floor really repair the defects of this dangerous and disastrous bill? Certainly not. Its fundamental faults do not lie so much in the impossible duties it imposes here and there as they do in the whole substructure of the tariff plan it puts forward. The cunningly concealed methods whereby American valuation will be introduced in a large range of cases, the extraordinary powers granted to the President, who is thus enabled at will to put rates up 50 per cent if he chooses, the scheme of retaliation against foreign countries, constitute a foundation of danger which can not be removed piecemeal. Extensive changes in administrative law and methods like those which have been provided under the guidance of the former lobbyists now members of the Tariff Commission, and by the commission of 'experts' which the Finance Committee employed, can not well be changed on the floor. Mere amendment here and there is not likely to alter their character, but will simply leave them incomplete—perhaps as harmful as ever.

"So, too, of the sporadic changes in rates at various points. A change in duties on machinery does not help much, unless the rates on other commodities, on raw materials used by machinery makers and the like, are also changed. Past experience shows that defacing a tariff bill throws it out of gear, hurts its operation, and only in isolated cases results in really repairing its essential defects. It is a whole, and the various parts of it fit more or less closely into one another. Particularly is this the case where, as in the present bill, there is a large range of rates which affect basic materials of manufacture. The cut in excessive rates on highly finished goods then leaves the producers in the position of having to bear excessive costs of production. And these basic rates have thus far tended to grow worse rather than better in the course of the Senate debate, due to the solidarity of the agricultural bloc.

"What this tariff bill needs is complete reconstruction. Public opinion since the bill first made its appearance has shown that the Nation will not endure it. Mere compromise makes things worse rather than better, and while waiting for the end of the long, dragging debate on the bill, business in a considerable number of fields is suffering. It is losing ground because of uncertainty. There has been little or none of the 'flood of imports' constantly referred to in Senate debates, but such increases as have occurred in a few minor lines, such as cutlery, cheap jewelry, and the like, are due to fears of extreme tariff protection and hasty importations to anticipate it. The tariff debate is bad for business, bad for national finance, and disastrous to the undertaking of new enterprises.

"This bill ought to be sent back to the Finance Committee with orders to reconstruct it. Study of its terms has shown its dangers. It has also shown the difficulty of revision on the floor. The inefficient patchwork of the Finance Committee is a tribute to cowardice and opportunism, not an evidence of change of heart. Only by general revision from the bottom up will any tolerable or workable measure be obtained. It would be far better to do what President Harding was asked to favor—repass the Payne-Aldrich bill—than to go on with the measure which has resulted from the blundering and the political bargaining of the dwarfish epigoni who have found the shoes of the old Senate oligarchy too large for them."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by Mr. Overhue, its enrolling clerk, announced that the House had passed the joint resolution (S. J. Res. 204) to authorize the loan by the Secretary of War to the commander in chief of the United Confederate Veterans of cots for the use of the members of the United Confederate Veterans during the sessions of the national encampment of the United Confederate Veterans at Richmond, Va., from June 19 to 22, 1922.

The message also announced that the House had passed the following bills, each with an amendment, in which it requested the concurrence of the Senate:

S. 2664. An act for the relief of Jesse Goodin; and

S. 2666. An act for the relief of Ed Thomas and Pauline Thomas.

The message further announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 211. An act to extend the provisions of the pension act of May 11, 1912, and May 1, 1920, to the officers and enlisted men of all State militia and other State organizations that rendered service to the Union cause during the Civil War for a period of 90 days or more, and providing pensions for their widows, minor children, and dependent parents, and for other purposes;

H. R. 3836. An act for the relief of Nolan P. Benner;

H. R. 6926. An act for the relief of Abraham Leibovitz;

H. R. 8214. An act to compensate the owners of the American steamship *Vindal* for damages and expenses in repairing the said steamship, and to make an appropriation therefor;

H. R. 8264. An act for the relief of Thomas B. Smith;

H. R. 8448. An act for the relief of Joseph Zitek;

H. R. 9626. An act granting a deed of quitclaim and release to the Traders' Brokerage Co., a corporation, of certain land in the city of Pensacola, Fla.;

H. R. 9746. An act for the relief of Emmett Otto Cooney;

H. R. 10234. An act for the relief of Edward A. Purdy;

H. R. 10419. An act validating certain applications for and entries of public lands;

H. R. 10675. An act for the relief of Henry McGuire; and

H. R. 10677. An act for the relief of Quincy R. Craft.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED.

The message also announced that the Speaker of the House had signed the following enrolled bills and joint resolution, and they were thereupon signed by the Vice President:

S. 1911. An act to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916;

S. 2014. An act to provide for the settlement of small holding claims on unsurveyed land in the State of New Mexico;

H. R. 9981. An act making appropriations for the Executive and for sundry independent executive bureaus, boards, commissions, and offices, for the fiscal year ending June 30, 1923, and for other purposes; and

S. J. Res. 173. Joint resolution authorizing the President to appoint a special mission of friendship, good will, and congratulation to represent the Government and people of the United States at the centennial celebration of the independence of Brazil.

PETITIONS AND MEMORIALS.

The VICE PRESIDENT laid before the Senate resolutions adopted by the Maui Chamber of Commerce, of Wailuku, County of Maui, Hawaiian Territory, protesting against the enactment of legislation to transfer jurisdiction over railroad, telegraph, and telephone companies in the Territory of Hawaii from the Interstate Commerce Commission to the Territorial Public Utilities Commission, which was referred to the Committee on Territories and Insular Possessions.

Mr. KEYES presented a resolution of the board of directors of the Portsmouth (N. H.) Chamber of Commerce, protesting against the adoption of the so-called St. Lawrence power and canal project until all available information determining its relative national and local value has been secured, which was referred to the Committee on Commerce.

Mr. WILLIS presented petitions of sundry citizens of Holgate, Napoleon, New Bavaria, Defiance, and Hamler, all in the State of Ohio, praying for the imposition in the pending tariff bill of a duty of $2 per 100 pounds on Cuban sugar, which were referred to the Committee on Finance.

He also presented a petition of sundry citizens of Lebanon, Ohio, praying for the imposition in the pending tariff bill of only a moderate duty on cotton gloves, which was referred to the Committee on Finance.

NAVAL APPROPRIATIONS.

Mr. POINDEXTER. I ask unanimous consent out of order to report with amendments from the Committee on Appropriations the bill (H. R. 11228) making appropriations for the Navy Department and the naval service for the fiscal year ending June 30, 1923, and for other purposes, and I submit a report (No. 762) thereon.

Mr. UNDERWOOD. Will the Senator from Washington state when he intends to ask the Senate to consider the bill?

Mr. POINDEXTER. I expect to ask to have the bill taken up on Monday next.

Mr. UNDERWOOD. The Senator will ask that the bill may be taken up in the morning hour?

Mr. POINDEXTER. Yes; if it is agreeable, as I understand it is, to the chairman of the Committee on Finance, and if it is agreeable to the Senate, I shall ask to have it taken up then.

Mr. KING. I should like to say to the Senator from Washington that some of us who are on the Committee on Naval Affairs in name know nothing of this bill. We have not had an opportunity, of course, under the new rule to learn what has been going on or to help frame the bill. We have had no voice in its formulation. Obviously there must have been some testimony taken by the subcommittee which framed the bill, in addition to the testimony which was taken in the House of Representatives. I ask the Senator not to press the consideration of the bill on Monday. I suggest that he wait until Wednesday before calling up the bill, in order to give us a chance to procure the testimony and familiarize ourselves with the record. I wish to say to the Senator that if the bill contains some features which I think it does, there will be some opposition to it.

Mr. POINDEXTER. Mr. President, I myself regret that the Naval Affairs Committee did not have jurisdiction to act upon this bill, but I am not responsible for that.

Mr. KING. The Senator from Utah acquits the Senator from Washington, of course, of any responsibility.

Mr. POINDEXTER. That was due to a rule adopted by the Senate, and, of course, we have to comply with that rule. I would have been very glad if the Senator from Utah had been a member of the Appropriations Committee to which the bill was referred. I will say to the Senator that the report which I am presenting now is, with very few minor exceptions, the same as the report of the subcommittee, a printed copy of which I handed to the Senator several days ago.

Mr. KING. The Senator did me the kindness and courtesy day before yesterday to hand me a confidential report, which I am free to say, with the press of business here, I have had no opportunity to examine as yet. Of course, I can infract the Sabbath to-morrow and go through it, as I shall; but I think it would be better if the Senator would give us a little time.

Mr. POINDEXTER. Of course, the Senator realizes the limited time between now and the beginning of the next fiscal year, and also the fact that the bill will have to go to conference after it shall have passed the Senate. I trust the Senator will allow us to take it up, with the understanding that, if there are special matters as to which the Senator desires further information as we proceed with the bill, I shall be very glad to pass them over so as to give the Senator from Utah an opportunity further to examine them.

Mr. KING. Of course, I have no right, probably, to interpose my views in opposition to the views of the committee which have reported the bill; but I suggest to the Senator that it is a bill of considerable importance, involving hundreds of millions of dollars, that there are a number of items in the bill of much importance, according to my view, and it would be better if we should not undertake the consideration of the bill until we are ready. Speaking for myself, I shall be ready on Wednesday to go on with the bill.

The VICE PRESIDENT. The bill will be placed on the calendar.

BILL INTRODUCED.

Mr. SPENCER introduced a bill (S. 3700) to establish a bureau for the study of criminal, pauper, and defective classes, which was read twice by its title and referred to the Committee on Education and Labor.

TARIFF BILL AMENDMENTS.

Mr. GOODING (for Mr. HARRELD) submitted two amendments intended to be proposed by Mr. HARRELD to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

AMENDMENT TO HOUSE RIVER AND HARBOR BILL.

Mr. STERLING submitted an amendment intended to be proposed by him to the bill (H. R. 10766) authorizing the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes, which was referred to the Committee on Commerce and ordered to be printed, as follows:

On page 17, line 14, strike out the words "Sioux City, Iowa," and insert the words "Chamberlain, S. Dak."

AMENDMENT TO NAVAL APPROPRIATION BILL.

Mr. STERLING submitted an amendment providing that the naval appropriation act approved June 4, 1920, be amended so that any chaplain in the Naval Reserve Force who was more than 50 years of age on the date of said act and who now holds the confirmed rank of commander may be transferred to and appointed in the same permanent grade and rank in the regular Navy not in the line of promotion and not eligible for retirement, etc., intended to be proposed by him to House bill 11228, the Navy Department appropriation bill, which was referred to the Committee on Appropriations and ordered to be printed.

PRESIDENTIAL APPROVALS.

A message from the President of the United States, by Mr. Latta, one of his secretaries, announced that on June 10, 1922, the President approved and signed the following acts:

S. 745. An act to amend section 24 and section 256 of the Judicial Code; and

S. 2775. An act to extend for one year the powers of the War Finance Corporation to make advances under the provisions of the act entitled "An act to amend the War Finance Corporation act, approved April 5, 1918, as amended, to provide relief for producers of and dealers in agricultural products, and for other purposes," approved August 24, 1921.

FOREIGN DEPOSITARIES OF PUBLIC MONEYS.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the joint resolution (S. J. Res. 7) authorizing the Secretary of the Treasury to designate depositaries of public moneys in foreign countries and in the Territories and insular possessions of the United States, which was, on page 1, line 8, after "prescribe," to insert:

Provided, That in designating such depositaries American financial institutions shall be given preference wherever, in the judgment of the Secretary of the Treasury, such institution is safe and able to render the service required.

Mr. McLEAN. I move that the Senate concur in the House amendment.

The motion was agreed to.

ED THOMAS AND PAULINE THOMAS.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 2666) for the relief of Ed Thomas and Pauline Thomas, which was, on page 1, line 4, to strike out "pay" and insert "pay, out of any money in the Treasury not otherwise appropriated."

Mr. BROUSSARD. I move that the Senate concur in the amendment of the House of Representatives.

The motion was agreed to.

JESSE GOODIN.

The VICE PRESIDENT laid before the Senate the amendment of the House of Representatives to the bill (S. 2664) for the relief of Jesse Goodin, which was, on page 1, line 4, to strike out "pay" and insert "pay, out of any money in the Treasury not otherwise appropriated."

Mr. BROUSSARD. I move that the Senate concur in the amendment of the House of Representatives.

The motion was agreed to.

HOUSE BILLS REFERRED.

The following bills were severally read twice by title and referred as indicated below:

H. R. 211. An act to extend the provisions of the pension act of May 11, 1912, and May 1, 1920, to the officers and enlisted men of all State militia and other State organizations that rendered service to the Union cause during the Civil War for a period of 90 days or more, and providing pensions for their widows, minor children, and dependent parents, and for other purposes; to the Committee on Pensions.

H. R. 10675. An act for the relief of Henry McGuire; and

H. R. 10677. An act for the relief of Quincy R. Craft; to the Committee on Agriculture and Forestry.

H. R. 9626. An act granting a deed of quitclaim and release to the Traders' Brokerage Co., a corporation, of certain lands in the city of Pensacola, Fla.;

H. R. 9746. An act for the relief of Emmett Otto Cooney; and

H. R. 10419. An act validating certain applications for and entries of public lands; to the Committee on Public Lands and Surveys.

H. R. 3836. An act for the relief of Nolan P. Benner;

H. R. 6926. An act for the relief of Abraham Leibovitz;

H. R. 8214. An act to compensate the owners of the American steamship *Vindal* for damages and expenses in repairing the said steamship, and to make an appropriation therefor;

H. R. 8264. An act for the relief of Thomas B. Smith;

H. R. 8448. An act for the relief of Joseph Zitek; and

H. R. 10234. An act for the relief of Edward A. Purdy; to the Committee on Claims.

PRICES OF COAL.

Mr. SUTHERLAND. Mr. President, I ask unanimous consent to have printed in the RECORD, in the regular RECORD type, Secretary Hoover's remarks before the coal operators on Wednesday, May 31, 1922, together with certain statements and tables in reference to the coal situation.

There being no objection, the matter referred to was ordered to be printed in the RECORD in 8-point type, as follows:

SECRETARY HOOVER'S REMARKS BEFORE COAL OPERATORS, WEDNESDAY, MAY 31, 1922, IN THE AUDITORIUM, INTERIOR DEPARTMENT, WASHINGTON, D. C.

A conference of coal producers convened at 10 o'clock a. m., pursuant to call issued by the Secretary of Commerce.

The SECRETARY OF COMMERCE (Mr. Hoover). Gentlemen, I have been asked by the President to call this conference for the purpose of consultation with you as to what measures we can properly take to restrain runaway prices, profiteering, and speculation in coal during the present coal strike.

This is not to be a discussion of the strike nor of wage questions, but purely a discussion between the Secretary of Commerce and the producing operators upon the sole question of price and distribution of coal.

You are aware of the facts in the present situation as well as I. At the present moment bituminous coal is being produced at the rate, approximately, of 5,000,000 tons a week. Consumption is somewhere from eight million to eight and one-half million tons a week. We are drawing upon stocks at the rate of three million to three and a half million tons a week. Production will probably increase slightly as time goes on.

But the time has arrived when those unwise virgins who did not accept the recommendations I repeatedly made as to stocking themselves with coal find themselves compelled to go into the market. Distribution is greatly disturbed from its normal channels. There is a tendency to multiply bidding from the public and thus to force up the price of coal against itself.

On the last occasion when there was disturbance in the coal production prices rose at some mines from a range from $6 to as high as $10 and $12 and even $15 a ton for spot coal at the mine, and all holders of coal raised their prices accordingly. Such a condition represents a loss on spot coal to the public running into the millions of dollars a week. It gives to the industry a color of profiteering; and it is my distinct recollection of that period that the charge given the operator was not only laid against many unjustly but that the vast majority of operators considered that in its reactions it was the most disastrous of the things that had happened to him. [Applause.]

It is utterly impossible for each operator to act alone. Many hundreds of operators during that occasion held to their price list, despite the offers that were made to them and despite the fact that coal which they placed on board cars at a comparatively low price was sold under their eyes at double and treble the price at which they had turned it out. I had felt that before such an occasion arises again it was desirable that we take such steps as we can take to prevent its recurrence.

A week ago I called a preliminary conference of some 30 or 40 coal operators to determine what steps might be taken, in their view, and to test out the disposition of producing operators in this matter. Those gentlemen were unanimous and emphatic in an expression of the necessity that restraint of some kind should be placed upon the existing situation, not only in the interest of the public but in the interest of the operators, and the fundamental interest of the whole industry. Upon their suggestion the President directed me to call this larger conference.

The result of the last conference a week ago has been to put a check on the daily rise in price that was in process, and prices have receded from 50 cents to a dollar a ton nearly throughout the country. Prices to-day vary somewhere from $2.50 to $3.50 a ton at the mines in most districts, although there are one or two districts that are still over the $4 level.

What we are interested in, what the public is interested in, is not the question of cents, it is the question of dollars. With the unrestrained operation of the law of supply and demand in a situation of this kind the price of spot coal might easily be carried to $12 or $15 a ton at the mine; and any such situation as that, I believe you will agree with me, must be prevented if we can. [Applause.]

I have some little knowledge, perhaps, of the situation in the coal industry as it has existed during the past 12 months. I am fully aware that the industry as a whole has operated without profit, and perhaps even at a loss; that prices to the public have been unduly low so far as the mine operator is concerned; that differences in price of 10 cents or 15 cents or 20 cents a ton make the difference between profit and loss in coal production. The public does not realize, I believe, that these are the margins for which the operator must contend. [Applause.]

With high freight rates, with high cost of retail distribution, the public has little appreciation of the secondary part that prices at the mines play in the ultimate cost to the individual of coal put in his cellar. Nevertheless, the operator has, in the public mind, the primary responsibility for the price of coal, and it is with a view to summoning that responsibility, in the public interest and in the interest of the industry, that we are meeting here at this moment.

There are some things that the public should understand in respect of this problem:

(1) That it is a problem of the most stupendous difficulty; that it is easy to denounce profiteering; in fact, it is the favorite sport. [Laughter and applause.]

(2) That the vast majority of the coal operators, out of their own interest and out of their sense of public interest, do not wish profiteering in coal. [Applause.]

(3) That where profiteering begins and ends is not a question of demagogic statement; it is a question as to a definite fair price. There is no use of arguing theories when it comes to determine what must be done in a practical world, but it becomes a problem of determining the actual basis upon which fair transactions should take place if actual constructive work is to be done in the situation.

(4) What a fair price may be depends upon conditions in each district and varies not only with each district but with different mines in each district.

(5) That the majority of the coal is sold on contracts established before the strike and that price fluctuation refers only to spot or free coal.

(6) The public should understand that there is not a shred of law or authority to either determine or enforce a fair price; that there is not a single shred of law on the statute books of the United States Government in prevention of profiteering or anything of that character.

(7) That the law itself prohibits coal operators agreeing among themselves as to what a fair price would be, even if the operators should place that fair price below cost of production. We may as well face the fact that a combination in the public interest is just as illegal as one against the public interest. Without entering into the merits or demerits of the local situation that is the actual case.

In times like these, in emergencies of this character, some one has got to take the responsibility, some one must take the leadership and say what is fair. I do not believe that men deserve to hold public office unless they are prepared to accept the responsibilities that arise in emergencies. [Applause, loud and prolonged.]

I therefore am not going to shirk this responsibility by asking you to enter into any agreement or combination amongst yourselves to restrain trade or prices or to do anything else that is wrong in law, whether it is in the public benefit or not. I propose to inquire, with your cooperation, as to the situation in the various districts; I propose to consult with you and to cooperate with you; I am going to take the responsibility upon my own back of saying what is fair, and I am going to ask every individual operator as a public service to adhere to such basis in his district, and that is to be a moral agreement between him and me. [Applause.]

If he should fail to keep that agreement it will be between himself and his conscience. I may have remarks to make about it, but I have no power to enforce it.

I have no desire to assume unnecessary responsibilities, responsibilities that are bound to carry unusual loads of criticism; but there is a question here of protecting the public from losses that might aggregate $15,000,000 or $25,000,000,000 a week; aye,

there is even a greater responsibility than that, and that is to save the business men of the United States from undeserved criticism by reason of being thrust in a position that they can not themselves alone prevent. [Applause.]

There is no question in mind as to the high sense of public service among the business men of the United States; that they want above all things not only to maintain but to demonstrate their right to esteem in the community, and I would be a failure as Secretary of Commerce if in representing these men I did not give opportunity to make such demonstration and to offer such public service. I am, therefore, suggesting to you a cooperation between each of you individually and the Secretary of Commerce. [Applause.]

Last week we prepared, after considerable discussion, a preliminary plan, a plan that I have no doubt would have been effective. That plan, however, has been criticized in that it might contain elements of restraint of trade by coordinate action between ourselves. I will not ask you to enter into any plan that might be subject to that suspicion, even though it be in public interest. The plan proposed then would be more effective than that which I now have to propose. The plan I propose here depends solely upon moral forces and good will.

It becomes necessary, then, that I should propose to you for discussion some alternative to that plan that will free it absolutely from any taint of suspicion or criticism as a conspiracy in law to restrain trade. In doing so I would like to make the emphatic statement to the public that the administration is here seeking cooperation of each individual coal operator in the public interest; that if such cooperation fails it will not be a failure of the administrative officials. I am confident that the vast majority will adhere to the plan proposed. If it will not work in a minority, it will be a failure in authority of administrative officials.

But I do not believe we will fail; in fact, I believe that here will be offered an opportunity to the business men to demonstrate that moral forces can be established that will prove that the arm of the law is unnecessary in the matter of protection of the public interest. [Applause.]

Now, gentlemen, we are all busy people, and I would like to make one or two propositions to you for your views.

(1) That the Garfield prices for run-of-mine coal should be the basis for computing sales prices, with such adjustments as are necessary to include the wholesale selling costs, changed conditions at the mines, and other factors that will be fair to the public and to the operators and will maintain production of coal. Any agreement to adhere to this is a moral agreement between each individual operator and myself.

I know that there is some objection, and some rightful objection, to using the Garfield prices as a base. On the other hand, we have no time, we have no machinery, for determining what is detailed right or wrong in the matter of price. The Garfield prices were the result of experience extending over a considerable period of time and an elaborate series of investigation, and it is much more easy; it is much more facile and much more practical to say broadly what are the necessary changes to be made in such basis than to go out and endeavor to establish a new base at this moment.

We know, approximately at least, the changes in wage levels. We know, approximately, those districts where the Garfield prices proved to be unfair. We know the changes that were proposed by the old Fuel Administration in those prices had that work continued. We know that a large proportion of the coal is sold on contract at prices below the Garfield levels. We know that this problem is a problem of spot coal alone. We know many of the factors that have entered into the question. The public is not interested in the question of cents, the public is interested in the question of dollars. Therefore, my feeling is that we can arrive quickly at some notion of a fair price which I can state after discussion with you as to these changed conditions, whereas otherwise we would be at sea for weeks.

(2) My suggestion is that each district should to-day nominate to the Secretary of Commerce a committee of the district to advise with him as to the conditions that bear upon the Garfield level and upon which I may form some judgment as to a fair price for the district.

(3) After we have made this primary determination these committees should continue and should report to me any unfair prices in their respective districts, and should act on my behalf and as I may direct them to do in individual cases that may arise in their respective districts.

In other words, the latter part of the machinery is altered to the extent that I wish to appoint a committee in each district to represent me purely in the capacity of a moral force in securing a fair price that I must take the responsibility of stating after I shall have learned as well as I can the conditions in each district.

The whole of this is purely a temporary expedient during this strike. I do not know how long the situation will last; it may be months, for all that I know.

I should have been glad to have proposed to you machinery that would have relieved me of this major responsibility, of machinery that would be absolute; but I can not do so without imposing upon you certain responsibilities and risks that I have no right to ask you to take.

I do not ask you to vote or take any collective responsibility on this proposition. I wish your individual views. This is a transaction between me and each individual operator. If anybody is to be called into question for this agreement, it is I alone, and I will stand it.

I shall be better able to judge the situation when I have had your views.

I will now call on some of those present for discussion. I would like to call upon all of you, but it happens I do not enjoy your personal acquaintance and therefore I may not call upon some who will be able to give us valuable suggestions. I first call upon Mr. Ogle, the president of the National Coal Association. [Applause.]

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, June 8, 1922.

HOMER D. JONES,
President National Retail Merchants' Association,
2623 West Adams Street, Chicago, Ill.

DEAR SIR: I am in receipt of your letter of June 6, which shows a good deal of misunderstanding of the situation.

Your letter gives the impression that the householder should be informed by me that retailers are warranted in advancing the price of coal by $1.75 per ton as the result of negotiations by the administration with the operators, and in support of this you make certain statements to which I can not agree.

First. You give the impression that spot smokeless coal for household purposes was selling at $1.75 prior to the strike, and that at $3.50 maximum for run of mine he is burdened with an advance of $1.75.

From the quotations you append to your letter the price of "run of mine" and slack (steam coals) prior to the strike was $1.75 to $2, but from the very quotations you give me it is evident that lump (which is the householders' main interest) the prices prior to the strike were $3 to $3.25, and not $1.75 as might be inferred.

Under the request I have made to the operators that they should adhere to the Garfield scales, plus such alteration as changes in production costs warrants, and that in the case of smokeless operators should not exceed $3.50 run of mine and $3.75 for lump, you will see that those who are justified in asking the maximum would have advanced lump over even prestrike prices by 50 to 75 cents per ton, and not $1.75. In other words, you have ignored the great decrease of differential in favor of the householder that has been suggested by me to the operators.

Second. Your letter seeks to give the impression that there was a rise of $1.75 per ton in smokeless after my statement of June 1. You are well aware that the prices of coal generally reached their peak above this on May 15, before I first became active. To-day smokeless lump exceeds your quotation for prestrike by about 25 cents.

Third. I am glad to note your statement confirming the fact that retailers have large stocks of prestrike coal. My recommendation to the retailers was that in public interest and the interest of the coal trade the retailers should reserve their prestrike coal or their contract coal, which they obtained at prestrike prices, and much of which came from the districts of shorter rail haul, and therefore lower cost for the smaller householders, and that it should, of course, be sold at actual cost, plus a fair handling charge, and that any coal bought at strike prices should be sold to the larger consumers likewise at cost and fair handling charge. As you will see, the increases since the strike are largely for run of mine, and therefore for steam coal.

In reply to the statement of your association at our conference that it was necessary for the retailer to sell his coal at replacement cost, thus advancing all prestrike coal to strike coal prices even from longer-haul districts, I stated that I thought it would be very unfair to the consumer and would constitute at least moral profiteering.

Fourth. I would again call your attention to the fact that you misquoted the statements issued here when you say that the price of coal has been fixed at $3.50 per ton. There has been no price fixed for coal. The operators were requested by me:

To cooperate with me in carrying out my proposal "that Garfield prices for run-of-mine coal should be the basis for

computing sales prices, with such adjustments as are necessary to include the wholesale selling costs, changed conditions at the mines, and other factors that will be fair to the public and to the operators and will maintain production of coal. Any agreement to adhere to this is a moral agreement between each operator and myself.

Further than this, I have expressed the view with regard to the Alabama fields, in following the above, the changes in conditions did not warrant a price in excess of 25 cents under the Garfield scale, and that in the smokeless fields they did not warrant a price in excess of $3.50 for run of mine, with a differential of 25 cents for lump instead of the prestrike differential of 75 cents to $1. Many operators having low costs are upon this formula selling considerably below this maximum for spot coal. I note that you ignore the whole question of a just price to the mines upon which production can continue.

Fifth. I note that you state:

"Our association is opposed in principle and as a matter of sound business to governmental policy, official or unofficial, or to legal control of the coal business, whether with respect to production or distribution."

I assume I am to take from this that your association does not wish to cooperate in the prevention of profiteering in this time of emergency. I notice there is an entire change of sentiment from that expressed at our conference at this office, when you strongly urged that a restraint in price was necessary in the public interest, and that you considered the action taken by the administration had prevented a runaway market. I can not believe that the change of views which you here evidence at all represents the vast majority of retail coal dealers in the country, because in their intimate contact with the needs of the householder I have found from inquiry that in the great majority of places they have made no attempt to secure unusual profits—that they are making every effort to supply their customers and to charge them simply the cost of their stocks of coal or their contracts for coal plus a reasonable handling charge.

Sixth. It does seem to me that the retail coal dealers could play a fine part in this emergency if they would follow this suggestion:

(a) All coal to be sold at cost plus a reasonable handling charge.

(b) The cheap prestrike and contract coal to be reserved for the smaller household trade.

(c) Steam and larger domestic consumers to be supplied from current purchases plus a reasonable handling charge.

(d) Cooperate to prevent rising mine prices, for some districts are refusing to accept the formula I have outlined above and are asking $5 per ton.

(e) Handle coal on straight lines from operator and wholesaler without speculative resales in the trade.

By such cooperation I feel sure we can save the public from runaway prices such as we witnessed in 1920, thus saving to them several dollars per ton—of more interest than questions of 25 cents or 50 cents.

Yours faithfully, HERBERT HOOVER.

Statement of average prices spot market—bituminous coal.

(In cents per net ton.)

Date.	Smokeless low volatile, Chicago, f. o. b. mine.		West Virginia high volatile, Cincinnati, f. o. b. mine.		Southeast Kentucky, Cincinnati, f. o. b. mine.		Pool No. 9, Sup. low volatile, New York, run of mine, steam sizes, f. o. b. mine.	Smokeless Hampton Roads, run of mine steam sizes, f. o. b. vessel.[1]

DEPARTMENT OF COMMERCE,
OFFICE OF THE SECRETARY,
Washington, June 5, 1922.

The PRESIDENT OF THE UNITED STATES SENATE,
Washington, D. C.

SIR: I have the honor to transmit the following statement in response to Senate Resolution 298, which reached me this morning.

I should state that there is no consequential recruiting of statistics by the Government from original sources. The Government departments, except for some special occasions, are dependent upon voluntary contributions of data from the trade and transportation associations. Upon this information the following estimates have been compiled. For convenience the questions enumerated in the resolution are repeated here.

1. "The present supply of mined bituminous coal."

The latest information we have is a canvass of the situation at the opening of the strike on April 1 by the Department of Commerce and the Geological Survey, partly depending upon various trade associations. No funds have been available for the repetition of this inquiry.

On April 1 the stocks of mined bituminous coal in the hands of consumers were estimated at 63,000,000 tons. In addition thereto there was estimated to be 4,000,000 tons on the Lake Superior and Michigan docks and about 2,500,000 either on tracks or in storage belonging to the operators. There was also an unknown amount of coal in transit on the railways. A guess has been made that it amounts to between 10,000,000 and 15,000,000 tons.

2. "The average weekly production and consumption of such coal since April 1, 1922."

The only statistics as to production are the daily number of cars loaded and are furnished by the railways, as follows:

Week ending—	Cars.	Estimated tons.
April 8	66,182	3,825,000
April 15	63,522	3,656,000
April 22	60,228	3,575,000
April 29	71,574	4,175,000
May 6	73,158	4,164,000
May 13	78,090	4,433,000
May 20	79,176	4,484,000
May 27	86,982	4,856,000
June 3	82,185	4,600,000
Total	661,097	37,768,000

There are no statistics of consumption. A rough estimate may be deduced by assuming the consumption to be equal to production, based upon car loadings in other periods.

Week ending—	1919	1920	1921
April 9	6,224,350	8,461,450	5,684,750
April 16	6,673,300	6,885,000	6,085,600
April 23	6,606,250	7,620,700	6,303,150
April 30	7,371,750	7,985,550	6,512,850
May 7	7,627,300	8,205,150	6,901,600
May 14	7,756,900	7,849,200	7,482,250
May 21	7,838,300	8,197,300	7,461,900
May 28	7,157,550	8,449,150	7,630,050
June 4	8,011,850	8,057,000	6,336,650
Total	65,267,550	71,707,500	60,488,800
Average	7,251,950	7,967,500	6,407,330

As there has been considerable industrial recovery from the situation of 1921 and less activity than 1920, our rough guess is that the total consumption from April 1 to June 4 is about 65,000,000 tons. Upon that data the stocks of mined bituminous coal remaining on hand week ending June 4 should be about 32,000,000 tons, and in addition the amount of coal in transit may amount to 10,000,000 tons.

3. "The amount of bituminous coal estimated to be necessary for all uses in the United States until May 1, 1923."

The following tables show the estimated production of bituminous coal based on car loadings during the previous years for this period of 11 months and furnish a probable guide to the future:

	Tons.
From June 1, 1919, to May 1, 1920	455,221,000
From June 1, 1920, to May 1, 1921	472,995,000

4. "The effect of such strike upon present coal prices and the probable effect upon such prices if a settlement of that strike is not reached before September 1, 1922."

First, as to present coal prices:

Coal is sold (a) by long-term contracts and (b) uncontracted coal for spot delivery. The proportion of the present production of bituminous coal on old contracts is variously estimated at from three-eighths to three-fourths of the production, and, of course, varies with each mine. The prices on old contracts are undisturbed by the strike. Spot coal receives the full impact of the new demand. The prices of spot coal prior to the strike and since vary with each district and each mine.

Various causes connected with the general business depression, the collapse of the export trade in coal, the competition of nonunion operators endeavoring to build up and maintain their organizations and production in anticipation of better prices in the event of the strike, the general pressure to give employment during the winter, appear to have caused the coal from southern districts—those now operating—to be sold at the cost of production or even at a loss for some months before the strike. After the strike mine prices rose steadily to as high as $5 and $6 in some instances, although the general range was somewhat below these levels.

Furthermore, owing to the necessity of present production being carried longer distances by rail to reach consumers formerly served by nearer fields the price levels in such localities for coal are much affected by increased freight charges.

It was deemed necessary to use the influence of the administration to halt the rise of prices and if possible prevent a repetition of the price panic of 1920 when spot mine prices rose to as high as $12 per ton. As a result of the activities undertaken the rise in prices has halted and has even receded in some districts in various amounts from 50 cents to $2 per ton. These activities of the administration are set out under paragraph 6.

As to what the course of prices may be, I am unable to state. I am in hopes the actions taken may save the public from a recurrence of such profiteering as developed on previous occasions.

5. "What action, if any, has been taken in the United States through its governmental agencies to terminate the strike?"

The governmental agencies have no legal authority to terminate or intervene in the strike. Quite informally and repeatedly suggestions as to propositions on which the disputants might well confer and hope for settlement have been made through the Department of Labor and this department, or both, but thus far these suggestions have been without result.

6. "What action, if any, has been taken by the United States to protect the consumers of coal from paying exorbitant prices by reason of curtailment of production?"

The administrative agencies possess no authority of law to protect the consumers or no appropriations available for the conduct of informal action. As a tender of good offices of the governmental agencies, various conferences have been held with consumers, dealers, and operators where it is sought to impress upon them the necessity for prices that would be fair in the interest of the public.

No generalizations upon profiteering are of any value to the public. In a shortage the only effectual action must be a statement of a fair price for dealing. Any such price must take into account the maintenance of production and, therefore, the costs of the mines the most expensive to operate.

In making such suggestions I have proposed "that the last Garfield prices for run-of-mine coal should be the basis for computing sales prices, with such adjustments as are necessary to include the wholesale selling costs, changed conditions at the mines, and other factors that will be fair to the public and to the operators and will maintain production of coal. Any agreement to adhere to this is a moral agreement between each individual operator and myself."

The Garfield scales (United States Fuel Administration) were the result of exhaustive investigations of the Fuel Administration and the Federal Trade Commission into working costs, profits, etc., during the war, and were generally considered as just.

The opinions of the directors of the Bureau of Mines and the Geological Survey have been availed of as to changes in conditions since those scales were settled and further inquiries upon specific points have been made of the operators and those familiar with different districts. The selling commissions set out separately in the Garfield scales were added to the mine figures. The maximum prices thought fair in certain districts are set out below. Some operators of specially low-cost mines have agreed to hold to lower prices. Certain operators and certain districts have refused to accept the suggestions made chiefly because the Garfield scales included contract coal, the losses on which below the Garfield scale they believe should be covered by equalizing increases in the spot-coal prices regardless of costs or profits. Numerous conferences are in progress, and I hope cooperation will be secured in all districts and between all branches of the trade.

These proceedings obviously have no force in law, and furthermore any collective agreements or any erection of committees in the trades for enforcement might be criticized as a violation of the law even were the result to public benefit. Therefore, the entire part of the administration is confined to statement of opinion of the administration of what is fair, with the hope it may be adhered to by each individual. The result so far has been to halt the rise and to secure considerable reductions in certain cases.

The attached statements have been issued.

I beg to remain,

Yours faithfully,

HERBERT HOOVER.

—

ALABAMA DISTRICT.

MAY 31, 1922.

In the Alabama field the costs of coal production have been reduced since the final Garfield scales were determined.

After having consulted the Alabama operators and being assured of their cooperation I have concluded that a maximum fair price for spot coal from the district should be 25 cents per ton below the final Garfield scale, the operators to absorb out of this price a reasonable selling expense.

The operators wish it clearly understood that this is the maximum fair price and that anyone may sell below it and that long contracts for coal are necessarily below these levels.

The Garfield scale varies from $2.45 to $2.85 for the bulk of run-of-mine coal from the district and, therefore, these coals will be a maximum of $2.20 to $2.60. There is some production from thin seams, and where the Garfield scale is higher these will also be subject to the 25-cent reduction. The differentials of the Garfield scale up and down for washed and prepared coals and screenings will be taken as a fair basis.

The Alabama field is not running full capacity, due to the lack of orders, and production can be increased 50,000 to 100,000 tons per week. Therefore, consumers in the southeastern States, together with those accessible to water-borne coal in the south Atlantic and Gulf seaboards, together with inland markets as far as St. Louis and Kansas City, would be well advised to take this opportunity of securing supplies.

—

POCAHONTAS, NEW RIVER, TUG RIVER, AND WINDING GULF FIELDS.

MAY 31, 1922.

After having consulted the operators in the Pocahontas, New River, Tug River, and Winding Gulf fields—smokeless coal districts of West Virginia—and having been assured of the cooperation of 80 per cent of the production here represented, and having the approval of the Director of the Geological Survey and the Acting Director of the Bureau of Mines, I have concluded that $3.50 per ton is a fair maximum price for spot run-of-mine coal for these fields, the operators absorbing in these prices a reasonable selling expense, the prices for prepared and slack coal to bear a differential up and down equal to the Garfield scales.

The last Garfield prices for the district, including the selling commission for run of mine, varied from $2.50 to $3 per ton for domestic coal, with a price of $3.85 to $4.35 per ton on export and bunker coal, which comprise a considerable portion of the production. The costs of production in the district have increased since the Garfield scale, and that scale included contract coal which now sells below the maximum.

I therefore hope the above flat price will be accepted as a fair maximum.

Considerable coal has piled up at seaboard from these districts, and the public would be well advised to secure this coal.

—

HARLAN, HAZARD, AND SOUTHERN APPALACHIAN FIELDS.

MAY 31, 1922.

Having consulted the operators in the Harlan and Hazard fields of Kentucky and the Southern Appalachian fields of Tennessee and Kentucky, and having been assured of the cooperation of about 80 per cent of the present production and having the approval of the Director of the Geological Survey and the Acting Director of the Bureau of Mines, I have concluded that $3.50 per ton is a fair maximum price for spot run-of-mine coal for these fields, the operators absorbing at these prices a reasonable selling expense, the price for prepared coal and slack to bear a differential up and down equal to the Garfield scale.

The last Garfield prices in this district—except for some low cost and special high cost mines—ranged from about $3 to $3.25 for run of mine, including selling commission. The costs have increased some since the Garfield scale, and that scale included contract coal which now sells below this maximum. I therefore hope the above flat price will be accepted as a fair maximum.

—

FRIDAY, JUNE 2, 1922.

Secretary Hoover announced last night:

"I believe that the whole of the coal districts in Virginia, West Virginia, Tennessee, and east Kentucky will accept the fair maximum of $3.50 per ton for run-of-mine spot coal. The Alabama field accepts the lower scale, as previously announced. The operators in the west Kentucky fields do not feel that they can agree to a lower price than $4.25. I have not felt that I could recommend this price to the consuming public, and the matter is therefore under further consideration. They feel that their costs have increased materially beyond the increases in other fields. On the other hand, my present feeling is that they should, in the general interest, adhere to the maximum accepted by the majority of the operators in other fields. A discussion of the Pennsylvania fields will be taken up later in the week. We have not yet dealt with problems west of the Mississippi River.

"It should be understood that the whole object of the administration's interest in coal prices is to protect the consumer by indicating the maximum price that would be fair for spot coal during the temporary period of the strike, and by doing so to protect that great group of operators who do not wish to take advantage of the present situation.

"Out of the 5,000,000 tons of weekly production of bituminous coal, probably three and a half million tons are under long-term contracts to consumers at prices stipulated in the contracts, and there can be no alteration of these contract prices, which as a rule run considerably below prices for spot coal, as they represent a steady business to the mines. The suggestion of a maximum fair price relates solely to spot coal. Many coal dealers enjoy long-time contracts at lower rates, and it would be only fair to the public that in the resale of this contract coal these dealers should give the customer the full benefit of their lower prices; and I feel sure from my discussions with them that the majority will do so.

"In order to prevent the resale of coal for speculative purposes it is most desirable in the interest of the consumer, operator, and wholesaler that the operators and dealers should insist upon knowing that purchases are on behalf of a definite consumer.

"The maximum price for spot coal is not the minimum price. It is only a general figure that will protect the public from such occasions as the last pinch, when spot coal in many places went to over $10 per ton. In arriving at the figure the Garfield scales were taken as a basis, as these scales were the result of close investigations during the war, and allowances have been made for increased costs and a general average of the situation taken that would protect the public and maintain production. The maximum price includes customary selling commissions, which were established separately in the Garfield scale, and the operators are recommended to use the usual wholesale agencies, thus promoting direct movement to the consumer.

"In these circumstances some minor proportion of the mines will make considerable profits; some minor proportion of them will, under these circumstances, earn nothing; and in some cases of low-cost producing mines the operators have already notified their consumers that they will continue to supply them at lower rates than the maximum. What we are endeavoring to prevent is a panic in prices such as took place at the last coal pinch.

"Every consumer who is interested in knowing that he gets a square deal can easily check the freight rates, can compare them with the maximum price, can inquire from his dealer whether he is buying contract coal and at what rate, and can make proper allowances for retail distribution. If consumers are unwilling to take this degree of interest in negotiating for coal, it is a certainty that no one can help them. I believe the vast majority of operators, wholesalers, and retail dealers sincerely wish that this difficult occasion shall pass by without any rightful criticism of their conduct anywhere along the line. I regret that a small minority have refused to cooperate and are demanding higher prices. The Government has no authority in the matter, for this is purely a moral question and one of cooperation. The consumers who are not treated fairly may appeal to this department in Washington and their case will be inquired into."

[For release June 3, 1922.]

DEPARTMENT OF THE INTERIOR,
UNITED STATES GEOLOGICAL SURVEY,
Washington.

Director George Otis Smith, of the United States Geological Survey, said last night:

"After attending the conference which the Secretary of Commerce has had with the coal operators, as well as living with the coal question for weeks, I am fully convinced that the plan Secretary Hoover is engineering in the interest of the public holds a larger promise of keeping coal prices down than any other move that is feasible at this time.

"In simple terms of current coal production and consumption the present situation is loaded. Since April 1 our mines have put on the cars only about half as much coal as the country has burned. Fortunately, the output is slowly increasing, but no possible stocks of coal in storage can long stand this drain of 3,500,000 to 4,000,000 tons a week. Yet the complacent public sleeps, seemingly awaiting some explosion to arouse it to action. Such an effective alarm could come in the shape of a sudden jump in coal prices, but Mr. Hoover and the coal operators have not thought it safe to permit the past to be repeated, and they are agreed that the safety-first move is to put some definite limit on prices.

"A buyers' panic and a runaway market usually happen at the same time, and each aggravates the other. Consumers with foresight, especially the larger consumers, bought large supplies of coal while the buying was good, but others who were less wise did not stock up, and these "foolish virgins," as Secretary Hoover has called them, will be the first to find themselves short of fuel. Their plight is partly of their own making, and, to judge from the $8 and $10 spot prices for 1920, many of them, once awake to their need, will try to buy at any price.

"It is obvious that, with this condition of undersupply of many consumers, coal production needs to be stimulated, and a fair price to accomplish most must be a generous price. Furthermore, the Secretary's decision as to a limiting price had to be reached without delay. It was imperative that even the high-cost producer be encouraged to contribute his tonnage, and therefore a fair maximum price was established for as wide a territory as possible, and the coal operators were urged to speed up production. Tons mined are far more important to the country than cents saved.

"The buying public should keep in mind that the $3.50, which is set up as a fair price for most of the coal fields south of the Ohio and Potomac, is a maximum price, and that it applies only to spot coal. More than half of the present output of these fields is still under contract, and, in view of the steadier business these contracts permit, the contract coal is normally delivered at much lower figures, and those who will insure themselves with new contracts can also get much better terms than this spot price.

"Moreover, the maximum fair price is set up as only a temporary measure to steady the nerves of what threatened to be a runaway market. It is hoped that this $3.50 price will become only a mark to show where the 1922 price of coal was halted. A repetition of the $8, $9, and $10 prices of 1920 is what Mr. Hoover is trying to avoid. The public should remember that two weeks ago, when the leading coal producers were first called to Washington, the price had begun to jump to $4 and even higher. The appeal then made to the sellers of coal for cooperation fortunately met with a sympathetic response, for the coal industry knows better than the public the dangers of a runaway market to all concerned.

"With these facts before me, I question either the logic or the memory of whoever attacks this cooperative move, in which the representative of the public and the coal operators are joining."

TRIBUTE TO JEWISH RACE.

Mr. ASHURST. Mr. President, I ask unanimous consent to have printed in the RECORD in 8-point type a short article in the nature of an editorial which I recently wrote for the Hebrew Standard, entitled "Bigotry, the most senseless of evil forces."

Mr. MCCUMBER. I could not hear the Senator's request, but I presume it has reference to the pending tariff bill?

Mr. ASHURST. It is in opposition to a propaganda that has been conducted and is now being conducted against the Jews, and I was asked to write a short editorial. I think it should go into the RECORD.

Mr. MCCUMBER. I do not object to anything that will relieve the world of bigotry.

Mr. ASHURST. The article reflects on no person, race, or creed.

The PRESIDING OFFICER. Without objection, the article will be printed in the RECORD.

The editorial referred to is as follows:

[From the Hebrew Standard.]

BIGOTRY MOST SENSELESS OF EVIL FORCES.

(By HENRY F. ASHURST, United States Senator, Arizona.)

Many years ago I was most favorably attracted by the power of penetration of the Jewish mind, and as time passed I grew more and more to admire the sterling qualities of the Jewish race. I wondered why the Jews possessed greater longevity than any other race, and I discovered that it was because of their freedom from vicious habits, their temperance, and their sereneness of mind. As a boy I was amazed to find that the Jewish race, which has been so foolishly and so cruelly persecuted, had a civilization, a culture, and a code of laws before other races of men knew how to build fires with which to cook food. The Jews have contributed so much to our American experiment in free government that it would take many pages adequately to describe the importance and extent of their noble work here.

Of all the evil forces that assail the human heart, religious bigotry is the most senseless and the most absurd, yet we know that the Jews have suffered severely at the hands of bigots.

I believe, however, that the majority of American people look with severe disapproval upon any further discrimination against the Jewish race. During all of my public life and as a private citizen I have ever denounced bigotry, and you may depend that my views will never change in this respect.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. SMOOT. Mr. President, I understand that we have passed over paragraph 376-A, "bismuth, 7½ per cent ad valorem."

The PRESIDING OFFICER (Mr. ODDIE in the chair). That was passed over.

Mr. SMOOT. I ask that we return to that paragraph.

The PRESIDING OFFICER. The amendment of the committee will be stated.

The READING CLERK. On page 85, line 6, it is proposed to insert the following:

PAR. 376a. Bismuth, 7½ per cent ad valorem.

Mr. SIMMONS. Mr. President, when this paragraph was up a few minutes ago I commented on the dearth of information with reference to it, and the Senator from North Dakota requested that it go over until the Senator from Utah could return to the Chamber and furnish fuller information than he was prepared to give the Senate. I find that there is a little information on this subject which may be of value to the Senate.

Bismuth, as we all know, is a salt that is very largely used for medicinal purposes. It is getting to be one of the common medicines of the people. What has struck me as very strange is the fact that in the case of most of the medicines that are in common use among the people that are now upon the free list the committee seems to have been disposed to transfer them to the dutiable list, or, where they are already subject to a moderate duty under the present law, to increase that duty greatly.

Under the present law this particular salt bears a duty of 10 per cent, and it is proposed in this bill——

Mr. KING. Under the present law it is free, as I understand.

Mr. SMOOT. The Senator is talking about another matter entirely; not bismuth.

Mr. SIMMONS. I am talking about bismuth salts.

Mr. SMOOT. But we are not talking about the salts. This is bismuth.

Mr. SIMMONS. It is a salt, nevertheless. Bismuth is a medicine. That is what we are talking about. It is also used as a cosmetic. The Tariff Commission says:

The chief use of bismuth salts is in medicine and cosmetics.

This is bismuth. The bismuth that I know anything about is a salt. What is this bismuth that you are seeking here to protect?

Mr. SMOOT. The Senator is referring to mixtures of bismuth, found in paragraph 20, I suppose.

Mr. SIMMONS. That is what I am referring to.

Mr. SMOOT. Bismuth itself is on the free list under the existing law. That is the raw bismuth as it is taken out of the ore.

Mr. SIMMONS. What is the bismuth which you intend to protect? It is a new thing which you have put into the bill.

Mr. SMOOT. No; it is not; it is in the bill.

Mr. SIMMONS. The Senate amendment is a new item. It does not appear in the bill as it passed the House at all.

Mr. SMOOT. I say to the Senator that it does appear in the bill as it passed the House, and if he will turn to paragraph 1523 he will find it.

Mr. SIMMONS. It does not appear at this point.

Mr. SMOOT. No; but the Senator said it did not appear in the bill.

Mr. SIMMONS. Then it appears somewhere else?

Mr. SMOOT. Yes; if the Senator will turn to paragraph 1523, he will find that it is on the free list.

Mr. SIMMONS. And the committee put it on the dutiable list?

Mr. SMOOT. It is taken from the free list and put here at 7½ per cent ad valorem.

Mr. SIMMONS. Then the committee has taken it from the free list?

Mr. SMOOT. That is what I stated; but what the Senator was referring to was another matter. He referred to mixtures of bismuth, which fall under paragraph 20.

Mr. SIMMONS. What is the bismuth which the Senator wants to put on the free list? What is it used for? What is it made for? I mean bismuth which the Senator wants to take off the free list and put on the dutiable list.

Mr. SMOOT. It is used for automatic fire extinguishers, automatic fuses, and solders, and wherever there is a low fusible requirement. If the Senator really wants to know what it is he will find the information by turning to the tariff summary as to paragraph 1523.

Mr. SIMMONS. I asked for information before the Senator came in, because I had none as to this article. My only object in taking the floor was to find out what we are about to tax.

Mr. SMOOT. I will tell the Senator what we are about to tax. Bismuth has been on the free list; it was on the free list in the act of 1909. The tariff summary says of it:

Bismuth, one of the minor metals, is soft, reddish-white, and highly crystalline. It is a component of many easily fusible alloys which are used in manufacturing automatic fire sprinklers, electric fuses, and solders. Since it expands on solidifying from the molten state, it is used in some form of type and in metal bearings. The principal uses of bismuth, however, are in certain medicines and to some extent in the manufacture of cosmetics.

Those are the products manufactured from bismuth. I continue reading from the summary:

Production is about 300,000 pounds annually, practically all as a by-product from the smelting of lead, copper, gold, and silver ores in Utah.

We have had it up once before. If the Senator will look at the report, he will find that in 1918 it was valued at $3 a pound, in 1919 it dropped to 97 cents a pound, in 1920 it rose to $2.50 a pound——

Mr. SIMMONS. In this country?

Mr. SMOOT. No; that refers to the foreign country. In 1921 it fell to $1.25 a pound. The testimony before the committee showed beyond a question of doubt that there was at least to-day about 20 to 25 per cent difference in the cost of recovery of bismuth in this country and in foreign countries. The ores carry a higher percentage of bismuth, and it is simply a matter of deciding the best thing to do. If they can not receive a certain price, about a dollar a pound, it is very much cheaper for the smelters to let it go off in the air, and not try to recover it at all. It is found in ores, as the report says, and if they recover it at all, there is an expense attached to the recovery in the smelting, and they have to receive about a dollar a pound to pay for that recovery.

Mr. SIMMONS. I want to ask the Senator if the expense to which he refers is not chiefly in the machinery which has to be installed for that purpose, and if aside from the cost of the machinery installed for the purpose, the cost of salvaging is not very cheap? I am not posted about this matter.

Mr. SMOOT. If the Senator understood in detail the extraction of the different ores, particularly where they are mixed, he would know that it is quite expensive to get bismuth out, particularly when the article being recovered is a very small percentage of the ore itself, as is the case with bismuth. The Tariff Summary says:

This cost is in reality the cost of the last operation of recovery.

It is only a question as to whether we want to recover it from the ores in the United States or allow it to be imported, because of the fact that there is not very much of it used in the United States.

Mr. SIMMONS. If the Senator will pardon me, I think we can get these facts much better by colloquies than by speeches.

I understand now, from what the Senator says, that this is a by-product of the smelting of zinc and copper.

Mr. SMOOT. No; not copper; lead, generally.

Mr. SIMMONS. Zinc and lead?

Mr. SMOOT. It is generally found in lead ores.

Mr. SIMMONS. It is a by-product?

Mr. SMOOT. If you can call it a by-product; it is a part of the ore itself. If they did not recover it, if there were no recovery at all, the smelter would simply charge that much more for the smelting of the ore, and if they can not get out of it what it costs to recover it, certainly they will not try to recover it, and it will go off into the air or into the slag.

Mr. SIMMONS. My understanding is that we have about as fine deposits of lead in this country as they have elsewhere, and the data which has just been furnished me since the item was first taken up says that it is not only a by-product of lead but of copper, gold, and silver ores. I can not quite understand how the Senator could claim that there is less of this material in the copper, the gold, the lead, and the silver ores which we produce here than there is in like substances produced somewhere else.

Mr. SMOOT. That happens not only with manganese, but with magnesite and a great many other things. The ores of Spain are very high in lead. That often happens with products of the earth, particularly products of a mineral character.

Mr. SIMMONS. That might happen with one product, but that all our lead and copper and gold and silver ores have less of this material than like ores of other countries seems to me to be rather incredible. But I do not know as much about that as does the senior Senator from Utah or as the junior Senator from Utah. They live in a section of the country where mining is carried on; I do not. But I can not understand why there is this difference in the bismuth contents of these metals between this and other countries, in the first place; and in the second place, I can not understand why it would cost so much more to recover this material here in the process of smelting than elsewhere.

Mr. SMOOT. The rate proposed is only 7½ per cent ad valorem. In this connection I want to say to the Senator that the European syndicate controlled prices before the war, and during the war the United States established a market for this product, and the producers were virtually compelled to recover it in order to secure the amount necessary in the United States. It is a small industry. At no time have they produced over 300,000 pounds in the United States.

Mr. SIMMONS. Yes; and our consumption is about 300,000. We are producing now about as much as we consume.

Mr. SMOOT. No; we are not producing as much as we consume.

Mr. SIMMONS. About as much. If we recover 300,000 pounds and we consume 300,000, it seems to me it is not only about as much as we consume, but altogether as much as we consume.

Mr. SMOOT. We are not producing that amount now. Many of the smelters have been closed entirely.

Mr. SIMMONS. If the Senator will hear me, I want to say this——

Mr. SMOOT. I thought the Senator asked me to proceed; but I will yield the floor.

Mr. SIMMONS. I am anxious to carry on this colloquy with the Senator, because I think it is enlightening and is enabling us to get at the facts we want. I wanted to ask the Senator about this before he takes his seat: Is it not a fact that we have almost criminally neglected to save these valuable by-products of mining and smelting in this country, and that that is one of the troubles we are having in supplying the American market? In Europe they save everything, and that is the reason why they have the big supplies of by-products of the coke ovens, and so forth. Here we have been in the habit of letting those things go to waste.

Mr. SMOOT. Let me call the Senator's attention to the fact that Europe is quite different from the United States. There is sometimes what might be called a wicked waste of by-products from the mines; but what are you going to do with them? In Utah we have some of the largest smelters in the world. We could produce enough of one by-product, sulphuric acid, to furnish, I think, all the world. It would not be by hundreds of pounds or thousands of pounds; I think we could make almost a small stream, running continuously.

Mr. WALSH of Montana. If Utah runs short, we can supply the deficiency from Montana.

Mr. SMOOT. Montana could do the same. What could we do with it? The freight rate is higher than the article itself is worth. We can not afford to recover it, because if we recover it, there is a cost attached to it, and we can not get a cent for it. The Senator is right when he says that in those things there is a waste, and I agree with my colleague, who stated a few moments ago that the American people are the most wasteful people, under the best of conditions, of all the people in the world. It is often stated that a Frenchman can live upon what an American family wastes. But we have a situation to meet. We can recover it, but there is a cost attached to recovering it, and we can not get a thing for it. It is not only a waste but it is a burden to the people who produce it, who are compelled to produce it under the existing conditions.

Mr. SIMMONS. Is it not a fact that we have not been saving much of this, but that we have been exporting it? Why could we not save enough to supply the American market?

Mr. SMOOT. The production of bismuth is quite a different proposition from the production of other by-products. There are ores all over the world which have no bismuth in them at all. For instance, I know of only two districts in our State which have even a trace of it. The cost of producing it is 75 cents a pound in Germany and nearly a dollar here. Wherever bismuth is recovered, there is a costly process required to recover it, and if they can not get enough to pay for the cost of it, of course it would go into the air, just as sulphuric acid does.

All we ask is 7½ per cent upon it, thinking perhaps that when things are normal that will equalize the conditions here and abroad and allow the producers to make just a small profit over and above the cost of taking it out. It is an economic question. It is not a question of the amount of duty. In Idaho they have bismuth, but it is always in small percentage; it is the same in Montana and the same in Utah. These ores are smelted there, and if they can not get a price equal to what it costs to recover it the bismuth is bound to go into the air or go into the slag. All that is requested on this item is 7½ per cent.

Mr. KING. There is nothing before us to justify a low rate or a moderate rate or a high rate of duty upon the commodity under consideration. I think the Senate committee with equal propriety could have argued for a 1 per cent duty or 25 per cent duty as well as 7½ per cent duty. Much of what my colleague has stated I assent to.

Mr. SMOOT. I do not know whether my colleague heard me when I referred to the question of the European syndicate that handles all the bismuth of all the world outside of what is produced in the United States.

Mr. KING. Yes; I heard that statement.

Mr. SMOOT. If they wanted to control the situation in the United States, all they would have to do would be to bring their bismuth into the country when we began to produce it and cut the price. That would, of course, stop our domestic production of bismuth, and again they would control the situation and could let the price rise as it has in the past. Their price was as high as $3 in 1918 and then dropped the following year to 97 cents. Of course there was not that difference in the cost of production. After that year, when the domestic production was again practically stopped, they advanced their price to $2.50 a pound.

Mr. KING. Let me say to my distinguished colleague that American manufacturers showed very violent fluctuations in thousands of articles produced in the United States compared to the fluctuation to which reference has just been made.

Mr. SMOOT. During these years I do not think so. Following the war, or during the war, it is quite likely, but when we got into 1920 they charged $2.50, because there was a shortage in the United States. Not only that, but this is what they do. They will not sell a single pound of bismuth to any purchaser in the United States unless he will sign an agreement that he will buy from them all of the bismuth that he may require during the year.

Mr. WALSH of Montana. Mr. President, with the permission of the junior Senator from Utah I would like to inquire of the senior Senator from Utah how many companies are actually producing bismuth.

Mr. SMOOT. Two are all in the United States.

Mr. WALSH of Montana. Where are they located?

Mr. SMOOT. The American Smelting Co. and the United States Smelting Co.

Mr. WALSH of Montana. The American Smelting Co. is refining it at two smelters?

Mr. SMOOT. The United States Smelting Co. in Utah, and the American Smelting Co., wherever they are located.

Mr. WALSH of Montana. Where do the United States Smelting Co. operate?

Mr. SMOOT. They have one smelter in Utah, and I think most of the bismuth is recovered in Utah.

Mr. WALSH of Montana. What amount are they recovering? What is the production?

Mr. KING. About 300,000 pounds.

Mr. SMOOT. They run from 122,000 pounds to 269,834 pounds.

Mr. WALSH of Montana. Do they recover this by the bag-house process?

Mr. SMOOT. I think it is by electrolytic refining. That is how it is done. By the bag-house process they catch the metallic zinc.

Mr. WALSH of Montana. The Senator said by electrolytic refining?

Mr. SMOOT. Yes; of the lead. It is a separate process entirely and only from lead.

Mr. WALSH of Montana. Where do our foreign imports come from?

Mr. SMOOT. Germany.

Mr. WALSH of Montana. Anywhere else?

Mr. SMOOT. Saxony, Germany, is about the only place. An English company controls the product, and they do have a refining process in one place in England. I think the process is the Betts process, as I remember it.

Mr. WALSH of Montana. The only reason that I can see why we should impose a duty would be to prevent exactions by foreign monopolies.

Mr. SMOOT. That is why we give it.

Mr. WALSH of Montana. The metal is exceedingly rare, and the cost of extracting it is so great that it would hardly be justifiable to impose this additional burden upon the sick people who are obliged to take bismuth unless it were——

Mr. SIMMONS. Oh, the senior Senator from Utah said it is not a medicine.

Mr. SMOOT. No; I said it was the raw material for a medicine. The Senator was talking about preparations from it.

Mr. WALSH of Montana. If we put this duty upon the crude bismuth, we will have to put a compensatory duty upon the finished product.

Mr. SIMMONS. The senior Senator from Utah and I had some little controversy about whether bismuth is a medicine. I asked what it was used for, and he stated, but he did not state that it is used as a medicine.

Mr. SMOOT. I certainly did, as the Senator will see if he will examine the RECORD.

Mr. WALSH of Montana. If it has any other use I never heard of it.

Mr. SIMMONS. That is what I said.

Mr. SMOOT. The greater part of it is not used in medicine at all.

Mr. SIMMONS. That is what the Senator said a little while ago. He said it was bismuth out of which medicine was made.

Mr. KING. Mr. President, I have the floor, I believe, so let me answer a few of the questions of the Senator from Montana. I read:

> Production is about 300,000 pounds annually, practically all as a by-product from the smelting of lead, copper, gold, and silver ores in Utah. Bolivia produces most of the bismuth of the world; some ore is also produced in Australia and Tasmania, which is mostly refined in Great Britain. Considerable bismuth ore has been produced in conjunction with tungsten in China which promises to be of increasing importance.
>
> Imports of bismuth were 133,190 pounds, valued at $241,448, in 1914. Imports come chiefly from Great Britain, but since 1915 some bismuth metal has come from South America, and still more recently China has become a principal source of supply.

So it would appear that we have no need to apprehend a foreign monopoly in Germany or Great Britain. Bolivia, Tasmania, and China will be the principal sources of the bismuth supply in the future.

Mr. SMOOT. That is the ore.

Mr. KING. That is the ore and, of course, it is from bismuth ore that we get the bismuth salts or the medicinal compound from the primary product.

Mr. SMOOT. Let me read what I stated to the Senator to be the use of it. I told the Senator that it was the raw material, not the product found in paragraph 20, about which he was talking.

The summary states:

> It is a component of many easily fusible alloys which are used in manufacturing automatic fire sprinklers, electric fuses, and solders. Since it expands on solidifying from the molten state, it is used in some form of type and in metal bearings. The principal uses of bismuth, however, are in certain medicines and to some extent in the manufacture of cosmetics.

That is just what I stated to the Senator before.

Mr. SIMMONS. That would mean that we put the finished product of medicine upon the free list, but we put the raw material out of which the medicine is made upon the dutiable list.

Mr. SMOOT. Oh, no; the Senator will find that paragraph 20 takes care of the preparations of bismuth and that there is a duty placed upon it. It does not go on the free list.

Mr. KING. Mr. President, as I stated at the outset of my observations, so far as the facts or the evidence disclosed may be concerned, there is just as much reason for placing an ad valorem duty of 1 per cent or 25 per cent as 7½ per cent. In other words, there is no reason at all and no evidence at all to justify the imposition of a single duty, specific, ad valorem, or compound. The product comes chiefly from other countries. It is produced in the United States as a by-product, just like arsenic and other things that are carried in our ores.

Mr. SMOOT. I think it is quite different from arsenic. I think the Senator from Montana has stated the only reason, and that is the only reason why I would vote for 7½ per cent. It is controlled by the English syndicate, and they will make the United States pay for it unless we produce it and recover it in this country. There is no doubt about it at all. In the end I think it would be very much cheaper for the users of bismuth in the United States to have a duty of 7½ per cent ad valorem on it than to rely on the English syndicate that controls the prices and has made the United States pay extremely high prices in the past.

Mr. KING. Of course, I do not know as to the control of the product by the English syndicate. There is no reason why an English syndicate should control it. We have just as much opportunity for the acquisition of the ore in China or Bolivia as has Great Britain. My colleague knows that in Bolivia to-day some of the most extensive mining operations are carried on by Americans. The Americans are the best miners in the world. We have the best machinery in the world especially adapted for mining. I do not believe that any people in the world can compete with Americans in mining operations.

Mr. SIMMONS. I understood the Senator a little while ago to say that the metal is produced in certain countries which he enumerated.

Mr. KING. Yes; Tasmania, Bolivia, China, and the United States.

Mr. SIMMONS. That product is sold to Great Britain largely and they recover the bismuth?

Mr. KING. I did not know until my colleague stated, except what the Tariff Commission says, that it is mostly refined in Great Britain.

Mr. SIMMONS. Where it is refined is the place where the bismuth is extracted.

Mr. KING. The crude ore would be carried to Great Britain and there refined.

Mr. SIMMONS. So that our competitor probably is not Germany, as the senior Senator from Utah supposed, but is Great Britain.

Mr. SMOOT. Let us see whether it is or not by the same tariff report in a statement the Senator did not read:

> Before the war Germany had three smelteries, which produced bismuth from ores mined in Saxony and Bohemia. Ore is also mined in England and Peru, and more recently in Korea.

I am informed by the Tariff Commission expert that the output or production of China is sporadic. They do not know whether it will amount to much in the future or not, but the prospects are, they say, up to the present time that it will, although in the past it has not come from there.

Mr. KING. Mr. President, my colleague has called attention, from the tariff report I presume, to the fact that there is some production in Germany. The summary from which I read did not give Germany as the source of any production. It did state, as I read, that Bolivia produces most of the bismuth of the world. Some ore is also produced in Australia and Tasmania. The Australian and Tasmanian ore is mostly refined in Great Britain. Bear in mind that to be refined in Great Britain the ore would have to be carried in bottoms of English or other ships from Australia and Tasmania that enormous distance half way around the world and refined and then transshipped to the United States in the finished product.

Mr. SIMMONS. And we have the ore right here.

Mr. KING. Yes; we have the ore right here at our doors. If it is produced in Utah, as my colleague says it is, and I think he is right, it is right at our door. It is a waste product. It is a by-product. We built our smelters in Utah and in Montana not for the smelting of bismuth or arsenical or sulphur ores, but for the purpose of getting the copper, lead, gold and silver, and those precious metals from the ore content.

Mr. SMOOT. My colleague said something about shipping the ore. The ore as it comes from the mine is not shipped in that form.

Mr. KING. It is shipped in the form of concentrates.

Mr. SMOOT. Yes; the very highest concentrates.

Mr. KING. That may be.

Mr. SMOOT. They do not concentrate the whole of the ore, but they concentrate only the hand-picked ore, and then, when it is concentrated from the hand-picked ore, it comes over in the very highest percentage of bismuth.

Mr. WALSH of Montana. Mr. President——

Mr. KING. I yield to the Senator.

Mr. WALSH of Montana. I should like a little further information from the Senator from Utah in reference to this matter. The Senator advises me that the bismuth is secured from the general matte through the electrolytic process.

Mr. SMOOT. That is true.

Mr. WALSH of Montana. After the copper or the lead, as the case may be, goes through the converter, it contains some other metals, in this particular case the bismuth. In the refining process the valuable metals, lead, gold, silver, and so forth, must be separated by the electrolytic process in order to be recovered. In that process the bismuth becomes a residuum.

Mr. SMOOT. That is true in the United States.

Mr. WALSH of Montana. That is to say that the bismuth, if it is in the ore, is separated by the electrolytic process. So what additional cost is there to the producer of copper and lead? Let us take copper matte, the principal constituents of value of which are copper and lead.

Mr. SMOOT. Bismuth is found almost entirely in connection with lead ores.

Mr. WALSH of Montana. Very well. The lead can not be put on the market alloyed with the bismuth, and the process must be prosecuted in order to get the pure lead. When that is done, a residuum of bismuth remains.

Mr. SMOOT. Yes; and that residuum is nothing but a mass of dirty mud. The Senator from Montana, no doubt, has seen what the residuum is. Nobody would think there was anything in it at all; the producers may throw that mud away, if they want to, and they will throw it away unless they can obtain a price that will justify taking the bismuth out.

Mr. WALSH of Montana. Exactly. What is the process by which it is extracted? Of course, the residuum is metallic or else it is silica. I do not suppose it is silica, because silica would pass off with the slag. But what is the process and what does it cost to get the bismuth out of the residuum after the lead or copper is extracted by the electrolytic process?

Mr. SMOOT. The producers claim it costs about $1.

Mr. WALSH of Montana. One dollar a what?

Mr. SMOOT. One dollar a pound in order to get it out, and that it costs in England and Germany about 75 cents.

Mr. WALSH of Montana. To get it out of what? What information has the Senator upon that subject?

Mr. SMOOT. I have the information which was given to the committee. The American Smelting Co. says that it costs about a dollar to do it here and about 75 cents in England and in Germany. The tariff board say:

> As bismuth is produced in the United States entirely as a by-product, the cost of production depends entirely upon the percentage of each operation which is charged against the bismuth as compared with the other products recovered from the smelting operation.

Mr. WALSH of Montana. That is the point. The smelters charge the cost of the operation in part against the bismuth content. They are carrying on their operations for the purpose of recovering copper and lead, and they would have exactly the same cost whether bismuth was recovered or whether it was not recovered.

Mr. SMOOT. There is a refining cost, because after the lead is taken out the residuum of dirty mud must be put through a special process. I forget the name now of the process under which it is taken out, but it is patented. So the recovery of the bismuth—and that is what we are talking about—involves a separate item of cost.

Mr. WALSH of Montana. I simply meant to give to the Senator my view about the matter. It occurred to me that, so far as the smelters are entitled to any tariff rate at all, it should be computed simply against the cost of extracting the bismuth from the residuum, after the refining of the copper.

Mr. SMOOT. The Senator from Montana is exactly right, and that is what we tried to do in this case.

Mr. WALSH of Montana. But I can not conceive that that would be $1 a pound.

Mr. SMOOT. If the price should decline to 75 or 80 cents a pound, there would not be any manufactured in the United States, because it would not pay to produce it. It is only a question of whether it is desired to take the mud after it has been separated and recover the bismuth which is in it. The extracting of bismuth from the mud is a most difficult process, and, as I am informed, a most disagreeable one. In the Tariff Information Survey not only that feature is referred to but they say:

> The production reported for 1915 is 570 metric tons. Export duties are levied by the Bolivian Government, and these were increased on the ground that bismuth ore production was subject to the control of a monopoly.

I have already referred to that.

Mr. President, I think if there is any commodity covered by this bill that may justly bear a duty of 7½ per cent ad valorem it is bismuth, if for no other purpose than to afford an inducement for the recovery of the bismuth in this country, rather than to let it go back into the rivers or into mother earth and become an economic waste.

Mr. WALSH of Montana. Mr. President, I have not seen the recent figures, but in the publication known as Mineral Resources, issued by the Geological Survey, there is given as to production in 1918 the following:

> In 1918 bismuth was recovered by only one company in the United States, the American Smelting & Refining Co., which obtained this product from the refining of lead bullion. Statistics of production can not be published.

I presume that is because the American Smelting & Refining Co. does not make the figures public. The imports for consumption in the United States in 1913 were 213,257 pounds; in 1914, 165,208 pounds; in 1915, 108,288 pounds. Can the Senator from Utah tell us about the American recoveries?

Mr. SMOOT. No; I can not say just how many pounds are produced annually. That depends upon the demand and, I presume, also upon the importations. In 1912, however, there were produced 122,080 pounds; in 1913, 213,554 pounds; in 1914, 251,486 pounds; in 1915—that is a year when the war was raging—316,716 pounds; in 1916, 245,676 pounds; in 1917, 318,187 pounds; in 1918, 266,499 pounds; and in 1920, 269,874 pounds.

Mr. WALSH of Montana. Then it appears that under free importation the American Smelting & Refining Co. since 1912 has found it profitable to put on the market anywhere from 100,000 to 300,000 pounds of this product?

Mr. SMOOT. The two companies have. The United States Smelting Co. was the first one to recover it.

Mr. WALSH of Montana. That is to say, with perfectly free importation, they found it profitable to go through with the reduction process?

Mr. SMOOT. Certainly.

Mr. WALSH of Montana. And put that quantity of the product on the market?

Mr. SMOOT. Yes; but in 1920 the price was $2.50 a pound, and in 1921 it fell to $1.25 a pound.

Mr. WALSH of Montana. The Senator will observe that we go back to 1912 there, as I understand; but the point I am making, regardless of conditions, is that 1912 was under the Payne-Aldrich bill. Subsequently we came in under the Underwood bill, and subsequently we encountered the war conditions; and, notwithstanding these varying circumstances and conditions, still these two companies found it profitable to put out from 100,000 to 200,000 pounds of this product annually, we will say, at an average price of $1 a pound—$100,000 to $200,000 worth of the product.

Mr. SMOOT. I think the price was a great deal higher than that.

Mr. WALSH of Montana. All right. They found it profitable, I say, to put that on the market under these varying conditions. I can not believe that in those circumstances they are going to put out a pound more or a pound less because there is a duty or there is not a duty upon the product.

Mr. HARRISON. Mr. President——

Mr. SMOOT. I will simply say to the Senator that the prices are given for each year; but I will not take up the time of the Senate to put them in now, as the Senator from Mississippi wants to speak.

CAMPAIGN CONTRIBUTIONS.

Mr. HARRISON. Mr. President, one of the most significant incidents affecting the future policy of the Republican Party occurred night before last in the city of Washington. I refer to a meeting of the heads of the party and the representatives of some of the great manufacturing and banking interests who met here touching campaign contributions. It is significant in that it shows that the leaders who were present at this conference—I think there was only one Senator present, and that was the distinguished junior Senator from Delaware [Mr. DU PONT]; the others were heads of large interests, many of which are interested in this tariff legislation and in taxation legislation generally.

They have heard from the country. They have just come from their respective States. They know what the people are

talking about. Through every kind of medium they have come to the conclusion that there are grumblings in the air. They know that the soldiers are not satisfied with the wishy-washy policy of the Congress and the President touching soldier legislation. I notice that on yesterday, when an honorary degree was bestowed upon the President and he was introduced by Dean West, the compliment that brought a great deal of applause was the allusion that the introducer made to the manner in which the President was handling the so-called soldiers' bonus. He gave the impression to his audience that the President was against it. If he knows that, he knows something that no Senator knows and that nobody else in the country has been able to ascertain. If the dean takes one statement that the President made in his preelection campaign, of course, he might very properly infer that the President was for a soldiers' bonus. If he believes the speech that the President made here to the Congress when the so-called soldiers' bonus legislation was withdrawn and sent back to the committee, he would think that the President was not for the soldiers' bonus. If he takes some of the interviews that have been given out by some of the distinguished Senators who have visited the White House and have talked to the President touching soldiers' adjusted-compensation legislation, he might believe that the President was on either side of the question. He has been quoted as being for and against it.

So it is that the soldiers of the country are manifesting an indisposition toward this administration that has aroused them. The laboring people of the country, of course, understand how you are pressing down upon them in higher taxes and day by day and minute by minute are placing greater burdens on them and giving encouragement to all the employers of the country to reduce wages, but at the same time by legislation increasing the cost of living upon them; so there is grumbling upon the part of the great laboring classes of the country, not only against the Congress, if you please, but also against the action of the occupant of the White House.

Of course, the legitimate and honest business interests of the country are thoroughly disgusted with the manner in which you have legislated and the way in which you have failed to solve the great problems that are pressing upon this Congress, among them the taxation bill and this bill by which you are attempting to erect a tariff wall around the country and cause other countries to retaliate against us and prevent these honest business interests from selling their goods in foreign markets. So it is enough to know that the people of the great Middle West who have been crying for irrigation and reclamation, appealing to Senators to pass the McNary-Smith bill, and it does not come, are naturally dissatisfied—business, laboring people, soldiers, everybody up in arms against you, your record, and your policies. So it is that these representatives of the Republican Party outside of this Chamber and the House, fresh from home, meeting here, trying to adopt a policy that might change the trend of events and bring success to your party in November, have gone out determined to buy the coming election.

That was the object of the meeting, and "men high up" participated in that conference. Cabinet members were there—Secretaries Weeks, Mellon, Daugherty, and Hoover, some of them personally interested in certain legislation now being passed in this tariff bill—John T. Adams, Charles D. Hilles, and others. All the Cabinet officials evidently made addresses, and so did Vice President Coolidge, whose speech was declared by those who heard it to have been a "rip snorter." I do not know what "rip snorter" means. I have looked in the dictionary and do not find a definition of it. But, anyway, this paper says that those who were at the meeting said that the Vice President made a "rip-snorting" speech.

I saw one paper that said it was a "humdinger." I do not know what "humdinger" means. I looked in the dictionary for the definition of it also, and the nearest approach I can find to it is "humbugger—one who humbugs." And so these distinguished men were there with Wrigley, who said: "I am not a speaker, but here is my check for $25,000," and he handed it over to Chairman Adams. It is said that it must have cost every one of those distinguished representatives who were there some three or four thousand dollars to eat at that table. Why, the Baltimore Sun has on the first page this morning:

G. O. P. to raise unlimited funds for campaign.

Wealthy members of party to be asked to give "until it hurts." Thorough canvass in every State. Hays's $1,000 rule to be ignored in individual contributions.

Listen to what is to be the future policy of the Republican Party in order to carry the election. All hopes of carrying it upon "redeemed promises," "pledges fulfilled," are gone:

The sky is the limit for contribution to the Republican campaign fund this year. The $1,000 limit established by Will H. Hays for the 1920 campaign, which ran his party into a deficit of $1,500,000, has been entirely abandoned and a group of the "fat-purse" boys—

One of them was Mr. Patterson, of the National Cash Register Co., about whom we talked on yesterday; and upon motion made to reconsider the vote whereby you gave to him a special privileges of 25 per cent ad valorem upon the importation of cash registers into this country you turned a deaf ear to our appeals and refused to reconsider it, and thereby took cash registers off of the free list and imposed this high tariff. Then, there was Wrigley, who got up the slogan "Wiggle and Wobble," whom you took care of in the revenue bill by taking the tax off of the chewing gum made by Wrigley. You provided by law that railroads no longer could give rebates, and yet here the Republican Party says: "Give us a large contribution, Mr. Wrigley," and he hands over a $25,000 check, and they rebate him by putting through Congress a law that will take a tax off of chewing gum.

Mr. Patterson says, "I will contribute. I will go out into Dayton, Ohio, and raise large sums of money from special interests who are favored by your legislation"; and then you say, "If you do we will rebate you," and you do rebate him by putting a protective tariff of 25 per cent ad valorem upon his manufactured article of cash registers, and thus you have adopted the new policy. And thus the new scheme of rebating goes on. The larger the contribution, the greater the rebate.

Oh, some of these expressions no doubt come from the bulletins that were issued in the campaign two years ago, wherein your campaign treasurer and your other campaign officials all admitted that you spent about $7,500,000. "The sky is the limit" now, and you intend to adopt the same tactics in order to buy up the coming election. Why, only to-day I read from an International News Service dispatch "that one Senator" who, the paper said, did not have much opposition up in Pennsylvania, one who had voted to seat the distinguished junior Senator from Michigan [Mr. NEWBERRY] after he had been here, I think, only about two or three days as a Senator, spent in his primary in the State of Pennsylvania—that he accounted for—around $60,000, and there were such large contributions to his campaign that he was able, if the papers state it correctly, to turn back to them some eleven or twelve thousand dollars. To-day what we thought was a great Progressive victory in the State of Pennsylvania is shown to be "a false alarm." It has all gone up. "They met to-day to select a State chairman to run the campaign this year in Pennsylvania, and the old guard, the old crowd that has carried things heretofore in Pennsylvania," extorting from the special interest these campaign contributions, "again got into the saddle and elected Mr. Baker the State chairman over Mr. Pinchot's opposition. They elected the new junior Senator from Pennsylvania as the national committeeman from Pennsylvania." Thus is revealed the new policy of the present administration to try to carry the elections in November. Oh, how natural read these bulletins which were used during the last campaign in order to obtain campaign contributions. The same kind will be used this time, I suppose. Here are some of them; this is the way they read:

Harding and Coolidge have the confidence of the people. Buy, boys. Get the money.

Boys, get the money. The weather is hot, the men are on vacation, meetings are hard to get; but, boys, get the money.

That is the language of the Republican bulletin issued two years ago in order to raise a slush fund to elect the present President of the United States and a majority in the Senate and the House.

There are hills to climb, but if you want to make a hill at the same speed you have been running where the road is level you have got to give it more power. Give her the gas; step on it. Get the money.

Listen to that: "Give her the gas; step on it. Get the money."

Said another of these bulletins:

Chicago's campaigns are to be conducted with four full-time divisions and five reserve divisions, which will swing into action the last three days on the public movement, functioning as a "mop-up" battalion.

What did they mean by "mop-up battalion"? The same thing this conference resolved upon night before last.

Another bulletin, of August 5, said:

Our readers are requested not to make this publication public. It is confidential. It is exclusive.

That is the kind of "dope" you sent out to get money, and told them to say nothing about it. I do not know how the meeting held the other night was made public. Somebody squealed. They said that Secretary of Commerce Hoover made a great speech. It evidently was not as good a speech as the Vice President's, because the Vice President's speech was a "rip snorter" and a "humdinger." This bulletin said:

The names and the amounts subscribed by donors should not be made public locally.

And why? It is your practice to do things under cover. Thus the leaders of the Republican Party are now beginning to get up a campaign fund which will buy the election. But let me say this: That the American people are reading. They

know what is going on in the Senate of the United States and in the House of Representatives. They know how the big dinners are being held in the White House. They know who are being invited there, and that the dinners are being held when legislation favorable to the representatives of those interests is being enacted. They know that just when this meeting of "big guns" was being held you were voting to give the National Cash Register Co. this new special privilege. The distinguished Senator from Ohio [Mr. WILLIS] said that Mr. Patterson told him the next day that he did not want the protection, and yet in the next breath the Senator from Ohio refused to vote to reconsider the vote by which the amendment was adopted and wanted to throw it to him anyhow. Perhaps he thought that through your generosity he would make his contribution larger.

The American people will know, and they know now, what is going on, and that in order to fight you the party to which I belong will not be able to call in the representatives of these great special interests, because we have never legislated in their interest. We have tried to legislate in the interest of all the people, without special privileges and favoritism to a few. But from the hills, the small villages, and the little towns, as well as large cities, from all over this country, workshops and counting rooms, farms and schoolrooms, mining camps and ranches, the small contributions will come in to the party that opposes you, in order that your political infamy may be condemned, and "a Government of the people, for the people, and by the people" may again be given control of the Government.

Mr. KING. Mr. President——

The VICE PRESIDENT. Does the Senator from Mississippi yield to the Senator from Utah?

Mr. HARRISON. I yield.

Mr. KING. I understood the Senator to state that among the distinguished personages attending this fat-frying meeting was the Attorney General of the United States. I want to inquire whether that information has been received by the Senator?

Mr. HARRISON. This information is published in the New York Times of this morning, and in other papers. I think it is generally understood. There are gentlemen present in this Chamber who were there, and they could inform us, if they would, about it. There is no question about it, I assume, and it would be the natural thing for Daugherty to be there.

Mr. KING. It seems to me that it is bad enough for Cabinet officers to participate in a meeting of that character, but I can not for the life of me comprehend, in the light of the fact that suits ought to be instituted for the enforcement of the Sherman antitrust law and for war frauds, how the Attorney General could be present at a meeting of that character and participate in it. Of course, it is obvious that the scheme is to obtain an enormous fund to use at the coming election. It is obvious that the plan is to cause Republicans to win and to perpetuate the Harding machine, to perpetuate Harding men in power; but in view of the prosecutions which are pending, and which ought to be brought, it does seem to me that the Attorney General should not participate in a meeting of that kind, which was called for the purpose of obtaining money from the big interests of the United States.

Mr. HARRISON. I agree thoroughly with the Senator; but the Senator will recall that only very recently, while this tariff bill was being written, one of the most distinguished Members of the majority side on the Finance Committee, the spokesman of the President, the gentleman who was sent to Indianapolis the other day to sound the keynote, wrote a letter to certain representatives of special interests throughout this country appealing to them to send in their contributions, so that Republican propaganda might be sent out broadcast through the country. So you are working it from every direction—from the White House, from this Chamber, and from the dinner parties attended by the Vice President down.

Mr. McCORMICK. Mr. President, the Senator from Mississippi said very truly that the American people are reading and thinking. The American people remember that when a Republican administration took office, and a Republican majority in Congress, together with it, assumed responsibility for liquidating the economic consequences of the war and the mismanagement of the war, they had a heavy task before them. The American people have not forgotten that when a Republican administration was inaugurated in Washington last year the current expenditure of the National Government was at the rate of $6,000,000,000 a year. They know that the rate of expenditure established under the Budget system and under the appropriations of this Congress will not exceed $3,500,000,000 a year.

Mr. HARRISON. Mr. President——

Mr. McCORMICK. The Senator will permit me to continue, I hope.

Mr. HARRISON. This is a very important suggestion.

Mr. McCORMICK. I hope the Senator will be good enough to permit me to continue. I did not interrupt him.

The American people appreciate, they understand, that taxation has been reduced in the sum of $1,000,000,000 a year; they know that the burden of every income-tax payer, great and small, has been lightened; they know that every one of them pays less than under the Democratic administration; that the tax of the small income-tax payer who is raising a family has been halved; that "nuisance" taxes have been abolished; that railroad rates, which were successively increased 5, 15, and 25 per cent, first by the Interstate Commerce Commission and then by fiat of the President, under the Wilson administration, have been reduced during the last few weeks. They have not forgotten that as a consequence of the administrative anarchy and the economic chaos from which the country suffered during the last months of the Wilson administration there was a liquidation in the price of agricultural products until corn was sold for 20 cents a bushel at the siding, whereas to-day it sells for 50 cents a bushel.

The American people know that during the last 90 days 2,000,000 idle men have gone to work because, despite the filibuster, there is promise that this tariff bill will become a law.

The American people know that by the time cold weather comes on there will not be an idle man in this country; aye, they know that even to-day the abnormal unemployment in Great Britain is six times per capita what it is in the United States. They know that in Scandinavia unemployment is still increasing. They know that whereas agriculture in America is beginning to thrive again, it remains prostrate in the Argentine, in Brazil, and in Chile. The American people know that by degrees the wreck of the railways of the United States, bequeathed to us, is being brought to order.

I count it no offense against good citizenship that Mr. Adams and his associates are planning to bring the facts to the knowledge of the American people.

If the reports of the new steel merger be true, it will not be long before that distinguished Wilsonian, Mr. Chadbourne, again will be able freely to contribute to the Democratic campaign fund. That estimable citizen, already rewarded, and I hope to be rewarded again when the Democratic administration comes into power——

Mr. KING. Which will be soon.

Mr. McCORMICK. Mr. Charles R. Crane has returned in season to contribute to the Democratic campaign fund.

Mr. B. M. Baruch before he sailed for Europe announced that he would shortly return. That most able of the Democratic servants of the country during the war, able and expert in markets both bull and bear, will be back in time to contribute to the Democratic campaign fund this year.

My colleague refers to Mr. Cleveland Dodge. I very well remember when Mr. Cyrus McCormick, the Democratic head of the harvester combine, had subscribed to the Wilson campaign fund, the subscription was most acceptable until it became public, when the Democratic National Committee assessed Cleveland Dodge, the copper king, to pay off Cyrus McCormick, the harvester king.

Mr. HARRISON. Now, will the Senator yield?

Mr. McCORMICK. The Senator from Mississippi, reading from one of the Democratic newspapers upon his desk, said, "The sky is the limit." The sky is the limit for the unfounded charges and the rodomontades to which the opponents of this administration, who seek to obstruct the reconstruction of the country, give utterance during these days in the Congress of the United States.

Mr. HARRISON. The Senator overlooked the fact that I have the Chicago Tribune on my desk, did he not?

Mr. McCORMICK. I did not, but the Senator has before him a most excellent newspaper with which I am not infrequently in disagreement.

Mr. HARRISON. And on the tariff in total disagreement. As the Senator was speaking I wanted to say something about the conference. As the chairman of the senatorial campaign committee, a great honor, having in charge the defeat of Democrats or the selection of Republicans in the coming campaign, he was not invited to this conference. If he was, then he declined the invitation, because the papers do not state that the distinguished Senator was there.

Mr. McCORMICK. The Senator was not there. He was not invited. He first learned of the conference from the lips of a Democratic colleague.

Mr. HARRISON. The Senator should read the Chicago Tribune and he would get all this information. I notice this

statement, which I did not read at first, but when the Senator talks in the fashion he does and fails to defend or praise the action of the conference I am inclined to believe that he is "nursing a sore toe," and he has a reason for it. If the statements touching this conference are correct, the chairman of the Republican National Committee has unhorsed the distinguished Senator from Illinois from further political participation in the election of senatorial candidates in November. I read:

The national committee will take almost complete charge of the campaign this year, both the senatorial and congressional committees having been, with the consent of the chairmen, relegated to places of comparative unimportance.

I do not imagine that it is because of the failure of the distinguished Senator to measure up to the high duties that necessarily devolve upon the chairman of the senatorial campaign committee, but I sympathize with him in having been relegated to a place of "comparative unimportance" and being sidetracked in such a brutal way.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. WALSH of Montana. Mr. President, because reference has been made to that Middle West newspaper so highly commended by the Senator from Illinois [Mr. McCORMICK], I desire to call attention to an editorial which appeared in its issue of May 23, 1922, touching the bill now under consideration.

The revolt against the Payne-Aldrich law had its chief center in that great productive region of our country of which the city of Chicago is the center. The people of that locality—and I speak now of the Mississippi Valley generally and the region known as the Middle West—are generally Republican. They are generally attached to the principles of a protective tariff, but they found in that measure—the Payne-Aldrich law—so much *that* was indefensible from the standpoint of any principle of protection that there was a general revolt against it. That revolt was expressed in the Senate by the two distinguished Senators from the State of Iowa, Dolliver and CUMMINS, and by the then Senator from Kansas, Bristow, by the then Senator from Indiana, Beveridge, and others. Although no strong voice from that section has been heard in opposition to the pending bill, the Chicago Tribune, which reflects the sentiment of the people of that great productive region, has found much to criticize in it. I read the editorial to which I have referred:

WHEN TARIFF DOES NOT PROTECT.

The common argument in favor of a protective tariff is to the effect that without such tariff the products of cheap foreign labor, perhaps combined with cheap raw materials and low overhead costs, can compete so successfully with American products in American markets as to put the American competitor out of business, close his factory, or reduce his workmen to starvation wages. That is a good argument. But it doesn't always hold. There are situations in which the reverse is true.

Consider the aluminum business—

We shall be presently considering the item in the bill—

Consider the aluminum business, which we have mentioned before, not because of any antipathy but because it appears to afford a startling illustration of possible dangers in a high protective tariff. The production of crude aluminum in the United States is controlled by a monopoly—the Aluminum Co. of America. In addition to producing virtually all the aluminum smelted in this country, that concern, through its subsidiary corporations, is a large producer of fabricated aluminum, such as kitchen utensils, and incidentally makes a vast amount of aluminum castings for use in automobile manufacture.

The Senator from North Dakota, in charge of the bill, the other day when we reached the item of articles made of aluminum, particularly for household use, thought it advisable to reconsider the rates in the bill, a very judicious action on his part. I continue:

It has as competitors some 35 or 40 independent aluminum cooking utensil manufacturers and several hundred independent aluminum foundries. It supplies these independents with ingots and sheets from which their products are manufactured. It is frequently delayed in filling orders for such materials. The better business becomes and the greater the demand for materials the more likely is the supply to be delayed.

Two courses then are open to the independents. They can buy abroad or close or restrict their plants. A prohibitive tariff would prevent them from buying abroad. It would also allow the monopoly to put any price it might desire upon its supplies. The effect upon these independents, employing some 10,000 men, is easily understood. It goes further than that. The average weight of aluminum used in automobiles is estimated at more than 100 pounds. The effect of protection of the monopoly upon our vast automobile business would be important.

Yet a tariff which the independents consider prohibitive, and which they say would allow the monopoly to close their plants and put their workers out of a job, is now on the schedule. And that "protection" is asked by and for a monopoly which earned more than $10,000,000 net in 1920 on a capitalization of less than $19,000,000. If such a tariff arrangement could be made in the aluminum business—

I would like to invite the attention of the Senator from Illinois to this—

If such a tariff arrangement could be made in the aluminum business, there is little doubt that a similar arrangement exists among others of the thousands of items on the bill. Such a duty does not protect. It exploits. It demands careful investigation of the entire bill.

But the Senator from Illinois would like to have us hurry the thing through without making an examination whatever of the specific items in the bill. However, the leading paper of his home city seems to commend the efforts of Democratic Senators upon this side of the Chamber in endeavoring to give to the country the facts in reference to those specific items.

Mr. McCORMICK. That very newspaper urged the ratification of the treaty of Versailles with the League of Nations. It is in error at times. The Senator will not charge me with having urged the ratification of that treaty with or without reservations.

Mr. WALSH of Montana. There is a sort of common view in this region that the Senator directs the policy of that paper.

Mr. McCORMICK. If the Senator from Montana will take the trouble to inform himself, he will learn that the Senator from Illinois has no interest in the paper; that he exercises no influence upon its policy, and has not for over a decade.

Mr. WALSH of Montana. It is a matter of no consequence to the Senator from Montana either one way or the other. It does profess to be the greatest newspaper in the world. It presumably speaks the views of a very large constituency in the region in which it circulates; at least I should imagine so. But the point I am making is that the paper, a leading Republican paper, is commending those of us who are endeavoring to scan the various items in the bill lest there shall appear to be in it thousands of items that are as open to criticism and objection as is the duty upon aluminum.

But I want to call the attention of the Senator from Illinois to this feature of it. I have no doubt the facts stated there are substantially correct. The matter of a duty upon aluminum was the subject of a very protracted discussion in the Chamber when the Underwood bill was under consideration. I say protracted discussion. A very protracted argument was made in favor of a duty upon aluminum by the then junior Senator from the State of Pennsylvania. Upon the vote taken my recollection is that it got few votes except his own and that of his colleague. But in this case we have a duty upon aluminum, and a very high duty upon the products of aluminum. If the President of the United States, under the terms of the bill, should deem that the duty placed upon aluminum does not equal the difference in the conditions of competition with respect to that article here and abroad, he can raise it, and thus put the manufacturers of aluminum products in the country, who are dependent upon the Aluminum Co. for their supply of raw material, at a greater disadvantage than they shall be subjected to by the rates fixed by the committee. In other words, the editorial calls our attention to the fact that it is impossible to apply a general rule, such as is laid down in section 316 and the subsequent sections, to all these conditions which shall arise and do justice or carry out even the principle of protection upon which the bill is said to be founded.

Mr. GERRY. Mr. President, I send to the desk a communication received by me, and ask that it may be read.

The PRESIDING OFFICER (Mr. McNARY in the chair). Without objection the Secretary will read as requested.

The Assistant Secretary read as follows:

Resolved, That we protest against the food, tableware, and women's wear schedules of the Fordney-McCumber bill. These schedules will increase the costs of living in every American home. They are fines levied by American men upon American women and upon American children. They should not be allowed to become law.

AVIS A. HAWKINS,
Director of Thrift, R. I. S. Fed. W. Clubs,
Chairman Woman's Co. on Schools.

The PRESIDING OFFICER. The communication will lie on the table.

Mr. KING. Mr. President, I think all the information that seems to be available relative to the item under consideration has been submitted to the Senate. Briefly recapitulating, it is this: We are consuming approximately 300,000 pounds of bismuth annually. A great portion of that amount is used for medicine. All who are familiar with medicines and with hospitals and with diseases know that bismuth is a very important factor in the treatment of certain kinds of diseases. Its use is becoming more important as the days go by and as advance is made in the science of medicine. Of course, there should be a desire to furnish medicines to people as cheaply as possible, and there can be no defense for any policy that seeks to increase the price of medicines. Those who believe in any tariff duties ought certainly not to ask for tariff rates upon medicine and

other commodities that are so indispensable to the health of the people.

There is produced in Bolivia, perhaps, the greatest amount of bismuth ore. Tasmania and Australia furnish some bismuth ore; China is becoming a field for the production of that ore; some little is also produced in Germany, and some is produced in the United States. It is manufactured in the United States by two smelting companies—the United States Smelting Co. and the American Smelting & Refining Co. Those companies have not erected their smelters for the purpose of producing arsenic or bismuth or a number of other by-products. Those great smelters have been erected for the purpose of reducing the sulphide ores and lead ores and other ores containing precious metals. Arsenic and bismuth are by-products. Whatever is recovered of those products is that much gain.

Now it is proposed to add further amounts to the already overflowing treasuries of those two great smelting organizations which have been denominated the Smelting Trust. It seems to me such action can not be defended at all. I think that bismuth should be in the future, as it is now and has been in the past, upon the free list. The people need it for medicine and we ought not to increase the burdens resting upon this article which is so important to the health of the people.

Mr. WATSON of Georgia. I ask unanimous consent for the present consideration of a bill——

Mr. SMOOT. Let us get at least one vote here to-day. I think we had better do so before the Senator from Georgia asks to take up another matter.

Mr. WATSON of Georgia. Very well.

The PRESIDING OFFICER. The question is on the amendment reported by the committee.

The amendment was agreed to.

Mr. WATSON of Georgia. I now renew my request for unanimous consent for the immediate consideration of the bill (S. 910) for the relief of Frank Grygla. Briefly stated, this is the case of a Government employee who was engaged in the service in Alaska, and some charge having been preferred against him, he was suspended while the charge was investigated. The investigation resulted in his complete exoneration.

Mr. SMOOT. I ask the Senator to defer his request for the present. I have written a letter to the department with reference to that bill, and I wish to get a reply and some further information before the bill is considered.

Mr. WATSON of Georgia. The bill simply gives this man relief for the time during which he was suspended.

Mr. SMOOT. I know that; but it proposes to pay him when he did not do any work for the Government and was out of the service.

Mr. WATSON of Georgia. But the Government did not let him do anything.

Mr. SMOOT. I am aware of that; but, nevertheless, the fact remains that he did not do anything; and I wish to ascertain the details of the case.

The PRESIDING OFFICER. Objection is made to the consideration of the bill. The Secretary will state the next amendment of the Committee on Finance.

The next amendment of the Committee on Finance was, on page 85, after line 7, to insert:

PAR. 376c. Metallic arsenic, 6 cents per pound.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. WALSH of Montana. Mr. President, before voting on the committee amendment, I should like to have the Senator from Utah [Mr. SMOOT] or some other member of the Committee on Finance explain that item.

Mr. SMOOT. The Senator will remember that white arsenic was placed on the dutiable list at 2 cents a pound. Metallic arsenic is made from white arsenic, and it takes about 3 pounds of white arsenic to make 1 pound of metallic arsenic. The Senator will find white arsenic provided for in paragraph 1 of the bill with a rate of duty of 2 cents a pound.

Mr. UNDERWOOD. Mr. President, both white arsenic and metallic arsenic have been taken off the free list and put on the dutiable list. I think a duty on either is unjustifiable; but, as there may be some difficulty in obtaining a quorum now, and as we will have no trouble when we reach the consideration of the free list to raise the issue with the committee on a direct vote, I am willing to let it go without a roll call at this time.

Mr. SMOOT. I think that that issue ought to be made when we take up the free list, and that white arsenic should be taken up first.

Mr. UNDERWOOD. We will take them both together at that time.

Mr. SMOOT. Yes; they may be both considered together at that time; but I wish to say that the compensatory duty upon metallic arsenic is a little over 3¾ cents a pound. If white arsenic is retained on the dutiable list at 2 cents a pound, we must give metallic arsenic a compensatory duty.

Mr. WALSH of Montana. Mr. President, I had a small part in the discussion of the duty of 2 cents a pound on white arsenic, which I think was then demonstrated to be utterly indefensible. I might here repeat that white arsenic is a by-product of the smelting of copper and lead ores. Anyone who owns a copper smelter, the ore of which contains any considerable quantity of arsenic, is obliged to take the arsenic out; otherwise, it would escape in the fumes from the smelters and destroy all vegetable and, to no little extent, animal life in the region of a very wide radius of which the smelter would be the center. There will not be a pound of arsenic produced by reason of the duty, because all there is must now be taken in some way out of the ore. I should like, however, to inquire of the Senator from Utah how I shall get confirmed the information he gives us that it takes 3 pounds of arsenious acid to 1 pound of metallic arsenic?

Mr. SMOOT. I do not know that I have the data here at this time.

Mr. WALSH of Montana. My recollection about the matter is that arsenious acid is a combination of oxygen and arsenic, with the arsenic the dominant element.

Mr. SMOOT. The Senator is wrong about that. Sulphide of arsenic is still on the free list, I will say to the Senator; it has not been taken off the free list. A duty of 2 cents a pound has been imposed on white arsenic. Metallic arsenic is made from white arsenic, and the compensatory duty is between 3½ and 3¾ cents a pound.

Mr. WALSH of Montana. Can the Senator tell me the chemical constituents of white arsenic or arsenious acid?

Mr. SMOOT. White arsenic contains 75 per cent of metal and in converting that into metallic arsenic there is a loss of at least 33⅓ per cent. If the Senator will make the calculation on the basis of the cost of white arsenic to-day, he will find the differential is about 3¾ cents a pound, considering the loss involved in conversion and the fact that white arsenic contains only 75 per cent of metallic arsenic.

Mr. WALSH of Montana. From what source does the Senator get information to the effect that it takes 3 pounds of white arsenic to make 1 pound of metallic arsenic?

Mr. SMOOT. I get it from the expert of the Tariff Commission.

Mr. WALSH of Montana. Is it published?

Mr. SMOOT. I said 3 pounds in the first place, but I should have said that there is required a compensatory duty of from 3½ to 3¾ cents a pound.

Mr. WALSH of Montana. That is the compensatory duty?

Mr. SMOOT. The compensatory duty on metallic arsenic, with the duty on white arsenic at 2 cents a pound, is from 3½ to 3¾ cents a pound.

Mr. WALSH of Montana. Exactly; that is, a duty of 2 cents a pound on white arsenic would require a compensatory duty of 3¾ cents on metallic arsenic.

Mr. SMOOT. No; more. The compensatory duty added to the 2 cents makes 5¾ cents, without giving any protection whatever in the conversion.

Mr. WALSH of Montana. That is what I am endeavoring to express. That is, a duty of 2 cents a pound on white arsenic will require, in order to be compensatory, a duty of 3¾ cents on metallic arsenic.

Mr. SMOOT. No; the compensatory duty over and above the 2 cents will be from 3½ to 3¾ cents. That would make from 5½ to 5¾ cents on the metallic, and the differential then between that and 6 cents, as provided, represents the protection that would be accorded for the conversion of it.

Mr. WALSH of Montana. That is to say it practically requires a duty of 5¾ cents in order to take care of the compensation?

Mr. SMOOT. That is, if we put a duty of 2 cents on white arsenic.

Mr. WALSH of Montana. That seems rather remarkable to me.

Mr. SMOOT. That is the result, I will say to the Senator.

Mr. WALSH of Montana. I know the Senator says so; but how does he reach that conclusion?

Mr. SMOOT. I will repeat to the Senator that white arsenic only contains 75 per cent of metallic arsenic.

Mr. WALSH of Montana. That is to say that white arsenic consists of 75 per cent arsenic and 25 per cent oxygen?

Mr. SMOOT. Yes; and then in the conversion of that there is one-third loss.

Mr. WALSH of Montana. That reduces it to 50 per cent.

Mr. SMOOT. That reduces it to more than that. It would be 50 per cent on a hundred per cent, but 75 per cent is all there is.

Mr. WALSH of Montana. Exactly; and one-third of 75 per cent is 25 per cent; so that there is 50 per cent of metallic content in a pound of white arsenic.

Mr. UNDERWOOD. Instead of multiplying by 3, you ought to add a third.

Mr. SMOOT. Without any loss whatever in the conversion, the compensatory duty that would be required is 2⅔ cents; and a loss of one-third of the 75 per cent metallic arsenic content in the process of recovery would require, as I have said, from 3½ to 3¾ cents.

Mr. WALSH of Montana. Let me inquire of the Senator who produces this product?

Mr. SMOOT. Does the Senator mean abroad or here?

Mr. WALSH of Montana. No; here. Who makes the metallic arsenic?

Mr. SMOOT. I do not know whether the United States Smelting Co. does or not, but I do know that the American Smelting & Refining Co. produces it. Both of them produce it, I understand. In fact, I suppose they produce it wherever they have bag houses to catch the arsenic.

Mr. WALSH of Montana. I am not speaking about the white arsenic. I mean, who takes the white arsenic and converts it into metallic arsenic?

Mr. SMOOT. I will say to the Senator that it was never done in this country until the war. The concern that produces the most is the Hoskins Metal Co., of New York, but there are one or two others. I will get the list, if the Senator wants it.

Mr. WALSH of Montana. What is the metal used for?

Mr. SMOOT. The great use of it is for the hardening of metals.

Mr. WALSH of Montana. Iron and steel?

Mr. SMOOT. Iron and steel and lead, particularly.

Mr. WALSH of Montana. Where do we get that information?

Mr. SMOOT. From the Tariff Commission. If I remember correctly, it is in paragraph 1553.

Mr. WALSH of Montana. I have made a very careful examination——

Mr. SMOOT. No; that is not the paragraph; but I will say to the Senator that it is here, because I have read it to-day.

Mr. WALSH of Montana. Let me suggest to the Senator that that item, which would follow very much after the article of arsenic, go over until the disposition of——

Mr. SMOOT. We have already disposed of white arsenic. Whenever we reach the free list, from which they were taken, we can reconsider white arsenic, and whatever action we take upon white arsenic, we must take the same action upon metallic arsenic; but this is simply to take care of the 2 cents duty that was put upon white arsenic.

Mr. WALSH of Montana. Very well.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The ASSISTANT SECRETARY. The next amendment is to paragraph 377, page 85, line 10, where it is proposed to strike out "ad valorem" and to insert the same words with a semicolon and the words "nickel-silver sheets, strips, rods, and wire, 30 per cent ad valorem," so as to make the paragraph read:

PAR. 377. German silver, or nickel silver, unmanufactured, 20 per cent ad valorem; nickel-silver sheets, strips, rods, and wire, 30 per cent ad valorem.

Mr. UNDERWOOD. Mr. President, the tax on this product has been very considerably increased. Under the Payne-Aldrich bill the tax was 25 per cent ad valorem on the German silver in these products. This is an old, old manufactured product. It is nothing new. It has been known in commerce for many, many years. If I recollect aright, although it is called German silver, the United States is the principal consumer and also the principal producer, and has been for many years.

This business had a tax of 25 per cent ad valorem under the Payne-Aldrich law, and, if I recollect aright, it was about the same under the Dingley law, although I have not the figures of that law before me. The industry ran along with such a degree of prosperity that the United States became one of the principal producers in the world.

When the present law was written, finding that the imports were negligible in comparison to the production—I think in 1920 the imports amounted to only 200 pounds, and for the first nine months of 1921 to 2,448 pounds, valued at $527, and before that the imports were along about the same lines—the committee that wrote the present law reduced the 25 per cent ad valorem under the Payne-Aldrich law to 15 per cent ad valorem. As I say, there has been no great increase in imports; but about the time that the present law was written the exports amounted to $38,000 as compared to very small importations, and they increased in 1917 to $410,000, and in 1920 the exports from this country had increased to $589,508, and still large exports continued in 1921, with comparatively no imports.

The House had provided a rate on this commodity of 20 per cent ad valorem. The Senate committee leave that on certain classes, but on the nickel-silver sheets, strips, rods, and wire they advance the rate to 30 per cent ad valorem.

Mr. SMOOT. Mr. President, under the existing law the duty on nickel-silver sheets, strips, rods, and wire is higher than the duty on German silver, or nickel silver. The duty under the existing law is 15 per cent on German silver, or nickel silver, unmanufactured. The Payne-Aldrich law, as the Senator has stated, imposed a duty of 25 per cent ad valorem. The House gave a duty of 20 per cent ad valorem on those items, but left the nickel-silver sheets, strips, rods, and wire to come under the manufactured clause.

Mr. UNDERWOOD. The basket clause, which is 20 per cent?

Mr. SMOOT. Twenty per cent; I mean under existing law.

Mr. UNDERWOOD. Under existing law; yes. Then the committee, under these circumstances—and that is what I am talking about—raise it to 30 per cent ad valorem.

This is not as offensive a proposition as many in the bill to a man of my viewpoint. It is more or less a slight luxury, in the sense that people of ordinary means may have some of this kind of silverware on the table when they can not have solid silver; but, still, they do not have to have it. The industry, however, was not jeopardized under the rate in the Payne-Aldrich law, because it has continued its exports into the open markets of the world, competing in the open markets of the world in the sale of this silver. In fact, there has not been very much competition against it.

Mr. SMOOT. Under the Payne-Aldrich law, however, the sheets, strips, rods, and wires bore a duty of 45 per cent under the paragraph of manufactured articles.

Mr. UNDERWOOD. I am not sure which paragraph it fell under in the Payne-Aldrich law as unmanufactured, but——

Mr. SMOOT. Just the same as under the existing law—20 per cent.

Mr. UNDERWOOD. But here is the main thing that I am talking about: Under existing law the unmanufactured article bore a rate of duty of 15 per cent ad valorem and the manufactured article 20 per cent ad valorem. The business has gone on increasing its production, and it has gone on increasing its exports. It has been exporting for many years. Away back, decades ago, it was exported. There were exports to Canada, and even to Denmark and Japan and South America, Brazil and Argentina being large consumers, where it comes directly in contact with the foreign-made product without any advantage under tariff rates.

Under these circumstances I can not see any reason on the face of the earth for this change. You are going to get no appreciable revenue out of it. I think for two or three years the revenue from this article, even with a 15 per cent tax, amounted to less than $100. It amounts to nothing as a revenue producer; but I suppose the committee found that the rate of the present law was so much, and under the general idea that any rate in the present law was too low they raised the rate.

I am not going to call for a roll call on the amendment, because if I did I am sure I would not succeed. Otherwise I would have a roll call; but this is not one of the great, important articles in this bill.

Mr. SMOOT. No; and I will say to the Senator that the only reason why these items were taken out of the basket clause of manufactures, where they have always been in every law—the Dingley law, the Wilson law, the Payne-Aldrich law, and the Underwood law—is that we wanted some kind of statistical information in relation to them.

Mr. UNDERWOOD. I am not objecting to your making a special paragraph of this; I am objecting to your rate.

Mr. SMOOT. I understand that.

Mr. UNDERWOOD. There is no reason in the world for this increase of tax. This class of silver does not require a great deal of workmanship. It is more or less pressed or molded. There is some polish on it. There is not so much labor on it. A great deal of it is a very cheap commodity, that allows people

of moderate means to decorate their tables. Of course, you may call it a semiluxury. If you were going to get real revenue out of a semiluxury, I would not object; but you do not get any revenue under the low rate and you will not get any under the higher rate. It is not a revenue-producing article, and it really would not affect it much if you reduced the rate.

Mr. McCUMBER. Mr. President, I should like to ask the Senator if he thinks we will not secure some more revenue under the little additional rate than we would if we left the law as it is?

Mr. UNDERWOOD. You have run for a number of years under the present rate with less than $100 of revenue. Possibly some of these articles will come in that really do not compete. Perhaps there are some particular forms of the article that are pleasing to the fancy that come from abroad and that create a market for themselves. It is not that they are any better; they do not come in because they are produced cheaper; they are just a fancy. You may increase the revenue $25, $30, or $50, but the only thing is that it will possibly give an excuse for the manufacturer behind that wall to raise his rates on the American people.

Mr. SMOOT. There is a resistance wire which is made from nickel that is used in different parts of the country now in electrical work, which the testimony shows was about what they wanted to protect. No one can tell how much has been imported in the past, because it has fallen in the other basket clause.

Mr. UNDERWOOD. I understand the Senator. Of course, I do not know anything about the wire. I suppose the wire made of this product is introduced here for ornamental purposes in connection with electrical work; but I really am not informed on that question. It just comes down to this: Somebody introduces some new kind of ornamental wire and says he needs protection, and in order to give the protection to that small portion of this class of commodities, you greatly increase the rate.

Mr. SMOOT. I want to say to the Senator that if we gave what this particular man wanted, this rate would not be half enough.

Mr. UNDERWOOD. I am not talking about what he wants; I am talking about how you get at it. You just throw out all of this proposition. The Senator said that was the reason why you raised the rate.

Mr. SMOOT. But in the past it has been in the class of manufactured articles.

Mr. UNDERWOOD. I understand that; but you are raising the rate, which is now 20 per cent on the manufactured article. I imagine that the cost of manufacturing this German silver into soup bowls or flower vases is very much cheaper than manufacturing it into wire, because wire is a thing you make usually by machinery entirely. Because this man wants some more protection on wire made out of this German silver, you are going to raise the rate 10 per cent to everybody who buys it. It is not a very material article, however, and I am not going to take the time of the Senate in discussing it. There are too many things in this bill of real importance to warrant us in taking up much time with this article.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment of the committee was, in paragraph 378, page 85, line 15, to strike out "engraver's" and insert "engravers'."

Mr. UNDERWOOD. That is merely a change in language. This paragraph will be discussed when there is an opportunity for the minority to offer an amendment to it, which does not present itself at this time. There is no objection to changing the language.

The amendment was agreed to.

The next amendment of the committee was, in paragraph 379, page 85, providing for a duty on aluminum, etc.

Mr. SMOOT. I ask that that paragraph may go over.

Mr. UNDERWOOD. I was going to say that that paragraph will probably lead to extended debate, and as I understand we are to adjourn early this afternoon, I think it ought to go over.

The PRESIDING OFFICER. Without objection, paragraph 379 will be passed over.

The next amendment was, in paragraph 380, on page 86, line 8, before the word "cents," to strike out "50" and insert "60," so as to make the paragraph read:

PAR. 380. Gold leaf, 60 cents per 100 leaves. The foregoing rate applies to leaf not exceeding in size the equivalent of 3⅜ by 3⅜ inches; additional duties in the same proportion shall be assessed on leaf exceeding in size said equivalent.

Mr. UNDERWOOD. Under existing law gold leaf is taxed 35 per cent ad valorem. As we have practically a monopoly of the gold of the world to-day, so far as money is concerned, I do not think much gold leaf will come in under a 35 per cent tariff. The House committee fixed 50 per cent in its bill, and the Finance Committee has raised it to 60 per cent.

I do not know that it is a matter in which the American people generally are very much interested, but I am enough interested to ask why the committee proposes to raise this rate on gold leaf from 35 to 60 per cent, when we have nearly a monopoly of the gold supply of the world now. It may be that the committee thinks we have too much gold in America. There are a great many people now arguing that theory of finance and they want to keep it all out. I would like to have the chairman advise us as to why the committee made this very great increase. I am sure I am not informed.

Mr. McCUMBER. It is a considerable increase. If the Senator will read in the tariff hearings, at page 2054, the statement of Mr. F. W. Rauskolb, representing the United States Gold Leaf Manufacturers' Association, he will get the data as to the comparative cost of manufacturing in the United States and in Germany. I will quote only this much from the evidence:

Wages: United States, $44 per week per man; Germany, 300 marks at $0.015—$4.50.
Product: 5,000 leaves of gold 3⅜ by 3⅜ inches.
Raw material: Gold. (Gold is gold the world over.)

Labor cost per 100 leaves, 3⅜ by 3⅜ inches.

United States:		
Man	$0.88	
Booking girl	.28	
Total		$1.160
Germany:		
Man	.09	
Booking girl	.024	
Total		.114
Difference		1.046

While, of course, this rate does not attempt to measure the difference in these costs, we hope it will at least approach what may be adequate protection in the United States.

Mr. SIMMONS. I infer from what the Senator has said that the importations against which he fears harm will come to the American producer are from Germany, and only from Germany.

Mr. McCUMBER. I understand that is the only place from which it is now being imported, or has been imported for some time.

Mr. SIMMONS. I do not know about that. There is nothing in the Tariff Commission's statement which indicates that it is exported to this country from Germany. Of course, all through these schedules the assumption on the other side seems to be that everything which is imported into this country practically, especially of metals, comes from Germany, that we have no other competitor in the world except Germany, and that all these rates must be made to meet German wage conditions. There is nothing in the book which shows that these small importations, $50,000 worth, I believe, during the nine months of 1921, came from Germany. I do not say they do not come from Germany.

I do not know whence they come. It seems to me a very trifling amount of importations compared with the annual output in America, valued at $2,432,000, against $50,000 of imports. Does the Senator know that they come from Germany, and that all of them come from Germany?

Mr. McCUMBER. I am certain that is the place from which the importations have been coming. I have not the testimony upon that point here, but all the data was upon the matter of the cost in this country and in Germany, and I am certain that the evidence showed the importations were from Germany.

If the Senator will turn to page 523 of the Summary of Tariff Information he will find the following:

Imports of gold leaf were $32,482 in 1914. Later statistics follow:

Calendar year.	Quantity.	Value.	Duty.	Ad valorem rate.
	100 leaves.			*Per cent.*
1918	2,110	$1,160	$406	35
1919	59	43	15	35
1920	44,502	31,868	11,154	35
1921 (9 months)	38,000	50,053	.....	.....

Mr. SIMMONS. But there is nothing which shows that the imports come from Germany.

Mr. McCUMBER. But the Senator will find that in a few months we had imports of $60,819, as compared with only

$32,482 in 1914. That is almost double. Of course, there is not a great amount of this material being used, but it is very important to those who are producing here in the United States.

Mr. SIMMONS. That is not the point I am now raising. I admit these figures show that since 1914 the importations have increased from $32,000 to about $60,000 for the year 1921; that is true. But that is a very small amount compared with the annual production in this country of $2,432,000. Leaving that out, however, the Senator has been reading to us a statement of the wages which are paid in the German factories, and I have asked him what evidence he has that the importations to this country come from Germany. I am not aware that Germany is the only country in the world that makes gold leaf, and why should the Senator assume that it comes from Germany unless he has the facts?

Then, again, Mr. President, the vice of this whole business, which permeates the bill from one end to the other, is the contention that we must lay duties which will exclude German products, which are said to be underselling the products of all the balance of the world, without any reference to the effect the high rates of duty which are necessary for that purpose will have upon our trade with every other country in the world.

Mr. WALSH of Montana. But why restrict it to Germany? Is it not a healthy thing to have $60,000 worth of this product come in, wherever it may come from, to compete with $2,432,000 worth of products made in this country in 1914? Why should we fix a tariff so as to absolutely shut out the foreign product; and is not that the actual condition of things with reference to a multitude of these items?

Mr. SIMMONS. If you put it high enough to shut out Germany, of course you absolutely shut out all the balance of the world.

Mr. WALSH of Montana. Undoubtedly. That is the thing I want to get at. Does the Senator believe that the introduction of foreign goods in any quantity is desirable, or would he have foreign goods excluded altogether? In 1914 there were $32,000 worth imported. It appears that in 1922, eight years afterwards, the imports went up to as high as $60,000, as against a production of $2,432,000 in this country in 1914. I daresay that has increased to probably $3,000,000 by this time. Is it not a healthy thing to have $60,000 worth coming in from the outside?

Mr. SIMMONS. The production has probably increased at equally as rapid a rate as the imports.

Mr. McCUMBER. The Senator asked me if there was any evidence whatever that this product came from Germany. Of course it is impossible to lay one's hand at a second's notice upon any definite part of the tariff hearings, but on page 27 of the Tariff Survey of 1921 I find this statement:

> Foreign production: Germany is the chief and practically the only gold or silver leaf producing nation entering foreign trade in normal times. Since 1914 much of Germany's leaf trade has been taken over by Japan, but the leaf is of poor quality and, since the Government's export embargo on gold, has ceased entirely. Imports are confined to leaf from Germany.

This shows at least that I was justified in taking the German wages. We have shown very considerable and very rapid increases in the last year or two. We have shown the difference in the cost of producing as shown by the latest evidence. I will admit there is not much imported to-day from Germany, and why? Germany has need for every ounce of gold she can get. It must be paid in reparations and in other expenses. I appreciate the difficulty just at the present time of Germany coming back immediately into the production of gold leaf in any great quantity, but I do not anticipate that condition is going to last. Taking into consideration their wages, taking into consideration the rapid increase even under the stringent conditions of gold in Germany, I can see that there is great foundation for the apprehension of the American manufacturers as to whether they will be able to hold the American market. I do not think the increase of the House rate from 50 per cent to 60 per cent, or from 35 to 60 per cent as in the bill as compared with the present law, is at all excessive.

In answer to the statement made by the Senator from Montana as to whether it is a healthy condition to have even that small proportion, I can not say. If there was danger of prices becoming too high, it might require even a greater importation, and yet even that importation might necessitate driving wages down and cost of production down very considerably in this country. I can not say definitely what effect it would have, whether it would have a healthy effect or otherwise.

Mr. SIMMONS. Mr. President——

Mr. McCUMBER. Will the Senator indulge me a moment?

Mr. SIMMONS. Certainly.

Mr. McCUMBER. There is a desire on the part of a great many Senators that we shall take a recess to-day at 4 o'clock. While I do not want to cut off debate at all upon this item, I was in hopes we might get a vote upon it this afternoon and then take a recess.

Mr. SIMMONS. If the Senator will pardon me for two minutes, so far as I am concerned, we may have a vote.

As I understand the Senator now, he claims that imports of the value of $60,000 as against a production as far back as 1914 of nearly $3,000,000 is dangerous and ought to be stopped. I am convinced that argument ought not to have the slightest weight unless we are engaged in the business of writing a prohibitive tariff.

The Senator admits that right now Germany has no gold. This is an article made out of gold. The Senator will also admit, I have no doubt that at this time the United States has at least nearly one-half of all the gold in the world. It is the only country in the world that has gold to spare. We have it locked up in our vaults. We have a billion dollars of it practically locked up in the vaults serving at present but very little good to the country.

The Senator recognizes, therefore, that in present conditions there ought to be no fear of Germany driving us out of the market in the sale of an article made of gold, of which product Germany is in possession of a very small amount, not enough to keep her currency at par, not enough to keep her currency at 1 per cent of par, while the United States has a billion dollars more than it needs for the purpose of keeping its currency at par.

There is no danger now whatever; but the Senator is legislating for a time in the future when Germany will be abundantly supplied with gold and when the United States probably will not have much more gold than is needed for the purpose of keeping its currency at par. That day may come, Mr. President, but I do not know. The time may come when gold will be possessed by Germany in greater quantities than it is by us and when we, therefore, shall be receiving her imports of gold products into America. But that day, I think, is pretty far distant. I think it is not just to the American people to impose upon them unnecessary taxation in anticipation of such an improbable and remote condition of affairs.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, before we go into executive session I want to say to Senators that from present appearances we shall have to go back to our night sessions again. I hope it will not be necessary, but I wish to give notice that unless we can do better than we have done for the last two days it will be necessary to hold night sessions.

I want to say that both the leader of the minority side and the ranking member of the minority of the Finance Committee have done everything they could to facilitate action upon the bill since last Thursday and have asked their side and others to desist from bringing in extraneous matters, but it seems that those matters will creep in anyway. I am not saying that we will hold night sessions, but I want to give notice that I shall try to hold night sessions unless we can give a greater portion of the time to the bill.

Mr. UNDERWOOD. Mr. President, I have no desire to delay the bill. I think it is a very bad bill, but the majority party has a right to pass it if it wants to do so. The bill must be debated. The country is entitled to debate and the country has profited from the debate. I have tried to cooperate with the Senator in charge of the bill to expedite it. Yesterday there was not much which came up out of the way. To-day there has been very little outside debate. The debate to-day has been on the bill, with very little exception.

I want to say to the Senator that if he wants night sessions he can "go to it." I have done my best, and if he is not satisfied we will just call it off right now, and he can go to it Monday night. I have nothing more to say about it.

I have tried to help, but I am not going to let the Senator from North Dakota threaten this side with any such proposition. If he wants night sessions he can order one for Monday night, and we will go back and fight the bill out.

Mr. McCUMBER. I do not think anyone in the Senate has ever heard anything from me that savored in the slightest degree of a threat.

Mr. UNDERWOOD. I do not mean the Senator threatens me, but he has held this side up——

Mr. McCUMBER. I am not threatening anybody.

Mr. UNDERWOOD. There has been just as much extraneous debate on the Senator's side of the Chamber as on this side.

Mr. McCUMBER. Of course, when it starts on one side of the Chamber it is answered on the other side. As I said in the beginning, the Senator from Alabama has done all he could to help expedite the bill; and I hope he will continue it on Monday, so that there will not be any necessity for a night session. I sincerely hope so. I do not want to hold night sessions. I think if we work from 11 o'clock in the morning until 6 o'clock in the afternoon no one ought to be required to remain longer; and yet the time is slipping away and we do not seem to be accomplishing anything. I am only saying this to indicate that it may become necessary to hold night sessions. I shall cooperate, and I know others here will, with the Senator from Alabama to make that unnecessary.

Mr. SIMMONS. I am glad the Senator from North Dakota takes out of his original remarks what seemed to be a threat, because the Senator knows how reluctant people are to act under the coercion of a threat. I think we all realize that it is a little difficult to go from one tariff system to another. I believe in a short time we will find that we are making progress and probably we can justify the discontinuance of night sessions. If we do not, then the Senator can go back to them.

Mr. McCUMBER. The Senator will admit that we have not made very much progress in the last two days.

Mr. SIMMONS. We did not make much progress yesterday, because nearly half the time was taken up in general debate precipitated by the speech of the Senator from Minnesota [Mr. KELLOGG] and the replies his speech invited.

Mr. McCUMBER. I am not objecting to any speech on the tariff, even though it may be a repetition of what has been stated many times. It is the extraneous matters which have taken up so much time.

Mr. SIMMONS. If the Senator will pardon me, to-day I have heard very little extraneous matter injected. The discussions have been entirely relative to the items in the bill. One or two items were discussed possibly at greater length than their importance justified.

EXECUTIVE SESSION.

Mr. McCUMBER. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened and the Senate (at 4 o'clock and 20 minutes p. m.), under the order previously entered, took a recess until Monday, June 12, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate June 10 (legislative day of April 20), 1922.

PUBLIC HEALTH SERVICE.

The following-named doctors to be assistant surgeons in the United States Public Health Service, to take effect from date of oath:

Ralph L. Lawrence.

Edwin C. Sorens.

These doctors have passed the necessary examination required by law.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

ADJUTANT GENERAL'S DEPARTMENT.

Maj. Samuel Greaner Talbott, Infantry, with rank from July 1, 1920.

Maj. Henry Henderson Pfeil, Finance Department, with rank from July 1, 1920.

ORDNANCE DEPARTMENT.

Capt. George Walter Hirsch, Coast Artillery Corps, with rank from August 23, 1920.

PROMOTION IN THE NAVY.

MARINE CORPS.

Second Lieut. Edward F. O'Day, to be a first lieutenant in the Marine Corps from the 1st day of July, 1921.

POSTMASTERS.

ARIZONA.

Lutie Paxton to be postmaster at Flagstaff, Ariz., in place of C. F. Heisser, resigned.

COLORADO.

Richard H. Brown to be postmaster at Silverton, Colo., in place of W. N. Haas, resigned.

GEORGIA.

John H. Pullen to be postmaster at Meigs, Ga., in place of Thomas Davis, resigned.

IDAHO.

Omer S. Cordon to be postmaster at Rigby, Idaho, in place of Lida Cox. Incumbent's commission expired March 8, 1922.

ILLINOIS.

Hoyt B. Kerr to be postmaster at Brookport, Ill., in place of W. T. Holifield. Incumbent's commission expired February 4, 1922.

KENTUCKY.

Henry C. Mann to be postmaster at Kevil, Ky., in place of Morgan Kuykendall. Incumbent's commission expired July 21, 1921.

MAINE.

Roger S. McGown to be postmaster at Carmel, Me., in place of L. C. Whitten, resigned.

Carroll M. Richardson to be postmaster at Westbrook, Me., in place of C. S. Eastman, deceased.

MARYLAND.

Mary C. Worley to be postmaster at Riverdale, Md., in place of A. C. Klinger. Incumbent's commission expired January 24, 1922.

MINNESOTA.

George N. Breher to be postmaster at Wadena, Minn., in place of Christian Hunsinger, deceased.

MISSISSIPPI.

Henry C. Majure to be postmaster at Newton, Miss., in place of C. W. Carr. Incumbent's commission expired July 21, 1921.

MISSOURI.

Charles E. Colinot to be postmaster at Monticello, Mo. Office became presidential April 1, 1921.

Rachel Pinkley to be postmaster at Portageville, Mo., in place of Olive DeLisle, resigned.

NEW MEXICO.

Arthur W. Lyckman to be postmaster at Madrid, N. Mex. Office became presidential April 1, 1922.

NEW YORK.

Henry L. Parker to be postmaster at Scarboro, N. Y. Office became presidential April 1, 1922.

George W. Steele to be postmaster at Brockport, N. Y., in place of J. W. Larkin. Incumbent's commission expired January 27, 1920.

De Witt C. Talmage to be postmaster at East Hampton, N. Y., in place of J. F. Gilmartin. Incumbent's commission expired May 6, 1920.

Fisher M. Joslin to be postmaster at Voorheesville, N. Y., in place of J. F. Joslin, declined.

NORTH CAROLINA.

William D. Holland to be postmaster at Dunn, N. C., in place of E. T. Lee. Incumbent's commission expired July 21, 1921.

Francis D. Gibson to be postmaster at Gibson, N. C., in place of W. Z. Gibson. Incumbent's commission expired January 8, 1921.

James B. Fagg to be postmaster at Leaksville, N. C., in place of W. H. Lane, resigned.

John W. Gilliam to be postmaster at Sanford, N. C., in place of S. V. Scott. Incumbent's commission expired January 24, 1922.

Walter D. Warren to be postmaster at Sylva, N. C., in place of H. R. Hastings. Incumbent's commission expired April 6, 1922.

OHIO.

Arthur L. Behymer to be postmaster at Cincinnati, Ohio, in place of J. C. Clore, resigned.

Sage P. Deming to be postmaster at Rocky River, Ohio, in place of S. P. Deming. Incumbent's commission expired April 16, 1922.

OKLAHOMA.

Clinton L. Rogers to be postmaster at Caney, Okla. Office became presidential January 1, 1921.

William E. Nevin to be postmaster at Jet, Okla. Office became presidential January 1, 1921.

William F. Hutton to be postmaster at Oakwood, Okla. Office became presidential January 1, 1921.

William E. Baker to be postmaster at Ripley, Okla. Office became presidential January 1, 1921.

Joseph E. Spurrier to be postmaster at Beaver, Okla., in place of J. A. Miller. Incumbent's commission expired January 17, 1920.

Levi R. Gray to be postmaster at Dover, Okla., in place of J. L. Lillibridge. Incumbent's commission expired February 4, 1922.

OREGON.

Amanda E. Bones to be postmaster at Carlton, Oreg., in place of M. O. Vail. Incumbent's commission expired August 26, 1920.

PENNSYLVANIA.

John E. Anthony to be postmaster at East Berlin, Pa. Office became presidential July 1, 1920.

Arnold E. Ewing to be postmaster at Newtown Square, Pa. Office became presidential April 1, 1922.

Edward Bayley to be postmaster at Picture Rocks, Pa. Office became presidential April 1, 1922.

Harry A. Fuellhart to be postmaster at Tidioute, Pa., in place of F. W. Engle, removed.

SOUTH CAROLINA.

Jean C. Sloan to be postmaster at Pendleton, S. C. Incumbent's commission expired March 18, 1922.

SOUTH DAKOTA.

Sadie E. Gustafson to be postmaster at Buffalo Gap, S. Dak. Office became presidential April 1, 1922.

TENNESSEE.

Rufus T. Hickman to be postmaster at Lynnville, Tenn., in place of M. B. Burford, resigned.

Mahlon H. Webb to be postmaster at Pulaski, Tenn., in place of J. S. Gilbreath, deceased.

TEXAS.

James F. Painter to be postmaster at Wolfe City, Tex., in place of W. R. Sharpe. Incumbent's commission expired January 24, 1922.

UTAH.

Beatrice E. Hemphill to be postmaster at Helper, Utah, in place of T. C. Smiley, removed.

VIRGINIA.

Annie Allee to be postmaster at Temperanceville, Va. Office became presidential January 1, 1922.

WASHINGTON.

William C. Black to be postmaster at Lowell, Wash. Office became presidential January 1, 1921.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 10 (legislative day of April 20), 1922.

COLLECTOR OF INTERNAL REVENUE.

David C. Bennington to be collector of internal revenue for the district of Oklahoma.

POSTMASTERS.

ARIZONA.

William A. Fowler, Tombstone.

CALIFORNIA.

Earl C. McWayne, Firebaugh.

CONNECTICUT.

Paul N. Shailer, Chester.

GEORGIA.

William M. Redman, Jackson.

ILLINOIS.

Ancel R. Dion, Clifton.
Susan Gilman, La Harpe.

NEW JERSEY.

John R. Allaire, Farmingdale.

NEW YORK.

Arthur E. Brundage, Newburgh.
Augustus P. Altemeier, Port Jervis.

OHIO.

Ferne V. Boone, Sterling.

PENNSYLVANIA.

Andrew L. Coffman, Phoenixville.
Florence H. Gray, Rosemont.
Reuben J. Knox, Rutledge.

PORTO RICO.

Leonidas M. Lopez, Camuy.

UTAH.

Stephen F. Stephensen, Riverton.

WYOMING.

David Miller, Cumberland.

HOUSE OF REPRESENTATIVES.

SATURDAY, *June 10, 1922.*

The House met at 12 o'clock noon.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

To Thee, O God, out of the busy voices of life we lift our breath of prayer. Give us the understanding that nourishes, restores, and establishes the way that we should go. The height and the depth, the length and the breadth of Thy nature we do not know, but grant that we may grow toward it with fine apprehension. O prepare us by gain and loss, by joy and sorrow to rise above all things false and to know Thee. When our sunset pales to dusk may the light of the past show us the way and bid us rest. Through Christ. Amen.

The Journal of the proceedings of yesterday was read and approved.

DESIGNATION OF SPEAKER PRO TEMPORE.

The SPEAKER. The Chair expects to be absent on Monday and Tuesday of next week, and designates the gentleman from Massachusetts [Mr. WALSH] to act as Speaker pro tempore in his absence.

EXTENSION OF REMARKS.

Miss ROBERTSON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the present economic conditions as affecting American homes.

The SPEAKER. The lady from Oklahoma asks unanimous consent to extend her remarks in the RECORD on the present economic conditions as affecting American homes. Is there objection?

There was no objection.

Mr. NEWTON of Minnesota. Mr. Speaker, I ask leave to extend my remarks in the RECORD by inserting an address delivered by the Director General of Railroads before the Western Railway Club at Chicago, Ill., on the aftermath of Federal control.

The SPEAKER. The gentleman from Minnesota asks unanimous consent to extend his remarks in the RECORD by printing an address of the Director General of Railways on the aftermath of Federal control.

Mr. GARRETT of Tennessee. Reserving the right to object, Mr. Speaker, when was the address delivered?

Mr. NEWTON of Minnesota. It was delivered by Director General Davis on the 15th of May last. It contains some very interesting information and statistics in reference to Federal control and liquidation under Federal control.

Mr. GARRETT of Tennessee. For the present, Mr. Speaker, I will object.

Mr. GRIFFIN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an address of the Hon. LESTER D. VOLK, Representative from the tenth district of New York, at the annual Memorial Day service, Veterans of Foreign Wars of the United States, Long Meadow, Prospect Park, Brooklyn, N. Y., on Sunday, May 28, 1922.

The SPEAKER. The gentleman from New York asks unanimous consent to extend his remarks in the RECORD by printing an address of the gentleman from New York [Mr. VOLK] at the annual Memorial Day service in Brooklyn, N. Y., on Sunday, May 28, 1922. Is there objection?

There was no objection.

The address is as follows:

MEMORIAL DAY ADDRESS OF HON. LESTER D. VOLK, REPRESENTATIVE FROM THE TENTH DISTRICT, NEW YORK, AT THE ANNUAL MEMORIAL DAY SERVICE, VETERANS OF FOREIGN WARS OF THE UNITED STATES, LONG MEADOW, PROSPECT PARK, BROOKLYN, N. Y., ON SUNDAY, MAY 28, 1922.

Comrades and friends, we are here assembled this Memorial Day to commemorate our Nation's dead—to strew flowers, emblems of peace and love, over their final resting places; to recount their glorious deeds of valor and patriotism; and to express our love and gratitude for their service and devotion.

To all Americans, whether by birth or adoption, Memorial Day should stand out as especially sacred, sanctified, glorified.

As one standing on a high eminence or lofty hill obtains a more extensive view of his surroundings and his thoughts and emotions grow more profound and intensive, so, as each year passes, standing on this eminence, we scan the horizon with greater vision, we hold our Memorial Day with more profound love and with deeper understanding.

Comparatively few years ago Memorial Day was observed in but a small part of this country. On this day a few high-minded women of the North resolved that the graves of the "boys in blue," so sadly neglected and unhonored, should be decorated with flowers and preserved to honor. Gradually this observance grew in extent and significance until it now embraces almost the entire country, and is set aside as a day of consecration and loving tribute the living pay to all our heroic dead.

Lest our Memorial Day shall become a meaningless form, let us ever keep in our hearts and minds the true meaning and significance of this day and these services. Let us feel the sacred inspiration from

their matchless deeds and devotion; let us learn the glorious sermon their sublime sacrifice has to impart; let us highly resolve to emulate their splendid example of heroic patriotism and duty, so as to be worthy of the great and wonderful heritage they left us.

We are not gathered here to awaken those bitter memories of bloodshed and slaughter, of rapine and devastation, of carnage and sufferings. We are not assembled this day to rekindle those vengeful fires of passion and hate or to swear over their graves eternal vengeance against our former enemies. We are not here this day to recount their deeds of valor and heroism that we may exult over their defeated adversaries. We are not here to glorify or to exalt the glamor of militarism or to perpetuate the lust for warfare or bloodshed.

Thank God, we are free from any such base and un-American purpose; that our cherished American principles and ideals are free from hypocrisy and sham; that the American Nation has ever been and, with the grace of God and our eternal vigilance, ever shall be the champion of justice, liberty, and humanity. That is the lessen our heroic dead teaches us; that is their heritage to us; that is the inspiration the living receive from the dead.

In the broad pages of history, from the dark ages of feudalism to the true light of civilization, no nation has had such a glorious, untarnished, and undimmed record of service, devotion, and sacrifice in behalf of principle and ideals. America, conceived and born in liberty and dedicated to the principle that all men are created equal, has ever sought and fought to perpetuate these blessings to all men and to all nations of this earth. May we never depart from such ideals and principles.

From the time of the Declaration of Independence, when with one stroke of the pen the shackles of servitude were broken, the bandage of blindness and ignorance torn from the eyes and minds of men, to the present moment when our power and might helped crush military despotism and tryranny, America has been in the forefront fighting for justice, liberty, and humanity.

The American flag blazed the path of civilization against the savage Indian tribes, the Mexicans, and the pirates of Morocco and Tripoli, and by fire and the blood and sacrifices of our heroic dead brought order and progress through the tangled wilderness. It was by the blood and sacrifice of countless thousands of these silent dead that we crushed out the last vestige of human slavery in our great Civil War—slavery not only of the human body, but of human minds and souls. At this terrible cost and sacrifice the great American ideal and principle was purified, perfected, and perpetuated to the world—that human beings were created not only equal, but that they must be forever free.

Then came the Spanish-American War, and the world again saw that we were still ready and willing to bare our breasts and bleed and die, if necessary, in the fight of justice and liberty against cruelty and oppression. When we liberated Cuba, the other nations of the world were amazed and wonderstruck. They were not accustomed to see any nation, and especially our Nation, whom in their ignorance or misunderstanding they painted as grasping and mercenary, actuated by such lofty, unselfish, and noble principles. And our noble actions and treatment of China during the boxer uprising set such a splendid example that the other world powers were shamed into treating China justly and humanely. It was out of gratitude to this country for such treatment that China set aside millions of dollars to send her brightest young men to America to be educated. That is why China entered into the World War on the side of the Allies.

Again we had showed the world that we held principle above gain, honor above money, right above might.

Then came that supercatastrophe, that curse and blot upon civilization, the great World War. We again entered into the fight for humanity. It is not mine to describe the enormity, the terrible havoc and loss, the excruciating agony, suffering, and carnage that human—or inhuman—ingenuity could devise and inflict on tortured mankind. It is too freshly seared on our hearts and memory to require me to picture it again. The staggering, horrible cost; the thousands and tens of thousands of splendid, happy, clear-eyed, clean-limbed young men, in the prime of their youth, who laid down their lives; the crushed and ruined hopes and dreams, the blighted lives of those who love and were loved by the maimed and these dead.

Who can count the full cost and the stupendous price they paid that humanity and justice might live? Yet they gladly laid down their all, their lives and hopes, at the altar of right and democracy.

They sprang to arms not for conquest, not for revenge, not for glory, not for indemnity, not for reward. They fought only to preserve and safeguard the principles of peace and humanity and to crush any force or power that threatened to destroy those principles. That is what they fought and died for; that is their simple but glorious destiny and contribution to mankind; that is their part in the vast scheme of the universe. That is the great debt and gratitude we, the living, owe to them, our martyred dead.

From their dying grasp they threw the torch of civilization to us that we might "carry on" the glorious work for which they gave their lives. If we fail them, they can not sleep. If we do not "carry on" their work, they will have died in vain.

But these hallowed dead have not died in vain. We will not be false to our trust. Justice to the dead and duty to the living alike demand that we transmit and carry on the glorious and inspired work they have begun—that tyranny and might shall be wiped from this earth and justice and right shall prevail and rule all mankind. Let us not be dismayed that we are still far from our goal; that there is still much injustice and inhumanity in this country and in the world; that there is still hunger and poverty and crime; that clouds and dangers still threaten the horizon; that we are still far from that rule of peace and love we all so long and pray for. But we are headed in the right direction. It is not so much where we are to-day that counts as much as in what direction we are traveling. And when finally Heaven sends this war-stricken and tortured world the true light of peace it will be found that this glorious Nation shall have ever been in the vanguard and the torchbearer.

But as we remember our beloved dead, let us not forget our heroic living; those brave boys who bared their breasts on the same battle fields, who shared the same dangers, the same sufferings, but who were spared from the same fate by Divine Providence, and were not called upon to make the supreme sacrifice for their devotion.

As I look about me I recognize many of those boys who served with me "over there." To them and you I say do not think that we have forgotten; do not think that this Government and Nation will for long neglect and overlook their debt and gratitude to you, the living. We will soon see a memorial day for the living as well as our heroic dead, warriors, and defenders.

Oh why do we grudge our sweets so to the living
Who have at best too much of gall,
And then with open, generous hands kneel, giving
Unto our dead our all?

What care the dead for the gentle token,
The gift, the praise, the floral offerings,
When living, palpitating hearts are broken
For want of just these things?

Will not the dead rest easier, will they not sleep more peacefully and sweetly in their last resting places in the knowledge and faith that we have been honest and just to their living comrades in arms?

Shall we not say to the dead, "You have not died in vain," and to the living, "You have not fought in vain"?

May their rest remain unbroken, and we, who must sooner or later join them, may we share as honored a resting place until the hour cometh when "the dead shall hear the voice of God." May he grant that when that voice sounds they that sleep in these soldiers' graves shall hear and live.

May posterity show to us, the living, what we to-day, by these simple services and ceremonies, by our love and honor and undying gratitude, show to our glorious dead.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had passed bill of the following title, in which the concurrence of the House of Representatives was requested:

S. 3659. An act to create the White House police force, and for other purposes.

ENROLLED BILLS SIGNED.

Mr. RICKETTS, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled bill of the following title when the Speaker signed the same:

H. R. 9981. An act making appropriations for the Executive and for sundry independent executive bureaus, boards, commissions, and offices, for the fiscal year ending June 30, 1923, and for other purposes.

The Speaker announced his signature to enrolled bills of the following titles:

S. 2014. An act to provide for the settlement of small holding claims on unsurveyed land in the State of New Mexico.

S. J. Res. 173. Joint resolution authorizing the President to appoint a special mission of friendship, good will, and congratulation to represent the Government and people of the United States at the centennial celebration of the independence of Brazil.

S. 1911. An act to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to its appropriate committee, as indicated below:

S. 3659. An act to create the White House police force, and for other purposes, to the Committee on Public Buildings and Grounds.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted as follows:

To Miss ROBERTSON indefinitely, on account of important business.

To Mr. BLAND of Virginia, for Monday next, on account of important business, and for Tuesday, attending city election.

To Mr. BURTON, for 10 days, on account of important business.

To Mr. PADGETT, indefinitely, on account of illness.

ADJOURNMENT.

Mr. MONDELL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 12 o'clock and 13 minutes p. m.) the House adjourned until Monday, June 12, 1922, at 12 o'clock noon.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. LANGLEY: Committee on Public Buildings and Grounds. H. R. 11731. A bill to provide for the renting of the first floor of the customhouse at Mobile, Ala., to the Mobile Chamber of Commerce; with an amendment (Rept. No. 1086). Referred to the Committee of the Whole House.

Mr. LANGLEY: Committee on Public Buildings and Grounds. S. J. Res. 192. A joint resolution providing for survey of the Potomac River banks and adjacent lands from Washington, D. C., to Great Falls, with a view to possible extension of the

District park system; without amendment (Rept. No. 1087). Referred to the Committee of the Whole House on the state of the Union.

Mr. SINNOTT: Committee on the Public Lands. S. 3425. An act to continue certain land offices, and for other purposes; with amendments (Rept. No. 1088). Referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HICKS: A bill (H. R. 11983) authorizing the acquisition of certain sites for naval aviation stations; to the Committee on Naval Affairs.

By Mr. BARBOUR: Resolution (H. Res. 303) for the immediate consideration of H. R. 7452; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BEGG: A bill (H. R. 11984) granting a pension to Jacob Gish; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5971. By Mr. KISSEL: Petition of the Volunteer Officers of the Civil War, Kansas City, urging the passage of House bill 4097; to the Committee on Invalid Pensions.

5972. Also, petition of Thomas B. Felder, Esq., New York City, N. Y., relative to charges made against him in the Senate; to the Committee on the Judiciary.

5973. By Mr. SMITH of Idaho: Resolution adopted by the Idaho State convention of the Knights of Columbus, held at Twin Falls, Idaho, in opposition to the Sterling-Towner bill, to create a department of education, to authorize appropriations for the conduct of said department, to authorize the appropriation of money to encourage the States in the promotion and support of education, and for other purposes; to the Committee on Education.

5974. Also, resolution adopted by the Idaho State convention of the Knights of Columbus, held at Twin Falls, Idaho, in support of claims for compensation by wounded and disabled veterans of the World War; to the Committee on Interstate and Foreign Commerce.

SENATE.

MONDAY, *June 12, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Brandegee	Gooding	McCumber	Sheppard
Bursum	Hale	McKinley	Shortridge
Cameron	Harris	McLean	Simmons
Capper	Harrison	McNary	Smoot
Culberson	Johnson	Myers	Spencer
Curtis	Jones, N. Mex.	Newberry	Sterling
Dial	Jones, Wash.	Nicholson	Underwood
Dillingham	Kendrick	Norbeck	Walsh, Mass.
Ernst	Keyes	Oddie	Walsh, Mont.
Fernald	King	Overman	Watson, Ga.
France	Ladd	Phipps	Watson, Ind.
Gerry	La Follette	Ransdell	Willis
Glass	McCormick	Rawson	

Mr. CURTIS. I was requested to announce that the Senator from Nebraska [Mr. NORRIS] and the Senator from Alabama [Mr. HEFLIN] are engaged in a hearing before the Committee on Agriculture and Forestry.

Mr. UNDERWOOD. I wish to announce that the senior Senator from Florida [Mr. FLETCHER] is absent on account of illness. I ask that the announcement may stand for the day.

The VICE PRESIDENT. Fifty-one Senators have answered to their names. A quorum is present.

PETITIONS.

Mr. TOWNSEND presented a petition of the Cook & Feldher Co., of Jackson, Mich., praying for the imposition in the pending tariff bill of only a moderate duty on cotton gloves, which was referred to the Committee on Finance.

He also presented petitions of sundry merchants and citizens of Jackson and Grand Rapids, Mich., praying for the imposition in the pending tariff bill of only a moderate duty on kid gloves, which were referred to the Committee on Finance.

He also presented resolutions adopted by members of the faculties of the Central High School and the Junior College, both of Grand Rapids, Mich., favoring the granting of relief to the afflicted peoples of Armenia, Anatolia, and Asia Minor now alleged to be suffering from severe Turkish atrocities, which were referred to the Committee on Foreign Relations.

Mr. WILLIS presented petitions of sundry citizens of Youngstown, Cleveland, Girard, and Sidney, all in the State of Ohio, praying for the imposition in the pending tariff bill of only a moderate duty on cotton gloves, which were referred to the Committee on Finance.

REPORTS OF THE COMMITTEE ON CLAIMS.

Mr. CAPPER, from the Committee on Claims, to which were referred the following bills, reported them each without amendment and submitted reports thereon:

A bill (H. R. 1723) for the relief of Edward J. Schaefer (Rept. No. 763); and

A bill (H. R. 7695) for the relief of James E. Connors (Rept. No. 764).

He also, from the same committee, to which were referred the following bills, reported them each with an amendment and submitted reports thereon:

A bill (S. 162) for the relief of Sarah Shelton (Rept. No. 765); and

A bill (S. 528) for the relief of the widow of Rudolph H. von Ezdorf, deceased (Rept. No. 766).

ENROLLED BILLS AND JOINT RESOLUTION PRESENTED.

Mr. SUTHERLAND, from the Committee on Enrolled Bills, reported that on June 12, 1922, they presented to the President of the United States the following bills and joint resolution:

S. 1911. An act to amend an act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September 7, 1916;

S. 2014. An act to provide for the settlement of small holding claims on unsurveyed land in the State of New Mexico; and

S. J. Res. 173. Joint resolution authorizing the President to appoint a special mission of friendship, good will, and congratulation to represent the Government and people of the United States at the centennial celebration of the independence of Brazil.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. BRANDEGEE:

A bill (S. 3701) for the relief of Blattmann & Co., of Waedenswil, Switzerland (with the accompanying copy of a letter from the Minister of Switzerland to the Department of State, which was ordered to be printed); to the Committee on Foreign Relations.

By Mr. BURSUM:

A bill (S. 3702) providing for the acquirement by the United States of privately owned lands situated within certain townships in the Lincoln National Forest, in the State of New Mexico, by exchanging therefor lands on the public domain also within such State; to the Committee on Public Lands and Surveys.

By Mr. SPENCER:

A joint resolution (S. J. Res. 208) authorizing the Federal Reserve Bank of St. Louis to enter into contracts for the erection of buildings for its head office and branches; to the Committee on Banking and Currency.

AMENDMENT TO HOUSE RIVER AND HARBOR BILL.

Mr. RANSDELL submitted an amendment providing that $1,000,000 appropriated in Public Resolution No. 50, Sixty-seventh Congress, approved April 21, 1922, for the preservation, protection, and repair of levees under the jurisdiction of the Mississippi River Commission, be not carried to the surplus fund of the Treasury, but that said sum be authorized to be appropriated for use under the terms of the flood control act of 1917, subsequent to April 21, 1922, etc., intended to be proposed by him to House bill 10766, the House river and harbor authorization bill, which was referred to the Committee on Commerce and ordered to be printed.

ADDRESS BY SENATOR WALSH OF MONTANA.

Mr. SWANSON. Mr. President, the senior Senator from Montana [Mr. WALSH] delivered an unusually able and eloquent address before the Virginia Bar Association at Lynchburg, Va., on the 8th instant, concerning the regulation of the jurisdiction of the Supreme Court of the United States. It bears directly upon a matter which is pending in the Senate, and I ask unanimous consent that it may be printed in the RECORD in 8-point type.

There being no objection, the address was ordered to be printed in the RECORD in 8-point type, as follows:

[Address delivered at Lynchburg, Va., June 8, 1922, by Senator WALSH of Montana.]

THE OVERBURDENED SUPREME COURT.

Considering the extraordinarily brilliant history of the bar of the State of Virginia and the many distinguished lawyers who have periodically addressed meetings of it, I count myself signally honored in being invited to speak to-day before this assemblage, regretting only that the exactions of my official duties have compelled me to select a subject to which, in the discharge of them, I have been required to give some thought.

The current session of Congress has been singularly prolific in questions, the solution of which involved the study of our fundamental law or the wisdom of departure from policies dating from the time of those who gave us that great charter. The scope and effect of the fourth amendment, assuring the people against unreasonable searches and seizures, became the subject of spirited controversy in connection with the supplementary prohibition legislation, commonly referred to as the "beer bill," and in the investigation into what are known as the "red raids," prosecuted during the winter of 1919 and 1920. The right of Congress to adjust through a commission the obligations due to our Government from foreign nations, arising out of loans made during the war and transactions incident thereto, amounting in the aggregate to approximately $11,000,000,000, was challenged, it being contended that the conduct of negotiations with foreign powers is, by the Constitution, reposed exclusively in the President, who alone is authorized to enter into agreements with such, subject to approval by the Senate, and further, that if the power is legislative in character rather than diplomatic, or if Congress has concurrent authority, it can not delegate the authority with which the people have intrusted it in that regard to a commission whose acts bind our Government, without the necessity of subsequent approval by Congress, or either branch thereof.

The appointment of a Senator and a Member of the House on the commission just mentioned, both of them serving as such at the time the act creating it was passed, gave rise to another question of constiutional construction which was, on the nominations being submitted to the Senate, referred to the Committee on the Judiciary, whose advice to the effect that the Constitution forbade their appointment was ignored by the Senate.

The antilynching bill precipitated in the House a stout contest over the scope and effect of the post-war amendments to the Constitution, which will probably be renewed in the Senate.

The pending tariff bill has been assailed because of what are referred to as the "elastic" provisions thereof, authorizing the President to raise or lower the rates or to change the classification or form of the duty, in order to, and to such an extent as shall, "equalize the conditions of competition in trade" in the markets of the United States as between the foreign and domestic product.

In the discussions attending the consideration of the questions referred to, involving the Constitution as originally framed, a purpose is professed to discover and give effect to the intention and to carry out the plan of the wise founders of our Government.

Another measure pending in the House proposes a radical departure from the system devised by them as a part of the machinery of government contemplated by the Constitution, to which your thoughtful consideration is invited. It is a bill the avowed purpose of which is to relieve the Supreme Court of the burden of a supposedly overcrowded calendar, which end is to be achieved by a further amendment of the judiciary act of 1789.

Notwithstanding the mutations undergone by that justly celebrated law, the work largely, if not entirely, of Oliver Ellsworth, member of the Constitutional Convention, United States Senator and Chief Justice of the United States, necessitated by the multiplication of causes reaching it consequent upon the phenomenal growth of our country and the expansion of the field of activity of the Federal Government, none of them impaired the right guaranteed by the act to have reviewed in the Supreme Court, as a matter of right and not of favor, a Federal question determined by a State court against the party invoking it until the passage of the act of September 6, 1916, now appealed to in support of the bill referred to as a precedent for a further encroachment upon the principle just mentioned.

The accumulation of business in the Supreme Court moved Congress, as early as 1875, to exclude from consideration by it appeals in civil causes in which the amount involved was less than $5,000, $2,000 being the minimum fixed in the Ellsworth Act. The act of 1875 made another interesting change in requiring that in causes of admiralty or maritime jurisdiction the review of the Supreme Court should be limited to the determination of questions of law arising on the record, closing the opportunity in such cases to introduce additional evidence in the appellate tribunal, a right which was recognized by the act of March 3, 1803, amending the act of 1789, which, after providing for filing a transcript of the record on appeal in cases of equity, of admiralty or maritime jurisdiction, and of prize or no prize, had this added clause, "and that no new evidence shall be received in the said courts on the hearing of such appeal, except in admiralty and prize causes." Whether the Supreme Court ever did take additional evidence in such causes or whether prior to the act of 1803 the right to submit such on any appeal was ever claimed or exercised, excited, I confess, my curiosity, though I found no time to satisfy it.

Further relief was afforded indirectly by the act of March 3, 1887, corrected by the act of August 13, 1888, with which the bar is familiar, occasioned by the growth of the business of the Federal courts generally, the main features of which were the increase of the minimum money value involved in order to entitle the litigant to bring in or to remove to a Circuit Court a civil cause from $500 to $2,000, since raised to $3,000, and the requirement, in the case of actions founded on diversity of citizenship, that they be brought in the district of the residence of either plaintiff or defendant.

These innovations were but palliative, however, and the Circuit Courts of Appeals came into existence by the act of 1891 as a thorough-going solution of the serious problem presented by the accumulation of business before the Supreme Court, in consequence of which it was nearly, not quite, four years in arrears. It introduced the idea of a review in the Supreme Court, by grace and not by right, created a permissive, as well as an obligatory, jurisdiction, the former to be exercised by certiorari in civil causes in which the Federal jurisdiction was originally invoked by reason of diverse citizenship or alienage, the latter by appeal or writ of error when it depended upon the existence of a Federal question. The limitation in that act of the right of review in all cases brought in or removed to the District Courts because of diversity of citizenship to the new courts created by it is eminently just. It is exceedingly questionable as to whether the time has not passed when the Federal courts should be burdened with litigation of that character.

The conditions which gave rise to the provision of the Constitution extending the Federal jurisdiction to such causes have all but passed away, if they were not always wholly imaginary. We have ceased to be an aggregation of warring States, suspicious of each other, the people of each harboring hostile sentiments toward those of every other or some other, likely to be manifested in civil suits by judges and juries. I am sure a citizen of Virginia would suffer no disadvantage in the courts of Montana against a citizen of that State before any judge or before any jury to which both were unknown, or equally well known, and I can not believe that as much can not be said for the courts and juries of this Commonwealth.

Should a federation of the States of Europe ever be organized on the lines of our Union it would undoubtedly be wise, in view of the hatreds engendered by the recurrent wars among them since before the dawn of history, the differences in language and religion and many other circumstances tending to perpetuate the heterogeneity that prevails, to make provision for the trial of causes in the general rather than the local courts at the instance of a litigant being a citizen of a State other than that in which the suit is brought or to be brought. Happily no such condition prevails here. But even under the adverse conditions that now obtain in Europe there seems to be, outside of Russia, no such denial of justice by the courts of one country thereof with respect to the citizens of another as, save in rare instances, to provoke diplomatic interference or to be any serious obstacle to trade. It may be gravely questioned whether there is any justification whatever for continuing the favor accorded by our Federal judicial system to litigants not

citizens of the State in which they become such, implying as it does, unwarrantedly, that their deserts would not be meted them in the courts of such State.

The change effected by the amendment of 1887–88, denying recourse to the Federal jurisdiction in civil causes in which the amount involved is less than $2,000—since raised to $3,000—though inspired by a desire to curtail the work devolving upon the Federal courts is, in fact, a confession that the principle upon which those courts are open to suitors of the class to which the act referred is unsound. The limitation fixed in the original judiciary act was doubtless intended to exclude petty cases, but not all those now excluded, being otherwise eligible, can be denominated as such.

It may be true that in our courts foreign corporations suffer to some extent from local prejudice, not because they are foreign, but because of their being, as a rule, organizations of the character that they are, representing considerable accumulations of capital. The domestic corporatin encounters the same hostility wherever it obtains, and in no less degree. The litigant who is accorded a choice of going into or having his cause removed to the Federal court, simply because his residence is in some State other than that of the forum, has no ground of complaint when he is given a right of appeal to a tribunal of equal dignity with that of the court to which his case would have gone had it been tried in the State court. One appeal is all he is entitled to.

Whatever consideration may have impelled Congress to accord to one invoking the Federal jurisdiction on the ground of diversity of citizenship, the right to apply to the Supreme Court for a writ of certiorari to review an adverse decision of the Circuit Court of Appeals, he can not contend that justice would not be done him were the judgment of that court made final. There will be occasion to refer to this subject again.

The jurisdiction over controversies between private parties depending upon alienage has little, if any, better foundation. Doubtless it was instituted partly like that arising out of diversity of citizenship on the assumption that the local courts would be subject to the influence of a prejudice against outlanders, but perhaps, as well, in the belief that the new government would be held in higher esteem abroad if it, charged with the conduct of international affairs, should undertake, in its own courts, to see that justice was done the foreigner. The policy of Hamilton, under which the National Government assumed the obligations of the States, had not yet taken shape and no little cause for distrust had been given by some of them touching their purpose to pay their own debts to subjects of other countries, or to require through the process of their courts the payment of obligations of like character by individual citizens.

Whatever may have been the occasion for according to aliens the privilege they enjoy of electing to submit their controversies at will, either to the State or to the Federal tribunals, it long since passed away. The courts of the several States have established a reputation for justice and learning which suffers in no respect by comparison with those of any country to which American citizens are from time to time obliged to resort.

From the beginning, aliens accused of crime against the laws of the several States—that is, for all ordinary crimes—have been brought to trial before the courts thereof without, so far as my information enables me to speak, a single protest upon the part of any Government against the regularity of the proceedings or the justice of the judgment or sentence. It ought not to be expected of our Government that precaution be taken to safeguard the property interests of foreigners, deemed unnecessary when their lives or their liberty are at stake. Nor is it either logical or just in the General Government by its laws even remotely to suggest that though the State courts may be trusted to try aliens for crimes alleged to have been committed by them, they are to be regarded with suspicion in respect to civil controversies to which aliens are parties.

The new procedure introduced by the Court of Appeals Act of review by certiorari was extended by the act of December 23, 1914, so as to permit the consideration by the Supreme Court of a Federal question determined by the court of last resort of a State, though the decision therein was in favor of the party relying upon such Federal question, an enlargement of the jurisdiction of the ultimate tribunal.

By the act of January 28, 1915, the writ of certiorari was prescribed as the sole method of review of judgments of the Circuit Court of Appeals in bankruptcy cases. It afforded some further incidental relief by providing that the Pacific railroads theretofore held to be entitled to invoke the Federal jurisdiction by virtue of the fact that they were organized under acts of Congress should no longer enjoy that right. This was speedily followed by another act, the purpose of which was, like that of the bill under consideration, to limit the obligatory jurisdiction of the Supreme Court, and thus enable it to give adequate consideration to causes deemed of paramount importance—the act of September 6, 1916. Besides making the final judgments and decrees of the Circuit Court of Appeals in actions arising under the railroad employees' liability act and similar acts to promote the safety of operatives engaged in interstate transportation by rail, and in apparent obliviousness of the fact that the law already so provided, judgments and decrees of such courts in bankruptcy cases reviewable by certiorari only, it made that method of review the exclusive way of getting before the Supreme Court a judgment or decree of a State court in a cause in which some "title, right, privilege, or immunity" was claimed under the Constitution of the United States, "or of any treaty or statute thereof or commission held or authority exercised under them," whether the decision was for or against the party making the claim.

The scope of the writ of certiorari was correspondingly extended so that causes which had theretofore come to the Supreme Court by right can now be heard only by grace of that tribunal, if one may appropriately or pardonably employ that expression.

The original judiciary act guaranteed a right of review in the Supreme Court from the judgments of the State courts in three classes of cases:

First. Those in which were raised the validity of a statute or treaty of or an authority exercised under the United States.

Second. Those in which were drawn in question the validity of a statute of or an authority exercised under a State on the ground that it is repugnant to the Constitution, treaties, or laws of the United States.

Third. Those in which was asserted some title, right, privilege, or immunity or authority under such Constitution, laws, or treaties.

The right of reexamination existed, however, only in the event that the decision of the State court was against the party thus relying on the Federal Constitution or laws or treaties or asserting the validity of an authority Federal in its origin.

The third class of cases, reviewable as of right since the organization of our Government, was transferred from the obligatory to the permissive jurisdiction of the Supreme Court.

There is, indeed, a basis for the distinction thus made, in that in the first two classes the constitutionality of the statute, treaty, or authority is brought into question, whether it be State or Federal, measured by the limitations in the fundamental law of the Nation. In the third there is presented only a question of the construction of the Constitution, laws, or treaties of the United States.

The act left, however, illogically, subject to review by writ of error or appeal, just such questions if they came to the Supreme Court from the circuit court of appeals, having been the basis of resort to the Federal jurisdiction, except they arose under the specific acts of Congress mentioned, namely, the bankruptcy act and the railroad employees' relief acts. That law is not one in the authorship of which anyone may take a just pride. Why single out those particular acts of Congress as unworthy of the attention of the Supreme Court, to be invoked as in the case of any other law enacted by it? And why shut out a question of the construction of the Constitution, or a law or treaty of the United States, or the validity of an authority exercised by them, except by permission of the court, when it comes from the highest court of a State, but admit it when it comes from the Circuit Court of Appeals; and, finally, why accord one an opportunity to be heard on a claim of being denied by a State court a right guaranteed to him by the Constitution if it is disregarded pursuant to a statute, either of the State or of the Nation, but deny him relief if his rights have been invaded or disregarded without even the justification of a statute?

The bill which gives occasion to these remarks, should it become a law, will remove in some small degree these incongruities. It makes all judgments and decrees of the circuit court of appeals reviewable by certiorari only. It further limits the obligatory and extends the permissive jurisdiction of the Supreme Court by transferring from the one to the other cases in which "is drawn in question the validity of" an authority exercised under the United States, the decision being in favor of its validity, or "an authority exercised under any State on the ground of its being repugnant to the Constitution of the United States." There would remain no obligatory jurisdiction except in cases in which a State court should deny the contention that a State statute is repugnant to the Constituion, laws, or treaties of the United States, or that a Federal statute is violative of the Constitution thereof.

The discretion to be reposed in the Supreme Court by this proposed statute is not fully expressed in the statement just

made. It would authorize the Supreme Court, upon the petition of a party, to require to be certified up to it for examination any cause, civil or criminal, pending before any Circuit Court of Appeals, including the Court of Appeals of the District of Columbia, even before judgment or decree has been rendered in such court.

The overworked writ of certiorari is further, by the bill under consideration, made the sole method of review of the judgments and decrees of the Supreme Court of the Philippine Islands. In view of the dignity given to the writ it is difficult to explain why it was not made the sole means of invoking the appellate jurisdiction of the Supreme Court.

The House Committee on the Judiciary was told by the Chief Justice that the bill is the work of the Justices of the Supreme Court. If so, it exemplifies that truism, half legal and half political, that a good court always seeks to extend its jurisdiction, and that other maxim, wholly political, so often asserted by Jefferson, that the appetite for power grows as it is gratified.

I think the act of 1916 made an unfortunate innovation in limiting the cases in which a review of the decisions of the State courts might be had as of right, and that the bill to which your attention is now directed, imposing, as it does, a further limitation, ought not to command the support of the bar at least in that respect. Let me remind you that by the act just mentioned no error of a State court touching the construction of a Federal statute can come before the Supreme Court for review except by its permission on an application for a writ of certiorari, nor, for that matter, any question of the construction or application of the Constitution of the United States, except the validity of a statute, State or national, as being repugnant to it is involved.

We have developed in the Western States a wonderful system of mining law, consisting of the acts of Congress of 1866 and 1872, and acts amendatory thereto, providing for the disposition of the mineral lands of the United States, the customs of miners to which the laws referred to give the sanction of statutory enactments, and the decisions of the courts construing and applying them. The whole system of the disposition of the public lands naturally bears a close relationship to that which is concerned exclusively with the mineral lands, and a more or less intimate knowledge of the former is essential to a full comprehension of the intricacies of the latter. So vast is the accumulation of learning with which the subject has been enriched, so prolific are the statutes relating to it in controversial questions, that a late work which must be at the hand of every lawyer in the western mining region consists of three bulky volumes. It need not be said that the amounts involved in the controversies out of which mining law as it is understood in this country has been evolved are often vast. The producing area of the Butte district, the output of which has run into billions, the richest mineral deposit the world has ever known, is not to exceed two miles square. As a rule the justices of the Supreme Court, though always masters so far as the general principles of the law are concerned and often specialists in some branch, have scarcely a bowing acquaintance with mining law, if, indeed, it is not a sealed book to them, or some of them. Moreover, a comprehension of the questions involved frequently, if not invariably, requires some familiarity, and not unusually a rather intimate familiarity, with mining geology, both to comprehend the particular proposition presented and the force and applicability of decisions to which appeal may be made. To deny a litigant a right to present to the Supreme Court a question arising under the laws of Congress touching the disposition of the mineral lands, except by writ of certiorari to be issued upon written application supported by briefs, but without oral argument, is all but to compel him to abide by chance alone, with the odds all against him.

Scarcely less intricate are the problems which arise under the public land laws generally, and while our section may be more fruitful in causes presenting Federal questions than others or than the country generally, there is scarcely any region that does not produce controversies depending for their solution upon Federal statutes. It is not only such that are shut out but, as well, every case involving the denial of a title, right, privilege, or immunity set up or claimed under the Constitution of the United States. There would be included, no statute being involved, a right claimed under the full faith and credit clause, the clause guaranteeing to the citizens of each State the privileges and immunities of citizens of the several States, and those ample rights guaranteed by the fourteenth amendment.

It is understood that it was because of the frequency with which actions were brought to the Supreme Court upon the claim, often shadowy, of the denial of a right under the amendment mentioned that the restriction was asked and, as I think, unreflectingly imposed by Congress. I may say, for whatever of exoneration there may be in it, that the act was passed in my absence. But the prevalence of the evil, if it be such, alluded to, as it seems to me, is a very poor reason for denying to the meritorious classes of cases to which I have referred a right to be heard in the tribunal whose appropriate function is to give an authoritative interpretation to the Federal law.

Quite likely a vexing fecundity has been exhibited by the bar in respect to appeals said to present questions of the disregard of rights protected by the fourteenth amendment, but if the idea advanced is without substance or not open to serious debate, the appeal may be dealt with summarily by the usual motion to dismiss or affirm or by relegating it to the short-cause calendar, while the practice of prosecuting such may be deterred by the consistent imposition of the penalty for frivolous appeals.

As heretofore pointed out, the bill in question not only confirms the departure, the unwisdom of which I have not hesitated to condemn, but it would likewise transfer to the permissive jurisdiction causes in which are involved the validity of an authority exercised under a State, as distinguished from a statute of such State, on the ground that it is repugnant to the Constitution of the United States, or the validiy of an authority exercised under as distinguished from a treaty or statute of the United States.

Just what was covered by the word "authority" as used in the judiciary act and continued in the present law and to be continued should the bill under consideration become a law it is somewhat difficult accurately to comprehend. It is not easy to conceive of an authority exercised under a State not founded upon a statute of such State, considering its constitution as a statute, as doubtless it must be regarded, nor to conceive of an authority exercised under the United States not founded upon a statute or treaty thereof, giving the word "statute" a similar significance.

It would seem as though every case involving the validity of an authority exercised under either State or Nation would involve the validity of a statute or treaty. It may be that the word "statute" is to receive a more restricted significance and the class of cases covered by the term "authority" is such as present acts done as within the constitutional grant and independent of statute or treaty. This view would seem to be sustained by Mathews *v.* McStea (20 Wall. 646), where the question was as to the sufficiency of the acts of the President to inaugurate a war which would invalidate the contract upon which suit was brought. The case of Pickering *v.* Lomax (145 U. S. 310) presented the question of the authority of the President to execute a deed of Indian treaty lands, but that obviously was to be determined upon the existence and construction of a treaty or statute or both and involved a claim of title or right under a statute of the United States, elsewhere covered in the appeals act. A long line of cases holds that the failure of a State court to give due consideration to a judgment of or to proceedings had in a Federal court is a denial of the validity of an authority exercised under the United States, but it would seem as though all such cases equally involved the denial of a title or right claimed under the Constitution and statutes of the Union.

It is advanced in Telluride Power Transmission Co. *v.* Rio Grande & Western (175 U. S. 639) that in view of the use of the word "commission" in the statute in juxtaposition to "authority" the latter probably refers to a personal authority, such as, as suggested above, springs from the Constitution without any statute. The word "commission" was doubtless employed to reach the case of acts by subordinate executive officers, civil and military, done by virtue of the authority reposed in the President, whose instruments they become pro hac vice. Possibly a ruling by a public service commission, acting under authority of a State, said to be confiscatory in character and therefore violative of the fourteenth amendment, when no assault can be made on the statute under which the commission acts, would be within the purview of the particular feature of the judiciary act being considered, and subject to the jurisdiction by the bill made permissive instead of obligatory. However, whatever vestige of the obligatory jurisdiction of the Supreme Court is founded upon an authority exercised under a State, not involving the validity of a statute tested by the Federal Constitution, would be gone, as well as such as is founded upon the validity of an authority exercised under the United States not involving the validity of a statute or treaty thereof.

It will be seen that the bill to which Congress is asked to give its assent will multiply the applications for writs of

certiorari. In my judgment they are far too numerous now. I have not the figures at hand to show what percentage of the causes determined by the nine Circuit Courts of Appeals are made the basis of applications for that particular writ of review, but it must be high. It is not expensive relatively to prosecute such an application, and why should not a lawyer take the chance even though it be a remote chance? As a rule his client will spur him on, though he himself despair. During the current term 324 such applications were filed, of which 53 were granted and 273 denied, and 4 remain undisposed of. Whatever may be said touching the degree of care with which such applications are considered, it is impossible to resist the conclusion that in the vast majority of cases they can have nothing more than the most cursory and superficial examination. There is a limit to the capacity for work of even justices of the Supreme Court. But even if the pressure of business and the multitude of such applications did not forbid a careful inquiry into the debatable character and importance, public and private, of the question raised, it is notorious that the importance of a point in a lawsuit is often lost sight of or only feebly comprehended by a judge, though ordinarily capable and astute, when unaided by oral argument. Indeed I have long believed that the value of an oral argument, aside from affording an opportunity to acquaint the court with the essential facts of the case, in which respect the spoken word has a value quite beyond that of the printed page, is measured not so much by how far the bench has been convinced as by how successfully the interest of the justices has been aroused in the determinative propositions canvassed in the brief. Moreover, preconceived notions erroneously entertained are often dissipated with ease in oral argument against which counsel who must rely on a printed brief would have no warning. It has been said that an attorney who waives oral argument betrays his client. Our concern is to see that justice is done. I am convinced that to be required to submit to the Supreme Court on a written or printed statement of the facts and briefs whether a cause should be reviewed in that court is a denial of justice in a multitude of cases.

But justice delayed is justice denied, and if the work of the Supreme Court is accumulating beyond its power to dispatch, giving due attention to the same, it is incumbent on Congress, within its powers, to grant relief. If the plan proposed is open to grave objection, what is the remedy? It will be well to dispel some misapprehension, more or less prevalent, concerning the conditions. The number of cases docketed annually has remained substantially stationary since 1910, while the number of cases carried over has declined during that period from 586 in 1910 to 343 in 1921. The figures in detail are given in the following table:

	1910	1911	1912	1913	1914	1915	1916	1917	1918	1919	1920	1921
Carried over.....	586	640	671	604	535	525	522	532	495	408	386	343
Docketed.....	509	530	509	524	528	524	532	582	580	555	.....	.....

The number of cases disposed of each year is ascertained by subtracting from the sum of the cases carried over in any one year and the cases docketed in that year the number of cases carried over into the following year. These have increased from 485 in 1910 to about 600 in recent years. For several years past a period of about one year has elapsed between the docketing of the case and the argument of the same. The delay is not apparently undue, but it is quite evident that the court is working at high pressure, disposing annually of over 100 cases more than it was accustomed to dispatch 10 years ago.

Some complaint has been made that the time allowed for argument is in many cases all too brief. It will be recalled that the limit fixed by the rules, formerly two hours, was a few years ago reduced to one and a half hours and later to an hour. Though the court has been liberal in extending the time upon the assurance of counsel that the cause could not be adequately presented within the period limited by the rule, it not infrequently happens, particularly when the controversy involves interests that can not be grouped with perfect regard for all, that the argument is so restricted as to be well-nigh valueless. This situation may well claim some attention.

Statesmen and jurists have declaimed against the constant expansion of the field of Federal activity and the absorption by the National Government of power exercised in the past exclusively by the States, the fruitful source of much of the business that crowds the calendar of the Supreme Court. It seems impossible to stay the tendency in that direction. Political parties vie with each other in their professions of a purpose to bring relief from real or supposed evils through national legislation. A widespread disposition prevails, peculiar to no section, to look to the General Government for redress for wrongs or relief from untoward conditions regardless of constitutional limitations. It is to be hoped that at some time in the future a healthy reaction will set in, but meanwhile something must be done to permit the orderly consideration of causes which should properly receive the prompt attention of the Supreme Court. It may aid if some thought is given to the question of what are such causes.

I conceive, as heretofore stated, that the primary function of that court is to give an authoritative interpretation of Federal law, constitutional and statutory. First among the cases enumerated in the Constitution to which the judicial power of the United States extends are those "arising under this Constitution, the laws of the United States, and treaties made or which shall be made under their authority." I would only as a last resort curtail in any degree the right to a hearing on such cases in the Supreme Court, but I would limit that hearing to the Federal question involved.

In the case of causes brought into the Supreme Court from the State courts the hearing is, as is well known, so limited. There is no reason why in the case of causes in which the Federal jurisdiction is invoked, in the first instance, because of the presence of a Federal question the review in the Supreme Court should not be similarly limited. One who is able to so state his case as to make it appear from his bill or complaint that a Federal question is involved may begin his action in the Federal District Court and have the whole case reviewed in the Circuit Court of Appeals and then in the Supreme Court of the United States. Another in whose controversy there is equally involved a Federal question but of such a character as that it will not appear from his pleading, artificially framed, can not take that course. (B. & M. Con. Co. & S. M. Co. *v.* M. O. P. Co., 188 U. S. 632.) He must go into the State court and reach the Federal Supreme Court by that route, but arriving there he can be heard, properly enough, only on the Federal question.

If the jurisdiction of the District Court over causes in which a Federal question is presented is to be preserved, the judgments or decrees of the Circuit Court of Appeals in such should be made final, except as to the Federal question, which should be reviewable by writ of error. Such a change would afford some very substantial relief to the Supreme Court. It frequently happens that the Federal question upon which the jurisdiction of the District Court is invoked is so doubtful in character as barely to sustain such jurisdiction, the real controversy between the parties depending upon issues of law and fact quite apart from such question. In a case of that class recently decided by the Supreme Court the Federal question was disposed of in a brief paragraph or two, while the other questions, so intricate that the court directed a reargument of the appeal, called for exhaustive study of a voluminous record and, as exhibited by the elaborate opinion filed, a discriminating and laborious examination of the other propositions of law raised. It might be added that though all three courts through which the cause passed held that though there was enough in the Federal question to sustain the jurisdiction the contention made with respect to it by the complainant was not sound.

I would cut more deeply than is here proposed. I would abolish altogether the right to go into the Federal court in the first instance simply because there is a Federal question involved. There is less justification for that branch of the jurisdiction of the district court than there is for that which depends upon diversity of citizenship or alienage. It had its origin in a strange belief that a hot rivalry might—indeed, was quite likely to—spring up between the State government on the one hand and the National Government on the other, so intense and possibly so bitter as to render it doubtful whether State judges would dispassionately and fairly administer the national law. We know that these dismal forebodings have happily proved altogether vain. So long as the litigant has the right through a writ of error addressed to the State court to have the Federal question upon which he relies passed upon by the Supreme Court full justice is done him. The abolition of this jurisdiction, it is true, would not afford the Supreme Court any relief beyond that which would ensue by making the judgments of the Circuit Courts of Appeals in such cases reviewable only as to the Federal questions involved in them, but it would contribute in some measure to relieve the congestion of business in the District Court, so great that Congress is importuned to create some twenty-odd additional district judgships, and the legislation simply awaits an agreement between the two Houses as to a few additional districts importunately insisting on being taken care of. On the consideration of that legislation it was gravely proposed in the Senate to abolish inferior Federal courts alto-

gether, reminding one of the attitude taken by Richard Henry Lee in connection with the judiciary act when it was on its passage before that body that such courts should be empowered to entertain only causes of admiralty or maritime jurisdiction. These radical views can probably command little support in our day, but it is my studied conviction that the reasons which impelled the Congress in 1789 to invest the Federal courts with jurisdiction over civil causes because of diversity of citizenship of the parties or alienage of one of them or because a Federal question was involved, never having been valid or having ceased to be valid because the conditions which it was assumed would justify the grant of such jurisdiction, do not prevail, the right to resort to the Federal courts on any such grounds should be abolished.

So far as that branch of the jurisdiction of the District Court which depends upon the existence in the controversy of a Federal question or upon alienage is concerned, no sturdy opposition to its elimination is to be anticipated save such as springs from the natural conservatism of lawyers, no particular interests being concerned about its retention. But the case is different when it comes to the other branch. It is perfectly well known that innumerable corporations have been organized under the laws of States other than those in which they contemplate operating for no reason except to enjoy a choice of having their legal controversies determined as their interests would seem best subserved, either in the State or the Federal courts, while the scandal of "tramp" corporations, the incorporators of which are residents of the State in which they do business under charters from distant States, sued out in order to escape the jurisdiction of the local courts, is a reproach to our judicial system. All such may be expected to rise in their might to acclaim the excellence of the system under which they enjoy such an unconscionable advantage over their neighbors.

Meanwhile, in like manner, I would make Federal questions raised in actions depending upon diversity of citizenship—those in which the Federal question was not made to appear by the initial pleading—reviewable by writ of error to the Circuit Court of Appeals. But I would make the judgment of that court final in both classes of actions, except as to any Federal question involved. I would thus rid the Supreme Court of the labor and annoyance of examining a vast number of applications for writs of certiorari. I would reduce the number of such applications rather than indefinitely increase them. I would relieve the Supreme Court from considering a vast mass of questions with which there is no special reason why it should concern itself that it might devote more time to the argument and more thought to the consideration of questions peculiarly within its province.

The rules which guide or should guide the Supreme Court in passing on applications for writs of certiorari have never been very clearly defined, or perhaps it is more accurate to say, so far as any rule has been laid down, it is so general in character, except in a single particular, as to tolerate the exercise of an unrestrained discretion. The court has said that the writ will be granted whenever there is a conflict of decisions among the Circuit Courts of Appeals, or between one of such courts and a State court, in order to bring about uniformity, or whenever the interests of the Nation in its internal or external relations or the importance of the question involved demand.

Perhaps the writ might be appropriately employed when the interests of the Nation are directly involved, and particularly with respect to its foreign relations, as was the case when the court ordered a transfer of the record in the case of *The Three Friends* (166 U. S. 7) even before it was heard in the intermediate court. It would seem, however, that in such a case the writ would more appropriately go, in the interest of expedition, on the motion of the Attorney General, to the District Court rather than to the Circuit Court of Appeals. So far as I can learn, this extraordinary power has never since been exercised by the Supreme Court. Its authority to proceed seems not to have been questioned in the suit referred to, though it might well have been in view of the language of the governing act, to the effect that the Supreme Court might require to be certified to it "for review and determination" any case the judgment or decree in which the Circuit Court of Appeals was made final by the act. The word "review" would seem necessarily to imply that the cause should first have been determined by the Circuit Court of Appeals. This conclusion is enforced by the fact that power was granted to issue the writ only in cases which otherwise became final in the Circuit Court of Appeals. It is quite likely, if not more likely, that national interests would require a speedy determination of a cause in which the jurisdiction depends upon the existence in the controversy of a question arising under the Constitution or laws of the United States as though it was invoked because of diversity of citizenship. It is difficult to resist the conclusion that that portion of the Circuit Court of Appeals act had no other purpose than to afford the litigant whose case would otherwise terminate in that court an opportunity, should the decision of that tribunal be adverse, to ask a review by the Supreme Court. However, whatever doubt may inhere in the present law in that regard the bill under consideration would remove, for it expressly declares that the writ of certiorari may be issued either before or after judgment. I find it difficult to conceive of any justification for such a provision, except to meet the contingency of a pressing national need, when, as suggested, the writ ought to procure the direct transfer of the cause from the District Court after judgment to the Supreme Court, regardless of the ground upon which the jurisdiction of the court of first instance was invoked.

But barring cases in which national interests are involved, there is to my mind little justification for transferring to the Supreme Court litigation between private parties, either because of the importance of the questions involved or to secure uniformity of decisions. "Importance" is a highly elastic term. Every suit involving a debatable proposition of law is more or less important, and there is no more of misfortune in a conflict between two Circuit Courts of Appeals, or between one of such courts and a State court, than there is in a conflict between the courts of any two of the forty-eight States. Still if the writ of certiorari were confined to cases in which such conflict exists, and the review restricted to the proposition in respect to which there is a difference, the number of applications would be limited and the labor entailed in passing upon them relatively light.

In my judgment the way to solve the problem is to relieve the court from the consideration of questions with which it should not now be troubled. Why should the Supreme Court be devoting itself to the consideration of the ordinary questions of commercial and corporation law, of negligence and torts generally, of domestic relations, of municipal securities, and the complex problems presented by the intricate and involved contracts which characterize the great business transactions of our day?

To recapitulate. The bill under review would substitute certiorari for writ of error in the case of judgments of State courts, in which is questioned the validity of an authority exercised under the United States, on the ground that it is contrary to the Constitution, laws or treaties thereof, or an authority exercised under a State on the ground that it is repugnant to the National Constitution. It would substitute certiorari for writ of error in causes coming to the Circuit Court of Appeals, because involving a Federal question. The amount of relief appears inconsequential.

On the other hand, I would abolish the writ of certiorari as to cases in the Circuit Court of Appeals and restrict the consideration in all cases from that court as in cases coming from the State court to any Federal question involved which should be subject to review as of right. I would amplify the right to the writ of error to State courts by renewing the provisions of the judiciary act in relation thereto, rendered ineffective by the act of 1916. I am convinced that not only would a greater measure of relief be thus afforded, but a higher measure of justice would prevail and a more rational judicial system obtain. But I would look forward to the eventual abolition of the jurisdiction of the Federal courts in civil causes because of diversity of citizenship or alienage or because the controversy involves a Federal question.

HOUSING CONDITIONS IN THE DISTRICT.

Mr. KING. Mr. President, some time ago the subject of the housing conditions in the District of Columbia received to some extent the attention of the District Committee, of which I am a member. We considered it particularly in view of the large building program that it was desired to enter upon for school purposes in the District. Subsequently Secretary Hoover met with the Commissioners of the District, and I also had the opportunity of being present. It was recommended at that meeting that a committee be appointed to investigate the housing situation in the District of Columbia, the reason for the house shortage, the cause of high rent, of the impediments and obstacles which are offered to building, the reason for high charges upon loans, and all cognate questions. A committee was appointed by the commissioners, of which Mrs. Eli A. Helmick was chairman. The committee has been in session from time to time; and recently, in fact on last Saturday, a tentative report was submitted by Mrs Helmick as chairman. I am advised that

the report was not accepted by the committee, but the report is of such merit and contains so many valuable suggestions that I feel that it ought to be referred to the Committee on the District of Columbia, to the end that that committee may take such steps as may be deemed necessary.

Speaking for myself, I believe that an investigation should be had by the District Committee. There is no doubt that men and corporations in this District are charging extortionate rents, and that many obstacles are opposed to legitimate building operations here. There should be a full and complete and exhaustive inquiry by the District Committee, because the impediments which this commission met with, perhaps, precluded that full investigation which should be made. The report appears in the Washington Daily News, a newspaper which has been doing most excellent work in presenting the evils of the housing situation to the people.

I ask that the tentative report which I have indicated be referred to the Committee on the District of Columbia.

There being no objection, the report was referred to the Committee on the District of Columbia.

DAYLIGHT-SAVING REGULATIONS.

Mr. DIAL. Mr. President, I shall take but a moment of the time of the Senate in discussing a matter not connected with the tariff.

The public has been waiting very patiently for the President to modify the order in regard to so-called daylight saving. A short time ago the Star told us that by a vote of 10 to 1, I believe, the people who had voted did not approve of the present arrangement, and recently we have read in the News that a great many of the employees of the Government are most strenuously against this new scheme. I was in hopes that the parties who had imposed upon the President by telling him that this was desirable would have the manhood to go back and ask him to revoke the order.

Mr. WATSON of Georgia. Mr. President——

The VICE PRESIDENT. Does the Senator from South Carolina yield to the Senator from Georgia?

Mr. DIAL. I yield.

Mr. WATSON of Georgia. According to my custom, I went to my office yesterday morning to dictate the editorials for my paper. The stenographer in the case is a young woman who works in the splendid State Department, under our magnificent premier, Mr. Hughes. She told me that she had been assigned to three different offices of the big men to take down shorthand, and not a single one of those men was on duty when the office opened. In other words, this foolish daylight-saving order is striking the small men and the weaker women, and not striking the strong men at all, and the Senator from South Carolina is quite right in protesting against it.

Mr. DIAL. The employees get out earlier in the afternoon, they have to go home to hot quarters, and they have to rush to get up in the morning, and hurry to get a little breakfast. Those who live out some distance, of course, are delayed, and it is very burdensome upon them. As the Senator from Georgia has said, no doubt the high officials come whenever they get ready.

I am more deeply interested in the schools, and I most earnestly protest, in behalf of the school children, against the early hour. I protest also upon the part of the housekeepers and laborers of the District. It is true that school will soon be out, but I do not want any such precedent established here.

Not only that, but it militates against the public service and public interest. Before the present plan went into operation we received the mail at 3.30, and we receive it now at the same hour; but before, we would get information from the departments and answer the mail in the afternoon, so that our constituents would have the information practically 24 hours earlier than they get it at the present time. The force at my office tells me that now when they telephone to the departments immediately after the last mail comes in, the doors are closed, and there is no one to answer the telephone.

So it occurred to me that the 15th would be a splendid time to let the prior practice go back into operation, and I am in hopes that some one will call it to the attention of the President, or that the President himself will take notice of it, and have the order revoked, to take effect on the 15th of this month.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. DIAL. Mr. President, I present a resolution from a number of ladies in my State protesting against certain schedules in the pending tariff bill. I ask unanimous consent to have the resolution inserted in the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, and to lie on the table, as follows:

Resolved, That we protest against the food, tableware, and women's wear schedules of the Fordney-McCumber bill. These schedules will increase the costs of living in every American home. They are fines levied by American men upon American women and upon American children. They should not be allowed to become law.

Yours truly,

CAMILLIA CANTEY SAMS (MRS. STANHOPE SAMS),
President Social Survey Club, 1922–23,
Secretary New Century Club, 1922–23.

Mr. McCUMBER. Mr. President, I ask that the Senate proceed to the consideration of paragraph 359 on page 76.

The VICE PRESIDENT. The paragraph will be read.

The READING CLERK. Page 76, line 14, paragraph 359, surgical and dental instruments—

Mr. McCUMBER. On behalf of the committee and as a committee amendment, on page 76, I move to strike out lines 14 to 20, both inclusive, and line 21 down to and including "ad valorem" and insert in lieu thereof the following:

PAR. 359. Surgical instruments, and parts thereof, composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 45 per cent ad valorem; dental instruments, and parts thereof, composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 35 per cent ad valorem.

Mr. SIMMONS. Mr. President, I understand the Senator from North Dakota wishes to substitute for that part of section 359 down to and including the words "ad valorem," on line 21, that which he just read.

Mr. McCUMBER. We propose to strike out lines 14 to 21, inclusive, down to the proviso on line 21. That part of the paragraph which we propose to strike out gives different rates on surgical and dental instruments—

Valued at not less than $2 per dozen and not more than $5 per dozen, 60 cents per dozen; valued at more than $5 per dozen, 12 cents per dozen for each $1 per dozen of such value; and in addition thereto, on all of the foregoing, 60 per cent ad valorem.

We propose to strike out all the specific duties and give a straight ad valorem of 45 per cent on surgical instruments and 35 per cent on dental instruments.

Mr. SIMMONS. In other words, the committee substitutes for the 60 per cent per dozen, on line 18, 45 per cent ad valorem?

Mr. McCUMBER. No; for both the specific duty and the ad valorem duty, which would amount, as I now recall, to about 80 per cent, we propose to give a straight 45 per cent ad valorem duty.

Mr. SIMMONS. That is, the committee proposes to strike out both the specific duty and the 60 per cent ad valorem duty and substitute 45 per cent for both?

Mr. McCUMBER. Forty-five per cent on surgical instruments and 35 per cent on dental instruments.

Mr. SIMMONS. That is a very substantial reduction, no doubt, but I am not prepared to say that it is as great as it should be. While I have no sort of objection to the substitution, I would not like at this time to express satisfaction with the substitute which is offered. The committee is now asking permission to offer the amendment. Does the Senator desire a discussion of the matter just at this time?

Mr. McCUMBER. Certainly.

Mr. SIMMONS. This is, of course, new matter that has just been presented to the Senate. I should be very glad if the Senator would proceed with some other paragraph and let us return to this paragraph in a very short time. I should like to look into it a little before it is finally acted upon.

Mr. McCUMBER. Very well.

Mr. WILLIS. Mr. President, will the Senator from North Dakota explain what his provision proposes relative to dental instruments? I could not fully hear what he said to the Senator from North Carolina.

Mr. McCUMBER. Dental instruments are given a straight ad valorem duty of 35 per cent.

Mr. WILLIS. Is that in a separate provision from surgical instruments?

Mr. McCUMBER. They are provided for in the same amendment.

Mr. WILLIS. Very well. That is satisfactory.

Mr. McCUMBER. If the Senator from North Carolina desires to pass over the paragraph temporarily we can proceed to the consideration of some other paragraph.

Mr. SIMMONS. I only desire that it may be passed temporarily. We can return to it in a very short time.

Mr. WALSH of Montana. Before the paragraph is passed over, I should like to inquire of the Senator from North Dakota what is the ad valorem equivalent of the rates as now fixed by the committee amendment?

Mr. McCUMBER. The rate is about 80 per cent as fixed by the bill and the committee amendment reduces it to 45 per cent ad valorem in one case and 35 in the other.

Mr. WALSH of Massachusetts. Mr. President, I should like to suggest to the Senator from North Dakota that this amendment is very important and many people are interested in it. I think amendments of this important character ought to be submitted to the Senate and be permitted to lie on the table for one day in order that we may study them and understand upon what we are voting. It is impossible to comprehend the scope of an amendment of this kind by merely hearing it read without an opportunity of studying and reflecting upon it.

Mr. McCUMBER. I have several copies of the amendment here and will be glad to hand the Senator one; but I think it is quite easy to keep in mind only the two proposition that under the amendment we propose a straight ad valorem duty of 45 per cent on surgical instruments and a straight ad valorem duty of 35 per cent on dental instruments. It is hardly necessary to have such an amendment lie over for a day in order to understand what it is.

Mr. KING. The reason for the difference in rate is, I suppose, that teeth are not worth as much as bones.

Mr. WALSH of Massachusetts. There are certain amendments which have been offered by the Senator from North Dakota, which are very important, and I think they ought to lie on the table in order that we may have an opportunity to consider them, and not have them presented here without any chance to consider them at all.

Mr. SIMMONS. Mr. President, I wish it to be definitely understood as to this matter that I am very much gratified at the reduction which the committee has proposed; a reduction from 80 per cent to 45 per cent in one case and 35 per cent in another is a very substantial reduction. It may be that it is not sufficient; I have not investigated that, and I merely desire the matter to be held open for a while in order that I may have an opportunity to look into it a little to ascertain whether action should be allowed to be taken on the new rates now proposed without further discussion.

Mr. McCUMBER. That is a very reasonable request, and I am glad to accommodate the Senator from North Carolina. I now propose that we shall proceed to the consideration of paragraph 360.

Mr. STERLING. Mr. President, I should like to ask the Senator from North Dakota if he will not be willing that paragraph 360 go over for the day? I have some data upon that paragraph, but I have not them here and they are not available to me now. I should like to present them in consideration with that paragraph.

Mr. McCUMBER. Mr. President, so long as we may consider some other paragraph I am not particular, although it is a little difficult for us to go from one paragraph back to another. The Senator from South Dakota desires, however, that paragraph 360 be passed over for the present, and I now ask that we take up paragraph 302 in reference to ferro alloys.

The VICE PRESIDENT. The amendment of the Committee on Finance to paragraph 302 will be stated.

The amendment of the Committee on Finance was, on page 49, line 2, after the word "carbon," to strike out "2½ cents per pound on the metallic manganese contained therein" and to insert "$2.50 per ton," so as to read:

ferromanganese containing more than 1 per cent of carbon, $2.50 per ton.

Mr. McCUMBER. On page 49 I desire to withdraw the committee amendment beginning in line 2, and in line 2 to strike out the numerals "2½" and insert in lieu thereof the numerals "1⅞."

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota to the committee amendment.

Mr. KING. I wish to inquire of the Senator from North Dakota what disposition has been made of the numerals "$2.50" which are found in line 4?

Mr. McCUMBER. The committee proposes to withdraw the amendment and then to strike out "2½," and insert "1⅞" in lieu of "2½."

Mr. SMOOT. And the words "$2.50 per ton," in line 4, will also be stricken out.

Mr. McCUMBER. Yes.

Mr. SMOOT. That was what the junior Senator from Utah asked.

Mr. McCUMBER. The whole matter, to which the Senator from Utah refers, will be stricken out if my suggestion is agreed to.

Mr. KING. Will the Senator explain what effect the amendment just suggested on behalf of the committee will have upon the text of the bill as reported by the Committee on Finance?

Mr. McCUMBER. It is a material reduction in the House rate, and the duty proposed now is designed to take care of the duty on manganese ore which was inserted the other day.

Mr. KING. It is an increase over the original Senate committee amendment. Has the Senator from North Dakota figured out what the increase would be measured in ad valorem rates?

Mr. McCUMBER. We have made the increase to correspond with the 1 cent duty which was voted the other day upon the manganese content of manganese ore. In order to allow a proper differential it is necessary, of course, to increase the duty on the product made from the manganese ore, and the rate proposed here is in accordance with the estimate made by the experts that it will require about 1⅞ cents.

Mr. WALSH of Montana. Mr. President, I should like to inquire of the Senator whether the percentage of differential is not too high? The Senate has given its approval to the House provision imposing a duty of 1 cent a pound on the manganese content of manganese ore. Manganese is reduced to ferromanganese by the electrolytic process generally. It seems to me that 1⅞ cents is altogether disproportionate as protection. Of course, the manganese manufacture should be allowed a compensatory duty of 1 cent. I think the Tariff Commission report discloses that ferromanganese can be produced just as cheaply in this country, if the additional cost occasioned by the duty on manganese is taken care of, as it can be produced anywhere in the world, except possibly in those countries where power may be secured more cheaply than in the United States. I do not know why it should be so, but apparently power can be secured more cheaply in Canada than it can in the United States, and of course it can be secured more cheaply in Norway; but, all things considered—and this is an industry of my State; we have the only ferromanganese mill, I think, in the West, and I am not averse to helping it along, inasmuch as it is an infant industry—I think that a rate of 1⅞ cents a pound is giving to the ferromanganese producer a consideration that is vastly greater than the consideration given to the producer of manganese when he gets only a cent a pound.

Mr. SMOOT. The House allowed a differential of 2½ cents per pound, which is altogether too much, figured on the actual differential necessary between the metallic content of the ore and the ferromanganese. Figuring a loss of 29 per cent in the manufacture of ferromanganese and taking into consideration the result of imposing 1 cent duty on the ore, the differential required $1.51, or 51 cents above the 1 cent on the metallic content of the ore.

Mr. WALSH of Massachusetts. Mr. President, if the Senator from Utah will allow me, will he state how much of the proposed rate of 1⅞ cents is compensatory and how much a protective duty?

Mr. SMOOT. Seven-eighths of a cent is the compensatory duty. The Senate voted for 1 cent per pound on the manganese content in the ore. Now, in the manufacture of ferromanganese ore there is a loss of at least 29 per cent in the case of the high-grade ore. From the Tariff Information Survey the Senator will find that—

The process employed in the manufacture of ferromanganese also influences the percentage of recovery. Less metallic manganese is lost on the average in the electric furnace than in the blast furnace. It is claimed that this loss can be reduced to 10 per cent by the use of the electric-furnace method, but figures obtained on the Pacific coast show a larger loss. One of the leading concerns in that region manufacturing ferromanganese in 1918 reported a metallic loss of manganese in the manufacturing process of 30 per cent.

The average, I am told, is 29 per cent, and that is in the case of the very highest grade of manganese ore which can be obtained in the United States.

Again, I wish to say to the Senator from Montana that the coke used in the manufacture of ferromanganese from the ore is very much cheaper in England than it is in the United States.

Mr. WALSH of Massachusetts. The rate provided by the committee amendment, then, is a compensatory rate?

Mr. SMOOT. Entirely so.

Mr. WALSH of Massachusetts. That is what I asked the Senator. There is no protective duty included?

Mr. SMOOT. There is no protection whatever.

Mr. WALSH of Massachusetts. It is entirely compensatory?

Mr. SMOOT. It is a compensatory duty pure and simple.

Mr. WALSH of Massachusetts. It is my opinion that it is a fair duty in view of the duty on manganese ore.

Mr. SMOOT. There is no doubt of it at all.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota to the committee amendment.

The amendment to the amendment was agreed to.

The VICE PRESIDENT. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 6, page 49, it is proposed to strike out "45" and to insert "30," so that, if amended, it will read:

Provided, That ferromanganese for the purposes of this act shall be such iron manganese alloys as contain 30 per cent or more of manganese.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. McCUMBER. Mr. President, on line 10 I desire to modify the committee amendment by striking out "20" and inserting in lieu thereof "1⅞ cents per pound on the manganese contained therein, and 15." I send the amendment to the desk and ask to have it stated.

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. It is proposed to disagree to the committee amendment so as to restore the House text in the following words:

cents per pound on the manganese contained therein and.

It is also proposed to strike out "2½" and insert "1⅞," and to change the "20" to "15," so that the entire amendment, if amended, will read as follows:

1⅞ cents per pound on the manganese contained therein and 15 per cent ad valorem.

Mr. WALSH of Montana. Mr. President——

Mr. SMOOT. I will say to the Senator from Montana that that gives exactly the same specific rate upon the manganese metal or the manganese silicon that was given upon the ferromanganese that is manufactured from manganese ore. We give them exactly the same compensatory duty as ferromanganese, namely, 1⅞ cents per pound, instead of 2½ cents per pound as provided for in the House bill; and instead of giving them 28 per cent protection, as provided in the House bill, on the American valuation, we give them 15 per cent ad valorem upon the foreign valuation. In other words, the 15 per cent is the protection afforded the manufacturer of manganese metal out of ferromanganese or out of the manganese ore itself.

Mr. WALSH of Montana. Mr. President, I inquire of the Senator whether there ought not to be a differential between ferromanganese and spiegeleisen?

Mr. SMOOT. A different protective rate?

Mr. WALSH of Montana. Yes.

Mr. SMOOT. I do not think so.

Mr. WALSH of Montana. The information I have concerning this matter leads me to believe that there should be a distinction. Indeed, it seems to me that with respect to both of these products, when the duty on the manganese is taken care of, there is not really much of anything else needed, and certainly not in the case of spiegeleisen. I read from the survey, "The ferro-alloy industries," Bulletin C-1. In discussing the subject of tariff considerations, the Tariff Commission says:

(1) Spiegeleisen and ferromanganese have been classified in our tariff laws for several decades with "iron in pigs." While they are blast-furnace products, their uses and conditions of production vary greatly from those of pig iron. They belong to the general class of ferro-alloys.

(2) No question now arises with reference to the competitive position of the American producer of spiegeleisen. His raw material is abundant and cheap and his conversion costs are low. In the case of ferromanganese, however, the American manufacturer is obliged to get his raw material abroad.

They make a distinction between the spiegeleisen containing the low percentage of manganese and the ferromanganese containing the high percentage.

Mr. SMOOT. Mr. President, may I call the Senator's attention——

Mr. WALSH of Montana. Just a moment. This statement, of course, is made upon the existing condition of things, when the manganese ore is admitted free; but when the manganese ore carries a duty of 1 cent a pound on the manganese content, of course the spiegeleisen producer ought to be protected to that extent. That is, he should have a compensatory duty; but when he gets his compensatory duty the Tariff Commission tells us that there are no competitive conditions whatever, and that the spiegeleisen producer can produce it in this country just as cheaply as the foreigner.

Mr. SMOOT. The Senator's statement would be absolutely correct if no account were taken of the amount of carbon that could be contained in the spiegelized article; but the Senator will notice in this case that it must not contain more than 1 per cent of carbon. Therefore it must be made by the thermit or the aluminum process, and it must be made in small quantities. If there were no question as to the amount of carbon that would be allowed in the spiegelized article, then, of course, they could make it as the Tariff Commission says; but the amount must be limited. For instance, I call the Senator's attention to paragraph 301. There the Senator will notice that the spiegelized iron and steel and kentledge are all in the same paragraph; but that contains more than 1 per cent of carbon, and it can be treated entirely differently. That is why a clause is put in this paragraph limiting the amount of carbon that can be contained in it.

Mr. WALSH of Montana. The information I have does not make any distinction in these matters at all.

Mr. SMOOT. The Senator will notice in paragraph 301 that the duty on spiegeleisen containing more than 1 per cent of carbon is $1.25 a ton, and it is classified there with iron in pigs, iron kentledge, and so forth; but in paragraph 302 the amount of carbon in the manganese must be less than 1 per cent, and therefore it must be made by the thermit or the aluminum reduction process, which can only produce it in small quantities. That is why the change is made in paragraph 302, and it shows the difference between paragraphs 302 and 301.

Mr. WALSH of Montana. I have not been able to discover that the question of the amount of carbon in it is of consequence at all.

Mr. SMOOT. Mr. President, the manganese is not used the same as the iron. The manganese containing less than 1 per cent of carbon is used in the hardening of brasses and bronzes, and if it had 1 per cent of carbon or more they could not use it at all. It would be impossible.

Mr. WALSH of Montana. No doubt there are some kinds of spiegeleisen containing a small amount of carbon that are used for purposes for which spiegeleisen containing a large percentage of carbon is not fitted; but that is not the question. The question is, Why does it cost more to produce the one kind than to produce the other kind?

Mr. SMOOT. It does cost more.

Mr. WALSH of Montana. What information has the Senator on that point? My information is that the spiegeleisen can be produced here as cheaply as anywhere.

Mr. SMOOT. One is made in a blast furnace and the other is made in a crucible; and I know and the Senator knows that it costs more to make it in a crucible than it costs to make it in a blast furnace. All that the Senate committee gives is 15 per cent ad valorem, not 28 per cent ad valorem, as the House gives, on the American valuation; and that is the reason why the change was made.

Mr. WALSH of Montana. Does the Senator say that 1⅞ cents a pound is 15 per cent ad valorem?

Mr. SMOOT. No; the 15 per cent ad valorem has nothing to do with the 1⅞ cents per pound. That is the compensatory duty because of the fact that the Senate voted for a duty of 1 cent a pound on the manganese ore; but, for instance, in paragraph 301 the article is sold by the ton; in paragraph 302 it is sold by the pound. That shows what a difference there is in the making.

Mr. WALSH of Montana. I have not yet discovered that there is any information available to us that makes any distinction at all between spiegeleisen which contains less or more than a certain per cent of carbon. The fact about the matter is that in the case of both of these commodities, ferromanganese and spiegeleisen, the manganese itself constitutes 70 per cent of the total cost, and only 30 per cent goes for overhead and interest upon capital and labor and everything else, the labor cost being, I think, about 20 per cent of the total cost; so that, if that is taken care of, it seems to me that that is all the duty that there ought to be on either ferromanganese or spiegeleisen over and above the compensatory duty.

Mr. SMOOT. The Senator's attention was called away when I gave the reasons, at his request, why that difference of 1⅞ cents was necessary. I can repeat it briefly by saying that the loss runs as high as 30 per cent—the average is about 29 per cent—and, then, the coke is very much less expensive in England than it is in the United States. I think I have here the quotations which show the difference. The Tariff Information Survey calls attention to the loss of 30 per cent, and the Senate committee has figured it down to the very cent.

I know that the independent ferromanganese manufacturers claim that we are going to drive them out of business with a duty of 1⅞ cents. They say they are entitled to 2½, which the House gave them. I do not think it will drive them out of business, but I do know they are entitled to 1⅞ cents, and that is what the committee has given them.

Mr. WALSH of Montana. My information is that in the manufacture of ferromanganese the recovery of the metal content in the ore averages about 80 per cent, the loss being only about 20 per cent.

Mr. SMOOT. That may be true of the high-grade ore, but it can not be done with the great mass of ore that is imported,

nor can it be done with any ore that is produced in the United States.

Mr. WALSH of Montana. I can not profess to have any personal knowledge about the matter, and I am obliged to take what information is given me from official sources with respect to this particular subject. They say that the loss is not to exceed 20 per cent of the manganese content of the ore.

Mr. SMOOT. The Tariff Commission Survey says:

During the war experiments were made to ascertain metallic losses in the making of ferromanganese and spiegeleisen from ores then available. Twelve furnaces, producing about 40 per cent of the country's output of ferromanganese, showed a metallic loss of manganese in the manufacture of this alloy of 29 per cent.

That is what I stated, that the average was 29 per cent. I admit that the United States Steel Co. can import selected ore from some foreign country containing the highest possible percentage of manganese and get 20 per cent out of it, but there is no ore in the United States out of which they can get it. The average of all the ores produced by the 12 independent producers averages 29 per cent, as I stated, and the loss in the manufacture of spiegeleisen, as I stated, is 38 per cent.

It should be stated, however, in this connection that the ores used were largely American, whose silica content is relatively large.

So the Tariff Information Survey claims that the American loss is 38 per cent. We are trying to protect the ferromanganese ore produced in Colorado and Montana, and what is the use trying to protect the ore if we allow a rate upon the ferromanganese that will let the ferromanganese in and kill the ore business?

Mr. WALSH of Montana. The simple question is, What is the rate necessary in order to accomplish the result? That is the whole question.

Mr. SMOOT. If the Senator will figure from the statement made by the Tariff Commission, he will see that 1½ cents is scarcely enough, and if we are going to protect the ore—which is what the Senate committee wants to do—I do not want ferromanganese to come in to the disadvantage of the ore.

Mr. WALSH of Montana. But seeing that there is only 1 cent duty on the manganese content of the ore, it requires some demonstration to show that you have to put 1½ cents on the ferromanganese product. Let me inquire of the Senator just what have been the importations of spiegeleisen into the country under the existing law?

Mr. SMOOT. I think they were put in the RECORD the other day, but I will look them up. In 1918 there were $4,300,604 worth; in 1919 there were $4,283,541 worth imported.

Mr. WALSH of Montana. That is of what?

Mr. SMOOT. Of ferromanganese.

Mr. WALSH of Montana. I asked about spiegeleisen.

Mr. SMOOT. The importations must be very small.

Mr. WALSH of Montana. Are there any importations at all?

Mr. SMOOT. I should not think there would be very much imported. In 1918 there were $228,012 worth; in 1919 there were $1,018 worth; and in 1920 there were $277,900 worth. The Senator will find that on page 359 of the Summary of Tariff Information, about the middle of the page. That refers to the spiegeleisen mentioned in paragraph 301, not this to which we are referring, because this has not been kept separate, and I can not tell the exact figures; but I will frankly say to the Senator that it could not be very much.

Mr. WALSH of Montana. My information about it is that no spiegeleisen is imported into this country at all. I have the information now before me. For the nine months of 1921 the imports were $9,260 worth.

Mr. SMOOT. That is correct; but in 1920 there were $277,900 worth imported.

Mr. WALSH of Montana. Yes; $277,900, and $9,260 worth in the nine months of 1921. In 1919 there were $1,018 worth, and in 1918 there were $228,012 worth.

Mr. SMOOT. Why does not the Senator make a motion to put the rate on the ores lower, if he wants it, and let the Senate vote upon it? If the Senator wants a low rate, so that the ferromanganese can come into this country, let him make a motion such as I have suggested.

Mr. WALSH of Montana. I am trying to profit by the full information of the Senator from Utah. I inquired of him whether he thought there should be a different rate.

Mr. SMOOT. No; I think the rate is just as low as it can be to keep out the ore.

Mr. WALSH of Montana. If that is the case, then should there not be a higher rate on ferromanganese?

Mr. SMOOT. No; I think the rate on ferromanganese of 1½ cents is enough to equalize the duty on the ore and the ferromanganese.

Mr. WALSH of Montana. Will the Senator tell us whether he thinks that is necessary in order to equalize the conditions with respect to spiegeleisen?

Mr. SMOOT. I do.

Mr. WALSH of Montana. Does not the Senator think it is too much?

Mr. SMOOT. No; I do not. I think it is too much if the manganese contains over 1 per cent carbon, and could be made in a furnace, but where it must be less than 1 per cent carbon, and has to be made in a crucible, it is not too much.

Mr. KING. Mr. President, I would like to ask my colleague in respect to ferromanganese containing more than 1 per cent of carbon, on which a rate is recommended of 1½ cents a pound. It seems to me that a tariff of $22.50 a ton, which, as I figure it, would be permissible under this amendment, is rather heavy.

Mr. SMOOT. I will say to the Senator that the amendment which has been offered is to fix the rate at 1½ cents a pound, and we have cut the ad valorem rate of the House from 28 per cent to 15 per cent.

Mr. KING. I think I understand that.

Mr. SMOOT. The Senator was not here, and I will state briefly just what led up to this change.

The House gave a rate of duty of a cent a pound on the manganese content in the ore. The Senate Finance Committee placed manganese ore on the free list. The Senate disagreed to the committee amendment, leaving a rate of 1 cent a pound on the metallic content. That, of course, necessitates a change in the rate of ferromanganese. The House with 1 cent on the metallic content gives manganese 2½ per cent. The Senate committee, with the same rate on the manganese content in the ore, gives 1½ cent a pound on the ferromanganese. That is a particular kind of ferromanganese, as it must contain not more than 1 per cent of carbon. In the paragraph before that manganese containing more than 1 per cent of carbon is provided for. Wherever it contains more than 1 per cent of carbon, then it is made in a furnace, but where it contains less than 1 per cent carbon it must be made in a crucible, and only in small quantities.

The reason why they made the difference is that ferromanganese containing less than 1 per cent carbon is used in the hardening of brass and bronzes, and if it contained more than 1 per cent carbon it could not be used for that purpose. The 15 per cent that the Senate gives is simply the protection that is necessary for the industry, and if I am not mistaken that is exactly the rate applied in the Underwood law.

Mr. KING. I will state the point I had in mind, and I shall be glad if I may have for a moment the attention of the Senator from Montana [Mr. WALSH]. The paragraph provides that ferromanganese containing more than 1 per cent of carbon shall have a duty of 1½ cents per pound. Here is the point to which I wish to call attention:

Provided, That ferromanganese for the purposes of this act shall be such iron manganese alloys as contain 30 per cent or more of manganese.

Mr. WALSH of Montana. That refers to the item immediately preceding and not to spiegeleisen.

Mr. KING. I understand that, but I wanted the Senator's view as to the point I am about to make now. It means, I think, that iron manganese alloy which contains 30 per cent of manganese will be entitled—that is, the entire product of 2,000 pounds, instead of 30 per cent of 2,000 pounds—to a duty of 1½ cents. So if a given tonnage, taking 1 ton to illustrate what I mean, is entered at the customhouse containing 30 per cent only of iron manganese alloy it receives a duty upon the entire content, 60 per cent of which may be comparatively valueless, and the duty would be, therefore, $22.50 upon the iron manganese alloy consisting of only 600 pounds.

Mr. SMOOT. I will say to the Senator that the standard is 80 per cent. This is only put here by way of precaution. There is nothing given as to the effect the tariff will have, but if it were thrown open entirely and nothing said about it at all, we do not know what they would undertake to do. It is simply a precaution taken in the tariff measure.

Mr. KING. That may be, and yet it occurs to me that it is giving a duty upon 1,400 pounds of some other product. If the imported article contains 30 per cent of iron manganese alloy, then the whole ton would carry the duty of 1½ cents per pound, so the ore may be reduced ore so as to send in a given importation only 30 per cent and still get the entire duty of 1½ cents per pound.

Mr. SMOOT. If the Senator will read it carefully he will see it says "ferromanganese containing more than 1 per cent of carbon." If we go back of that it is "ferromanganese contained therein." It is not "if it is 80 per cent," or 65 per cent, or 50

per cent, or 30 per cent, or whatever it is. It is the amount of manganese "contained therein."

Mr. KING. If my colleague will allow me a minute, that would be all right if it were not for the proviso starting on line 4:

Provided, That ferromanganese for the purposes of this act shall be such iron manganese alloys as contain 30 per cent or more of manganese.

Mr. SMOOT. But, Mr. President——

Mr. KING. If the Senator will pardon me, if the product which is brought in be a manganese iron alloy, it needs to contain but 30 per cent of manganese in order to obtain the full benefit of 1½ cents.

Mr. WALSH of Montana. I think the Senator is in error about that.

Mr. SMOOT. Yes; the Senator is in error about it.

Mr. WALSH of Montana. I think the junior Senator from Utah is in error. It means that if it contains less than 30 per cent of manganese it is not to be deemed to be ferromanganese within the meaning of the clause and will not carry a duty of 1½ cents. If the manganese content is less than 30 per cent, it will be regarded as manganese, not ferromanganese, and will carry a duty of only 1 cent per pound, as provided in the first part of paragraph 302.

Mr. KING. I suppose that is what was intended, but the language, it seems to me, is rather confusing.

Mr. WALSH of Montana. It reads:

Provided, That ferromanganese for the purposes of this act shall be such iron manganese alloys as contain 30 per cent or more of manganese.

That is to say, anything that does not contain at least 30 per cent is not to be deemed to be ferromanganese for the purpose of fixing the duty of 1½ cents.

Mr. SMOOT. Not 1½ cents, but the 15 per cent ad valorem duty. If it does contain more than 30 per cent, then it is ferromanganese, and if it contains less than 1 per cent of carbon, then it has 15 per cent ad valorem above the 1½ cents.

Mr. WALSH of Montana. I thought I had this matter clearly in my mind, but I am confused when the Senator talks about 15 per cent ad valorem. Where does the 15 per cent ad valorem come in?

Mr. SMOOT. No; I was wrong; it is the metal that has the 15 per cent ad valorem. There is no 15 per cent at all on the item about which we are talking.

Mr. WALSH of Montana. The 15 per cent refers to molybdenum and not to manganese at all.

Mr. SMOOT. The Senator is right. Ferromanganese containing more than 30 per cent of manganese is ferromanganese. If it is less than that it is spiegeleisen and defined in paragraph 301, provided it has more than 1 per cent carbon.

Mr. WALSH of Montana. There is no specific duty on spiegeleisen, so far as I can see.

Mr. SMOOT. If the Senator will return to paragraph 301 he will see that the proviso put in there reads:

Provided, That spiegeleisen for the purposes of this act shall be an iron manganese alloy containing less than 30 per cent of manganese.

If it contains more than that, then it is ferromanganese, and that is the dividing line. The House cut it down to 15 per cent, and then changed it to 30 per cent. Thirty per cent is the proper division.

Mr. KING. Mr. President, the explanations of my learned friend——

Mr. SMOOT. If my colleague will read it just as it is, he will see that it does not apply as he thought it did:

Ferromanganese containing more than 1 per cent of carbon, 1½ cents per pound on the metallic manganese contained therein: *Provided*, That ferromanganese for the purposes of this act shall be such iron manganese alloys as contain 30 per cent or more of manganese.

If it contains less, then in paragraph 301 we say it is not ferromanganese, but it is spiegeleisen.

Mr. KING. I am not satisfied with the explanation made by the Senator from Montana or by the senior Senator from Utah. It strikes me that there will be confusion and an attempt will be made to obtain the benefits or the disadvantages, depending upon which side of the shield is to be considered, that flow from the imposition of 1½ cents per pound upon iron manganese alloys, where the imports are in products or consist of products where 60 per cent at least of the import may be of some other product, practically valueless, some other product than ferromanganese.

Mr. SMOOT. The Senator would be correct if we did not specifically state that it should be the metallic manganese contained therein. My colleague's position would be absolutely correct if those words were not here, but they are here.

Mr. KING. Let me ask my colleague a question: Does the committee intend by this provision to give a duty of 1½ cents a pound upon all products brought into the United States denominated ferromanganese alloys, where 60 per cent of the imports of the product may be waste or gang, and 30 per cent and only 30 per cent consist of ferromanganese alloy?

Mr. SMOOT. No; there is no such intention nor would this provision do it. If there were 100 pounds of that kind of product coming into the United States and it contained 30 per cent of manganese, then there is a duty of 1½ cents a pound on the metallic content, which is the 30 per cent of manganese; but if, as I said, the words "the metallic manganese contained therein" were not here, then my colleague would be entirely right. If there were 40 per cent, there would be 1½ cents on 40 pounds. If there were 60 per cent, it would be 1½ cents on 60 pounds. But if it were 20 per cent it would not fall in here at all, because it would not be ferromanganese but would be spiegeleisen.

Mr. KING. I submit to my colleague that if the bill passes in this form there will be a controversy when importations come to the customhouse and the product consists of 30 per cent only of iron manganese alloys and 60 per cent of some other product as to just what the rate of duty should be. My colleague said the rate of duty would be only 1½ cents per pound upon the metallic content—that is, the manganese alloy content—whereas it may be contended that the duty shall be levied upon the entire product, because it will be said that 30 per cent of it consists of iron manganese alloy, and therefore the entire product which comes into the United States must bear the duty of 1½ cents.

Mr. SMOOT. I assure my colleague that will never happen.

Mr. KING. I hope the construction contended for by my colleague is correct, but later on, after further examination, I may recur to it and make a motion to clarify it, if I shall not be satisfied that the construction which I think now will be placed upon it is correct.

Mr. WILLIS. Mr. President, I desire to ask the senior Senator from Utah a question, if the junior Senator will permit me.

Mr. KING. I yield.

Mr. WILLIS. The Senator will remember that we had some contest some days ago about the duty on manganese. The duty was fixed, in my judgment, entirely too high; but what I want to know is if this has been rewritten on the basis of the change then made so as to give a compensatory duty?

Mr. SMOOT. Seven-eighths of 1 cent is compensatory duty.

Mr. WILLIS. I recall the duty of 1 cent which we placed on manganese ore.

Mr. SMOOT. It is necessary because the Senate voted a duty of 1 cent upon the metallic content in manganese ore.

Mr. WILLIS. A vote which I think ought not to have been taken.

Mr. KING. Mr. President, I want to put in the RECORD a brief statement, if it has not heretofore been put into the RECORD, showing the domestic production and the imports of ferromanganese.

In 1908 the domestic production was 40,000 tons plus—I will not give the odd figures. That production increased until 1920, when we produced 295,447 tons. In 1918 we produced 333,027 tons. The imports in 1908 were 44,000 tons; in 1918 they were 27,000 tons; in 1919 they were 33,000 tons; in 1920 they were 59,000 tons; and in 1921 they were only 9,057 tons. I have not the production for 1921; I have not obtained that from the Tariff Commission; but, as stated, in 1920 the total domestic production was 295,447 tons.

The imports for last year consisted of only 9,057 tons; yet, in the face of that limited import, and a domestic production beyond the 200,000-ton mark, and over the 300,000-ton mark in 1918, it is proposed to place the very high duty of 1½ cents a pound upon the product. It seems to me that it is entirely too high, and I do not think it may be justified.

Mr. WALSH of Montana. If the Senator from Utah will pardon me, I wish to express my concurrence in the view now expressed by him. I read from the Tariff Survey as follows:

According to figures secured by the Tariff Commission on the cost of production, about 70 per cent—

Seventy per cent—

of the total expense of manufacturing ferromanganese is the price paid for the manganese in the ore. Hence ore cost is important in determining the competitive position of the American manufacturer.

Now, with reference to the other 30 per cent, the survey states:

With reference to conversion cost, the American producer is at no disadvantage compared with his English competitor. Coke is cheaper in the United States than in England, and the higher wage rates prevailing here are offset in a measure by larger furnaces and greater output per man employed.

So all that it is necessary to do is to take care of the compensatory duty. There is a loss in the conversion of the ore into ferromanganese that should be taken care of in the compensatory duty. Now, what should that be? I continue reading:

As manganese ores and ferromanganese and spiegeleisen are on the free list—

That is, under existing law—

no question now arises in regard to compensatory duties. Should, however, duties be levied either on the ores or on the alloys, the question of compensatory duties would arise. In passing from one stage of manufacture to another, there is always some loss involved, and this loss should be allowed for in imposing compensatory duties. In the manufacture of ferromanganese the recovery of metal contained in the ore averages in good practice about 80 per cent.

So that, there being no difference in the conversion cost, and the only thing we are obliged to take care of being the compensatory duty, we have got to compensate upon the basis of a loss of 20 per cent. Accordingly, Mr. President, we should give 25 per cent on 80 per cent; that is to say, a duty of twenty-five one-hundredths of 1 cent a pound will take care of the loss in conversion; so that the compensatory duty on ferromanganese should be one and one-fourth cents. That is what it should be according to the information here given us by the Tariff Commission. A compensatory duty of one and one-quarter cents will take care of the duty on manganese so far as conversion costs are concerned.

Mr. President, I am not going to object to a duty of one and seven-eighths cents per pound on ferromanganese; but I want it distinctly understood that the difference between one and a quarter cents and one and seven-eighths cents is not a protective duty at all so far as the principle of the difference between the cost of production in one place and the other is concerned. If it is said that the difference between one and a quarter cents and one and seven-eighths cents—that is to say, five-eighths of a cent a pound—is to take care of the difference in the cost of transportation between Great Falls, Mont., for instance, and Pittsburgh, why, I will let it go at that.

Mr. SMOOT. That is taken care of in the 1 cent a pound on the ore.

Mr. WALSH of Montana. Very well; then there is no justification whatever for the additional five-eighths of a cent. It is a plain gift to the producers of ferromanganese at the expense of the steel industry of the country.

Mr. SMOOT. No; but I want to say that it is a plain gift to the producers of manganese ore in Montana and Colorado. That is where the gift is and nowhere else, and let us understand it. The Senator from Montana reads from the Tariff Commission a statement in regard to the highest grade ores in all the world; a statement which was made at a time when the prices were the highest. I want to say to the Senator from Montana now that I would not be standing here asking for a duty of 1¼ cents had the Senate not by a previous vote decided that the ores produced in Montana and Colorado should be protected. The ores in Colorado and Montana are low-grade ores, and what the Tariff Commission has stated does not apply to them at all. If the Senator should vote for a rate of 1¼ cents only, the manganese ores of his State would go begging, and ferromanganese would be shipped in here instead of the ore.

I take it for granted that the Senate of the United States in expressing their wish in this matter desired to take care of the ores produced in the West, and in order to take care of those low-grade ores we had to make the rate on the ferromanganese 1¼ cents a pound.

I voted for free manganese, Mr. President; but, as I have said, if the Senator wants to move to reduce the rate of 1¼ cents now proposed let him do so now, and I will vote with him. I want, however, to tell him what the result will be. If we are going to undertake to protect an industry in the United States, what is the use of making the attempt on the one hand and then on the other hand robbing it of all that the first amendment intended it should have?

The committee decided originally to put manganese on the free list, and only gave a rate of $2.50 a ton on the ferromanganese; but the Senate decided otherwise. The Senator from Montana knows that in all of these ores the higher the per cent of silica the greater the loss in the recovery of manganese.

Mr. WALSH of Montana. If the Senator will pardon me, I stated quite frankly I did not know a thing about it. I am merely relying upon the information given to us by the Tariff Commission with respect to the matter, which is the result of a very extensive investigation.

Mr. SMOOT. I admit that what they say is true with respect to the highest grade ores shipped into the country.

Mr. WALSH of Montana. But they do not speak about the highest grade of ore; they speak of all ores and give the recovery in current practice.

Mr. SMOOT. Let us see what they do say about it:

With reference to the ores used, the recovery of manganese in the manufacture of ferromanganese depends largely upon the silica content. The higher the silica content the more manganese will be lost. The average recovery in blast furnaces when good manganese ores are used, i. e., ores containing 6 per cent or less silica and 48 per cent or more manganese, is about 80 per cent in good practice.

Is there a pound of such ore produced in the United States? Not one. If we are going to protect the western miner, let us protect him not on the ore alone but on the product made from the ore.

Mr. WALSH of Montana. What percentage does the Senator think the Tariff Commission was speaking of when it said that the loss was 20 per cent?

Mr. SMOOT. It says here containing 6 per cent or less silica.

Mr. WALSH of Montana. How much?

Mr. SMOOT. Six per cent or less of silica. The ore has to be of that high grade in order that 20 per cent may be recovered. I understand that the United States Smelting Co., when they first began to import those high-grade ores, which now they can not get anywhere in the world, did recover 80 per cent, but the Tariff Commission in the same report state that the average for the 12 concerns manufacturing in the United States is 29 per cent.

Mr. WALSH of Montana. I was not inquiring about the silica content. The Senator spoke about high-grade ores. What kind of ores does he mean?

Mr. SMOOT. Fifty per cent and above.

Mr. WALSH of Montana. I understood that the classification heretofore made was 35 per cent and above.

Mr. SMOOT. I will say to the Senator the Tariff Commission says in this very report that their statement applies only to ores containing 6 per cent or less silica and 48 per cent or more of manganese. The Senator knows that the ore produced in Colorado and Montana carries only about from 35 to 36 per cent. The highest that was ever shipped was only 37 per cent.

Mr. WALSH of Montana. My recollection is it was 42 per cent.

Mr. SMOOT. I have not seen any record to that effect, although I did see one record which gave the figure at 37 per cent.

I feel that the Senate placed a duty of 1 cent a pound upon the metallic content of manganese ore for the purpose of protecting the production of the United States, and in order to protect the ore there must be a differential of seven-eighths of a cent on the ferromanganese, or else, instead of the producer of the ore having protection he will have none, for it will come in here in the shape of ferromanganese and not in the shape of ore.

Mr. UNDERWOOD obtained the floor.

Mr. KING. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Utah.

Mr. KING. Mr. President, when I yielded to the Senator from Montana I was calling attention to the domestic production and the imports for the year 1908 to 1921, inclusive. I will ask that the table to which I have referred may be printed in the RECORD at the conclusion of my remarks.

I will state in conclusion that at a time when there was no tariff duty on the ore, as I understand, and the ferromanganese came in free of duty, the importations last year were only 9,057 tons, while the domestic production in 1920 was nearly 300,000 tons; and yet it is proposed to allow this enormous rate of 1¼ cents per pound upon the product. I repeat that in my judgment it is indefensible.

The VICE PRESIDENT. Without objection, the table referred to by the Senator from Utah will be printed in the RECORD.

The table referred to is as follows:

Year.	Domestic production.		Imports (consumption).		Exports.	
	Quantity.	Unit value.	Quantity.	Unit value.	Quantity.	Unit value.
	Tons.		*Tons.*		*Tons.*	
1908	40,642	$44.31	44,624	$41.70	.....	.....
1909	82,209	42.73	88,934	38.19	.....	.....
1910	71,376	40.49	114,278	37.99	.....	.....
1911	74,482	37.28	80,263	37.56	.....	.....
1912	125,378	50.40	99,137	39.41	.....	.....
1913	119,495	57.87	128,070	44.37	.....	.....
1914	106,083	55.80	82,997	43.61	.....	.....
1915	149,521	92.21	55,263	60.33	.....	.....
1916	221,532	164.12	90,928	101.62	.....	.....
1917	260,125	309.17	45,381	134.58	.....	.....
1918	333,027	250.00	27,168	156.75	.....	.....
1919	185,357	137.24	33,022	129.71	2,999	$148.66
1920	295,447	188.00	59,254	131.22	3,454	186.03
1921	.....	.....	9,057	98.09	690	145.61

Mr. UNDERWOOD. Mr. President, I will not take much time in discussing this paragraph. The facts in reference to it have already been put in the RECORD, but I wish the RECORD to show the philosophy of this action.

In the first place there was nothing consistent in the action of the Senate in placing manganese ore on the tax list. Manganese ore is a commodity that is necessary in the production of certain classes of steel, but it is no more necessary in the production of such steel than is iron ore or coal. Iron ore is the basic material from which steel is made. Manganese ore is merely used as an alloy for the purposes of hardening steel. Coal is necessary. Now, the Senate has left coal and iron ore on the free list—and I do not object to that—and put manganese ore on the tax list.

Of course, Mr. President, we know that when the raw material of any product, whatever it may be, is placed on the tax list the excuse is given—and sometimes it is a necessary conclusion—that a compensatory duty must be levied on the finished product. Why start in this industry—it does not relate to any other industry than iron or steel—by taking some part of the raw material and putting it on the tax list and leaving the other part of the raw material on the free list? There is no logic, there is no reason, there is no system whatever in such a procedure. Either one is right or the other is right.

If this tariff bill is being written solely for the purpose of playing favorites, if special friends are to be taken care of within the folds of this bill that they may make money whereas otherwise they would not, then let the country know it; let us have the reason for it, but if you are going on a system of taxing raw material why not tax it all? Why not be consistent about your theory? You are not, and therefore I assume that the basis is that if you are friendly to one man you will erect a tax wall in his favor, and if you are unfriendly to another you will tear it down, and that that is the basis of taxation as contained in this bill.

Of course I have never seen any logic in the proposal or reasoning that because some commodity is contained in the ground and lies there the man who happens to own the surface and can dig down and get it is entitled to have a tax levied on all of the American people to make valuable to him a commodity that is under his ground and that is not valuable unless you levy the tax. Until you start to take it out of the ground there is no labor in it. In all human probability he paid for the ground, or the original purchaser did, when there was not any tax on it. He paid for it without tax. He acquires the property and then asks the Government of the United States to increase the value of his property by levying taxes in his favor.

As to ferromanganese, of course the cry may come here that it is necessary to levy this tax on the raw material because we may be in danger of being short of this commodity during war times if we do not build up the industry. As a matter of fact, Mr. President, the raw material was on the free list when the Great War broke out, and immediately men went into the manufacture of ferromanganese from ferromanganese ore, and overnight the industry was developed in this country. One of the greatest plants is in my State, at Anniston, where they converted some old plants into an electrical furnace and made a very large portion of the ferromanganese that was used in this country during the war. When the war was over they scrapped the plant, so that the excuse can not be offered that you have to do it in order to protect the Nation, because it is a thing that you can do in two or three weeks. The manufacture of this product is not a process that needs any great degree of labor. I assume that in the future most of the ferromanganese will be made through the electrical furnace. Of course, I realize that there are furnaces built on the basis of the old pig-iron furnace, where they originally made it, that will be continued, and gentlemen having manufacturing plants that are not in line with the progress of modern methods will necessarily ask the people of the United States to allow themselves to be taxed in order that they can preserve their ancient methods of production. That is human nature. I do not suppose it is worth while to take the time to criticize men who believe that they are such superior creatures that they are entitled to have the power of the Government exercised in favor of their own pocketbooks; but what I do complain about is this:

Your party 40 or 50 years ago started out in favor of a protective tariff. You adopted that system. It was not the beginning of the protective tariff system, but you adopted it when your party was born, and you said you did it in order to build up the industries of America, to allow these infant industries to build and grow strong and develop. I do not say the protective tariff has done it; it may have helped in a degree, but I think the great iron and steel industry, because of the great supply of raw material and American genius, would have been built up anyhow; but, at any rate, whether your theory builded it or not, it is here. The giant is born. It is no longer a baby in swaddling clothes. It is going out into the markets of the world, the master in its line of production, if you give it a chance, if you give it an opportunity; and yet we find that because you want to favor some particular individual or corporation, notwithstanding this giant is able to go out, if you take the shackles off of him, and fight unhampered in the markets of the world for the trade of the world, you are proceeding to try to put him back in swaddling clothes, and you do that every time you tax his raw material. Every time you levy a tax—I do not care whether it is the manufacture of steel and you tax ferromanganese, or whether it is the manufacture of chain and you tax the billets or the bars out of which the chain is made—every time you tax the raw material from which some of these commodities are made you are chaining down to earth a great giant of industry.

There is no excuse for it. No matter whether you are a protectionist in theory or not, there is no excuse for this; and I think it is next door to a crime when you have a material like this already on the free list, when you can make it. Your party never levied taxes of this kind during the life of the Republican Party on most of these ferro-alloys. There are one or two exceptions. You have most of them in the same tax classification as pig iron. There are one or two exceptions, but you have most of them taxed along with the low rate of pig iron. When the present law was adopted I realized that there were some real exceptions in reference to ferro-alloys that would produce revenue, and that some of them were entitled to a reasonable tax, and I separated the ferro-alloys from pig iron and made the ferro paragraph; but I was not wild enough to go and levy a tax on things like ferrosilicon and ferromanganese, where the only purpose of the proposition would be to make it more difficult for the steel mills to march out into the world's markets and command the world's trade, and when it was unnecessary. You have had these things on the free list, and, as the Senator from Utah has pointed out, the importations have been very small. They have not seriously affected the industry, and they will not.

Mr. President, I know that my voice in this Chamber can carry no weight on this bill, and that you will go on and do this foolish thing. I believe that the tax you have levied in this bill on ferromanganese—although I will not say it positively, because I am not dead sure about it—is in excess of what is necessary to make a compensatory duty for the tax the Senate has put on manganese ore. I think you will carry a degree of protection besides the compensatory duty; but you ought to strike out both of them. You ought to give this giant in industry a chance to battle in the markets of the world, and there is no use in talking about going ahead and helping the consumer on the finished product if you are going to tie down the industry before it gets a chance to come to the markets.

So, Mr. President, I only rose to say that I hope this amendment will not be agreed to, and that ferromanganese may go back on the free list where it belongs. I suppose, however, my hope will be in vain.

Mr. McCUMBER. Mr. President, it is not for me to say that the Senate did a foolish thing in overruling the views of the committee and putting manganese upon the dutiable list at $20 per ton. The Senate in its wisdom or unwisdom did so, and it is for the Senate now to determine whether or not, having put manganese upon the dutiable list, we should give a compensatory duty to ferromanganese. I can not imagine any benefit that would accrue to the owner or miner of manganese ore if he is to have a duty while ferromanganese is allowed to come in free, and I think that the Senator from Alabama will concede that even if the Senate did a foolish thing in putting manganese ore upon the dutiable list, it ought to put ferromanganese upon the dutiable list.

Mr. UNDERWOOD. If the Senator will allow me a moment. I am not contesting the logic of his argument. All I say is that two wrongs never made a right, and I know that both of these propositions are wrong, and therefore I shall vote against both of them.

Mr. McCUMBER. Even from the Senator's standpoint, one wrong necessitates action to meet that wrong; so, in either instance, we would have to have the compensatory duty.

Mr. WATSON of Georgia. Mr. President——

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). Does the Senator from North Dakota yield to the Senator from Georgia?

Mr. McCUMBER. I yield to the Senator.

Mr. WATSON of Georgia. In northern Georgia there are as rich deposits of manganese as can be found, and not one single letter or message have I received from anybody in northern Georgia asking for this tariff duty; and I really should like to know where this demand comes from.

Mr. KING. Mr. President, before the Senator answers the question of the Senator from Georgia, may I submit one, so that he can answer the two? It has been suggested by the Senator from Montana [Mr. WALSH]—and it seemed to me as he was speaking that his position was accurate and could not be controverted—that the compensatory duty provided by the committee is entirely too high; that perhaps 1¼ cents would be an adequate compensatory duty to be carried upon this alloy.

Mr. McCUMBER. On that of 50 per cent, or a higher grade. If you take the manganese ore of a lower grade, then it would require from 1¾ to 1¾ cents in order to get an adequate duty. I think the Senator's colleague has sufficiently explained that.

I am not going to get into a controversy with my friend from Georgia on the question as to whether any Georgia people have requested this duty. The Senate put a duty on manganese ore, and in that action it overruled the committee; and having been overruled upon that item, the committee felt that it was necessary to make this change in order to give a compensatory duty on the products of the ore.

I want to say just a word with reference to the argument of the Senator from Alabama [Mr. UNDERWOOD]. It is true that some 70 years ago we began placing a protective tariff upon commodities for the purpose of protecting what were then infant industries. At that time nearly three-fourths of our population were rural and only a little over one-fourth of our population were living in cities. As a result of protection we have a country now in which less than one-third are rural and more than two-thirds live in our cities and are engaged in manufacturing and commerce.

It is true that we developed the infant industries until in many instances they became giants, but we can not forget that along with the growth and development of those infant industries into mighty giants there came a gradual raise in laborers' wages, in standards of living, resulting in a higher standard of living, and in our cities especially and even greater in the agricultural communities.

We have given labor a much better wage; we have reached a far higher standard of living. The question now arises, will you strike down the giant which is still giving that advantage to the American workman and to the greater portion of the American people? I do not think it would be beneficial to the country to now kill the giant because we think it has become overgrown. From the standpoint of the agriculturists I still prefer to have two-thirds of the American people consumers of agricultural products produced by the other third than to reverse the situation and have two-thirds producing food and agricultural products for the use of the other third.

If I believed for a single moment that we would help the rural communities—that we would help agriculture—by striking down the other industries of the country, I might be led to the belief of those Senators on the other side who are against any kind of protection, but believing that we should maintain those industries, believing that we should have as many consumers of agricultural products in the United States as possible, and believing that we should not reduce the standard of living or the high wages in the United States any more than is absolutely necessary, in order that there may be free buying and selling between the different classes and the different sections of the country, I should still maintain the propriety of having reasonably high protective tariff duties.

I agree with the Senator from Alabama in the statement that if there is no necessity for any tariff upon steel products up to a certain degree of manufacture we should give no protection, but I am yet to be convinced that that is the case.

Mr. UNDERWOOD. Mr. President, I always listen with much interest to the remarks of the Senator from North Dakota. He speaks well, and he speaks convincingly if you admit his premises, but he is still dreaming in a theory of the past. He defends his proposition that he is not willing to strike down a giant of industry by taking off the tariff. I have asked nobody to strike down a giant of industry or any other giant. I have merely pointed to the fact that this great giant in the iron and steel industry is already walking the face of the earth, combating with men all over the earth in the marts of trade, and if the fact that he can fight abroad does not demonstrate that he is able to fight at home nothing will demonstrate the proposition. The only thing I am saying for him is, give him a chance; take the shackles off him; do not tax the raw material he must have out of which to make his products, and take the tax off these great products.

If the Senator from North Dakota had merely consented to leave alone the rate in the present law on the heavy products of iron and steel, I would not have indulged in criticism, although I think they are too high. I would have been willing to let time demonstrate that they are too high. But the Senator and his committee are not content with that. Although it is demonstrated that this great industry, under a low tariff with many of its products on the free list, has gone through nearly a decade of the most wonderful growth in its entire history, and has marched out into the markets of the world to a greater extent than ever before, without rhyme or reason the Senator proceeds to raise the taxes all along the line, to increase the taxes.

This is not a question of building up the industries of the towns and cities in order to supply markets for the agricultural interests. The agricultural interests had the market during the operation of the present law. There never was a greater production in this industry than during the war, and it would go on now, under the rates in the present law, if the country were not suffering under the depressed times which have been existing for the last year and a half.

But there is another statement in which I do not agree with the Senator. I have never been one of those who denied that the levying of a protective tariff may have fostered or stimulated the growth of industry in this country, just as exactly as you will stimulate a plant by pouring fertilizer on it, and as long as it was a stimulation of which the public got the advantage, and was not solely levied in the interest of selfish monopoly, I did not voice much criticism about it. But the time has come when you have built the monopoly, and it is prepared to stand alone in the markets of the world and fight its own battles; but you bring in a bill to foster it in the interest of a special few.

But there is one thing I am not willing to admit on the record, and that is that this system has improved the living conditions of America. Our grandfathers may not have ridden in automobiles; they may not have been able to buy Florida strawberries in the middle of winter; they may not have been able to secure their fish out of a refrigerating plant which had kept it from time immemorial. But their health was much better; they lived in more comfortable houses, although those houses may not have been heated by a steam-heating plant; they ate better and purer food, and they had more of it in our grandfather's time, and although they may not have had the latest patterns from Paris, and may not have worn as many clothes, when they bought a woolen suit they bought it cheaper, and it was all wool and not shoddy.

Mr. KING. The Senator might state that our grandmothers wore more clothes than the ladies now wear.

Mr. UNDERWOOD. Yes; in our grandmothers' time the high cost of living had not forced the dresses down to the size of a pocket handkerchief, and they really were wrapped in some clothes that were visible to the eye.

I am not willing to concede that this stimulated growth which has driven the population of America into the cities, which the Senator from North Dakota desires to keep in order that there may be greater markets for those engaged in agriculture, has improved either the health or the morals or the living conditions of the Nation.

Mr. McCUMBER. Mr. President, if the Senator thinks that our grandfather days and the methods of living then were better than they are to-day, I do not blame him for being against a protective tariff. I can imagine some of those good old conditions of which the Senator speaks. I can imagine the good housewife at midnight, with her knitting needle, working away into the wee small hours of the morning to make stockings for her little brood. It might be that four or five of the children would be stuffed into a trundle bed that was shoved under the other bed to keep it out of the way during the daytime. If the Senator thinks that was a more healthful condition than the present way of living, I can not agree with him. With all of our wickedness, which perhaps has grown out of our prosperity, I can imagine the difference between the conditions of the present day and of our grandmothers' day, when the good woman was married in her black gown and kept that old silk gown for her shroud when she should die, and it was perhaps the only good dress she had for 40 or 50 years. I confess I would rather see the conditions of to-day.

I can remember how our grandmothers used to file out of church with their polka-dot dresses, which they wore for 10 or 15 years, and I can not help comparing them with the beautiful flower garden you will see when any church door opens to-day, when we see the beautiful faces and the beautiful dresses and the beautiful women filing out of church, and you thank God that you are living to-day and not in your grandfather's day.

It may be that we have become a little more restless. When people only work 3, 4, 5, or 6 hours a day, they perhaps are not as solid in their conservatism, and so forth, as our grandfathers, when they had to work 18 hours in the day. But after all, I think that we are in a far better condition to-day, and if a protective tariff has helped us in any way in reaching that condition, then thank God for it, and let us firmly and unitedly support it.

Mr KING. Mr. President, the Senator from North Dakota [Mr. MCCUMBER], like most devotees of extreme protectionism, have attributed all industrial progress and the increase in the wealth of all countries to high tariffs. If his theory be true, then China, which had for centuries practically a complete prohibition of imports, ought to have been enormously rich. Great Britain's wealth increased as if by magic when she removed the artificial barriers erected by foolish tariff laws. Of course, some nations possess such inexhaustible resources that more or less of prosperity will result regardless of taxation, direct or indirect, levied upon the people.

The United States, because of its extensive area and its great natural resources, was bound to develop and become a rich and prosperous country. Congested countries in the Old World required an outlet for their population, and the fertile plains of the great agricultural areas of the United States attracted their attention, and America became their adopted country. With the great increase in population, largely due to immigration, a variety of industries were developed.

History reveals that even in countries where the agricultural resources were the greatest, as the population increased the activities of the people became more varied, and industries belonging to other categories than agriculture were developed.

The question of transportation was an important consideration in the development of manufacturing and other industries in the United States. When great agricultural sections such as the Mississippi Valley were settled and a large population was developed, manufacturing enterprises were bound to be established. In a country as large as the United States, no matter what conditions exist abroad, there will be developed what some denominate home industries, and manufacturing enterprises will constantly increase in number and production.

The United States, because of its large population and varied resources, and the superior qualities of its people, was inevitably destined to develop industrially. The genius of the American people would not be satisfied with a purely agricultural country. I repeat when I say that the inexhaustible agricultural and other resources of the United States compelled its development industrially and made imperative the building of mills and factories and the establishment of a multitude of enterprises. Europe, 3,000 miles and more from our eastern shores, was at a disadvantage in many respects in marketing her products on this side of the Atlantic, and these disadvantages increased as the markets in the United States were remote from the Atlantic. Oceans that separated the United States from Europe and Asia constituted tariff walls, and, in many instances, embargoes, and gave to the American manufacturer an immense advantage over his would-be foreign competitor.

The virgin resources of this great Nation are so stupendous that even with unwise legislation and hampering and restrictive policies, it was bound to become a great commercial and financial power in the world, and, indeed, to become supreme in those fields which determine the true standard of a nation's worth and greatness. In addition to the varied and rich natural resources of our country, we have a people whose virtues and qualities compel them to march forward and to lead the van in industrial progress, as well as in liberal and enlightened policies.

While according to the peoples of other lands due honor and full recognition of their virtues and achievements, it is not too much to say that we have in the United States such a blend of races as inevitably would produce a mighty people destined to accomplish mighty things and to hold high the standard of civilization and progress.

Reactionary Republicans have sought to arrest the progress of this Nation, to bind and shackle the American industries, and to close the ports of the world to our ships and to our products. There are Republicans who regard the tariff as the supreme issue in our political and industrial system and who believe that prohibitive tariffs are specifics for all domestic or national ills. There are those so saturated with the poison of protectionism that they are blind to the economic forces of the world and to the fundamental principles upon which trade and commerce rest.

It has been urged during the progress of the debate upon this bill that the tariff rates must be so high as to keep out every commodity that possibly might be produced in the United States. Of course, this view belongs to the Dark Age, not to an enlightened progressive age; and yet intelligent Republicans, with the utmost naïveté, stand before us and proclaim it.

There never was a time in the history of this Republic when we so much needed foreign markets, not only for our agricultural products but for the products of the mine, the mill, and the manufacturing plants. No country has made greater progress in agriculture than this. Our farmers are becoming scientific agriculturists, and the annual yield of our fields and farms is increasing to a most remarkable degree. We are learning the secrets of nature and using them in our agricultural activities, and indeed in all branches of the industrial life of the people. The remarkable improvement in agricultural machinery has revolutionized farming, and it will not be long before the labor of one man upon the farm will yield more than the labor of a score of men a few years ago.

We have millions of acres of land yet to be cultivated and millions of acres which have been cultivated rather imperfectly which, with intensive cultivation, will yield richer rewards than are now comprehended. We can greatly increase our cotton yield. All forms of agricultural products can also be increased almost beyond computation. And the farms are now becoming attractive. Schoolhouses are being taken into every agricultural section, and with the improvement in our highways and increase in the use of automobiles, the construction of electric interurban railroads, the cities are being taken to the people.

Agriculture is only in its infancy in this Republic. We should have for export tens of millions where there are now millions. And no people have been as inventive as those in the United States. The success of the American people along the lines of invention has been phenomenal. We are constructing machinery not only of the highest grades but of the greatest utility. We are building manufacturing plants that surpass any to be found in the world. It is but a few years ago that the cotton mills of Great Britain were perhaps the best in the world. To-day Great Britain and all other nations lag far behind the United States in the character and efficiency of their mills. The American workmen are more alert and resourceful than those in any other country, and the results of their labor are very much greater than those of any other workmen. While it is true the American workmen are paid higher wages, the fact is that they produce more than those employed in similar work in other countries. I feel quite sure that in many industries, measured by the results of their effort and their labor, many American workmen are paid no more than that received in the same industries in some European countries. In other words, the American employee is paid a greater per diem, but in many industries he receives no larger compensation, measured by the products resulting from his effort.

The Senator from North Dakota seems to think that our agriculturists are only concerned in supplying the needs of our manufacturing centers and manufacturing population, and that our manufacturing industries are to be content with supplying their own needs and the requirements of the agricultural population. Mr. President, as I have stated, our agricultural resources are so great that we can not only feed the people of our country, but we can annually produce for export products of the value of billions of dollars, and our industrial development is such that our mills and factories and mines must find markets in other lands if the people of the United States are to have assured prosperity. No country can compete with the United States in most industrial lines. We have inexhaustible coal measures, mountains of copper and lead and zinc and other metals. We have the great primary products which constitute the foundation of our chemical and all other classes of industries. Europe is now waiting not only for raw materials and primary products of all kinds, but also our finished products.

What is needed in the United States is greater production, and what the world needs to-day is increased production. Production is the source of wealth; indeed it is wealth. The wealth of the country is measured not by gold and silver, but by its production. The United States needs to-day millions of additional homes, and with the erection of these homes the additional wants thus arising must be supplied. With the increase in homes, the demands for the articles and commodities essential therein will be increased, and as these demands are satisfied increased production must be had. The world is crying for larger production. Hunger and want exist in many lands, and yet unwise and foolish leaders and statesmen busy themselves in offering obstacles to production and to satisfying the necessities of the people.

This bill is an exhibition of this unwise and what I believe to be reprehensible policy. Instead of aiding domestic production

it will tend to restrict; instead of aiding the American people to obtain markets for their products and to increase their production it will operate as a dam to retard the current which should bring prosperity to the people. I suggest to my distinguished friend from North Dakota that this bill which bears his name, and I feel constrained to say that it will not add to his glory, is not in the interest of the American people. It will add to their burdens, it will increase their taxes, it will multiply their difficulties. Those who will be benefited by it are certain manufacturers and certain industries whose representatives have been most potent in the framing of the schedules which we find in the bill before us.

The Senator from Alabama [Mr. UNDERWOOD] has just pointed out in a clear manner the difference in a tariff to aid what might be called an "infant industry," and which may contribute temporarily at least in the development of a new industry, and a tariff where the industry has been established and is controlled by gigantic corporations, which in their operation constitute a practical monopoly. The Senator from North Dakota apparently fails to appreciate the difference between a new industry and an industrial condition where billions are invested and monopolistic control is found. This bill is not framed upon the theory of protecting infant industries. It seeks to perpetuate the control which monopolies and great corporations have of the domestic markets of the United States. It turns over to gigantic organizations the practical control of our industries and legalizes the extortionate prices which these organizations compel American people to pay; but it does more. It injures the American people and indirectly hurts the domestic manufacturer because it closes the door to foreign trade.

This country, because of its varied resources, may have a measurable degree of prosperity with comparative isolation from the world, but we deny to American citizens the rich patrimony of abundant and overflowing prosperity, and also fail in our duty to the world if we pursue such a course, and we also fetter the American people to such an extent that they cease to be a factor in international trade and commerce, and are prevented from wearing the crown of moral leadership in the world.

The American manufacturer is most unwise to use the power of taxation, as it is being used through the instrumentality of this bill, to obtain monopolistic control of the domestic market. Such a course in the end will develop discontent among the American consumers and create resentments against manufacturing interests and many classes of producers which will eventuate in hostile and perhaps extreme drastic legislation. It will provoke a demand for high taxes and for the perpetuation of an exaggerated excess-profits system of taxation, for an increase in income taxes, and perhaps for Federal control and regulation of all interstate commerce. The monopolist, the big corporations, the big business interests of the United States are blind to their own welfare when they demand these outrageous taxes levied by this bill. They are sowing the wind; they will reap the whirlwind. The leaders of the Republican Party are foolish in the extreme when they urge this bill. They not only are betraying the American people but they are striking a deadly blow at their own party. No political organization in this country can long remain in power when it is controlled by corporations or trusts or special interests or any particular group or class. The majority of the American people are opposed to group or class government, and undoubtedly they will visit their wrath upon any political organization which permits organized wealth or great corporations or monopolistic enterprises to dictate legislation, particularly such as deals with taxes and lays tariff duties.

These great interests which are controlling the Republican Party in order to secure the passage of this bill have formed an alliance with organizations or persons claiming to represent the agriculturalists of the United States. For years the Republican Party has used the farmers of many of the States to further its uneconomic and un-American policies. The farmers have been made to believe that the high protective measures enacted by the Republicans have been for their advantage. The farmers have been fooled by the specious arguments of the Republicans, and have given their support in many States to Republican candidates. The farmers have been compelled to sell their products for prices determined and fixed in the markets of the world, and have been compelled to buy the commodities produced by the manufacturing industries of the United States at fictitious, artificial, and extortionate prices because of the heavy taxes imposed in the tariff bills enacted by the Republican Party. Some of the agriculturalists have begun to realize the deception which has been practiced upon them, and they have become partially disillusioned.

Instead of denouncing the iniquitous tariff policies of the past and the oppressive tariff taxes which have been imposed upon them, some have compromised with the monopolistic manufacturing forces, and for giving support to these extreme and oppressive rates are to be given tariff duties upon agricultural products. Of course, the manufacturers can safely promise 20 or 30 or even a higher rate of duty upon products which come from the farm and the field which do not meet, and can not meet, with foreign competition.

The agriculturalist derives no benefit from the deal. His products will not be enhanced in price, and he is being used as a tool to fasten upon his own neck and upon the necks of the American people chains of industrial bondage fashioned by the industrial trusts and manufacturing combinations of the United States.

The farmers of the United States should demand a low rate of duty upon manufactured products, and should oppose the imposition of these burdensome taxes which the manufacturers propose shall be levied by the McCumber bill.

Mr. President, this bill ought not to pass. It is economically unsound. It contravenes the fundamental principles of trade and commerce. It is hostile to the best interests of the American people. It will benefit, at least temporarily, the monopolies and predatory interests for whose benefit it is written. It is so incongruous, so complicated, so deceptive and misleading, so hateful and harmful and injurious that it ought to be killed or recommitted to the Committee on Finance, there to repose until the conditions in the world have been materially changed. This is no time to write a tariff bill. This is no time to increase the burden of taxation. The great majority which the Republican Party has both in the House and the Senate may enable them to pass this bill. If it does become a law, I make the prediction that there will be no industrial peace in the United States until it is repealed or greatly modified. If it is not a Frankenstein to devour its makers, it will at least prove to be the iconoclastic weapon with which the proud and arrogant party which now rules this Republic will be broken and shattered.

Mr. WALSH of Montana. Mr. President, the Senator from North Dakota explained the necessity of a duty of 1¼ cents per pound upon ferromanganese while there is a duty of but 1 cent on managnese by explaining that a quarter of a cent would not take care of the situation, because there is a great loss in the ores containing a low percentage of manganese. Touching the matter of the metallic recovery, I want to submit the following from the Tariff Commission:

> The manufacture of ferromanganese and spiegeleisen from manganese or manganiferous ores involves some metallic losses. It is a matter of importance to take account of such losses in view of the fact that they are of vital concern whenever the question of compensatory tariff rates arise. Unfortunately only rough general estimates can be made, as these losses vary with the ores used, the process employed, and the experience of the producer.
>
> With reference to the ores used, the recovery of manganese in the manufacture of ferromanganese depends largely upon the silica content. The higher the silica content the more manganese will be lost. The average recovery in blast furnaces when good manganese ores are used, i. e., ores containing 6 per cent of less silica and 48 per cent or more manganese, is about 80 per cent in good practice. Very seldom, with even the highest grade ore and the best practice, does it get above 85 per cent.
>
> During the war experiments were made to ascertain metallic losses in the making of ferromanganese and spiegeleisen from ores then available. Twelve furnaces, producing about 40 per cent of the country's output of ferromanganese, showed a metallic loss of manganese in the manufacture of this alloy of 29 per cent. The manganese loss in the manufacture of spiegeleisen was 38 per cent. It should be stated, however, in this connection that the ores used were largely American, whose silica content is relatively large.
>
> The process employed in the manufacture of ferromanganese also influences the percentage of recovery. Less metallic manganese is lost on the average in the electric furnace than in the blast furnace. It is claimed that this loss can be reduced to 10 per cent by the use of the electric-furnace method, but figures obtained on the Pacific coast show a larger loss. One of the leading concerns in that region manufacturing ferromanganese in 1918 reported a metallic loss of manganese in the manufacturing process of 30 per cent. This loss, however, was much larger than the average. The manufacture of ferromanganese in electric furnaces is too limited and recent to admit of any categorical statement. Furthermore, the ores used in these furnaces are mainly American and therefore of lower average grade than the foreign ores employed in blast furnaces.
>
> Practice and experience count for much in metallic recoveries. There is a great variation in the percentage of loss among new and old producers. As a rule the former show a larger percentage of loss than the latter. One of the largest and oldest manufacturers reported that its average practice in a blast furnace—

Bear in mind this is a blast furnace, not an electric furnace.

> One of the largest and oldest manufacturers reported that its "average practice in a blast furnace shows that about 17½ per cent of manganese contained in the ore is entirely lost during the process of manufacture into ferromanganese."

It should be borne in mind that 45 per cent of the ferromanganese produced in this country is produced by the United States

Steel Co. I submit, in connection with this Tariff Commission showing, that this is specifically a rate to take care of one of the great products of the United States Steel Co., which it sells to other producers of steel in this country.

Mr. WALSH of Massachusetts. Mr. President, I should like the attention of the Senator from Montana. I noticed that he referred to the fact that ferromanganese was very extensively used by the United States Steel Corporation, and that the tariff rate proposed would benefit that corporation.

Mr. WALSH of Montana. It is not only used by them but they produce it extensively, their production amounting to 45 per cent of the consumption, as I understand.

Mr. WALSH of Massachusetts. As a matter of fact, do they use all they produce?

Mr. WALSH of Montana. They sell some, although they use, of course, the greater proportion of the amount they produce.

Mr. WALSH of Massachusetts. I want to say to the Senator that my information is—and I do not think we differ in principle at all—that it was largely due to the influence of the United States Steel Corporation that manganese was put upon the free list; that ferromanganese was also through this influence put upon the free list; for all the other alloys used in making of steel bear a high duty. The provisions of the House bill show a substantial duty on ferromanganese. The Senate committee, as the Senator well knows, put manganese upon the free list, and also put ferromanganese on the free list, their action being largely due to the influence of this corporation which a few years ago purchased extensive and valuable manganese mines in South America. Thus the putting of manganese on the free list would permit the Steel Corporation to get all of its manganese without paying any duty, and enable it also to produce without this duty its ferromanganese from the manganese obtained from South America.

The information which has come to me is that the discrimination in these amendments involved in putting these two products upon the free list was due to the influence of the United States Steel Corporation exerted on the majority members of the Finance Committee. At any rate, the fact is that the House in its bill provided for a duty upon manganese and ferromanganese, and the bill as reported by the Senate Finance Committee put them upon the free list. The provisions of the Senate amendment were of undisputed value to the United States Steel Corporation, in view of its extensive deposits of manganese in South America. The conclusion is that the change was made in the interest of that corporation. So, therefore, whether my argument or the Senator's is sound, both tend to show that special consideration was given to the interest of this great trust in establishing this duty.

The PRESIDING OFFICER. The question is upon the amendment offered by the Senator from North Dakota to the amendment reported by the committee.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The Secretary will report the next amendment.

The ASSISTANT SECRETARY. On page 49, line 13, it is proposed to strike out "$1.25" and insert "$1," so as to read:

ferromolybdenum, metallic molybdenum, molydenum powder, calcium molybdate, and all other compounds and alloys of molybdenum, $1 per pound on the molybdenum contained therein—

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. WALSH of Montana. Mr. President, this entire paragraph deals with what are known as ferro-alloys; that is to say, metals which are combined with iron in the production of steel. The imposition of a duty upon manganese and manganese ore necessitates a compensatory duty on the ferromanganese. A duty is imposed upon tungsten and there should be a corresponding duty on the compounds of tungsten used for the purpose of alloys. I am inclined to think that much can be said for the imposition of a duty on tungsten and quite certainly on chromium; so that the compounds of those metals used as alloys should carry a duty; but my investigation has led me to believe that outside of the alloys to which I have thus specifically referred there is no justification whatever for the duties proposed.

Of course, if a duty of 75 cents a pound is imposed on the molybdenum content of molybdenum ore, there should be a compensatory duty as provided in the part of the bill to which our attention is now directed; but no opportunity was given to discuss the subject of whether molybdenum ore should or should not carry a duty, because there was no amendment proposed with respect to that article. New that a duty is proposed upon ferromolybdenum, the question is presented whether or not molybdenum ore should carry a duty. Of course, if the duty proposed upon ferromolybdenum is not agreed to by the Senate, doubtless the committee will be moved to make some change in the provisions of the bill in relation to molybdenum ore.

Now, I wish to submit briefly such information as we have concerning molybdenum ore as given to us in the Tariff Information Survey, designated as FL 28, from which I read as follows:

Molybdenum is used by the steel industry in the manufacture of stainless and high-speed steels and by the chemical industry in the manufacture of ammonium molybdate and other molybdenum compounds.

DOMESTIC PRODUCTION.

Previous to the war the bulk of the molybdenite produced came from small, scattered deposits in Australia, Norway, Sweden, and the United States. During the war large deposits were discovered in Colorado, and new properties were opened up in various other Western States, so that in 1915 the United States was the world's largest producer. The production in 1918 was equivalent to 430.8 tons of metallic molybdenum (861,637 pounds).

Prior to 1918 only about 50 short tons of molybdenum, or less than 30 per cent of the 1917 production, were consumed each year in the United States. The balance was exported either in the form of concentrate or as ferromolybdenum.

* * * * * * *

IMPORTS.

With the exception of 8 tons imported in 1913, practically no molybdenum in any form was imported until 1918. The imports during the last half of 1918 and first quarter of 1919 amounted to 116 short tons. In the calendar year 1919 they amounted to 53 short tons (106,743 pounds).

COSTS AND PRICES.

Molybdenum ore costs are variable owing to the "spotty" character of the deposits. The operation requires a large amount of development work per ton of concentrate. The price of molybdenite rose from 30 cents per pound in 1912 to 70 cents early in 1914. During the first year of the war the price jumped to $2 per pound, and after minor recessions reached $1.80 per pound in 1917. During that year some material sold for as high as $3 per pound and closed in December at $2.25.

In 1918 the European embargo was removed and increased production drove the price down to $1 per pound. Sales in 1919 were from 65 cents to 85 cents per pound.

* * * * * * *

COMPETITIVE CONDITIONS AND TARIFF CONSIDERATIONS.

The demand for molybdenum is expanding materially, but unless new uses are discovered for the metal or its alloys the domestic production will satisfy all domestic demands for some time. Costs at the new low-grade deposit in Colorado are as low as those obtained anywhere in the world for production in quantity.

Notwithstanding the fact that the Tariff Commission tells us this ore can be produced in Colorado as cheaply as anywhere in the world, there is a duty of 75 cents a pound put upon it.

To show how the domestic production is crowding out the imports, I call attention to the f ct that in the year 1918 there was imported molybdenum ore to the value of $123,924. Of course, it was on the free list. In 1919 the importations dropped to $77,752, and in 1920 to $9,707, and that, of course, because of the conditions to which reference has been made.

The Tariff Commission tells us, with reference to tariff considerations, as follows:

The probability of any imports of molybdenum, either as metal (or ferro-alloy) or as crude mineral is rather remote, in view of the strong position of the domestic producers, although the demand from domestic steel makers is expanding substantially.

Early in 1918 the United States became the dominating factor in the world supply of molybdenum through the completion of the new mill of the American Metal Co. at Climax, Colo. More than one-half of the total amount of molybdenum now being produced is mined in this country.

That is, more than half of all the molybdenum produced in the world is mined right here in the United States.

The Tariff Commission continues:

In case a domestic demand develops for molybdenum, competition may be expected from Canada in the domestic market if prices of over about $1 a pound are maintained. A surprising development of the industry has taken place in the last two years in Quebec and Ontario. The low-grade deposits of Canada are fairly comparable to those in Colorado, with the balance in favor of Colorado, because of the greater size of the ore body, greater quantity of production, and unquestionably lower costs in spite of lower grade ore, higher wage scale, and high mountain freights. It is believed that few Canadian producers can sell molybdenite much below $1 a pound and make money. It is possible that the Colorado plants can operate at a profit with prices as low as 50 cents a pound. At this price a great demand would develop in the home market, which has looked askance at molybdenum as a high-priced tungsten substitute in expensive tool steels, but would welcome a large supply of cheap metal. It is not likely that any other mines in the world could meet such a reduction in price of the product except at a loss.

Mr. President, so much for the duty on molybdenum ore. Ferromolybdenum is, of course, produced from the molybdenum ore in union with iron and carbon and other elements; but in the matter of the production of ferromolybdenum we are in exactly the same favorable condition that we are with respect to the raw material from which it is produced, as will appear from the Survey of the Tariff Commission C–1, at pages 133 and 134, from which I read as follows:

The cost of producing molybdenum and ferromolybdenum is high, but the greater part of this expense is the cost of the metal in ore concentrate. As in the case of ferrotungsten, the item of raw material constitutes the bulk of the total cost. At present no country is so favorably situated with reference to raw material as the United States.

That takes care of the raw material item.

The price of electric power is an important item in the conversion cost; but, as in the case of ferrotungsten, the expense of conversion is a relatively small part of the total cost. With reference to this power cost, however, the American producer of ferromolybdenum has the same handicaps that the manufacturers of other electric-furnace ferro-alloys have.

Some molybdenum and ferromolybdenum have been imported into this country during recent years, but most of it came as a result of the stocks left over in other countries after the war.

I dare say that that statement will explain not a little of the information that is given to us in the Reynolds report. I dare say the saws that the Senator told us about yesterday as being sold at less cost than American saws belong to some stocks left over after the war.

The importation before the war, as has already been seen, was prior to the discovery of the large deposits in Colorado and other Western States. To-day the American industry is not seriously threatened with competition from abroad.

Continuing:

Under present conditions there are no tariff problems connected with the manufacture of molybdenum and ferromolybdenum. Aside from the question of tariff classification, as it pertains to the ferro-alloys in general, no problem arises with reference to grades or character of tariff rates. The competitive situation favors the American producer. As imports are small and sporadic, little revenue would be derived from any duty on this metal.

The question of compensatory duties is not likely to arise, as the supply of molybdenite from domestic sources is so large that a duty on this ore would not influence prices in this country. Prices of metallic molybdenum and ferromolybdenum to steel manufacturers would not be raised by virtue of any duty on the alloy for practically the same reason. Assuming no monopoly conditions, domestic producers are in a position to satisfy the home demand for metal and alloy at prices at least as low as those prevailing elsewhere in the world.

In view of this condition of things I should like to have somebody explain why this duty is put on here. Of course some one wants it put on. There is no doubt about that. It is not here by mere accident. Somebody is asking for it, and asking for it for only one reason, which is frequently disclosed in this bill in connection with articles the importations of which are practically a nullity or entirely negligible. They want it in order to have an opportunity behind the wall thus created to raise their prices to the domestic consumer without any peril of competition from abroad.

Mr. President, in line 13 I move to strike out "$1" and insert "1 cent."

Mr. McCUMBER. Mr. President, this is one of the war babies, born in the throes of a great world conflict. It came into existence in 1914, after the war started in Europe. Prior to that time we had produced none of any account.

I look over the molybdenum ore summary table and I find the following figures of production in this country:

We produced in—	Pounds.
1910	Nothing.
1914	1,297
1915	181,769
1916	206,740
1917	350,200
1918	861,637

That shows the wonderful growth of this product since 1914. It cost considerable, of course, to produce it in this country. One ton of the material will produce only 10 pounds of the concentrate in Colorado. I have not before me the proportionate amount in the old country, but undoubtedly it is very much greater.

The factories in Colorado have shut down. The imports are coming in. There is considerable of the product of the American factories still on hand. It is being sold at about 50 cents a pound. The foreign product is sold for about 40 cents a pound, and the cost of transportation, and so forth, brings it up to about the American cost. With our own factories closed down and with a great increase in the importation of the product, knowing that this business was not in existence prior to the war, that it is closed down now, and that the product is being sold for less than the cost of production, I really think that the business of producing it in this country is worth saving.

I will read from but one paragraph of the Tariff Information Surveys:

The doubtful factor in the molybdenum situation is the market. Until recently a dependable supply of molybdenum ore has not been available, and the development of uses for the metal has been delayed on that account just as the development of a large output was hindered by doubt as to the market. Now that a large and steady output is coming from Colorado, new uses are sure to appear and an increased demand develop.

Mr. President, I think that information of itself is sufficient to justify the continuance of the production in the United States; and I think further, from the evidence before us, that without a protective duty the manufacturers in this country can not possibly compete with the importing costs.

Mr. WALSH of Montana. Mr. President, I inquire of the Senator where he gets the information that the foreign product is selling in this country for 40 cents a pound?

Mr. McCUMBER. The importing price is now about 49 cents a pound.

Mr. WALSH of Montana. Where does the Senator get that information?

Mr. McCUMBER. I have it here in a very late report in the Engineering and Mining Journal-Press of June, and the 50 cents per pound for 85 per cent is the price of the American product in the United States. My understanding is that the foreign product is sold for about 49 cents—I have not the record before me just at the present time—and that it is produced at about 40 cents a pound.

Mr. WALSH of Montana. The fact is that some of the American product has been sold for 50 cents a pound, and of course if the American product is sold for 50 cents a pound the foreign product can not be sold for any more.

Mr. McCUMBER. No; I assume that they are both selling for substantially the same price.

Mr. WALSH of Montana. So that apparently, according to the statement of the Senator, some foreign molybdenum has been sold for 49 cents, and some American molybdenum has been sold for 50 cents. That is the statement the Senator makes.

Mr. McCUMBER. At a very serious loss, so I am informed.

Mr. WALSH of Montana. The loss will be as great on the foreign production as it will on the American production, because we can produce more cheaply in America than they can produce abroad. There is not any opportunity for controversy about these facts. They are undisputed.

This is referred to as an industry developed by the war. To be sure it is. It is a new industry everywhere. The use of molybdenum as a substitute for tungsten in the production of steel is a recent discovery.

I want to read a little further from the document from which the Senator was reading about competitive conditions:

Norway can be expected to maintain a production of not over 100 tons of molybdenum a year. This figure is practically double the pre-war production, and was reached only by greatly increased costs and loss of efficiency. Competition from the above output may be expected in the European market at any price above $19 a unit (95 cents a pound).

I call the attention of the Senator to the fact that the Tariff Commission tells us that foreign producers can not compete with this country at a price less than 95 cents a pound. Of what significance is it that some molybdenum was sold, under what circumstances we do not know, for 49 cents a pound and some American ore was sold at 50 cents a pound? Of course, they are not mining molybdenum ore in Colorado just now, when the market price is only 50 cents a pound. They were not mining copper ore in Montana for nine months of the past year when copper was down to 11 cents a pound. But it was not because of foreign competition; it was because there was a lack of demand for it anywhere, either here or abroad. The Tariff Commission, in the survey, say:

Competition from the above output may be expected in the European market at any price above $19 a unit (95 cents a pound). If prices lower than this prevail a large part of the production would cease. Another factor in the Norwegian output is the probability of manufacture of ferromolybdenum with the aid of cheap electric power near the mines. The more general adoption of local reduction in Norway would not greatly reduce the cost of ferromolybdenum and is not considered of material consequence.

The doubtful factor in the molybdenum situation is the market.

That is the trouble with the 49-cent and 50-cent molybdenum. The market is not here. The production of steel has fallen off.

Until recently a dependable supply of molybdenum ore has not been available, and the development of uses for the metal has been delayed on that account just as the development of a large output was hindered by doubt as to the market. Now that a large and steady output is coming from Colorado, new uses are sure to appear and an increased demand develop. It is not possible to predict the extent of this demand or the limiting price at which it will actually develop. Some difficulty has been experienced in disposing of the great quantities of material produced in the United States. Prices were accepted that were much below those quoted, as the market and the market quotations have been lowered 50 per cent.

I really think the Senator from North Dakota ought to take into consideration whether this commodity should not be on the free list or a mere revenue rate fixed upon both the molybdenum ore and the ferromolybdenum. I see no reason at all for this duty, and I must confess that the Senator has not offered any which seems to me at all persuasive.

It is true that this is a new industry; but, apparently, we have an abundance of the ore. The mining is comparatively inexpensive as compared with the cost of mining in other countries, and I can not find any justification for the duty. I should move to put it on the free list, but this is not permitted at this time, so I ask for a vote on the amendment proposed.

The PRESIDING OFFICER. The question is upon agreeing to the amendment offered by the Senator from Montana to the committee amendment.

Mr. WALSH of Montana. I notice that only the Senator from North Dakota [Mr. MCCUMBER] and myself and the junior Senator from Nevada [Mr. ODDIE] are in the Chamber. I accordingly suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Borah	Glass	McLean	Simmons
Brandegee	Gooding	McNary	Smoot
Broussard	Hale	Newberry	Spencer
Bursum	Harris	Nicholson	Sterling
Cameron	Heflin	Norris	Sutherland
Capper	Johnson	Oddie	Townsend
Caraway	Jones, Wash.	Overman	Underwood
Cummins	Kendrick	Phipps	Walsh, Mass.
Curtis	Keyes	Pittman	Walsh, Mont.
Dial	King	Poindexter	Warren
Dillingham	Ladd	Pomerene	Watson, Ga.
Ernst	La Follette	Ransdell	Watson, Ind.
Fernald	McCormick	Rawson	Williams
France	McCumber	Sheppard	Willis
Frelinghuysen	McKinley	Shortridge	

The PRESIDING OFFICER. Fifty-nine Senators having answered to their names, a quorum is present. The question is upon agreeing to the amendment offered by the Senator from Montana to the committee amendment.

Mr. WALSH of Montana. As we are about to vote on this item, I should like to have the attention of the Senate so that I can state what it is about.

The amendment proposed relates to the item found on line 11, page 49, $1 a pound on ferromolybdenum. That is intended to be compensatory for a duty of 75 cents a pound on molybdenum in molybdenum ore.

The Tariff Commission reports that molybdenum can be produced in the United States, and actually is produced in the United States, cheaper than anywhere else in the world; that it can be produced in Colorado at a cost not to exceed 50 cents a pound; and that the foreign product can not come into competition with it until the price runs as high as 95 cents a pound. There is accordingly no excuse whatever for a duty on molybdenum ore, and there should be no duty whatever on ferromolybdenum.

These facts are not controverted or openly disputed. It is information given to us by the Tariff Commission. There is no country in the world where this ore can be produced as cheaply as it can be produced in the United States. There is no country in the world where ferromolybdenum can be produced as cheaply as it is produced in the United States, and yet there is a duty put upon it of $1 a pound.

I move to strike out "$1" and to make the rate "1 cent."

Mr. HEFLIN. On that I ask for the yeas and nays.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and vote "nay."

Mr. UNDERWOOD (when his name was called). I transfer my general pair with the senior Senator from Massachusetts [Mr. LODGE] to the Senator from Nebraska [Mr. HITCHCOCK] and vote "yea."

The roll call was concluded.

Mr. STERLING (after having voted in the negative). I have a general pair with the Senator from South Carolina [Mr. SMITH]. I observe that that Senator has not voted. I transfer my pair with him to the Senator from New York [Mr. WADSWORTH] and permit my vote to stand.

Mr. SUTHERLAND. I transfer my pair with the senior Senator from Arkansas [Mr. ROBINSON] to the junior Senator from Pennsylvania [Mr. PEPPER] and vote "nay."

Mr. SIMMONS. I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG], who is absent from the Chamber. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON], and will vote. I vote "yea."

Mr. ERNST (after having voted in the negative). I transfer my general pair with the senior Senator from Kentucky [Mr. STANLEY] to the junior Senator from Delaware [Mr. DU PONT] and permit my vote to stand.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair, after having voted in the negative). The Chair desires to state that the senior Senator from Virginia [Mr. SWANSON] is necessarily absent. I promised to take care of him for the day with a pair. I find, however, that I can transfer my pair to the junior Senator from Oklahoma [Mr. HARRELD], which I do, and allow my vote to stand.

Mr. CURTIS. I wish to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Maine [Mr. FERNALD] with the Senator from New Mexico [Mr. JONES];

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL].

The result was announced—yeas 22, nays 38, as follows:

YEAS—22.

Ashurst	Heflin	Pittman	Walsh, Mass.
Caraway	Kendrick	Pomerene	Walsh, Mont.
Dial	King	Ransdell	Watson, Ga.
Glass	La Follette	Sheppard	Williams
Harris	Norris	Simmons	
Harrison	Overman	Underwood	

NAYS—38.

Borah	France	McKinley	Smoot
Brandegee	Frelinghuysen	McLean	Spencer
Broussard	Gooding	McNary	Sterling
Bursum	Hale	Newberry	Sutherland
Cameron	Johnson	Nicholson	Townsend
Capper	Jones, Wash.	Oddie	Warren
Curtis	Keyes	Phipps	Watson, Ind.
Dillingham	Ladd	Poindexter	Willis
Elkins	McCumber	Rawson	
Ernst	McCormick	Shortridge	

NOT VOTING—36.

Ball	Fletcher	Moses	Robinson
Calder	Gerry	Myers	Shields
Colt	Harreld	Nelson	Smith
Crow	Hitchcock	New	Stanfield
Culberson	Jones, N. Mex.	Norbeck	Stanley
Cummins	Kellogg	Owen	Swanson
du Pont	Lenroot	Page	Trammell
Edge	Lodge	Pepper	Wadsworth
Fernald	McKellar	Reed	Weller

So the amendment of Mr. WALSH of Montana to the amendment of the committee was rejected.

Mr. SMOOT obtained the floor.

Mr. HARRISON. Mr. President——

Mr. SMOOT. I was about to make a statement with reference to the next item.

Mr. HARRISON. I merely desire to ask unanimous consent to have something printed in the RECORD. It will only take a moment.

Mr. SMOOT. I yield to the Senator for that purpose.

Mr. HARRISON. There was printed in yesterday's New York Times an article written by the leader on this side, the senior Senator from Alabama [Mr. UNDERWOOD]. It is headed "Worst tariff bill in country's history. Rates of taxation higher and less defensible than any that have ever been proposed in American Congress. Story of iron and steel." It is a very splendid article, and I ask unanimous consent to have it incorporated in the RECORD in 8-point type, so the country can read it.

There being no objection, the article was ordered to be printed in the RECORD in 8-point type, as folows:

[From the New York Times, June 11, 1922.]

WORST TARIFF BILL IN COUNTRY'S HISTORY—RATES OF TAXATION HIGHER AND LESS DEFENSIBLE THAN ANY THAT HAVE EVER BEEN PROPOSED IN AMERICAN CONGRESS—STORY OF IRON AND STEEL.

(By OSCAR W. UNDERWOOD, United States Senator from Alabama.)

One man in the Senate is seldom interviewed for publication. He is OSCAR W. UNDERWOOD, of Alabama, author of the Underwood tariff law and leader of the Democratic minority. The attack on the Fordney-McCumber tariff bill, now before the Senate, is largely in the hands of Senator UNDERWOOD, who has set forth for the New York Times what he termed "a few observations" on the bill.

"In approaching the consideration of a customs tariff bill one's viewpoint is largely governed by the principles involved. To the believer in the theory of a protective tariff a bill prepared by those advocating that theory is more than likely to receive the immediate approval of the advocates of protection without a careful investigation of the details involved in the bill.

"On the other hand, those believing in the revenue or competitive theory of tariff taxation are equally predisposed to accept the views of those advocating the theory without analysis of the details.

"I have always opposed in principle the theory of protection, and have leaned strongly to the idea that customs taxation

should be levied primarily in the interest of revenue for the Government and that all rates of taxation should be so adjusted as to allow a reasonable inflow of goods from abroad in order that the customhouse might have an opportunity to take its toll as they passed through and some degree of competition might be established. I have never contended that in the interest of a revenue tariff it is necessary to bring about destructive competition, but a tariff that fixes the rates of taxation so high as to practically prohibit foreign goods from entering the American market at all has been abhorrent to my ideas of the proper use of the taxing power of the Congress of the United States.

"Accepting the statement I have just made as to the viewpoint of approach of this subject, it is not surprising to find the Members of Congress who favor protection giving their practically united support to the tariff bill now pending before Congress. There are comparatively few men in the Congress who have given a detailed study to tariff questions and understand the resultant effect of levying either high or low rates at the customhouse.

"A protectionist who has not given careful analysis to the details and resultant effect is apt to reach his conclusion from the standpoint that the main thing to be considered is to keep the foreign goods out of the American market, and, if the rates are high enough to do that, he is prepared to accept whatever else may result. It is, of course, to be expected that with the Republican Party in power in both branches of the Congress and the Republican Party committed to the principle of protection, a tariff bill drawn along those lines should pass the Congress, and there would certainly be no complaint from those believing in the theory of protection if that was all that was involved in the issue; but there is a great deal more in the pending tariff bill than the mere question of asserting and fostering the theory of protection.

OUTSTRIPS ALL OTHER BILLS.

"There are some few low rates in the pending bill. There are some articles on the free list. But, taking it all in all, it is undoubtedly the most prohibitive tariff bill that has ever been proposed in the American Congress, and the rates of taxation are higher and less defensible than any that have ever been presented to us in the past. It looks as if those charged with the responsibility of writing the bill have accepted unqualifiedly the rates proposed by the special interests desiring protection and have not given consideration to the resultant effect on the general business of the country or the burdens that must be borne by the consumers of America. Should the bill become a law, the American people will find this out in time, but it will be after they have paid the price of the experiment.

"The Democratic Party is often charged with being a free-trade party. So far as I know, from the beginning the Democratic Party has never abandoned the system of raising taxes at the customhouse. There are free traders in the Democratic Party, and I have known of some in the Republican Party. As I understand it, the position of the Democratic Party is that taxes levied at the customhouse should be for revenue purposes only, that the customhouse is a place where revenue may be obtained to run the Government, and that it provides a convenient way of raising a certain amount of revenue; that if a revenue tax be levied at the customhouse in such a way that it does not unduly stifle competition from abroad, and the person who pays it really pays it to the Government, it is a reasonable way to raise revenue. But when a tax is levied so high that very few imports come in—and if imports do not pass through the customhouse they leave no taxes behind them—the result is merely that of raising the price, which goes into the pockets of the home producer.

"The effect of protective tariff laws, as distinguished from tariffs for revenue only, has been to tax the great mass of the American people and to increase the profits of a few. I often hear socialism and communism condemned. I do not believe in either, but it is discrimination on the part of the Government against the masses of the people for the benefit of the few that sows the seed from which grows the tree of discontent, and discontent when brought about by unjust laws reflects on the whole system of Government. I believe that the great powers of the Government are intended to be used only for the benefit of all the people, not for the promotion of special interests, and I care not whether those special interests come out of the fields of agriculture or arise from the smokestacks of a steel mill.

"I am of that school of thought which believes that the legislative branch of this Government has no constitutional right—I might say no moral right—to use the taxing power of this Government for the purpose of building up fortunes or of tearing them down. I am just as much opposed to the idea of so levying a tax, under the guise of protecting American industry, that the mass of the people must contribute out of their pockets to build up a special industry and make a few rich as I am of extending the power of taxation so far that it confiscates the property of the individual and accomplishes by the power of force of taxation what the communism of Russia has accomplished with the red flag.

WHERE THE FARMER COMES OUT.

"In my opinion, if it were not for the support given this bill by Senators who represent agricultural constituencies it would be impossible to pass it through the Senate. The argument is advanced that since taxes are to be levied on manufactured products taxes should also be levied on agricultural products, and that if the people are to be penalized for the benefit of the manufacturer they should likewise be penalized for the benefit of the farmer. Where the fallacy of this argument comes is that under the guise of doing something to help the farmer in some particular item their support is asked for a bill that as a whole means that for every dollar the farmers may derive from the bill they will pay $100 in taxes for the benefit of somebody else. In other words, for every 1 per cent of protection they are given they pay 99 per cent of protection for the benefit of other people. I do not think there is any question about that.

"Take the wool schedule, known as 'Schedule K' in the Payne-Aldrich bill, but having a number in the bill that is now before the Senate. If the tax proposed in the bill is levied, the farmer will have to pay the tax the same as does the man who lives in the city, the man who works in the store, the machine shop, the foundry, or in an office. If the analysis be worked out, it will be demonstrated that the tax of 33 per cent on scoured wool will cost the public nearly $200,000,000, of which those engaged in the growing of wool will receive something like $72,000,000, against which the farmers as a whole will pay about $99,000,000, the rest of the people will pay in proportion, while the Government will receive as its share of this enormous tax less than $20,000,000. Yet it is contended that this duty on wool will help the American farmers. I admit it will help the men whose business is raising sheep, but the other farmers of the country—those who do not grow wool but raise wheat and corn and cotton—will pay the bill; that is, a most substantial part of it, and for every woolgrower there are a thousand farmers who do not raise sheep. I do not have in mind the little farmer who raises cotton or wheat and has a few sheep on the side, but the men whose business is growing sheep and who are only a few in number when compared with the great mass of farmers who will pay so large a proportion of the tax proposed in the pending measure.

"So we find some of the proponents of the pending measure maintaining that its enactment will greatly relieve the agricultural situation in this country, because it raises the tax on their products at the customhouse. Personally I have never believed that such a tax would prove of any benefit to the American farmer. We are told how the bill is going to help the farmer by an increased tax on wheat, by increasing the tax on certain kinds of cotton, neither of which will ever be of any benefit to the farmer or put one dollar in his pocket. This talk may sound like music to the farmer, but does the farmer realize that there are also in this bill paragraphs taxing the necessities of life, necessities that are vital to the farmer, the necessities by which agriculture lives?

"When the present law was written not only were all kinds of fertilizer, which are imported into the United States and are valuable in the development of agriculture, placed on the free list but binding twine for the man who raises wheat in the West and ties and bagging for the farmer whose basic crop is cotton were likewise placed on the free list. Under this bill they propose to put these things back on the tax list, and there is no evidence that either of these industries has suffered from outside competition under existing law. Some of the fertilizers coming into this market and many of the commodities from which fertilizers are made also will be taxed under the proposed law. I am confident that the farmer will not be long in finding out these things. The items I have cited are simply illustrative. Others which concern the welfare of agriculture can be found all through the bill.

"Let us examine the steel and iron schedules. I do not believe that the agricultural masses of this country will approve a tariff bill which proposes to impose prohibitive taxes on the raw materials from which their plows, their trace chains, their agricultural implements of all kinds are made. When the present law was written it was my view that as to the heavy commodities in the iron and steel schedule the great American industry was full grown and able then, as now, to fight its own battles in any market in the world. We are the master iron makers of the world. In framing the tariff act of 1913 I put

some of the articles embraced in the iron and steel schedule on the free list. There was just one reason why the rest of them were not also placed on the free list, and that was that I realized the tariff house had been built on stilts, that it had been on stilts for a great many years, and if it was brought down by cutting the timber with an ax and letting it drop I might shock the business sentiment of the country and force a reaction on what I was endeavoring to do.

THE STORY OF IRON AND STEEL.

"Therefore I attempted to reduce the rates by lowering the tariff with a jackscrew, hoping that time would justify the course I had taken and that at a later day the entire list of heavy iron and steel commodities and other similar articles covered by the bill might also be put on the free list, when the people might understand that this country could get along without tariffs on everything and that the American consumer could not be mulcted behind a tariff wall.

"Consider the paragraphs in the pending bill that relate to iron and steel sheet plates. They constitute the basic material out of which plows are made, the basic material in the manufacture of wagons, the basic material out of which ships are constructed, the basic material out of which are built freight cars for carrying the commodities of the country to market, the basic material for almost everything found in the blacksmith shop, and so on. On these commodities the schedule is built. And under this bill the rates on iron and steel plates have been largely increased. In 1920 we produced in the United States plates and sheets totaling 9,337,680 gross tons. We imported 29 gross tons and exported and sold in the markets of the world more than 1,000,000 gross tons. These statistics tell the story. Comment is unnecessary.

"I have had to fight this iron and steel question out a good many times. The truth about the matter is this: For many years in the other House of Congress I represented a great iron and steel district. I am in the business myself. I would not willingly harm a people that I represented, but neither would I willingly betray a people I represented by taxing them unjustly for special interests. I know this iron and steel schedule, and I know that it is a fraud and sham upon the people of this country. I know that it is not even in the interest of the industry in the end, and that it is very much better for this great industry to take the shackles of a tariff off its limbs. It can compete anywhere in the world. Let it sell to the mills at home, to the blacksmith, the automobile and the wagon maker, the roof maker, at reasonable profits and develop a home market for its products. It can stand a giant in the world of industry. There is no excuse for its being wet-nursed in a baby's crib when it is a full-grown industry.

"These wool and steel schedules are illustrative of the policy followed throughout in the drafting of this bill. I might cite schedule after schedule in proof of this; for instance, the duties proposed on glass, on cotton goods, silks, chemicals, and so on, indefinitely, but that would require too much space. The man or woman who reads the bill will have no difficulty in understanding what its enactment will mean.

"Scan for a moment the administrative features of the pending tariff measure. The bill authorizes the President to adjust rates under certain conditions where they do not equalize the difference of conditions of competition in trade. I know of no measure by which you can judge of the equalization of conditions of competition in trade other than the price of the article. The bill does not make plain whether it contemplates wholesale or retail conditions. Of course, it would be very much more extreme if we assumed that it meant to equalize the difference in retail conditions, with retail profits added, than if we assumed that it referred to wholesale conditions. But it must mean one or the other.

"EQUALIZATION" NOT DEFINED.

"It must mean that the President can equalize the difference in competition in trade between foreign goods after they are landed on American soil and goods manufactured in this country, as governed by either the wholesale or retail price, because that is the only way in which the President can measure it. It does not say 'wholesale or retail prices,' but that is, nevertheless, the measure of trade conditions. For the sake of argument, however, it is my assumption that the milder form of equalization is contemplated, namely, wholesale prices.

"Where is this competition going to be equalized? Is it to be equalized in Salt Lake City, with freight rates often equaling the value of the commodity, or is it to be equalized in New York, Chicago, New Orleans, or Boston? It is reasonable, I think, to assume that the equalization will take place where the competition is met; that is, at the seaboard.

"If that is what is meant by this bill, and the President must levy a tariff duty high enough to make the wholesale price of the foreign commodity equal to the price of the home manufactured commodity—and most of these commodities are made in the interior—at the port of entry, it will mean that the moment the foreign article starts toward the interior freight rates will be added to its price, accumulating on the price above that of the wholesale American manufacturer, and that will absolutely prohibit its sale in the American market. It would therefore seem reasonable to assume that the rates will be prohibitive at the customhouse and that the foreign manufacturer will find it hard to enter the American market at all.

"If this be true, then the very terms of the pending bill have destroyed foreign competition. Of course, from the standpoint of protection, it may be argued that the American producer is entitled to the entire American market, and if it were not for the fact that this proposed law taxes the American people there might be some justice in trying to bring about such a result. But when the home manufacturer is given a monopoly by levying taxes at the customhouse high enough to prevent foreign competition, then we make the consuming masses pay the price of industrial monopoly, and, in my mind, there is no doubt that is what the pending bill accomplishes.

"In other words, the proposed law contemplates a tariff wall which will foster and build up monopoly in this country and do what the beneficiaries of the protective system have clamored for for 30 years, and which Congress has never intentionally heretofore granted them—that is, a protective tariff to protect their profits, a tariff that makes it possible for them to pyramid their profits on the cost of production, and then stands between them to drive the foreign competitor out of the American market.

"It is true that the Congress may delegate to the executive branch of the Government the power to administer legislative provisions, but it has never been held yet that the legislative branch can directly transfer to the administrative branch the power to legislate.

"In the pending bill it is to be left to the discretion of the President to fix any rate he may choose up to and including 50 per cent. We all recognize the fact that we may delegate the power, upon the happening of an event, for the Executive to put into force a tax that has been agreed upon by Congress, but it is my contention that no definite event is fixed in this bill, and that the happening is a matter of discretion with the President. There is no dispute about the fact that when the event has happened the President may exercise his power and fix any rate of taxation from 1 to 50 per cent.

SEES BUREAUCRACY AHEAD.

"I say the primary thing in taxation is the rate, and that Congress in the bill has abandoned any control of the rate of levying taxation on the American people except a limitation of 50 per cent. If that is held constitutional, then next year it can be made 1,000 per cent or 2,000 per cent, and the Congress can abandon its control of taxation entirely to some subordinate bureau of the Government.

"Of course, we all recognize that, although we are speaking in the name of the President of the United States, we are delegating to him a power which he could not exercise himself because he has not the time to put it into force. The moment we delegate this power to the President he must turn it over to a subordinate bureau of the Government to exercise for him—a bureau without direct responsibility to the American people, giving to a bureaucracy the unlimited power to control industry—the unlimited power to levy taxes on the American people.

"You can not build up a market overnight. It takes time and it takes labor and it takes money to develop and build up markets for any class of goods. When an importer comes into this country to sell boots and shoes—which he could not sell here—laces, or cotton goods, or any other necessity of life, he has to establish his distributing points; he has to establish his agencies; he has to advertise his goods and make them attractive to the American public; and when he has done that, then he finds his market and commences to sell his goods. If you fix the machinery of law so that he can only come in here on an equal basis with the cost of production with a profit added, and the American manufacturer for the time being drops his selling price just to the extent of his profit, or half his profit, he drives out the foreign goods, and they will not come back as long as that law stands on the statute books, because when you have driven them out they will not again go to the expense of appointing their agencies, developing their market, and advertising their goods for sale, when they know that under your law the American manufacturer, by giving up a part of his profits, can drive them out again. The result is that you establish an embargo,

you create a monopoly in favor of the American manufacturer, and he can exploit the American people to any extent he desires."

Mr. SMOOT. Mr. President, I can not see why the House placed a rate of 75 cents upon the metallic content of molybdenum. Evidently that is one of the industries in the United States which prospered, but with such a duty I want to say to the Senate there would be no industry in the United States because of the fact that unless the product sells in the United States at from 50 to 55 cents a pound it would not be used in the manufacture of automobile axles, automobile cranks, and products of that kind. The Senate will remember that not long ago there was a molybdenum car built, and it was then thought molybdenum would be used in the building of all sorts of cars.

Molybdenum simply displaces vanadium, and if it goes above the price of vanadium, then, of course, molybdenum is not going to be used. What is the use of a duty upon it greater than the price of the article at which it can be sold and used in this country? If used, it displaces an article, and that article at any time would be used if molybdenum costs more than 75 cents a pound. I know that the State of Colorado is interested in this industry. I know the industry is down at the heels at the present time like other industries. But this is a tariff bill that is to be permanent and I feel just as confident as I live that if a rate of 75 cents a pound is put upon the content of the ore, it will never take the place of vanadium, and unless it can do that it will not be used or produced in the United States. Therefore, I am going to move to strike out "75 cents," in line 23, on page 48, and insert "35 cents."

The PRESIDING OFFICER. The Chair desires to state to the Senator from Utah that the question, first, is upon the amendment of the committee, in line 13 on page 49.

Mr. SMOOT. Then I will move to amend committee amendment with the statement that if it is amended, I will return not only to the content of the molybdenum ore but I will also refer back to paragraph 305.

Mr. WALSH of Montana. I suggest to the Senator that doubtless unanimous consent would be given to consider first the amendment now suggested by the Senator from Utah.

Mr. SMOOT. The other course can be just as well taken I will say to the Senator, because I have them worked out in a compensatory form. I now move, on page 49, in line 13, to strike out "$1" and insert "50 cents."

The PRESIDING OFFICER. The Senator from Utah moves to amend the committee amendment on page 49, line 13, by striking out "$1" and inserting in lieu thereof "50 cents."

Mr. WALSH of Montana. The Senator intends that to compensate for the duty of 35 cents on the ore?

Mr. SMOOT. Yes; and then, I will say to the Senator, that will be reduced to 65 cents instead of $1.25.

Mr. WALSH of Montana. Then, for the purpose of presenting the matter, I move to amend the amendment offered by the Senator from Utah by making the same 25 cents instead of 50 cents, and now that a few more Senators are here, I want to read again——

The PRESIDING OFFICER. The Chair would suggest to the Senator from Montana that that would be an amendment in the third degree.

Mr. WALSH of Montana. Very well. I will say that if the amendment of the Senator from Utah to the amendment of the committee is defeated, I shall then move to amend by making it 25 cents. I desire to read the following:

> The probability of any imports of molybdenum, either as metal (or ferroalloy) or as crude mineral, is rather remote, in view of the strong position of the domestic producers, although the demand from domestic steel makers is expanding substantially.
>
> Early in 1918 the United States became the dominating factor in the world supply of molybdenum through the completion of the new mill of the American Metal Co. at Climax, Colo. More than one-half of the total amount of molybdenum now being produced is mined in this country.

Further:

> The low-grade deposits of Canada are fairly comparable to those in Colorado, with the balance in favor of Colorado, because of the greater size of the ore body, greater quantity of production, and unquestionably lower costs in spite of lower grade ore, higher wage scale, and high mountain freights. It is believed that few Canadian producers can sell molybdenite much below $1 a pound and make money. It is possible that the Colorado plants can operate at a profit with prices as low as 50 cents a pound.

And yet it is proposed to put a duty of 30 cents a pound upon that commodity.

Mr. SMOOT. I think the statement just read as to the cost of production in Colorado is a little too broad. From all I can learn, it can not be produced in Colorado at 70 cents.

Mr. WALSH of Montana. They could not be 100 per cent wrong. The Tariff Commission reports that the article can not come in at less than 95 cents. They can not produce it abroad and land it here at less than 95 cents. If the cost is 50 per cent higher in Colorado, if it costs them 75 cents, they would still have a big margin here over the foreign producer, not to speak of a duty.

Mr. SMOOT. The Senator must understand that that statement was made at a time when the price of molybdenum was a great deal higher than it is to-day.

Mr. WALSH of Montana. It does not make any difference what the price was, the statement is that they can produce it at 50 cents a pound.

Mr. SMOOT. What I am speaking of is the foreign article coming into the United States for less than 95 cents a pound. That was true at that time, but it is not true to-day. It can be shipped here for a less price than that to-day. I feel that 35 cents a pound is ample, and I think myself that it will give the industry to the companies in the United States. If the price is too high, I will say to the Senator, then they will not use it in the United States because, as I said, it is a displacement article, and vanadium will take its place and can be used for the same identical purpose, and when one rises in price above the other, the one that is the highest in price is not going to be used.

Mr. WALSH of Massachusetts. I ask the Senator from Utah if the amendment offered by him is in the nature of an amendment or a substitute offered by the committee to the amendment reported in the bill?

Mr. SMOOT. After I came into the Senate I discussed the question with all the majority members of the committee, including the chairman, and they authorized me to offer the amendment.

Mr. WALSH of Montana. In that event I renew my motion to amend the amendment and to make the rate 25 cents.

Mr. WALSH of Massachusetts. In that event the motion of the Senator from Montana is not withdrawn.

Mr. WALSH of Montana. No; that does not change the motion to amend.

Mr. SMOOT. I have already moved to amend the committee amendment.

Mr. WALSH of Montana. I understood that the committee offered this as a substitute. The committee, of course, is entitled to change its amendment if it sees fit to do so. As the committee amendment changes the rate to 50 cents a pound, my motion to amend the committee amendment is in order.

Mr. SMOOT. I will say to the Senator that the only way I know to change the rate is to offer it as an amendment.

Mr. WALSH of Massachusetts. Every time the Senator from Utah has offered an amendment in the name of the committee he has offered it personally. Whenever the Senator from North Dakota [Mr. McCUMBER] modifies a committee amendment in the bill he moves it as a substitute. What has just happened has occurred several times. The Senator from Utah is offering an amendment in his own name rather than in the name of the committee.

Mr. SMOOT. It is on behalf of the committee I am offering the amendment, I will say to the Senator.

Mr. WALSH of Massachusetts. Why is it not a substitute if it is offered in behalf of the committee?

The PRESIDING OFFICER. Does the Senator desire to withdraw the original amendment and propose as a substitute the rate of 50 cents?

Mr. SMOOT. That is what the committee desires to do.

Mr. WALSH of Massachusetts. That has been the course pursued by the other members of the committee.

The PRESIDING OFFICER. That will make the amendment of the Senator from Montana [Mr. WALSH] in order.

Mr. SMOOT. There will be no trouble about it, because should there be any trouble I would withdraw the committee amendment and allow the Senator to offer his amendment first. So long as I may substitute the rate of 50 cents for the rate originally proposed, I ask that that may be done.

The PRESIDING OFFICER. The Senator from Utah asks unanimous consent to withdraw the committee amendment and to insert for it 50 cents. Is there objection? The Chair hears none. Now the Senator from Montana may offer his amendment.

Mr. WALSH of Montana. I move to amend the committee amendment by substituting "25" for "50."

The PRESIDING OFFICER. The Senator from Montana moves to amend by substituting "25" for "50." The question is on the amendment of the Senator from Montana to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the committee amendment.

The amendment was agreed to.

Mr. SMOOT. Now I ask to go back to page 48, line 23, and on behalf of the committee I move that "75 cents" be stricken out and "35 cents" inserted.

The PRESIDING OFFICER. The question is on the amendment of the committee striking out "75" and in lieu thereof inserting "35."

Mr. WALSH of Montana. I move to make that rate "15 cents" instead of "35."

The PRESIDING OFFICER. The question is on the motion of the Senator from Montana [Mr. WALSH] to insert "15" instead of "35."

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question is on the committee amendment.

The amendment was agreed to.

Mr. SMOOT. I desire, so as to clear this whole matter up, again to return to paragraph 305, and on page 53, line 16, I move to strike out "$1.25" and to insert "65 cents."

The amendment was agreed to.

Mr. SMOOT. The next amendment is on page 49, line 14.

The PRESIDING OFFICER. The next amendment will be stated.

The next amendment was, on page 49, line 14, to strike out the numerals "17" and insert in lieu thereof the numerals "15."

The PRESIDING OFFICER. The question is on agreeing to the amendment.

Mr. SIMMONS obtained the floor.

Mr. WALSH of Montana. I should like to make an inquiry of the Senator from Utah.

The PRESIDING OFFICER. Does the Senator from North Carolina yield to the Senator from Montana?

Mr. SIMMONS. Yes.

Mr. WALSH of Montana. What is the purpose of putting on this additional 15 per cent ad valorem duty? We have a duty now of 50 cents a pound and of 15 per cent ad valorem on this commodity. The current prices for molybdenum——

Mr. SMOOT. We allowed 15 per cent in this case, as in the others, as a protective duty and on account of the loss that may be incurred.

Mr. WALSH of Montana. That has been taken care of by making a differential between 35 and 50 cents.

Mr. SMOOT. But this is volatile, I will say to the Senator, and there is a heavy loss attached to it which the 15 per cent will not more than take care of. It is the same rate as was allowed on the ferromanganese.

Mr. WALSH of Montana. Yes; and there is a margin of 15 per cent which would take care of the loss of from 33 to 35 per cent.

Mr. SMOOT. I will ask the Senator from Montana to look at the present law. With the ore free 15 per cent ad valorem duty was imposed, just as the committee now recommends. The other House gave 17 per cent ad valorem duty on the American valuation. The Finance Committee allowed as protection 15 per cent, which is the same as the duty under the present law. We granted the same rate upon the other ferroalloys.

The PRESIDING OFFICER. The question is on the committee amendment.

The amendment was agreed to.

The next amendment was, on page 49, in line 16, to strike out "72" and insert "60," so as to read:

ferrotungsten, metallic tungsten, tungsten powder, tungstic acid, and all other compounds of tungsten, 60 cents per pound on the tungsten contained therein.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WALSH of Montana. Mr. President, the next bracket refers to tungsten compounds and tungsten. I do not know whether these rates are justified or not, indeed, I must confess, although I know something about tungsten, I do not know how one would arrive at any kind of a just rate. The fact about the matter that tungsten, or at least ores bearing tungsten, are, I think, perhaps without exception what are known as "spotty" in character, and so it becomes next to impossible to determine what the cost of production here is and what the cost of production abroad is.

Mr. SMOOT. I can state to the Senator in a very few words just why the rate here is proposed.

Mr. WALSH of Montana. I will be very glad to have the Senator tell us how the committee arrived at the rate.

Mr. SMOOT. Mr. President, on tungsten ore and concentrates the House allowed a rate of 45 cents a pound on the metallic content. There is a recovery of 75 per cent, and the House allowed 72 cents a pound on the metallic tungsten. The loss, however, does not justify that, the differential allowed being altogether too much. Figuring upon a basis of 45 cents a pound for the metallic tungsten and a 75 per cent recovery, gives 53 cents as a strictly compensatory duty for the loss in the production from the ore to the metal.

Mr. WALSH of Montana. I inquire of the Senator where is the ore taken care of?

Mr. SMOOT. On line 25, page 48, at the bottom of the page—

tungsten ore or concentrates, 45 cents per pound on the metallic tungsten contained therein.

As I have said, with a duty of 45 cents a pound on the metallic tungsten and a 75 per cent recovery, 53 cents is indicated as the compensatory duty. If the Senator will figure that, he will see that it just makes 60 cents a pound on the metallic tungsten.

Mr. WALSH of Montana. I think, if we put the duty at 45 cents a pound on tungsten ore, that a duty on the compounds of 60 cents is not disproportionate.

Mr. SMOOT. It figures out exactly, I will say to the Senator, just as nearly as it can be, unless a fraction be added.

Mr. WALSH of Montana. I wanted to ask the Senator what he has to say about putting a duty of 45 cents a pound on tungsten contained in the ore. That makes, of course, a duty of $900 a ton.

Mr. SMOOT. I shall ask that this item go over until I find out definitely what the price of tungsten is to-day. The Senator will remember that the first time a duty was imposed upon tungsten directly was in the Payne-Aldrich law. That was done at the time the first discovery of tungsten was ever made in Colorado. At that time tungsten was worth about a dollar a pound, as I remember, and perhaps a little more than that. I recall a statement being made upon the floor of the Senate by the then Senator from Colorado that tungsten was being sold at that time for about $4,000 a ton. At that time there was a duty of 45 cents a pound on the metallic tungsten contained in the ore. The House evidently gave the same rate as provided in the Payne-Aldrich law, and there was no amendment made to it by the committee. Mr. President, I ask that the item go over for the present, and in the meantime I will see if there has been a change in the price of tungsten between the time the Reynolds report was made and the present date, and when that is ascertained we may refer again to this item for consideration.

Mr. KING. Let me say to my colleague that the imports have been rather small and the unit value shows that the price is not very large. For instance, in 1921 the importations were 1,441 tons and the unit value $192.

Mr. SMOOT. Of course, the Senator will notice that ferrotungsten rather than the tungsten ore has been imported because under the existing law there was not allowed the necessary differential in order to take care of the spread between the ore and the ferrotungsten.

Mr. WILLIS. Mr. President, I desire to ask the Senator from Utah a question.

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Ohio?

Mr. SMOOT. I yield.

Mr. WILLIS. Will the Senator state to the Senate whether the rate proposed by the committee represents an increase or a decrease? Perhaps the Senator has already explained that, but I could not hear him.

Mr. SMOOT. I beg the Senator's pardon, but I did not catch his question.

Mr. WILLIS. The Senator is speaking of the rate on tungsten, is he not?

Mr. SMOOT. Yes.

Mr. WILLIS. Will he state to the Senate whether the compound rate amounts to an increase or to a decrease? There seems to be a decrease in the case of one item and an increase in the other.

Mr. SMOOT. It amounts to an increase, I will say to the Senator.

Mr. WILLIS. I make the inquiry because I want to ask the Senator another question.

Mr. SMOOT. But compared to the rates in the House, of course, it is a decrease. I think perhaps that is what the Senator had in mind.

Mr. WILLIS. That is what I am asking.

Mr. SMOOT. Oh, well, then it is a decrease.

Mr. WILLIS. The House rate is "72 cents per pound on the tungsten contained therein and 17 per cent ad valorem." Now, it is proposed to make it 60 cents a pound—that is a decrease—and 25 per cent ad valorem—that is an increase.

Mr. SMOOT. The 17 per cent in the House was on the American valuation. The 25 per cent is on the foreign valuation.

Mr. WILLIS. So the Senator thinks, taking the two items together, that it makes a decrease?

Mr. SMOOT. It makes a decrease.

Mr. WILLIS. Now, let me ask the Senator another question. There has been some complaint amongst the people of our State, particularly the Cleveland Twist Drill Co., of Cleveland, Ohio, who make very high-grade tools, claiming that this rate is excessively high as compared with the rate on the finished product. Can the Senator state whether the compensatory duty has been carefully worked out there and whether it is sufficient?

Mr. SMOOT. I will say to the Senator that if the rates that are now named in the bill are finally agreed to there ought to be a change in the compensatory rate on the products made from it, particularly the steel products in the high-speed tool paragraph.

Mr. WILLIS. Can the Senator tell me what paragraph that is? I can look it up, but the Senator can tell me more quickly.

Mr. SMOOT. We shall have to make a paragraph for that if this is agreed to, and we will change it, because the way it is written we might just as well put it in a paragraph by itself, and then hereafter we will know just what the statistics are.

Mr. WILLIS. They make the statement—I can hardly believe that it is true, but they make the statement, and I think my colleague [Mr. POMERENE], perhaps, has similar correspondence—that there is a higher rate on this raw material than there is on certain grades of their finished product.

Mr. POMERENE. Mr. President, I was simply going to confirm what my colleague has said on that subject. The complaint is general out there among the steel people, particularly the tool-steel people.

Mr. SMOOT. That is where the burden falls.

Mr. WILLIS. They make very high-grade tools.

Mr. SMOOT. I think there is only one class that is dissatisfied, and that is the makers of the high-speed steel.

Mr. POMERENE. I should have to go over my correspondence again to say definitely about that.

Mr. SMOOT. I am quite sure the Senator will find that that is the case.

Mr. POMERENE. I know that the high-speed steel makers are complaining very bitterly about it, and I feel that their cause was just, no matter what viewpoint we may take of this tariff problem.

Mr. SMOOT. We shall have to decide first on the rates upon tungsten.

Mr. WILLIS. If these provisions are agreed to, then does the Senator intend to take up the item with reference to tools?

Mr. SMOOT. I think a new paragraph will have to be written for that.

Mr. WILLIS. Does the Senator intend to take that up this afternoon?

Mr. SMOOT. I think not. I think the only thing we can do now is to allow this matter to go over until we finally decide on the rates.

Mr. WILLIS. Very well. I will get the material I have, and have it prepared.

Mr. ODDIE. Mr. President, I should like to ask the senior Senator from Utah a question. Referring to the statement just made by the junior Senator from Utah [Mr. KING] as to the small tonnage imported recently, is not that due to a large extent to the accumulation in this country since the war?

Mr. SMOOT. This is the best answer to that: I think, as I said, that the ferrotungsten has been coming in rather than the tungsten ore. In 1919 there were 396,460 pounds of ferrotungsten imported, and in 1920 there were 1,997,719 pounds imported; so when I stated that it was not coming in in the shape of ore, but that it was coming in in the shape of ferrotungsten, of course the record shows that to be a fact.

Mr. ODDIE. I should like to state, Mr. President, that the impression has gone abroad quite generally that the native deposits are insufficient. I should like to correct that by stating that in a number of Western States there are very large deposits of tungsten ore, and new ones are being discovered constantly, and there are many to my knowledge that are undeveloped awaiting development.

Mr. KING. Mr. President, let me say to the Senator from Nevada, if I may, that the imports of the ore in 1912 were only 381 tons; in 1913, 766 tons; in 1914, 238 tons; in 1915, 1,317 tons; in 1916, 3,335 tons; in 1917, 4,357 tons; in 1918, 10,362 tons; in 1919, 5,400 tons; in 1920, 1,740 tons; and in 1921, 1,441 tons.

As stated by my colleague, the ferrotungsten that was imported in 1918 was negligible, only $8 worth; in 1919, 396,460 pounds; in 1920, 1,997,719 pounds; and for nine months of 1912, 507,206 pounds. So that there has been a perceptible diminution in the imports since 1918. They reached the maximum in that year, and there was a perceptible increase in the imports of the ore, because in 1912 they were only 381 tons; and in the case of the ferrotungsten there was an increase in 1920, and a decrease in 1921.

Mr. SMOOT. I think I can explain that to the Senator and the Senate. I think in 1921 the unit value began to drop, and they wanted to use the stock they had on hand rather than import any larger stocks, with the market going that way; and in 1921 the Senator knows that the mills in the United States were not in operation 25 per cent of the time.

Mr. KING. To what mills does the Senator refer?

Mr. SMOOT. The steel mills throughout the country.

Mr. KING. Oh, yes; of course, the consumption was less.

Mr. SMOOT. That is another thing.

Mr. McCUMBER. Mr. President, I understand that the Senator from Utah has requested that all of these clauses relating to tungsten should be passed over; and if that is the case, there is no use in discussing the subject at this time.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Utah? What amendments does the Senator refer to?

Mr. SMOOT. I refer to all of the amendments commencing in line 14 and going down to and including the words "ad valorem" in line 21, page 49, down to "ferrosilicon."

The PRESIDING OFFICER. Is there objection to the request that those amendments go over? The Chair hears none.

Mr. McCUMBER. Mr. President, that brings us down to ferrosilicon. I think I should make some brief statement with reference to the next clause, which relates to ferrosilicon, in order that we may understand clearly not only its uses but also the duties levied and the reason.

Ferrosilicon is an alloy composed of silicon and iron. If you take steel scrap and silicon in the form of high-purity quartz and melt them at an especially high temperature, the iron and the silicon of the quartz rock alloy themselves, and the product is called ferrosilicon.

Ferrosilicon is used as a purifier of steel. Many of the high grades of steel can not be made without it. At the time of the war ferrosilicon in a single year entered into and was necessary to the production of 30,000,000 tons of steel. In the early days, and to a large extent at the present time, ferrosilicon containing less than 15 per cent silicon is made in the blast furnaces. For the past 15 years especially it has been found that ferrosilicon containing a higher percentage of silicon could not be made in the blast furnaces, because the temperature necessary to force the silicon into an alloy with the iron could not be reached. For this reason it was necessary to employ the electric furnace in the production of high-grade ferrosilicon.

In the electric furnaces the temperature rises to over 6,000 degrees. High-grade ferrosilicon was developed first in this country. The industry was then taken over by France, Norway, and Germany; but its manufacture was undertaken here in 1908, and a tariff of 20 per cent ad valorem was accorded ferrosilicon under the Payne-Aldrich bill.

In the tariff bill of 1909, I think, blast-furnace ferrosilicon was treated separately and accorded a rate of $5 per ton on ferrosilicon containing not more than 15 per cent silicon and 20 per cent ad valorem on ferrosilicon containing more than 15 per cent of silicon. The Underwood law gave a rate of 15 per cent on all ferrosilicon. These rates in both laws proved ineffective until the war; and as the industry advanced in the higher qualities of ferrosilicon, where the difficulties were greater, the duties finally became wholly inadequate.

The Ways and Means Committee after exhaustive consideration gave to ferrosilicon containing 8 per cent or more of silicon and less than 30 per cent a duty of 2½ cents per pound on the silicon contained therein; containing 30 per cent or more of silicon and less than 60 per cent, 2¾ cents per pound on the silicon contained therein; containing 60 per cent or more of silicon and less than 80 per cent, 3½ cents per pound on the silicon contained therein; containing 80 per cent or more of silicon and less than 90 per cent, 4 cents per pound on the silicon contained therein; containing 90 per cent or more of silicon and silicon metal, 8 cents per pound on the silicon contaied therein. Then the Senate Finance Committee reduced the House rates on these grades of silicon most largely used and of most importance, which are the ferrosilicons running from 8 to 60 per cent, cutting the rate on ferrosilicon containing from 8 to 30 per cent one-half of 1 cent per pound on the silicon contained therein; from 30 to 60 per cent, three-fourths of 1 cent per pound on the silicon contained therein; and from 60 to 80 per cent, one-fifth of 1 cent per pound on the silicon contained therein.

Mr. WILLIS. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from Ohio?

Mr. McCUMBER. I yield.

Mr. WILLIS. If the Senator prefers to yield later, I do not care to interrupt his statement, but I wanted to ask him a question right on that point. What does the committee propose to do with the silicon below 8 per cent? It starts in, as the amendment would now make it, "containing 8 per cent or more of silicon and less than 60 per cent." I should like to know what is the rate on that below 8 per cent.

Mr. McCUMBER. That would fall under the metals, under a basket clause, of course, if it came in; but I do not think it will come in of a less percentage.

Mr. UNDERWOOD. Mr. President, if the Senator will allow me, a great deal of ordinary, common pig iron has sand in it; and if you taxed it below 8 per cent, instead of falling in the pig-iron class, you might put it in the ferrosilicon class and raise the tax on pig iron to $44 a ton instead of $1.25. I suppose that is why the committee left it out.

Mr. WILLIS. Mr. President, the reason why I ask the question is that I suppose at least 60 or 65 per cent of all the blast-furnace ferrosilicon made in the United States is made in the State of Ohio.

Mr. UNDERWOOD. Of course as to whether the ferrosilicon really is to be useful depends on the amount of sand or silica in it. As I said, the modern method is to cast it in an iron cast, but the old method was to put it in big beds of sand, and in that way a certain amount of sand got into the pig; and if you tried to put a rate on all pig that had silica in it, you might be taxing pig iron at a very high rate.

Mr. WILLIS. The product of some of our Ohio blast furnaces, particularly the ones at Jackson and Wellston, is about 7 per cent, or perhaps below 7 per cent. There is a fair rate of protection given to the high grades, but apparently no protection to the low grades, and those people are left out. Would the Senator from North Dakota permit an amendment to this provision when an amendment would be in order?

Mr. McCUMBER. I do not understand that with less than 8 per cent of silicon it really has any value whatever.

Mr. WILLIS. I think the Senator is mistaken about that.

Mr. McCUMBER. I do not understand that it is usuable.

Mr. WILLIS. I know there are large blast furnaces in Ohio whose product is 7 per cent and below. I can furnish the Senator very conclusive information on that. They have been running there for years. Just now they are not running, as they have been closed down.

Mr. McCUMBER. Do they use that very low grade at all in the manufacture of steel?

Mr. WILLIS. I so understand it. I am very certain that is the case. If the Senator would permit an amendment to make it 6 or 7 per cent, it would take care of that situation.

Mr. UNDERWOOD. As the chairman said, all ferrosilicon was originally made in blast furnaces. Some of the old furnaces using that method still exist in Ohio, but they really are not now making the ferrosilicon of commerce. They may be making a silicon iron, but not ferrosilicon. It is ferrosilicon in one sense, because all pig iron that is mixed with silicon is ferrosilicon, but in the commercial sense they are not making ferrosilicon. They are making a silicon iron, which may have its advantages for casting. But if you try to put a tax on it as being in the class of ferrosilicon, you would make an enormous tax on that class of iron, and I think the committee would get themselves in serious trouble, even more serious trouble than they have already gotten themselves into.

Mr. WILLIS. It would make serious trouble in Ohio if this were not changed. They would shut down unless we got a change in the rate. Of course, it is not in order now to offer an amendment.

Mr. UNDERWOOD. The Senator recognizes that as time goes on the methods, not only of the production of silicon but of the pig iron, change. Your furnace of 40 years ago, which did not improve its methods of making pig, has gone out of existence, and probably will remain out of existence.

Mr. WILLIS. The Senator admits that, yet a fair proportion of the ferrosilicon in the United States is blast-furnace ferrosilicon and not electric-furnace ferrosilicon.

Mr. UNDERWOOD. I think I am correct in saying that is a ferrosilicon iron. The purpose of putting the silicon in the iron is to make it flow easier and keep the blowholes out, so that it does not crack so easily, either in iron or steel. I think what the Senator is talking about is a silicon iron and not ferrosliicon.

Mr. WILLIS. I ask permission just here to print in the RECORD a brief statement of facts on this matter from some of my constituents, which I think will throw light on the subject. I will not interrupt the Senator further at this point.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE JACKSON IRON & STEEL CO.,
Jackson, Ohio, September 19, 1921.

Hon. FRANK B. WILLIS,
United States Senator, Washington, D. C.

DEAR SIR: The Fordney House tariff bill, now being considered by the Senate, carries a protection of 2½ cents per pound per unit of silicon in ferrosilicon carrying 8 per cent and higher. Grades of ferrosilicon from 7 per cent to 15 per cent have been made in this State for years, principally in Jackson County and at New Straitsville; in fact, the manufacture of this product has been the principal industry in Jackson County for years and has been a source of keeping alive the blast furnaces here, and the city of Jackson is dependent on its three blast furnaces, which furnish more than 60 per cent of the labor. During the World War steel became a great winning factor; ferrosilicon is so necessary in its manufacture that it became a sort of a key to steel production. The governments of the Allies, as well as this Government, did everything possible to encourage the building of plants to increase production. Electrolytic furnaces, in which grades above 16 per cent are made, were erected at many places in this country where hydroelectric power could be had. Also, Canada built several of these plants, ostensibly for the production of the higher grades—50 per cent and upward. With the ending of the war there came a great slump in the ferrosilicon consumption, and the electrolytic furnaces turned their attention to producing the lower grades, i. e., 7 per cent to 15 per cent, and as a consequence all of the blast furnaces producing this material in this State have been closed down, in most part for more than a year. Our investigation shows that the Canadian electrolytic producers, by reason of their cheaper hydroelectric power, are able to produce the material so much cheaper that they have practically driven the blast furnaces out of the business, and are doing the same thing to the electrolytic furnaces of the United States. The State of Ohio produces 65 per cent or more of the Bessemer ferrosilicon (ferrosilicon made in blast furnaces) of the total amount made in the United States.

Canada is a very small user of ferrosilicon; therefore has a very large surplus, which it can and is dumping in the United States. Its surplus capacity will absorb the major portion of the consuming power of the United States. Its extraordinary cheap hydroelectric power makes it possible to sell at a profit below the States' cost of production.

* * * * * * *

Yours very truly,

NOAH G. SPANGLER, *General Manager.*

UNITED STATES TARIFF COMMISSION,
Washington, May 17, 1922.

Hon. P. J. McCUMBER,
Chairman Committee on Finance,
United States Senate.

MY DEAR MR. McCUMBER: On May 11 you forwarded to us the two letters herewith inclosed, addressed to Hon. FRANK B. WILLIS, in which it was claimed that the dividing line in the ferrosilicon classification should be 7 per cent silicon content instead of 8 per cent and asked us to advise the Committee on Finance relative to this matter.

It gives me pleasure to transmit to you a memorandum by Doctor Berglund of the commission's staff in reply to this request.

Sincerely yours,

THOMAS O. MARVIN, *Chairman.*

GLOBE IRON CO.,
Jackson, Ohio, March 13, 1922.

Hon. FRANK B. WILLIS,
Washington, D. C.

DEAR SENATOR: I thank you for yours of the 10th, and have received copy of House bill with Senate changes on ferrosilicon, as noted in pencil. The committee has given more than ample protection to the higher grades (say 50 per cent ferrosilicon) and have left the American plants producing the lower grades, or grades below 20 per cent, at the mercy, absolutely, of the Canadian manufacturers.

Please note how it works:

A ton of iron, gross, is 2,240 pounds, and 50 per cent silicon content in the ton is 1,120 pounds, which, at 2 cents per pound equals $22.40 tariff, which is fair, or more than fair, perhaps. But 8 per cent silicon, or 179 pounds silicon to the ton at 2 cents per pound, equals $3.58 tariff, 10 per cent $4.48, and so on, which is entirely too low for protection.

Your bill simply means that the American producer of the higher grades, which is mainly 50 per cent, will have the market absolutely to themselves, for not a ton of this grade can be shipped into this country. This is all right, but what will be the position of the American producers of the lower grades when the Canadian manufacturers turn their attention from the 50 per cent to 7 per cent to 20 per cent with the low-tariff rates?

It means that the American blast furnaces will be entirely shut out of this business, for the foreign producers, after being shut out of this country by the high tariff on 50 per cent material, will naturally turn to the lower ferrosilicons with their low-tariff obstacles. Ohio, your State, produces all of the blast-furnace ferrosilicon in the United States, and the bill as it now stands shuts out the 70,000 tons Canadian capacity of 50 per cent in order to allow it to ship in 210,000 tons Canadian capacity of the lower grades, taking absolutely every ton of our trade, for we can not compete with the foreign manufacturers on this grade on account of the low electric power they get.

The Ohio plants, located at Jackson, Wellston, and New Straitsville, make a specialty of ferrosilicons, and 95 per cent of the output is of this material. My plant has been running on ferrosilicon for 30 years, and to be knocked out of a trade that we have spent almost a lifetime in building up and to be compelled to start in again on another grade and seek and build up a new line of customers is awfully discouraging.

Don't forget that the same plants in Canada that now are able to produce, say, 70,000 tons of 50 per cent ferro will be able to produce three times this tonnage, or 210,000 tons, of the lower grades, so the bill keeps out the smaller tonnage and lets in the larger tonnage, which, by the way, is more than America needs or can use. Also, the larger the American tonnage displaced the larger is the number of American laborers displaced.

Keep out all the foreign material, both 50 per cent and lower ferrosilicons, by a tariff equal to the difference in cost, which should be at least $5 and up, according to value; and I would suggest an ad valorem duty, for this method charges the tariff against the value of the material at time of sale.

The minimum silicon content in ferrosilicon is 7 per cent and not 8 per cent, as stated in the bill.

I am sorry to write at such great length, but I want to put up the matter fairly and squarely and in a way I hope that you can understand and appreciate.

Yours very truly,

JOHN E. JONES, *President.*

MAY 16, 1922.

Memorandum on ferrosilicon.

Referring to the communication of Mr. John E. Jones, president of the Globe Iron Co., Jackson, Ohio, addressed to Hon. (Senator) FRANK B. WILLIS, concerning the dividing line between ferrosilicon and pig iron in the Fordney bill and the comments on the differences in the rates imposed on pig iron and ferrosilicon, some explanation is necessary concerning (1) the definition of ferrosilicon, (2) the processes employed, and (3) the relative cost of production.

Definition of ferrosilicon: In the Tariff Commission's report on "The Ferroalloy Industries" ferrosilicon is defined as "an alloy of iron and silicon. The silicon content ranges from 7 or 8 per cent to over 90 per cent." (See p. 71.) In paragraph 302 of the Fordney bill the rates of duty on ferrosilicon begin to operate with the 8 per cent grade, leaving the 7 per cent and lower grade silicon irons subject to the rate prescribed in paragraph 301 on pig iron ($1.25 per ton). There is no reason, however, why the dividing line between pig iron and ferrosilicon should not be drawn at 7 per cent rather than at 8 per cent. It may be stated in this connection that it is difficult to draw any precise line between these two commodities. Foundry iron generally contains from 2 to 4 or 4½ per cent silicon; and silvery iron, which should not be confused with ferrosilicon, from 5 to 10 per cent silicon. The principal distinguishing characteristics of silvery iron differentiating it from low-grade silicon, are the lower average percentage of silicon, the higher phosphorous content (above 0.1 per cent), and, as its name implies, the possession of a silvery fracture.

Processes of manufacture: The tariff problem with reference to ferrosilicon relates mainly to the processes of manufacture. Ferrosilicon is made by either the blast-furnace or the electric-furnace method. The grades containing over 15 per cent silicon are manufactured by the latter method, and sometimes grades containing 15 per cent and less, particularly the grades from 12 to 15 per cent. The lower grades of ferrosilicon, especially those containing less than 12 per cent, can be more economically made in blast furnaces than in electric furnaces, and hence in these grades the blast-furnace method tends to prevail.

Relative cost of production: The electric-furnace method is absolutely necessary in the manufacture of the grades of this ferroalloy having a silicon content in excess of 15 per cent, because sufficient heat can not be generated by the blast-furnace method. Electric power, however, is costly, forming a large proportion of the total expense of manufacture and a proportion which tends to increase with the rise in grade. This power is also more expensive in the United States than in Canada and some European countries (Norway, Sweden, and France). Itemized cost statements furnished the Tariff Commission by manufacturers of ferrosilicon show that in the year ending September 30, 1919, over 26 per cent of the total expense of producing the 50 to 60 per cent grades, and over 37 per cent of the total of the 70 to 75 per cent grades, constituted power cost (see Tariff Commission's report on "The Ferroalloy Industries," p. 86). Since 1919 labor and raw material costs have declined while power costs have remained practically the same. Therefore, a similar cost statement compiled to-day would show larger percentages for electric power.

Investigations made by the Tariff Commission in 1920 show that the producers of ferrosilicon at Niagara Falls were paying $20 per horsepower year for their electric energy, and some producers in other parts of the country considerably more, while their principal competitor, at Welland, Ontario, was charged only $12.75 per horsepower year. Scrap, which constitutes an important item in the raw material cost of manufacturing ferrosilicon, was cheaper at that time in Canada than in the United States, although it must now be said that this situation has changed.

When it comes to low-grade or blast-furnace ferrosilicon, especially the grades containing less than 12 per cent silicon, the American producer is not at the same disadvantage compared with his foreign competitor as the domestic manufacturer of the electric furnace product. Raw material and fuel (coke) in 1919 constituted about 65 per cent of the total cost of manufacture, and these items were as cheap in the United States as in any other country of the world. Coke, which constituted over 36 per cent of the total expense, was appreciably cheaper. Even to-day, when the prices of coke here and abroad are more nearly equal than they were two or three years ago, it is less costly in the United States than in Great Britain. Thus in April, 1922, blast-furnace coke was selling in England at £1 2s. 6d. to £1 3s. 6d. per ton (approximately equivalent to $4.95 to $5.17 per long ton) (converted at the exchange rate of $4.40 to the pound sterling), while at the same time in this country similar coke was selling at $4.50 per long ton. The wages of furnace men are higher in this country than abroad, but in 1919, when they were much higher than they are to-day, labor cost constituted less than 11 per cent of the total expense of manufacturing ferrosilicon.

GENERAL CONCLUSIONS.

Within certain limits the precise point at which a dividing line between pig iron and ferrosilicon should be drawn is a matter which can be decided arbitrarily. Seven per cent silicon content might just as well be fixed upon as the lowest grade of silicon iron, which should be governed by the rates in the ferro-alloy paragraph (paragraph 302), as 8 per cent silicon content. The custom among manufacturers would, in all probability, favor the change.

The distinction between the electric-furnace and blast-furnace grades of this ferro-alloy should be observed. Blast furnaces can be operated in the United States as cheaply as in any other country in the world. Electric furnaces, however, can not be operated here as cheaply as in Canada and some European countries, mainly on account of the greater cost of hydroelectric power in this country. Hence the recognition of this difference in tariff rates is entirely consistent with any policy looking toward an equalization of the cost of the domestic and foreign product in American markets.

Mr. McCUMBER. The Senator from Ohio stated that he would move to make the rate 6 cents. The ferrosilicon, containing from 8 to 60 per cent of silicon, is taxed at only 2 cents.

Mr. WILLIS. The Senator misunderstood me. I was calling the attention of the Senator to the situation if the committee amendment on line 22 shall stand. It reads "containing 8 per cent or more of silicon and less than 60 per cent, 2 cents per pound." I am not talking about the rate. I am talking about the percentage of silicon. If we get that down so as to take in the ferrosilicon containing 7 per cent of silicon, which we produce in Ohio, it will take care of the situation; but under the rules under which we are proceeding I suppose such an amendment would not now be in order.

Mr. McCUMBER. During the war ferrosilicon was made in nine plants in the United States, all of them using hydroelectric power. I did not know that it was still made under any different method. I especially desire the attention of Senators to this statement. In the standard grades of ferrosilicon it takes one horsepower of electrical energy one year to make 1 ton of ferrosilicon. Horsepower in the United States costs from twenty to thirty dollars per horsepower year. I understand there is a difference of about $15 per ton between this country and Canada in the cost of hydroelectric power alone in the production of these most largely used grades of ferrosilicon. Horsepower on the American side costs between $20 and $30 per horsepower per year, whereas on the Canadian side, I am informed, it is about $7 per horsepower per year, that difference growing out of the law of supply and demand, the American side being very much short of the supply of horsepower, and the Canadian side being long on horsepower, with little demand. That must be considered, as I stated before, in connection with the difference in the matter of taxing, the Canadian not being charged a tax at all for the use on the American side.

Mr. WALSH of Montana. I have been attracted by the statement made by the Senator that power can be secured in Canada at $7 per horsepower. That seems to me impossible. The investigations conducted by various committees here, as my recollection serves me, have shown that hydroelectric power was produced more cheaply in Norway than anywhere else in the world, and it cost from $9 to $12 per horsepower to produce it there.

Mr. McCUMBER. I am informed by the tariff expert who has examined this matter that the cost in Canada is about $7, and that is shown to be about the price of hydroelectric power in Norway, namely, about $7.40 per horsepower year. I notice by the report of the Tariff Commission Survey, however, that the horsepower in Canada is $12.75. My informant may be in error, but he is the Tariff Commission's expert, and he says it is about $7.

Mr. WALSH of Montana. I did not think of it so much in connection with this as with a multitude of industries. If they can produce hydroelectric power and sell it in Canada for $7 per horsepower, they have the potential manufactures of the world over there in Canada.

Mr. McCUMBER. Even if we take the Tariff Commission Survey report, which gives it at $12.75, that would be nearly 40 per cent less than the regular rate charged by American alloy manufacturers for the Niagara Falls horsepower. So that would be enough to make up the difference. The freight rates from European points to the United States to the points of the largest use are less than the freight rates of American manufacturers to the points of use, especially the eastern seaboard because of the difference between ocean freight rates and rail rates in the United States. These differences amount to from two to eight dollars per ton. Labor and transportation costs of raw materials are much higher in the United States.

Therefore, in order that the American manufacturer of ferrosilicon using hydroelectric power may compete with Norway and Sweden, it is necessary that he should receive at least the rates accorded in the bill as reported by the Finance Committee, which amounts, in the various grades, to from $3.60 on the lowest to $22.40 per long ton on the 50 per cent grade, which is the standard. The change from ad valorem to specific duties is not only essential because of the undervaluation during the years past, but gives a rising standard of duty in proportion to the difficulties of our manufacture, and it is therefore necessary, and ferrosilicon is an ideal for the application of specific rates.

I desire to read only one paragraph from a letter received by me March 2 from the Tariff Commission relating to ferrosilicon. It says:

Cost of production: The cost of producing ferrosilicon of standard grade (50 per cent of silica) in foreign countries, namely, France, Sweden, and Norway, we find to be at this time, according to the best available information, $38 to $44 per ton. The cost of the production of ferrosilicon in the United States, according to our latest information, we estimate and believe to be from $78 to $82 per ton.

That, I think, presents the matter in a nutshell.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

Mr. WILLIS. Let the amendment be again reported, so that we may understand what we are voting on.

The VICE PRESIDENT. The Secretary will state the amendment.

The ASSISTANT SECRETARY. On page 49, line 23, it is proposed to strike out "30 per cent, 2½" and to insert "60 per cent, 2," so that if amended it would read:

ferrosilicon, containing 8 per cent or more of silicon and less than 60 per cent, 2 cents per pound on the silicon contained therein.

Mr. KING. Do I understand the Senator to contend that this product, which exists in the United States in such prodigious and inexhaustible quantities, is to bear a rate of duty of 2 cents per pound?

Mr. McCUMBER. I suppose the Senator, of course, means upon the silicon content?

Mr. KING. Yes; upon the silicon content. I confess my inability to comprehend the reason for such an enormous rate.

Mr. McCUMBER. I just gave it in the very last paragraph which I read, in which the foreign cost is stated to be $38 per ton; cost in the United States, as given here, $78 per ton; highest foreign, $44 per ton; highest in the United States, $82 per ton. I see from that that we have scarcely equaled the difference.

Mr. KING. Before the war the price, as I recall it, was about $50 to $55 per ton. The processes employed in manufacturing ferrosilicon are not difficult. There are no metallurgical or other obstacles or serious complications. It is simply the fusing of silica which exists here and everywhere. We have not only millions but billions of tons of silica and quartz in every State in the Union. The fusing of the metal, with the addition of such ingredients as may be necessary, is a very simple process. To impose this high tariff, of course, is a tax upon the production of steel, and a tax upon the production of all steel is a tax upon the production of all of the articles of the household, the farm and the country, of which iron and steel form a constituent part.

I am not quite able to comprehend who are the beneficiaries of this particular paragraph. I can not say that it is the Steel Trust, because this means an augmentation of the price of the product employed in the production of steel. It must be the few plants or the many plants engaged in the production of silica.

It seems to me that the bill is fashioned upon the theory that everything must bear a tax. We put a tax upon steel products. We put a tax upon everything that enters into the production of iron and steel. Then, of course, we must pass on to what might be denominated the intermediates or the finished products, all of the antecedent factors, and they are pyramided until finally the housewife who buys the knife or the fork or some product composed in part of iron or of steel, or the farmer or the mechanic or the American people, must bear all of the prior accumulations.

The Senator said that because horsepower in Canada is cheaper than horsepower in the United States, therefore we must add an additional duty or tax so as to protect those in the United States who can not get horsepower quite as cheaply. I suppose under that view if horsepower was the principal factor in the production of this or other products, and it could be had for nothing in Canada or in Mexico, it would be the theory of the proponents of the bill to throw away that rich gift of nature and impose an exorbitant tax and pass it on to the American people to enable somebody to engage in the business here under disadvantageous circumstances. But I am not able to perceive, in view of the inexhaustible supply of the silicia and the quartz, the inexhaustible supply of water power, and, of course, of coal, how the cost of silica should mount up to $75 or $85 per ton. As I stated, the pre-war price was between $50 and $56 per ton.

I am unwilling to increase the price of silica to the Steel Trust or to the independents or to any person who may use silica, because in so doing I would know that the person who was compelled to pay that tax would add to the product which he manufactured the entire tax plus other costs for handling the matter, overhead expense, profit, and what not, and the person who purchased his product would add to his intermediate or finished product all of the antecedent costs, and they in turn would be passed on to the ultimate consumer.

I think this illustrates the vice of the bill, the inherent iniquities of it, and, of course, with these accumulated costs and taxes the ultimate consumer must be burdened not with hundreds of millions in the aggregate but billions of dollars. So that the American people must make up their minds when the tax bill is passed that they will have to pay the tax and all of its accumulations which will rest upon their bowed backs.

Mr. McCUMBER. Mr. President, I wish to put in the RECORD the horsepower rates of the different countries that are given me by an expert from the Tariff Commission. The United States averages $20 to $30 per horsepower year; Norway, $5.40 to $9; Sweden, $6 to $10; Germany, $8 to $10; France, $8 to $12.

I am also informed that the imposition of the duty as fixed by the Senate Finance Committee would mean an added cost of about 10 cents per ton in the manufacture of silicon.

Mr. WALSH of Montana. Can the Senator inform us from what source the Tariff Commission gets this information?

Mr. McCUMBER. Page 89 of the Tariff Information Survey C–1.

Mr. WALSH of Montana. My attention was diverted when the Senator was giving some figures. I did not understand whether it was the cost of production of ferrosilicon in this country and abroad or the price at which it is sold.

Mr. McCUMBER. The cost which I gave in this country and in foreign countries was from a letter which I received from the Tariff Commission. A like letter was sent to the Senator from West Virginia [Mr. SUTHERLAND]. It is dated March 2, 1922. It is in reply to a request for information regarding ferrosilicon, its costs abroad and in the United States. The costs which I gave here in the two countries were the costs which were given in that letter from the Tariff Commission.

Mr. WALSH of Montana. Would the Senator give us the figures again?

Mr. McCUMBER. They said:

The cost of producing ferrosilicon of standard grade, 50 per cent of silica, in foreign countries, namely, France, Sweeden, and Norway, we find to be at this time according to the best available information, $38 to $40 per ton. The cost of production of ferrosilicon in the United States, according to our latest information, we estimate and believe to be from $78 to $82 per ton.

Mr. WALSH of Montana. "We estimate and believe to be," they say.

Mr. McCUMBER. That is the Tariff Commission. Of course, they get that upon a very thorough investigation.

Mr. WALSH of Montana. I undertake to say there is something wrong with the figures. I have before me the result of a careful investigation made by the Tariff Commission, which I shall be glad to give to the Senate, disclosing that that quality of ferrosilicon was produced in this country in 1919 by blast-furnace process at a cost of $42.07 a ton, and by the electric-furnace process at a cost of $53.49.

Mr. McCUMBER. On page 86 of the Tariff Information Survey C–1 is a table giving the cost in 1919, and the cost in that year in the United States was $94.54.

Mr. WALSH of Montana. That is 50 to 60 per cent and 70 to 75 per cent.

Mr. McCUMBER. That is 50 to 60 per cent silicon content, of course.

Mr. KING. Mr. President, will the Senator from Montana yield?

Mr. WALSH of Montana. I yield.

Mr. KING. I have before me the American metal market and daily iron and steel report—May 11, 1922—which shows electrolytic ferrosilicon, delivered at Pittsburgh Valley and Cleveland, Ohio, 50 per cent, $55 to $60. That is just last month, and it ought to be cheaper now than it was then, unless the trusts are forcing the prices up all the time. Of course, there is a profit in that figure, too. That is the price at which it was sold.

Mr. McCUMBER. On the contrary, my information is that they were selling far below cost.

Mr. KING. Oh!

Mr. McCUMBER. Oh, that does happen sometimes.

Mr. KING. I have not discovered any trust selling very much below cost. Their dividends indicate quite the reverse.

Mr. WALSH of Montana. Mr. President, I want to offer a few figures for the information of the Senate. I am going to assume now that the Senator is giving us the correct figures of the cost of the production of ferrosilicon in this country at $95 a ton. Now, let us see where we come out.

The only difference is in the cost of power. We compete with Canada and the only advantage she has over us is in power. The power entering into the production of this commodity amounts to 26 per cent of the total cost. Practically one-fourth of the total cost is power. Of the $95 a ton, therefore, one-fourth would be $24. Twenty-four dollars is the power cost to produce a ton of ferrosilicon, the total cost of which is $95.

Let us assume that we can get power in Canada for $12.50 per horsepower as against $25 in this country; that is to say, the power costs twice as much. Instead of the $24, therefore, that

could be had for $12 in Canada. Let us assume also that the wages in Canada are the same as the wages in this country; but, no, let us assume that the wages are 25 per cent higher in Canada than they are in this country. The total labor amounts to 17.5 per cent of the $95, and the difference will be about $4.50 in labor, or $16.50 total difference in the cost of the power and labor in this country over Canada. I am assuming a difference of 25 per cent against us in the matter of labor.

In order to take care of a difference in the cost of production of $166.50 it is proposed to put a tariff of 2 cents a pound, or $40 a ton, on this commodity; but there is nothing extraordinary about this. That is about the way these things run. The rates are professed to be put on because of the difference in the cost of labor, and invariably the rate put on is more than the total amount of the labor.

Mr. McCUMBER. Will not the Senator revise that estimate a little? Forty dollars per ton would be 100 per cent of ferrosilicon, and it is on 50 per cent of ferrosilicon we are levying the rate. Therefore it would be just one-half of that.

Mr. WALSH of Montana. The rate is 2 cents per pound.

Mr. McCUMBER. No; it is not. It is on the content.

Mr. WALSH of Montana. Exactly; 2 cents a pound on——

Mr. McCUMBER. On the silicon content, and the silicon content in a ton of 50 per cent silicon would be only half of $40.

Mr. WILLIAMS. Mr. President——

Mr. WALSH of Montana. I yield to the Senator from Mississippi.

Mr. WILLIAMS. Where does the Senator derive his idea that there is a difference of 25 per cent in the cost of labor in Canada and the United States?

Mr. WALSH of Montana. I do not. The Tariff Commission report that there is no difference.

Mr. WILLIAMS. But the Senator just admitted for the sake of argument that there was a difference of 25 per cent.

Mr. WALSH of Montana. Even if the Senator from North Dakota were right, he has a rate of $20 on 50 per cent silicon to take care of a difference in the cost of power that does not exceed $12.

Mr. WILLIAMS. Mr. President, the people of the United States and the people of Canada are in a state of flux all the time. Americans are constantly crossing the border seeking employment, and Canadians likewise are constantly crossing the border seeking employment. Is there, as a matter of fact, any difference at all in the price of labor in Canada and in the United States?

Mr. WALSH of Montana. There is practically none.

Mr. WILLIAMS. And yet the Senator in making his argument admitted for the sake of the argument that there was a difference of 25 per cent?

Mr. WALSH of Montana. Yes; because it is assumed.

Mr. WILLIAMS. Who assumes it?

Mr. WALSH of Montana. It is generally assumed that labor costs are less anywhere in the world than they are in the United States.

Mr. WILLIAMS. But who assumes it?

Mr. WALSH of Montana. It is assumed generally by those who advocate this bill.

Mr. WILLIAMS. Does the Senator know any particular person who assumes it?

Mr. WALSH of Montana. No; I would not attribute the assumption to any particular person.

Mr. WILLIAMS. Did the Senator from North Dakota assume it?

Mr. WALSH of Montana. He confined his argument, I think, chiefly to power.

Mr. WILLIAMS. As a matter of fact, there is absolutely no difference between the cost of common labor in Canada and in the United States, just across the border, is there?

Mr. WALSH of Montana. I think not; or skilled labor either, for that matter.

Mr. WILLIAMS. So that the whole Republican idea of erecting a tariff barrier between the United States and Canada as against an inferior cost of labor is a piece of humbuggery?

Mr. WALSH of Montana. I will give the Senate the benefit of the conclusions of the Tariff Commission with reference to this particular product. It is stated:

> Summing up the competitive situation the following conclusions may be drawn:
>
> 1. The cost of producing Bessemer or blast-furnace ferrosilicon is as low in the United States as anywhere else in the world.

"Anywhere else in the world."

Mr. WILLIAMS. Can not the Senator from Montana go beyond that and say that at Birmingham, Ala., the cost is lower than anywhere else in the world?

Mr. WALSH of Montana. I am not sure that they produce ferrosilicon at Birmingham.

Mr. WILLIAMS. No; but the Senator was talking about the Bessemer process.

Mr. WALSH of Montana. I referred to Bessemer blast-furnace ferrosilicon.

The survey continues:

> The raw material and fuel, which constitute about 65 per cent of the total cost, are as abundant and as low in price here as elsewhere. Labor cost is only 10 per cent of the total—

Ten per cent of the total is the amount of the labor cost—

> and, as in the case of ferromanganese, the higher wages in this country are offset by the larger output per man employed.

So that, so far as labor costs is concerned, there is not any difference.

Mr. WILLIAMS. If the Senator will pardon me for just a moment more, I remember that about 16 years ago I offered an amendment when a Republican tariff bill was being considered in the House of Representatives which provided that where the difference in labor was any given amount the tariff duty levied upon the foreign product should never be beyond 100 per cent of the labor cost—not 100 per cent as representing the inferiority of foreign labor, but that the duty never should be above 100 per cent of the total labor cost. I remember that Grover Cleveland, who was at that time an ex-President of the United States, and however poor a Democrat in some respects, he was a mighty good one on the tariff, came out in a public article indorsing that idea. Is there anything in this bill now which indorses the idea that there shall not be any import duties above the total cost of labor in the production of a given article?

Mr. WALSH of Montana. No; I think there is not; but, in view of many of the disclosures which have been made in the discussion of the bill thus far, an amendment of the character suggested by the Senator from Mississippi would be exceedingly pertinent, and I can not conceive why anyone should oppose it.

Mr. WILLIAMS. Does the Senator from Montana imagine that any Republican, even the Senator from North Dakota, at the head of the Finance Committee, would accept it?

Mr. WALSH of Montana. I am not able to say as to that.

Mr. WILLIAMS. I shall offer an amendment later on to the effect that wherever the total labor cost of a product shall amount to a given sum the total import duty shall not be above 100 per cent of that sum.

Mr. WALSH of Montana. I take this occasion to say to the Senator—perhaps he was not present—that the Senator from North Carolina [Mr. SIMMONS] a few days ago submitted a very elaborate table showing the labor cost entering into various commodities as compared with the rate which they bear in this bill, from which it appeared that often the rate fixed amounted to more than the total labor cost.

Mr. WILLIAMS. Of course, that might be a matter of dispute between the Senator from North Carolina [Mr. SIMMONS] and some Republicans; but if any Senator on this side of the Chamber were to offer an amendment to the effect that the import duty should never exceed the entire labor cost in America of a given product, does the Senator from Montana imagine it would be accepted?

Mr. WALSH of Montana. I imagine not. It would be said that there was a difference in the cost of power.

Mr. WILLIAMS. Of wind, water, and other things.

Mr. SIMMONS. The Republicans would not accept such an amendment because, if they did accept it, it would practically wipe out of the bill about one-third of the proposed duties.

Mr. WILLIAMS. I do not know the exact proportion. I am glad to hear it would be about one-third.

Mr. SIMMONS. I merely ventured that as an estimate.

Mr. WILLIAMS. If the Republican Party are sincere—the Senator from Utah [Mr. SMOOT], for example, and the Senator from North Dakota [Mr. MCCUMBER], for example—and really want the cost of labor of Europe and here to be equalized, they ought to be satisfied with an import duty equal to the entire cost of the labor entering into a product, whatever it may be.

Mr. SIMMONS. They would be if they were writing a bill for protection purposes, but where they are writing a bill for the purpose of maintaining certain prices and to permit additional profits, of course, they would not be satisfied.

Mr. WILLIAMS. I do not join in that sort of tirade. I do not believe for one moment that distinguished Republican statesmen are attempting to do what the Senator from North Carolina insinuates. I believe that they are only trying to equalize the cost of European, Asiatic, and African labor with the cost of American labor. Of course, if that be their true intent and purpose, then a duty equal to the entire cost of labor entering into an American product—the American cost and not the European cost, because the American cost would be still greater, according to them—they ought to be satisfied. But I scorn to

believe that, as the Senator from North Carolina has intimated, Senators on the other side are engaged in any effort to keep up present prices or to increase them. The Senator from North Carolina knows as well as I do that they have disclaimed that intent time and time again, and he knows that, as Mark Antony said of Brutus and Cassius, "they are all honorable men."

Mr. WALSH of Montana. Mr. President, I am obliged to the Senator from Mississippi for the contribution he has made to this discussion. Of course, his vast experience in connection with tariff legislation entitles him to very considerate attention whenever he chooses to discuss what is before the Senate. We all regret that he does not participate more frequently than he does.

I have shown, Mr. President, by the Tariff Commission's report that so far as blast-furnace ferrosilicon is concerned, it can be manufactured in this country as cheap as anywhere in the world and there is no occasion whatever for the imposition of a duty.

Blast-furnace ferrosilicon ordinarily contains, as I understand, from 8 to 15 per cent silicon. The first bracket in this paragraph of the bill embraces all ferrosilicon containing more than 8 per cent silicon; so it would include all blast-furnace ferrosilicon.

Mr. WILLIS. All except that below 8 per cent.

Mr. WALSH of Montana. That is regarded as not ferrosilicon at all, I understand.

Mr. WILLIS. There is a difference of opinion about that. I have here the report of the Tariff Commission in which they say that 7 per cent is included.

Mr. WALSH of Montana. Very well. All blast-furnace ferrosilicon, then, is included within this bracket bearing a duty of 2 cents a pound or $40 a ton—$40 a ton, bear in mind, on a product which the Tariff Commission tells us we can produce in this country as cheaply as anywhere in the world, the item of power not entering into the proposition at all, and the labor cost being only 10 per cent of the total cost of the product.

Now we come to the ferrosilicon produced by the electric-furnace process, utilizing power. In that case there is a differential against us because power is cheaper in Canada than it is in this country, although there is by no means the disparity that would be indicated by the remarks of the Senator from North Dakota, as I shall show presently, but there is some difference. The Tariff Commission says:

2. The cost of producing electric-furnace ferrosilicon, especially the standard and higher grades, is greater in the United States than in some countries. This difference is mainly owing to the fact that in such countries as Canada, Norway, and France, water power, which is a very important item in the total cost, is cheaper than in the United States. In Canada, where we get the bulk of our imported ferrosilicon, power costs range from 10 to 50 per cent less than at Niagara Falls, N. Y., where power on any large scale is sold more cheaply than in any other part of the United States. As the grade of product rises power cost becomes more important, and hence the advantage of the country having low-price power becomes more pronounced.

Mr. President, I repeat that if we were able to get power in this country at just twice the cost of power in Canada, paying for it $25 a horsepower as against $12.50 in Canada, the increase in the amount that it would cost to produce ferrosilicon in this country by reason of that increase in the cost of power would be just $12; and in order to cover that $12 a rate of 3 cents a pound is put on when it contains 60 per cent or more of silicon, which would be $42. A duty of $42 is put on—$42, bear in mind, or better—to cover an excess of power cost of only $12.

Bear in mind, now, I am figuring upon the basis that power in this country costs twice what it costs in Canada while the Tariff Commission tells us that the difference is from 10 to 50 per cent. The particular figures I shall give presently.

Leaving power out of consideration, the commission says:

3. Other cost factors like raw material and labor give the foreign producer, under normal conditions, but slight, if any, advantages. There is little difference between the wages of American and Canadian workmen, and while labor cost may be lower in Europe than in the United States, it is not such a big factor in the total cost as power and raw material. Coke or coal and silica rock are about as cheap here as in other countries.

So that all we have to take care of in this matter is the matter of power. How much power do you have to use in order to make a tariff of $60 a ton justifiable on the silicon content?

Of course that is $60 a ton. If it contains only 60 per cent, the price would be $42—bear in mind, $42 a ton duty upon this to take care of the difference in power, when the total cost of the power in this country is only $25; not the difference, but the total cost.

Now, let us see about the difference in the cost of power:

At Niagara Falls, N. Y., where the leading producers of ferrosilicon in the United States have their plants, the present (1920) cost of power for electrometallurgical work is $20 per horsepower year.

Twenty dollars per horsepower. I figured on $25. If it is $20, that reduces the difference in the power cost so much.

For this price the consumer must use 500 kilowatts as a minimum and for a term of not less than five years. This cost is divided into "firm energy to be supplied or kept available for supply" at a price of $23 per kilowatt per annum and "compensation for loss of electric energy between the point where the same is measured, and for the agreed value of the service for the transmission of such 'electric energy' supplied or kept available for supply as firm energy between the generating station of the company and the premises of the customer" at a price of $3.80 per kilowatt per annum. The total charge is thus $26.80 per kilowatt per annum, or approximately $20 per horsepower year.

On the Canadian side of the Falls electric power is cheaper, ranging from $10 to $18 per horsepower in Ontario. If we can get it on this side at $20, and on the other side at $10, there is a difference in power of $10, for which the American people are required to submit to a tariff of $42 per ton—$42 per ton to take care of a difference in power of $10. But, Mr. President, the cost is not uniform, but it runs from $10 to $18 per horsepower, or a difference of $42 to take care of a difference in the cost of power of just $2.

I wonder how long the American people are going to stand this kind of thing. I wonder how they are going to regard a bill that is framed as this one is, and in the face of facts of this character.

Mr. NORRIS. Mr. President, may I interrupt the Senator?

Mr. WALSH of Montana. I yield to the Senator.

Mr. NORRIS. The Canadian power costs that the Senator has been giving are in Ontario, as I understand.

Mr. WALSH of Montana. Yes, sir.

Mr. NORRIS. Has the Senator there, or is there given there, the reason for the difference in power costs between the American side and the Canadian side of the Niagara River?

Mr. WALSH of Montana. No; that subject I do not find discussed here; but the Senator from North Dakota tells us that it is due to the fact that they have a superabundance of power on the Canadian side and a limited demand, while on this side they have a lack of power and an excess of demand.

Mr. NORRIS. The Senator is aware, I presume, that the power on the Canadian side is Government owned and on the American side privately owned?

Mr. WALSH of Montana. Yes, sir.

Mr. NORRIS. I think I called attention once before while this bill was here to a report that is being used to prevent the Government of the United States from developing as a Government any of its water powers, wherein a famous engineer makes a comparison between the Ontario price to the consumer and the American price to the consumer, and reaches the conclusion that the American consumer is getting his power cheaper than the Canadian Government-owned organization gives it to the consumer over there. That, however, was not for the purpose of levying a tariff or something. The object there was to discourage Government operation and Government development of water power in the United States. It seems now, in this instance, where it is desired to levy a tariff on a product, and it is desirable to show that the Canadian cost of the product made from this power is cheaper than the American cost, that it is demonstrated that the Government-owned power development of Canada is cheaper than the privately owned power development in the United States.

Mr. WALSH of Montana. It seems that the figures are flexible, depending upon the conclusion at which you desire to arrive.

Mr. NORRIS. Yes.

Mr. WALSH of Montana. But, Mr. President, the end is not here at all. Thus far we have been considering the matter of power being procured over in the United States on a basis of $20 per horsepower, but let me submit the following from this same report:

While the power rates on the American side of the Falls is $20 per horsepower-year, some producers of ferrosilicon, by virtue of old contracts, pay less. Some of these rates are as low as $15 and $16 per horsepower-year, and in one instance the rate is even lower. As old contracts expire the rate is raised to $20.

During the war some of the American producers of ferrosilicon at Niagara Falls were obliged to add to their allotment of power in order to supply the increased demand for this ferro-alloy. As the available water power was already in use, resort was had to steam-generated power, which cost as high as $80 and $90 per horsepower-year. This high cost was, of course, a temporary condition brought on by a great world crisis and was not excessive compared with what is paid in other parts of the country for steam-generated electrical energy. Since the war the use of steam-generated electric power has been discontinued by manufacturers of ferrosilicon.

The great bulk of the ferrosilicon manufactured in Canada is produced by one company, whose plant is located at Welland, Ontario. In 1907 this company entered into a contract whereby it was to be supplied with hydroelectric power for 30 years at a cost of $12.75 per horsepower-year, or nearly 40 per cent less than the regular rate charged American ferro-alloy manufacturers by the Niagara Falls Power Co.

So I feel that we are justified in saying that at the very highest the difference in the cost of power in this country and in Canada is the difference between $12.75 and $20, or $7.25—

$7.25, and a tariff of $42 a ton is put on to cover that difference. But, as I said, the same showing is repeatedly made with respect to many items in this bill in which the tariff is put on ostensibly to cover the difference in the cost of labor in this country and abroad; but it is disclosed often that the total labor cost is nowhere near the amount provided for the tariff rate.

Mr. President, this is a wholly indefensible provision, and I move to amend it by making the rate 1 cent per pound instead of 2 cents. One cent would be $10 per ton in the case of 50 per cent silicon. Of course, we will reach presently the case of the 60 per cent and more, 3 cents.

Mr. SMOOT. Mr. President, I am not going to repeat what the Senator from North Dakota has said upon this subject matter, but I want to say to the Senate that the Senator from Montana has been discussing one article and applying it to an article that has no more reference to what he was discussing than if it were made in a foreign country and never entered America.

The Senator has been reading from the tariff report the figures on blast-furnace ferrosilicon. It is sometimes called Bessemer ferrosilicon. The usual grade of that kind of ferrosilicon carries 10, 11, and 12 per cent—never above 12 per cent—of silicon. The average is 11 per cent; and when it goes above 15 per cent, as provided for in what the Senator has been talking about, it is never made in a blast furnace. It can not be made in a blast furnace. It is made in an electric furnace under the electric-furnace process.

I have a few figures to show just how far afield the statement was that was made by the Senator. Taking 11 per cent as the average, the silicon content of a long ton of 2,240 pounds—and all of the importations are given in long tons—would equal 247 pounds.

The duty is 2 cents a pound, or $4.94 cents a ton, and not $44, or $40, or any other amount. It is $4.94 a ton. The price of the ferrosilicon of 11 per cent is $44.80 a ton to-day, and $4.94 per ton would equal an 11 per cent ad valorem duty. That is what the committee has reported.

At present our only imports run 50 per cent and above, nothing under, and there is not a pound of ferrosilicon imported into the United States that is made in a blast furnace; not one single pound. Yet we have been told that the duty upon it is $44, and that it costs only some $7.75 more to produce it in the United States because of the difference between the cost in the United States for water power and that in Canada. The whole duty on the item is $4.94 a ton, and of course the water power does not cut any figure in this case at all. But if the product contains 50 per cent silicon or over, then it does cut a figure, and that is just what I have already stated. That is a product not made in a blast furnace but made by electrical furnace process.

The Senator from North Dakota, I think, gave the figures, and a concise statement, as to just what was intended by the amendments proposed by the Senate Committee on Finance, and I have made this statement simply because of the fact that the Senator from Montana read from the report of the Tariff Commission as to one item and applied the statement to another.

Mr. WALSH of Montana. Mr. President, there is no justification for that statement at all. I read what the Tariff Commission said about the blast-furnace ferrosilicon, and they said there was no difference at all. The blast-furnace ferrosilicon contains anywhere from 8 to 15 per cent.

Mr. SMOOT. That is what I said.

Mr. WALSH of Montana. This amendment includes from 8 to 60 per cent, so it includes all the blast-furnace ferrosilicon there is.

Mr. SMOOT. As I stated, there is not a pound of blast-furnace silicon imported into the United States.

Mr. WALSH of Montana. I do not care what the Senator said; I am talking about what the Tariff Commission said. Let us take the figures about which the Senator is talking. The item under consideration embraces everything containing from 8 per cent silicon to 60 per cent silicon. That bears a rate of 2 cents a pound. The average of all that is 34 per cent. There would be 680 pounds of the silicon in the average of this, running from 60 per cent up. Of course, if it was 50 per cent, there would be a thousand pounds, and 2 cents a pound on that would be $20, as a matter of course. That is what you have on your first item, $20. Nobody can controvert those facts, if it is 50 per cent. If it is 60 per cent, your duty is $24, to take care of the difference in the power cost, which I have shown can not exceed $7.25.

Mr. SMOOT. The Senator probably did not hear the letter read by the Senator from North Dakota from the Tariff Commission, dated, I think, March 2.

Mr. WALSH of Montana. I read it; but the Tariff Commission tell us that there are contracts outstanding by which the ferrosilicon manufacturers get their power for from $15 to $16 a horsepower, and likewise they tell us that the power cost for work of this character is $20 per horsepower.

Mr. SMOOT. If Canada could make it so much cheaper than any other foreign country, or anyone with whom we were in competition, it certainly would furnish the product to England, instead of Norway furnishing it to England. Norway produces it more cheaply than any other country in the world. Norway has a power price of $6 to $7 a horsepower per year. That is where ferrosilicon is produced cheaper than anywhere else in the world, and it furnishes, I think, all the ferrosilicon sent to England.

Mr. WALSH of Montana. The Tariff Commission does not seem to think that the competition from Norway is deserving of any consideration at all, because it simply discusses the competition of Canada.

But while we are on this item we might just as well consider the other items. If the product contains from 50 to 80 per cent silicon, it gets 3 cents. The average is 70 per cent. That is 1,400 pounds in every ton, and 3 cents a pound would make it $42. Forty-two dollars, as I said, is the tariff on the high-grade ferrosilicon.

Mr. WILLIS. Mr. President——

The VICE PRESIDENT. Does the Senator from Montana yield to the Senator from Ohio?

Mr. WALSH of Montana. I yield.

Mr. WILLIS. Will the Senator permit me to call attention to an inevitable result of this paragraph, if adopted as it stands? I called his attention a moment ago to the fact that 7 per cent ferrosilicon is ferrosilicon proper, and not pig iron. If this shall be adopted as it stands, the inevitable result will be that instead of producing the higher grades of ferrosilicon, as they now produce them in Canada, they will use this cheaper power to which the Senator has referred in producing the lower grades. The Senator from Utah pointed out the fact that up to date blast-furnace ferrosilicon has not been imported. That is true, but unless we shall include the 7 per cent ferrosilicon it will inevitably be true that the Canadian manufacturers will produce a lower grade, and therefore we will have importations. That is why we ought to have 7 per cent there instead of 8 per cent.

Mr. WALSH of Montana. The ferrosilicon which contains from 80 per cent to 90 per cent gets 4 cents a pound. The average would be 1,700 pounds, 85 per cent, figuring on 2,000 pounds to a ton and 4 cents a pound.

Mr. SMOOT. I do not see why the House put that in. There is no such thing as that used in commerce. Eighty per cent is the highest. That is the standard, and I can not understand why they made provision in the bill for the product containing between 80 and 90 per cent silicon. It is not used anywhere.

Mr. WALSH of Montana. I certainly can not enlighten the Senator.

Mr. SMOOT. I think the extra cost attached to the manufacture, if such a thing were on the market, would be more than the advantage they would receive in the freight rates, even where it comes from Europe or anywhere else.

Mr. WALSH of Montana. There would, then, according to the Senator, be two classifications, one of more than 8 and less than 60, and another more than 60 and less than 80, or, generally, more than 60. From 8 to 60, and from 60 above, would be the two classifications suggested by the Senator, the first to bear 2 cents and the second to bear 3 cents.

Mr. SMOOT. Yes.

Mr. WALSH of Montana. If you figure it from 60 to 80, as I have said, that makes an average of 70, and 3 cents a pound would make the tariff $51.

Mr. SMOOT. The only importations are of the 50 per cent grade; then there is a 75 per cent grade. Wherever it is 90 per cent it is silicon metal, and they might just as well make the product into silicon metal as to try to make one containing 90 per cent of silicon. As I said before, I do not see why they put the bracket in the bill, because it is not commercially used. It is not known; it is not advertised. Nobody tries to make it.

The VICE PRESIDENT. The question is on agreeing to the amendment offered by the Senator from Montana to the committee amendment.

Mr. SIMMONS. I ask that the amendment to the amendment be stated.

The VICE PRESIDENT. The Secretary will state the amendment.

The ASSISTANT SECRETARY. It is proposed to strike out "2 cents" and to insert "1 cent," so that, if amended, it would read:

Ferrosilicon containing 8 per cent or more of silicon and less than 60 per cent, 1 cent per pound on the silicon contained therein.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, on page 49, line 24, to strike out the words, "containing 30 per cent or more of silicon and less than 60 per cent, 2¾ cents per pound on the silicon contained therein."

Mr. WILLIS. Before we leave the other provision I desire to say a word.

Mr. SMOOT. I would not care whether that were made 8 per cent or 7 per cent, but I am not authorized by the committee to make that change. I promise the Senator that the question shall be brought to the attention of the committee. I do not know what the committee will do, but as far as I am personally concerned it will make no difference, in my opinion, whether it is 7 or whether it is 8.

Mr. WILLIS. The Senator is willing to let it go over, then?

Mr. SMOOT. That item is not amendable now, anyhow; but the committee may amend it if they so desire.

Mr. WALSH of Montana. I move to amend the committee amendment by substituting 1½ for 3 cents.

Mr. SMOOT. The Senator will allow us to vote upon this first amendment, will he not, striking out lines 1 and 2? The next amendment is what the Senator has in mind.

Mr. WALSH of Montana. Yes; that amendment may be acted upon.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee, striking out the words which have been read, on page 49, line 24, and lines 1 and 2, page 50.

The amendment was agreed to.

The next amendment was, on page 50, line 4, to strike out "3½" and insert "3" before the word "cents," so as to read:

Containing 60 per cent or more of silicon and less than 80 per cent, 3 cents per pound on the silicon contained therein.

Mr. WALSH of Montana. I move to amend by substituting "1½" for "3."

The amendment to the amendment was rejected.

The amendment was agreed to.

Mr. WALSH of Montana. I would like to inquire of the Senator from Utah if it is his purpose to move to strike out at the appropriate time the remaining clause, and to make the appropriate amendment to carry out his ideas there?

Mr. SMOOT. I have not presented that to the committee. It will be presented to-morrow, if we get time.

Mr. WALSH of Montana. As I understand it, then, it would read substantially, if made to conform to the idea of the Senator, starting with line 2, "containing 60 per cent or more of silicon, 3 cents per pound on the silicon contained therein," with the remainder stricken out?

Mr. SMOOT. That would be perfectly satisfactory to me, and I think it would be to commerce, because it is not known as a commercial product, although if we do that, then we will have to have silicon metal provided for. Silicon metal runs at least 90 per cent and over, and that would have to be taken care of if this provision as to ferrosilicon is stricken out.

Mr. WALSH of Montana. Let me inquire. Silicon metal would be simply plain sand, would it not?

Mr. SMOOT. I will say to the Senator that silicon metal is made of plain sand, but it is the plain sand reduced to a metal through a process which I think the Senator understands.

Mr. WALSH of Montana. No; I do not, because I supposed silicon reduced to metal was pure glass.

Mr. SMOOT. That is one process of making glass, but mixed with other chemicals.

Mr. WALSH of Montana. I thought when we had pure quartz we had pure silicon.

Mr. SMOOT. That is what it is if it were possible to make it.

The VICE PRESIDENT. The Secretary will report the next amendment.

The ASSISTANT SECRETARY. On page 50, line 14, the committee proposes to strike out the word "ferrocerium" and the comma.

Mr. SMOOT. This is what may be called the basket clause. It is reported at 30 per cent ad valorem. I move to strike out "30" and insert "25."

The VICE PRESIDENT. The amendment will be stated.

The ASSISTANT SECRETARY. In line 13, strike out "30" and insert in lieu thereof "25."

Mr. WALSH of Montana. Is it the Senator's purpose to make the same amendment in line 13?

Mr. SMOOT. That is the amendment I am now offering.

Mr. WALSH of Montana. I thought the Senator referred to the "30" in line 13.

Mr. SMOOT. That is a special metal.

Mr. WALSH of Montana. It is chromium.

Mr. SMOOT. It is the cerium metal to which the Senator is referring?

Mr. WALSH of Montana. No; there is a duty of 30 per cent on chromium and its compounds. In line 19 there is a 30 per cent duty on various compounds.

Mr. SMOOT. The committee made no change in those items.

Mr. WALSH of Montana. That is to remain the same?

Mr. SMOOT. Yes; the same. There is no amendment offered.

Mr. WALSH of Montana. Then I take it that is practically a revenue duty.

Mr. SMOOT. No; it is not only revenue but it is a protective duty.

Mr. WALSH of Montana. There are none of those metals that require any protection, are there—ferrophosphorus, for instance?

Mr. SMOOT. If the Senator will look at the importations, he will find there are large quantities of chromium imported from France.

Mr. WALSH of Montana. We export from this country millions of dollars worth of phosphates.

Mr. SMOOT. But this is ferrochromium.

Mr. WALSH of Montana. Ferrophosphate, of course, and other kinds of phosphates.

Mr. SMOOT. That comes in the next bracket. They will fall in the basket clause at 25 per cent. That is the very first item in what I term the basket clause, and I wanted to move to strike out 30 and insert 25.

Mr. WALSH of Montana. On what page?

Mr. SMOOT. On page 50, in line 13, before the words "per centum ad valorem," following ferrochrome and ferrochromium, following the words "ad valorem" is "ferrophosphorus." I thought this was what the Senator had reference to.

Mr. WALSH of Montana. Yes.

Mr. SMOOT. On page 50, line 13, following the words "ad valorem," "ferrophosphorus" is the first word, and that is the first item in what I term the basket clause. They also carry 30 per cent in the House text, but the Senate committee desires to strike out "30" and insert "25."

Mr. WALSH of Montana. I think that is only a revenue rate, and I do not know any particular reason why these products should be revenue producers, except, of course, that they burden the industry to a very considerable extent. There are none of these which require any kind of protection. Take ferrovanadium, for instance. We import the ore very largely from South America, and yet we can compete with the world in the manufacture of ferrovanadium, as appears from the Tariff Commission Survey C-1, page 128, from which I read as follows:

Under present (1920) conditions no tariff problem arises with reference to the manufacture of ferrovanadium. This country furnishes most of the ferrovanadium produced in the world and controls the principal sources of supply of raw material. The imports of ferrovanadium having been very small and sporadic, the imposition of a duty yields only a negligible revenue.

Mr. SMOOT. I will say to the Senator that outside of ferrophosphorus all those items are used only in very small quantities. There are none of them which are really made in any quantity, not only in this country but in the world.

Mr. WALSH of Montana. There is ferrouranium, for instance. Uranium, it will be remembered, is the metal from which by some process radium is produced. We control the supply of the world, and it can not be produced anywhere in the world more cheaply than in the refineries of Pittsburgh.

Mr. SMOOT. I do not know whether there are 100 pounds of it used anywhere in the world. The Senator knows that in making up these basket clauses, they are made with the view that we do not know what will develop in the future. There are items in the bill, particularly in the basket clause, as to which a new discovery may be made, and it is generally put somewhere in the tariff bill. It would fall in the basket clause if they wanted to know something about the statistics of the item itself.

Mr. SIMMONS. Mr. President, may I ask the Senator from Utah a question?

Mr. WALSH of Montana. I yield for that purpose.

Mr. SIMMONS. I think one of the purposes of the power which is to be conferred upon the President in the amendment delegating to him power to fix rates under certain conditions is to meet the cases which the Senator says may possibly arise in connection with the very item he is now discussing.

Mr. SMOOT. If it is on the free list, I will say to the Senator, the President will have no power to take it off the free list.

Mr. SIMMONS. It is not on the free list.

Mr. SMOOT. I know it is not now. The power given to the President would allow him to increase whatever rate is fixed not to exceed 50 per cent, and this is a 25 per cent rate.

Mr. SIMMONS. And he may increase it 50 per cent.

Mr. SMOOT. He may do that. That is, he could increase it to 37½ per cent.

Mr. SIMMONS. The Senator is proposing to confer that power to increase the rate 50 per cent to meet a purely conjectural case.

Mr. SMOOT. Well, we can not tell. No living soul can tell. The Senator knows items of that kind are in every tariff bill.

Mr. SIMMONS. There may be items of that kind in every tariff bill, but I supposed the power given to the President was to take the place of these items.

Mr. SMOOT. Not at all. Nobody can tell what it may be. It may be 100 years before anything is discovered, and it may be 100 days or 100 weeks or 100 months.

Mr. WALSH of Montana. I should not spend any time on these items, which in a way are trifling, except that they illustrate to some extent the characteristic feature of the bill to clap a tariff on anywhere. Take ferrovanadium, as to which we control the world. The importations all come from South America and the mines are owned by American capital. Take ferrouranium. Nobody in the world produces uranium in a fractional part of the quantity that is produced here in this country. Indeed, we supply the world. Take ferrophosphorus, for instance. We have phosphate beds in the West limitless in amount, and they have so much down in Florida and Tennessee that we are shut out of the market absolutely. It is a drug on the market, so far as the United States is concerned, and yet it is proposed to put a tariff of 25 per cent on that product. The Tariff Commission says:

> There is no special problem with reference to tariff classification or kind of duty to be imposed. The competitive position of the domestic producers is not seriously menaced by any known special advantages which the foreign manufacturer may have. While hydroelectric power is cheaper in some foreign countries than in the United States, the blast-furnace ferrophosphorus made in this country, as shown by the small importation, has been able to hold its own against the foreign product. Certain radical alterations in the relative prices of coke and hydroelectric power may, of course, change this situation.
>
> The importation of ferrophosphorus has been too small to yield any considerable revenue. Since 1912 the duties collected on imports in any one year never amounted to as much as $1,000. In 1911, under a 25 per cent ad valorem rate, the duties collected on the unusually large importation of 195 tons amounted to only $1,716.

Ferrotitanium is another item in the so-called basket clause. We are in the same favorable situation with respect to that, as appears from the Tariff Commission report, as follows:

> With the present small and sporadic importation of ferrotitanium the tariff problem is not an urgent one, either because of adverse competitive conditions or on account of revenue possibilities. In tariff classification, however, recognition should be given to the fact that the carbon-free ferrotitanium is a much more expensive product than ferro-carbon-titanium, and is produced under different conditions. The possibility of serious competition in the future on account of high power costs merits some consideration.

But for the present there is no occasion for a tariff at all.

Mr. SMOOT. Mr. President, is it not strange that this was all right in 1913? It was all right to name these very items and place a duty upon them in 1913. It was the duty of a statesman to do that in 1913, but in 1922 it is all wrong. Every item, with the exception of ferrozirconium, was named specifically in the law of 1913, and that product was not known at that time, or it would have been included. The importations in this bracket were only $25,000, and I have stated why they are mentioned in the bill. They are items which are not used to any extent in any part of the world. What would the world do if some one were to produce a pound of radium? What would it mean—a pound of radium for all the world? I do not think we ought to take any time in disposing of these things. It makes no difference to the bill whether they come out or whether they stay in.

The PRESIDING OFFICER (Mr. JONES of Washington in the chair). The Secretary will state the pending amendment.

The ASSISTANT SECRETARY. In line 14, page 50, the committee proposes to strike out the word "ferrocerium" and the comma.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

The ASSISTANT SECRETARY. In line 15, page 50, strike out "ferrosilicon" and insert "zirconium ferrosilicon."

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

The ASSISTANT SECRETARY. In line 20, page 50, the committee proposes to strike out the words "ad valorem" and insert "ad valorem; cerium metal, $20 per pound; ferrocerium and all other cerium alloys, $2 per pound and 25 per cent ad valorem."

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. SMOOT. Now, my motion is to strike out, in line 19, the numeral "30" and insert "25."

Mr. SIMMONS. Mr. President, in voting on amendments, we much prefer that the Chair, instead of saying "Without objection, agreed to"—we may not agree to the amendments—would permit a vote to be taken where there is no call for the yeas and nays. I should much prefer that the Chair should put the question on agreeing to amendments.

The PRESIDING OFFICER. The Chair will be glad to put the question on amendments. The amendment offered by the Senator from Utah will be stated.

The ASSISTANT SECRETARY. In the House text at the end of line 19, on page 50, it is proposed to strike out the numerals "30" and to insert the numerals "25."

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The ASSISTANT SECRETARY. The next amendment is, on page 50, line 20, after the words "per cent," to strike out "ad valorem" and insert "ad valorem; cerium metal, $2 per pound; ferrocerium and all other cerium alloys, $2 per pound and 25 per cent ad valorem."

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

Mr. WALSH of Montana. Mr. President, I wish some Senator would make some explanation of that amendment. I have not been able to get any information in reference to it. Two dollars a pound seems to be a pretty stiff duty.

Mr. FRELINGHUYSEN. Mr. President, the duty of $2 per pound on cerium metal is warranted by the import price of $10 a pound. The price on the ferrocerium during the war was $100 a pound. The average price is now about $25 a pound.

The cerium industry is not a large one. During the war a process was developed in this country for the manufacture of cerium alloys and we were able to furnish the Army of the United States and its allies ignition means, without which they would have been seriously handicapped. Prior to the war it was all controlled by an Austrian trust; but during the war the patents were taken over and we began to manufacture it in this country. There were three or four concerns which manufactured it during the war. If we are to maintain this industry in this country it is necessary to impose these duties, which are practically, as near as I can figure them out, about 40 per cent of the cost of the product. I desire to read into the RECORD at this point a statement concerning the character, production, uses, and so forth, of cerium metal:

> Cerium is a soft black heavy metal produced in the electric furnace. Its only recognized use is as the basis of pyrophoric alloy (designated commercially as sparking metal or flints) for lighting appliances, such as mining lamps, gas and pocket lighters, which alloy is composed of about 70 per cent impure cerium metal, hardened by about 30 per cent of iron, zinc, copper, magnesium, or other metals. The alloy is marketed mainly in small cylindrical shaped sizes about one-eighth inch diameter by one-eighth inch long, running about 1,500 to 2,000 pieces to the pound. The normal market in this country is only about 500 pounds monthly, the principal countries using same being France, Germany, Austria, Poland, and Russia, and tropical countries where matches are injured by moisture.
>
> The cerium salts used to produce the metal are the residues left after extracting thorium salts (used in the making of gas mantles) from the monazite sands found principally in India and Brazil. The sands are concentrated so that when marketed the Brazilian sands contain 5 to 7 per cent of thoria and the India sands 8 to 10 per cent, the India sands consequently being superior. About 70 per cent of the volume of sands treated for thoria is left as residue. About 5 pounds of such residue, carrying about 50 per cent of cerium salts, are required for a pound of cerium metal.
>
> Before and during the war the gas-mantle and the cerium industry of Europe was controlled by a German-Austrian cartel, of which Von Dernberg (the recognized financial representative of Kaiser Wilhelm) was the largest stockholder. The principal company of the cartel was the Treibacher Chemische Gesellschaft, of Treibach, Austria, formed by Auer von Welsbach, the original inventor of the gas mantle. The cartel had branches or subsidiary companies which they controlled in the principal parts of the world, and also controlled the monazite sands of India through a British company, of which they owned the stock. The Brazilian sands were and still are controlled by a French company that worked in accord with the cartel. The cartel produced probably about 5,000,000 pounds of thoria per year, the greater part of which they marketed with their gas mantle, doing a business of several million yearly. The two or three American companies which manufactured thoria were independent of the cartel, but had necessary trade relations on account of their need for getting the monazite sands. Their cost of producing thoria and gas mantles was higher than in Europe on account of their more limited production and because they had no market for their residues. During the war the company controlling the India sands was taken over and sold by the British Government as alien-owned property, and is now controlled by a former German who became a British subject. They have a working agreement with the French company and expect to succeed the original cartel by controlling the main deposits of monazite sands.
>
> Before the war the sparking metal business in this country was supplied by a branch of the Treibacher Co. in New York City, in charge of their agent. The cerium metal was shipped here from Austria and made up into alloy at this branch.
>
> Cerium metal is produced by an intricate electric-furnace process. The alloy is produced by an even more difficult process. These proc-

esses were kept secret by the cartel. In 1917 a group of leading electrometallurgists here took up the question of producing the metal and the alloy and in 1918 were able to supply all our needs, and resulted in this corporation, representing outlays of more than $250,000.

The cost of producing cerium metal here per pound is about $3.50 and the cost of producing the alloy per pound is about $4.50. The cost abroad, owing to cheaper labor, money, and materials, and larger production on account of larger market, is less than half these costs. The agent of the Treibacher Co. stated that their pre-war cost was less than $1 per pound. This statement is probably fairly accurate. At any rate, the production costs abroad are so much lower that it will be impossible for this newly established industry to continue without reasonable tariff protection. Without such protection our own market, as well as other markets, will be supplied only by foreign-made alloy.

We desire to emphasize the great difference between cerium metal as covered by paragraph 1542 of schedule 15 and the crude minerals or other metals also included in the free list.

Cerium is not a metal which can be extracted from its ores by a simple smelting process, but is a highly intricate article of manufacture. Cerium is produced from the residues of the gas-mantle industry by a very difficult electrolytic process which we have developed in this country. It can not by any consideration be regarded as a raw or unwrought metal, but is an article of manufacture requiring the greatest electrometallurgical skill to produce it.

Its manufacture provides the only use for the residues of the gas-mantle industry, thereby affording an important help to this industry against foreign competition which it would not otherwise have. The national importance of the gas-mantle industry has been recognized by other countries—England particularly—in regarding the manufacture of thorium nitrate and other salts as one of the key industries, and protecting same accordingly. We respectfully contend that the preservation of the cerium industry in this country by suitable tariff protection is of national importance, because the pyrophoric alloys, of which it is the prime constituent, provide the only substitute for matches or other igniting means where these latter can not be obtained or used. During the war, by reason of the processes which we developed for the manufacture of cerium and its alloys, we were able to furnish to the armies of the United States and its allies ignition means without which they would have been seriously handicapped, not only for the uses of the soldiers in the trenches but also in tracer shells and the like. Furthermore, cerium alloys are of vital importance for miners' safety lamps, and mining operations would be seriously handicapped if, in a national emergency, it would be impossible to provide by American manufacture means of ignition for purposes of this kind.

We desire to also call special attention to the difference between ferrocerium and other ferro-alloys with which it is grouped at the present time in paragraph No. 302 of schedule 3 of the proposed tariff. Ferrocerium, as distinguished from the other ferro-alloys, is not used as a subsidiary product for the treatment of alloy of steel, but its only use is in lighting appliances, as previously stated. What we desire to emphasize is that though known as ferrocerium it is not a member of the so-called ferro-alloy group and should be treated absolutely independent of same and under entirely different considerations.

The need for protection of "special-purpose metals" and their alloys has already been recognized in the proposed tariff bill, as, for example, in schedule 3, paragraph 302, molybdenum and other metals; paragraph 375, magnesium and its alloys.

* * * * * * *

Dated December 28, 1921.

Mr. SIMMONS. Will the Senator from New Jersey allow me to ask him a question?

Mr. FRELINGHUYSEN. Certainly.

Mr. SIMMONS. I understood the Senator to say that we are now manufacturing this commodity for $25 a pound.

Mr. FRELINGHUYSEN. I understand that is the price of ferrocerium.

Mr. SIMMONS. I understood the Senator further to say that during the war it sold for $100 a pound?

Mr. FRELINGHUYSEN. Yes; that is my information.

Mr. SIMMONS. There was an embargo during the war; and why did it sell for so much at that time?

Mr. FRELINGHUYSEN. I do not know, unless it was due to the cost of the manufacture. I understand it was difficult to get.

Mr. SIMMONS. I was wondering—and it is about that I desire to elicit an opinion from the Senator—why should this commodity have cost so much as $100 per pound to make during the war when it had an embargo on it, and why have we been able to reduce the price to $25?

Mr. FRELINGHUYSEN. Everything was costly here during the war.

Mr. SIMMONS. Does the Senator know that its manufacture cost 400 per cent more during the war than it now costs?

Mr. FRELINGHUYSEN. Yes; the price of labor has now come down. It cost more to manufacture everything during the war.

Mr. SIMMONS. I do not know how it is in this particular industry about the labor coming down, but labor has not come down in any other industries in any such proportion to that.

Mr. FRELINGHUYSEN. I understand also that when the patents were taken over the manufacture of this commodity was in its experimental stage.

Mr. SIMMONS. But the manufacturers were in possession of the patents when they were charging $100 a pound, were they not, as they are in possession of them now?

Mr. FRELINGHUYSEN. Undoubtedly.

Mr. SIMMONS. It looks like somebody has been practicing extortion upon the American people. If they are not practicing extortion now, they must have been doing so when they charged $100 a pound for this material.

But allow me to ask the Senator another question. Before the war, before we got possession of the patents about which the Senator has spoken, and when we were entirely dependent upon Austria for this particular product, will the Senator tell me what the price of the commodity then was?

Mr. FRELINGHUYSEN. All I have, I will say to the Senator from North Carolina, is the information furnished by the Tariff Information Survey, which gives us the following information:

Before the war the pyrophoric alloy manufactured in this country was made from metallic cerium imported from Germany. Soon after the imports were cut off by the war, the manufacturers of metallic cerium was undertaken by the New Process Metals Co. of New York. This company was, however, unable to make the pyrophoric alloy with iron owing to a patent controlled by the Austrian manufacturers, and the company therefore sold their product to the American agent of the Austrian producers. Under the trading with the enemy act in 1917 the New Process Metals Co. was able to secure a license from the Federal Trade Commission and is now manufacturing pyrophoric alloy under the patents formerly controlled by the Austrian manufacturers. Pyrophoric alloy has been quoted at $25 to $40 per pound—

That is the ferrocerium, as I understand—

depending upon its quality and the degree of manufacture. Misch-metal sells for about $10 per pound—

That is the cerium metal, as I understand—

Statistics for the domestic production are not available, but the annual consumption in the United States has been estimated at about 20 tons. During the war a small export trade with the Allies was developed, but it is very doubtful if this will be held after normal conditions are restored in Europe.

Imports of pyrophoric alloys are not published separately in the official statistics. Imports of "cerium, cerite, or cerium ore," which are made up chiefly of metallic cerium and misch-metal, are shown in Table 20.

Mr. SIMMONS. What I desired particularly to find out was how much more we have to pay for this little item now that we are manufacturing it than we had to pay when we were not manufacturing it. I think it would be very desirable information if we could get it. I should also like to know what the price was before we began to manufacture it, when we imported it from abroad. Has the Senator any information as to what we paid for it before we began the manufacture of it?

Mr. FRELINGHUYSEN. I have not that information, I regret to say to the Senator from North Carolina.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

Mr. WALSH of Montana. Mr. President, before voting on this item, I desire to give the Senate the benefit of further information on this subject furnished by the Tariff Commission. Before I do so, however, I desire to recall that the Senator from North Dakota informed us that hydroelectric power could be secured in Norway for something like $7 per horsepower. That statement, he advised us, was made upon the advice of the expert of the Tariff Commission who sits with him in this Chamber. To show how the information that thus comes offhand from the expert should be regarded, I read from page 159 of the Survey C-1, which must have been the source of the information given to the Senator from North Dakota by his assistant:

In Europe rates for hydroelectric power are hard to state, on account of the demoralized monetary conditions prevailing over the greater part of the Continent. In Norway, as noted in discussing ferrosilicon, one American company—

One American company—

according to a contract entered into in 1913, pays a rate of $7.40 per horsepower year, or about $0.0011 per kilowatt hour. A Swedish metallurgical engineer, now president of a blast-furnace company in Sweden, informed a representative of the Tariff Commission that hydroelectric power in Norway now (1920) costs three times as much as it did in the pre-war period.

As to cerium, upon which the Senator from New Jersey modestly asks for a tariff duty of $2 a pound, the Summary of Tariff Information states:

Description and uses: Cerium is a soft, steel-gray metal occurring in more than 60 minerals. Of the entire list of cerium-bearing minerals, two may be regarded as commercial sources. These are the phosphate (monazite sand, par. 1616)—

That is, it is on the free list—

and the silicate (orthite). Cerite, a hydrous silicate occurring in Sweden, was for some time the only commercial source of cerium compounds. Monazite sand, the most important cerium ore, is mined for its content of thoria, which is used in incandescent gas mantles. Cerium is a by-product and is obtained in excessively large amounts.

It is a by-product, Mr. President, of the production of thoria, and in the production of thoria is secured an excessively large amount of cerium. There is so much of it that it is found next to impossible to dispose of it—

No commercial use has been found for the pure cerium metal, but certain of its alloys and compounds have a fairly extended range of application. The quantity consumed, however, is only a small fraction of the production. Incandescent gas mantles, besides thoria, contain 1 per cent of ceria. Certain cerium alloys, e. g., pyrophoric alloys, throw off glowing particles when scratched by a hard metal, a property utilized in automatic cigarette and gas lighters. Other alloys are used as reducing agents and as dexodizers in the manufacture of high-grade iron and steel castings—

It will be seen that we usually run up against the steel industry in connection with these products—

Cerium fluoride is used extensively in carbon electrodes for "flaming" electric arc lamps. Cerium salts are also used in medicine.

Production statistics of cerium are not available, but consumption of monazite sand indicates an output of at least 250 tons of ceria (cerium oxide).

A duty of $2 a pound represents $4,000 a ton; so that the duty on 250 tons would be a trifling matter of $1,000,000 imposed on the taxpayers of the country by this innocent-looking item in the bill:

At least 10,000 tons of ceria are estimated to have accumulated at the gas-mantle factories.

Imports of cerium, cerite, and cerium ore are small and of no significance. They were valued at $10,712 in 1914 and at $5,260 in 1918 (fiscal year). They came entirely from Austria in 1914. There were no importations in 1919 and only $30 worth in 1920.

Mr. FRELINGHUYSEN. Mr. President, everything that the Senator from Montana has said is perfectly true, with the exception of the statement that this is a tax on the consumers of this country to any great extent. If we are going to protect this industry and keep it here—and I am in favor of doing so—$2 a pound is not an excessive duty.

Cerium is a by-product, but I am informed—and this is some expert information which I have procured—it is not a metal which can be extracted from its ores by a simple smelting process, but is a highly intricate article of manufacture. Cerium is produced from the residues of the gas-mantle industry by a very difficult electrolytic process which we developed in this country. It can not by any consideration be regarded as a raw or unwrought metal, but is an article of manufacture requiring the greatest electrometallurgical skill to produce it. Its manufacture provides the only use for the residues of the gas-mantle industry, thereby affording to this industry an important help against foreign competition, which it would not otherwise have.

Mr. President, as I am informed that the cost of the manufacturing process is some $4.50 to $5.50, I submit that a duty of $2 will not create an embargo. The Senator from North Carolina has asked why the price is $25 a pound. It seems to be due to the fact that the process and the labor employed in it must constitute a very large portion of the cost of production and manufacture. If a duty of $2 a pound is placed upon this product, with a lower cost of manufacturing in Germany or Austria, which have been the competing countries heretofore, it surely will not prevent to any great extent the competitions of Europe or cause an increased tax upon the consumers in this country.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from New Jersey yield to the Senator from North Carolina?

Mr. FRELINGHUYSEN. I do.

Mr. SIMMONS. I do not know whether I understood the Senator a little while ago, but I thought I understood him to say, while he was reading from the brief there, that the cost of manufacture was $4 a pound or $4.50 a pound.

Mr. FRELINGHUYSEN. I understand from the figures I have here that the cost of producing ferrocerium is about $4.50 to $5.50 per pound.

Mr. SIMMONS. Then I again ask why it is sold for $25 a pound.

Mr. FRELINGHUYSEN. I do not know, Mr. President, why it is sold for $25 a pound.

Mr. SIMMONS. That is a very important thing.

Mr. FRELINGHUYSEN. Nor do I know what the foreign cost is.

Mr. SIMMONS. The foreign cost has nothing to do with it. The Senator says that he wants an article protected which is produced in America for $4.50 and sold to the American consumer for $25 a pound.

Mr. FRELINGHUYSEN. Why, certainly, Mr. President. I am basing my argument for a duty on a cost of production of $5.50 per pound.

Mr. SIMMONS. Mr. President, if an American producer can sell his product in this market for six times what it costs to produce it, it must be because he already enjoys a monopoly; otherwise he could not command any such profit as that upon his product. It seems to me that where it is shown that the American consumers are having to pay six times the cost of producing an article in the domestic market, if it can be made anywhere else and sold to us at a rate that would protect us against this enormous, this unconscionable profit of six times the cost of production, we ought not to be excluding it by this high, prohibitive tariff.

Mr. FRELINGHUYSEN. Mr. President, does the Senator contend that $2 a pound duty against a manufacturing cost of $5.50, even if the product is selling at $25, is a prohibitive duty?

Mr. SIMMONS. It would appear that something is prohibiting it. I do not know.

Mr. FRELINGHUYSEN. But is the duty prohibiting it?

Mr. SIMMONS. Is it not apparent to the Senator that this product does not require, and that the producers of this product have no right to ask the American people to keep out foreign competition when they are selling that article in this market to the American people for six times what it costs to produce it? That is the point I am making.

Mr. FRELINGHUYSEN. Mr. President, I was informed that the price was $25, and I am informed that that was during the war. I have some further testimony on the subject.

Mr. SIMMONS. But the Senator said it was $100 during the war, and is $25 now. That is the point I am making with him.

Mr. FRELINGHUYSEN. It was $100 during the war.

Mr. SIMMONS. And that it is $25 now, and that it costs $4.50 to produce it in this country.

Mr. FRELINGHUYSEN. I did say that.

Mr. SIMMONS. Now, the Senator wants to protect the American people against foreign competition on an article that is being sold to the American consumer for six times what it costs to produce it.

Mr. FRELINGHUYSEN. Mr. President, here is some further testimony upon this rather vague subject—the testimony of Mr. Alexander Harris, at page 4421:

The price in this country is $7 per pound, but special grades of this material bring about $15 per pound, and some other grades bring $18 per pound.

Mr. SIMMONS. If the Senator keeps on he will get it down to nothing after a while. He started with $100, and got it down to $25, and now he gets it down to $15 and $18.

Mr. FRELINGHUYSEN. No; I would not do that, because then the duty would be too high.

Mr. SIMMONS. I think we ought to have the yeas and nays on this amendment.

Mr. WALSH of Montana. Mr. President, I think I shall ask for the yeas and nays on this amendment; but before doing so I should like to summarize the situation.

It costs $5.50 a pound to produce this commodity. It is sold for anywhere from $7.50 to $25 a pound. We know absolutely nothing whatever about what it costs to produce it abroad. We do not even know what the foreign price is. That is the brief situation as it has developed. It is a by-product, just simply utilizing some waste.

I ask for the yeas and nays.

Mr. McCUMBER. Mr. President, I will ask if the Senator from New Jersey will be willing to pass over this paragraph?

Mr. FRELINGHUYSEN. Why, no, Mr. President, unless the Senator insists, of course.

Mr. McCUMBER. No; I will not insist.

Mr. FRELINGHUYSEN. I think it ought to be voted on. I do not think the duty is at all unreasonable, and it might just as well be settled now.

Mr. McCUMBER. Very well.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee, on which the yeas and nays have been requested.

The yeas and nays were ordered, and the reading clerk proceeded to call the roll.

Mr. JONES of New Mexico (when his name was called). I transfer my general pair with the Senator from Maine [Mr. FERNALD] to the Senator from Missouri [Mr. REED] and ask that this announcement may stand for the day. I vote "nay."

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. KELLOGG], who is absent from the Chamber. I transfer that pair to the senior Senator from Texas [Mr. CULBERSON] and will vote. I vote "nay."

Mr. SUTHERLAND (when his name was called). Making the same announcement as on the previous vote with reference to the transfer of my pair, I vote "yea."

The roll call was concluded.

Mr. HALE. Making the same announcement as before, I vote "yea."

Mr. ELKINS. I transfer my pair with the Senator from Mississippi [Mr. HARRISON] to the Senator from Vermont [Mr. PAGE] and vote "yea."

Mr. GERRY. I desire to announce that the senior Senator from Alabama [Mr. UNDERWOOD] is unavoidably detained. He

is paired with the senior Senator from Massachusetts [Mr. LODGE].

Mr. STERLING. I transfer my pair with the Senator from South Carolina [Mr. SMITH] to the Senator from New York [Mr. WADSWORTH] and vote "yea."

Mr. CURTIS. I desire to announce the following pairs:

The Senator from Delaware [Mr. BALL] with the Senator from Florida [Mr. FLETCHER];

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL];

The Senator from New Jersey [Mr. EDGE] with the Senator from Oklahoma [Mr. OWEN]; and

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR].

Mr. ERNST (after having voted in the affirmative). I transfer my general pair with the senior Senator from Kentucky [Mr. STANLEY] to the junior Senator from Delaware [Mr. DU PONT] and permit my vote to stand.

The result was announced—yeas 34, nays 25, as follows:

YEAS—34.

Brandegee	Gooding	McLean	Spencer
Bursum	Hale	McNary	Sterling
Capper	Johnson	Nelson	Sutherland
Curtis	Kendrick	Newberry	Townsend
Dillingham	Keyes	Oddie	Warren
Elkins	Ladd	Phipps	Watson, Ind.
Ernst	McCormick	Poindexter	Willis
France	McCumber	Rawson	
Frelinghuysen	McKinley	Smoot	

NAYS—25.

Borah	Heflin	Norris	Swanson
Caraway	Jones, N. Mex.	Overman	Walsh, Mont.
Dial	Jones, Wash.	Pittman	Watson, Ga.
Gerry	King	Pomerene	Williams
Glass	La Follette	Ransdell	
Harris	Myers	Sheppard	
Harrison	Norbeck	Simmons	

NOT VOTING—37.

Ashurst	Edge	New	Stanfield
Ball	Fernald	Nicholson	Stanley
Broussard	Fletcher	Owen	Trammell
Calder	Harreld	Page	Underwood
Cameron	Hitchcock	Pepper	Wadsworth
Colt	Kellogg	Reed	Walsh, Mass.
Crow	Lenroot	Robinson	Weller
Culberson	Lodge	Shields	
Cummins	McKellar	Shortridge	
du Pont	Moses	Smith	

So the amendment of the committee was agreed to.

DISTURBANCE OF OPEN-AIR MEETINGS BY AIRPLANES.

Mr. HEFLIN. Mr. President, I ask unanimous consent for the present consideration of the joint resolution which I send to the desk.

The PRESIDING OFFICER. Without objection, the joint resolution will be read by title.

The joint resolution (S. J. Res. 207) to prevent airplanes from disturbing public assemblies in the District of Columbia was read twice by its title.

The PRESIDING OFFICER. The Senator from Alabama asks unanimous consent for the present consideration of the joint resolution.

Mr. WILLIAMS. I object.

The PRESIDING OFFICER. Objection is made.

Mr. HEFLIN. Mr. President, does the Senator from Mississippi know just what this resolution seeks to do? Did the Senator from Mississippi hear the title read?

Mr. WILLIAMS. Of course I did, or I would not have objected. What does the Senator mean by that sort of an insolent inquiry?

Mr. HEFLIN. It is a joint resolution to prevent airplanes from flying overhead and disturbing public assemblies in the District of Columbia.

Mr. WILLIAMS. I understood that perfectly, and I also understood that an airplane interfered with a public meeting at which the Senator from Alabama was making a speech.

Mr. HEFLIN. That is correct. I was speaking under the auspices of the Washington Elks on the subject: "The American Flag."

Mr. WILLIAMS. And I have objected to unanimous consent for the consideration of the resolution. What did the Senator mean by his insolence in asking me whether I understood?

Mr. HEFLIN. I meant no insolence whatever. Am I to understand that the Senator from Mississippi would object to a resolution to prevent the disturbance of people assembled for the purpose of paying tribute to the American flag?

Mr. WILLIAMS. Mr. President, I was not objecting to preventing any disturbance——

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Mississippi?

Mr. HEFLIN. No; I do not yield.

Mr. WILLIAMS. I shall not object to preventing any disturbance——

The PRESIDING OFFICER. The Senator from Alabama has the floor, and he declines to yield to the Senator from Mississippi.

Mr. WILLIAMS. Then I will wait until he is through, and I will claim the attention of the Chair.

Mr. HEFLIN. Mr. President, complaints have come frequently from patriotic bodies and religious bodies holding open-air meetings in the District of Columbia about being disturbed by airplanes flying overhead or near by them. The weather is warm, and people are holding meetings in the open air in the District of Columbia, as they have a right to do. These airplanes come out and circle around overhead and near the assemblies, disturb these meetings, and make it impossible for the people to proceed with their programs.

Just two weeks ago the President of the United States was making a speech down at the Lincoln Memorial, receiving that magnificent monument on behalf of the people of the greatest Government in all the world, and one of these airplane fellows, taking pictures for a moving-picture show, I am told, circled overhead and made such a noise as to greatly disturb the President, and the President was naturally very indignant at the aviator's performance. Everybody was indignant at that discourteous treatment of the President of the United States and of the patriotic people who had assembled for the purpose which called them together.

On yesterday the Elks of the city of Washington had their flag-day service, and we were assembled at the base of Washington's Monument, out in the open air, in the Sylvan Theater. Representative FREE, a Republican Member of Congress from the State of California, read the Elks' tribute to the flag. I had been invited by the Elks to make a speech upon that occasion, to deliver the principal address, and my subject was "The American Flag." There we were, Mr. President, assembled out on the green, holding this patriotic meeting, and an airplane making a tremendous noise passed over the assembly. It disturbed me and disturbed the meeting. I had to stop speaking two or three times on account of the noise. Several people, including myself, waved to him to leave. In about five minutes he returned and repeated the annoying performance. He circled over and around us about three times. He annoyed, irritated, and disturbed everyone present. The whole audience showed its resentment at his uncouth conduct. That patriotic assembly in the Capital of the Nation had to endure the outrageous performance. I announced that I was going to undertake to protect the people of the District of Columbia from such annoyances and disturbances in the future. The audience with hearty applause expressed its approval of my suggestion. The people of Washington are entitled to the protection that my resolution provides. When the Senator from Mississippi objected, I thought that he probably had not understood the purpose of the resolution and I felt that maybe his desire to go on with the tariff discussion prompted his objection to the consideration of the resolution at this time. Certainly I meant no offense to the Senator by asking if he understood what it was I was trying to do.

The Senator became angry and indignant because I wanted to know if he knew what it was I was trying to do at this time. I merely thought he did not want to consider any resolution now. But he informed me that he did know, and that he did object, so that is all there is to it. I will just have to wait until I can get it up at some other time.

Mr. WILLIAMS. Is the Senator through?

The PRESIDING OFFICER. Does the Senator from Alabama yield to the Senator from Mississippi?

Mr. HEFLIN. Not yet; he doesn't look friendly enough to warrant me in yielding to him yet.

Mr. WILLIAMS. Go ahead, then.

Mr. HEFLIN. Mr. President——

Mr. WILLIAMS. Mr. President——

The PRESIDING OFFICER. The Senator from Alabama has declined to yield to the Senator from Mississippi.

Mr. WILLIAMS. Oh, has he?

Mr. HEFLIN. I yield to the Senator from Mississippi.

Mr. WILLIAMS. No; I shall wait until the Senator from Alabama imagines he is through.

Mr. HEFLIN. It will probably be an hour or so before I am through.

Mr. WILLIAMS. All right, then, I will wait for an hour or two.

Mr. HEFLIN. Mr. President, I was merely jesting about speaking an hour. I believe that is about all I desire to say at this time. I really did not think there would be any opposition

to the joint resolution, but I will have to wait, since the Senator from Mississippi will not agree to take it up at this time.

Mr. WILLIAMS. Mr. President, I am highly delighted at the idea that the Senator from Alabama has expressed that maybe he could "wait for an hour or two" until I had gotten through expressing my objections to this. Of course, I conceived long ago that the Senator from Alabama expressed some remarkably new ideas or a remarkably new concurrence of modern ideas that might at some time be renaissance. The Senator just informed me that he was advocating this resolution because of certain "religious or patriotic" motives, and as far as I can learn his religious and patriotic motives amount to this, that at a certain meeting in the city of Washington, where he was speaking, an airplane flew over and interfered with his discourse.

Of course, every now and then something may interfere with the distinguished Senator from Alabama in his discourse. Shall I call it a discourse?

I leave that to posterity. It may be or it may not be. At any rate, in the opinion of the Senator from Alabama, an airplane flying around loose in the free air interferes with the discourse of a Senator of the United States. Why, Mr. President, if that Senator were even the Senator from Utah [Mr. SMOOT] or the Senator from North Dakota [Mr. MCCUMBER], much more political personages than the Senator from Alabama even, I would contend that a fellow had a right to fly around in the air regardless of who was walking or talking on the earth below him just so he did not injure him. You know, I can not imagine that even the Senator from North Dakota, at the head of the Finance Committee, or one of his experts, or even the Senator from Utah, of secondary consideration upon the Finance Committee, or one of his experts, could have a right to utter a protest against another American citizen flying around in the air away yonder above them maybe 500 feet, maybe 5,000 feet, not disturbing them at all, not rustling up against them, not hurtling their elbows.

Why, Mr. President, can you imagine a Senator from the State of Washington—and there is one from that State sitting in the chair at this present moment—can you imagine that when he was flying an airplane from Washington State on the way to Washington City, coming by way of Mississippi, that I would be entitled to complain, because he interfered with a Fourth of July speech of mine or some other speech of mine, which I chose to consider a form of "public worship"? Even a Fourth of July speech of mine is generally a very good speech. I say so myself. I acknowledge it. I do not admit that an ordinary speech of the Senator from Alabama is a very good speech. But suppose that I entered into the arena claiming that the Senator from Vermont [Mr. DILLINGHAM], who sits opposite me now, had no right to fly an airplane and flutter its wings, while I, an immortal Senator of the United States, were talking to a Fourth of July audience about something. Anyhow, the Senator from Alabama was talking to somebody about something. It was the immortal Senator from Alabama who was talking to somebody about something, and a "balloon riz up," an airplane impudently fluttered in competition with his voice. He did not quite realize what he was talking to, but that is an ordinary habit with him.

Mr. HEFLIN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Mississippi yield to the Senator from Alabama?

Mr. WILLIAMS. Of course.

Mr. HEFLIN. The Senator from Alabama knew about what he was saying and the audience he was addressing.

Mr. WILLIAMS. Oh, Mr. President, I have no doubt that the Senator from Alabama thought that. I have no sort of doubt that he thought the audience was following him. I have watched him for quite awhile in this body, and I have never caught an audience following him. But perhaps that particular audience was following him. At any rate, I am thoroughly convinced that the Senator from Alabama was convinced that he was speaking seriously and that a lot of other people were listening seriously.

Now, Mr. President, so far as I can learn, there is nothing free in the world except the air. The earth is not free because the trusts own it. The political future of the United States is not free because the Republican tariff barons own it. Europe is not free because France's militaristic instincts own it. There is nothing free except the air. For God's sake, leave the air free even if it interrupts the President of the United States or the Senator from Alabama.

I started to go further and say that it ought to be left free even if it left the Senator from Mississippi interrupted by an airplane fluttering, but I will not say that because I represent the State that has been represented by Jeff Davis, by Robert J. Walker, as Secretary of the Treasury, by George Poindexter, by Edward Cary Walthall, and James Z. George—and by me, outside of all them, and they and I were or ought to be sacred—sacro-sanct.

But, Mr. President, just think—just think for one moment of the audacity and the insolence of an infernal airplane flying over my head right now, for example, while I am trying to address your intelligence, which is singularly absent by lack of attention. Think of what it would amount to. Why, I could not stand for that any more than the Senator from Alabama could stand for it. Airplanes! Things up in the air with no regulated routes, with no regulated highway, flying around as they darned please, fluttering over a President, and worse than that, infinitely worse than that, now and then fluttering over the head of the Senator from the State of Alabama.

Think of it! Why, the fellow that is running that airplane is taking his life in his hands. He may be risking his existence, but I challenge him to risk his existence at the expense of the oratory and the eloquence of the Senator from Alabama. He has no right to do it. It is too little of an ante in comparison with the pot. The oratory and the eloquence of the Senator from Alabama are so much of a public nature, of so much public value, that a man in the air flying an airplane, even if he were formerly an aviator operating for America in France or Belgium, has no right to interfere with his eloquence and his oratory. His eloquence and his oratory I am acquainted with, and you are, too, and they are of the very highest excellence. They are of that form of excellence that punishes itself with constant matutinal and vesper performances at the expense of the grandest banking system and the grandest financial system that the world has ever seen.

Why, Mr. President, I hear somebody on the Republican side saying, "Not only has an airplane interferred with the Senator from Alabama"—of course, that is the biggest thing in the world—"but an airplane absolutely offended President Harding, the President of the United States, and came flying down just a while ago over the Lincoln Memorial." Mr. President, Mr. Harding, whom I love very much—I served with him here in the Senate for years, and I learned to love him very much—has no cause for complaint, because he had his photograph taken under the airplane and the airplane taken over his photograph.

Mr. President, I believe that is all I have to say, except that as between a division of the universe between the earth and the air, the earth devoted to the President of the United States and the Senator from Alabama, and the air devoted to God and the angels and the airplanes, I would rather a little bit be on the side of the airplanes and God and the angels. There is no telling what is coming from the air after awhile, but everybody knows what is coming from President Harding and from the Senator from Alabama.

Oh, Mr. President, why all this camouflage? Why all this nonsense? Why all this disproportion? Why all this idea that the Congress of the United States, exerting its influence only over the District of Columbia, can control and conclude the air routes above us and the earth beneath us? When I get up to make a public speech in the open air at some time or other, as I may some time when I have less sense than I have now—I would not do it now for $1.25—I would defy all the planes of heaven or in heaven or in the air pretending to be heaven—I do not know which—to interfere with my "discourse," because my discourse will be founded upon sentiment and honor and logic, and no airplane flutterings can interfere with that sort of discourse. My discourse will come from the old-time traditions and from new-time idealism, and airplanes can not flutter me out of existence and can not even flutter me out of patience. I am not astonished at the Senator from Alabama that he should have been fluttered out of patience, because he never had too much patience, anyhow; but I was astonished at President Harding that he should be fluttered out of patience, because I always imagined that about the chief virtue President Harding had was his patience—patience with "standpatters," patience with "progressives," patience with everybody. Methinks I hear a voice from Alabama saying to the air, "Wait awhile longer and I will tell you what I meant."

Mr. HEFLIN. Mr. President, I shall detain the Senate for but a moment. The joint resolution which I have submitted, I believe, would be indorsed by all the men, women, and children of the District of Columbia. Airplanes circling over public gatherings make such a noise that the people can not conduct in a decent and orderly manner their public meetings. They are entitled to be protected from such noises and disturbances. The Senator from Mississippi [Mr. WILLIAMS]

probably never heard one of these airplanes buzzing around in the air. I do not know that he knows that they circle over the city of Washington, but they really do. They fly around here very promiscuously. There are statutes in the States against disturbing public assemblies. Penalties have been imposed upon people who disturb public worship or who disturb public speaking by making noises which interfere with the proper conduct of such exercises. The people in the District of Columbia, in the Capital of the Nation, are entitled to have protection from disturbing noises made by anybody on the ground or in the air above the ground. I resented the insult and the insolence offered to the President of the United States by the man who swooped down over that assemblage when the President of the country was speaking at the Lincoln Memorial dedication exercises. Everybody without a single exception—men and women, Democrats and Republicans—who have talked to me about the incident said there ought to be some way of preventing its recurrence. I agreed with them.

On yesterday, as I have said, services in honor of flag day were being held at the Washington Monument, certainly a sacred place, and certainly the speaking was about something which is dear to the heart of every loyal American—the American flag. It was also upon the Sabbath Day, and surely we were entitled to be protected from the noise of the buzzing airplanes flying over the heads of the people there assembled, trying to listen to some one whom they had honored by inviting him to speak upon that occasion, and who had responded to their request and was doing the best he could under the circumstances.

I protested then; everybody there protested. Scores of those who were present came up afterwards and told me that they hoped I would introduce a resolution designed to prevent such occurrences in the future. Representative FREE and I—he a Republican Member of the House of Representatives and I a Democrat in the Senate—agreed that we would frame a resolution for the purpose of protecting outdoor meetings in the District of Columbia from such annoyance.

That is my purpose in now offering the joint resolution. It is designed to prevent the recurrence of such incidents hereafter when open-air meetings are being held in the District of Columbia, whether by civic organizations, religious organizations, or patriotic assemblies, for they are all entitled to be protected from such disturbing noises. That is the purpose of the joint resolution which the Senator from Misssissippi has not even permitted to be read in the Senate. I tried to have the resolution read, but he would not even hear the preamble, and so he does not know any more what is in it than does a mouse-colored mule about operating an airplane. He rushes to the rescue to keep the air free. I suppose there would not be any harm, according to the Senator's view, in dropping a few bombs out of the air, because the air is free and one may drop bombs out of it just as he can make a noise. Mr. President, I am going to insist upon protecting the open-air meetings of the people in Washington from disturbing noises.

Mr. WILLIAMS rose.

The VICE PRESIDENT. Does the Senator from Alabama yield to the Senator from Mississippi?

Mr. HEFLIN. I yield to the Senator.

Mr. WILLIAMS. Oh, no. I have not asked the Senator to yield. I was waiting until he got through, and I thought he was through.

Mr. HEFLIN. The Senator is again mistaken, as he usually is.

Mr. WILLIAMS. Oh, I know that.

Mr. HEFLIN. Mr. President, I do not believe I will say anything more now. I am sure that everybody here understands the situation. I shall bring the joint resolution up at some other time.

Mr. WILLIAMS. Mr. President, when I rose thinking that the Senator from Alabama was through, I knew he was through. Just for a moment or two he denied that he was through, but I knew he was through, because I knew he had nothing more to say of any description.

The Senator tells me that men, women, and children heard the airplane threatening destruction of everybody below. Mr. President, I have seen men, women, and children gathering around every now and then to see the airplanes fluttering in the air, doing no harm to anybody, but making a little noise. Why should anybody quarrel with a thing which makes a noise in competition with a Senator making a noise? [Laughter.] They are both equally noisy and, between the two, the airplane is the more scientific noise. The airplane makes a scientific noise, while a Senator makes an ordinary plebian noise; an ordinary common noise. And when the Senator complains that an airplane has entered into competition with him, Mr. President, that simply means that he thinks that gas in the air running an airplane ought not to be recognized as superior to gas on the floor of the Senate running a Senate plane. I decline to recognize that superiority.

The Senator went on a little bit further, misled by his religious sentiment, to say that airplanes were "disturbing religious worship." Think of that, Mr. President, and, by the way, think of it twice, and think of it three times! Airplanes up yonder were disturbing religious worship down here where the Senator was and where the President was—either or both. Whose religious worship? What religious worship? The religious worship of the President of the United States uttering a great speech? And by the way it was a great speech. I am a Bourbon Democrat, but it was a great speech.

The airplane did not disturb that speech; it went to the whole country. It probably struck a responsive chord in the hearts and minds of all the nonpartisan people of the United States, although I knew when I read it that there was a lot of partisanship in the heart of it and that he meant something which perhaps the majority of the people in the United States did not understand.

Then, Mr. President, the second great argument is that the Senator from Alabama was carrying on public worship. Was it public worship, or was it not?

Mr. HEFLIN. It was a service in honor of the United States flag.

Mr. WILLIAMS. Oh, I understand; and in his speech about this question the Senator said the airplane was disturbing public worship—and I took that phrase down—but now he tells me that it was worship of the United States flag. Well, Mr. President, I am not an idolator even of the United States flag. My children have fought for it; my forefathers have; my grandfathers have; but we never recognized that God's image on earth was on a piece of bunting, and never thought that such an occasion was a species of public worship. We never believed in any form of idolatry, even flag worship.

There was an airplane flying over the Mount Vernon Church. Was it the Mount Vernon Church? I wish to be accurate.

Mr. HEFLIN. The exercises were at the Washington Monument. The 14th day of June is flag day, and they were holding flag-day services on Sunday.

Mr. WILLIAMS. Where was the Senator speaking?

Mr. HEFLIN. At the Washington Monument—out in the open.

Mr. WILLIAMS. At the Mount Vernon Church?

Mr. HEFLIN. No; at the Sylvan Theater in the Washington Monument Grounds.

Mr. WILLIAMS. Now we have it. So this meeting was being conducted in a sylvan theater—s-y-l-v-a-n, I suppose, one of the most highly attractive words in the English language. The Senator was there and he was making a speech, and all at once there arose a humming sound. What was it? An airplane. There was a buzzing sound way up in the air which disturbed the eloquence of the Senator from Alabama, who upon this occasion complains that they were "disturbing public worship." I believe he said the airplane was disturbing public worship.

Mr. HEFLIN. A public assembly.

Mr. WILLIAMS. Oh, public assembly; that is still more indefinite. "Public worship" I could have understood, but "public assembly" I can not understand for the life of me. It may mean an assembly of anybody; it may mean an assembly of Russian soviets; it may mean an assembly of French communists; it may mean an assembly of American labor unions, or it may mean an assembly of those who are protesting against labor unions. Public assembly! The Senator now, on second thought, declines to say that it was a case of "public worship," although he has been very particular to tell me that it all happened on Sunday—the Lord's Day—the Sabbath Day. The Senator himself talked, and he tried to listen to others talk as he tells us. Why? The airplane was not trying to listen. Why? It knew why, and in that respect it was superior to the Senator, or his audience.

And then the Senator closes up with a general little anecdote about "a mouse-colored Alabama mule."

Mr. President, there are all sorts of Alabama mules. There are nearly all sorts of mouse-colored Alabama mules. I would hate to say it, I would hate to believe it, I would hate to designate it, but judging by the Senator's matutinal and vesper attacks upon the greatest achievement of the American people, the reserve bank system, morning and night, every day and every morning, matins and vespers—Mr. President, I would hate to say it, but I am almost compelled to say, that the Senator from Alabama is absolutely mistaken about the mouse-colored

Alabama mule's particular personality and localization. Is not that about the kindest way I could put it, the most charitable way that I could put it?

The VICE PRESIDENT. The joint resolution will lie on the table.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. Mr. President, I believe now that we have disposed of the paragraph that was just under consideration; and if that is the case, I desire to return to page 76, paragraph 359, surgical and dental instruments. I offered an amendment this morning to the first part of that paragraph, and the Senator from North Carolina [Mr. SIMMONS] asked that it might be temporarily passed over. I therefore yield to the Senator from North Carolina.

Mr. SIMMONS. Mr. President, the Senator from New Mexico [Mr. JONES] desires to be heard upon that paragraph, and he has just come into the Chamber.

Before beginning the consideration of the paragraph I desire to read a letter which I have received to-day from the Williams Brush Co., importers, 1009 and 1011 Filbert Street, Philadelphia, addressed to myself:

DEAR SIR: We were recently requested by the United States Tariff Commission to furnish them confidentially with information concerning the cost of our goods, the profits we made, and other data of this nature pertaining to our business. We complied promptly, but added the suggestion that the domestic manufacturers who were so insistent for increased protection should also be requested to furnish the same data, because if a just solution of the tariff problem is what you are seeking, we believe such information necessary. We named particularly the following houses:

Florence Manufacturing Co., Florence, Mass.
Rubberset Brush Manufacturing Co., Newark, N. J.
Arlington Manufacturing Co., Arlington, N. J.

We believe that you will see the justice in this. We call your attention to the matter because we are to-day notified by the United States Tariff Commission that your committee requested no information on this subject except relating to the importer's overhead and profit.

That is signed by the Williams Brush Co.

I am not complaining at all at the request on the part of the committee for this information with reference to the profits of the importers, but I am reading this to ask the chairman of the committee if he will not also request the Tariff Commission at the same time to ask for the profits of the American manufacturers of this particular product. I think we ought to have information as to the profits of the business of both the importer and the manufacturer if we are going to compare foreign prices with domestic prices in the matter of making tariff duties.

Mr. McCUMBER. Of course, Mr. President, the object of securing the foreign valuation on which we base our tariffs in all instances is to obtain first the selling price; then, if that can not be obtained, to obtain the cost of manufacture—that is the second proposition—and then adding thereto a reasonable amount for profit, and so forth. The whole object of that letter was to get the data that was necessary, not from the standpoint of protection at all, in order to determine the probable selling price or cost price of the article under the second clause of the bill relating to the levying of duties; and it was not intended to get a mere comparison of American profits with foreign profits. However, I shall be glad to take up the subject as the Senator requests.

Mr. SIMMONS. Yes. For the same reasons that the Senator from North Dakota desires to know something about the foreign cost and the profits of the importer, who really is the wholesaler of foreign goods, I desire to know something about the cost of production of the American article and the profits charged by the American manufacturer and wholesaler.

I shall be glad if the Senator will take this letter, and if he will ask for the counterinformation suggested.

Mr. McCUMBER. The Senator will recall that in the Reynolds report we were seeking, under the bill as it was then drawn upon the American valuation, to get the spread between the landed cost, the selling price of the foreign article, and the selling price of the comparable American article.

Mr. SIMMONS. Yes; and profits are a very important element in that connection.

Mr. McCUMBER. Certainly.

Mr. SIMMONS. Therefore, if we are going to seek the profits charged by the importer, we ought also to have the profits of his competitor in the domestic market.

The Senator from New Mexico is in the Chamber now and I think is ready to proceed with paragraph 359.

Mr. JONES of New Mexico. Mr. President, I ask whether the amendment proposed by the committee has been stated?

The PRESIDING OFFICER (Mr. POINDEXTER in the chair). The amendment proposed by the committee will be stated.

The READING CLERK. On page 76, paragraph 359, the committee proposes to strike out lines 14 to 21, down to and including the words "ad valorem," and to insert:

Surgical instruments and parts thereof composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 45 per cent ad valorem; dental instruments and parts thereof composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 35 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I have heard no explanation for this amendment. It is apparent that the amendment proposes a very great reduction of the duties first reported to the Senate by the committee; but it seems to me that this proposal perhaps necessitates or would warrant an explanation, whereas the other proposal might not.

I can understand upon some theory how the first proposal could have been made. This is the first time in a tariff bill, I believe, that steel surgical instruments have been put into a special paragraph. They have usually fallen into the basket clause of the schedule. If I understand the situation correctly, prior to the war we were not producing steel surgical instruments in this country to any very great extent, the reason being that those instruments were produced by the use of a very large percentage of hand and skilled labor.

We were importing practically all of our steel surgical instruments. We did have a special tariff duty upon instruments produced from the precious metals, gold and silver and platinum. We likewise had a small duty upon instruments made from what are called the soft metals; but the last proposal of the committee is considerably higher than the present law—in fact, it is about 100 per cent higher than the present law—so far as steel and soft-metal instruments are concerned. There is at the present time a considerable duty upon instruments made of the precious metals—50 per cent, I believe.

During the war we began the production of steel surgical instruments in this country, and for war purposes were able to produce very large quantities; but it is not contended, I believe, that any small duty, or a duty reaching even to the point which the committee now proposes, will enable the manufacturers of the United States to continue the production of steel surgical instruments. I know that the witnesses who appeared before the Finance Committee insisted upon very much higher duties, and it was their contention that they would require very high duties in order to continue this industry. Now, the Finance Committee has modified its high duties by proposing this reduction, and it seems to me that it is not high enough to permit the industry of manufacturing these steel surgical instruments to continue. Therefore the only result which can be expected from the duties which the committee now proposes is to place a higher bounty upon the production of surgical instruments produced from what are called the softer metals.

There is no evidence that an additional duty upon such surgical instruments is necessary. I think we are entitled to receive from the committee some explanation as to why the reduction should be made in the first instance; and, in the second place, if the duty is to be reduced upon steel surgical instruments, why it was not reduced considerably below what it is. I think from all that can be learned from the evidence, this is not sufficient to protect the steel surgical instrument industry, and it is more than necessary, so far as the other surgical instruments are concerned.

Mr. McCUMBER. Mr. President, the Senator is entitled to that information, and I will give it in a form as nearly accurate as I possibly can.

Let us take the average of 27 items of the Reynolds report on surgical instruments. The average foreign value of these instruments was $9.70 each. The landing charges averaged 58 cents. If we levied a duty of 45 per cent upon the $9.70, that would equal $4.70, and these items added together amount to $14.65. The selling price of the comparable domestic article is $23.55. The difference between the landed cost of the product, duty paid at 40 per cent, which would amount to $14.65, and the comparable American article selling at $23.55, would be, after the duty has been paid, $8.90.

But in the surgical-instrument business, unlike any ordinary business, the articles not being standardized, there is a great deal of risk in their importation, in their manufacture, and in their sale, and the profit accorded to the importer, because of that fact, has been very much greater than in other lines of industry. A profit as high as 66⅔ per cent upon the imported price, or 40 per cent upon the selling price, is usual in the sale of the imported article.

If we allow 60 per cent upon the imported article, it will just equal the difference between the price of the foreign product,

as shown by the Reynolds report, and the selling price of the American product. However, we have agreed upon a rate of 45 per cent, which is, of course, 15 per cent less than the amount which would be necessary to measure the present difference, allowing a 60 per cent profit to be made upon the imported goods.

Mr. JONES of New Mexico. Of course, the committee had before it the Reynolds report when its first proposal was made. May I ask what caused the reduction in the proposal of the committee?

Mr. McCUMBER. The report, in the first instance, was made some time ago; and leaving the House differentials, "valued at not more than $5 per dozen, 60 cents per dozen; valued at more than $5 per dozen, 12 cents per dozen for each $1 per dozen of such value; and in addition thereto, on all of the foregoing, 60 per cent ad valorem," it will, in the opinion of the committee, with the probabilities of higher costs in Germany and a reduction in the costs in the United States, be sufficient at the present time to properly guard the production in the United States.

Mr. JONES of New Mexico. Mr. President, the other evening, when we were discussing the other portions of the cutlery schedule, both the Senator from North Dakota [Mr. McCUMBER] and the Senator from Connecticut [Mr. McLEAN] presented table after table for the purpose of showing that German prices are decreasing, and thereby undertook to account for the very high duties which they imposed upon other branches of cutlery. Now, with respect to another item, which is produced principally in Germany, they produce statements from the Reynolds report and complacently tell us that, taking into consideration the Reynolds report and the supposition that prices in Germany are going to be higher, they propose this reduction in rates.

It does seem to me that an inconsistency has developed here which should cause one who has been trying to follow this discussion to doubt that the committee had any basis or reason for these rates which are being presented. With regard to one paragraph, one view is taken regarding the German situation; with regard to the very next paragraph a different view is taken and stated in all solemnity as a basis for action by the Senate.

Again I must express my amazement. I can not help feeling that there are other forces at work which are bringing about these reductions in rates, and I am inclined to agree that these discussions may have had some influence upon them. I, of course, feel that as to this paragraph regarding surgical instruments, where there are different kinds of surgical instruments involved, those made of the soft metal, as well as those of steel, there should be some discrimination so far as the instruments made of softer metals, which are made in quantity, are concerned.

As I understand it, that industry has been prospering under existing law, in which there is a duty of only 20 per cent provided, and as to the steel instruments, we have not been producing them in this country, and if what the witnesses have said upon the subject is true, this 45 per cent duty will not enable them to produce these instruments. So, as I remarked a moment ago, the only effect of increasing the duty under this paragraph from 20 per cent to 45 per cent will be simply to enable the manufacturers of the soft-metal instruments to charge higher prices. As to the steel instruments, if the testimony be true, the rate will not amount to protection for them.

Of course, I am glad, in a way, that the Finance Committee has proposed this reduction, but in another way I think it is indefensible. It is not enough to protect or keep going the steel surgical instrument industry of the country. It is too much duty upon the soft-metal surgical instrument industry.

Mr. POINDEXTER. Mr. President, will the Senator yield to me long enough to make a request for an agreement?

Mr. JONES of New Mexico. Certainly.

NAVAL APPROPRIATIONS.

Mr. POINDEXTER. I ask unanimous consent, with the approval of the chairman of the Committee on Finance especially, that when the Senate convenes on Thursday morning next the tariff bill shall be temporarily laid aside and that the Senate shall proceed to the consideration of House bill 11228, the Naval appropriation bill.

The VICE PRESIDENT. Is there objection? The Chair hears none, and it is so ordered.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. JONES of New Mexico. Mr. President, it does seem to me that the rate adopted by the House is high enough, and under the circumstances I do not believe it is going to amount to protection to the steel surgical instrument industry, and it was not proposed with that idea. It was proposed on an entirely different basis. The House ad valorem duty fixed upon these instruments was 35 per cent. The Senate committee proposes 45 per cent, and as far as any good that can come from this duty is concerned it seems to me 35 per cent will be just as much protection as the 45 per cent, and of course this bill is being framed upon the protection idea, and I am not making war upon that general purpose of the bill. I shall therefore simply vote against the committee amendment.

Mr. McCUMBER. Mr. President, I want the RECORD to show the facts with relation to the changes in the value of these products. The Senator has stated that we adopted one system when we had the paragraph pertaining to knives and cutlery before us, and that we adopted a different method when we were considering the particular subject under consideration now. The Senator is in error in that.

The Senator said that we claimed that knives and cutlery had gone down, and yet when we made our estimates of what would be a proper protection in this bill we took the Reynolds report, when, as a matter of fact, the prices had also gone down. This is the fact in reference to both these paragraphs: The prices of cutlery, including knives, went down very considerably, up to about the 1st day of April.

So in surgical instruments there was a considerable decrease in the importing price about the 1st of April. If we had made our tariff bill to meet a condition as it appeared upon the 1st day of April, the bill as first amended by the committee would have been approximately right. The rate would have been somewhat less than the true facts would warrant. However, we have always made allowances. As to both knives and surgical instruments, the prices have again gone up until, as I am informed, surgical instruments are practically the same now as they were when the Reynolds report was written. Therefore, as the importing price more nearly approaches the American selling price, we can reduce the differential, and that is exactly what we have done in this instance.

Mr. JONES of New Mexico. Mr. President——

Mr. McCUMBER. I yield.

Mr. JONES of New Mexico. The Senator stated a few moments ago that the prices were going up.

Mr. McCUMBER. Yes; going up since April.

Mr. JONES of New Mexico. The Senator has just stated that the changes were made because of recent changes in German conditions. If that be true, and prices are going up, and the going up of prices warranted a reduction in these duties, does not the Senator think we had better defer the consideration of this paragraph and let prices go up a little further and become a little more stable and then write the paragraph?

Mr. McCUMBER. No; I do not, because I do not think the importing cost or the importing selling price will ever go up to meet the American cost and the American selling price. I am willing to make, and I have made, full allowance for possibilities and probabilities in the change of the prices of commodities. Of course, we can not change our tariff every time the price of a commodity changes.

Mr. JONES of New Mexico. Mr. President, I desire a separate vote upon the next paragraph, and if the amendment of the committee may be divided I am ready for a vote on the first part of the amendment.

Mr. McCUMBER. I am satisfied that the amendment shall be divided.

The VICE PRESIDENT. The Secretary will state the first part of the amendment.

The READING CLERK. On page 76, the committee proposes to insert:

PAR. 359. Surgical instruments and parts thereof composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 45 per cent ad valorem.

Mr. JONES of New Mexico. I ask that that be submitted to a vote first. I move in the amendment of the committee to strike out the numerals "45" and insert "35."

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from New Mexico to the amendment of the committee.

The amendment to the amendment was rejected.

The amendment was agreed to.

The VICE PRESIDENT. The Secretary will report the next portion of the amendment.

The READING CLERK. Insert following the amendment just agreed to:

Dental instruments, and parts thereof, composed wholly or in part of iron, steel, copper, brass, nickel, aluminum, or other metal, finished or unfinished, 35 per cent ad valorem.

Mr. JONES of New Mexico. As to that part of the committee's proposal I want to say just a few words. The United States is manufacturing dental instruments and supplying them to every part of the world. They are made in quantity according to design, and 35 per cent of the dental instruments made in the United States are exported. That was the history of the industry prior to the war. Thirty-five per cent of all the dental instruments manufactured in this country prior to the war were exported. The Tariff Commission tells us all these facts. That information is known. Importations are nominal. It is a matter of quantity production, machine production, and we compete with the world.

This part of the paragraph, it seems to me, justifies the heading of an editorial in the New York Times of yesterday which reads, "Protection gone mad." Without reading, I ask that the editorial may be published in the RECORD in 8-point type.

Mr. CURTIS. Is not that the matter which was printed in the RECORD this morning at the request of the junior Senator from Mississippi [Mr. HARRISON]?

Mr. JONES of New Mexico. If it was, of course, I will not ask to have it repeated in the RECORD; but if not, then I ask that it be printed in the RECORD at this point. I am just advised that the Senator from Mississippi asked that another article from the New York Times of yesterday be printed in the RECORD.

Mr. CURTIS. There is no objection if it has not already been ordered to be printed in the RECORD.

The VICE PRESIDENT. Without objection it is so ordered.

The editorial referred to is as follows:

[From the New York Times, Sunday, June 11, 1922.]

PROTECTION GONE MAD.

"The Senate Finance Committee has repeatedly expressed its astonishment, in the course of the debates on the tariff bill, that anybody should object to it. Had it not been framed in the established way? The committee had merely followed the practice of its predecessors. Nobody was excessively outraged at the way in which the rates were fixed under the McKinley bill, the Dingley bill, or the Payne-Aldrich bill. Why, then, all the criticism and outcry to-day just because the Republican members of the Finance Committee have had secret hearings with manufacturers and other interested persons, and on the basis of finding out what tariff duties were wanted have decided what should be given? Again and again Senator SMOOT and Senator MCCUMBER have plaintively reproached the Democrats and the dissident Republican Senators for finding fault with the method adopted for writing the new tariff. It was simply the ancient style, so why all this modern protest?

"These Senators are but dimly aware of the great change which has come over public sentiment in the matter of the protective tariff. What once was regarded as a matter of course is now held to be an intolerable abuse. This has certainly been one of the striking results of the prolonged discussion of the new tariff. Think what we may of the time-wasting tactics of the Democratic Senators, their continual hammering at objectionable clauses of the bill has had the effect of bringing out in the deep-seated opposition, not only in the Senate but in the press of the country, to a measure which people would have once passed by with a shrug as merely the usual thing in tariffs, but which they now consider as a manifestly vicious system of law making. The pained surprise of some Republican Senators is proof enough that they are moving about to-day in a world which they do not realize.

"Another significant feature of the Senate debate and of the amendments proposed to the tariff bill is the way in which protective doctrines of an older day are tortured out of all resemblance to their original form. Last week, for example, Senator SHORTRIDGE, of California, took the innocent view that adequate protection to American manufacturers meant entire exclusion of foreign goods that might possibly compete with their products. He frankly admitted that as regards many articles of commerce 'I am in favor of an embargo.' It worked well in the war, he remarked, and why shouldn't it be an excellent thing in time of peace? American manufacturers, he argued, are entitled to the whole American market, and the simple way to assure this is to make the tariff rates so high that foreigners could not break in at all. Senator SHORTRIDGE would never consent to surrender any part of the American market to any foreign country. He would so shape the tariff as to guarantee immunity from foreign competition to 'each and every and all American industries.'

"This extraordinary view of the real intent of a protective tariff was too much for Senator LENROOT, of Wisconsin. He rose to protest that it was 'entirely a new doctrine in the Republican Party.' Proceeding, Mr. LENROOT said:

"I have never before heard it claimed that the American manufacturers are entitled to a monopoly of the American market. The Republican theory has always been, and it is mine now, that the American manufacturer was entitled to protection, so as to give him a fair chance and a fair opportunity to compete in the American market, and that he shall not be discriminated against by undue competition from abroad. But in equalizing the conditions it has never been the theory of the Republican Party that they should enact prohibitive rates and embargoes upon the matters of common production in the country.

"This did not in the least satisfy Senator SHORTRIDGE. The particular clause under discussion being the duty on saws, he asked the Senator from Wisconsin if it was desirable to increase their importation. Mr. LENROOT promptly answered that it was. He said that 'when we are exporting $4,000,000 worth of saws a year and importing only $78,000 worth' he thought there could be no danger in allowing somewhat larger imports to come in. But the California Senator insisted upon knowing why such a thing ought to be desired. Senator LENROOT was explicit in his answer:

"I will tell the Senator why we ought to desire it. To-day the commodities of the farmers of this country are down to pre-war prices, but as to everything the farmers have to buy, including saws, if you please, to-day they are compelled to pay prices very much higher than the pre-war prices. We can not expect permanent prosperity in this country until there shall be a level secured between what the agriculturist receives for his products and what he pays for what he must buy, and we are not going to reach that level if by prohibitive rates we protect present high prices of the manufacturers.

"No debate can be called wholly futile which has served to bring out such a sharp issue between the old protectionists and the new. It would seem that protection to-day is in danger of being devoured by its own children. No wonder that Mr. LENROOT and other alarmed Republican Senators from the Middle West cry out in protest."

Mr. MCCUMBER. I will put in the RECORD just one item from the Reynolds report on dental instruments. The unit of quantity in this instance is per gross. The foreign value is $1.49 per gross, landing charge 80 cents, selling price of the imported article $3.30. The selling price of the comparable American article is $3.84 per gross. The rate required to equalize, allowing a reasonable profit to the importer—and in this instance we allow 33⅓ per cent profit—would require 88 per cent. The amount that we have allowed, however, is 35 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, I do not care to detain the Senate. I will simply ask that there be printed in the RECORD, in 8-point type, as a part of my remarks, the comments of the Tariff Commission on dental instruments and appliances. It is less than two pages in length.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

DENTAL INSTRUMENTS AND APPLIANCES.

GENERAL INFORMATION.

"Description: Dentistry and dental surgery have been developed in the United States to a high degree of perfection, and domestic work is recognized as the equal if not the superior of that in any other country. Dental instruments are composed of steel almost exclusively, and consist of a large number of standard tools. There is some call for instruments of special design, but the demand can not be compared to that found in the surgical instrument field.

"General supplies required by the profession consist of artificial teeth, plate frames, gold wire, and special fixtures.

"Every practicing dentist requires, in addition to his tools, an extensive assortment of appliances, such as operating chairs, spittum pans, sterilizers, power drills, anesthetic administering devices, and other articles designed specially for the dental trade and not used in the surgical profession to any extent.

"Domestic production: The dental appliance, instrument, and supply industry produces sufficient material to supply the home market and exports large quantities of the products to all the world's markets. Domestic manufacturers are at no disadvantage in obtaining their raw material and are not affected by the cost of labor to the extent experienced by the manufacturer of surgical instruments, because dental instruments are more nearly standard and can therefore be manufactured in quantity. The export business is a considerable proportion of the entire production, the National Dental Association estimating that over 35 per cent of the domestic production is for foreign consumption.

"Prior to the war English teeth manufacturers were able to market a small amount of their product in the Unied States. Domestic manufacturers produce this product in large quantities (one firm exporting over 20,000,000), but the profession claims that the domestic product is not as satisfactory as the English article for some purposes.

"Dental instrument and appliance exports are not classified separately in the customs statistics. Information obtained by the commission justifies the assumption that practically all of the material classified in the customs statistics as medical and surgical instruments are in reality material used exclusively by the dental profession. These exports amounted to over

$1,100,000 in 1913 and to almost $10,800,000 in 1919. This is exclusive of artificial teeth, amounting to about $300,000.

"Foreign production: Considerable quantities of dental instruments, supplies, and appliances are manufactured in England, France, Germany, and Japan. The dental profession has not been developed in those countries to the same degree as in the United States, however, so foreign manufacturers are without the large home market possessed by manufacturers in the United States.

"A large part of the international business carried on by foreign concerns is in the hands of one English company. The New York representative of this company asserts that during the last 35 years his company has exported dental goods, mainly teeth, valued at $1,500,000, to the United States, and during the same period has exported to England domestic goods to the value of $25,000,000. During 1920 domestic exports of artificial teeth amounted to $300,000 as compared to imports of $20,000.

"Tariff history: Dental instruments have never been specifically provided for in the tariff and have entered as miscellaneous manufactures of metal. (See Tariff History of Surgical Instruments.) Teeth are classified as porcelain or earthy mineral substance manufactures.

"Competitive conditions: Dental instruments and appliances of foreign origin do not compete to any extent with the domestic product except in the case of specialties such as teeth. Tooth manufacture is a ceramic process and domestic consumers claim that the foreign product is superior to the domestic for some purposes. The continued importations of this product tend to substantiate this claim.

"Tariff considerations: Dental-instrument manufacturers are in a good position to compete with the foreign product. Surgical-instrument manufacturers, on the other hand, must produce a large number of different styles of each class of instrument, so can not place production of any one product on a quantity basis. Domestic manufacturers export dental instruments, whereas surgical instruments are imported in large quantities. These facts justify mention of dental instruments as distinct from those used exclusively in surgical work."

Mr. JONES of New Mexico. In the proposed amendment of the Finance Committee I move to reduce the rate from 35 per cent to 20 per cent; in other words, to strike out the numerals "35" and insert "20."

The VICE PRESIDENT. The question is on the amendment of the Senator from New Mexico to the amendment of the committee.

The amendment to the amendment was rejected.

The amendment of the committee was agreed to.

Mr. McCUMBER. Mr. President, I should like to go on, if we can, and dispose of paragraph 360, philosophical, scientific, and laboratory instruments.

Mr. KING. May I say to the Senator from North Dakota that the Senator from South Dakota [Mr. STERLING] desires to be here when that paragraph is taken up.

The VICE PRESIDENT. The Chair directs the attention of the Senator from North Dakota to the fact that paragraph 359 is not yet fully disposed of.

Mr. McCUMBER. Very well, let us finish that.

The VICE PRESIDENT. The next amendment will be stated.

The READING CLERK. In paragraph 359, page 76, line 23, after the word "maker," insert the words "or purchaser."

The amendment was agreed to.

The READING CLERK. On the same page, line 24, before the word "country," insert the words "name of the."

The amendment was agreed to.

The READING CLERK. In the same line, line 24, page 76, strike out "die-sunk" and insert "die sunk."

The amendment was agreed to.

The VICE PRESIDENT. That completes paragraph 359.

Mr. McCUMBER. I desire to state to the Senator from Utah that I saw the Senator from South Dakota, and he stated at the time that he would like to have paragraph 360 go over until later, but afterwards he sent word that he did not request it to go over.

Mr. KING. To what paragraph is the Senator referring?

Mr. McCUMBER. Paragraph 360, philosophical, scientific, and laboratory instruments.

Mr. JONES of New Mexico. Regarding that paragraph I have received a number of communications from educational institutions and from others insisting that these articles should be made free so far as those institutions are concerned. I suppose the majority of the Finance Committee have duly considered that question and decided against them. May I inquire of the Senator from North Dakota if that is true?

Mr. McCUMBER. Yes; the matter was under consideration.

Mr. JONES of New Mexico. I suppose it would answer no good purpose to discuss the matter. May I inquire why surveying instruments and parts thereof were put into this paragraph as new matter?

Mr. McCUMBER. Because they were taken out of another paragraph, paragraph 228.

Mr. JONES of New Mexico. I do not recall just now what rate of duty they bore under the other paragraph.

Mr. McCUMBER. The same, 55 per cent.

Mr. JONES of New Mexico. I was under the impression that the duty under the present law was either much lower or that they were on the free list. I was not certain about that.

Mr. McCUMBER. Under the present law the rate is much lower, 25 per cent, I am informed.

Mr. JONES of New Mexico. They were in the basket clause, were they not, at 25 per cent?

Mr. McCUMBER. I think so; but it was thought, these being scientific instruments, that they ought to be in this clause. I am informed that under the present law they bear a rate of 25 per cent ad valorem.

Mr. JONES of New Mexico. Mr. President, it does seem to me that we ought not to impose such high duties as these on instruments necessary in the education of the youth of the land and in research work. Surveying instruments must be used by those engaged in surveying work, of course. To tax in this amount the very tools which they use is highly improper, in my opinion. Surveying instruments are expensive anyway, and to put on this additional duty and make it 55 per cent ad valorem on philosophical and scientific and laboratory instruments and apparatus, utensils, appliances, including drawing and mathematical instruments, and not to allow any special privilege to the educational institutions of the country, it seems to me is protection gone mad, as the editorial in the New York Times stated.

Mr. DIAL. Mr. President——

Mr. JONES of New Mexico. I yield.

Mr. DIAL. I will say to the Senator that I have received more protests against this paragraph than possibly any other item in the bill.

Mr. JONES of New Mexico. I am sure that is the experience of practically every Senator. Protests have been coming in from the four corners of the United States, and I am surprised if there is any Senator here who has not received some protest regarding this paragraph.

Mr. McCUMBER. The only question is as to whether or not we should yield to these protests and turn the production over entirely to the foreign manufacturers. I myself do not think we should do so. The American colleges and laboratories are supported by the American people, and I really think they can pay for American-made instruments.

Mr. KING. Will the Senator from New Mexico yield to me?

Mr. JONES of New Mexico. I gladly yield to the Senator from Utah.

Mr. KING. I discover that in 1918 the importations of these instruments were only $51,972 worth; in 1919 they were $71,453 worth; in 1920 they were $151,334 worth. Of the platinum vases, retorts, and a few other articles referred to, there were $78,697 worth imported in 1920; and the entire amount of imports covered by this paragraph was approximately $148,000.

In addition to that, if I may say so to my friend from New Mexico, we exported of "scientific instruments, other than those used for medical, surgical, and optical purposes," in 1914, $689,366 worth; in other words, our exports were very much more than four or five times as much as our imports. It is stated in the Tariff Summary that—

> In general those instruments which before the war had a sufficiently large market to permit large-scale production were produced here successfully.

This document further says:

> During the war, however, foreign competition was removed and domestice production expanded in volume and variety.

In 1914—that is, before the war, the fiscal year ending June 30, 1914—the imports were $704,496. The imports shrunk, as the Senator will see from the figures which I have stated, so that for the nine months of 1921 they were approximately $148,000, while the exports have gone up into the hundreds of thousands of dollars. We can compete with almost any country in the world, so many of these instruments being manufactured from the primary products in which the United States is so rich.

It seems to me that this is one of the indefensible rates of duty which are imposed in this bill. As has been repeatedly stated, it is proposed in this bill to tax everything from the cradle to the grave. I do not so much object to taxing the graveyards and the tombstones and the coffins, but I do object

to taxing the instruments of learning and of knowledge. Our Republican friends in their omnium gatherum zeal to tax everything, go into the schoolrooms, the schoolhouses, the colleges, and the laboratories and lay their strong and oppressive hands upon those commodities. I protest against it.

Mr. JONES of New Mexico. Mr. President, I can understand the indignation of the Senator from Utah. A few moments ago while discussing the subject of dental instruments I read from the report of the Tariff Commission to the effect that we were exporting 35 per cent of the total domestic production, and that the importations prior to the war amounted to nothing. I have been doing that time and again in the consideration of the paragraphs of this bill; the Senator from Utah has been doing that; but, apparently, it has no effect. Protection has gone mad.

I quite agree that these instruments ought not to have the taxes imposed upon them so exorbitantly increased; I thought the same about dental instruments; but, apparently, whatever data are given here have no effect. The Republicans are determined to increase these duties. Apparently there is a determination on their part that there shall not remain anything untaxed or bearing a tax less than considerably higher than existing law. On dental instruments the duty is increased nearly 100 per cent at a time when we are exporting 35 per cent of the domestic production.

The only reason given for this proposed action is, as we are gravely told, that away back last August, at some time, some of these instruments came in here at a price under that which was being charged by the American manufacturer. Senators on the other side, however, do not tell us the profit the American manufacturer was making; they do not tell us the profits he is making now on scientific instruments, including surveyor's instruments. I do not wonder at the indignation of the Senator from Utah when it is proposed to increase these duties so enormously upon the learning, the research, and the intelligence of the country; but it has no effect. I am myself inclined to quit referring to these facts; but I hope the Senator from Utah will continue in his persistency to present them whenever they are not presented by some other Senator.

Mr. McCUMBER. Mr. President——

Mr. JONES of New Mexico. I yield to the Senator from North Dakota.

Mr. McCUMBER. I notice in the Reynolds report that there are three items coming under this head. None of them, however, covers surveying instruments; but on one line it would require 37 per cent ad valorem to equalize foreign and domestic production; and on the other line it would require 58 per cent to do so. I notice that the committee has given 55 per cent. If the Senator from New Mexico will allow me, I will move to reduce that 55 per cent to 35 per cent, which is 10 per cent above that granted on some of the instruments by the existing law.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from North Dakota to the amendment of the committee.

Mr. McCUMBER. I shall have to add, however, Mr. President, that my making the motion is conditioned on whether or not I can get a vote on the amendment now.

Mr. KING. Mr. President, just one word and then the Senator can have a vote, although I think we shall move to make the rate 25 instead of 35.

The Senator often refers to the Reynolds report, and I make no complaint of that; but the Reynolds report ought not to be accepted as the basis for any rate. The Senator from North Dakota knows, for he is an intelligent man and he is industrious—no man in the Senate is working harder than the distinguished Senator from North Dakota——

Mr. McCUMBER. I have not used the Reynolds report except in those instances in which I thought it really measured the difference.

Mr. KING. I have no doubt the Senator is entirely sincere in his viewpoint in this matter, but I was about to say that there has been a change, as the Senator knows, in conditions since last August. The Senator knows that in Germany wages have gone up.

Mr. McCUMBER. If the Senator will allow me, we went over that argument just a few moments ago when the Senator was out of the Chamber. I said then that I agreed with the Senator from New Mexico that, while prices had gone down very materially—I mean import prices—from the date of the Reynolds report up to April 1, nearly all of those prices, we now find, have an upward tendency, and have in many instances nearly reached the same levels that prevailed at the date of the Reynolds report. That is true quite generally.

Mr. KING. Does the Senator mean the domestic prices or the German prices?

Mr. McCUMBER. I mean the foreign prices have gone up again; so that while there was a very great spread between the foreign importing price and the domestic price on April 1, a very much greater spread than there was at the time of the Reynolds report, the foreign price has gone up again and has narrowed that spread to a considerable extent. I am making full allowance, I think, for that, and I have moved to reduce the rate in this instance from 55 to 35 per cent ad valorem.

Mr. KING. If my friend will pardon me, the error—and I say it in all kindness—which I think he makes and which other Republican Senators make lies in the fact that they are seeking to base a tariff bill for the future, for the period when it is presumed we will reach the normal conditions, upon conditions that exist now or have existed in the past; in other words, we ascertain what the war prices were or the abnormally high prices of yesterday and the day before or last August, and we presume a continuity of those high levels, and seek to perpetuate into peace time and into normal conditions those high prices. It is sought to give to the manufacturers in the future the prices which they are getting now and the profits in the future which they are getting now. This kind of a tariff bill is calculated to maintain present high prices and to prevent a return to normal and rational conditions.

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from North Dakota to the amendment proposed by the committee.

The amendment to the amendment was agreed to.

Mr. McCUMBER. I understand that my motion to decrease the rate on certain instruments referred to from 55 to 35 per cent has been carried?

The VICE PRESIDENT. The amendment has been carried.

Mr. McCUMBER. But the amendment as amended has not been agreed to?

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee as amended.

The amendment as amended was agreed to.

The VICE PRESIDENT. The Secretary will state the amendment in line 5.

The READING CLERK. On page 77, at the beginning of line 5, it is proposed to strike out "surveying," so as to read:

Par. 360. Philosophical, scientific, and laboratory instruments, apparatus, utensils, appliances (including drawing and mathematical instruments).

The amendment was agreed to.

The next amendment was, on the same page, line 11, after the word "maker," to insert "or purchaser"; and, in line 12, after the word "origin," to strike out "die-sunk" and insert "die sunk," so as to make the proviso read:

Provided, That all articles specified in this paragraph, when imported, shall have the name of the maker or purchaser and beneath the same the name of the country of origin die sunk conspicuously and indelibly on the outside, or if a jointed instrument on the outside when closed.

The amendment was agreed to.

ORDER FOR RECESS.

Mr. McCUMBER. I ask unanimous consent that when the Senate concludes its business on this calendar day, it shall take a recess until to-morrow at 11 o'clock.

The VICE PRESIDENT. Without objection, it is so ordered.

EXECUTIVE SESSION.

Mr. CURTIS. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 5 minutes spent in executive session the doors were reopened; and (at 6 o'clock and 30 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Tuesday, June 13, 1922, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate June 12 (legislative day of April 20), 1922.

DIRECTOR OF THE WAR FINANCE CORPORATION.

Fred Starek, of the District of Columbia, to be a director of the War Finance Corporation, vice Angus W. McLean, term expired.

MEMBERS OF THE UNITED STATES SHIPPING BOARD.

Meyer Lissner, of California, for a term of six years. (Reappointment.)

Admiral William S. Benson, of Georgia, for a term of six years. (Reappointment.)

JUDGE OF THE DISTRICT OF COLUMBIA MUNICIPAL COURT.

Robert H. Terrell, of the District of Columbia, to be a judge of the municipal court, District of Columbia. A reappointment, his term having expired.

PROMOTION IN THE REGULAR ARMY.

To be major.

Capt. Emile George De Coen, Field Artillery, from June 1, 1922.

APPOINTMENTS, BY TRANSFER, IN THE REGULAR ARMY.

QUARTERMASTER CORPS.

Capt. Robert John Wagoner, Infantry, with rank from July 1, 1920.

Capt. Frank Watts Arnold, Cavalry, with rank from July 1, 1920.

POSTMASTERS.

ALABAMA.

Thomas H. Stephens to be postmaster at Gadsden, Ala., in place of S. W. Riddle. Incumbent's commission expired January 24, 1922.

ALASKA.

Elizabeth D. De Armand to be postmaster at Sitka, Alaska, in place of Joe McNulty, resigned.

COLORADO.

Ethel Shy to be postmaster at Cheyenne Wells, Colo., in place of Vivian Sadler, resigned.

ILLINOIS.

John B. Porter to be postmaster at Olney, Ill., in place of B. A. Iaun, resigned.

Nelle L. Hyland to be postmaster at Windsor, Ill., in place of B. F. Moberly, resigned.

INDIANA.

Ernest W. Shaw to be postmaster at Gaston, Ind. Office became presidential October 1, 1919.

Fred S. Huffman to be postmaster at Lapel, Ind. Office became presidential January 1, 1921.

Ralph S. Ward to be postmaster at Knightstown, Ind., in place of C. E. Clark, resigned.

LOUISIANA.

Novilla T. King to be postmaster at Simsboro, La. Office became presidential January 1, 1921.

MICHIGAN.

Ernest E. Hawes to be postmaster at Applegate, Mich. Office became presidential April 1, 1921.

MISSISSIPPI.

Aurora L. Howze to be postmaster at Logtown, Miss., in place of W. X. Casanova, declined.

Thomas H. Nicholson to be postmaster at Scooba, Miss., in place of Guy Jack, resigned.

MISSOURI.

Clarence D. Springer to be postmaster at Richards, Mo. Office became presidential October 1, 1921.

Julius J. Boehmer to be postmaster at Lincoln, Mo., in place of W. A. Grant. Incumbent's commission expired January 24, 1922.

NEW MEXICO.

Lorna J. Cayot to be postmaster at Springer, N. Mex., in place of V. K. Reynolds. Incumbent's commission expired January 24, 1922.

NEW YORK.

Grace O. Meloy to be postmaster at East Durham, N. Y. Office became presidential April 1, 1921.

Rosella M. Palmeter to be postmaster at Purling, N. Y. Office became presidential January 1, 1922.

NORTH DAKOTA.

Lena L. Diehl to be postmaster at Dunn Center, N. Dak., in place of L. L. Diehl. Incumbent's commission expired May 20, 1922.

OHIO.

Walter R. Britton to be postmaster at Kimbolton, Ohio. Office became presidential April 1, 1921.

John W. Switzer to be postmaster at Ohio City, Ohio, in place of D. H. Heiby, resigned.

OKLAHOMA.

William G. Blanchard to be postmaster at Purcell, Okla., in place of William Barrowman, resigned.

OREGON.

Etta M. Davidson to be postmaster at Oswego, Oreg. Office became presidential July 1, 1920.

Wallace W. Smead to be postmaster at Heppner, Oreg., in place of W. A. Richardson. Incumbent's commission expired January 24, 1922.

PENNSYLVANIA.

Charles E. Keim to be postmaster at Hellam, Pa. Office became presidential July 1, 1921.

Edward F. Anderson to be postmaster at Austin, Pa., in place of C. W. Freeman. Incumbent's commission expired February 4, 1922.

George H. Cole to be postmaster at Evans City, Pa., in place of Andrew Wahl. Incumbent's commission expired February 5, 1922.

Arch R. Lykens to be postmaster at Martinsburg, Pa., in place of J. H. Kensinger. Incumbent's commission expired February 4, 1922.

James T. Patterson to be postmaster at Williamsburg, Pa., in place of J. R. Detwiler. Incumbent's commission expired February 4, 1922.

W. Stans Hill to be postmaster at Williamsport, Pa., in place of Hugh Gilmore. Incumbent's commission expired February 4, 1922.

SOUTH CAROLINA.

Ida A. Calhoun to be postmaster at Clemson College, S. C., in place of I. A. Calhoun. Incumbent's commission expired January 24, 1922.

TENNESSEE.

Matthew D. Duke to be postmaster at Martin, Tenn., in place of C. B. Bowden. Incumbent's commission expired July 25, 1921.

VIRGINIA.

Thomas C. Bunting to be postmaster at Exmore, Va., in place of R. T. Gladstone. Incumbent's commission expired May 22, 1922.

James L. Earles to be postmaster at Willis, Va., in place of J. H. Conduff, removed.

WEST VIRGINIA.

Millard F. Forgey to be postmaster at Kingston, W. Va. Office became presidential January 1, 1921.

WISCONSIN.

Lloyd A. Hendrickson to be postmaster at Blanchardville, Wis., in place of A. K. Blanchard. Incumbent's commission expired January 24, 1922.

WYOMING.

Mayme L. Jackson to be postmaster at Osage, Wyo., in place of E. V. Pointer, resigned.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 12 (legislative day of April 20), 1922.

DIRECTOR OF THE WAR FINANCE CORPORATION.

Fred Starek to be Director of the War Finance Corporation.

PROMOTIONS IN THE ARMY.

Samson Lane Faison to be brigadier general.

Henry Stevens Blesse to be captain, Medical Corps.

Alberto Garcia de Quevedo to be captain, Medical Corps.

Albert Kingsbury Mathews to be chaplain, with rank of captain.

Milton Humes Patton to be captain, Cavalry.

Frederick Brenton Porter to be first lieutenant, Field Artillery.

Clark Hazen Mitchell to be first lieutenant, Field Artillery.

Thomas Francis Hickey to be first lieutenant, Field Artillery.

Allen Ferdinand Grum to be first lieutenant, Ordnance Department.

Haskell Allison to be captain, Signal Corps.

John Kenneth Cannon to be first lieutenant, Air Service.

PROMOTIONS IN THE NAVY.

To be ensigns.

Chauncey Moore.
Edwin E. Woods.
Robert McC. Peacher.
Halstead S. Covington.
Henry E. Eccles.

MARINE CORPS.

James Austin Stuart to be second lieutenant.

POSTMASTERS.

LOUISIANA.

John F. Basty, Destrehan.
David S. Leach, Florien.
Marion H. Page, Fullerton.
Claud Jones, Longleaf.
Weston W. Muse, Lottie.
Edward J. Sowar, Norwood.
Cherie Cazes, Port Allen.
Edwin H. Biggs, St. Joseph.
Nelle Masten, Woodworth.

NEW YORK.

Albert C. Stanton, Atlanta.

NORTH CAROLINA.

Ira L. McGill, Lumberton.

OKLAHOMA.

George F. Cutshall, Cement.

SOUTH CAROLINA.

William B. Aull, Walhalla.

TEXAS.

James H. Loyd, Alba.
William A. White, Cleveland.
Mayo McBride, Woodville.

WASHINGTON.

Lillian M. Tyler, Brewster.
Matthew E. Morgan, Lind.

WITHDRAWAL.

Executive nomination withdrawn from the Senate June 12 (legislative day of April 20), 1922.

POSTMASTER.

James E. Pickett to be postmaster at Clemson College in the State of South Carolina.

HOUSE OF REPRESENTATIVES.

MONDAY, *June 12, 1922.*

The House met at 12 o'clock noon, and was called to order by Mr. WALSH as Speaker pro tempore.

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Blessed Father in heaven, we thank Thee for material progress, for intellectual achievement, and for social gain. Grant that these good fortunes may be used for Thy glory and for the good of man. In all good work may we be patient and enduring. Enable us to carry Thy spirit into all our labors and thus serve Thee in whatever worthy thing we do. O may we live by our deeds and not by the years. Hush all anxiety and all care that fret away happiness and contentment and we will give Thee the praise. Amen.

The Journal of the proceedings of Saturday, June 10, 1922, was read and approved.

EXTENSION OF REMARKS.

Mr. ELLIOTT. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein an address delivered by Senator JAMES E. WATSON, of Indiana, before the Republican State convention of Indiana a few days ago.

The SPEAKER pro tempore. The gentleman from Indiana asks unanimous consent to extend his remarks in the RECORD by printing therein an address delivered by Senator WATSON of Indiana before the Republican State convention held in Indiana a few days ago. Is there objection?

Mr. STAFFORD. Mr. Speaker, reserving the right to object, has this address been heretofore printed in the RECORD at the request of a colleague of the gentleman in the other body?

Mr. ELLIOTT. It has not.

Mr. GARNER. Mr. Speaker, reserving the right to object, did not Senator WATSON repeat that speech in the Senate after he got back here?

Mr. ELLIOTT. Not that I know of.

Mr. GARNER. I read something of his in the RECORD that had some semblance to a newspaper report of the speech that he made at Indianapolis, and I am wondering if he had already repeated the speech in the Senate.

Mr. WINGO. Oh, I think he delivered the speech in the Senate first.

Mr. STAFFORD. The gentleman does not mean to cast any reflection upon the Senator from Indiana by insinuating that he has only one speech that he can deliver?

Mr. GARNER. They were so similar they looked like twins.

Mr. WINGO. Perhaps he tried it on the Senate first.

CALL OF THE HOUSE.

Mr. SPROUL. Mr. Speaker, I make the point of order that there is no quorum present.

The SPEAKER pro tempore. The gentleman from Illinois makes the point of order that there is no quorum present. It is clear that there is no quorum present.

Mr. MONDELL. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will close the doors, the Sergeant at Arms will bring in absentees, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Anderson	Dickinson	Kline, N. Y.	Rosenbloom
Andrew, Mass.	Drane	Knight	Rossdale
Ansorge	Drewry	Kreider	Rouse
Appleby	Driver	Kunz	Rucker
Arentz	Dunn	Langley	Ryan
Barkley	Dupré	Larson, Minn.	Sabath
Beck	Dyer	Lee, N. Y.	Sanders, Ind.
Bell	Edmonds	London	Sears
Benham	Evans	Luce	Shaw, Ill.
Bixler	Fairchild	McClintic	Shreve
Black	Fess	McKenzie	Siegel
Bland, Ind.	Fields	McLaughlin, Nebr.	Sinclair
Bland, Va.	Fish	McLaughlin, Pa.	Slemp
Blanton	Fordney	Maloney	Smith, Mich.
Boies	Foster	Mann	Snell
Bond	Frear	Mansfield	Snyder
Bowers	Freeman	Mead	Steenerson
Brennan	French	Michaelson	Stevenson
Britten	Fuller	Miller	Stiness
Brooks, Pa.	Gilbert	Mills	Stoll
Buchanan	Glynn	Moore, Ill.	Strong, Pa.
Burke	Goldsborough	Morgan	Sullivan
Burtness	Goodykoontz	Morin	Swank
Burton	Gorman	Mott	Sweet
Campbell, Kans.	Gould	Mudd	Tague
Cantrill	Graham, Pa.	Murphy	Taylor, Ark.
Carter	Green, Iowa	Nelson, J. M.	Taylor, Tenn.
Chandler, Okla.	Griest	O'Brien	Temple
Clague	Hayden	O'Connor	Ten Eyck
Clark, Fla.	Hersey	Olpp	Tilson
Classon	Hicks	Osborne	Treadway
Cockran	Hogan	Padgett	Tyson
Codd	Hooker	Paige	Upshaw
Cole, Iowa	Husted	Park, Ga.	Vaile
Cole, Ohio	Ireland	Parks, Ark.	Vare
Connell	Jefferis, Nebr.	Patterson, N. J.	Volk
Cooper, Ohio	Johnson, Wash.	Perkins	Walters
Cooper, Wis.	Jones, Pa.	Perlman	Ward, N. Y.
Copley	Kahn	Petersen	Wason
Crago	Kelley, Mich.	Rainey, Ala.	Watson
Crowther	Kelly, Pa.	Ramseyer	Weaver
Cullen	Kendall	Rayburn	Williams, Ill.
Darrow	Kennedy	Reber	Winslow
Davis, Minn.	Kiess	Reed, N. Y.	Woods, Va.
Deal	Kindred	Riordan	Woodyard
Dempsey	Kinkaid	Robertson	Wurzbach
Denison	Kitchin	Robsion	Wyant

The SPEAKER pro tempore. On this call 240 Members have answered to their names, a quorum.

Mr. LONGWORTH. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The doors were opened.

EXTENSION OF REMARKS.

The SPEAKER pro tempore. The gentleman from Indiana asks unanimous consent to extend his remarks in the RECORD by inserting therein a speech delivered by Senator JAMES E. WATSON, of Indiana, at the Republican State convention held in Indiana a few days ago. Is there objection?

Mr. MOORE of Virginia. Mr. Speaker, reserving the right to object, I have noticed that several times speeches have been published in duplicate. They have been published in the RECORD by the action of the House and also by the action of the Senate. I am wondering whether the oration of the Senator from Indiana has not already been printed in the RECORD by order of the Senate.

Mr. ELLIOTT. It has not.

Mr. MOORE of Virginia. I have no objection.

The SPEAKER pro tempore. Is there objection?

There was no objection.

Mr. ELLIOTT. Mr. Speaker, in accordance with the leave granted me by unanimous consent to-day, I extend my remarks in the RECORD by printing a speech delivered by Senator JAMES E. WATSON, of Indiana, before the Republican State convention of

Indiana on the 25th day of May, 1922, which speech reads as follows:

Sixty-one years ago the Republican Party assumed control of the legislative and executive branches of the Government and, looking back over those decades from the vantage ground we occupy to-day, with full confidence we can assert that we are justly proud of the record made. My fellow Republicans, yours is a grand lineage. You were in the spiritual loins of Lloyd Garrison, Wendell Phillips, and Charles Sumner. You are the direct descendants of those who swept down the Shenandoah Valley with Sheridan, stood embattled with Meade at Gettysburg, marched with Sherman through Georgia to the sea, and assembled about the apple tree at Appomattox, where Lee gave up his sword to the silent and unconquerable leader of the forces of liberty, Ulysses S. Grant. In your veins flows the blood of those mighty men of heroic mold who saved a nation and redeemed a race. And no Republican assemblage was ever held that did not sit under the inspiration of the spiritual presence of the greatest of all our mighty dead—Abraham Lincoln—whose name shall be enshrined in every patriotic heart so long as altars are erected to liberty and the flag waves over this land of the free.

In your veins flows the blood of the men who laid deep the enduring foundations of peace, of progress, and of prosperity. They crushed slavery and made it impossible for slave labor ever again to compete with free labor in our Republic. They saved the Union, the instrumentality through which is to be worked out the well-being and the development of the individual citizenship of the Nation and the leadership of the world. They made our currency as national as the flag, so that every dollar of American money, of whatever substance composed, is the equal of every other dollar, and every such dollar worth 100 cents in every money market of the world. They established a credit unparalleled among nations, so that before the war our bonds were drawing but 2 per cent interest and every one at premium every day and everywhere. They early maintained and always continued the system of protective tariff, which stimulated inventive genius, developed natural resources, diversified industries, profitably invested capital, remuneratively employed labor, and more generally distributed the results of toil than elsewhere among any people in all the recorded history of the world. And the operation of the policies of this party for 50 years brought this Republic to that commanding position among the nations of the world where, while it numbered but a twentieth of the population of the globe yet owned one-half of its railroads, one-half of its telegraph, and three-fourths of its telephone lines, and did one-third of its mining, one-third of its manufacturing, one-fifth of its agriculture, and owned one-sixth of all its wealth. This is the ripe fruitage of these beneficent policies, and by them we are willing to be known.

In harmony with this purpose, our brothers climbed over the ridge of the world to plant the stout tree of liberty in the Philippines, while our possession of Guam and of Hawaii and of Porto Rico and the benign influence we have exercised in Cuba have given renewed evidence to the world of our belief in the universality of the liberty which we enjoy and the unselfish devotion of this Republic to the cause of human freedom throughout the earth. And all this was achieved under the guiding hand of that great man, the story of whose noble life is an inspiration to every patriot and whose name is the gentlest memory of our day, William McKinley.

And when the prosperity our policies had created so took possession of the minds and hearts of its chief beneficiaries that they threatened to trample under foot the rights of their fellow men; and when capital, like the released genie, loomed so large that thoughtful men became alarmed at its proportions, another leader appeared who reannounced the principles of the Declaration of Independence with compelling power and brought men to a fresh consideration of and a renewed devotion to the fundamentals of our Government. And men called him Theodore Roosevelt.

Catching the spirit of these preceding decades, our sons smashed through the Hindenburg line in France and, in the Argonne Forest and in the Belleau Wood, gave to the world renewed evidence of the inspiration that fills the breast of every American patriot and the supreme confidence it instills in his heart when the institutions of the Republic are imperiled.

And we who are the heirs of all their labors and the beneficiaries of all their struggles sit upon the summit of civilization to-day, in the high place to which they have led us, and firmly resolve that the principles for which they suffered and the ideals for which they sacrificed shall continue to be the guiding stars of the Republic throughout the generations that are yet to come. And in this spirit we rejoice to-day in the leadership of another patriot, worthy of all those mighty statesmen whose genius has lighted the pathway of our history, kindly, patient, gentle natured, noble souled, with a heart that beats in sympathy with the struggling and the suffering of all the earth and yet with a wisdom that recognizes the limitations imposed upon us not alone by our Constitution but as well by the very spirit of our nationality, whose head is among the stars because of the heighth and breadth of his vision, and yet whose feet are on the solid rock because of his devotion to principle—Warren G. Harding.

THE PRESENT RECORD.

My fellow citizens, this administration does not need an apologist. All it requires is some one to tell the story of its achievement. The mere recital of its accomplishments is the surest vindication of its conduct. Its success in the work of restoration and rehabilitation can be measured only by the magnitude of the obstacles it was necessary to surmount before a return to normalcy could be achieved. Surely the future historian will declare that no administration ever before came into power confronting problems of such complexity and difficulty as those which were inherited by President Harding and the Republican Congress.

Those who declare that little has been accomplished forget the bewildering character of the situation that existed in this country and throughout the world on the 4th day of March, 1921, and they speak with scant knowledge of the circumstances and with slight comprehension of the vastness of the task inherited by the Republican Party after eight years of Democratic maladministration.

THE PROBLEM STATED.

We had passed through an area of public expenditures on a scale that staggers the imagination. In its train was left a national debt involving an annual interest charge greater in itself than the entire cost of running the Government before the World War. The public service had been habituated during this period to an extravagance far more easily established than uprooted. Not only had there been an enormous increase in the cost of civil administration, as evidenced by swollen public pay rolls, but the entire service had become thoroughly saturated with the spirit of reckless spending and wanton wastefulness. We became accustomed to speak of billions of dollars as we were once wont in the discussion of public expenditures to talk of millions. This tendency to public extravagance, which wasted untold sums under a national administration elected on a program to enforce simplicity and economy, could not be completely corrected by a mere change in the chief officials of the Nation. Indeed, it will be many years before the spirit of reckless extravagance, with which the public was so thoroughly impregnated during the Wilson era, has been fully overcome, for it spread like a contagion through State and city and county governments to the smallest political division and rested not until it seized and held all our people in its grasp. And yet enormous strides have been taken in that direction by the Government during the past year. It will be decades before the people of this country cease to feel the effects of excessive taxation, made necessary in part by war's emergency, but to no small extent by the reckless, riotous, wicked waste which characterized the incompetent and irresponsible conduct of the national business during and after the war, and which is largely chargeable to the inefficient subordinates of the Wilson administration.

Witness that $11,000,000,000 were appropriated for the purpose of furnishing artillery and airplanes and ships, with the unbelievable result that fewer than 200 pieces of American-made artillery ever reached the battle field, fewer than 200 American-made airplanes ever sailed through the air above the soil of France, and that but one ship built under the authority of the United States Shipping Board ever carried an American soldier to a European port. Much of this was legitimately expended, but more of it was illegitimately wasted, and but few of us to-day comprehend the saturnalia of extravagance and the riot of profligacy that characterized both appropriations and expenditures during that period.

WORLD-WIDE CONFUSION.

The problems that confronted us were both foreign and domestic, all being the direct result of the greatest cataclysm known to human history, and we best can appraise the progress made by this administration in one year and two months by a glance at the conditions of the nations of Europe who were involved in the same titanic convulsion. The war impoverished the world, it is true, by the loss of well-nigh 30,000,000 of her bravest and her best, those most fully qualified for productive purposes, dead upon the field of battle or maimed for life. It left a foreign debt amounting to almost $400,000,000,000, and the most fearful phase of it all is that these nations are not living within their incomes, are not balancing their budgets, and do not seem yet to have entered upon any well-defined program of either financial retrenchment or fiscal reform. The gravity of this situation is best presented by the statement that but two nations of all Europe are to-day living within their means, while every other one is steadily increasing its debt and rushing on in an extravagance of expenditure that, if continued, can lead but to bankruptcy, insolvency, and complete collapse.

The figures are ominous, for they tell the story of an almost utter breakdown of European currencies, largely due to the fatal policy involved in fiat money, an attempt to create values by operating printing presses without limit and scattering irredeemable currency in ever vaster quantities among the people:

Countries.	Total wealth.	Gross debt 1919.	Per cent.
United States	$250,000,000,000	$25,000,000,000	10
Great Britain	90,000,000,000	40,000,000,000	44.4
France	65,000,000,000	30,000,000,000	46.1
Italy	30,000,000,000	12,000,000,000	40
Germany	85,000,000,000	40,000,000,000	47

This staggering indebtedness forecasts disaster to every European nation involved, unless they change completely their fiscal policies. And thus it will be seen that we have been dealing in this administration not only with our own problems but with questions of the greatest gravity inescapably reflected upon us by these chaotic conditions in Europe. For, as everybody recognizes, the whole world is irrevocably bound together commercially and financially, and inevitably the prosperity of our citizens and the fiscal soundness of our institutions depend at least in part upon the stability of European peoples and countries.

Act as we may, talk as we please, the indescribable derangement of European finances and the total demoralization of their money systems and the constant decline in the value of their currencies, the purchasing power of which seems to be reduced with each succeeding month, complicate the situation beyond description, because in their totality they make our rate of foreign exchange practically prohibitive, and therefore very greatly interferes with the full resumption of trade between Europe and America. And strive as we may, enact legislation as we please, we can not fully restore American prosperity without at least a very considerable resumption of normal conditions on the continent of Europe. And yet, despite these hindrances, by means of wholesome economy and sane legislative enactments, we have accomplished much toward the resumption of our original prosperity, and the progress already made justifies the hope of a still nearer approach to normalcy in the near future.

In all but two countries of Europe there were larger deficits in 1921 than in 1920, and England is the only nation that engaged in the last war that can be regarded as at all financially sound. Take, for instance, Poland as a most striking example of insolvency. Her revenue in 1920 was estimated at 3,000,000,000 paper marks and her expenditures at 15,000,000,000. In 1921, 10,000,000,000 paper marks represented the amount of her revenue from taxation, while 110,000,000,000 represented her expenditures. It requires no expert in finance to see whither she is tending.

Take France, whose condition presents a problem of overwhelming gravity, and study the figures of her ever-increasing indebtedness:

	Francs.
1914, July 31	34,188,000,000
1918, December 31	151,122,000,000
1919, December 31	240,242,000,000
1920, September 30	285,836,000,000
1921, February 28	302,743,000,000
1921, September 30	320,000,000,000
1921, December 31	328,000,000,000

Also, it should be stated that for the 12 months ending September 30, 1921, the deficit was well-nigh 35,000,000,000 francs, without any reference to the interest on the debt she owes to other nations.

Look at Germany's sad plight and see how that mighty nation is floundering along in the bogs of financial distress. In order to balance her budget at the present time Germany would be compelled to double her revenue and cut her expenses in two, which seems to be an utterly impossible task. The enormous fiscal deficit of the German Government seems to be the main explanation of the vast increase in the circulation of marks, which rose from 70,000,000,000 the last day of May, 1921, to over 120,000,000,000 the first of this month. What dismay is written in these figures! What monetary riot, what financial despair!

I mention the deplorable condition of Europe's finances in order better to explain and more strikingly to show the very wonderful improvement made in our own country, for notwithstanding the near approach to collapse of the monetary system of nearly every country in Europe we have balanced our budget, we are living within our income, we have issued no bonds and sold no Treasury certificates, we have paid off $1,000,000,000 of the public debt, we have reduced taxation $825,000,000 the first year and $525,000,000 more the second year, we have curtailed governmental expenses $1,600,000,000, and are to-day financially solvent and commercially sound, and on the upgrade toward a normal resumption of American prosperity. Such is the genius of Republican statesmanship.

And in the light of these European conditions the accomplishments of this administration are all the more remarkable and afford the people fresh assurance of what yet may be accomplished in the three years just ahead.

DEMOCRATIC WRECKAGE.

Scattered all about us on every hand at the beginning of this administration was the destruction that was wrought not only by our misfit administration but as well by international conditions. In our own land 5,000,000 men had been taken from the fields of production and set at the destruction of all values, which is the business of war. That conflict had been over, it is true, two years and four months when we assumed control, but at the instance of our own President the completion of peace had been delayed for many weary months while a world constitution was being constructed, and, when the treaty itself finally was ratified by nations other than ours, it proved to be a compact productive of chaos rather than one of order in Europe.

If a rational treaty had been completed, as easily might have been within three months of the signing of the armistice, and if the nations of the Old World had been permitted properly to turn to the task of industrial reconstruction, we to-day might be dealing with a far more stabilized Europe than we are, one well on the highway to a complete rehabilitation rather than with nations still ravaged by war and rumors of war, and threatened with economic collapse and with unutterable financial despair.

And thus we have been compelled to deal not alone with our problems at home, largely the result of Democratic inefficiency, but as well with those abroad caused by the fatuous policy of our own President across the sea. Look whichever way we may in the midst of this wreckage, cast our eyes in whatever direction we please among the shattered nations, and we see in the background the faces of Woodrow Wilson and a portion of his Cabinet as the partial authors of it all.

THE NEGATIVE SIDE.

In order to carry out the platform pledges made at Chicago, this administration was compelled first of all to abandon many of the practices and reverse many of the tendencies steadfastly pursued and adhered to by the former Chief Executive. In this respect it has performed a service of inestimable value even if one not yet fully realized by the people. Since Harding became President there has been no thought of surrendering the rights, interests, and ideals of this Nation to any scheme of alien supersovereignty anywhere in the world. There has been no intention, either hidden or expressed, of dragging this Republic into the League of Nations. Upon the contrary, every utterance of the President has shown him to be diametrically opposed to any such scheme. Under him we shall maintain our independence and keep a firm hold on our sovereignty and, while fondly hoping that the League of Nations may bring peace to shattered Europe and prosperity to her struggling millions, and while gladly aiding to bring about that desired end to the fullest extent consistent with our traditional policy, yet we shall steadfastly decline to be drawn into their political involvements or entangled in their financial catastrophies.

We best can serve the world by being able to serve it, and we most surely can remain able to serve it by keeping ourselves strong at home. If we are to help the world, it is for us to say when we shall help it and by what method we shall help it and how much we shall help it, and it is not for any supergovernment to dictate our course to us. By a policy of national independence we brought ourselves to that position of financial primacy and commercial supremacy that enabled us to reach out our hands and grasp the blood-stained arms reached forth to us across the sea in a plea for help and lift bleeding Europe out of the depths of despondency to the heights of victory, and we shall best be able to extend needed aid to the other nations of the world in the days that are to come by keeping ourselves free of all entangling alliances and independent of all foreign involvements. Such is the Harding policy, and such plan will meet with the approbation of the people of this land.

There have been no further steps toward the socialization of industry since Mr. Harding became President. He constantly has said that there must be less Government in business and more business in Government, and he has cautiously proceeded to enforce that pronouncement. Under the guise of war necessity, the last administration took practical possession of all the business of the Nation and made it entirely subservient to those in power. They took over the railroads and the telegraphs and the telephones, and they commandeered corporations, and they seized factories, and they operated plants, and they projected themselves into all the business affairs of the land. And with what result? Never was there such mismanagement, never such extravagance, never such a welter of inefficiency, never such dire confusion.

The Republican Congress at once proceeded to untangle this mess, to give back these properties to the people who owned them, and to establish again the firm principle of the recognition of individual and property rights under the guaranties of the Constitution.

While not abating by one jot or tittle the force of the Sherman antitrust law, while having brought many proceedings to punish corporations for the violation of that statute during the war period, ruthless profiteers and plunderers who enriched themselves at the expense of a suffering and sacrificing people, nevertheless the general tendency of the administration is toward full freedom in business and a recognition of the larger right of the individual to control and operate his own business affairs. The "new freedom" preached by Woodrow Wilson was a grotesque travesty on the very name, while the enfranchisement of business under Harding is an accomplished fact. There therefore has been no suggestion from high places that private pay rolls should be diminished in order that public pay rolls might be increased, all designed to place a larger number of voters under the direct supervision of those who hoped to profit politically by the change.

Since Mr. Harding became President there have been no White House pronouncements expressive of the false theory that Government is the natural and proper enemy of business, and there have been no examples of governmental infringement upon the just domain of legitimate private enterprise, and that there will be none in the days to come should prove encouraging to every friend of economic freedom.

THE PRESIDENT AND CONGRESS.

Since Warren G. Harding became President there has been a complete restoration of proper relations between the executive and legislative branches of government. There has been no coercion by one and no servility by the other. They both have worked together in a spirit of harmony and cooperation without the exercise of a dangerous authority on the one hand or slavish sycophancy on the other. Each recognizes and accords to the other its full rights and neither expects at any time to infringe upon the prerogative or invade the legitimate sphere of activity of the other. I know that some of our citizens are disappointed at this course. I realize that many people think that the President should take a club and at least threaten Congress, if not actually cudgel it, into submission, but assuredly the almost fatal example of Woodrow Wilson's fatuous policy in this regard should satisfy such believers that that course is inimical to the best interests of our Government, and that, even if adopted, it would meet with the emphatic disapproval of the American people. Never was this more clearly manifested than when, right in the midst of a successfully conducted war, on the very eve of one of the most momentous triumphs of history, a Congress, Republican in both branches, was elected contrary to the expressed wish of the President and, indeed, in opposition to his practical demand.

The American people then and there set their seal of disapproval upon autocratic power in the United States, and assuredly, in the light of the great success that has followed the adoption of the opposite policy, they are not yet ready to reverse that decision thus solemnly rendered.

The length of the steps we have taken since March 4, 1921, may not have been as great as many of us would like, but they have been in the right direction, they have been away from the quicksands of socialistic idealism and toward the old, solid rock of traditional, common-sense Americanism, with its deep-grounded belief in the right and duty of every individual to work out his own salvation in his own way. We are gradually moving away from the tendency which not long ago gripped this Nation to make the American people inmates rather than citizens of the Republic.

We are opposed to autocracy in any form, whether it be of the President or of capital or of labor or of class. It is hostile to the spirit of our institutions, shocks the deepest sensibilities of every American citizen, and runs counter to the highest principles of the Republic. No single individual and no one favored class shall ever be permitted to assume autocratic control in this country and with imperious power dominate all other phases of our civilization. Such a course would spell disaster to republican institutions, founded upon the everlasting doctrine of human equality, and plunge us all into the midnight of despair.

THE POSITIVE SIDE.

When the Republican Party came into power it found a huge and increasing army of unemployed, with industry and agriculture deep in the lengthening shadow of depression. Partly this was due to the demoralization of war; partly to mistaken national policies of tariff and taxation. Fellow Republicans, we did not create this condition, we inherited it. It is the inevitable result of Democratic administration. We had passed through an orgy of speculation and inflation, always a concomitant of war, the day of defiation and of settlement came on apace and it became necessary for us to set our house in order to meet the changed condition. All this meant a general readjustment. It meant to face hard facts and solve difficult problems, not amid the blaze of war and the blare of trumpets but in committee rooms, where month after month programs were made and policies were formulated along business lines, afterwards embodied in legislation, and still afterwards religiously kept and followed.

When we came into power there was a bedlam of confusion in all governmental affairs. Our national finances were administered under tax laws imposed by the necessity of war. Our emergency fleet, which had cost $3,500,000,000, was in a state of demoralization that can be neither imagined nor described. Railroad transportation was on the very verge of collapse. Measures for war relief had not been thought out. A vast horde of foreigners was prepared to sweep down upon us in order to escape from tax-ridden and war-torn Europe. Agriculture was in a deplorable condition. Employment was everywhere sought. Government costs were out of all proportion to Government receipts and over all was the blighting pall of uncertainty. But the Republican Party faced this situation unafraid. Like a giant, conscious of its mighty strength, it grappled with the task. And what has been done in the past 14 months to relieve this frightful condition and with what results have we wrought and achieved?

First, we ended the technical state of war with Germany and Austria, an act essential to the prosperity of this country and the rehabilitation of Europe. Owing to circumstances for which the Republican Party was not responsible, it was necessary to make a separate peace with the Central Powers or have no peace at all. The new administration early contemplated a peace conference, but this was impossible while our own Nation was still theoretically at war with two European countries. The Democratic Party steadfastly opposed such a declaration of peace, thus more nearly fulfilling the party policy established by Woodrow Wilson of keeping us out of peace rather than the other one formulated by his ardent followers of keeping us out of war.

The Republican Congress next passed an act restricting immigration in any one year to 3 per cent of the American population of such nationality. This was a step in Americanism long demanded and long delayed. Without reflection upon any of the foreign elements in our citizenship, which in generations past have contributed immeasurably to the national upbuilding, the time has come when we should cease absorbing a larger alien population than it is possible for us to digest without serious internal disturbances, and certainly when 5,000,000 of our own people were out of work we were justified in preventing additions to that great number by large blocs of Europeans who could have done nothing else than add to the general discontent.

THE BUDGET SYSTEM.

The Republican Congress passed an act establishing the Budget system, a necessary step in the policy of putting more business in government, to which the party in power is committed. The adoption of this policy was postponed a year through the veto of a similar measure by President Wilson. Already it has exercised a remarkable influence in the limitation of public expenditures. In my judgment this law will stand out as one of the most important pieces of constructive legislation enacted in the last quarter of a century, and its operation, under the forceful leadership of Gen. Charles G. Dawes, already has produced unbelievable results.

APPROPRIATIONS.

The appropriations for the year ending June 30, 1922, were $4,065,000,000, and the estimates were $5,600,000,000, showing an approximate reduction of $1,600,000,000. These estimates were submitted by a Democratic administration, while the appropriations were made by a Republican Congress.

The estimates for the fiscal year ending June 30, 1923, submitted by the present administration are $3,853,000,000. It is too early to say what the appropriations will aggregate, but the chairman of the House committee estimates them at $3,500,000,000, each of these figures including the cost of operating the Post Office Department, which is $550,000,000 a year.

I call your especial attention to the important fact that there are now three fixed items of charges approaching $2,000,000,000 which did not exist before the war, namely, $975,000,000 interest on the public debt, $381,000,000 sinking fund, and approximately $500,000,000 for the maintenance of the Veterans' Bureau in connection with the care of wounded soldiers. There are other items like the shipping industry and increased outlay for law enforcement to be added to these three.

Therefore it will be seen that these stated charges can not be eliminated, and so we begin to make provision for the operation of the Government after we have first provided for these $2,000,000,000 of fixed charges which grew out of the war.

After we deduct the $2,000,000,000 from the $3,500,000,000, which it is estimated will be the aggregate of appropriations for 1923, it will be seen that we have but $1,500,000,000 for the conduct of every activity of the Government, including the Army and Navy, which is only $250,000,000 more than the cost of the Government before the war, and $150,000,000 of this is represented in the increased volume of business done by the Post Office Department; so that when we take the $250,000,000 and deduct the increased cost of running the post office—$150,000,000—we will reach rock-bottom, and our Government will be conducted at as low a cost as is possible under existing conditions.

The annual revenue from the liquor business before the enactment of the Volstead Act was approximately $290,000,000. The revenue now from the same source is $83,000,000 and will gradually be reduced.

If these figures are verified by the appropriations, and I have no doubt they will be, they will conclusively show that we are the only country in the world that is really living within its revenue.

This is certainly as remarkable a showing as ever has been made in the financial management of this or any other country, and I attribute much of it to the success of the operation of the Budget system, together with the unalterable determination of Congress to reduce expenses to the minimum.

AGRICULTURAL RELIEF.

There is an inadequate conception in industrial centers of the hardship visited upon the farmers of the country through the reaction of war. And yet we must realize upon reflection that impoverishment of the American farmer means not only destruction of the purchasing power of half of our population but a reduction in quantity of farm production, and therefore an ultimate increase in cost of food to the city consumer.

In the process of deflation that began after the war and still continues, agriculture was the first to feel its full effect. Almost at once prices became so low that they did not meet the cost of production, while at the same time the price of practically everything the farmer was buying, including transportation, remained on the war level. This was an intolerable condition, for it threatened to bring about the complete collapse of agriculture, which, as we fully realize, is the basis of all industry and the foundation of all prosperity. To meet this manifest demand, exigent in all particulars, Congress enacted at once an emergency tariff law, which was signed on May 27, 1921, and renewed on November 16, 1921, and will now stand until a permanent tariff law shall have been passed. There have been some newspaper comments as to the futility of this act, but permit me to say that not one single witness that appeared before the Finance Committee in all of our hearings, whose attention was particularly directed to this act, but what testified that it unquestionably had saved the wool and sheep industry of the country from utter destruction, that it had been of immense value to the dairy interests as well, and that it had operated to the great benefit of the farmer as to all the other items it enumerates.

The export trade bill was next passed, a measure authorizing the Government to loan up to $1,000,000,000 to aid in financing the export of farm products. Of this sum $45,000,000 already have been loaned for export and $283,587,000 to cooperative associations.

The packers' bill was enacted for the regulation of commerce in live stock and dairy products, and poultry and eggs, and places in the hands of the Secretary of Agriculture the authority and machinery necessary to prevent abuses long complained of by farm producers, but avoids the radical measures, destructive of all industry, which have been proposed by demagogues and theorists. This act settles a controversy of long standing.

The grain exchange law, instituting the control over boards of trade and other grain market agencies similar to that over the meat packers, a bill which prohibits any gambling in grain futures, but permits useful dealing in the grain market, intended to prevent purely speculative operations believed to be injurious to both producer and consumer. Although this law has just been declared unconstitutional, it nevertheless clearly shows the disposition of Congress to be helpful in that direction.

The law increasing the capital of the Federal farm loan banks by $25,000,000, designed to assist the farmer in securing additional loans at reasonable rates. I may say in passing that the sum of $629,897,654 has been loaned to farmers through this agency up to March 31, 1922.

Congress also passed a law conferring upon farmers the right to form organizations for the marketing of their products, which is a special exemption of agricultural interests from the operation of the Sherman antitrust law, and which undoubtedly will prove highly beneficial to the farmers of the country and greatly aid them under present strained conditions.

We amended the farm loan act by authorizing an increase in the interest on bonds issued by the Farm Loan Board from 5 to 5½ per cent, and limiting the rate of interest on loans to farmers to 6 per cent.

We provided for the establishment of an Agricultural Inquiry Commission to investigate and report on agricultural needs, the most complete body devoted exclusively to this subject yet assembled.

And to this may be added the agricultural conference called by President Harding and held in Washington for the purpose of considering the many pressing problems immediately confronting the farmers of the land. This is an array of acts for the benefit of the agricultural interests of the country never before equaled by any one Congress in our entire history.

All these have resulted most beneficially to the farmers of the country as is evidenced by the fact that the prices of nearly all farm products have advanced, as doubtless they will continue to do, until they reach a level where the farmer can realize the profit his investment and his labors entitle him to receive.

OTHER MEASURES.

The emergency tariff act carried a provision continuing the dye embargo and in the tariff bill under consideration this will be renewed for one year, with permission granted to the President to renew it a year longer upon a proper showing. This will insure the establishment of the synthetic chemical industry in America, than which no more important step could be taken.

Congress has not been remiss in the discharge of its obligation to the disabled veterans of the World War, nor will the members of that body ever forget the solemn duty they owe to these defenders of our faith. The operations for the relief of war veterans was originally divided up among the Treasury, the War Risk Insurance Bureau, the Vocational Training Board, and other departments, and one of the first acts of reconstruction passed by a Republican Congress was the unification of all these activities under the supervision of the Veterans' Bureau.

It is difficult to imagine what an enormous task confronted this new organization, and yet a faint glimpse of it can be given by the statement that already there has been paid to disabled veterans and their dependent relatives $1,979,286,634—or a greater sum than that expended for the relief of the soldiers of the Civil War before 1880, or 15 years after the close of that struggle.

There is going out of the Treasury each day for that purpose approximately $1,250,000. To meet the demands of the disabled, the Government now has nearly 30,000 hospital beds to which 11,000 are immediately to be added at an approximate cost of $3,000 a bed. There are 29,000 men already in hospitals each of whom is receiving, in addition to his keeping and his care, from $80 to $157 each month. I am informed that the disbursements for compensation run over $10,000,000 each month and for insurance over $9,000,000, while during the same period there are 15,000 compensation claims and 1,200 insurance claims received for action. There are 116,000 men taking vocational training, each of whom receives pay at the maximum of $170 per month. There are now in existence 107 Government-operated hospitals which provide 182 employees for each 200 patients. There are 5,000 schools used throughout the country for training ex-service men, and in excess of 10,000 institutions for placement training.

When the War Risk Department was reorganized there were 200,000 claims awaiting adjustment. Of these all the uncontested ones were settled long ago. There are about 700 claims received each day, which are immediately decided, and I am very happy to say to you that this whole mass of undigested business has been cleared away and that this important department of the Government is to-day up to date in all of its examinations and decisions.

This department is in actual contact with all public and private charities everywhere, in touch with every office of the Red Cross, and in communication with every Legion post and, while all mistakes can not be avoided and relief can not immediately be afforded in all cases nevertheless the organization is now so perfect and is operated on such sound business principles that unquestionably there need be no great delay in adjusting the claims or attending to the wants or meeting the needs of every deserving soldier of that war.

SOLDIERS' BONUS.

The House of Representatives already has passed an act providing a bonus for World War veterans, and I have no doubt that in some form or other it will find its way through the Senate and become a law before the close of this session of Congress. I can not now say just what the provisions of this act will be, because they are yet the subject of consideration by the President and the members of the Finance Committee, but I am quite sure that they will involve no additional taxation and that finally they will be paid by the use of the bonds of our debtor nations.

The difficulty with regard to the enactment of bonus legislation is quite apparent to all. Congress is most determined to reduce expenses to the lowest limit, and yet, on the other hand, every Member of that body is anxious to please the soldier and, within the limits of possibility, equalize his pay during his period of service with that of his brother who remained at home and received inflated wages. If our Treasury were full and overflowing, no questions would be asked, because there would be no problem presented, but with the necessity for reduced taxation if business is to be resumed, and with the determination to run the Government on business principles whatever else happens, the question presented by the bonus has been one of the most difficult to answer. And, that I may make a candid statement of the whole situation, permit me to say that a large number of the Members of both the Senate and House committed themselves to the payment of a bonus in the last campaign and feel under compulsion to redeem the pledges then made. And so I feel quite sure that, notwithstanding the perplexing difficulties surrounding the entire question, such a measure will be passed, and that, when understood, it will meet with the approval of the great majority of the people of the land, including the beneficiaries of the legislation.

FURTHER LEGISLATION.

In addition to these great measures, Congress passed a Federal highway act appropriating $75,000,000 for Federal cooperation with States in the building of highways.

An act establishing a woman's bureau to enable women to respond to the new duties imposed upon them by their recent enfranchisement.

The maternity bill, pledged by the Republican Party in the last campaign and advocated almost unanimously by the recently enfranchised women of the land. The bill provides for cooperation with the States in the protection of maternity and infancy and is voluntary rather than compulsory in its provisions for enforcement.

Among relief measures enacted were two for the benefit of the starving people of Russian, one to donate $20,000,000 for food and to purchase seed grain for the famished in the Volga region, and the other to release medicines now held by the War Department to be applied to aid the sick of this ailing and unfortunate country.

The House passed the rails-security refunding proposal looking to the rehabilitation of the finances of transportation, but the general improvement in the tone of the market enabled the railroads, through the aid of the War Finance Corporation, to dispose of their own securities and it was found unnecessary to consider this bill in the Senate.

The naval appropriation bill was passed with a saving of $86,000,000, as compared with the sum carried by the same bill in the last Congress and the Army appropriation bill, which reduced the standing Army to 150,000 men and carries $15,000,000 less than the former bill which President Wilson refused to sign.

The law providing for the consolidation of independent telephone companies, making possible the elimination of loss through unnecessary duplication of such lines.

The law providing a method of control by the President for landing submarine cables, correcting a situation which became embarrassing under the former administration.

An act broadening the organic law of the Indian Bureau, which will cure the evil of legislative riders and appropriations, an abuse of long standing in connection with the Indian Service.

A law providing for an agreement among the Western States for the apportionment of the water of the Colorado River, settling an interstate dispute of long standing known as the Kansas-Colorado case.

A law authorizing the completion of the Alaskan Railroad at a cost of $4,000,000. The final estimates of the cost of this road by the former administration having been found inadequate, it was necessary to provide the amount necessary to finish the line or leave it in an unserviceable condition.

An act for the relief of those who responded to the call of the Government for the production of war materials, relieving many producers of small means who patriotically undertook to meet the war needs of the Nation.

The law to amend the Federal reserve act with regard to the capital stock of corporations.

An act to reclassify postal employees, involving many thousands of our fellow citizens, and readjusting their salaries on a more equitable basis.

The Volstead Act, providing for the enforcement of the eighteenth amendment, for which over $9,000,000 has just been appropriated for the ensuing year. Regardless of what one may think of national prohibition, there can be no serious difference of opinion among patriotic people as to the importance of enforcing laws, and especially those arising out of and based on constitutional amendments. Contempt of one law breeds contempt of all laws, and contempt of law is not a thing that serious-minded people can afford to condone or encourage. The law while it is a law must be enforced. Failure to do so is nullification, and nullification carried to its logical conclusion means the utter collapse of orderly government.

These salutary acts, together with about 500 others of minor importance, tell the story of a legislative session unparalleled in our history for the number and consequence of its enactments.

TAX LEGISLATION.

The national Republican platform pledged a reduction in expenditures and a decrease in taxation, and in both instances we have kept the faith. We gained control of Congress on the 4th of March, 1919, but until the 4th of March, 1921, we were handicapped by the fact that the disbursing branch of the Government was in the hands of the Democratic Party, which had the habit of spending developed to a most remarkable degree, and therefore all we could do was to cut down the appropriations demanded by the various departments.

The first session of the Republican Congress which assembled reduced appropriations for the current fiscal year to $4,500,000,000, which was $75,000,000 less than the appropriations for the fiscal year preceding, $1,500,000,000 less than the Wilson administration asked for its last year, and $3,000,000,000 less than were appropriated for the second fiscal year preceding.

The total appropriations for the year ending June 30, 1916, were $1,114,490,704.09. For the year ending June 30, 1917—we had been in the war two months—they were $1,625,419,995.53; for the year ending June 30, 1918, they were $18,892,027,501.58; and for the next fiscal year they were $27,065,148,690.75. No sooner had the Republican Congress come into power than it repealed war appropriations aggregating more than $8,000,000,000. For the fiscal year ending June 30, 1920, the first one under a Republican Congress, appropriations aggregated $6,495,015,370; and, as I said above, and it is worthy of repetition, for the year ending June 30, 1921, the actual cost of running the Government was $5,538,040,689, and for the next fiscal year it will be $3,922,372,030.

The departments during the last fiscal year estimated an expenditure of $5,337,996,723.23, but Congress so greatly reduced this sum that we have actually balanced our Budget and are living within our income. A part of this reduction is due to the fact that during the year ending June 30, 1921, 93,634 people were dismissed from the public service, in the last year 10,000 more, and since the armistice a total of 330,278 employees have been dropped from the civil pay roll; and I may say in this connection, as an expression of personal belief, they have not been getting rid of the Democrats in some of the departments fast enough to suit me.

This is a Government by and through the agency of political parties; and, while its present form is maintained, it can not be governed in any other way, for by this method alone can the people express themselves as to the policies they desire to control the administration for the ensuing four years. Anything, therefore, that strikes at either the existence or the efficiency of political parties is injurious to an agency of government, and should not be permitted except after most careful consideration.

I believe in the civil service as applied to a great many of the phases and activities of Government operation, but I do not believe in that system when it shelters men who are opposed to the policy of the administration and who secretly connive to overthrow it and strike at it and interfere with it whenever an opportunity is presented. There are a large number of such in office in Washington now, and my judgment is that they should be released and sent home. This is particularly true of those who occupy key positions or who can make decisions or determine policies or settle questions of procedure.

As to all persons except those who are doing the mere routine work, more or less clerical in character, the administration should see to it that they are in harmony with its spirit and its purpose and the President and heads of departments are entitled to have the occupants of these offices loyal to the policies they are attempting to carry out.

A large number are not in this frame of mind but diametrically opposed to the administration, to the President, to the party in power, and to the things we are trying to do, and, in my judgment, all such should be summarily removed.

I have been and am opposed to putting postmasters under civil service. They are very useful in maintaining party organization, and the past shows that these activities have not in any wise interfered with their efficiency. A Congressman is compelled, by the very force of public sentiment, as well as by his own conception of right and propriety, to name none but the best, because he knows that the service rendered is the surest justification for any appointment. His own self-interest prompts him to pursue that course, and the record proves that but few mistakes have been made.

THE NEW TAX LAW.

Whatever may be said as to the new tax law, and no such enactment ever has been or ever will be popular, it is infinitely better than the present one. It will produce $835,000,000 less this year than the present law and next year will assess the people $525,000,000 still less, or a total in excess of $1,300,000,000 of a decrease under the existing law. Further revision within the next year is probable. No one not familiar with the difficulties and intricacies of tax revision, with the conflicting theories and interests involved, has the slightest conception of the labor and trouble of reconstructing our tax laws and can not understand how many months of most unremitting toil by experts and legislators is represented in such a measure.

Every law involving hundreds of items and affecting millions of individuals is necessarily a compromise, and no thoughtful man expects a law framed in its every item to suit him. I speak with full personal knowledge when I say that the new tax law is the best that could be worked out of the conflicting elements involved, and from that starting point we can move on to better things.

This law has been criticized because we reduced the surtaxes only 15 per cent, from 65 to 50, but that was the very best that could be done, and it was the result of a compromise after weeks of patient work in connection with the subject. I made the compromise myself, and, therefore, I speak with full knowledge of the subject.

I have been for many years a believer in and an advocate of the sales tax as the most just and equitable system of taxation that any Government can devise, but, up until the last taxation measure was passed, no real opportunity was ever presented to have it even considered. I voted to report it out of the Finance Committee as a substitute for the higher surtaxes and the excess-profits taxes and other forms of aggregated taxation, but we could not muster a sufficient number of votes to secure favorable action. In common with 24 of my colleagues, I voted to pass it as an amendment to the tax bill, but to no avail. I am firmly convinced, however, that some such proposition will be enacted into law at a comparatively early date. As a matter of principle, I shall support it whenever an opportunity is presented to pass it.

We did repeal excess-profits taxes, which in part were smothering the productive activity of the country, and, if many of us had had our way, we would have reduced the surtaxes to not more than 25 per cent, which would have prevented the flow of free capital into tax-exempt securities, would have led to investment in industrials that would have revived business, and would have given assurance to men of means that the Government did not intend to tax their incomes entirely out of existence by a confiscatory system of taxation.

I hitherto have said that the expenses of the Government can not be much further reduced because of fixed annual charges growing out of the war. People may complain, but the Republican Party is not responsible for these conditions. We did not make them—we inherited them—and we are dealing with these complex problems left us by an incompetent and inefficient Democratic administration.

These bills must be paid largely by taxes taken from the pockets of the people. There is no other way in which it can be done. While the war was on it required money to pay the expense, and the money we then borrowed, together with the interest, must be paid, and it is not possible while all of this is being done to reduce expenses beyond what they will be next year.

The Senate, with only two hours' debate, voted $640,000,000 for aircraft. A Democratic committee of the Senate found that this money was worse than wasted, and yet it must all be paid and the people must pay it by taxation. We sold for $120,000 what cost us $80,000,000, but we must raise the $80,000,000 and it can be done alone by taxation. The $25,000,000,000 the war cost is a debt of honor and we will pay it and whatever other charges honorably arise out of it, but it must be done by taxation, and under all the circumstances the Republican Party has worked wonders in the way of the curtailment of expenses and reduction of taxes. This is the real test of constructive statesmanship. And, fellow citizens, we in this convention to-day can take a pardonable pride in the fact that the ability to reduce taxes and yet meet current expenditures from current incomes without resorting to loans, and at the same time, by reason of effective economy, pay $1,000,000,000 on the public debt; that this ability is characteristic alone of America and is characteristic of the Republican Party alone in America.

THE TARIFF.

The House of Representatives early passed and the Senate is now engaged in debating a tariff bill to supplant the Underwood-Simmons law, which on the average assesses 6½ per cent on all imports, or the lowest rate provided by any bill in the entire history of the Nation. I shall enter upon no extended argument on the tariff question for none is required in this presence. The national platform of 1920 demanded the restoration of a protective policy and that pledge shortly will be fulfilled.

The whole question of the tariff is a question of wages. From top to bottom and from bottom back to top it is a problem of the man who labors and of the man who toils. If the workman engaged in any gainful occupation in this country is willing to take the same rate of wages that his competitor gets in any competing country we can adjust ourselves to the new conditions and proceed with business. Capital in reality does not need to be protected. Capital is never weak and requires protection only to enable it to pay American wages. But the man who has nothing to sell but the brawn and the muscle of his good right arm and who goes out every morning to sell that product is entitled to the best market in the world in which to dispose of it and to receive the best wages paid in the world in return for it.

Involved in this problem is also the question of the capacity of American citizenship to meet the demands made upon it in a Government devoted to the doctrine of human equality. If men are to be

equal before the law they must be qualified for equality, and as a partial equipment to be thus qualified each must receive such a return on his investment of labor as will enable him to stand upon a level with his fellows and play his part in upholding this Government of free and equal men.

There can not be equality in any country where any considerable portion of its citizenship is ground down by extreme conditions of living and a weight of inescapable poverty. Wages must be paid which will permit the laboring man to enjoy the comforts and conveniences and even the luxuries of life, to rear his children in accordance with their needful requirements, to meet the demands made upon him by a well-regulated social life, and demean himself as a self-respecting American citizen. These things he can not do if he is compelled to come in direct contact with the products of the cheap labor of Europe, cheaper now than ever before because these people are compelled by stern necessity to seek new markets and open up new avenues of trade.

CHEAPNESS.

The outcry against the tariff is based on the theory of cheapness. Those who oppose protection do so on the ground that it enhances the price of the article protected, and they insist on buying the article wherever in the world it can be bought the cheapest. But a thing may be too cheap. A thing is too cheap in the United States when the man who makes that thing can not get a decent, honest, American living by making it. Benjamin Harrison, than whom no greater protectionist ever lived, and who had the faculty of compressing a whole argument into a statement, graphically remarked that "A cheap coat means a cheap man under the coat," by which he meant that the man who made the cheap coat would be a cheap man because he got low wages, and this is true of every other article made in America.

If these gentlemen are anxious to have cheap things, why don't they go to China? That is the cheapest country in the world and there they can have cheapness to their soul's content, but they would also have cheap men and cheap civilization.

We have righteously excluded immigrants from the United States except in very limited numbers, and yet free traders want all the products of their toil to come into this country without restraint or limitation. Economically, the result is almost the same.

Under years of protective tariffs we have built up an American system of living through an American scale of wages and an American plane of costs, and back of it all an American conception of the regal dignity of every man which must be preserved by his ability to maintain himself through just rewards for service rendered. This is the American plan and by means of it we have easily outdistanced all the other peoples of the world.

UNDERWOOD LAW.

Everyone knows that the operation of a revenue tariff has always resulted in commercial depression, in business paralysis, and in industrial despair. Six times this has been demonstrated in American history, and 1914 was no exception to the rule. Everyone knows that we were then going into a period of depression, headed straight for industrial disaster and financial wreckage, when the war intervened and erected a prohibitive tariff behind which we wrought and achieved as never before. That same Underwood law is still in existence, and unquestionably conditions that existed in 1914 and even worse will come upon us again unless that law be repealed. War wages have been but slightly reduced in many lines of activity, while wages are lower in Germany and in many other European countries than ever before. American industry can not directly meet this competition and survive. Under the Underwood law these wages can not be paid, these living conditions can not be maintained, and nothing but an adequate protective tariff will enable us fully to restore prosperity in the United States and bring contentment and happiness to the citizenship of America.

They tell us that our rates are high, but as to whether or not a rate is high depends upon the competition, on the production cost of the competitive article. We framed the present tariff bill wholly and solely on the basis of the difference in the cost of production at home and abroad as nearly as we could ascertain the facts. In formulating this bill we have been much like a man trying to build a dam in a flood, he can not always be sure of his foundation and he may be compelled to shift from time to time in order to meet new conditions. But this dam had to be built and we were compelled to do the best we could under the hard conditions with which we contended.

It is quite true that we did not always have exact information, but we have approximated a correct tariff, and I can say in all candor that in every case where there was uncertainty we gave the benefit of any and every doubt to the American producer and not to his foreign competitor.

A protective rate can not be said to be either high or low if it protects. I can cite a great number of instances in which it would take from 500 to 1,000 per cent to measure the difference in the cost of production at home and abroad, and therefore 1,000 per cent, being simply protective under the rule, would not be high, whereas in other instances 25 per cent would be high, because it would more than measure that difference. There is no such thing as a high protective tariff or a low protective tariff, for a protective tariff furnishes its own definition without any adjectives or prefixes to define it.

This bill will give to agricultural products the first real protection they have ever secured in the history of the country, and undoubtedly it will be of immense benefit to the farming interests of the Nation in their present dire straits, and likewise to all American industries that compete with like foreign industries with low wages and reduced costs of production. To them all we undertake in this measure to give adequate protection.

WAGES IN GERMANY.

I make the comparison with Germany because of the immense capacity of her people and the vast forces that can be brought into play by proper organization, which they so well understand and to which they so willingly submit. I am no more anxious to protect the United States against German-made goods than those of any other country, but I am equally anxious to secure the American market for the American producer from invasion from any country and from all countries.

The assertion continually is being made that wages have increased in Germany since 1914, and that therefore we do not require as high a tariff as otherwise we would. This I emphatically deny, and I am giving herewith a statement of wages in Germany which can be multiplied indefinitely, showing that they have decreased since 1914, measured by American money, and that they are lower to-day than they ever have been at any time in the history of Germany, which proves that their competition is all the more dangerous.

Wages in Germany—Rates per week for adult male workers.

Source: The wages for 1913 were compiled from the Statisches Jahrbuch fur des Deutsche Reich (Statistical Yearbook for the German Empire, 1915), page 91. The wages for December, 1921, are compiled from the Korrespondenzblatt des Allegemeinen Deutschen Gewerkschaftsbundes (the publication of the General German Trade Union Federation, March 4, 1922), pages 4 to 18, inclusive.

Mark converted to dollars in 1913, at $0.2382.

Mark converted to dollars in December, 1921, at $0.005223, the average buying rate for the month of December, 1921, for New York cable transfers as reported by the Federal Reserve Board.

RATE OF EXCHANGE.

In addition to this disparity in wages, there is still an even greater one in the value of the currency of this and competing countries, evidenced by the rate of exchange, which is one of the most serious problems that confronts not only Europe, not only America, but the whole world as well.

The normal value of the Russian ruble is 51.46 cents, measured in our money, but to-day 100 rubles are worth seven one-hundredths of a cent in our currency, or a depreciation of 99 per cent.

The German mark is normally worth 23.8 cents; to-day one-third of a cent, or 98 per cent depreciation. At face value the Austrian crown is 20.3; at present it is worth one one-hundredth of a cent, or a depreciation of 99 per cent. Polish marks are ordinarily valued at 23.8 cents, now two one-hundredths of a cent, a depreciation of 99 per cent. The French franc is normally worth 19.3 cents American money, to-day 9¼ cents, or a depreciation of 50 per cent. The Italian lire is worth 19.3 cents in ordinary times; to-day its value is 5⅝ cents American money, thus representing a depreciation of 75 per cent.

Now, under these conditions, how can anyone say that a protective tariff is not necessary for the salvation of our industries?

With the enormous depreciation in currency, with this great disparity in the rate of exchange, with their labor paid at home in this depreciated currency, how is it possible for anyone to contend that the American laboring man can meet the competition on an even plane? If we are to suffer a continuation of the present law, one of two things inevitably will result, and from one or the other there is no escape, namely, the American laboring man must be willing to take the same wage as his foreign competitor engaged in making the same article, or, second, he must stop work, lose his job, and wait for a change in policy. This has been demonstrated over and over in our history, and now, to a far greater extent than ever before, again will be demonstrated without a protective tariff.

ADEQUATE RATES.

This tariff is not being made to please free traders. We did not formulate it to suit importers. Their business is legitimate and is entitled to consideration, but we always must remember that American

business is first to be considered and the importer afterwards. If a man wears a coat made in England, then he does not wear one made in the United States, and to that extent the labor of the United States is displaced by the labor of Europe. This is true as to all imported articles the like of which we make in our own land. Free trade opens factories in competing countries but closes factories in the United States, and that is precisely the policy which we must avoid now more than at any other time in our history.

Our opponents are greatly distressed over what they call high ad valorems, but I must confess that I am not so impressed. If an article cost a dollar and we put a tariff of 25 cents on it, that is an equivalent ad valorem of 25 per cent. If, after putting a tariff on that article, we produce it at home in such quantities that the competition pulls the price down from a dollar to 50 cents, then the 25 per cent duty is equivalent to 50 per cent ad valorem, and on that ad valorem the Democrats base many of their charges against our tariff. They study percentage, we study prices. I would rather have a low price with a high ad valorem than a high price with a low ad valorem, and in any event I want an ad valorem sufficiently high to protect American labor wheresoever employed and American capital wheresoever invested.

Approximately 52 per cent of all imports will come in free under the pending bill, 30 per cent will carry specific rates, and the remaining 18 per cent ad valorem duties. As to these ad valorem rates, I really believe in American valuation and am firm in the conviction that that policy will some day be applied; but it could not be done at this time because of unpreparedness for its administration.

The following table shows the true value to-day of the currency of some of the foreign countries which are the greatest producers of agricultural products:

Normal and present value of currency in the following foreign countries:

Country.	Normal value.	Present value.	Percentage of depreciation.
	Cents.		*Per cent.*
Russia (rubles)	51.46	$\frac{1}{10}$ of cent for 100 rubles.	99
Germany (marks)	23.8	$\frac{1}{4}$ cent	98
Austria (crown)	20.3	$\frac{1}{10}$ cent	99
Poland (mark)	23.8	$\frac{1}{10}$ cent	99
Belgium (franc)	19.3	8$\frac{1}{2}$ cents	50
France (franc)	19.3	9$\frac{1}{2}$ cents	50
Rumania (leu)	19.3	$\frac{3}{4}$ cent	98
Italy (lira)	19.3	5$\frac{1}{2}$ cents	75
Czechoslovakia (crown)	20.3	2 cents	90

THE FLEXIBLE TARIFF.

Prices are so fluctuating, values so changing, costs so shifting, and the rates of exchange so varying that it is not possible exactly to measure the difference in production costs in competing countries. We have striven for months and months of the most exacting labor thus to formulate a bill, but despite all our efforts mistakes have been made and errors have been committed. We have been compelled to change many rates from the time we began, owing to shifting values, and therefore, in order to make the tariff as flexible as possible, we have incorporated a provision empowering the President upon a showing made by any industry that foreign competition is about to endanger its existence to raise the rate as much as 50 per cent over the one provided in the bill. Because of chaotic conditions in commerce and industry around the world the tariff formulated now, but for this saving provision, would not adequately measure the difference in production costs for any great period of time, and even with this incorporated, in my judgment, it will be necessary again to revise the tariff at no distant date as conditions in Europe change in order that we may adequately protect American industry without at the same time affording a shelter for American monopoly.

WAR INDUSTRIES.

No more striking or convincing argument for a tariff ever can be made than that afforded by the war, which absolutely prohibited many articles of import and furnished a complete embargo against them. Take, for instance, the dye industry. Many efforts had been made to establish it theretofore, but always in vain. The textile manufacturers fought it because they did not want to add to the cost of their raw material, saying that if they did they could not so well compete in the markets of the world with those who got their dyestuffs at a lower price. But when the war came on it became a matter of sheer necessity and the result is simply astounding. Two hundred million dollars have been expended in the dye industry, and 90 per cent of all the dyes we consume in the United States are made in the United States and large quantities exported, while the great organic synthetic chemical industry is now on a sound footing in America, with all the vast consequences that statement implies.

I can name over 100 articles, most of them chemicals, now being produced in the United States in large quantities, not one dollar's worth of which was made here before the war. Necessity compelled their production, and the war furnished ample protection against imports from abroad. A sufficiently high protective tariff would have done precisely the same thing at any time, but the opponents of the tariff system would have rent the air with their wails and filled the newspapers with their calamity pronouncements and public sentiment would have been lashed into a foam against the establishment of these projects.

And yet our history conclusively shows that many of our greatest industries were thus established and never could have been even started in America but for the operation of an adequate protective tariff.

The steel-rail industry, earthenware and crockery, chinaware, tin plate, a portion of our wool manufactures, and many others too numerous to mention within the limits of a speech, all were established because of the tariff, and not one dollar's worth of any of those goods could have been made in this country to-day but for such a system.

And the remarkable thing is that, with these instances being brought before us in such indisputable fashion, there are numbers of persons in Congress and larger numbers out who to-day are doing everything within their power to take the tariff off of these articles and literally make it impossible to produce them in the United States against present foreign competition, and a few Democrats in the Senate are conducting a most unseemly filibuster against the present bill in order to prevent any tariff from being placed on those articles, the production of which began in the United States behind an embargo afforded by the war.

Before that conflict they were not made here; the war gave ample protection, and the Democrats are now seeking to take away that protection, and if they succeed, it inevitably will mean the destruction of those industries in America and the purchase of those articles abroad once more.

Why any American should take a position of that kind is past my comprehension and entirely outside the boundary lines of my conception.

THE OLD CRY.

Every time a tariff bill has been passed in the history of the country its opponents have always said that it would shrivel up our foreign commerce, that we could not sell abroad unless we bought abroad, and that we could not buy abroad because of the tariff wall that was being erected.

From 1812 down to the present time there has been an endless repetition of this cry about the "tariff wall" and a remorseless reiteration of the charge that the tariff then being enacted would destroy our foreign commerce. Never were such charges made with such relentless force and such unmitigated vehemence as when the Dingley law was enacted, the highest law in all our history. It was incessantly dinned into our ears by day and by night that those high rates would absolutely shut off all imports, that people would not buy of us because they could not sell to us, and that our foreign commerce would be dried up and our foreign business destroyed. Protectionists paid no attention to these charges and went right on with the passage of the law. And with what result? Let just a few of the figures speak for themselves.

In 1897, the first year of the operation of this law, our exports amounted to $1,099,000,000, and they steadily mounted upward until in 1909, the last year of its life, they stood at $1,752,000,000, or an increase of well-nigh $700,000,000 in exports, contrary to the prophecies and predictions of every opponent of that measure.

And in the meantime, what of our imports? For these gentlemen were asserting then, as now and always, that this high tariff prevented other people from selling to us and that for that reason they would not buy of us.

In 1897 our total imports amounted to $742,595,000, while in 1908 they had climbed up to $1,116,000,000, or an increase of almost $400,000,000 in what we bought abroad; and, be it remembered, the Dingley law was higher in its average rates than either the Payne-Aldrich or the one we are now considering in the Senate.

This same charge was made about the Payne-Aldrich bill, and with the same degree of truthfulness. The figures show that in 1908 our total exports, as above stated, were $1,752,000,000 in value and that in 1913, the last year of the operation of this law, they had risen to $2,484,000,000, or an increase of almost $700,000,000 in our exports under this much-defamed act. In the meantime our imports had risen from $1,116,000,000 to $1,792,000,000, an increase of $776,000,000 in what we bought abroad. So that these charges that are now being repeated with such feigned emphasis fade into thin air when the light of truth is thrown upon them. They are now being made by the same people in the same language and for the same purpose and will be met with the same results.

We do not put a tariff on anything going out of the country. People can buy from us when they want to buy, and they can buy without restriction or limitation. Foreign nations do not buy of us because they love us but because they are compelled to, because there is no place else to go to get what they want, and if all our factories are fully operating they can get what they want here a little better then they can get it anywhere else on earth.

This has been proved over and over again, so that, despite cheaper labor and lower production costs, we constantly have sold the products of our factories right in the teeth of that competition all around the world.

In spite of these inventors of woe and these purveyors of calamity and these prophets of evil, during all of these years we have made the most marvelous progress of any nation in all the history of nations, and every day of that progress was made partially because of the protective-tariff system, and the only times this march of progress has been interrupted were when the American people temporarily forgot themselves and placed the Democratic Party in power to try its free-trade policy. Thus does history speak and thus should we learn the wisdom of the lesson she teaches.

And in passing it may be somewhat instructive to remember that England, France, and Italy have passed laws putting a very strict embargo on German dyes and positively preventing their admission into those countries, while England has also placed prohibitive tariffs on the imports that affect her five key industries. So that this one free-trade nation, while still urging that policy upon us, proceeds to protect herself in the very same manner in which we have always protected our country from her and from all other countries. And so, while still doing her level best to force her medicine down our throats, she very gracefully but nevertheless forcefully declines to take it herself.

EUROPEAN CONDITIONS.

We can not hope for much help from Europe. Unfortunately, those nations will continue to grope in darkness and flounder in the quicksands until her people forget wars and national jealousies and racial rivalries and ancient grudges, and turn their attention to industry, thrift, prosperity, and the well-being of their nationals. Unhappily, they are far from this fortunate condition to-day. There is at hand no evidence that, until within the last few weeks, any attempt had been made to reduce the number of civil officers by any of the debtor States of Europe, and the number of such reductions up to date have been few and inconsequential. Apparently they do not intend to disband their armies. The following table shows the armaments maintained by seven of the continental States at the present time:

	Men.
Belgium	115,000
Yugoslavia	140,000
Czechoslovakia	150,000
Rumania	190,000
Italy	250,000
Poland	290,000
France	750,000

So that to-day 2,000,000 soldiers are encamped round about the capital of the League of Nations devoted to peace and brotherly love. This recital dispels all hope of their ever being able to reduce expenses, to live within their incomes, to cease warring among themselves, or to live in peace with their neighbors, unless they change their mental attitude toward one another and think in terms of peace

rather than in terms of war, of construction instead of destruction, and substitute confidence and trust for hatred and revenge.

It ill becomes us to dictate the policies of other nations because we do not like for them to determine what course we shall pursue, but, inasmuch as these peoples owe us large sums of money, it may not be inappropriate for us to suggest that they should reduce armaments and disband armies and utilize the sums thus expended for the payment of their debts. We have reduced ours and are living within our income—why should they not do the same?

There is no royal road out of these conditions; no primrose path of dalliance points the way from these conditions; nothing but the old-fashioned virtues of working and saving will rescue these people from present disaster and from future collapse.

OUR FOREIGN DEBTS.

Congress has passed and the President has approved a law creating a commission to fund our foreign indebtedness. This at the present time amounts to more than $11,000,000,000, and is distributed among the debtor nations as follows:

Statement showing obligations of foreign Governments and so-called Governments held by the United States (including those held by United States Grain Corporation), interest accrued and unpaid thereon up to and including the last interest period, and interest heretofore paid.

Country.	Principal amount of obligations.	Interest accrued and unpaid up to and including the last interest period.	Total indebtedness.	Interest heretofore paid.
Armenia	$11,959,917.49	$1,177,548.63	$13,137,466.12	.....
Austria	24,055,708.92	2,165,013.81	26,220,722.73	.....
Belgium	377,564,298.77	51,391,987.94	428,956,286.71	$14,394,347.48
Cuba	8,147,000.00	.....	8,147,000.00	1,656,058.14
Czechoslovakia	91,169,834.29	11,936,591.38	103,106,425.67	304,178.09
Esthonia	13,999,145.60	1,695,002.82	15,694,148.42	.....

Serbia	51,153,160.21	6,719,035.42	57,872,195.63	636,059.14
Total	10,102,429,990.23	1,414,953,069.26	11,456,383,059.49	493,006,089.28

[1] Includes $61,000,000 of British obligations which were given for Pittman silver advances and for which an agreement for payment has been made.

Cuba pays interest as it becomes due.

No interest due on Nicaraguan notes until maturity as is also the case with certain Belgian obligations aggregating $2,284,151.40.

May 15, 1922.

Foreign propagandists and some of our own internationalists have stealthily spread the idea throughout the country that those debts should be canceled, and, as usual, when they want to get anything out of us they appeal to the idealistic and the sentimental in our natures to bolster up their cause. Fellow citizens, speaking for myself, I am unalterably opposed to forgiving one dollar of those debts. I believe in collecting them in full at the very earliest possible date, and, as we say in a note, "without relief from valuation or appraisement laws." There is only one condition on which I would consent to their cancellation, and that is that if the situation were to be such that we would be compelled to buy enough goods from European nations to enable them to pay off their indebtedness to us then and in that event I might be induced to vote to forgive the debt, for I would much rather pursue that course than to close our factories and throw our laboring people out of employment and discourage our business men and thus prevent the return of prosperity. Under no other condition shall I ever consent to a cancellation of one penny of that debt.

Be it said to the credit of England that she is ready to fund her indebtedness to us and to pay her interest, and the representatives of France will shortly start to this country to propose terms of payment. Of course we must wait on the other nations until they are ready to discharge their obligations without impairing their own credit, but within those limitations we should insist on the payment of every cent.

It now appears that no nation but England will try to pay even the interest for a long period of time, and it is quite evident that unless they change their entire fiscal policy they will not be able to do so, for the annual interest charge is a very considerable sum, and therefore, for purely selfish reasons, if for no other, we should employ all the arts of persuasion to induce them to abandon their present wasteful and destructive methods and turn to the varied arts of peace.

THE RAILROADS.

Ladies and gentlemen, without unduly prolonging these remarks I can not go into such a discussion of the railroad question as its merit warrants. Briefly it may be stated under three heads—wages, operating expenses, dividends. As to the first, permit me to say that Congress passed the Adamson law the 1st day of January, 1917, and that at that time the total pay roll of all the railroads was $1,468,576,394.

The Government took over the lines on January 3, 1918, and released them on March 1, 1920, a period of 26 months. The Railroad Labor Board increased wages slightly shortly thereafter, so that for the remaining eight months of that year the pay roll amounted to $3,698,216,351, or an increase in wages alone—salaries constituting but a negligible percentage of the sum—of $2,229,639,957, or 85 per cent.

Since that time they were reduced to $2,800,896,614 for 1921, so that the increase over 1916 totals $1,331,320,220.

As to the second item, the operating expenses for 1916 amounted to $2,357,398,412, and for 1920 to $5,768,720,013, or approximately 120 per cent higher. They have since been reduced to $4,591,479,241, so that they are still $2,240,081,829 higher than in 1916. Of this increase, as stated above, $1,331,320,220 results from increased pay rolls, and the remaining $908,761,609 is attributable to increased prices of rails and engines and cars and all equipment and as well the added cost of coal.

Fellow citizens, before there can be a complete return of prosperity in the United States railroad rates must be reduced, and before railroad rates can be reduced there must be a further reduction in railroad wages. Transportation charges absorb altogether too much of the value of the product transported, and the railroad laborer himself feels the effect of it in added costs of living.

Railroad wages will not and should not return to pre-war levels, but rearrangements and reclassifications will enable the roads to pay their skilled operators as much and their unskilled less and yet lose nothing in efficiency and at the same time save in cost of operation.

In the year that railroad labor received over $3,500,000,000 in wages all the stockholders together received $20,000,000 in dividends, and while that sum has risen to over 5 per cent over the whole country and to almost 7 per cent in the Eastern States, nevertheless it is quite evident that private capital will not seek investment in railroad securities without some assurance of a fair return on the investment, a condition they have the right to expect.

Eminent students of railroad problems recently have asserted, what we all know, that the growth of the country calls for the immediate investment of hundreds of millions of dollars to meet the imperative and constantly increasing transportation needs of the public. It has been placed by these students at practically $1,000,000,000 a year for many years to come, and the estimates of the railroads themselves is in excess of $850,000,000 of new capital each year.

In other words, there must be invested for new and added railroad facilities every day an average of two and one-third to two and three-fourths millions of dollars—that is, new investment.

And many authorities on the subject not connected with railroad operation recently have informed the Interstate Commerce Commission that if this flow of capital can not be directed toward railroad investment and a business revival carries the volume of traffic back to the 1920 level we are sure to be brought face to face with the strangulation of our prosperity by the soaring prices that go with car shortage.

A number of railroads in the United States in 1920–21 did not pay their operating expenses, and only a few carried dividend-paying stocks. Under these conditions where is this necessary capital to come from? There are just two sources, for, obviously enough, we can not and we should not pay freight rates and fares high enough to raise it and add it to the wealth of the railroads. There are just two sources—it must come from the investor or out of the Public Treasury. It seems to be very well understood among the people that the Treasury has about all the burdens it can carry and that they do not intend by taxation to keep up the railroads; and, therefore, in order to enable these great transportation lines profitably to carry the commerce of the country at a reasonable profit to its producers, to pay fair American wages to the operators, and give decent returns to the investor, there must be a further reduction in railroad rates, preceded by or accompanied with a further reduction in railroad wages. There is no other way out of the difficulty, for in order to obtain this money from investors the railroads must have stability, for stability is the basis of all credit.

REDUCTIONS MADE.

Beginning with the first of the year, two very material reductions in transportation costs were made. Congress repealed the transportation tax, which amounted approximately to $200,000,000 in 1920 and $185,000,000 in 1921, and to that extent relieved the situation. Following this, on January 1, this year, the railroads voluntarily lopped off 10 per cent on practically all the products of the soil, which was immediately reflected in the price of those products. And it is worthy of notice that in reducing rates particular attention has been given by the Interstate Commerce Commission to the products of the farm, garden, orchard, and ranch. All rates on these commodities in the raw state, and on some partially manufactured, were reduced in part. Among those affected are fruits and vegetables of all kinds, live stock, grain and grain products of all kinds, hay and straw, butter, eggs, and cheese, live poultry, and wool. There have been other important reductions in freight rates in large sums since the general increase of 1920 was forced upon us by the maladministration of the railroads under Government control.

Based on the light tonnage of 1921, the reductions in the aggregate amount to $186,700,000 per annum. Based on the more normal tonnage of the year 1920, the reduction would stand at $224,000,000 a year. Add it to the amount saved by repeal of the transportation tax and we have a reduction of $425,000,000 in transportation costs, which is of great significance to the country, for, even if the traffic moves in no greater volume than in 1921, the saving will be more than $360,000,000, or $1,000,000 a day.

I can say to you with something of assurance that another reduction in rates is imminent, in fact, is likely to occur at almost any time; but we must always bear in mind that no new railroads have been built in the country for many years, that it is not possible with present returns to pay for improvements out of earnings, that there are some portions of the country that are entitled to transportation facilities that do not have them, while there is a tremendous pressure for additional trackage in all populated States and for enlarged and improved terminal facilities. All of these things must be borne in mind in connection with the railroad problem, and therefore I exhort you to be patient until they can be worked out in accordance with the best interests of all concerned.

I preach to-day a gospel of hope and not one of despair. Business is reviving, conditions are improving, we are on the upgrade, and all we need to do is to take a tight hold on ourselves, look well to individual industry, thrift, and economy, and not blame all the ills of the body politic on the administration or the Government, and undoubtedly we shall very soon find ourselves in the old enviable place we have so long occupied among the people of the earth.

OUR SHIPPING INTERESTS.

The previous Democratic administration expended in the construction of ships and facilities for their erection $3,500,000,000. As a result of this vast expenditure approximately 1,500 steel ships were completed and 285 wooden ships. Scarcely a single one of the ships constructed by the Democratic Shipping Board was actually put in use, or was ready for use, during the war. Only a few which already had been building in private yards for private companies, and which were commandeered by the Government, were available for service in that conflict. Waste and extravagance of every conceivable kind was the order

of the day. Utopian ideas, utterly impracticable, academic theories, and impossible plans resulted in the waste of hundreds of millions of dollars. Tens of millions were spent in the construction of model and luxurious homes for workmen in the vicinity of shipbuilding plants that, of necessity, were intended to be but temporary. Likewise churches, hotels, moving-picture theaters, athletic parks—all out of the taxpayers' money, and as a result of the dreaming of some theorist.

THE SITUATION DESCRIBED.

The fleet itself was poorly balanced. The wooden ships, on which over $300,000,000 was expended, are utterly worthless. The Government will be fortunate, indeed, if it realizes $1,000,000 from their sale. Of the steel fleet, the chairman of the Shipping Board has stated that one-half is good and serviceable. Of the other half a large percentage probably will have to share the fate of the wooden ships. No consistent, intelligent plans for the after-war use of the ships were followed in the construction or design of the fleet. As a result, there were only a handful of combined passenger and cargo ships constructed, a type of vessel which is now in great demand throughout the world, and far too many cargo boats with which the world market has been glutted. In making contracts for the construction of these ships the Democratic board wholly neglected to insert clauses in the construction contract providing for their cancellation at the end of the war. Upon the coming of the armistice the old Shipping Board canceled contracts for the construction of 950 ships, leading in each case to a multiplicity of damage suits and claims by reason of their action. But if the extravagance, incompetency, and inefficiency in the construction of the Government-owned fleet may in part be excused by the war exigency, the post-war operations of the fleet can in no sense be thus explained. When the new Republican chairman of the Shipping Board, Mr. Lasker, took office he found, to quote his language, that "he had taken hold of the greatest commercial wreck in the history of the world." Two years' operation of the fleet by the Democratic administration had left a situation of utter chaos and confusion. The very first and most elementary principles of business had been utterly and completely ignored. No books were in existence from which accurate records could be compiled showing the business operation of the fleet. No statements of its assets or liabilities were on hand, or could be obtained without a complete reorganization of the whole Shipping Board. No inventory was on file to show the properties belonging to the Shipping Board and the Emergency Fleet Corporation. Yet a vast army of superfluous employees was drawing pay from the Government for no adequate service.

DEMOCRATIC MANAGEMENT.

When the present Shipping Board went into office there were 8,300 employees with an annual pay roll of $16,000,000. Immediately the ships were completed "Democratize the American Merchant Marine" became the political slogan of the Democratic Shipping Board. Ships were turned over for operation at the Government's expense to all persons with sufficient political backing. Theatrical costumers and members of the learned professions were intrusted with the operation of the Government-owned ships at the taxpayers' expense. The only persons disqualified were those who had actual shipping and operating experience. The boats were turned over to the operators under the terms of the now famous MO–4 agreement. By its terms the operator received 5 per cent of the gross freight receipts of the ship, while the Government paid the entire expense and all the losses of operation. Under those conditions abuses of every kind naturally crept into the operation of the ships. Operators had an eye only for the 5 per cent commission which they could collect from the Government. Little they cared how much the Government lost in operation. One sea captain, having steamed 1,600 miles from the port of Manila, was called back by radio to take on a cargo of 500 tons of coal, and on which the operator got a commission of a few hundred dollars. To steam the additional 3,200 miles necessary for the boat to get back to Manila and return lost the Fleet Corporation many thousands of dollars. Little the operator cared inasmuch as he got his commission. Living on board the ships was high. One instance is on record where the captain of one of our cargo ships, to relieve the boredom of his crew and to make them forget the cold weather of the northern seas, served fresh strawberries to his crew on Christmas Day. The per diem expense of feeding the crews in some instances ran as high as $6 per day per man. Rates for stevedoring paid by operators mounted sky high, the stevedoring being in many cases done by subsidiary companies owned and controlled by the operators themselves. The cost of supplies, paint, and repairs mounted into fabulous figures, and usually this work was done by subsidiary companies owned or controlled by operators. In another case an irresponsible operator booked one of the Shipping Board boats with freight from a South American port bound for the States, collected the advance freight and disappeared, leaving the Shipping Board to bring back the ship and cargo to port at great expense.

MORE EVIDENCE OF FAILURE.

In another case the Shipping Board allocated to an operator, the United States Mail Line, the cream of its passenger boats, those taken from the German Government, the *George Washington*, the *America*, the *President Grant*, the *Agamemnon*, worth in the neighborhood of $20,000,000. The United States Mail Line claimed to have $10,000,000 of capital and agreed to recondition the boats chartered to it at an expense to itself of $10,000,000. In fact the United States Mail Co. was organized with an alleged capital of $1,000,000, yet not one dollar was ever paid into the company. Uncashed checks and worthless stock in fake companies were turned in to the treasury of the company to represent the paid-in capital. The managers of the line in order to keep one step ahead of the sheriff sold advance passenger tickets to helpless, ignorant immigrants in Europe and collected from them their railroad fares to carry them to interior parts of the United States to the extent of $1,200,000, so that when the company failed, as it inevitably was bound to do, the Shipping Board, in order to protect the credit of the United States Government in Europe and to prevent untold hardship on the innocent and defrauded immigrants, was obliged to refund and to make good such passenger money. The boats of the United States Mail Line were libeled in Europe and in the United States for the tremendous debts incurred by that company. Before the present Shipping Board could regain possession of the boats, free and clear of all indebtedness and obligations to immigrants, it was obliged to spend in excess of $5,000,000.

In another instance the Shipping Board sold $7,000,000 of cargo vessels to a purchaser without receiving one cent of money for the purchase price, but merely an obligation to pay therefor over a period of years. The purchaser moved the vessels to a shipyard for the purpose of having them converted into oil tankers. After more than a million dollars of obligations had been incurred to the shipyard in this work, the purchaser was unable to pay the cost of the conversion and the shipyard is now claiming damages against the ships of a million dollars before they can be returned to the Shipping Board, although the Shipping Board has scores of tankers lying idle. Again, through the influence of persons high in the administration of President Wilson, Charles W. Morse and his associates secured a contract for the erection and construction of ships at a cost exceeding $45,000,000, with a result that Charles W. Morse and his associates are now under indictment for having defrauded the United States Government out of vast sums of money.

WORTHLESS ORGANIZATION.

In the auditing department there was chaos unimaginable. Although there were some 3,500 auditors in the accounting department, out of 9,000 trip voyages, 6,000 remained unaudited, so that it was utterly impossible to ascertain what money was due from the ship operators. There was no system of bookkeeping, no method of accounting. It was impossible to tell how much money was owing to any one of the creditors of the Shipping Board, and how much was owing from them. There was no place where the debts of the Shipping Board were listed, nor was there even a record made of them. In one case one of the large corporations of the country asked to settle its accounts with the Shipping Board. In order to meet their demand it was necessary to examine 210 ledgers and books of accounts and to seek information in many different cities. After this exhaustive examination it appeared that the Shipping Board owed $3,500,000 to the corporation in question. Before making final settlement, however, the present Shipping Board asked permission to put its auditors on the books of the creditor company. After an examination lasting for weeks they discovered that that corporation owed the Shipping Board $4,250,000, about which there could be no dispute. This sum did not appear anywhere on the books of the Shipping Board. None of the items in question were in dispute, and the corporation finally acknowledged and paid to the present Shipping Board the sum of $725,000 in cash, and the indebtedness of the Shipping Board of $3,500,000 to it has been wiped out. Even to-day, after a year of the most intensive investigation and study, debts of the Shipping Board are coming to light daily, which appear nowhere on any of its books or records, and assets are being discovered of which no one ever knew.

CONFUSION WORSE CONFOUNDED.

There was no effort and no organization to liquidate or sell the assets of the corporation. No thought on the part of anybody in authority to ascertain what was the financial condition of the Shipping Board. There was no legal department worthy of the name. Ships worth millions of dollars were sold for practically no cash down and with agreements on the part of the purchasers to give mortgages to the Shipping Board. Yet in many cases the mortgages were never executed at all.

In one instance the Government ordered boats and plant to be built by a dishonest contractor to an extent of over $65,000,000, and yet not a scratch of a pen could be found to show what were the contractual relations between the Shipping Board and the shipbuilder. In addition there were some 3,500 lawsuits and claims against the Shipping Board scattered through the courts of the United States from the Atlantic to the Pacific and from the Gulf to Canada, aggregating over $300,000,000.

The losses to the Government from operations when the Republican Shipping Board took office were running at the rate of $16,000,000 a month. When the President appointed Chairman Lasker, the latter, realizing the horrible condition of affairs and further realizing that shipping was a business competing not only with private owners in America but also with the best shipping brains of Great Britain, Germany, Japan, and other maritime nations, decided that it was necessary, first, to secure the best shipping men available and to build a competent and efficient organization which could bring order out of the tangled affairs of the board. He secured the services of some of the ablest shipping experts in the country, who immediately proceeded to attempt to put method, system, and business experience in the operations of the Shipping Board. First, he had an inventory made of all the property of the Shipping Board, a simple task to speak about, a most difficult undertaking in fact. The property of the Shipping Board was located in 750 places in the United States and at 100 points in 35 different foreign countries. At Hog Island alone there are 927 acres of land, 103 acres of building floor space, 82 miles of railroad tracks, 23 miles of road and sidewalks, 11 miles of fences, 570 miles of electric wires, and 56 miles of water and sewer pipes. There was surplus material stored in 26 different buildings.

The work of taking an inventory of Hog Island alone involved a physical count of material and supplies of 125,000 different characters comprising millions of units. The first inventory report of Hog Island consisted of 11,000 typewritten sheets and the total inventory of the property of the Shipping Board numbered in all 25,000 typewritten sheets containing about 400,000 extensions. The inventory showed operating material and supplies, construction material and equipment, shipyards and their adjuncts, and other property which had cost $389,780,250.31, and which had a forced-sale value of $31,065,253.92.

LASKER'S BUSINESS METHODS.

Next the chairman set about getting a correct balance sheet, or as nearly so as could be obtained, in view of the fact that nowhere were all the debts and liabilities of the Shipping Board actually shown. The books of the old Shipping Board disclosed that it had assets exclusive of its fleet worth $66,931,000. The first balance sheet actually prepared on business principles showed that that sum was at least $360,873,075.83 more than the actual value of the assets, and even the later figure has since been revised downward by a very large amount. This overvaluation of assets was due to a variety of reasons. In one instance the Shipping Board had erected additional shipways and additional plate and angle shops and appurtenant equipment and facilities at an expenditure of approximately $17,000,000. These facilities were valued in the accounts of the Shipping Board at cost—$17,000,000—and were carried by the old board as property having a value of $17,000,000. In seeking to determine the valuation of this plant, it was discovered that agreements had been entered into between the old Shipping Board and the contractor under which the Shipping Board had transferred all of this property to the contractor in return for which the contractor was to pay to the Shipping Board 50 per cent of the net earnings of the property during a period of 10 years. In other words, the Shipping Board had parted with its rights in this property for a share of future earnings. Inasmuch as the plant in question, after losing a great deal of money, had shut

down and was practically dismantled, the equity of the Shipping Board under the new inventory and appraisal was set down at a nominal value in the new balance sheet and $17,000,000 had to be written off the property account.

In another case the Shipping Board had constructed at the yard of a contractor certain shipbuilding equipment and facilities at an approximate cost of $16,000,000. The Shipping Board had sold the plant to the contractor under a form of lease-sale agreement. By the terms of that agreement the contractor was obligated to pay a certain annual amount of lease rental upon this property, and, at the termination of the specified number of years, when the lease rentals would have accumulated to $5,000,000, the Shipping Board would apply such rental as payment of the purchase price of the plant and transfer title to the contractor. This plant was carried in the accounts of the old Shipping Board at its original cost—$16,000,000—notwithstanding that the lease rental payment already made by the contractor aggregated $3,250,000. The Shipping Board's equity in that property was, therefore, $1,750,000 and not $16,000,000.

The new balance sheet prepared by Chairman Lasker showed that the Shipping Board had actual current liabilities outstanding at $71,460,134.50. This, however, did not include any amounts for claims or lawsuits aggregating $300,000,000. Notwithstanding the fact that hundreds and hundreds of employees were let out by the auditing department, the chairman installed a system of accounts whereby, as in any well-run, large corporation, monthly statements of revenue and outgo were furnished promptly to the Shipping Board with consistent regularity.

The Jones Act provides that the Shipping Board shall build up and maintain essential trade routes necessary to the American overseas commerce. A careful study was made of such routes. It was recognized by the new board that in order to develop an American merchant marine it was necessary that American ships be efficiently run, efficiently manned; that they leave the ports on the dates advertised; that they furnish a regular service; that due and proper care be used in loading and unloading. The trade routes to the Far East, China, and Japan were developed and built up. A service to South America was promoted, established, and developed. For the first time it was unnecessary for an American citizen wishing to go to South America to sail from New York to London and from London to South America.

Some of the finest combination passenger and cargo boats of the American fleet were put into a direct service from the United States to South America, beating all records as to time. To-day the Shipping Board boasts that the service given by its boats equals that of any private shipping company in the world. But in the upbuilding of these routes and of this service it is in the nature of things necessary, with the present depression in shipping, that large losses be incurred.

The new Shipping Board immediately instituted a policy of tying up all Shipping Board ships which were not operating on essential trade routes or helping to develop the foreign commerce of the United States. By efficient and competent supervision it has cut out most of the abuses of the old system. Each ship operator is allowed a per diem charge of 80 cents per man for sustenance. No operator is allowed a sum larger than that. Fixed rates have been established for stevedoring charges. Prices paid for supplies have been carefully supervised and standardized. Repair and restoration costs have been cut down to such an extent that a monthly saving of as high as several hundred thousand dollars has been effected.

As an example of the economies instituted, the Shipping Board has some 1,000 vessels laid up. Under the previous administration the average annual lay-up cost per vessel, including all wages and all incidental expenses, was $12,233. This has been cut by the new Shipping Board to the average annual expense of $5,013.12 per ship. Based on 1,029 vessels laid up, this shows an annual reduction of $7,429,421.16.

The Claims Commission was organized to adjust the claims against the Shipping Board and a competent force of attorneys employed to defend them. They have been hampered in their work by the fact that in innumerable cases there are no accurate records available, no correct audits made, no property inventories taken in the hundreds of plants where ships were being constructed and material manufactured. It is still necessary to keep a large number of auditors, engineers, and accountants to continue this herculean task. In spite of this fact, the number of employees of the Shipping Board in one year has been reduced from 8,300 to 5,000, and it is predicted by the chairman that by January 1, 1923, a large part of the work of auditing and checking the claims will have been completed and the great bulk of the surplus material owned by the Shipping Board will have been sold, by which time a further drastic cut can be made in the administrative and overhead expense and the number of employees greatly reduced.

MORE ECONOMY.

In spite of the fact that the past year has seen the greatest depression in shipping that the world has ever known, the monthly losses of the Shipping Board have been cut from an average of $16,000,000 to $4,000,000, and yet not one single trade route has been abandoned. The new Shipping Board organized a sales liquidation and collection department which has proceeded in dead earnest to liquidate the assets of the Shipping Board. It has made progress to such a remarkable extent that it has collected in the past year the sum of approximately $70,000,000, and all in all it can be predicted with every assurance of fulfillment that on the 1st day of July the Shipping Board will be entirely out of debt with every one of its obligations discharged save alone those arising out of claims and lawsuits which it will take time to adjust. The countless number of business men who in good faith had furnished supplies, merchandise, and credits to the Shipping Board will on that date have been paid to the last dollar. It is the confident prediction of Chairman Lasker that by the 1st of January, 1923, except for its fleet of vessels and the construction claims and lawsuits against it, the affairs of the Shipping Board will have been completely liquidated—an unbelievable task accomplished only through the tremendous ability, energy, and untiring work of Chairman Lasker and his able assistants, backed by the determination of the President and Congress to push it through to successful conclusion.

President Harding recently has recommended to Congress a ship subsidy measure which I hope will pass. We can not dispose of these vessels to private operators until we fix a government policy, and that government policy must put them on an even plane with foreign competitors in mercantile operation. There is not a shipping man or corporation in America that would take one of these vessels to-day as a gift if he were compelled to operate it and pay all the expenses of the operation for three months. He simply could not do it and meet European competition.

A ship subsidy is the only plan that will enable him to do it. I have advocated this policy for 25 years; I have been vilified and traduced for it, but I have been right every minute of that time. There is no other plan and there is no other policy by which the problem can be solved, and the sooner we come to it the better off we will be in every respect.

DEMOCRATIC CHARGES.

And yet in the face of all these triumphant achievements, of which I have given an all too hasty review, members of the Democratic Party are everywhere vociferating that this is a do-nothing Congress and has accomplished nothing worth while. Having some knowledge of the record of past Congresses for 30 years, and measuring the value of my words, I assert with all due solemnity, and without fear of successful contradiction from any quarter, that no Congress in the history of the Nation in a time of peace ever enacted more helpful and constructive legislation than the one now sitting in Washington.

There was so much to do when we took charge that it appears as if no great things have been done, but in the light of the evidence that can be adduced and in view of the results of the laws thus far enacted, who will rise to repeat, except for rank partisan purposes, that this is a do-nothing Congress?

Who will say that we have been remiss in the discharge of our obligations to the people? Who dare assert that we have failed to fulfill our promises to the people and to redeem the pledges made in the last campaign?

Even if this charge were true, it is better to do nothing than always to do wrong. It is better to sit still than to move only to destroy. It is better to have one's fingers paralyzed than to use strong ones to write checks with no funds to pay, sign warrants with no cash to meet them, and issue bonds with no method provided for their redemption. Better, altogether better, Republican watchful indifference than a debt-incurring, deficit-creating, bond-issuing, surplus-scattering, factory-closing, industry-paralyzing, prosperity-destroying, social-upheaving, cataclysm-producing Democratic administration.

They boldly assert that we have not given relief to the country. Relief from what, pray? Manifestly from the results of two Democratic administrations, for there is nothing else to be relieved from. My friends, we did not produce all of this wreckage. We are not responsible for all this waste. We did not incur these debts. We have not piled up this mountain of obligations, and these gentlemen who are responsible for all this riotous orgy of extravagance and all this upsetting of industry and unsettling of financial conditions now stand by to jeer at us because in 14 months we have not overcome all the evil they produced in eight years.

It is as if a mob marched through a town and dynamited and ravaged and plundered and destroyed, and then, when law and order had been restored and an honest effort was being made by the property holders to gather up the fragments and to begin the reconstruction of their destroyed and ruined property, the members of the mob should stand by and jeer at them and scoff at them and interfere with them because they were not able in a few days to build up all that the mob had thus riotously ruined.

Anybody can throw a monkey wrench into a machine that works with frictionless precision and so damage it that it will take a skillful mechanic a long time to repair it, and even tyros in government in an incredibly short space of time can create more difficulties and stir up more strifes and cause more troubles than wise men can overcome in many years.

Fellow citizens, we have not yet accomplished all that we set out to do. We have not cured all the ills and corrected all the mistakes and overcome all the evils of eight years of Democratic misrule; but certainly we have taken long strides in the right direction, and assuredly if the Republican Party can not readjust matters what hope is there in turning to the organization that caused all this disaster in the beginning?

It is either the Republican Party with its cautious and constructive way of proceeding or the Democratic Party over again with all that that means of incompetency and inefficiency and misrule.

Think of a party led by the Josephus Danielses and the Newton D. Bakers and the Albert Burlesons and the William Gibbs McAdoos pointing the way to sane legislation and wise construction! No; it is the party you so nobly represent and the one that always has risen to solve every problem thrust upon it that must be trusted in this most emergent condition in the history of the world. Those who produced the wreck should not be given charge of the rebuilding program; to those who wrought all the destruction should not be committed the program of rehabilitation. The Republican Party may not build rapidly, but it will build wisely and solidly and for all future time, and to its hands alone may safely be committed the reconstruction and realignment of the shattered forces of the Republic.

EXECUTIVE ACTIVITY.

And while Congress has been unremittingly engaged in the enactment of this wise and constructive legislation the executive departments of the Government have not been idle. It is not necessary to dwell at length upon their achievements, because they are so notable that they have elicited the applause not only of the Nation but of the entire world. It is characteristic of President Harding that one of his earliest acts bearing upon domestic questions was to summon to Washington representatives of business enterprises, of labor, and of the general public to consider the problem of unemployment. The President and his Cabinet were and are exceedingly anxious to see work and wages provided for every American toiler, and the solution of this vexed question is one close to the heart of this administration. And it is a cause of congratulation that, as a result of the deliberations of this conference, over 1,000,000 men were put to work in gainful occupations. And the Labor Department reports that employment throughout the country has now reached 80 per cent of normal, which is vital evidence of the revival of industry, and which, of course, brings pleasure to every patriotic heart.

Through the instrumentality of Hon. James J. Davis, Secretary of Labor, whom we all greatly admire and respect as a former Hoosier, the department under him has used its good offices from March 4, 1921, to May 15, 1922, in 471 industrial disputes, strikes, threatened strikes, and lockouts. Of this number 325 cases were satisfactorily adjusted, 53 cases were settled by commissioners in cooperation with State boards and mayors' committees or other local agencies, 34 cases are pending in the process of adjustment, and failure has been recorded in only 59 disputes. The number of workers directly and indirectly involved in these cases aggregate in excess of 1,400,000, a most gratifying showing for our honored friend and his department.

FOREIGN POLICY.

When President Harding was inaugurated, he found our relations with many foreign Governments in an unsettled and an unsatisfactory state. Our attitude toward Mexico was undefined. This since has definitely been stated by Secretary Hughes, who, in fixed terms, gave

the President of Mexico to understand that he must first enter into a treaty guaranteeing American rights and protecting American life and property before this Government would consent to formal recognition of his Government, and steps are now under way to settle this difficulty.

Our relations with Russia were undetermined, but Secretary Hughes has issued a statement setting forth the terms on which alone the soviet régime will be recognized by our Government.

There was friction and irritation and misunderstanding with the Orient. We lacked the respect and confidence of European nations. Our attitude toward the countries of Central and South America was misunderstood and misinterpreted and needed clarification. This confused condition resulted in President Harding calling the Armament Conference, the largest step toward international peace with justice the world has known in all its history.

AMERICAN DIPLOMACY.

The most astonishing feature of this great conference was the startling directness of Secretary Hughes in dealing with the problem of disarmament. On the very first day this challenge came, abandoning all the old methods of argumentation and proposing a plan for either acceptance or rejection. Its very boldness attracted and its fairness compelled assent. There was no appointment of committees to formulate the plan, there was no intrigue or manifestation of cunning, there were no secret processes or star-chamber methods, but a straight-out, unequivocal proposal that had to be voted either up or down. The magnanimity of the proposition was compelling, because by its very terms we agreed to scrap nearly as many vessels as we asked both Great Britain and Japan combined to deal with in that manner.

The whole world rose to applaud the proposals and their final acceptance in reality was a result of the combined judgment of all nations. It is a matter of pride to every American that all the proposals our conferees submitted were substantially accepted, but, once on the way toward the destruction of wars' agencies, the conference went even further than the original proposals and included also treaties to limit the operation of the submarine in future wars within certain prescribed bounds and also the total abolition of the use of poisonous gases.

Simultaneously the four-power treaty was submitted for discussion. It will be recalled that our relations with Japan had been somewhat strained by reason of the acute character the question assumed in California and in the Philippines and in Hawaii. Our historic friendship for China caused us to look with unfriendly eye upon the acquisition of Shantung by Japan and upon what seemed to be the evident intention of that country to penetrate peacefully and finally to possess Manchuria and inner Mongolia and Siberia.

Our friendly attitude toward Russia caused us to look with deep concern upon any attempt by Japan or any other nation to take advantage of her present helpless situation to make unfair bargains with her or to force upon her stricken people unjust or unwarranted stipulations. All this rendered our problem in the Orient one of extreme sensitiveness and one that required the most skillful diplomatic handling.

It is a matter of commendable pride to every American, as well as of felicitation to every lover of his race, that all these problems have been amicably adjusted, that these differences have been settled, and that to-day there is a perfect understanding as to the mode of procedure in case future difficulties shall arise.

Every feature of the conference was productive of good feeling, and the result ushers in a new era of international relations. The straightforward declaration of Secretary Hughes in favor of limitation of armament, the negotiation of the four-power treaty, the progress made in establishing justice as between China and the other powers, the mutual understandings arrived at with reference to all future voluntary conferences for the consideration of international questions, constitute a program of tremendous significance and of incalculable influence upon the future of civilization. This conference demonstrated clearly that no supergovernment of force is necessary for the peaceful solution of international questions if only the will for peace exists among the nations, and without that will all treaties are scraps of paper and all forms of supergovernment are worse than futile.

To the solution of this problem of international relations, rendered acute by the course of the preceding administration, President Harding has brought the irresistible power of enlightened common sense and a consecration to the welfare of humanity which is breathed in his every utterance. A new era in world history has been opened with the summoning of the Washington conference, and if the record of the Harding administration were to be closed to-morrow it would take high place among the great and inspiring periods of American history, because it points the way to the disbanding of armies, to the dismantling of navies, and to the substitution of peace and justice for force and power among the peoples of the world.

When peace shall become the object for which nations strive, when art and science and literature and philosophy become agencies of conquest instead of armies and navies, when commerce and navigation supplant battleships and battalions as the means of achieving world-wide influence, when nations forget suspicion and put behind them overreaching and undermining methods of dealing with their neighbors, when all governments shall be lifted to that plane where the same generous regards for the rights of others is manifested as among citizens in a civilized land, then indeed shall we reap the rich harvest of universal tranquillity for which the whole world prays.

How beautiful that day will be. How bloodless and painless its triumphs. How noble and just its rule. How salutary and uplifting its reign. This consummation has been the dream of the poet, the hope of the philanthropist, and the aim of the statesman for countless centuries past, and if this be its dawning, as please Heaven it is, let us pray that its noonday glory may be the fulfillment of the song chanted by the angelic choir above Judea's hills, "Peace on earth, good will to men."

THE GENOA CONFERENCE.

Keeping in view the determination of the President for national independence and yet international comity, the maintenance of American sovereignty yet ever the attitude of kindliness and hopefulness for other nations, always with the underlying thought that mutual understandings, coupled with unfeigned sincerity, will ultimately solve all problems, in this light we can well understand why President Harding and Secretary Hughes declined to send an American representative to the Genoa conference, and we all the more heartily commend their conduct for so doing.

Manifestly this was not an economic but a political conference. Whenever any financial or commercial question was taken up for discussion, almost immediately it developed a political phase and soon there was thrust into it political questions of the hardest and most unyielding character. Surely America had no business to be represented in any such conference, and it is a matter of congratulation, that the President and his Secretary of State have likewise determined not to have any official relationship with the proposed Hague convention, which is but an adjourned session of the Genoa conference, with the same subjects to be discussed, and the same topics to be considered, and the same objectives to be attained.

The world by this time ought to understand that we do not intend to become involved in their political wrangles and that, while we are willing to lend aid or give counsel and maintain always a sympathetic attitude, yet we always will refuse to be dragged into their financial difficulties and we always will decline to meddle with their national affairs or to become involved in their age-old racial rivalries, with their conflicting claims and jarring interests, with their hatreds and their jealousies, magnified a thousandfold by the cruel tortures of war. We do not intend to get into this confused jumble of European animosities. This attitude of our administration will meet with the hearty approval of everybody except internationalists of a most extreme type.

THE HARDING PROGRAM.

The Washington conference is the climax of a series of administrative achievements which will ever make the Harding era memorable. Surrounding himself with a Cabinet of such strength that its personnel stands out in vivid contrast with the shifting corps of advisers under a recent presidency, President Harding has from the beginning proved that he did not regard his position as a seat of autocratic authority, but that he believed in the virtue of common counsel, as Washington did, as Lincoln did. Warren G. Harding is not a lonely or a secluded President. The gates and the windows of the White House have been thrown open and through them passes day by day in increasing measure the good will of the American people to the modest yet capable, patient yet forceful, generous yet firm President. No one honestly doubts the earnest desire of Warren G. Harding to lead the American people out of the dangers and difficulties in which he found them upon his accession, to the broad, straight highway of national prosperity and progress, and there is a justified increasing confidence in his ability patiently but surely to get the Nation "back to normalcy."

IN INDIANA.

In our own State our administration of affairs has been successful and satisfactory. We have redeemed pledges, we have fulfilled promises, we have kept faith with the people and can point with pardonable pride to a record of achievement that justifies a renewal of power.

Our State officers have conducted themselves in an honest, straightforward, and commendable manner and are entitled to the gratitude of a well-served people. And I am especially pleased to stand in this place and pay my tribute of respect and admiration to our splendid governor, Warren T. McCray. He came into office pledged to a faithful performance of duty and to a program of fidelity to the highest interests of the people. That he has fulfilled the expectations of his friends and disappointed the hopes of his enemies is known to all, and that he is a clean-handed, high-minded, and patriotic official is denied by none. He is not a candidate for reelection and, under our constitution, can not be, but the people have the opportunity to express their confidence in him and their gratitude for his successful administration by the election of a legislature that will work in harmony with his purpose, and I bespeak for him and those who surround him a cordial and enthusiastic indorsement at the polls in November.

THE SENATORSHIP.

My fellow Republicans, I gather from reports that you have had quite interesting contests recently in Indiana, one pertaining to nominations and one to organization. Personally, I never deprecate these contests if they are fairly and honorably conducted. I rather encourage them, for they stir up the fighting blood of the militant hosts of the party and put them in battle trim for the final contest. Witness that nobody paid much attention to the Democratic primary in Indiana. It was the side show, while the main circus was pulled off under the Republican tent, and this fall it will be quite easy for us completely to absorb the other exposition.

Ladies and gentlemen, it was known to all of you that I wished for the renomination of my honored colleague, Senator HARRY S. NEW. He had been a faithful servant of the people, and an industrious and conscientious Senator, and our own relations had been cordial from the beginning of our service. I naturally believed that he had fairly earned and was entitled to a renomination and a reelection and gave expression to my views on all proper occasions.

But the Republicans of the State, by the established method of procedure, decreed otherwise, and I yield a ready and willing obedience to their commands, and therefore from this time until election day I shall exert every energy at my command to secure the election of Albert J. Beveridge, and I urge all of my friends in Indiana to pursue the same course.

Senator Beveridge is no novice in public affairs. His name is known to all men, his eloquence is recognized by all people, and his ability commands the respect of the entire Nation. He is distinguished not only as an orator and statesman but as an author as well, and his work on John Marshall is a real contribution to the literature of the Nation. He is in all respects worthy and capable, and I shall support him with all the vigor I possess throughout the approaching campaign.

Therefore, in the interest and for the sake of the party, let us forget the things that are behind us and press forward to the things that are yet to come, lose sight of the family contest, with whatever of animosity it may have engendered for the day, and array our forces in solid phalanx for the final contest with the common enemy, the one with which we have so frequently battled, and the one over which we have so often triumphed. We shall thus measure up to the expectations of our friends throughout the land and meet the imperative demands made upon us by the exigencies of the hour.

THE INDIANA DELEGATION.

I can not let the opportunity pass without expressing my most earnest commendation of the solid Republican delegation from the State of Indiana in the House of Representatives. Having been a Member of that body for many years, I naturally take a more than ordinary interest in its proceedings and keep in rather close contact with many of its Members. I have observed with pride the standing of our delegation in that great body, and I have never been unmindful of the course and conduct of each of them.

I therefore speak with more than ordinary knowledge of the situation when I say that for industry, for integrity, for intelligence, for faithful attendance upon their respective committees and the meetings of the House, for services rendered to their various constituencies, for a keen grasp of public affairs, and a faithful discharge of the many

duties devolving upon them, for all of these characteristics, so essential to successful representation, this delegation is not excelled by any other one in the entire House of Representatives.

Mr. Harding will be President until the 4th of March, 1925, the political complexion of the Senate can not be changed at the next election, and it would be the height of folly to elect a Democratic House and expect that body to accomplish anything in connection with a Republican Senate and a Republican President. There must be harmony or there will be confusion, and confusion means utter failure. If the Republican Party had done anything that deserved the censure of the people, if it had not faithfully and diligently discharged its obligations and performed its services, the people might well vote a Democratic Congress as a mere matter of rebuke to the administration and to the party, but, having made such a record as I have partially and feebly set forth, and having under way a program of reconstruction and a plan of rehabilitation, some portions of which remain unfulfilled, it would certainly be the extreme of political unwisdom to elect a body out of harmony with the purposes of the President and the Senate. And therefore I specially urge upon all of you to see to it that every Republican Member from Indiana who is a candidate to succeed himself, and all are but one, shall be returned by a vote of confidence to continue the work already so well begun.

CONCLUSION.

My fellow Republicans, in neither State nor Nation are there signs of an approaching millenium. Anyone who expected a happy solution of all problems, the final disposition of all questions, was a dreamer and had no just cause for his dream. Nevertheless, much has been done, and what already has been accomplished is in the right direction and along the right line. The vast work of reconstructing the shattered finances, the disordered commerce, and the disturbed relations of an entire Nation can not be accomplished within the narrow compass of a year, but must diligently be worked out, as worked out it will be with another Republican Congress and the same Republican President.

And so, my countrymen and my fellow partisans, having in view the glorious history and the noble traditions of our party with all of its mighty past, let us as the true descendants of those who have so richly wrought in the decades gone strive to perpetuate the policies for which they fought, the policies in which Morton and Harrison believed, the policies made sacred by reason of the Republic they have produced, the policies that alone can insure the future safety, stability, and independence of our land.

In the language of the deathless Lincoln, "With malice toward none, with charity for all, with firmness in the right as God gives us to see the right, let us strive on to finish the work we are in."

Mr. ZIHLMAN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting therein a speech delivered by the gentleman from Illinois [Mr. GORMAN] on Memorial Day at Antietam Cemetery.

The SPEAKER pro tempore. The gentleman from Maryland asks unanimous consent to extend his remarks in the RECORD by inserting a speech delivered by the gentleman from Illinois [Mr. GORMAN] at Antietam Cemetery on Memorial Day. Is there objection?

There was no objection.

The extension of remarks referred to are here printed in full as follows:

Mr. ZIHLMAN. Mr. Speaker, on May 30 of this year the distinguished gentleman from Illinois, Hon. JOHN J. GORMAN, kindly consented to deliver the principal address at the memorial exercises held in the national cemetery on the Antietem battle field.

On that occasion Antietem Post, No. 14, Grand Army of the Republic, observed the day with solemn and sacred ceremonies in the presence of thousands of the citizens of Washington County, Md., and the address of the gentleman from Illinois is so rich in historical allusions, so filled with the spirit which animated the men who engaged in the great conflict waged upon the Antietam battle field many years ago, that I have taken advantage of the privilege accorded me and am inserting his remarks in the RECORD.

The address is as follows:

"Fourscore and seven years ago our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal. Now, we are engaged in a great Civil War, testing whether that Nation or any nation so conceived and so dedicated can long endure."

Those beautiful sentences, so filled with fact and optimistic hope, taken from the opening lines of Lincoln's Gettysburg speech, very tenderly recited for our edification earlier in this program, are the text of my address.

"Fourscore and seven years ago, our fathers brought forth on this continent a new Nation, conceived in liberty and dedicated to the proposition that all men are created equal."

Our fathers, indeed, brought forth a new Nation. It was a heretic among the nations of the earth. It startled the world, as the luminous orbit of a newly revealed comet would, did this revolutionary civil concept when its fundaments of liberty and equality were proclaimed to an incredulous, jeering world.

Up to the period of the founding of this new Nation there were no such bulwarks as liberty and equality among the Governments of the world. The monarchical theory had been thoroughly fastened upon civilization, that the king or ruler was the fountain head of authority and the source of all power; that he was a superman or semideity who swayed his subjects by divine right. The people were his slaves, possessed of no inalienable rights whatever, and enjoying only such limited privileges as he allowed to filter down to them out of the generosity of his soul.

The people were his playthings of war and his drudges of peace. They fought his battles, tilled his soil and harvested his crops, gathered his wood from the abundant forest, carried his water on aching shoulders in earthen jars, and diligently ministered to his divers other wants and caprices. For their remuneration they were allowed from the product of their own labor sufficient only to give them a bare existence. Their spiritual food, too, was carved from the dogma of what their master's disposition fed upon. Spiritually as well as physically they were slaves.

Liberty among the people was merely a thick-rinded hope, like the apples of Hesperides, serving to incite a voracious appetite, but never to requite it, while equality was an idea uninvented. The peoples of the earth everywhere had always lived under such repression, emerging temporarily from abject slavery to more or less tolerable feudalism, only to lose their hold upon the ladder and slip downward again.

Here, too, in the New World, the colonists felt the iron heel of despotism, but their remoteness from the regal seat softened somewhat the rigors of their oppression.

Distance emboldened them to hitch the chariot of their hopes to the Star of Freedom, until at last they did a daring act. They declared war upon their oppressors, struck off the binding fetters of allegiance, and proclaimed themselves free men, children in liberty and brothers in equality. In the Declaration of Independence, in Congress, July 4, 1776, they set forth this new creed of the new Nation: "We hold these truths to be self-evident: That all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights Governments are instituted among men, deriving their just powers from the consent of the governed." When those immortal words were committed to the parchment, just before the signers had subscribed their signatures thereto, Patrick Henry released his powerful emotions in the famous speech which he sent ringing through the unborn ages, even to serve as a freshet keeping moist the taproot of the tree of liberty.

"These words," said Patrick Henry, "will go forth to the world when our bones are dust. To the slave in bondage they will speak hope; to the mechanic in his workshop freedom. * * *

"That parchment will speak to kings in language sad and terrible as the trumpet of the archangel. You have trampled on the rights of mankind long enough. At last the voice of human woe has pierced the ear of God and called His judgment down. * * *

"Such is the message of the Declaration to the kings of the world. And shall we falter now? And shall we start back appalled when our free people press the very threshold of freedom?

"Sign, if the next moment the gibbet's rope is around your neck. Sign, if the next moment this hall rings with the echo of the falling ax. Sign, by all your hopes in life or death, as husbands, fathers—as men with our names to the parchment, or be accursed forever. Sign, not only for yourselves but for all ages; for that parchment will be the textbook of freedom—the Bible of the rights of man forever.

"Sign, for the declaration will go forth to American hearts like the voice of God. And its work will not be done until throughout this wide continent not a single inch of ground owns the sway of privilege of power.

"It is not given to our poor human intellect to climb the skies, to pierce the councils of the Almighty One. But methinks I stand among the awful clouds which veils the brightness of Jehovah's throne. Methinks I see the recording angel—pale as an angel is pale, weeping as an angel can weep—come trembling up to the throne and speaking his dreadful message.

"Father! The Old World is baptized in blood. Father! It is drenched with the blood of millions who have been executed, in slow and grinding oppression. Father, look! With one glance of Thine eternal eye, look over Europe, Asia, Africa, and behold everywhere a terrible sight—man trodden down beneath the oppressor's feet, nations lost in blood, murder, and superstition walking hand in hand over the graves of their victims, and not a single voice to whisper hope to man.

"He stands there—the angel—his hand trembling with the human guilt. But hark! the voice of Jehovah speaks out from the awful cloud: Let there be light again. Let there be a new world. Tell my people, the poor downtrodden millions, to go out from the old world. Tell them to go out from wrong, oppression, and blood. Tell them to go out from the old world to build up my altar in the new.

"As God lives, my friends, I believe that to be His voice. Yes, were my soul trembling on the wing of eternity, were this hand freezing to death, were my voice choking with the last struggle, I would still, with the last gasp of that voice, implore you to remember the truth. God has given America to be free. Yes; as I sank down into the gloomy shadows of the grave, with my last gasp I would beg you to sign that parchment. In the name of the One who made you, the Savior who redeemed you, in the name of the millions whose very breath is now hushed, as, in intense expectation, they look up to you for the awful words, 'You are free.'"

Not only did those stirring words of Patrick Henry carry the conviction to his auditors that the Declaration of Independence ought to bear their signatures, but they were moved to make every sacrifice humanly possible to set up this "new nation conceived in liberty and dedicated to the proposition that all men are created equal."

For the first time in the chronicles of the human family, it was recorded in a nation's declaration of principles that all authority resides in the people and wends its way upward to the Chief Executive. By this declaration the divine right of kings as the depository of all authority was struck a deadly blow. The declaration established the bedrock of popular government, where authority issues out of the masses instead of percolating toward them from above. Lest posterity might allow this "new Nation, conceived in liberty and dedicated to the proposition that all men are created equal," to relapse into slavery; divested of all the fruits of glorious victory, into the greatest document ever written—"the most wonderful work ever struck off at a given time by the brain and purpose of man," said the noted English statesman, William E. Gladstone—into it, the Constitution of the United States, the fathers wrote ineffaceably the doctrine of liberty and equality.

Under the flood light of this new order of statecraft, the colonists, banded together in the United States of America, marched upward through the ever-broadening avenues of progress, and their new Nation, scoffed at as a phantasmagoric bubble soon to burst, became greater and stronger at every stride. Prosperity smiled upon a free people, under whose directing energies and quickening genius, agriculture and industry teemed with wealth, the while "health and plenty cheered the laboring swain."

Yet our progress, as marvelous and unmatched as it was, moved with a limp which became more and more acute as the years rolled on and whose ever-increasing acuteness threatened a halt in our journey. We were suffering from partial organic nonfunctioning. While our principle of government proclaimed and guaranteed liberty and equality to all our people, yet some of them were enmeshed in slavery. Our principle faltered when set in motion. Hundreds of thousands of black men were slaves. Some of our people wanted to set them free in ac-

cordance with our theory of liberty and equality, while others sought to keep them in servitude as a species of chattel property in conformity with the Dred Scott judicial pronouncement. Dissensions on the subject arose everywhere until States were rocked by the agitation of proponents and opponents. The controversy assumed such terrific heat that States asserted their right to secede from the indissoluble Union and set up their independent government. Then the Civil War ensued, to give answer to the query, gathered up and surcharged by the howling winds, "Can this Nation or any nation so conceived and so dedicated long endure?"

The saintly Lincoln averred that this Nation could not endure half free and half slave. "A house divided against itself must fall," said he, drawing from the sacred book the answer to the mooted question.

The answer resounded from every fireside in the taking down of the musket from the wall, from every hillside in the tramp, tramp of soldiers' feet, and flamed forth in every stream crimson with the patriots' blood. Here on Burnside's bridge and the ridge of Antietum the answer flashed in steel and fire, echoed forth in the cadences of the bleeding and dying, and hurrahed in the salvos of victory as the fraternal enemy was repulsed in broken columns.

During the gory years of 1861 to 1865 the varying successes of the fraternal armies answered the eternal question, now in the affirmative, anon it seemed in the negative, until Appomattox forever put the seal of approbation upon human liberty and equality. The Union armies demonstrated with unquestionable finality that this Nation, "Conceived in liberty and dedicated to the proposition that all men are created equal," will endure so long as ropes of sand impound the waters of the oceans to perpetuate a habitat for men. Against all the vicissitudes of fickle time, even until the consummation of the world, will the children of liberty and equality flourish in this land of the free and home of the brave, while their hearts are true, their eyes are steady, and their adherence to basic principles is unshaken.

Antietam was a bloody footprint along the pathway of human progress. It marked an important stage in an important war—a war which was inevitable, because at some time in this Nation the principle of liberty and equality must have been put to the test. Human progress is achieved only by human sacrifice. Principles triumph only when men triumph. Ideals inspire the souls of men. They are stepping stones to the celestial. They are the reflexes of men's souls struggling for freedom, to take their ethereal flight.

Antietam, thou wert liberty's lodestar! Men of Antietam, thou wert the saviors of this "new nation conceived in liberty and dedicated to the proposition that all men are created equal."

In your commemoration we make this annual pilgrimage and here high resolve that you have not died in vain. For you we say a prayer and pay the silent tribute of a tear.

"How sleep the brave, who sink to rest,
By all their country's wishes blest.
When spring, with dewy fingers cold,
Returns to deck their hallow'd mould,
She there shall dress a sweeter sod
Than fancy's feet have ever trod.
By fairy hands their knell is rung,
By forms unseen their dirge is sung!
There honor comes, a pilgrim gray,
To bless the turf that wraps their clay;
And freedom shall a while repair
To dwell a weeping hermit there!"

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Craven, its Chief Clerk, announced that the Senate had concurred in the amendment of the House of Representatives to the joint resolution (S. J. Res. 7) authorizing the Secretary of the Treasury to designate depositaries of public moneys in foreign countries and in the Territories and insular possessions of the United States.

The message also announced that the Senate had concurred in the amendments of the House of Representatives to bills of the following titles:

S. 2666. An act for the relief of Ed Thomas and Pauline Thomas; and

S. 2664. An act for the relief of Jesse Goodin.

DISTRICT OF COLUMBIA DAY.

The SPEAKER pro tempore. Under the rules business is in order to-day reported from the Committee on the District of Columbia.

Mr. FOCHT. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of certain legislation concerning the District.

The SPEAKER pro tempore. The gentleman from Pennsylvania moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of business relating to the District of Columbia reported by that committee.

Mr. GARRETT of Tennessee. Mr. Speaker, pending that, will the gentleman yield?

Mr. FOCHT. Yes.

Mr. GARRETT of Tennessee. Will the gentleman indicate to us what business he intends to call up?

Mr. FOCHT. After a few remarks by the chairman of the committee in reference to a measure that was to have been called up it is my purpose to call up what is known as the workmans' compensation bill, as it applies to the District of Columbia, with an agreement, tentative, of course, until it is sanctioned by the House, to have two hours of debate on each side, and pending the motion, Mr. Speaker, I ask that on this compensation bill, H. R. 10034, there be four hours of general debate, two hours on a side, one-half to be controlled by the gentleman from Massachusetts [Mr. UNDERHILL], opposing the bill, and one-half by myself, as chairman of the committee.

The SPEAKER pro tempore. Pending the motion the gentleman from Pennsylvania asks unanimous consent that in Committee of the Whole House on the state of the Union considering the bill H. R. 10034 there shall be four hours of general debate, one-half to be controlled by himself, in favor of the measure, and one-half by the gentleman from Massachusetts [Mr. UNDERHILL], against the measure. Is there objection?

Mr. GARRETT of Tennessee. Mr. Speaker, reserving the right to object, is the debate to be confined to the bill?

Mr. FOCHT. Yes. I am willing there should be an understanding to that effect.

Mr. GARRETT of Tennessee. The only reason that I asked that question is because if there is to be debate on other subjects, I think somebody on this side should control some of the time.

Mr. FOCHT. No; it is to be strictly confined to the bill, and, judging from the hearings before the committee, it will take all of that time to conclude the debate.

Mr. GARRETT of Tennessee. Then the debate will be confined to the bill.

Mr. FOCHT. General debate, yes; and I would like to ask, however, under those circumstances, that I may have unanimous consent to proceed for a few minutes.

Mr. MAPES. Mr. Speaker, reserving the right to object, the motion of the gentleman from Pennsylvania, chairman of the Committee on the District of Columbia, as I understood it, was that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of District business. I think the Speaker modified it somewhat and said "business reported from the District of Columbia Committee." I would like to ask the gentleman from Pennsylvania this: There has been some talk in the newspapers about the chairman of the District of Columbia Committee calling up to-day Senate Joint Resolution 23, which has been reported by the Rules Committee, but has not been referred to the Committee on the District of Columbia. Of course, the gentleman from Pennsylvania, as chairman of the District of Columbia Committee, knows that he has not the authority to call up legislation that has been reported by some other committee, even though it pertains to the District of Columbia. I would like to ask the gentleman if that is his understanding of the rule?

Mr. FOCHT. If the gentleman will permit, I would like to explain the situation so that the House may have an idea of the whole matter. After we saw the newspaper reports we made investigation and find that the gentleman is entirely right, absolutely.

Mr. MAPES. And there will be no attempt to call up the Senate resolution this afternoon?

Mr. FOCHT. No, sir; it would be absolutely impossible.

Mr. BANKHEAD. Mr. Speaker, reserving the right to object, do I understand the gentleman has modified his request so as to provide the time should be devoted to debate on the bill?

Mr. FOCHT. Yes, sir; that is the request and understanding.

The SPEAKER pro tempore. The gentleman from Pennsylvania asks unanimous consent that when the House resolves itself into the Committee of the Whole House on the state of the Union and the bill H. R. 10034 is taken up for consideration that there shall be four hours of debate, to be confined to the measure, one-half to be controlled by himself in favor of the bill and one-half by the gentleman from Massachusetts [Mr. UNDERHILL] opposed to the measure. Is there objection? [After a pause.] The Chair hears none, and it is so ordered. The question is on the motion of the gentleman from Pennsylvania that the House resolve itself into the Committee of the Whole House on the state of the Union.

The motion was agreed to; accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of District of Columbia Committee business, with Mr. TOWNER in the chair.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of business relating to the District of Columbia.

Mr. FOCHT. Mr. Chairman, I call up the bill H. R. 10034.

The CHAIRMAN. The gentleman from Pennsylvania calls up H. R. 10034 and is recognized for two hours.

Mr. GARRETT of Tennessee. I assume that the bill will be reported.

The CHAIRMAN. The Clerk will report the bill.

The Clerk read as follows:

A bill (H. R. 10034) creating the District of Columbia insurance fund for the benefit of employees injured and the dependents of employees killed in employments, providing for the administration of such fund by the United States Employees' Compensation Commission, and making an appropriation therefor.

Mr. FOCHT. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

Mr. UNDERHILL. Mr. Chairman, I object.

The Clerk read as follows:

Be it enacted, etc., That the prosperity of the District of Columbia depends in a large measure upon the well-being of its wageworkers, and, therefore, for workers injured in employment and their families and dependents sure and certain relief is hereby provided, regardless of questions of fault and to the exclusion of every other remedy, proceeding, or compensation, except as otherwise provided in this act; and to that end all civil actions and civil causes of action for such personal injuries and all jurisdiction of the courts of the District over such causes are hereby abolished, except as in this act provided.

SEC. 2. That wherever used in this act—

"Employment" means all private employments.

"Employee" means every person engaged in any employment under any appointment or contract of hire, or apprenticeship, expressed or implied, oral or written, including aliens, and also including minors, whether lawfully or unlawfully employed, but excluding any person whose employment is casual and not in the course of the trade, business, profession, or occupation of his employer.

"Employer" means every person, partnership, association, and private corporation, including any public-service corporation, and the legal representative of any deceased employer, or the receiver or trustee of a person, partnership, association, or corporation carrying on any employment.

Mr. FOCHT. Mr. Chairman——

The CHAIRMAN. For what purpose does the gentleman from Pennsylvania rise?

Mr. FOCHT. I renew my request for unanimous consent to dispense with the first reading of the bill.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. FOCHT. Mr. Chairman, inasmuch as time has been provided with ample opportunity for debate on this bill I trust that though it has been agreed there shall be no speeches made on any other subject, there was a matter brought up this morning in connection with Senate Concurrent Resolution 23 as to which I feel there should be some explanation, as there is involved an original expression of opinion of the chairman of the Rules Committee and the response I made to him in regard to my duty concerning the said legislation. I had no knowledge whatever of this resolution's existence, nor that it had been passed by the Senate and referred here to the Committee on Rules of the House.

Mr. UNDERHILL. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. UNDERHILL. As the gentleman is proceeding along this line I desire to ask if that is deducted from the time allowed for discussion on the pending measure?

Mr. FOCHT. I am just explaining this other situation.

Mr. UNDERHILL. It comes out of the gentleman's time?

Mr. FOCHT. Yes; that is all right.

Mr. LAYTON. Will the gentleman yield for a question?

Mr. FOCHT. Yes, sir.

Mr. LAYTON. Is the gentleman discussing this bill?

Mr. FOCHT. I am discussing another question. I asked unanimous consent, and I hope there will be no objection. It is in reference to a question raised before the bill was taken up.

Mr. LAYTON. Then it is not this bill the gentleman is discussing?

Mr. FOCHT. Not the bill proper.

Mr. LAYTON. Therefore the understanding is broken with respect to debate——

Mr. FOCHT. No; not if I have unanimous consent. I want to clear up the old fuss before we start on a new one.

The CHAIRMAN. The gentleman will proceed in order.

Mr. FOCHT. Mr. Chairman, the Jones resolution No. 23 was not referred to the Committee on the District of Columbia, and upon my return from Pennsylvania I noticed an article in the newspapers and was interviewed by the reporters a number of times as to this misapprehension as to the assumption of certain rights and prerogatives on the part of the chairman of the District of Columbia Committee in attempting to bring up this resolution. It was never asserted by the chairman, nor by any member of the committee, I know, that we intended to bring up the resolution, and in answer to a query by a newspaper reporter as to what was going to be done, I simply said that if the parliamentary situation as described by the chairman of the Committee on Rules were correct, we would take up the matter and possibly undertake to bring the resolution before the House.

We find that is not possible. While we did not have it in contemplation or seriously consider it, and knew nothing about it, in pursuance of the discharge of our duties, and as that relates to a given situation relating to the financial condition here in the District of Columbia, we investigated it, and, with the leadership of our excellent friend the former and able chairman of the Committee on the District of Columbia [Mr. MAPES], we found the parliamentary law which prohibits such a thing as the District Committee bringing out any legislation except that which had been considered by that body. But since we will have ample time to discuss the compensation bill, in order to set your minds running along that line now on Resolution 23, I have asked for unanimous consent and received it, and I think we may get some little idea of what that Resolution 23 means.

When I became chairman of this committee and came in contact with the various northeast and northwest and southeast and southwest associations in Washington, that call you out to their meetings to address them about things concerning which you know nothing, I was advised there were $5,000,000 excess taxes paid by the people of the District of Columbia and now in the hands of the Government which should be properly applied to the development of the school and road and water systems of the District of Columbia. I came up here most enthusiastic and came in contact with the leaders of the House and other Members who seemed familiar with that particular subject, and I met with great disappointment, if not chagrin, when one of them told me, "You have now taken hold of the $5,000,000 myth." So this resolution proposes to investigate the myth. Inasmuch as it came up at the present time, and it never may be brought up again, with your patience for five minutes I am sure you will leave with an analysis of it, as far as I can give it, of the question of how it comes about that the people downtown, wherever you go, want to know what you are going to do about using that $5,000,000 they have paid in taxes above the amount the Government has given on their plan of taxation here of 60–40 or 50–50. They say that we have overtaxed the people by over $5,000,000 and that the money is there and ought to be used by the people of the District of Columbia. Here is where it starts:

STATEMENT REGARDING THE SURPLUS OF REVENUES OF THE DISTRICT OF COLUMBIA NOW LYING IN THE TREASURY.

Beginning with the fiscal year 1916–17 the appropriations for the District of Columbia have for the past several years been less than the revenues of the District, raised by taxation, have been sufficient to cover. The District Commissioners have, in strict observance of the law, been compelled to present estimates within the estimated local revenues, matched by Federal money in accordance with the established ratio of District-Federal contributions. Congress has, during these past few years, not appropriated as much in bulk for the District as the District's funds have warranted.

Thus for these past few fiscal years there has been accumulating in the Treasury a surplus of District tax money not appropriated. In the year 1916–17 the surplus of this money was $1,380,218.90, according to the figures of the District auditor. In 1917–18 the surplus was $673,733.77. In 1918–19 it was $1,226,732.79. In 1919–20 it was $783,236.72. In 1920–21 it was $584,744.51. In the whole of these five years the accumulation of District tax money, collected but not appropriated, has been $4,648,666.69.

This surplus of District tax revenues may not be kept in a separate fund in the Treasury as has been claimed by some. It may be a bookkeeping myth, as has been alleged. But the fact is undeniable that $4,648,666.69 has been collected from the people of the District in taxes and from other sources during the last five fiscal years that has not been spent in appropriations on District needs.

The pending resolution proposes the appointment of a joint commission of six, three Senators and three Representatives, to inquire into the origin, nature, and equity of this surplus of District tax revenues. The District contends that it should be spent for extraordinary public improvements, such as school buildings, or water supply, or street extensions and improvements. It is contended by some Members of the House that it is subject to offsets and claims of the Federal Government for old debts owed by the District to the United States. The purpose of this inquiry is to ascertain the equities in the surplus of District tax revenues.

It is important to pass this resolution promptly. The District appropriations bill is now pending in the Senate. The conferees have agreed upon the appropriation terms and upon a new formula of fiscal relations between the District and the United States. The major purpose of that formula is to enable the District by the beginning of the fiscal year 1927–8 to meet its obligations under the annual appropriation acts with its own cash instead of requiring advances from the United States Treasury during the greater part of each fiscal year. The tax collections are made now in May of the fiscal year for which they are due and payable. It is proposed to put the District on a cash basis by various methods. The conferees plan to enable the commissioners to accumulate a fund of District revenues by July 1, 1927, by increasing taxes in certain respects. As an alternative it has been proposed to advance the tax collection date so that District tax funds may be available earlier in the fiscal year. It is also proposed to apply to the cash-payment fund any surplus of District tax revenues that may be found to stand to the undisputed credit of the District in the Treasury.

It is the purpose of this resolution to conduct an inquiry by joint committee into the nature and present status of this surplus of unexpended District tax revenues; to ascertain whether there are any equitable claims on the part of the United States which may be properly charged against and collected from it; whether the surplus, to whatever amount it may be reduced in the net by the deduction of just claims of the United States, should, in the judgment of the joint select committee be applied to the cash-basis fund proposed, or expended, on the established District-Federal ratio, on current or extraordinary District requirements.

This commission is merely to find out certain facts and to recommend its conclusions to Congress. Until those facts are ascertained, until the nature and equitable status of the surplus are determined, it is impossible to know whether there is any accumulation of District tax revenue that can be used in the establishment of a cash basis. Meanwhile the appropriation bill will be enacted into law, but inasmuch as the cash-basis plan proposed does not go into effect for five years, the

determination of the surplus will be in season for such action at the next session of Congress as may be deemed proper.

The reason for urgency at this time is simple. The appropriation bill is held up in the Senate by the peculiar situation there. Some Members of the Senate believe that the so-called "amendment No. 1," which provides for the proposed new fiscal plan, should be amended to take cognizance of the surplus as a possible factor in the cash-basis accumulation. If we pass this concurrent resolution now and thus provide for the joint commission, it will be possible for the Senate to consider this factor.

And I would like to add to that the report of the local auditor, as follows:

District tax surpluses and deficits.

Statement of net surpluses or deficits in District tax revenue under organic act of 1878 of deficit or surplus accumulations and of interest charges on advances to meet revenue deficits for the fiscal years 1900 to 1920, inclusive. Figures from auditor's office, District Building.

Fiscal years.	Net surplus.	Deficit.	Deficit accumulations or reductions.	Interest charges on advances to meet deficits.
1900	$387,577.18			
1901		$220,182.57	$220,182.57	
1902		1,529,055.77	1,759,238.34	
1903	140,905.59		1,653,517.51	$35,184.76
1904	336,926.17		1,349,661.69	23,070.35
1905		863,375.22	2,240,030.14	26,993.23
1906		846,428.75	2,931,259.49	44,800.60
1907		286,796.79	3,277,866.28	59,810.00
1908		307,139.46	3,650,563.06	65,357.32
1909		268,940.71	3,992,515.03	73,011.26
1910	798,086.35		3,274,278.98	79,850.30
1911	674,682.75		2,665,081.81	65,485.58
1912	1,015,339.03	[1] 76,016.75	1,779,061.16	53,301.63
1913	1,393,869.52	[1] 200,748.85	621,521.71	35,581.22
1914	1,407,432.00	[1] 697,605.52	[2] 75,875.24	12,430.43
1915	655,911.50	[1] 868,655.42	[2] 731,786.74	
				[3] 585,076.68
			Surplus accumulations.	
1916	1,380,218.90			
1917	673,733.77		$2,053,052.67	
1918	1,226,732.79		3,280,685.46	
1919	783,236.72		4,063,922.18	
1920	584,744.51		4,648,666.69	

[1] Direct charges.

[2] Cash in United States Treasury. While the District had these items of cash in the Treasury to the credit of the general fund of the District of Columbia at the close of the fiscal years 1914 and 1915, the deficit in revenues to meet unexpended balances of appropriations and part of debt to the United States on June 30, 1914, amounted to $1,012,014.57; and the revenue deficit in this respect on June 30, 1915, amounted to $765,106.74. On June 30, 1916, the excess revenues over all appropriations for that year amounted to $2,145,325.64. Out of this amount provision was made to take care of the deficit in revenues on June 30, 1915, amounting to $765,106.74, so that beginning with the fiscal year 1916 the District began to accumulate a surplus of revenues over appropriations and all other charges amounting to $1,380,218.90 for that year. By accretions in 1917, 1918, 1919, and 1920, the surplus of such revenues on June 30, 1920, totaled $4,648,666.69.

[3] Total interest charges on loans to meet deficits.

Mr. MAPES. Mr. Chairman, I would like to ask the gentleman a question.

Mr. FOCHT. Yes, sir; with great pleasure.

Mr. MAPES. After first making this statement. As the gentleman knows, at different times the books of the District and the Government have been audited to ascertain their financial condition. Before the gentleman became chairman of the District Committee and before I was chairman of the committee, the committee under the chairmanship of the gentleman from Kentucky [Mr. JOHNSON], as the gentleman from Pennsylvania will remember, had an auditor going over the books and finding different items that should be credited to the Government and not to the District. Before that there was a joint committee of the House and Senate appointed to investigate the fiscal relations of the District generally. Does the gentleman think that this commission is going to get any information that Congress has not already got?

Mr. FOCHT. I do not know anything about that. I was simply reading the conclusion. I believe that all those facts the gentleman speaks of have been determined. I believe they were referred to in my statement. The only thing is that Congress does not act; that Congress calls it a myth. I do not believe it is. I believe taxpayers of the District paid in excess of their share these large amounts.

Mr. MAPES. Is the gentleman more hopeful that the Congress will act on this joint commission's report than on the other joint commission's report?

Mr. FOCHT. I believe there is more fairness and justice toward matters of that kind here now than at any other time, and I believe they will do what is right.

Mr. MAPES. The gentleman does not mean to leave the inference that Congress has not done justice in other cases?

Mr. FOCHT. I will say that there will be more justice, due to public opinion, and more knowledge. We have had a Republican House with a Democratic President and a Democratic House with a Republican President, but now this is all with us. When the thing is presented to this House for justice and for sanction, with the auditor also a Federal officeholder, I believe they will be liable to get fair consideration.

Mr. REED of West Virginia. Will the gentleman yield?

Mr. FOCHT. Yes, sir.

Mr. REED of West Virginia. Talking about this being a myth, as I understand that, even though there will be a settlement demanded and there may be something in the settlement due the Government, is not this a state of facts boiled down?

Take a hypothetical case: It was determined that the cost of the District government in a given year would be $20,000,000. On the 50–50 theory the District was asked to lay levy of $10,000,000 and the National Government would appropriate $10,000,000. But the Government appropriated only $8,000,000. The District paid in their $10,000,000 and the Government but $8,000,000, leaving a surplus paid by the people of the District of $2,000,000 somewhere that was paid in actual cash and is not a myth.

Mr. FOCHT. Absolutely so. I believe that after investigating this question for two years.

Mr. MAPES. Will the gentleman yield?

Mr. FOCHT. Yes.

Mr. MAPES. So far as the last few years are concerned, the report of the auditor gives the facts, does it not?

Mr. FOCHT. What you are getting at I quite agree to. If there is to be any expense connected with this, so far as I am concerned or the committee of which I am chairman is concerned, we prefer no appropriation. We will gladly do the work day and night without cost. In regard to experts, I do not think you need them. I believe we can get along without any cost to the Government. At least, the committee will do its part without any cost. [Applause.]

Mr. Chairman, I yield 15 minutes to the gentleman from Ohio [Mr. FITZGERALD].

Mr. FITZGERALD. Mr. Chairman and gentlemen of the committee, I hold in my hand a map which indicates just how far workmen's compensation laws have been adopted in the United States. The black spots indicate the District of Columbia and five States of the Union where workmen's compensation has not succeeded and where the old war between employer and employee—capital and labor—is still being fought in cases of injured workmen for a year and even 10 years in the courts, and on all sorts of questions.

All of the employees of the Government are already protected and covered. Congress has passed the Federal employers' liability act, which protects the over 600,000 employees of this Government. All of the States in the Union except five, and Porto Rico and Hawaii, and all of the Canadian Provinces except one, Prince Edward Island, have passed similar acts; and it is the purpose of this bill to permit the people of the District of Columbia to take this step forward in social legislation by having compensation for injured employees of this District, who number something like 108,000.

Mr. OGDEN. Would the gentleman name the five States he has mentioned?

Mr. FITZGERALD. The five States that have no workmen's compensation laws are Arkansas, Mississippi, North Carolina, South Carolina, and Florida. None of these States, one might say, is a manufacturing State, or a great industrial State, where the necessity has been forced upon the people by the continuous friction between the employer and the employee in the courts, where so much of the time of the courts has been taken up and so much expense to the State incurred by the decision of these contested cases. So it is the purpose here to let this war cease, and to provide for every person who is injured in his employment a compensation commensurate with that injury, and for those who may be killed in the course of their employment a certain security for their surviving dependents, whether widows or children.

Mr. LAYTON. Does the gentleman mean this is a general law?

Mr. FITZGERALD. For the District of Columbia only, for the private employees in the District of Columbia, all others in the Union being covered except in the five States to which I have alluded.

Mr. LAYTON. What have all these States except the five States got now in the shape of workmen's compensation? Is this in addition to the compensation or insurance proposition for the District?

Mr. FITZGERALD. It is; that is, it provides compensation which is certain to the injured workman and to the dependents of the injured workmen in proportion as they are dependent upon the person who may be killed.

Mr. LAYTON. I thought the gentleman had stated a moment ago that we had already passed an act applying compensation to the District of Columbia.

Mr. FITZGERALD. Employees of the Government.

Mr. LAYTON. Yes. How much further does this go? This covers employees of private concerns?

Mr. FITZGERALD. Everybody.

Mr. LAYTON. As between the employee and the employer?

Mr. FITZGERALD. Yes, sir.

Mr. LAYTON. And you propose to make this as a governmental agency?

Mr. FITZGERALD. Yes, sir.

Mr. LAYTON. Has the gentleman in mind the purpose to institute a national insurance act for all employed in the United States to follow after this measure?

Mr. FITZGERALD. No, sir.

Mr. LAYTON. You have not?

Mr. FITZGERALD. No, sir.

This subject has been debated in the legislative halls in every State in this country and in all the Canadian Provinces. It has been the subject of repeated investigation. There seemed to be in the progress of this bill through the committee, where extensive hearings were held, little or no opposition to some sort of a compensation or insurance bill for the District of Columbia. All of the opposition has come from the organized effort of the insurance companies, who have been very ably represented by a very distinguished and very learned gentleman who has presented their case as forcefully as it could be.

The objection of the insurance companies is that this bill provides for a mutual fund; that is following the decision of the courts of Washington that this was a governmental function and a tax; that where it was made obligatory upon the employer to protect the workman in his employ it was also a moral obligation on the Government to see that that obligation might be met by the employer as economically as possible, without loading him with a needless expense of 30 or more per cent to pay a profit to insurance companies. In competition with insurance companies there is a marked difference in cost. The insurance companies do not claim that they can write this compensation or insurance for workmen at less than 37½ or 38 cents for overhead, a great part of which, of course, is agent's commission, and the fact that this act is compulsory seems to militate against any feeling that the insurance companies should be presented with from 30 to 35 cents out of every dollar which the Government requires the employer to pay.

Mr. LAYTON. Mr. Chairman, will the gentleman yield again?

Mr. FITZGERALD. Yes.

Mr. LAYTON. Logically that argument you have just stated means that the Government should go into this?

Mr. FITZGERALD. No.

Mr. LAYTON. Logically it does.

Mr. FITZGERALD. Illogically, because I have referred to the decisions of the courts.

Now, this matter I expect to take up somewhat more at length, because the leader of the opposition in the committee on this bill expects to or has intimated that he desires to offer a substitute for this bill, to which there are many objections in addition to that of making the rates higher and necessarily limiting the possibility of the compensation to the workingmen to a much smaller amount.

We have 16 States in this Union which provide what are known as State funds; that is, there is a board or commission to which the employer may pay the proper assessed cost of protecting the workmen in his employ, and this board investigates and pays out a just and fair compensation under the act. If insurance companies were left to take care of that compulsory duty on the part of their employer, then the State must also provide investigating and checking agencies in order to prevent in some measure the taking advantage of the injured workmen, because this is different from any other form of insurance in this, that the beneficiary himself has nothing to say, or very little, as to the business of obtaining or writing insurance and every one except the injured workman seems to be most interested in how little may be paid to him.

In the State of New York, where the fund is not exclusive, we have had two investigations by the State, the Connor investigation and the Lockwood investigation, which has just recently been concluded. It was shown by the first investigation that injured workmen had been defrauded to the extent of $5,700,000 by the private insurance companies in spite of the inspections and supervision the State had attempted to maintain.

I want to contrast this with the situation in some of the States where not only a fund is provided—that is, where they all join in and treat the matter as a mutual concern—where the fund is exclusive, or very nearly so; and taking Ohio as illustrative of that point, where the entire overhead expense or overhead is less than 3 per cent as contrasted with the situation in States where the insurance companies take 38 or 40 and sometimes 50 cents out of every dollar of the premium paid by the employer for the purpose of the insurance company in its solicitation work adjustment and for profits. In fund States the fund is administered for an average of 7½ per cent overhead upon the amount collected in premiums. Everywhere that there has been an investigation the success of the fund has been demonstrated, as contrasted with the practice compelling employers to protect their workmen and then turning them over to private insurance companies to make a profit out of the injured man and the employer.

I hold in my hand the report of Miles M. Dawson, entitled "State Accident Insurance Funds a Demonstrated Success in America." This man, Mr. Dawson, was the consulting actuary employed to make the investigation in three of the States—New York, Pennsylvania, and I think Illinois. The Department of Labor, for the benefit of the people of the United States, has made a thorough and apparently impartial investigation of the entire subject in all its aspects—that is, in regard to the time which the man must wait for his money; in regard to how liberally he is treated; in regard to the cost; in regard to underpayment; in regard to every feature which enters into it. I hold in my hand the report of Carl Hookstadt, then and now the expert on this subject, of the Department of Labor, to which anyone interested may refer, as demonstrating the fairness and the justice of the fund as compared with either the competitive system or the writing of such compensation by insurance companies. This document and report made by the expert of the Department of Labor has been attacked by an employee of the insurance companies, Mr. P. Tecumseh Sherman, in a very clever pamphlet. I am referring to an insert in that pamphlet which was supplied, I believe, to every Member of this House as a part of the propaganda of the insurance companies against this bill, because it ought to be made clear that on both sides of this controversy there seems to be no difference of opinion but that this particular act for the District of Columbia must be either one or the other. It can not be like it is in Pennsylvania, competitive, nor can it be one where self-insurance and other features are taken up to make it complex.

One reason is because the field here is so limited and restricted by only 100,000 employees, and another is because it would make it unduly expensive and more complex, because this act attempts to take advantage and does take advantage of the commission which already exists under the former act, which is for the benefit of Government employees, which commission is already administering the act for 600,000 employees of this Government, 75,000 of whom are in the District of Columbia. So that no new machinery is created in order to provide protection for the private employees of the District of Columbia, which ought to make this the most economical administration of any act in existence, not excepting even the wonderful showing made in the State of Ohio.

I refer to this insert and read:

Finally it is argued in the report—

That is the report which was filed by the District Committee on this bill—

that the comparatively small area and limited number of employees in the District of Columbia make a *monopolistic*—

That is the word of the criticism, and then in brackets they put in the real word of the report—

[exclusive] State insurance fund there especially advisable. Those facts do preclude a competitive State fund. But the more advisable alternative is no State fund at all.

In the face of all these figures we can not accede to a demand to tax the employers of the District of Columbia to waste 35 cents out of every dollar simply to give useless business to the private insurance companies.

Mr. LAYTON. So that this act will actually put out of business all private casualty companies in the District of Columbia?

Mr. FITZGERALD. They do an insignificant business. They will tell you that, Doctor, that they have little or no business now. This would put a great expense upon the employers of the District, and it is a question whether that should be done simply for the sake of giving profits to insurance companies. [Applause.]

Mr. SPROUL. Mr. Chairman, I make the point of no quorum present.

The CHAIRMAN. The gentleman from Illinois makes the point of no quorum present. The Chair will count. [After

counting]. Sixty-six Members present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, when the following Members failed to answer to their names:

Almon	Dempsey	Kincheloe	Robsion
Anderson	Dickinson	Kindred	Rodenberg
Andrew, Mass.	Drane	Kinkaid	Rogers
Ansorge	Drewry	Kitchin	Rossdale
Appleby	Driver	Kline, N. Y.	Rouse

Deal	Kiess	Robertson	

The committee rose; and Mr. WALSH, Speaker pro tempore, having resumed the chair, Mr. TOWNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10034, and finding itself without a quorum he had directed the roll to be called, whereupon 231 Members responded to their names, and he presented a list of the absentees.

The committee resumed its session.

Mr. UNDERHILL. Mr. Chairman, I ask the Chair to notify me when I have spoken 30 minutes. I first wish to compliment my colleague [Mr. FITZGERALD], who made a very fair presentation of his side of the workmen's compensation act, and in the second place to correct an error in a statement that I am opposed to the workmen's compensation act. That is not the fact; I am opposed to the so-called Fitzgerald bill, but I am in favor of H. R. 9546, a bill which I shall move at the proper time to substitute for the Fitzgerald bill. I might also say in passing that if it had not been for the insistence of some of the proponents of this workmen's compensation there would probably have been a law on the statute books pretty nearly a year ago; but some of the proponents apparently would rather have the workman suffer and be deprived of his rights indefinitely in order that they may stand for what they call an advanced and what I call a socialistic piece of legislation which jeopardizes any chance the bill may have in passing both branches of Congress. In the second place it has delayed, I can not say for how long, the readjustment of conditions in the District, which are particularly bad and disgraceful to the country. Like my predecessor, I have a map of States that are now covered by some form of workmen's compensation, showing 5 States that are without it, showing that out of all the other States only 6 have the monopolistic or socialistic feature of the Fitzgerald bill, and showing 15 in all, including those 6, that have some form of State competitive insurance to which I do not object, and the balance of the country in blue—Arizona, New Mexico, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Louisiana, Wisconsin, Illinois, Tennessee, Alabama, Georgia, Indiana, Kentucky, Virginia, New Jersey, Maine, New Hampshire, Vermont, and Massachusetts—all have a liberal freedom and privilege of carrying on legitimate business without the Government stepping in and saying that they shall not do it.

Mr. MOORE of Virginia. Will the gentleman state the six that have, as he calls it, the monopolistic and socialistic features of the bill.

Mr. UNDERHILL. Washington, Wyoming, Nevada, Oregon, North Dakota, and Ohio. Ohio was the last State to join this group, and there has been no State added to it for a number of years, although some of the States have taken up the subject of workmen's compensation insurance and have passed laws with reference to it.

Mr. GRAHAM of Illinois. When was the Ohio law passed?

Mr. UNDERHILL. The gentleman from Ohio, Mr. FITZGERALD, can probably answer the gentleman. I do not want to introduce anything of a partisan character into this debate, but I am not betraying any confidence when I say that the result of the efforts on the part of James M. Cox, of Ohio, to get this adopted in Ohio law is responsible for the introduction of this bill here, but that does not make it good, bad, or indifferent, and yet at the same time it casts light on the subject in which some of you might be interested.

Now in only 7 out of 43 States that have accepted the workmen's compensation provision do they have a monopolistic or exclusive feature, and I think I may be excused if I take a moment to explain what that means. It means this. I hold no brief for the insurance companies. I am very grateful to the companies for the protection I have had in business in protecting me from fire and my family against loss that they might sustain because of my death. But this says that the companies in this country who are producers, who are investors, who pay a tax, and who employ thousands and thousands of people in their legitimate endeavors shall not come into the District of Columbia and write insurance on workmen's compensation. That is what it says in effect. The proponents will tell you that it does not prevent a man taking out workmen's compensation insurance in any of these companies. That is true; it does not prevent him, but he would duplicate his expense by taking out insurance of the State or governmental companies, and also in the stock companies.

Now, if we had passed the Fitzgerald bill a year ago, which provides a capital furnished by the Government of $50,000, if we had passed it before the Knickerbocker disaster that whole capital would have been wiped out by the death and injuries of the employees of the Knickerbocker Theater.

Mr. MILLSPAUGH. If the gentleman will yield, is it not a fact that the Knickerbocker disaster would have wiped out twice as much capital?

Mr. UNDERHILL. Yes, indeed; the total capital provided in the Fitzgerald bill would have been twice wiped out.

I tried to amend the Fitzgerald bill. I have done everything I possibly could do to bring out a proper bill. I tried to amend the bill, to provide for $250,000 of capital in the first place, and the proposition was turned down. You can not possibly carry on governmental business as successfully as you can private endeavor.

In my bill I provide every remedy, every relief, every consideration for the workman that is provided for in the Fitzgerald bill. Every man who appeared before the committee, when we had the matter before us for weeks and months, was asked the question as to which is of paramount importance, the relief of the workman or the relief of the employer in saving him a few dollars in the writing of his premium, and everyone agreed that the workmen's compensation bill was a workmen's compensation bill and that the workman was the first consideration. That is the idea of to-day, but when workmen's compensation was first proposed it was not to that altruistic idea at all. The first idea of workmen's compensation was to relieve society of the burden of the renewal of human machinery and put it upon the industry that was responsible for the wearing out of that machinery or the maiming of the employees. That was the original idea, but to-day it has gone further than that, it has more of a humanitarian aspect, and I am glad of it.

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. GRAHAM of Illinois. A query in my mind at the start of this is, Can the Government do insurance business, counting all of the overhead charge—that is to say, in that operation—more cheaply than private corporations, more cheaply than private companies can do it?

Mr. UNDERHILL. The Government can do anything more cheaply than private companies can do it, provided the Government assesses the taxpayers for the balance.

Mr. GRAHAM of Illinois. That is what I am getting at. Will the burden be transferred to the people?

Mr. UNDERHILL. I will be frank and say that it will not.

Mr. ZIHLMAN. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. In a minute. The Government has already a vehicle or machinery for putting into operation an extended workmen's compensation act in the District, and it is so provided for in my bill. I have asked the board about it and they have frankly stated that it means that they would have to hire a large number of additional employees. Every time the Government puts another one on the pay roll it simply takes from the ranks of the producers a man and puts him in the ranks of the consumers, and the taxpayer has to pay for it. In that way it costs the people. Furthermore, it takes away from legitimate industry, even though it is the much abused line of insurance work and activity. It takes some man of ambition, of incentive, with an earnest endeavor to go out after business and make business for himself and build up business for the country, and it puts him in the ranks of the consumers. Furthermore, it takes away from the Government that amount of taxation which it would collect, and it amounts to millions of dollars every year from the insurance companies of this country. They pay in part for running the Government's machinery. If you pass this monopolistic law, you tax the insurance companies in Connecticut, in your State, in my State, and every other State, that are carrying on a legitimate business, to carry on a governmental function in Washington in competition with their own business, and there again the people pay.

Mr. NEWTON of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. NEWTON of Minnesota. What is the claimed advantage on the part of the proponents of this bill for Government insurance as distinct from the insurance now in effect in these various States?

Mr. UNDERHILL. The claim is, and I shall use my colleague's own words, that it costs about 35 per cent for a private company—a corporation to do this business—and that includes taxation, rent, agents' commissions, the hiring of real estate, office rent, office supplies, and all that sort of thing——

Mr. LAYTON. And taxes.

Mr. UNDERHILL. I mentioned taxes, and I reiterate it; and, on the other hand, the Government pays no taxes to itself, and in the carrying on of its business in many instances the expense is hidden; some other department carries it. Take the Post Office Department. That does not carry one single dollar for the buildings of the Post Office Department, and the Treasury Department does; and yet the Post Office Department shows a deficit of only so many million dollars, whereas if they had to show the whole expense it would show a deficit that would alarm the people. It is the same way in this proposition. This is the first time that I have seen certain organizations and certain individuals show such anxiety in respect to how much the employer pays out of his pocket. There is no question whatever but that the employee gets just as much under my bill as he does under the so-called Fitzgerald bill, but the argument for that bill is that it costs the employer from 24 to 30 per cent less. I doubt if it costs as much less as that, although I think there is a difference of about 15 per cent.

Mr. NEWTON of Minnesota. The gentleman has answered the inquiry; but, that being the case, why then make it compulsory so that Government insurance must be carried? What is the argument for that?

Mr. UNDERHILL. Workmen's compensation is of no use whatever unless it is compulsory.

Mr. NEWTON of Minnesota. I mean the Government insurance feature as being compulsory. Why not let it be taken from either the Government insurance company or the private insurance company?

Mr. UNDERHILL. That is the only contention between Mr. FITZGERALD and myself, or between the proponents of this bill and the proponents of my bill. It is that one difference, that legitimate business has a right to that business, and that the Government should not say him nay in going after that business. If I want to join with Mr. HAMMER and Mr. WILLIAMS and a dozen other men here and form a mutual insurance company and carry on this business ourselves with a sufficient surplus to take care of employees, then I think the Government has no right to say that we shall not do it.

Mr. NEWTON of Minnesota. Is that prohibited?

Mr. UNDERHILL. Absolutely.

Mr. ZIHLMAN. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. ZIHLMAN. Did not the testimony before the committee show that these States that have a State fund were doing business for an overhead of about 3 per cent as compared with 35 to 60 per cent in States where they had the competitive form?

Mr. UNDERHILL. Yes; and I think that is a good argument for the Underhill bill. If we can get 35 per cent into general business, it is better than putting 3 per cent into Government business. What is the result in the States where they have a competitive business, in these States, including the great State of Pennsylvania and the State of New York? Over 75 per cent of those who carry insurance—and everybody, you understand, has to carry it—elect to take out the regular straight old-line company insurance, and they pass up the cheaper insurance which the State offers and does give.

But, gentlemen, any one of you who has been in business knows that it is not always the cheapest that is the best. You know in your business you pay for service. In fact, every employee you have you do not pay because he is John Smith or John Jones, but for the service which he renders, and you try, unless hampered by some outside organization, to pay the men who give the best service a little more money and recognition.

Mr. DENISON. Will the gentleman yield?

Mr. UNDERHILL. I will.

Mr. DENISON. In view of the question just asked by the gentleman from Maryland, can the gentleman from Massachusetts just state briefly what it is that makes the difference in the cost of writing insurance between the Government writing it and a business concern writing it?

Mr. UNDERHILL. Well, in the first place, there is that horrible bugaboo that is always put before us of the profit that the company makes in writing insurance, and they are legitimately entitled to have a profit. The next is that the agent here in Washington, a resident of Washington, who goes out seeking this business, is paid a commission, and that the Government has no agent to pay a commission. The next is the taxes that these insurance companies and all employed by them pay to the Government. The Government does not have to pay taxes to itself. The next is the office buildings rented by the insurance companies and agents down on F or Sixteenth Street in which to do their business. Why, it is positively ridiculous unless we are going to go the whole distance. And how far are you going to go? Let us start with the insurance companies, and then we will take the railroads and then we will take the mines, and then let us go out and take the manufacturers throughout the country, and then you have the farmers, and then what have we got left? It is just what Russia has left; that is, the church wealth. Then what is there to pay our taxes? That is the ultimate result.

Mr. MILLSPAUGH. Will the gentleman yield?

Mr. UNDERHILL. I will yield.

Mr. MILLSPAUGH. The proponents of the Fitzgerald bill are so anxious to make it appear that the District is such a restricted territory and having taken that stand want to collect as large an amount of premiums under the proposition that they foster, do not they with the provisions of this bill provide that if you have a maid coming to your house once a week to clean up for two hours and if on the 1st day of June, the registering day, you fail to register the maid with the District Commissioners or the board or whatever functionary it might be, you will be liable to a fine of $500. Is not that true?

Mr. UNDERHILL. That is true largely. And, gentlemen, I just want to call attention to this. I have no pride of authorship in the so-called Underhill bill, and I have tried to have the bill introduced under another name, but there is a bunch of amendments which must be offered to the Fitzgerald bill in order to make it conform to the kinds of insurance that you have in most of your States, so I thought it better to offer the amendments in bulk. The Underhill bill differs from the Fitzgerald bill in this—that it does not include domestic employment. That is, if you and I or some one of our neighbors has a maid who comes once a week; say she comes to my house on Monday every week, and to your house on Tuesday every week, and to a neighboring house on Wednesday every week, each one of the three, five, or a dozen have to carry insurance for that person because that means regular employment. Why, the nuisance of including domestic employees in this bill would make it so unpopular that Mr. VOLSTEAD's name would be written in gilt bright letters in comparison with it. [Laughter and applause.]

Mr. WILLIAMSON. Will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. WILLIAMSON. If we adopt the amendment the gentleman proposes what differences would it make in reference to the insurance of these employees?

Mr. UNDERHILL. I do not know just the page, but my bill exempts domestic employees entirely from the provision. Let me give you a little of the inconsistencies of the Ohio law. The Ohio law exempts any employee employed in an establishment where they do not employ more than five people. In other words, if you are carrying on a little business and you employ

five men, you do not have to take out workman's compensation. If one of your employees breaks a leg or loses an arm or loses an eye, he is not compensated under the Ohio law at all, but his eye is gone, his arm or leg is broken, and he is suffering just the same. Furthermore, the Ohio law exempts all farm laborers. A man falls from a load of hay and breaks his leg, or he falls off one of these mowing machines that has dozens of knives running click clack, cuts off his foot or a toe; he gets nothing whatever, because farm laborers are all exempt.

Almost all the States have that provision excepting farm labor. I do not know whether they are civilized enough to realize what this all means to the workingmen, and that if a man is employed in farm labor he is just as much of a workingman as a man who is employed in a mine or a man employed on railroads and is just as much entitled to protection. So I have included in my bill the farm laborer, and I have included the man who works for his brother and is the only employee he has. For years I ran a blacksmith shop, where I employed only one man beside myself. Do you not suppose that his family was just as much entitled to relief and help if he happened to an accident as an employee of my competitor, who hired 10 men, say, and 1 of which was injured? There is reason why you should exempt that class of employment where the accidents are very few, where the employment is not hazardous, and where the nuisance is of such a character that it more than makes up for whatever relief may come. Furthermore, you know it, all of you, by your own personal experience, that if a maid cuts a finger you do not discharge her. You either send her to your family physician to have the wound dressed or you do it yourself by first aid. You know if you have a chauffeur who in cranking a machine breaks an arm, you do not fire him, but you take care of him until he is ready to go to work again. And so instead of having thousands of people in Washington register that they have one woman in the kitchen or a man emptying ashes, or this girl or that wheeling the baby out on Sunday afternoon, I have exempted them.

Mr. HUDSPETH. Does the gentleman propose to substitute his bill for this one?

Mr. UNDERHILL. That is my purpose.

Mr. HUDSPETH. Does the gentleman make any arrangement as to exemption in regard to the number employed?

Mr. UNDERHILL. I do not exempt anyone, no matter how few are employed.

Mr. HUDSPETH. But you exempt domestic labor?

Mr. UNDERHILL. Yes.

Let me give you a brief outline of what my bill does accomplish. I know I have quite a task before me, due to the fact that most of the Members of the House have a misunderstanding of these two bills. They think I am opposed to the workmen's compensation. Far from it. I am proud of the fact that Massachusetts was the first or one of the first States to adopt workmen's compensation. I was a conservative member of the house at the time. They had tried at several sessions to put workmen's compensation upon the statute books, but had failed. I think possibly because of the reputation I had of ultraconservatism my support helped considerably in putting the bill on the statute books. One of our other Members here at that time was a member of the Massachusetts Senate. When they tried to make this exclusive and monopolistic feature a part of the bill, he led the opposition.

One of the other pleas you will hear is to your prejudice against insurance companies. My bill leaves no chance for the insurance companies to take advantage of the workmen. Every single, solitary injury almost that you can conceive of has been covered in my bill and provision made for it—for the loss of a foot, of a hand, of a finger, a toe, an eye, or an arm, or a leg, and for everything of that sort, and there is no way for an insurance company, even if they were so inclined, to be crooked or mean, because the bill says what they shall pay and how long they shall pay. It takes care of every dependent—the widow with 1 child, 2 children, 6 or 10 children, as the case may be. And it is only right that it should do so.

Mr. RANKIN. Will the gentleman yield?

Mr. UNDERHILL. I will.

Mr. RANKIN. How does the gentleman's bill compare with the Massachusetts law?

Mr. UNDERHILL. I will say that the bill is almost identical with the Massachusetts law, with few exceptions that had to be made in the bill on account of the Maryland law and the Virginia law. You know how necessary it would be to take into consideration the law of those States, where the District of Columbia is only a small acreage in the midst of them, and almost every man who employs help here in the District of Columbia sends that help over into Maryland and into Virginia. And so my bill had to be drawn with reference to the laws that exist in Maryland and in Virginia.

The CHAIRMAN. The gentleman has consumed his time.

Mr. UNDERHILL. I yield myself another half hour.

Mr. RANKIN. Will the gentleman yield?

Mr. UNDERHILL. I will.

Mr. RANKIN. What are the main differences between the Ohio law and the Massachusetts law?

Mr. UNDERHILL. In the Massachusetts law we have an insurance commissioner. You have one here in the District of Columbia. That commissioner passes upon the liability of an insurance company, and any insurance company with sufficient capital and a good reputation in business and can meet its obligations can come into Massachusetts and solicit insurance from me, and I can write with that company workmen's insurance, but under this bill no one in the District of Columbia could get any insurance company, no matter how solvent it might be, to write any insurance unless they duplicated it afterwards or before by writing insurance with the State company here in the District of Columbia.

No insurance company in the District or in any State will hire an agent to go out and solicit insurance of this character after the passage of the bill. It has got to be done under governmental operation and is exclusively a governmental function.

Mr. GENSMAN. Under your bill is the employer absolved from all liability whatever for the ordinary accident?

Mr. UNDERHILL. When the employer takes out the insurance he transfers his liability to the insurance company. He is liable, however, in every instance.

Mr. OGDEN. Is it a fact that under the operation of the competitive system you have better and safer working conditions and therefore a decrease in the number of accidents to the employees?

Mr. UNDERHILL. I wish I could only cover all these questions. It is a most interesting study. In Massachusetts many insurance companies are far from being looked upon with distrust and disregard by the employer and employee, but are looked upon almost as angels of mercy. Why? Because they insist on safeguards in instance after instance, and send their inspectors out day after day and day after day, and woe betide any factory where they have not placed all the safeguards that that inspector orders around the machinery to protect the workers. It is surprising to see how many safety devices have been invented and put into operation in Massachusetts by insistence on the part of the insurance company that the workers shall be protected.

Mr. HUDSPETH. As I understand, unless the insurance company is organized in this District it can not write this insurance?

Mr. UNDERHILL. If an insurance company is organized in this District, it can not write this insurance.

Mr. HUDSPETH. What company can?

Mr. UNDERHILL. The Government can write it, and only the Government. It says that Congress shall appropriate $50,000, and that then, if you are an employer of labor you must go on the first of a certain month and register with the Labor Commission, and show how many you employ, how much you pay, and all the details they ask you concerning your business, and then you must take out the insurance the Government says you must take out and pay the premium the Government says you must pay.

Mr. HUDSPETH. Mr. Chairman, will the gentleman yield there?

Mr. UNDERHILL. Yes.

Mr. HUDSPETH. That provides for employees of the Government as well as for those who are not employees of the Government?

Mr. UNDERHILL. No. It applies only to those employed by private individuals and corporations. Government employees are already provided for.

Mr. GRAHAM of Illinois. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. GRAHAM of Illinois. Does the Fitzgerald bill apply also to home labor and farm labor?

Mr. UNDERHILL. Yes, sir.

Mr. GRAHAM of Illinois. So that anybody who has a housemaid or a farm hand must take out liability insurance?

Mr. UNDERHILL. Yes, sir.

Mr. JONES of Texas. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. JONES of Texas. I notice here that compensation is given for disability. Is there any compensation given for an

injury other than a disability, or injury such as cutting off an ear or something producing a disfigurement only?

Mr. UNDERHILL. Yes; there is compensation for disfigurement.

Mr. JONES of Texas. Is there a provision here that a man may sue if he is not satisfied, or is he bound to abide by it?

Mr. UNDERHILL. He may sue. But if an employer does not take out insurance he has no protection at all; that is, he can not revert to the old common law, or contributory negligence, or anything of that kind.

Mr. LINEBERGER. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. LINEBERGER. Is it obligatory on the part of those having domestic help to take out this insurance?

Mr. UNDERHILL. Yes.

Mr. LINEBERGER. It is obligatory?

Mr. UNDERHILL. Yes. If you do not, you lay yourself liable to be pretty badly held up and soaked.

Mr. REED of West Virginia. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. REED of West Virginia. You stated that the agent of a stock company can not write insurance in the District of Columbia after the enactment of this bill. Let us take an example: John Smith is getting $150 per month from Parker, Bridget & Co. or some other store here. He is insured. I believe under the Fitzgerald bill he would get $100 a month, or 66⅔ per cent?

Mr. UNDERHILL. Yes.

Mr. REED of West Virginia. Do you say that an agent could not go to John Smith and say, "You are already protected, and that is not costing you anything; your employer pays for that. I want you to take out additional insurance." Can he take out additional insurance?

Mr. UNDERHILL. Certainly.

Mr. REED of West Virginia. Is it not a fact that there is an atmosphere of insurance created here that would help the insurance business?

Mr. UNDERHILL. Yes. God help us if we ever should say that a man can not take out insurance to protect his people. We would not dare to go that far.

Mr. BARBOUR. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. BARBOUR. What would the gentleman say that it would cost to take out insurance for a housemaid, for example?

Mr. UNDERHILL. Oh, it might be $5 a year, but the nuisance of it would be emphasized every time you got a new maid in your kitchen, a man to tend the furnace, or a new maid to push the perambulator.

Mr. LAYTON. That would be one of the changes that most familes would have to make here?

Mr. UNDERHILL. Yes.

Mr. BARBOUR. Does not the blanket clause cover almost any kind of person?

Mr. UNDERHILL. Yes; almost any kind of person might be covered by the compensation clause.

Mr. BARBOUR. It would not apply to a particular person?

Mr. UNDERHILL. No.

Now, gentlemen, I do not want to be misunderstood. I think it is a disgraceful state of affairs that the Capital of this Nation and the more than 100,000 people employed therein should not have the protection that is given almost universally all over this country. They are entitled to it.

I think that before long those five States which so far have been without workmen's compensation laws will undoubtedly see the advantage of it, and will come in under some form of workmen's compensation. In the State of Massachusetts, where we have to depend upon our industries, and practically all the people there are employed in industry, there is not an employer who would change the employers' compensation law. There is not an employee who would change it. There is not a word of criticism to be heard against it. And yet it took one of the greatest fights ever had in any legislature to get that form of insurance adopted by the Massachusetts Legislature on account of the opposition on the part of business men who could not see their way clear to pay that added expense. We added that expense to the public, to industry, to be accurate; and to-day the injured workman, instead of being thrown upon the charity or upon the kindness and sympathy and hospitality of his friends, has a legitimate source from which he can draw and keep his little family together and care for himself. His doctor's bills, his hospital bills, even his burial expenses, are provided for in this bill, and it is the right way to handle this great economic problem.

Under private insurance the losses are settled with the greatest expedition possible. Whereas in the State of Ohio there is hardly a man injured there, so the record shows, that gets his pay until after he goes back to work again, and that is the usual result of government activity everywhere—the delay owing to the army of employees and to the great amount of red tape, and all that sort of thing.

Do not be misled, gentlemen, by an appeal to the prejudice they hope to create regarding the heartless corporations known as insurance companies. We have found them in Massachusetts, those of us who have had to deal with them in the halls of legislation, those of us who have had to deal with them as business men, have found the insurance companies measure up to the full standard with any organizations of business men, professional or otherwise, that we have in the community. We have found that they were willing in many, many instances to stretch a point. I had five years' experience as the president of a great philanthropic organization in my State, and I never went in vain to the big insurance companies that handle workmen's compensation and asked for them a little leniency, a little leeway, or a little extra on their part in behalf or for the benefit of some of the injured employees which they did not grant willingly. There are mistakes made, and there are evils that creep into any line of business or profession, and no doubt instances could be related to you where a man may have been unjustly treated through the operation of some insurance company, but for every instance of that character I can bring you another, on the other hand, because of the red tape of the governmental mismanagement. I have been able in the last few weeks to correct some instances of injustice on the part of the Federal Insurance Board.

When brought to their attention in a proper sort of way they were very glad to correct those instances. In some cases it seems to me they should have been more liberal; but I am not here to criticize the operation of the Federal Workingmen's Compensation Commission. I think it is a splendid board and that it has done an excellent work.

I just want to state a few of the fundamentals, and then I shall be very glad, indeed, to yield to anyone.

Under the provisions of this bill we give a man 66⅔ per cent of his wages. Under my bill we start to give him conpensation after 5 days; that is, if he is injured, after 5 days we begin to give him compensation from the fourth day. In Massachusetts that has been reduced from 14 to 10 days, and I think from 10 to 7 days. In the Fitzgerald bill it is after 3 days. Now, the trouble with that is that while most of the workingmen are pretty good fellows, and most of them are not only willing but anxious to get back to work, where you make it 3 days it is an invitation to the workmen to lay off and quit the job for a little minor injury. So we increase the time by 2 days, and to a certain extent that removes the difficulty.

Mr. MOORE of Virginia. As I understand, the only irreconcilable difference between the gentleman's bill and the Fitzgerald bill is the one that he has been discussing, namely, the competitive insurance feature.

Mr. UNDERHILL. Absolutely. I would take all the evils of the Fitzgerald bill and fold them to my bosom to-day, and would have done so long ago, if they could have eliminated this exclusive, monopolistic, socialistic feature of his bill which has been adopted in Ohio. And may I say in passing that my information from Ohio recently is that the employers in Ohio are not all satisfied with this provision; that they are now seeking some remedy through an investigation of the whole workings of this bill in Ohio, with a purpose in view of changing this from a monopolistic State insurance to something of a different character, where they can have mutual, self-insurance, or competitive insurance. So you can see that there is some difference of opinion in Ohio, even although Ohio has collected hundreds of thousands of dollars from the premium payers—from industry and from society—and turned the money back into the State treasury. That is not altogether a good thing. Because the State of Ohio made $1,000,000 on this form of business last year, I do not consider that that justifies it by any means. It does not justify it, because it takes the money away from somebody, and that is simply another form of taxation.

Mr. LAYTON. In other words it is taken away from productivity.

Mr. UNDERHILL. It is taken away from production and paid out to public employees. In my bill we provide for medical and surgical aid, for previous disability, for all of the dependents, for minors and incompetent persons, for the right of employers and insurers to examine, for methods of payment, for proceedings to collect. Nothing has been left out of the

bill. It is not a perfect bill. I have no pride of authorship. When it comes to the reading of the bill if it is substituted for the Fitzgerald bill there will probably be numerous amendments that should be offered that will be improvements to the bill.

There is a great deal to be said about other forms and other practices in other States. You gentlemen who come from these other States are probably familiar with them and can improve this bill.

Now, let me say just one word more and then I am through. What is the purpose back of this bill? Why do they want a monopolistic bill here in this little bit of a District, where there are only 100,000 employees anyway? Why do they want that bill here? They want it for a model. They want it for a wedge. They want it for a starting point. They want to adopt it in the Nation's Capital, to hold it up as the one real piece of legislation that all other States should follow. What is the next step? Why, the next step is to go out into your State and my State and say, "Here, you have got to do this because they have done it down in Washington; and because we find we are making some money for the Government by going into the insurance business, it is a good thing for you to follow." In other words, it is an example.

The purpose is to try it first here as a model for all the rest of the country to follow. I do not believe the Members of Congress with their States rights want such a form of insurance. I see that New York and Massachusetts and other States in the North are coming to believe that the States have some rights, for an unprecedented thing has happened in Massachusetts. Congress passed a law giving to Massachusetts $69,000 on a so-called maternity bill, and the Legislature of Massachusetts refused to accept the $69,000 and is going to bring suit against the United States to test the constitutionality of that act. Did you ever hear before of a State refusing $69,000 from the Government? You heard once of the State of Massachusetts having a tea party. This is the second tea party, and we are going to protest against being taxed from now on. New York has taken about the same action or will take similar action. It is time for Congress to pause before they put into Government activities, Government hands, Government employees, Government bureaus, Government departments all of the rights and privileges that belong to the people and to the States.

So I oppose this bill, the so-called Fitzgerald bill, on the principle which is dear to the heart of almost every American, greater than the amount of money that they can make out of it or that the Government can make out of it—the principle of thrift, industry, ambition, and justice; but I advocate earnestly the principles of the workmen's compensation act as applied in Massachusetts and many other States. [Applause.]

Mr. ZIHLMAN. I yield five minutes to the gentleman from Ohio [Mr. FITZGERALD].

Mr. FITZGERALD. Mr. Chairman, while this matter is fresh in our minds I want to say a few words in regard to what my distinguished friend from Massachusetts has just said. I want to say, first, that nowhere in the world where workmen's compensation laws have been enacted and the State fund established by the government has this feature ever been departed from, and wherever the forward step has been taken it has come to be made exclusive; we have added West Virginia to the black map which my opponent has presented here, and the Canadian Province of Alberta because of the scandal which has occurred there when the insurance overhead expense rose to 50 per cent of the premiums.

My opponent, the distinguished gentleman from Massachusetts, is entirely mistaken about what his bill provides. I have had prepared by an actuary familiar with the laws of New York, Pennsylvania, and Massachusetts an analysis to show how imperfectly he understands his own bill. It reminds me of what he said in the committee, that he wanted to make a statement, which "was not borne out by the facts." He does make a statement, and it is not borne out by the facts. Labor can not recognize either him or his bill as friendly. Let us see. Here is a Government with a commission already administering for 600,000 employees, and he tosses it aside as useless machinery in providing for the 100,000 additional employees, just to create business uselessly for insurance companies and at the expense of both employer and employee. He talks about discontent in the State of Ohio and about the Hon. James M. Cox, late candidate for President of the United States. I wish to say that if there was one thing more than another which the Republicans resented in the State of Ohio during the last campaign it was the fact that to Governor Cox there was attributed too much credit for the wonderful popularity of the exclusive fund of the State of Ohio and the making it economically possible to pay the workmen compensation for injuries received in their employment without a needless additional 30 per cent burden on the employers.

Now I wish to call attention to the investigation made in the State of New York by the State officials. I want to call attention to his own State, where he claims that they are so well satisfied. Here is the last speech made by one of the senators on the floor of the senate in the State of Massachusetts. It reads:

Workmen's compensation insurance—Employers robbed—Injured workers swindled—Workers forced to pay $15.60 per capita tax—State fund only remedy—Address delivered by Hon. Warren E. Tarbell on floor of Massachusetts Senate April 5, 1922.

Mr. UNDERHILL. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. UNDERHILL. The proposition introduced by Mr. Warren Tarbell got one vote in the whole legislature, both in the House and the Senate, when it came up for action. [Laughter.]

Mr. FITZGERALD. I am glad to have my friend, who is so courageous, make that statement, as I may be inclined to think he is as much mistaken as he is about other things. He appeals to the intelligence of this House on the same basis that thinks that Yom Kippur is a kind of herring, and that Easter Sunday is a sister of Billy Sunday.

Mr. ZIHLMAN. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. ZIHLMAN. Does it not show that the employees were paying more than two and a half millions more than they would pay under the State fund?

Mr. FITZGERALD. Yes; that is demonstrated by every actuary and every investigating committee and from independent sources.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. NEWTON of Minnesota. I am at a loss to understand why this is made exclusive. If Government insurance is better and cheaper, why will not that fact in itself drive out private insurance companies, and if it does not drive them out, why should Congress be interested in driving them out?

Mr. FITZGERALD. I might answer the gentleman in a psychological way. I doubt if you or I ever took out life insurance until we were importuned. This insurance is made compulsory, and then we are asked by the gentleman from Massachusetts to tax the employers 35 per cent so that the insurance people can go out and solicit the business among and for themselves.

Mr. NEWTON of Minnesota. But you make it compulsory to take out Government insurance rather than private insurance.

Mr. FITZGERALD. I have tried to answer that.

Mr. LAYTON. But the gentleman has not.

Mr. FITZGERALD. The gentleman from Delaware may be right; I have done my best to answer it. The Lockwood investigation in New York explains that there is a fraudulent cutting of other kinds of insurance, burglary, flywheel, and other casualties which are not associated with Government activity in State funds in any State whereby by collusive action they are able to obtain the business as against the State fund.

Mr. LAYTON. Mr. Chairman, I do not like to embarrass the gentleman, but that is thicker than it was before.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. ZIHLMAN. Mr. Chairman, I yield the gentleman three minutes more.

Mr. WYANT. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. WYANT. If it is true that the Government offers better insurance at a cheaper rate, is it not also true as a usual thing that good business men would seek the best rate of insurance without being importuned?

Mr. FITZGERALD. I answer the gentleman by referring him to the life insurance companies that attempted insurance by mail at a saving of the agents' commissions. They were not able to go on with it. They kept it up and advertised in some of the high-class magazines, and although everybody could go to them, nobody would take the trouble to do it. Cutting the rates for other classes of insurance to induce employers to deal with the stock companies is a notorious scheme to get business away from the State fund. This is not my say-so, but this is the testimony taken by the Lockwood committee of the New York State Legislature which investigated conditions in the State and the city of New York.

Mr. JONES of Texas. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. JONES of Texas. I notice that the first part of the bill abolishes all causes of action, so that one must look to the

bill. In case of disfigurement, you are allowed only to recover when it diminishes ability to obtain employment. Suppose a man gets his ear cut off or his toe cut off, such as to cause tremendous physical pain and disfigurement, and yet it would not interfere with the kind of business that he is doing. He can not receive anything at all under this bill.

Mr. FITZGERALD. I think the gentleman is right, because this is solely economic.

Mr. JONES of Texas. You abolish all causes of action. There are many causes of action that under the present laws throughout the country can be sustained, where there is disfigurement, which would not result in lack of ability to obtain employment, but which would cause humiliation and pain, and for which, where it is negligently done, any man ought to have the right to obtain compensation.

Mr. FITZGERALD. I would agree with the gentleman on that, and I would be very glad to join in an amendment on that subject. These bills are far from perfect. I am in accord with the gentleman on that ground.

Mr. BARBOUR. Mr. Chairman, will the gentleman yield?

Mr. FITZGERALD. Yes.

Mr. BARBOUR. Is there any organized machinery now existing which will carry into effect this Government insurance?

Mr. FITZGERALD. Yes. We have a commission here for the employees of the United States, all of them—600,000—to which we turn this over.

Mr. BARBOUR. Do they do an insurance business under the Federal liability act?

Mr. FITZGERALD. So far as I know.

Mr. MICHENER. Oh, no.

Mr. FITZGERALD. This bill is in accord with that.

Mr. BARBOUR. If it is necessary to create an entirely new bureau or department to conduct this insurance business, and there are only 100,000 people to take insurance, and private companies also engage, then there would not be enough business to go around.

Mr. FITZGERALD. In spite of what my opponent from Massachusetts [Mr. UNDERHILL] says, all of the official propaganda going out from the headquarters of the insurance companies admit that the District of Columbia would not admit of a competitive plan; that it must be either one or the other—we must make it compulsory and turn it over to the insurance companies or make it compulsory and use the machinery that we already have.

Mr. BARBOUR. That is conceded by everyone?

Mr. FITZGERALD. Yes. I can show the gentleman the insurance company propaganda that went out on that.

Mr. UNDERHILL. Mr. Chairman, I want to yield a little time to myself in order to answer some of these questions. There was not an insurance company that appeared before our committee, or that was represented before our committee, that opposed the workmen's compensation act. There was no insurance company or a representative of an insurance company that appeared before our committee that objected to the State fund provided that they had the privilege of competing with that State fund.

Mr. BARBOUR. Suppose the Government had to establish a bureau or some kind of machinery for carrying on this insurance business. It would be more or less expensive. Suppose the private insurance companies came in through their agencies now existing and competing, would it not necessarily follow that the Government would do this insurance business at a loss? There are only 100,000 prospects to begin with.

Mr. UNDERHILL. I want to be perfectly fair. In the first place the Government has this machinery. It is provided in both the Fitzgerald bill and in my bill that the present machinery shall be used.

Mr. BARBOUR. Do they do an insurance business?

Mr. UNDERHILL. No; they do not. They only insure the Government just the same as under the laws in most of the States an individual can insure his own employees if he will deposit a bond sufficiently large to cover all of the loss that may be entailed under that insurance. That is allowed in many States, and also mutual insurance. The Government, in other words, acts as an individual; that is, insuring its own employees in carrying its own insurance.

Mr. BARBOUR. And the commission now is not conducting an insurance business?

Mr. UNDERHILL. No.

Mr. BARBOUR. But if this bill goes into effect it will have to do it.

Mr. UNDERHILL. If this bill goes into effect, the board tells me that they could not carry it on with their present force; that everything would have to be kept separate, and they would have to have an entirely new force to carry out the provisions of the bill.

Mr. BARBOUR. Does it not necessarily follow that this insurance business will have to be done entirely by the Government or by private companies?

Mr. UNDERHILL. I will agree that there is not enough business here to divide between the two, but that is no reason why the Government should say that an individual who wanted to do business here shall not do it.

Mr. BARBOUR. Then, it resolves itself into a question of the Government doing an insurance business or private companies doing it.

Mr. UNDERHILL. Absolutely.

Mr. WYANT. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. WYANT. As I understand, the Government has now machinery by which it carries into effect the insurance of Federal employees.

Mr. UNDERHILL. Yes.

Mr. WYANT. Did this department inform the committee that they would have to have an entirely new machinery to insure these other parties proposed to be taken on by this bill?

Mr. UNDERHILL. I do not think that I am mistaken when I say that the board did not inform the committee, nor was it asked by the committee—I see no reference to it in the hearings—as to whether they could carry on the business. Of course they can carry on the business, but the gentleman's common sense as a business man would show him that in this entirely different class of business they would have to employ more help; they would have to take from the ranks of the producers and add to the ranks of the consumers in order to carry on the business.

Mr. LAYTON. Will the gentleman yield?

Mr. UNDERHILL. I will.

Mr. LAYTON. As a matter of fact, however, it will go out to the country at large that Congress is establishing, at least as far as the District of Columbia is concerned, a governmental monopoly in this class of business?

Mr UNDERHILL. Absolutely.

Mr. FOCHT. Mr. Chairman, I yield 15 minutes to the gentleman from Maryland [Mr. ZIHLMAN].

Mr. ZIHLMAN. Mr. Chairman, I at one time had a rather comprehensive knowledge of this subject. In 1910 I was the author of the cooperative relief bill for coal and clay miners in my State, which was one of the pioneer laws on the subject of compulsory compensation legislation. And I was a member of the committee which drafted the present compensation law in Maryland, and yet I rise to speak on this bill before the committee with some reluctance and diffidence because I have been connected more or less for a number of years with the insurance business and a large part of the business written for the firm of which I am a member is compensation insurance. However, I feel that here in the District of Columbia, with a very limited field for the writing of business and a very few employees engaged in hazardous occupations, that it would be unfair for Congress to pass a law compelling the private employers of the District of Columbia to insure their employees and then open that field to the competition of insurance companies and force them to pay an overhead of from 35 to 60 per cent in excess of what they would have to pay under a State or a district fund. The gentleman from Massachusetts, who set up a straw Frankenstein here this afternoon and then kicked it to pieces, says he admits that the cost of writing insurance by insurance companies or by private capital is fully 35 per cent in excess of what it would cost if conducted under the fund provided by the Fitzgerald bill, but he pointed out to the House the fact that in the bill now before the committee an initial appropriation was carried of $50,000 to set in motion the machinery of insuring the private employees here in the District of Columbia. Now, I call the attention of the committee to this fact that in this bill it is also provided that there shall be set up a reserve fund to pay losses due to the injury or death of workmen and it is provided that when the fund reaches the sum of $100,000 the $50,000 paid out of the Federal Treasury is to be refunded. But what does the gentleman provide in the bill he proposes as a substitute for the bill now before the House?

The gentleman just stated to the distinguished gentleman from Pennsylvania that it would necessitate additional employees—additional clerks, stenographers—additional offices and quarters; but he did not tell the committee this was to be paid for out of the fund created by the provisions of the Fitzgerald bill. What does the gentleman provide in his bill? Let me call your attention to the method by which the gentle-

man from Massachusetts legislates along the lines of economy. Section 2 of his bill, the very first page, provides that there shall be appointed a compensation commissioner at $4,500 to administer the law. In section 5 it provides that the compensation commissioner may employ a deputy or deputies, clerks, officers, and other assistants and fix their compensation, subject to the written approval of the Commissioners of the District of Columbia. When the gentleman from Massachusetts comes to providing jobs and making expenditures from the Federal Treasury, the sky is the limit; but in this bill when it comes to dealing with the question of the injured employees the gentleman has put the total awards payable under that bill as low as he consistently can, taking into consideration the law of his own State and in other States on the subject.

Mr. UNDERHILL. Will the gentleman yield?

Mr. ZIHLMAN. I will.

Mr. UNDERHILL. I will state to the gentleman that in my bill the awards are higher than existing in any State in the Union——

Mr. ZIHLMAN. I differ with the gentleman. I hold in my hand a report of the Department of Labor, and I call attention to the fact that the Federal act and the law in a great many of the States provides that when a man is permanently disabled his family shall receive compensation for an indefinite period; and I call attention to the fact that in his bill it provides that it shall be limited, and that if within the 10 years the man totally disabled becomes either a pauper or——

Mr. UNDERHILL. Will the gentleman yield?

Mr. ZIHLMAN. I call attention further to the fact that in section 16 of his bill, I think it is, it provides that the insurance companies can go and settle their differences with the injured employee. In other words, the man who may be permanently disabled under provisions of the bill may be beguiled by the soothing words of some adjuster of the insurance company to settle for the compensation due him in any manner that he might see fit, subject to the approval of the insurance commissioners.

Mr. LAYTON. Will the gentleman yield?

Mr. ZIHLMAN. I will.

Mr. LAYTON. I know you will, my friend; we are old-time friends since 1920.

Mr. ZIHLMAN. I know, and I am deeply indebted to the gentleman.

Mr. LAYTON. But will the gentleman tell me as a citizen of the United States why he should be willing to pass any law that would keep any reputable business out of the District where the Capitol of the country is?

Mr. ZIHLMAN. Well, I will say to the gentleman when Congress attempts to legislate and say that employers shall carry insurance in a city such as this, where there is practically no industry and where a great majority of the employees are engaged in nonhazardous occupations, and we have already set up a compensation commission to adjudicate and adjust compensation connected with Federal employees, that we should provide this same class of protection that many of the States, which have been pioneers in this movement for compensation legislation, now provide.

Mr. LAYTON. If the principle is good, let us go the whole hog about legislation. Let us put Woodward & Lothrop out of business, put all the other merchants out of business for the sake and the benefit of the people of the District of Columbia, and keep all merchants and everybody else doing anything under heaven outside of the District for the benefit of the people and let the Government do it all.

Mr. ZIHLMAN. Well, I will say to the gentleman that a few years ago, when legislatures took up the question of injuries to men in employment, there was a great clamor as to taking property without due process of law; that they could not pass a law compelling an employer to compensate his employee; but nobody now, with the modern thought on the subject before them, would dare to voice that opinion which was voiced by many constitutional lawyers on this question.

Mr. LAYTON. The gentleman, I suppose, is restrained from taking a chance in the amalgamation of the car lines of the city for the purpose of securing cheaper car fares?

Mr. ZIHLMAN. We were only restrained from the fact that when we brought in a bill Members proceeded to kick it all over the House and did not offer a substitute for it.

Mr. LONDON. I understand that the law of almost every State in the Union, distrusting insurance companies, writes for them the contracts so far as life and fire insurance companies are concerned. Do the various insurance companies prescribe the terms in accident cases?

Mr. ZIHLMAN. They not only do that, but make terms as to life-insurance policies.

Mr. LONDON. Do the States prescribe the terms of accident policies?

Mr. ZIHLMAN. They regulate the reserve and protection of policyholders.

Mr. LONDON. The State has practically prescribed the terms of the policy. It has taken out the making of contracts from the hands of the insurance companies because of the frauds committed.

Mr. ZIHLMAN. I am glad to have that information added to the discussion.

Mr. BARBOUR. I want to say that the State of California does provide the form of policy.

Mr. ZIHLMAN. The gentleman from New York says it is almost universal among the States.

Mr. MILLSPAUGH. Will the gentleman yield?

Mr. ZIHLMAN. Yes.

Mr. MILLSPAUGH. How many States make the State or government insurance exclusive?

Mr. ZIHLMAN. Five States.

Mr. MILLSPAUGH. What others?

Mr. ZIHLMAN. The gentleman knows them.

Mr. MILLSPAUGH. I am asking for information.

Mr. ZIHLMAN. I have them here. Exclusive are Nevada, North Dakota, Ohio, Michigan, Porto Rico, Washington, West Virginia, and Wyoming.

Mr. LAYTON. Wyoming is exclusive?

Mr. ZIHLMAN. Yes.

Mr. LAYTON. What is that last word? Is it Wyoming?

Mr. ZIHLMAN. Yes.

Mr. LAYTON. It can not possibly be.

Mr. ZIHLMAN. I will explain to the gentleman. I can loan him this pamphlet.

Mr. LAYTON. I can not understand how it could be. [Laughter.]

Mr. ZIHLMAN. I will give the gentleman the Government statement. I also want to call attention to the fact that the gentleman from Massachusetts, who is so concerned about the enormous expenditures under the Fitzgerald bill, appropriates $20,000 in his bill annually for the years 1922 and 1923, and so much thereof as may be necessary annually for the maintenance of the office of the compensation commissioner of the District of Columbia and in the payment of salaries and expenses of the commissioner and his employees.

Further appropriation is made of $5,000 for the year 1922 for the necessary expenses of aforesaid compensation commissioner to cover printing, office fixtures, and other legitimate expenses. So that when it comes to the matter of officers and competent help—stenographers, typists, clerks, and assistants—the gentleman has been very liberal, and I want to show just how liberal the gentleman has made provisions for compensation in his bill.

Mr. UNDERHILL. Does the gentleman pretend that this can be carried on without expense?

Mr. ZIHLMAN. I contend that under the Fitzgerald bill sufficient premium will be collected to pay the expenses, and that is clearly outlined in the bill.

Mr. UNDERHILL. Who pays them?

Mr. ZIHLMAN. The employers, the policyholders. The public pays, absolutely.

Mr. UNDERHILL. In my bill I provide for the executive officers, but I do not provide for a whole army of employees to take care of all of these workmen.

Mr. ZIHLMAN. You provide for the necessary employees. I want to ask the gentleman from Massachusetts—I do not want to misquote him—did you not state before the committee that this bill of yours was perfectly acceptable to the insurance companies?

Mr. UNDERHILL. I did not make any such statement. I do not know whether it is or not, and I do not care.

Mr. LAYTON. Is not the gentleman, at least, in this dilemma, that either the functions already established for Government employees in their compensation liability are too much, or else there will have to be an additional force to take care of the additional work that will be thrown upon them?

Mr. ZIHLMAN. I do not think there is any question about that being true, I will say to the gentleman. There will be additional employees, and they will be paid as part of the overhead for managing this phase of the business of the Federal accident commission, by the premium and policy holders.

Mr. LAYTON. And then, of course, if there is an additional cost and overhead charges, the increase must come out of the Treasury or, what amounts to the same thing, out of the pockets of the people.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ZIHLMAN. I would like to ask the gentleman from Pennsylvania if he will yield me five additional minutes?

Mr. FOCHT. I yield five minutes more to the gentleman.

Mr. ZIHLMAN. I call the attention of the committee to the fact that in the Underhill bill the total and permanent disability is limited to payments aggregating $5,000, so that at the end of 10 years the injured employee, if his injury is total and permanent, would be a charge on the community. I want to call attention to the fact that way out in Arizona this provision is for life; in California, I will state to the gentleman from California [Mr. BARBOUR], this provision is for life; in Colorado, for life; in Idaho, for life; in Illinois, for life; in Nevada, for life; in Pennsylvania, for life; in North Dakota, for life; in Ohio, for life; in South Dakota, for life; in Washington, for life; in West Virginia, for life; and under the compensation laws for Federal employees if a man is permanently and totally injured he gets compensation—a percentage of his wages—as long as he lives, but under the provision of the very liberal bill of the gentleman from Massachusetts he is limited to $5,000.

Mr. MOORE of Virginia. Does the gentleman state that the States can control the rates charged by insurance companies?

Mr. ZIHLMAN. I will state to the gentleman from Virginia that in the gentleman's own State, the State of the gentleman from Massachusetts [Mr. UNDERHILL], according to this publication of the Government, the original proposition was to create a mutual company of employers, supervised and guaranteed by the State. But owing to the great pressure of the insurance companies, from the agitation against this form of legislation, they made what they call a fourfold plan, and that the experience of Massachusetts has been the experience in Maryland. Originally it was proposed to create a State fund, and the law now provides that you can insure in the State funds or you can carry your own insurance by depositing the proper bond; and an employer can insure in a stock company, and he can insure in a mutual company. The fourfold plan is in operation in Maryland and other States.

Mr. MOORE of Virginia. Mr. Chairman, will the gentleman yield?

Mr. ZIHLMAN. Yes.

Mr. MOORE of Virginia. I understand that in the gentleman's State and in my State, as well as in the District of Columbia, an insurance commission is authorized by law to regulate the insurance companies and restrain the rates within certain limits. Is not that the fact?

Mr. ZIHLMAN. In my State the authority to administer the workmen's compensation law is vested in a commission.

Mr. MOORE of Virginia. That is true with us.

Mr. ZIHLMAN. Yes; I recall now that they must approve the rates submitted. I will say to the gentleman that in my State and in many other States the experience has been that the insurance companies through the solicitors get the preferred business and discourage the writing of others, and the State usually gets the undesirable end of the business.

Mr. MOORE of Virginia. If this bill passes, it seems to me the District of Columbia would be a "no man's land," so far as insurance business is concerned, but they could do business in the adjoining States of Maryland and Virginia.

Mr. ZIHLMAN. I will say to the gentleman that they have no business now to speak of, and in order to get business Congress would have to say so by law.

Mr. MOORE of Virginia. I understand you are proposing new legislation here, but that it is at variance with that of the State that the gentleman partly represents and that of the State that I partly represent.

Mr. OGDEN. Mr. Chairman, will the gentleman yield?

Mr. ZIHLMAN. Yes.

Mr. OGDEN. Of course, the insurance companies are doing a liability business in the District at this time, are they not?

Mr. ZIHLMAN. They are doing some, but not the great volume of business that they would do if this act went into effect. The volume of business must necessarily be small here, because there are no industries of a hazardous nature here.

Mr. OGDEN. Whatever such business there is would be destroyed by this bill, and they will be driven out of business altogether?

Mr. ZIHLMAN. There would be nothing to compel the employer to take out double insurance.

Mr. OGDEN. It would be a double liability?

Mr. ZIHLMAN. Yes.

Mr. OGDEN. I want to call this to the gentleman's attention: Beginning on line 21 of page 2 of the Fitzgerald bill it is provided:

"Injury" means only an injury sustained in the course of employment, including disease arising out of and in the course of employment and an injury caused by the willful act of a third person directed against an employee because of his employment.

What particular situation did the gentleman have in mind when that provision was inserted?

Mr. ZIHLMAN. I will state to the gentleman that this is not my bill, but the provision, no doubt, is intended to cover injuries received because of the occupation of the employee, such as assault.

Now, Mr. Chairman, as I have just pointed out, there is a limitation of payment of $5,000 in this bill to those who may be permanently injured, contrary to the provisions of the acts of most of the States and contrary to the Federal compensation or liability law. In section 26 it is provided that the injured employee can adjust the matter, can compromise the sum that the insurance company may owe him, which is a form that is not found in the Massachusetts law. The gentleman from Massachusetts [Mr. UNDERHILL] said that his bill was taken largely from the insurance laws of his own State. There is no such provision in Massachusetts that would allow an insurance company to adjust their liability with the injured employee.

Mr. UNDERHILL. My bill, in section 15, provides that it shall not be done without the consent and permission of the insurance commission.

Mr. ZIHLMAN. Yes; I understand that.

Now, I contend that in a limited field such as obtains here in the District of Columbia, with a commission already set up, adjusting hundreds of cases each year; a commission whose members are competent and who, I understand, are willing to handle this additional business, where the number of injured is relatively small, where the business can be written at an average of 3 per cent overhead, as compared with from 35 to 60 per cent on the part of insurance companies, we should give to the people of the District the opportunity of securing this class of protection at the lowest rate possible.

The CHAIRMAN. The time of the gentleman from Maryland has again expired.

Mr. FOCHT. Mr. Chairman, I yield to the gentleman one minute.

Mr. LAYTON. Mr. Chairman, will the gentleman yield?

Mr. ZIHLMAN. Yes.

Mr. LAYTON. I want to repeat a question that I asked my friend. Does he not think it a vicious principle——

Mr. ZIHLMAN. I do not think it is any more vicious a principle to say how he shall buy his insurance than to say that he shall insure.

Mr. LAYTON. The gentleman has not heard my question in full. Let me ask the gentleman this question: Do not you think that it is a vicious principle for this Congress to say that any legitimate business in the territory presided over by the United States shall not have the right to enter in?

Mr. ZIHLMAN. I do not consider it any more vicious than to say that the employer shall take insurance; and if you compel a man to take something, you should provide the best possible vehicle for him.

The CHAIRMAN. The time of the gentleman from Maryland has again expired. To whom does the gentleman from Pennsylvania yield?

Mr. FOCHT. I yield five minutes to myself.

The CHAIRMAN. The gentleman from Pennsylvania is recognized for five minutes.

Mr. FOCHT. Mr. Chairman, this debate has gone along on a great question, which is one that is universally understood, I believe, and accepted in all the States. The fact of the matter is, this country has been very dilatory in matters of this kind. That will be manifest when we note and comprehend the fact that in Germany they had compensation laws 100 years ago. They have old-age pension laws in England, Germany, Austria, Australia, and New Zealand in successful operation; everything is done to extend the helping hand to the weak and the unfortunate. For the District of Columbia to have a compensation law is marking time far behind the rest of the divisions of government in the country. Massachusetts, New Jersey, Pennsylvania, Minnesota, and Wisconsin, and many of the other Western States have had these laws in full and successful operation. Therefore, fundamentally, so far as the people are concerned, these laws are acceptable, and as to their functioning they have been satisfactory and have met every requirement.

Now, what we are trying to do is to perfect them as we step along in the march of advancement; trying to apply something to the District of Columbia, although admitting that conditions here are somewhat different from those in the States, both as to the laws governing the District, on account of the District not being a municipality, but a species of Government reserva-

tion, without the sovereignty of a State, and otherwise, so that the laws of a State could not be transferred and applied here as they are in New York or Pennsylvania, or as they are out in Kansas, where Colonel LITTLE lives, where they have been adopted and perfected.

Therefore, in applying this law to the District of Columbia—a measure that has worked with splendid success in the great industrial State of Pennsylvania—and I do not think I am immodest or boastful when I say a thing that has worked successfully in Pennsylvania will work well anywhere else in any situation that will justify the application of a beneficent law like this.

Mr. OGDEN. You have the competitive system in Pennsylvania, have you not?

Mr. FOCHT. Oh, yes; and that is the exact point I want to refer to.

Mr. WYANT. Before the gentleman closes——

Mr. FOCHT. I have only started.

Mr. WYANT. I wish the gentleman would address his attention to this exclusive feature of this bill. Personally, I am strongly in favor of employers' liability laws, but the thing to which I object in the bill is the exclusive feature. Now, the gentleman is well posted in this matter——

Mr. FOCHT. I admit it.

Mr. WYANT. Will he give us some reason for inserting this exclusive feature in the bill?

Mr. FOCHT. I am afraid I can not do that. That is just exactly where the trouble comes with this bill, and where it has found opposition from the day it was offered by the distinguished gentleman from Ohio [Mr. FITZGERALD], whose heart, like mine, is for the man who is down and out, and who wishes to help the man who is injured. We must extend that helpfulness wherever injury may befall a man, particularly the workingman.

I want to see this thing so enlarged and extended that it will not only include the injured but will include helpfulness to the sick man and the sick woman and a pension for the aged as well. We shall have come nearer to the last word in Christian civilization when those things are accomplished. But progress must be made slowly. Therefore, believing with all my heart in a reasonable compensation bill, I can not understand why this bill should be imperiled and why we are asked to vote for a bill containing the obnoxious principle of continued governmental interference with the business of the people, something that does not appear in that wonderfully successful measure now operating so satisfactorily in the State of Pennsylvania.

The CHAIRMAN. The gentleman's five minutes have expired.

Mr. FOCHT. I yield to myself five minutes more. So successfully does this law operate in Pennsylvania that the few men whom I employ in my publishing plant actually cost so little that I never hear anything about it. And notwithstanding the low cost there they have a reserve fund of something approximating $5,000,000, although the insurance has not been in operation any great length of time.

Mr. KELLY of Pennsylvania. The gentleman is very familiar with the Pennsylvania law. Will he kindly give us the fundamental differences between the Pennsylvania statute and this bill which is now before us?

Mr. FOCHT. The fundamental difference, as I understand it, is one which I would like to have clarified by the gentlemen who wish to establish governmental control in contradistinction to the operation of the law in Pennsylvania, where insurance companies have the opportunity to compete with the State. Now, if the Government is going to do it so much cheaper than private companies can do it, then why is it necessary to legislate against the private companies? If the Government will do it more cheaply and do it as well as the private companies, then the Government ought to get the business in open competition.

Mr. LAYTON. Would not that be a good logical argument in favor of the Government going into every form of business under heaven?

Mr. FOCHT. That is the one reason I sent to Pennsylvania for the experts from the capital of that State. Mr. Mackey sent down several experts from the Pennsylvania board to give testimony before the committee, and it is the one bone of contention so far as this bill is concerned. No man on this floor will vote against compensation for injured employees in Washington, but I believe if the thing were separated so that an opportunity were given to vote upon each proposition singly every man here would vote against governmental interference and governmental ownership and governmental control. Now, during the rest of this debate I would like to have Members who understand this thing and who are sincere and earnest explain to us why they can not take out of this bill the element of Government control and let it operate successfully, as it does in Pennsylvania, and not hamper and jeopardize the possibility of the passage of this bill. [Applause.]

Mr. KELLY of Pennsylvania. The gentleman realizes that in Pennsylvania there is a 10 per cent differential in favor of the State.

Mr. FOCHT. Yes.

Mr. KELLY of Pennsylvania. But still the private companies do business.

Mr. FOCHT. Yes; and you do not establish the obnoxious principle of this exclusive governmental feature, a thing that is a nuisance and an annoyance to every man who believes in individual incentive. If we are going to continue to interfere with private enterprise, we will take away the rock upon which this Government is built, which is the hope of any young man to succeed in enterprise, and if the Government is going to run all the business, then all of us will be Government employees, and then the Government itself will perish and be eclipsed. [Applause.]

Mr. LAYTON. The gentleman and I are in thorough accord.

The CHAIRMAN. Does the gentleman from Massachusetts desire to yield any time?

Mr. UNDERHILL. How much time remains?

The CHAIRMAN. The gentleman has an hour and five minutes remaining, and the other side have 40 minutes remaining.

Mr. WYANT. Will the gentleman yield for a question?

Mr. UNDERHILL. Yes.

Mr. WYANT. During the remarks of the gentleman from Maryland [Mr. ZIHLMAN] reference was made to the fact that in the Fitzgerald bill the payments are indefinite in the case of the death of an employee. I understand the gentleman's bill provides for a maximum payment of $5,000 extending over a certain period of time. Is that correct?

Mr. UNDERHILL. Yes.

Mr. WYANT. Will the gentleman state why he gives a limited sum rather than the payment over an indefinite period of time?

Mr. UNDERHILL. Mr. Chairman, the two bills differ in many minor ways, and this is one of them. I have been, in addition to being a member of the Committee on the District of Columbia, a member of the Committee on Claims in this House. I have reported from time to time various bills for the death of citizens of the United States caused through no neglect or fault on their part but through the carelessness or drunkenness or neglect of some Government employee, and in no case has the sum exceeded $5,000 for a death. That has been the maximum, and when I realize the amount of energy and time and explanation to get these just claims adjudicated before this House I thought that possibly the House was committed to the $5,000 maximum in the case of death.

Mr. LAYTON. Will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. LAYTON. Has one of these claims been paid yet?

Mr. UNDERHILL. I do not know.

Mr. LAYTON. The reason that I have asked the question is that I have had two claims of this character where the evidence was absolutely conclusive and there has not been a settlement in either instance yet.

Mr. UNDERHILL. It seems to me there should be some limitation; it seems to me that this thing ought not to run on indefinitely. If you run these matters along indefinitely regarding the insured workman and his dependents, there will be no incentive on the part of anybody to try to improve conditions; it will be an easy thing for them in many instances to live on the amount of the award by compensation laws. You will note that in my bill I try to provide for that; that there shall be a specific sum for the loss of a hand or a foot, a toe or a finger, or an arm or a leg, and all the members or parts of the anatomy which enter into the carrying on of business and making a living.

The insurance company can not take any advantage because it is specifically stated in the bill what their responsibilities are. It may be better to carry this over a series of years. I know the United States Government, the Federal Employees' Commission, have paid in instances claims amounting to $12,000 and over and are still going on, but that is one of the ways in which the Government carries on its business, and it is one of the objections I had to placing more business in the hands of of the Government.

Now I have in my hand a report of the hearings before the subcommittee, and I want to read to you what the insurance commissioner of the State of Massachusetts has said. He said

he had had four years' experience as chairman of the board, several years as chairman of the House Judiciary Committee that had all the bills to do with workmen's compensation, and one summer served on a special committee, and he said in all that experience he never knew an instance where the insurance companies have not been willing to settle all claims on a reasonably fair basis. That brings us to the real reason for passing a workmen's compensation bill. It is not how much the employer pays, it is not how much society contributes, or how much industry has contributed in regard to paying it. The real reason for it is to pay the employee for the injury he has received, and that is covered in my bill without unnecessary delay. The proponents of my bill say that that is not a business now existing; that it is a new business created by this law. As a matter of fact, many of the merchants, many of the men who employ help, carry insurance to-day in behalf of their employees. Why should they not continue to deal with insurance companies in the same pleasant relations they have had in the past; why should they have to shift and change and go to the Government employees who are only on the job seven hours of the day, when he could call up the agent over the telephone and tell him what the difficulty is, what he wants to do, and get the business and all of his worry and trouble passed along to the agent or representative of the insurance company?

Mr. WYANT. Will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. WYANT. Do the hearings disclose the number of States in which this payment to the beneficiary extends over an indefinite period of time?

Mr. UNDERHILL. I think the gentleman from Maryland [Mr. ZIHLMAN] gave that to the House, and I have no reason to question his statement. There are many States that extend it over an indefinite period of time.

Mr. LONDON. Will the gentleman yield?

Mr. UNDERHILL. I will.

Mr. LONDON. Speaking of the Fitzgerald bill, in what manner does the bill compel the employers to insure? Does it fine them or does it remove the old common law?

Mr. UNDERHILL. It removes the old common law; he has no protection in the courts.

Mr. LONDON. The penalty is that it withdraws the old common law from any defense the employer may make?

Mr. UNDERHILL. Practically all defense is withdrawn.

Mr. LONDON. That is the only penalty it imposes.

Mr. UNDERHILL. And the same in my bill.

Mr. MOORE of Virginia. Mr. Chairman, will the gentleman yield?

Mr. UNDERHILL. Yes.

Mr. MOORE of Virginia. I have not had an opportunity to study the gentleman's bill. Is the gentleman's bill as liberal to the employees as the law in any of the States?

Mr. UNDERHILL. In many respects my bill is much more liberal to the employees than in any of the States, including the State of Ohio. There is some question as to the good judgment of that. The Fitzgerald bill carries a maximum of $25 a week, and in his own State the maximum is only $16.

In Massachusetts it is more than that. I provide for a maximum of $25 in my bill. The only limitation I made in my bill that is not made in the Fitzgerald bill is as to time, and I do specify the exact amount which shall be paid for a finger, a toe, an arm, or a leg, and so forth.

Mr. MOORE of Virginia. I take it for granted, then, that the gentleman's bill reaches the high-water mark of liberality which obtains in any of these States where compensation laws are in effect.

Mr. UNDERHILL. Yes. Mr. Chairman, before I go any further, I ask unanimous consent to revise and extend my remarks in the RECORD in order that I may have my bill printed in the RECORD.

The bill is as follows:

A bill (H. R. 9546) relating to assuring compensation for accidental injuries or death of employees in certain occupations in the District of Columbia.

Be it enacted, etc., That this act shall be known as "The District of Columbia workmen's compensation act."

SEC. 2. That the office of compensation commissioner for the District of Columbia is hereby created. It shall be the duty of such commissioner to administer this act. He shall be appointed by the Commissioners of the District of Columbia and shall be an actual resident of said District. His term of office shall be for four years, but said commissioners may at any time remove him for inefficiency, neglect of duty, or malfeasance in office. The salary of such commissioner shall be $4,500 per annum, and shall be paid as other salaries and expenses of public officers of the District of Columbia are paid. The commissioner shall devote his entire time to the duties of the office and shall not hold any position of trust or engage in any occupation or business interfering or inconsistent with his duties as such commissioner. The commissioner shall maintain an office in the District of Columbia, to be provided by the Commissioners of the District of Columbia.

SEC. 3. That any investigation, inquiry, or hearing which the compensation commissioner is authorized to hold or undertake may be held or undertaken by or before any deputy commissioner, and every order made by a deputy commissioner, when approved and confirmed by the compensation commissioner and so shown on his record of proceedings, shall be deemed to be the order of the compensation commissioner.

SEC. 4. That the office of the compensation commissioner shall be open for the transaction of business during all business hours of each and every day, excepting Sunday and legal holidays. All hearings shall be open to the public and shall stand and be adjourned without further notice thereof on its record. All proceedings of the commissioner shall be shown on his record of proceedings, which shall be a public record, and shall contain a record of each case considered and the award made and of all remuneration paid or allowed to any employee of the commissioner or to any other person for services: *Provided, however*, That any person in the employ of the commissioner who shall divulge any information secured by him in respect to the transactions, property, or business of any person, firm, company or corporation, association or joint partnership to any person other than the compensation commissioner or a deputy commissioner shall be guilty of a misdemeanor and subject to a fine of not less than $100 or more than $500, or imprisonment not exceeding 12 months, in the discretion of the court, and shall thereafter be disqualified from holding any appointment with the commissioner.

SEC. 5. That the compensation commissioner may employ a deputy or deputies, clerks, stenographers, and other assistants, and fix their compensation, subject to the written approval of the Commissioners of the District of Columbia. The commissioner shall provide necessary office furniture and supplies for the same. Such compensation and all necessary expenses shall be audited and paid as other salaries and expenses of the District of Columbia are paid. The commissioner shall provide himself with a seal for the authentication of his orders, awards, and proceedings, upon which shall be inscribed the words "District of Columbia Compensation Commissioner—Official Seal."

The compensation commissioner and each deputy commissioner shall, before entering upon the duties of his office, take and subscribe to the constitutional oath of office.

SEC. 6. That the compensation commissioner and each deputy commissioner shall, for purposes contemplated by this act, have power to issue subpœnas, compel the attendance of witnesses, administer oaths, certify to official acts, compel the production of pertinent books, pay rolls, accounts, papers, records, documents, and testimony.

If a person subpœnaed to attend or in attendance before the compensation commissioner or a deputy commissioner shall, without reasonable cause, fail or refuse to attend or refuse to be examined or to answer a legal and pertinent question, or to produce a book or paper when ordered to do so by the commissioner or deputy commissioner, the commissioner may apply to any judge of the Supreme Court of the District of Columbia, upon proof by affidavit of the fact, for a rule or order returnable in not less than two or more than five days, directing such person to show cause before the judge who made the order, or any other judge aforesaid, why he should not be committed to jail; upon the return of such order the judge before whom the matter and such person shall come on for a hearing shall examine under oath such person, and such person shall be given an opportunity to be heard; and if the judge shall determine that such person has failed or refused, without reasonable cause or legal excuse, to attend or to be examined or to answer a legal or pertinent question, or to produce a book or paper which he was ordered to bring or produce, he may forthwith commit the offender to jail, there to remain until he submits to do the act which he was so required to do or is discharged according to law.

SEC. 7. That each officer or person who serves a subpœna issued as aforesaid shall receive the same fee as the marshal would receive where said witness is subpœnaed, and each witness who appears in obedience to a subpœna before the compensation commissioner or a deputy commissioner shall receive for his attendance the fees and mileage provided for witnesses in civil cases in the Supreme Court of the District of Columbia, which shall be audited and paid in the same manner as other expenses hereinbefore provided for. No witness subpœnaed at the instance of a party other than the compensation commissioner or deputy commissioner shall be entitled to compensation, unless the commissioner or deputy shall certify that his testimony was material to the matter investigated. In an investigation the commissioner may cause depositions of witnesses residing within or without the District to be taken in the manner prescribed by law for like depositions taken in cases pending before the Supreme Court of the District of Columbia. The compensation commissioner shall have authority to appoint, by his written order, any subordinate or other person to serve subpœnas, notices, and all other papers issued by and in his name.

SEC. 8. That, subject to the provisions of this act, the compensation commissioner shall adopt reasonable and proper rules to govern his procedure, which procedure shall be as summary and simple as reasonably may be. He shall regulate and provide for the kind and character of notices and the service thereof, and, in cases of injury by accident to employees, the nature and extent of the proofs and evidence and the method of taking and furnishing the same for the establishment of the right to compensation. He shall determine the nature and forms of application of those claiming to be entitled to benefits or compensation, and shall regulate the method of making investigations, physical examinations, and inspections, and prescribe the time within which adjudications and awards shall be made: *Provided*, That all such rules and regulations shall conform to the provisions of this act.

SEC. 9. That a transcribed copy of the evidence and proceedings, or any specific part thereof, of any investigation taken by a stenographer appointed by the compensation commissioner or a deputy commissioner, being certified and sworn to by such stenographer to be a true and correct transcript of the testimony, or of a particular witness, or of any specific part thereof, or to be a correct transcript of the proceedings had on such investigation so purporting to be taken and subscribed, may be received in evidence by the commissioner or a deputy with the same effect as if such stenographer were present and testified to the facts certified. A copy of such transcript shall be furnished on demand to any party in interest upon payment of the fee therefor, as provided by rule of the compensation commissioner.

SEC. 10. (a) That the compensation commissioner shall prepare and furnish free of cost blank forms and provide for their distribution so that the same may be readily available, of applications for benefits or compensation, notices to employers, proof of injury or death, of medical attendance, of employment and wage earnings, and such other blanks as may be deemed proper and advisable, and it shall be the duty of employers to constantly keep on hand a sufficient supply of such blanks.

(b) The compensation commissioner shall inquire into the causes and results of accidents to employees, and study the methods of safeguarding against such accidents. The said commissioner, or any of his agents, may enter into any place of employment for the purpose of collecting facts and statistics, examining the provisions made for the health, protection, and safety of employees and observing and enforcing the observance of any law, ordinance, or other lawful rule, regulation, or order relating thereto.

SEC. 11. That annually, on or before the 1st day of January, the compensation commissioner shall make a report to the Commissioners of the District of Columbia, which shall include a statement of the number of awards made by him, the causes of the accidents leading to the injuries for which the awards were made, and a detailed statement of the expenses of his office, together with any other matters which the commissioner deems proper to report, including any recommendations he may desire to make.

SEC. 12. That if an employee suffers personal injury or death by accident arising out of and in the course of an employment subject to this act his employer or insurer shall pay or provide compensation according to the schedules of this act, except where the injury is occasioned by the willful intention of the injured employee to bring about the injury or death of himself or of another, or where the injury results solely from the intoxication of the injured employee while on duty. Where the injury is occasioned by the willful intention of the injured employee to bring about the injury or death of himself or of another, or where the injury results solely from the intoxication of the injured employee while on duty, neither the injured employee nor any dependent of such employee shall receive compensation under this act.

The liability prescribed by the last preceding paragraph shall be exclusive, except that if an employer fail to secure the payment of compensation for his injured employees and their dependents, as provided in this act, an injured employee or his legal representative, in case death results from the injury, may, at his option, elect either to claim compensation under this act or to maintain an action in the courts for damages on account of such injury; and in such an action the defendant may not plead as a defense that the injury was caused by the negligence of a fellow servant or that the employee assumed the risk of his employment, or that the injury was due to the contributory negligence of the employee.

SEC. 13. That this act shall apply to all private employments, except as herein otherwise provided. It shall not apply to—

(1) Any employment in commerce between the District of Columbia and any of the States, Territories, or possessions of the United States or any foreign nation or nations, in the service of a common carrier by railroad;

(2) Any employment that is casual and not in the usual course of the trade, business, occupation, or profession of the employer;

(3) Any employment in an occupation not carried on by the employer for the sake of pecuniary gain;

(4) Any employment as a household domestic servant; or

(5) Any employment by an eleemosynary institution or association.

Provided, however, That an excluded employment may be brought under the provisions of this act by express agreement in writing between the employer and employee filed with the compensation commissioner.

SEC. 14. (a) That where an accident happens while the employee is employed elsewhere than in the District of Columbia which would entitle him or his dependents to compensation if it had happened in such District, the employee or his dependents shall be entitled to compensation, if the contract of employment was made in said District, if the employer's place of business is in said District, or if the residence of the employee is in said District: *Provided,* That his contract of employment was not expressly for service exclusively outside of said District.

(b) *Provided, however,* That if an employee shall receive compensation or damages under the law of any State or Territory other than the District of Columbia, nothing herein contained shall be construed so as to permit a total compensation for the same injury greater than is provided in this act.

SEC. 15. That the rights and remedies herein granted shall exclude all other rights and remedies of such employee, his personal representative, wife, parents, dependents, or next of kin, at common law or otherwise on account of such injury, loss of service, or death, except as herein elsewhere otherwise provided.

The making of a lawful claim against an employer for compensation under this act for the injury or death of an employee shall operate as an assignment to the employer of any right to recover damages which the injured employee or his personal representative or other person may have against any other party for such injury or death, and such employer shall be subrogated to any such right and may enforce, in his own name or in the name of the injured employee or his personal representative, the legal liability of such other party. The amount of compensation paid by the employer or the amount of compensation to which the injured employee or his dependents are entitled shall not be admissible as evidence in any action brought to recover damages, but any amount collected by the employer under the provisions of this section in excess of the amount of compensation paid by the employer subject to the order of the compensation commissioner or for which he is liable shall be held by the employer for the benefit of the injured employee or other person entitled thereto, less such amounts as are paid by the employer for reasonable expenses and attorney's fees: *Provided,* That no compromise settlement shall be made by the employer or insurance carrier in the exercise of such right of subrogation without the approval of the compensation commissioner and the injured employee or the personal representative or dependents of the deceased employee being first had and obtained.

Where any employer is insured against liability for compensation with any insurance carrier, and such insurance carrier shall have paid any compensation for which the employer is liable or shall have assumed the liability of the employer therefor, it shall be subrogated to all the rights and duties of the employer, and may enforce any such rights in its own name or in the name of the injured employee or his or her personal representative: *Provided, however,* That nothing herein shall be construed as conferring upon insurance carriers any other or further rights than those existing in the employer at the time of the injury to his employee, anything in the policy of insurance to the contrary notwithstanding.

An employer, insurance carrier, firm, association, or corporation knowingly misappropriating any moneys collected, received, or held under the foregoing provisions of this section shall be guilty of a felony and punished by imprisonment for not exceeding five years or by fine not exceeding $5,000, or by both.

SEC. 16. (a) That where any person (in this section referred to as principal contractor) undertakes to execute any work, which is a part of his trade, business, or occupation or which he has contracted to perform, and contracts with any other person (in this section referred to as subcontractor) for the execution by or under the subcontractor of the whole or any part of the work undertaken by such principal contractor, the principal contractor shall be liable to pay to any employee employed in the work any compensation under this act which he would have been liable to pay if the employee had been immediately employed by him; and where compensation is claimed from or proceedings are taken against the principal contractor, then, in the application of this act, reference to the principal contractor shall be substituted for reference to the subcontractor, except that the amount of compensation shall be calculated with reference to the earnings of the employee under the subcontractor by whom he is immediately employed.

(b) Where the principal contractor is liable to pay compensation under this section, he shall be entitled to indemnity from any person who would have been liable to pay compensation to the employee independently of this section or from any intermediate contractor, and shall have a cause of action therefor.

(c) Nothing in this section shall be construed as preventing an employee from recovering compensation under this act from a subcontractor instead of from the principal contractor, but he shall not collect from both.

(d) A principal contractor, when sued by an employee of a subcontractor, shall have the right to call in that subcontractor or any intermediate contractor or contractors as defendant or codefendant.

SEC. 17. (a) That no employer or employee who is subject to the provisions of this act shall exempt himself from the burden or waive the benefit of this act by any contract, agreement, rule, or regulation, and any such contract, agreement, rule, or regulation shall be pro tanto void. No agreement by such employee to pay any portion of the insurance premium paid by such employer shall be valid, and any employer who deducts any portion of such premium from the wages or salary of any employee entitled to the benefits of this act shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not more than $200 for each offense.

(b) Nothing herein shall affect any existing contract or policy of employer's liability insurance or the liability of any mutual insurance association, or any arrangement now existing between employers and employees, providing for the payment to such employees, their families, dependents, or representatives of sick, accident, or death benefits in addition to the compensation provided for by this act; but liability for the compensation specified in this act shall not be reduced or affected by any insurance, contribution, or other benefit whatsoever due to or received by the person entitled to such compensation, and the person so entitled shall, irrespective of any such insurance or other contract, have the right to recover the compensation directly from the employer.

SEC. 18. That no claim for compensation under this act shall be assignable, and all compensation and claims therefor shall be exempt from all claims of creditors.

SEC. 19. That all rights of compensation granted by this act shall have the same preference or priority for the whole thereof against the assets of the employer as is allowed by law for any unpaid wages for labor.

SEC. 20. That in addition to the compensation hereinafter provided for the employer shall promptly provide for an injured employee such medical, surgical, or other attendance or treatment, nurse and hospital services, medicines, crutches, apparatus, artificial hands, arms, feet, and legs as may be required by the compensation commissioner in an amount not to exceed $300. If an employer neglects to provide the same, the injured employee may do so at the expense of the employer. All fees and other charges for such treatment and services shall be subject to regulation by the compensation commissioner and shall be limited to such charges as prevail in the same community for similar treatment of injured persons of a like standard of living. In case death ensues from the injury within three years, reasonable funeral expenses shall also be allowed, not to exceed the sum of $150. The compensation commissioner shall have full power to adopt rules and regulations with respect to furnishing medical, nurse, and hospital services and medicine to injured employees entitled thereto and for the payment therefor.

SEC. 21. That no compensation shall be allowed for the first ——— calendar days of disability resulting from an injury, except the benefits provided in section 20; but if disability extends beyond that period, compensation shall commence with the eighth day of disability. If, however, such disability shall continue for more than four weeks, then compensation shall be payable for the first ——— days of disability.

SEC. 22. That each employee (or in case of death his dependents entitled to receive compensation under this act) shall receive the same in accordance with the following schedule, and except as in this act otherwise provided such payment shall be in lieu of any and all rights of action whatsoever against any person whomsoever.

1. Permanent total disability: In case of total disability adjudged to be permanent, 66⅔ per cent of the average weekly wages shall be paid to the employee during the continuance of such total disability, not to exceed a maximum of $25 per week and not less than a minimum of $7 per week, unless the employee's established weekly wages are less than $7 per week at the time of the injury, in which event he shall receive compensation in an amount equal to his average weekly wages, but not to exceed a total of $5,000. Loss or loss of use of both hands or both arms or both feet or both legs or both eyes, or of any two thereof, shall, in the absence of conclusive proof to the contrary, constitute permanent total disability. In all other cases permanent total disability shall be determined in accordance with the facts.

2. Temporary total disability: In case of temporary total disability, 66⅔ per cent of the average weekly wages shall be paid to the employee during the continuance thereof, but not to exceed a maximum of $25 per week and not less than a minimum of $7 per week, unless the employee's established weekly wages are less than $7 per week at the time of the injury, in which event he shall receive compensation equal to his full wages; but in no case to continue more than six years from the date of the injury or to exceed $3,750 in the aggregate.

3. Permanent partial disability: In case of disability partial in character but permanent in quality the compensation shall be 66⅔ per cent of the average weekly wages, in no case to exceed $25 per week and not less than a minimum of $7 per week, unless the employee's established weekly wages are less than $7 per week at the time of the injury, in which event he shall receive compensation equal to his full wages,

but in no case to exceed $3,750 in the aggregate, and shall be paid to the employees for the period named in the schedule as follows:

Thumb: For the loss of a thumb, 50 weeks.

First finger: For the loss of a first finger, commonly called the index finger, 30 weeks.

Second finger: For the loss of a second finger, 25 weeks.

Third finger: For the loss of a third finger, 20 weeks.

Fourth finger: For the loss of a fourth finger, commonly called the little finger, 15 weeks.

The loss of the second, or distal, phalange of the thumb shall be considered to be equal to the loss of one-half of such thumb; the loss of more than one-half of such thumb shall be considered to be equal to the loss of the whole thumb; the loss of the third, or distal, phalange of any finger shall be considered to be equal to the loss of one-third of such finger. The loss of the middle, or second, phalange of any finger shall be considered to be equal to the loss of two-thirds of such finger. The loss of more than the middle and distal phalange of any finger shall be considered to be equal to the loss of the whole of such finger: *Provided, however,* That in no case shall the amount received for more than one finger exceed the amount provided in this schedule for the loss of a hand.

Great toe: For the loss of a great toe, 25 weeks.

Other toes: For the loss of one of the toes, other than the great toe, 10 weeks.

Hand: For the loss of a hand, 150 weeks.

Arm: For the loss of an arm, 200 weeks.

Foot: For the loss of a foot, 150 weeks.

Leg: For the loss of a leg, 175 weeks.

Eye: For the loss of an eye, 100 weeks.

Hearing: For the total loss of hearing of one ear, 50 weeks; for the total loss of hearing of both ears, 100 weeks.

Loss of use: Permanent loss of use of a hand, arm, foot, leg, or eye shall be considered as the equivalent of the loss of such hand, arm, foot, leg, or eye, and for the loss of the fractional part of the vision of either one or both eyes the injured employee shall be compensated in like proportion to the compensation for total loss of vision, and in arriving at the fractional part of vision lost regard shall not be had for the effect that correcting lens or lenses may have upon the eye or eyes.

Amputations: Amputation between the elbow and the wrist shall be considered as the equivalent of the loss of a hand. Amputation between the knee and the ankle shall be considered as the equivalent of the loss of a foot. Amputation at or above the elbow shall be considered as the loss of an arm. Amputation at or above the knee shall be considered as the loss of the leg.

The compensation for the foregoing specific injuries shall be paid in addition to, and consecutively with, the compensation hereinbefore provided in subsection 2 of this section.

If an employee dies the right to any compensation payable under this subsection unpaid at the date of his death shall survive to and vest in his personal representatives.

Other cases: In all other cases in this class of disability the compensation shall be 50 per cent of the difference between his average weekly wages and his wage-earning capacity thereafter in the same employment or otherwise, if less than before the accident—but not to exceed $25 per week—payable during the continuance of such partial disability, but not to exceed $3,000, and subject to reconsideration of the degree of such impairment by the compensation commissioner on his own motion or upon application of any party in interest.

In all cases where there has been an amputation of a part of any member of the body herein specified, or the loss of the use of any part thereof, for which compensation is not specifically provided herein, the commissioner shall allow compensation for such proportion of the total number of weeks allowed for the amputation or the loss of the use of the entire member as the affected or amputated portion thereof bears to the whole.

Disfigurements: For other mutilations and disfigurements, not hereinbefore provided for, compensation shall be allowed, in the discretion of the commissioner, for not less than 10 weeks nor more than 100 weeks, as the commissioner may fix, in each case having due regard to the character of the mutilation and disfigurement as compared with mutilation and injury hereinbefore specifically provided for.

4. Temporary partial disability: In case of temporary partial disability, except the particular cases mentioned in subdivision 3 of this section, an injured employee shall receive 50 per cent of the difference between his average weekly wages and his wage-earning capacity thereafter in the same employment or otherwise, if less than before the accident, but not to exceed $25 per week during the continuance of such partial disability, but not in excess of $3,500, except as otherwise provided in this article.

5. Fatal cases: In case the injury causes death within the period of three years, the benefits shall be in the amounts and to the persons following:

If there be no dependents, the disbursements shall be limited to the expense provided for in section 20 hereof.

If there are wholly dependent persons at the time of death, the payment shall be 66⅔ per cent of the average weekly wages, not to exceed, however, a maximum of $25 per week and not less than a minimum of $7 per week, unless the deceased employee's established weekly wages were less than $7 per week at the time of injury, in which event the compensation shall be an amount equal to the average weekly wages, and to continue for the remainder of the period between the date of death and 416 weeks after the date of injury, and not to amount to more than a maximum of $5,000, nor less than a minimum of $1,000.

If there are no wholly dependent persons at the time of the death, but are partly dependent persons, those partly dependent shall receive compensation as follows: The weekly payments to such dependents shall be in an amount not exceeding 66⅔ per cent of the average weekly wages or $25 per week, but may in the discretion of the commissioner be for a less amount per week and to continue for all or such portion of 416 weeks after the date of the injury, as the commissioner in each case may determine, and not to amount to more than a maximum of $3,000.

The following persons shall be presumed to be wholly dependent for support upon a deceased employee: A wife or invalid husband ("invalid" meaning one physically or mentally incapacitated from earning), a child or children under the age of 16 years (or over said age if physically or mentally incapacitated from earning) living with or dependent upon the parent at the time of the injury or death. But a husband or wife of an injured employee who has deserted said employee for more than one year prior to the time of the injury or subsequently shall not be a beneficiary under this act.

In all other cases questions of dependency, in whole or in part, shall be determined in accordance with the facts in each particular case existing at the time of the injury resulting in death of such employee, but no person shall be considered as dependent unless such person be a father, mother, grandfather, grandmother, stepchild, or grandchild, or brother or sister of the deceased employee, including those otherwise specified in this section.

The term "child" and "children" shall include posthumous children and adopted children, whether members of the deceased employee's household at the time of his accident or death or not, and shall also include stepchildren, illegitimate children, and other children, if such stepchildren, illegitimate children, and other children were members of the household of the decedent at the time of the accident or death and had received contributions toward their support from such deceased employee during any part of the six months immediately preceding the accident or death.

The right to any compensation payable to any dependent and unpaid at the date of death of any such dependent shall survive to and be vested in the surviving dependents, as the commissioner may determine, if there be such surviving dependents, and if there be none such, then the compensation shall cease.

Compensation under this article to alien dependent widows, children, and parents, not residents of the United States, shall be the same in amount as is provided in each case for residents, except that at any time within one year after an accident resulting in death the commissioner may, in his discretion, convert any payments thereafter to become due to such beneficiaries into a lump-sum payment, not in any case to exceed $2,400, by paying a sum equal to three-fourths of the then value of such payments.

Nonresident alien dependents may be officially represented by the consular officers of the nation of which such alien or aliens may be citizens or subjects, and in such cases the consular officers shall have the right to receive for distribution to such nonresident alien dependents all compensation awarded hereunder, and the receipt of such consular officers shall be a full discharge of all sums paid to and received by them.

In case of the remarriage of a dependent widow of a deceased employee, without dependent children at the time of the remarriage, she shall receive compensation for one year after the date of her remarriage, provided there is so much of the compensation previously awarded her outstanding. No widow or widower shall receive any benefits under this act where the marriage shall have taken place after the person entitled to benefits hereunder shall have been injured, provided there are no dependent children.

6. Where an injury to an employee is caused by the intentional failure of the employer to comply with any statute or lawful public ordinance, rule, regulation, or order relating to the safety of employees, the compensation for which the employer would otherwise be liable under this act shall be increased 15 per cent in the amount of each payment. Where the injury is caused by the intentional failure or the injured employee to use any safety appliance furnished by the employer or to obey any lawful public ordinance, rule, regulation, or order relating to the safety of employees, the compensation for which the employer would otherwise be liable for under this act shall be decreased 15 per cent in the amount of each payment.

SEC. 23. That the benefits in case of death shall be paid to such one or more of the dependents of the decedent for the benefit of all the dependents as may be determined by the compensation commissioner, who may apportion the benefits among the dependents in such manner as he may deem just and equitable. The dependent or person to whom benefits are paid shall apply the same to the use of the several dependents according to their respective claims upon the decedent for support, in compliance with the findings and direction of the commissioner.

SEC. 24. That the fact that an employee has suffered previous disability or received compensation therefor shall not preclude him from compensation for a later injury nor preclude compensation for death resulting therefrom; but in determining compensation for the later injury or death his average weekly wages shall be such sum as will reasonably represent his earning capacity at the time of the later injury: *Provided,* That an employee who is suffering from a previous disability shall not receive compensation for a later injury in excess of the compensation allowed for such injury when considered by itself and not in conjunction with the previous disability: *Provided further,* That if an employee who has previously incurred permanent partial disability through the loss of one hand, one arm, one foot, one leg, or one eye incurs permanent total disability through the loss of another such member or organ, he shall be paid, in addition to the compensation for permanent partial disability provided in this section and after the cessation of the payments for the prescribed period of weeks, special additional compensation for the remainder of his life to the amount of 66⅔ per cent of the average weekly wage earned by him at the time the total permanent disability was incurred. Such additional compensation shall be paid out of a special fund created for such purpose in the following manner: The employer or insurance carrier shall pay to the superintendent of insurance of the District of Columbia for every case of injury causing death in which there are no persons entitled to compensation the sum of $100. The superintendent of insurance shall be the custodian of this special fund and the compensation commissioner shall direct the distribution thereof.

SEC. 25. That the compensation in this act provided for shall be payable weekly; but the compensation commissioner, upon application of either party, may, in his discretion, having regard to the welfare of the employee and the convenience of the employer or insurer, authorize compensation to be paid monthly or quarterly instead of weekly.

SEC. 26. That whenever any periodical payment has been continued for not less than 26 weeks, the liability therefor may, in unusual cases, where the parties agree and the compensation commissioner deems it to be to the best interests of the employee or his dependents, or where it will prevent undue hardships on the employer or his insurance carrier, without prejudicing the interests of the employee or his dependents, be redeemed, in whole or in part, by the payment by the employer or insurance carrier of a lump sum which shall be fixed by the commissioner, but in no case to exceed the commutable value of the future installments which may be due under this act. The commissioner, however, in his discretion, may at any time in the case of a minor who has received permanently disabling injuries, either partial or total, provide that he be compensated in whole or in part by the payment of a lump sum, the amount of which shall be fixed by the commissioner, but in no case to exceed the commutable value of the future installments which may be due under this act.

SEC. 27. That whenever the compensation commissioner deems it expedient any lump sum, subject to the provision of the foregoing section, shall be paid by the employer or insurance carrier to some suit-

able person or corporation appointed by the Supreme Court of the District of Columbia as trustee, to administer the same for the benefit of the person entitled thereto in the manner ordered by the commissioner. The receipt of such trustee for the amount so paid shall discharge the employer or anyone else who is liable therefor.

SEC. 28. That if a dependent shall reside or remove out of the United States and shall have been such nonresident for a period of one year the commissioner may, in his discretion, convert any payments thereafter to become due to such dependent into a lump-sum payment, not in any case to exceed $2,400, by paying a sum equal to three-fourths of the then value of such payments.

SEC. 29. (a) That whenever payment of compensation is made to a widow or widower for her or his use, or for her or his use and the use of the child or children, the written receipt thereof of such widow or widower shall acquit the employer.

(b) Whenever payment is made to any person 18 years of age or over the written receipt of such person shall acquit the employer. In case where an infant or minor under the age of 18 years shall be entitled to receive a sum amounting to not more than $300 as compensation for injuries, or as a distributive share by virtue of this act, the father, mother, or natural guardian upon whom such infant or minor shall be dependent for support shall be authorized and empowered to receive and receipt for such moneys to the same extent as a guardian of the person and property of such infant or minor duly appointed by proper court, and the release or discharge of such father, mother, or natural guardian shall be full and complete discharge of all claims or demands of such infant or minor thereunder.

(c) Whenever any payment of over $300 is made to a minor under 18 years of age, or to a dependent child over the age of 18 years, the same shall be made to some suitable person or corporation appointed by the Supreme Court of the District of Columbia as a trustee, and the receipt of such trustee shall acquit the employer.

(d) Payment of death benefits by an employer in good faith to a dependent subsequent in right to another or other dependents shall protect and discharge the employer, unless and until such dependent or dependents prior in right shall have given him notice of his or their claim. In case the employer is in doubt as to the respective rights of rival claimants he may apply to the compensation commissioner to decide between them.

SEC. 30. That if an injured employee is mentally incompetent or is under 18 years of age at the time when any right or privilege accrues to him under this act, his guardian, trustee, or committee may in his behalf claim and exercise such right or privilege. And no limitation of time provided in this act for the giving of notice or making claim under this act shall run against any person who is mentally incompetent, or a minor dependent, so long as he has no guardian, trustee, or committee.

SEC. 31. That a minor working at an age legally permitted under the laws of the District of Columbia shall be deemed sui juris for the purposes of this act, and no other person shall have any cause of action or right to compensation for any injury to such minor employee unless otherwise herein provided.

SEC. 32. That the employer shall secure compensation to his employees in one of the following ways:

(1) By insuring and keeping insured the payment of such compensation with any stock or mutual corporation authorized to transact the business of workmen's compensation insurance in the District of Columbia.

(2) By furnishing satisfactory proof to the compensation commissioner of his financial ability to pay such compensation himself, in which case the commissioner may, at any time and from time to time, in his discretion, require the deposit with the commissioner of securities such as are accepted by the equity courts of the District of Columbia for the investment of trust funds, and in an amount or amounts to be determined by the commissioner, to secure the liability of the employer to pay the compensation specified in this act; and in order to be informed as to the continued financial responsibility of any such employer the commissioner may require reports from him annually, or at any such other times as the commissioner may deem necessary or advisable, and may examine such employer under oath or make such other examination of his business as the commissioner may determine. If he should fail to furnish such satisfactory proof, or give bond, or deposit such securities, as required by the commissioner, or if he should at any time fail to render satisfactory reports to the commissioner or otherwise satisfy the commissioner of his continued financial ability to pay the compensation himself, he shall be subject to the provisions of the first paragraph of this section.

SEC. 33. (a) That every employer subject to the provisions of this act shall, within 30 days after this act takes effect, file with the compensation commissioner, in form prescribed by him, and thereafter annually or as often as may be necessary, evidence of his compliance with the provisions of section 32 and all others relating thereto. If any such employer refuses or neglects to comply with the provisions of this paragraph, he shall be punished by a fine of 10 cents for each employee at the time of the insurance becoming due, but not less than $1 nor more than $50 for each day of such refusal or neglect, and until the same ceases, and he shall be liable during continuance of such refusal or neglect to an employee either for compensation under this act or at law, in the same manner as if he were not subject to this act, except that in such action at law he shall not be permitted to defend upon any or all of the following grounds: (1) That the employee was negligent, (2) that the injury was caused by the negligence of a fellow employee, (3) that the employee had assumed the risk of injury.

(b) Every employer who has complied with the provisions of section 32 shall post and maintain in a conspicuous place in and about each of his places of business or other places where his employees subject to this act are employed a typewritten or printed notice in such form as the compensation commissioner may prescribe, stating the facts of compliance with such provisions and giving the name and address of his insurer if he be insured. If any employer neglects or refuses to comply with the provisions of this paragraph, he shall be liable to a penalty of 10 cents per day for each employee affected, but not less than $1 in any event: *Provided, however*, That the compensation commissioner, for good cause shown, may remit such penalty in whole or in part.

SEC. 34. That whenever an employer has complied with the provisions of section 32, relating to self-insurance, the compensation commissioner shall issue to such employer a certificate which shall remain in force for a period fixed by the commissioner, but the commissioner may upon at least 30 days' notice and hearing to the employer revoke the certificate upon satisfactory evidence for such revocation having been presented. At any time after such revocation the commissioner may grant a new certificate to the employer upon his petition.

SEC. 35. (a) That all policies or contracts insuring the payment of compensation under this act must contain a clause to the effect that as between the employer and the insurer notice to or knowledge of the occurrence of the injury on the part of the insured employer shall be deemed notice or knowledge, as the case may be, on the part of the insurer; that jurisdiction of the insured for the purposes of this act shall be jurisdiction of the insurer; and that the insurer shall in all things be bound by and subject to the awards, judgments, or decrees rendered against such insured employer.

(b) No policy or contract of insurance against liability arising under this act shall be issued unless it contains the agreement of the insurer that it will promptly pay to the person entitled to same all benefits conferred by this act, and all installments of the compensation that may be awarded or agreed upon, and that the obligation shall not be affected by any default of the insured after the injury or by any default in giving notice required by such policy, or otherwise. Such agreement shall be construed to be a direct promise by the insurer to the person entitled to compensation enforceable in his name.

(c) Every policy or contract for the insurance of the compensation herein provided, or against liability therefor, shall be deemed to be made subject to the provisions of this act. No corporation, association, or organization shall enter into any such policy of insurance unless its form shall have been approved by the superintendent of insurance.

(d) This act shall not apply to policies of insurance against loss from explosion of boilers, or flywheels or other similar single catastrophe hazards.

SEC. 36. That no policy or contract of insurance against liability arising under this act shall be canceled within the time limited in such policy or contract for its expiration until at least 10 days after notice of intention to cancel such policy or contract, on a date specified in such notice, shall be filed in the office of the compensation commissioner and also served on the employer. Such notice shall be served on the employer by delivering it to him or by sending it by mail, by registered letter, addressed to the employer at his or its last known place of residence: *Provided*, That if the employer be a partnership, then such notice may be so given to any one of the partners, and if the employer be a corporation, then the notice may be given to any agent or officer of the corporation upon whom legal process may be served.

SEC. 37 (a). That the rates charged by all carriers of insurance writing insurance against the liability for compensation under this act shall be fair, reasonable, and adequate, and all risks of the same kind and degree of hazard shall be written at the same rate by the same carrier, subject to such rules as the superintendent of insurance may prescribe. The basic rates may be modified in accordance with a plan of merit or schedule rating. No policy of insurance against liability for compensation under this act shall be valid until the rate thereof has been approved by the superintendent of insurance, nor shall any such carrier of insurance write any such policy or contract until its basic and merit rating schedules have been filed with, approved, and not subsequently disapproved by the superintendent of insurance.

(b) Each such insurance carrier shall report to the superintendent of insurance, in accordance with such reasonable rules as the superintendent of insurance may at any time prescribe, for the purpose of determining the solvency of the carrier and the adequacy of its rates; for such purpose the superintendent of insurance may inspect the books and records of such insurance carrier and examine its agents, officers, and directors under oath.

(c) Any person or persons who shall in the District of Columbia act or assume to act as agent for any insurance carrier whose authority to do business in such District has been suspended while such suspension remains in force, or who shall willfully make a false or fraudulent statement of the business or condition of any such insurance carrier, shall be deemed guilty of a misdemeanor and upon conviction shall be punished by a fine of not less than $100 nor more than $1,000, or by imprisonment for not more than one year, or both such fine and imprisonment, in the discretion of the jury.

(d) Whenever by this act or the terms of any policy contract any officer is required to give any notice to an insurance carrier, the same may be given by delivery or by mailing by registered letter, properly addressed and stamped, to the principal office or chief agent of such insurance carrier within the District of Columbia, or to its home office, or to the secretary, general agent, or chief officer thereof in the United States.

SEC. 38. That notice of an injury for which compensation is payable under this article shall be given to the employer within 10 days after the accident, and also in case of the death of the employee resulting from such injury within 30 days after such death. Such notice may be in writing and contain the name and address of the employee and state in ordinary language the time, place, nature, and cause of the injury, and be signed by him or by a person on his behalf or in case of death by any one or more of his dependents or by a person on their behalf. The failure to give such notice, unless excused by the compensation commissioner either on the ground that notice for some sufficient reason could not have been given or on the ground that the insurance carrier or employer, as the case may be, has not been prejudiced thereby, shall be a bar to any claim under this act.

Whenever an accident occurs to any employee it shall be the duty of the employer to at once report such accident and the injury resulting therefrom to the compensation commissioner. Such report shall state (a) the time, cause, and nature of the accident and injuries, and the probable duration of the injury resulting therefrom; (b) whether the accident arose out of or in the course of the injured person's employment; (c) any other matters the rules and regulations of the commissioner may prescribe.

SEC. 39. After an injury and so long as he claims compensation, the employee, if so requested by his employer or ordered by the compensation commissioner, shall submit himself to examination, at reasonable times and places, by a duly qualified physician or surgeon designated and paid by the employer or the compensation commissioner. The employee shall have the right to have present at such examination any duly qualified physician or surgeon provided and paid by him. No fact communicated to, or otherwise learned by any physician or surgeon who may have attended or examined the employee, or who may have been present at any examination, shall be privileged, either in hearings provided for by this act or in any action at law brought to recover damages against an employer for an injury subject to the provisions of this act. If the employee refuses to submit himself to or in any way obstructs such examination requested by and provided for by the employer, his right to compensation and his right to take or prosecute any proceedings under this act shall be suspended until such refusal or obstruction ceases, and no compensation shall at any time

be payable for the period of suspension, unless in the opinion of the compensation commissioner the circumstances justify the refusal or obstruction. The employer, or the compensation commissioner, shall have the right in any case of death to require an autopsy at the expense of the party requesting the same.

SEC. 40. That all questions arising under this act, if not settled by agreement of the parties interested therein, with the approval of the compensation commissioner, shall be determined by the commissioner except as otherwise herein provided.

SEC. 41. That if, after seven days from the date of the injury, or at any time in case of death, the employer and the injured employee or his dependents reach an agreement in regard to compensation under this act, a memorandum of the agreement in the form prescribed by the compensation commissioner shall be filed with the commissioner; otherwise such agreement shall be voidable by the employee or his dependents.

If approved by the commissioner, thereupon the memorandum shall for all purposes be treated as an award by the commissioner and shall be enforceable by the court's decree, as hereinafter specified.

SEC. 42. That if the employer and the injured employee or his dependents fail to reach an agreement in regard to compensation under this act, or if they have reached such an agreement which has been signed and filed with the compensation commissioner and compensation has been paid or is due in accordance therewith, and the parties thereto then disagree as to the continuance of any payment under such agreement, either party may make application to the compensation commissioner for a hearing in regard to the matters at issue and for a ruling thereon.

Immediately after such application has been received the commissioner shall set the date for a hearing, which shall be held as soon as practicable, and shall notify the parties at issue of the time and place of such hearing.

The compensation commissioner or a deputy commissioner shall hear the parties at issue and their representatives and witnesses, and shall determine the dispute in a summary manner. The award, together with a statement of the findings of fact, rulings of law, and other matters pertinent to the questions at issue, shall be filed with the record of the proceedings, and a copy of the award shall immediately be sent to the parties in dispute.

SEC. 43. That upon his own motion, before judicial determination or upon the application of any party in interest on the ground of change in condition, the compensation commissioner may at any time review any award, and on such review may make an award ending, diminishing, or increasing the compensation previously awarded, or awarding compensation where no compensation was previously awarded, subject to the maximum and minimum provided in this act, and shall immediately send to the parties a copy of the award. No such review shall affect such award as regards any moneys paid.

SEC. 44. That any employer, employee, dependent, or person feeling aggrieved by any decision or award of the compensation commissioner affecting his interests under this act may have the same reviewed by a proceeding in the nature of an appeal and initiated in the Supreme Court of the District of Columbia, and the court shall determine whether the commissioner has justly considered all the facts concerning injury, whether he has exceeded the powers granted him by the act, and whether he has misconstrued the law and facts applicable in the case decided. If the court shall determine that the commissioner has acted within his powers and has correctly construed the law and facts, the decision of the commissioner shall be confirmed, otherwise it shall be reversed or modified. Upon the hearing of such an appeal the court shall, upon motion of either party filed with the clerk of the court according to the practice in civil cases, submit to a jury any question of fact involved in such case. The proceedings in every such an appeal shall be informal and summary, but full opportunity to be heard shall be had before judgment is pronounced. No such appeal shall be entertained unless notice of appeal shall have been served personally upon the commissioner within 30 days following the rendition of the decision or award appealed from. An appeal shall not be a stay. If the decision or award of the commissioner shall be changed or modified, the practice prevailing in civil cases as to the payment of costs and the fees of medical and other witnesses shall apply. Appeal shall lie from the judgment of the Supreme Court to the Court of Appeals of the District of Columbia, as in other civil cases, and such appeal shall have precedence over all cases except criminal cases.

The corporation counsel for the District of Columbia shall be the legal adviser of the commissioner and shall represent him in all proceedings whenever so requested by the commissioner. In all court proceedings under or pursuant to this act the decision of the commissioner shall be prima facie correct and the burden of proof shall be upon the party attacking the same.

SEC. 45. That any party in interest may file in the Supreme Court of the District of Columbia a certified copy of an agreement approved by the compensation commissioner, or of an order or decision of the commissioner, or of an award of the commissioner unappealed from, or of an award of the commissioner affirmed upon appeal, whereupon said court, upon proof of default in payment or that the security for payment is doubtful, shall render a decree in accordance therewith and notify the parties. Such decree shall have the same effect, and all proceedings in relation thereto shall thereafter be the same, as though said decree had been rendered in a suit duly heard and determined by said court.

SEC. 46. That if the compensation commissioner or the court before which any proceedings for compensation or concerning an award of compensation have been brought, under this act, determines that such proceedings have not been so brought upon reasonable ground, it shall assess the whole cost of the proceeding upon the party who has so brought them.

Claims for legal services in connection with any claims arising under this act and claims for services or treatment rendered or supplies furnished pursuant to section 20 of this act, shall not be enforceable unless approved by the compensation commissioner.

If so approved, such claim or claims shall become a lien upon the compensation awarded, but shall be paid therefrom only in the manner fixed by the commissioner.

SEC. 47. That any person who shall knowingly secure or attempt to secure larger compensation or compensation for a longer term than he is entitled to, or knowingly secure or attempt to secure compensation when he is not entitled to any, shall be guilty of a misdemeanor, and upon conviction thereof shall be fined not exceeding $500 or imprisoned not exceeding 12 months, or both, in the discretion of the court, and shall from and after such conviction cease to receive any compensation.

SEC. 48. That in this act, unless the context otherwise requires—

(a) "Employer" shall include any individual, firm, association, or corporation, or the receiver or trustee of the same, or the legal representative of a deceased employer, using the service of another for pay. If the employer is insured, it shall include his insurer so far as applicable.

(b) "Employee" shall include every person, including a minor, who is employed by another under any lawful contract of service or apprenticeship, written or implied. Any reference to an employee who has been injured shall, where such employee is dead, include a reference to his dependents and other persons to whom compensation may be payable, or, where the employee is a minor or incompetent, to his committee or guardian or next friend.

(c) "Average weekly wages" shall mean the earnings of the injured employee, including "overtime," in the employment in which he was working at the time of the accident during the period of 52 weeks immediately preceding the date of the accident, dividend of 52; but if the injured employee lost more than seven consecutive calendar days during such period, although not in the same week, then the earnings for the remainder of such 52 weeks shall be divided by the number of weeks remaining after the time so lost has been deducted. Where the employment prior to the injury extended over a period of less than 52 weeks, the method of dividing the earnings during that period by the number of weeks and parts thereof during which the employee earned wages shall be followed: *Provided*, That results fair and just to both parties will be thereby obtained. Where by reason of a shortness of time during which the employee has been in the employment of his employer or the casual nature or terms of his employment it is impracticable to compute the average weekly wages as above defined, regard shall be had to the average weekly amount which during 52 weeks previous to the accident was being earned by a person of the same grade and character employed in the same class of employment in the same locality or community.

If the injured employee at the time of the injury is regularly employed at higher wages than formerly during the preceding 52 weeks, only such higher wages shall be taken into consideration in computing his average weekly wages. If the injured employee was of such age and experience when injured that under natural conditions his wages would be expected to increase, that fact may be taken into consideration in determining his average weekly wages.

But where for exceptional reasons the foregoing would be unfair either to the employer or employee, such other method of computing average weekly wages may be resorted to as will most nearly approximate the amount which the injured employee would be earning were it not for the injury.

"Earnings" shall include the reasonable value of board, lodging, housing, fuel, and similar advantages which the employee receives from the employer as part of his remuneration, but shall not include payments by the employer to cover special expenses entailed on the employee by his employment.

(d) "Injury" and "personal injury" shall mean only injury by accident arising out of and in the course of the employment, and shall not include a disease in any form, except where it results naturally and unavoidably from the accident.

(e) Hernia shall not be deemed an injury by accident arising out of and in the course of the employee's employment, unless it be proven to the satisfaction of the compensation commissioner—first, that there was an injury resulting in hernia; second, that the hernia appeared suddenly; third, that it was accompanied by pain; fourth, that the hernia immediately followed an accident; fifth, that the hernia did not exist prior to the accident for which compensation is claimed.

SEC. 49. That the rule that statutes in derogation of the common law are to be strictly construed shall have no application to this act; but this act shall be so interpreted and construed as to effectuate its general purpose.

SEC. 50. That if the provisions of this act relative to compensation for injuries to or death of employees become invalid because of any final adjudication, the period intervening between the occurrence of an injury or death, not previously compensated for under this act by lump-sum payment or completed periodical payment, shall not be computed as a part of the time limited by law for the commencement of any action relating to such injury or death: *Provided*, That such action be commenced within one year after such final adjudication, but in any such action any sum paid to the employee on account of injury for which the action is prosecuted shall be taken into account.

SEC. 51. That the provisions of this act shall not apply to injuries or death, nor to accidents which occurred prior to the taking effect of this act.

SEC. 52. That the sum of $20,000 annually for the years 1922 and 1923, or so much thereof as may be necessary annually for the maintenance of the office of the compensation commissioner for the District of Columbia and the payment of the salaries and expenses of the commissioner and his employees, is hereby appropriated, and shall be payable to the order or orders of the said commissioner from time to time, as in this law provided, and the auditor of the District of Columbia shall draw his warrant or warrants therefor upon the United States Treasury, as in law provided for the annual appropriations in the District of Columbia. And a further appropriation is hereby made of the sum of $5,000 for the year 1922 for the necessary expenses of the aforesaid compensation commissioner to cover printing, office fixtures, and such other legitimate expenses as the commissioner may incur in establishing his office as in this act contemplated, and the auditor of the District of Columbia shall draw his warrant upon the United States Treasury for the said sum of $5,000, or any part thereof, upon the order or orders presented to the auditor of the District of Columbia by the said commissioner.

SEC. 53. That all acts or parts of acts in conflict with this act are hereby repealed to the extent that they conflict with this act and no further.

SEC. 54. That this act shall take effect from the date of its passage, but that its application as between employers and employees shall date from and include the 1st day of July, 1922.

The CHAIRMAN. The gentleman from Massachusetts asks unanimous consent to extend and revise his remarks in the RECORD. Is there objection?

There was no objection.

Mr. UNDERHILL. Mr. Chairman, I yield five minutes to the gentleman from Delaware [Mr. LAYTON].

Mr. LAYTON. Mr. Chairman, I have not asked for the privilege of the floor for the purpose of making any extended speech upon the bill. However, I have interposed questions here and there to such an extent that I feel in justice to myself I ought

to explain my position. In the first place, I am absolutely in favor of the humane, general principle of an employees' liability act. We have one in my own State. It has been on the statute books there for some years. I am in hearty sympathy with that legislation, especially when it comes by the will of the people within their respective Commonwealths. The objection, and the only objection, I have to this bill is that it establishes one of the most vicious propositions that could be enacted into law which has ever been presented upon the floor of this House. That proposition is that the Federal Congress shall assume the right within the territory where this Government exists to say to any legitimate organized business, "You shall not enter in." Cut that out and I am in favor of this bill. [Applause.]

Mr. FOCHT. Mr. Chairman, I yield five minutes to the gentleman from Pennsylvania [Mr. GERNERD].

Mr. GERNERD. Mr. Chairman, we in Pennsylvania pride ourselves upon the splendid operation of our workmen's compensation act. I remember distinctly when that measure was before the legislature there was great propaganda extant hostile to its adoption, but the spirit of human progress prevailed, and we enacted such a law. We have a dual system in Pennsylvania, permitting private companies to compete with the State. The one stirs up the other, with the result, I am satisfied, that the efficiency with which the workmen's compensation act operates is largely due to the alert competition which the State receives from private companies. I am pleased to say that I myself carry all of my insurance with the State. I have found it more preferable than to do it with private companies. I have been getting the best kind of service, and I know a lot of my clients before I came here did the same thing, but I believe the competition of the private companies is the incentive that has made for real efficiency in its operation.

Mr. COLTON. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. Yes.

Mr. COLTON. It has been stated here that in the District of Columbia we can not have that dual service, that we must choose as between the Government service and the private service.

Mr. GERNERD. I know that that has been suggested, but I really question the wisdom of such a statement. I do not say that it is not accurate.

Mr. COLTON. If the gentleman will permit further, some of us are driven, in view of the statement made by the author of each of these bills, to choose between either the Government service or the private service, and many of us would prefer, if we could, to have the dual service.

Mr. GERNERD. Yes. I am for the dual system, and I hope before the bill is finally enacted into law we will have an opportunity to vote for an amendment that will give us the same rights that the Pennsylvania law gives to the citizens of Pennsylvania. I shall vote for that; but if we lose out on that I shall vote for the compensation bill as it now stands. I am for the dual system, but rather than not have a workmen's compensation act in the District, I am willing, under great reluctance, to accept the bill as presented.

Mr. LAYTON. Mr. Chairman, will the gentleman yield?

Mr. GERNERD. Yes.

Mr. LAYTON. While some gentlemen seem much alarmed over the fact of the dual system existing in the District of Columbia, yet if the Government insurance, as proposed in the bill, is going to be so very much more economical than private insurance, then no private insurance business can come in.

Mr. GERNERD. I want to say that since I have been here the great scare that is brought about by propaganda has lost its effect, so far as I am concerned. I find that in practical legislation a lot of this stuff is overdrawn, and when the contest is over and the bill is enacted into law, we usually have gotten down to the natural bearings of things and were able to work out things along practical lines.

Mr. LAYTON. In other words, private companies will not come in unless they come in on a competitive basis.

Mr. GERNERD. I believe that in this country everybody should have a right to compete, but I recognize the modern doctrine that is growing, that Government supervision and operation is helpful and should not be entirely excluded.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. FOCHT. Mr. Chairman, I yield the gentleman five minutes more.

Mr. LAYTON. Will the gentleman yield?

Mr. GERNERD. Yes.

Mr. LAYTON. I am a little confused. The beautiful golden statement was made that this administration stood for less interference on the part of the Government with business. I do not see why we should not stick to that and go on with it.

Mr. GERNERD. That, too, is overdrawn. I have heard a lot about that since I have been here, but I have learned that it is a convenient excuse to oppose salutary legislation.

Every time you get before committees there is opposition and talk about the Government that it should not do this or that. We are here and recognize the fact that it is a lot of propaganda. What we ought to do is to get at the merit of a proposition impartially, patriotically, and then act.

Mr. LAYTON. Provided we have got the right to do it.

Mr. GERNERD. Oh, I agree with the gentleman. That is why we have a Supreme Court to determine whether a thing is right or not. But let me read you from the report made by Hon. Harry N. Mackey, of Pennsylvania, who has been administering the workmen's compensation law in Pennsylvania in a very able, salutary manner. He has humanized the law and inspired absolute confidence. When we originally started it the legislature gave to the State fund the sum of $500,000 with which to create a fund to do business. All of that has been paid back to the State out of surplus earnings. It costs 10.5 per cent to do business. That represents the annual operating expense of putting the workmen's compensation act in operation in Pennsylvania, while the claims were but 42.6 per cent, showing almost 40 per cent profit coming back to the State fund, where it has been accumulating and taking the place of the fund that was originally created.

I want to say, in conclusion, I am for a workmen's compensation act, first, with a dual system; but if I can not vote for that, then I am for the workmen's compensation bill as presented by Mr. FITZGERALD.

The CHAIRMAN. The time of the gentleman has expired.

Mr. GERNERD. I would like permission to revise and extend my remarks?

The CHAIRMAN. Is there objection to the gentleman from Pennsylvania's request? [After a pause.] The Chair hears none.

Mr. FITZGERALD. Mr. Chairman, I yield 15 minutes to the gentleman from Kansas [Mr. LITTLE].

Mr. LITTLE. Mr. Chairman, I ask unanimous consent to revise and extend my remarks.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. LITTLE. Mr. Chairman, there is one outstanding radical difference between these bills, and that is about all of the distinctive difference I have been able to catch yet. The first bill is drawn for the special purpose of providing compensation to injured laborers. The second bill is brought out on the distinct theory that somebody must make some money out of it. That is the only real difference that I have been able to catch out of them, except, of course, that the Fitzgerald bill has less restriction and more liberal compensation. A great Frenchman once said that private interest in public affairs was the greatest difficulty in government. For many years 70,000 people have gone to work every Monday morning in this town without any protection of this kind, although 5,000 of them were injured every year and 40 of them were killed every year. The Fitzgerald bill comes in and provides a system by which they claim that for about 3 per cent overhead they can provide suitable insurance protection for them. Somebody else comes along and says, "Good God, only making 3 per cent! That is an economic failure. Let me have a crack at it and I can make 35 per cent." Now, if there is any other difference between the bills in particular, I do not know what it is. Gentlemen, get up here and say that we must not save the 32 per cent because the Government will be "going into business." As the gentleman from Pennsylvania just suggested in effect, that is simply a lot of bunk. The Government went into business when it took over the schools; the Government went into business when it took over the post offices; the Government goes into business all the time, and has been getting into it more and more as the growth and development of national life and civilization goes on. Where they are to stop I do not know. Time will tell. Whenever private enterprise does the work better and more economically the Government should not compete. This will be a brand new business in the District of Columbia only. The Government is compelling employers to insure. The Government must give the cheapest insurance possible. Private enterprise will require an overhead of 35 per cent or more. The Government will carry on this compensation with a 3 per cent overhead. It will save the employers 32 per cent. Now, anything that you do not like you call socialism, and anything you do like you call progress. [Laughter and applause.]

Do not let us quibble about words. This is all bunk about socialism and the Government being in business. It is all just child's talk. The practical question before us is whether the Government can do it better in this particular instance, and each

business and every transaction in which the Government does or does not engage should be determined by which can do it the better. The Government can do this, according to everybody interested, for 32 per cent less than the other people do it. Now, the Government has started a new business. Here are 70,000 people. There is the basis for an entirely new development of insurance. Here is a new field which is open. The gentleman says, my friends say, enemies perhaps, that the big insurance companies should have a chance at this. For the love of Heaven, why should they? Nobody in the world makes as much money as they do. Why should we interfere with this work of protecting the people for the aid of insurance companies? The insurance money is piled mountain high and hell deep in New York City vaults. The sums that have been accumulated there stagger one's intelligence to conceive. Probably the greatest menaces to this Republic right now are these accumulations, practically uncontrollable, ready to interest themselves and interesting themselves in every feature of business, governing, determining everything, the railroads, the factories, the banks.

Mr. WYANT. Will the gentleman yield?

Mr. LITTLE. When I get a little further along. Right now they have their funds in everything. Why should they come in here just because they want to get their hands on the 108,000 people here? They say if you do not allow these big companies to come here you will have a monopoly. Why these great companies are monopolies, dangerous menaces. Right down here at the head of a little bureau is a woman equipped and prepared, they say, to take care of this business, and it will cost the people who insure, they say, about 3 per cent. The gentleman from Maryland said it would not cost the Government anything because the fellows who pay for the insurance are going to pay enough to meet all the expenses of this self-supporting enterprise.

It appears that unless we allow this bill to go as it is the competition of the big companies will be such that the dual feature will be driven out of this business. There is only a limited supply of possible insurance business in the District. There are only 70,000 people as the basis of this whole industry. It will come that these silver-tongued orators who represent these big companies will get hold of the business and drive the bureau people out. There is no chance for a great dual business here. In the great State of Pennsylvania, that sweeps from the biggest river that we have, except the Mississippi, to the seacoast, there, with wealth that is almost beyond the dreams of avarice, with more money than they know what to do with, the tremendous business will supply competition between any number of people. But in this little widow's garden——

Mr. GERNERD. I want to thank the gentleman for the unusual compliment to the State of Pennsylvania.

Mr. LITTLE. The gentleman is entirely welcome. My grandfather came from there. [Laughter and applause.]

Mr. MOORE of Virginia. I think we must agree that Pennsylvania is rapidly becoming a very "Progressive" State, must we not? [Laughter.]

Mr. GERNERD. I agree with the gentleman from Virginia.

Mr. LITTLE. Everything is very satisfactory so far. Why should you attempt to create this competition that these gentlemen insist upon here? To help somebody that needs help? No. Just to pile up so much more money for those who do not need it. This bureau can do business much more cheaply than these companies can. This bureau is on the ground. There will be no competition if the fellows outside get their hands into this sack. The companies who hustle for it will drive out the bureau which can not. You all know that. Everybody practically concedes it on both sides. And what on earth would be the sense or the use of providing for this bureau and this public insurance if you immediately stick a bomb under it and blow it up before it starts?

The thing for you to do is to take this ewe lamb you propose for this District and let it grow, and shear it later after its growth. It is the first time in the history of this Government that we ever tried to do anything of this kind for these laboring people. It is the first time the mantle of this Congress has ever been thrown across them.

Now, do not let us figure out how somebody can skin them and make money out of them. There is enough for these great insurance companies to do without coming down here. My friends, I think of the old Frenchman's statement that the greatest difficulty in government is private interests in public affairs, and I see that sticking out every day here and everywhere else wherever government exists. Somebody wants to make money, and he can not see anything going by without wanting to snatch his dollar off of it. [Laughter.] Let us legislate once primarily in the interest of the people we are legislating for. Let us forget whether or not some millionaire is going to make another million out of it. Do not let us raise the cry-baby talk about this being socialism. "A rose by any other name would smell as sweet." Is the Post Office Department socialism? It is true that we tend more and more toward what some folks call socialism, but as we use it so far it is just the application of good common sense. The fight is between cooperation and corporation. The great corporations are organized purely for private and individual gain. They have no conscience and no soul. The men they employ have got to make money for them or get out. Cooperation is the development of friendship between men in life, private and public, so that they can help each other instead of trying to climb up on other backs all the time and take all the money away from fellows they climb over. [Applause.]

Let us provide a law for once that furnishes a good, sensible way to give these Columbians insurance. Are you not ever going to learn to differentiate between cooperation and corporation? Cooperation represents the soul of the people. That entity has to be taken into consideration. Now, let us take a commonsense, practical view. I think perhaps there is a good deal in the suggestion of the gentleman from Pennsylvania; but it is not practical here. You can not run them both together. They will just drive out the better one of the two, the one that you favor—the State insurance the gentleman from Pennsylvania favors at home. Let us go ahead now and pass this bill the way the gentleman from Ohio [Mr. FITZGERALD] has presented it. Let the insurance bureau get a good start before the big companies begin to throttle it. It is the first attempt that has been made to accomplish anything of the kind in the District. Give it a fair trial.

Mr. ELLIS. Will the gentleman yield?

Mr. LITTLE. I will.

Mr. ELLIS. I simply want to say to the gentleman that I am enjoying his speech, and I am as glad to hear it as he is to make it. I have not heard it before since the Populists carried Kansas.

Mr. LITTLE. Was it a good speech then?

Mr. ELLIS. Yes; it carried Kansas.

Mr. LITTLE. Oh, the gentleman overestimates.

Mr. WYANT. In view of the fact that the Government lost more than $2,000,000 by operating the railroads for a period of 18 months, and then got out, and in view of the fact that we are attempting to operate ships and losing $4,000,000 a month thereby, does the gentleman still insist on the Government going into private business with the hope of saving money for the people?

Mr. LITTLE. We know now that private enterprise is not competent to run the railroads successfully, and the Government failed to manage them successfully. Every plan tried so far has failed since the railroads became so essential a feature. Is there, then, somebody who knows what to do with them? There has been no real Government control of any railroad. There has been a Government administration, in an indirect way, of railroads, tempered by the selfish interests of the men who did not propose there should be any success in it. Neither private enterprise nor public administration has shown ability to manage these arteries of commerce.

Mr. LAYTON. Will the gentleman yield a minute?

Mr. LITTLE. Yes. The gentleman has shown a commendable curiosity on the bill.

Mr. LAYTON. You were here when the Esch-Cummins bill was passed?

Mr. LITTLE. Yes.

Mr. LAYTON. You would not run anything, no matter how small, how ordinary, it was, if you had all of the folks and all the labor employed in it, and you had the credit employed in it, and the price of things you had to sell fixed by some other authority. You would not run any other business like that if you were a sensible man.

Mr. LITTLE. They seem as able to run it that way as any other way. The job appears to be too big for anybody. People who could not succeed with all that Government aid could not handle the business in any way. All railroad management has failed in recent years. But what has that to do with it? The American soldiers were insured by the Government without any competition. By the United States employers' compensation act the Federal employees are automatically insured by the Federal Government without any competition from private companies. The establishment of this Government bureau in the District of Columbia only should follow the former precedents, and there is no reason why the United States Government should go into competition with anybody for the business it creates, any more than they did for that of the soldiers or Federal employees. The private interests did not create this business, but the Government does and should protect it at

reasonable rates. Many States have successfully adopted similar laws. Is it possible these people want the Government to compete with them for all business? Be sensible, gentlemen; you are doing very well now. We succeed with schools and post offices. State after State has done well in this insurance. That cry of "Railroads! Railroads!" is just another lighted candle in a pumpkin. Do not jump, my friend. That is just for kids on Halloween. I would run it as we run the post office and as we run the schools, and they seem to get along very well. What has carrying insurance for 70,000 laborers to do with $20,000,000,000 worth of railroads? One thing is demonstrated, and that is that private owners and the Government did not work together. Yet you want them to in insurance in this District. Give this proposition a chance to begin. [Applause.]

The CHAIRMAN. The time of the gentleman from Kansas has expired.

Mr. FOCHT. Mr. Chairman, I yield 10 minutes to the gentleman from New York [Mr. LONDON].

The CHAIRMAN. The gentleman from New York is recognized for 10 minutes.

Mr. LONDON. Mr. Chairman and gentlemen of the committee, I would not address the committee if the gentlemen in charge of the bill were ready to proceed with the reading of it.

Mr. LAYTON. Would the gentleman prefer to have a quorum here just now?

Mr. LONDON. No; not even to hear the questions which the gentleman may have in mind to propound. [Laughter.]

Mr. LAYTON. Very well. We will get along without my making the point that there is no quorum here.

Mr. ELLIS. Mr. Chairman, will the gentleman yield?

Mr. LONDON. Yes.

Mr. ELLIS. I would like very much to ask for a quorum if the gentleman would like to have it, because I know he is going to make a socialistic speech, and the gentleman is the only man who admits that he is a Socialist.

Mr. LONDON. Some of those who are not Socialists are anarchists, of which there are two varieties, one at the bottom, poor, helpless, despondent. Then there is another group of anarchists, dangerous to democracy, a group that does not recognize the power of the soul in human affairs. That is the group that would subordinate to cash, to money, every human consideration, and that is really the dangerous group of anarchists.

Mr. LAYTON. Mr. Chairman, I like this talk so much that I will make the point of no quorum.

The CHAIRMAN (Mr. RAMSEYER). The gentleman from Delaware makes the point that there is no quorum present. The Chair will count.

Mr. LONDON. That is unfair.

Mr. LAYTON. I will withdraw it, Mr. Chairman.

The CHAIRMAN. The gentleman from Delaware withdraws the point.

Mr. ELLIS. Mr. Chairman, will the gentleman yield?

Mr. LONDON. No; I can not yield.

Mr. ELLIS. The gentleman did not understand my attitude. I was not speaking in criticism of the gentleman. I was speaking in congratulation.

Mr. LONDON. Whenever anybody refers to a Socialist in my presence it is a compliment, because he must have me in mind. [Laughter.]

Now, let us come to the point: Insurance should never have been a private function or business. It is interesting that when the first insurance case came up in France after the French Revolution it was thrown out of court on the ground that it was against public policy; that it was below the dignity of a Frenchman to place a money price upon his life. That was the sentiment of the French Revolution—that a Frenchman was too noble a being for his life to be estimated in francs, in dollars and cents, and the first case was thrown out.

Death is a certainty. Other things may be uncertain in life, but death is certain to come; and life insurance—the richest part in the insurance business, the most prosperous part—proceeds upon a mathematical law, an inescapable law. There is no reason in the world why any group of private individuals should benefit by the death of their fellow men. There is no reason in the world why in this particular branch of human endeavor—the insurance business—the municipality or such other governmental agency as the case may require should not be the agency which should collect the premiums upon an actual cost basis and pay the insurance. There is no reason why any profit should be attached to it. There is no reason in the world why insurance should be a source of private profit making.

The early history of life insurance is a history of piracy. The fraudulency of the insurance companies knew no limit. The policies contained so many exceptions that the insured could never recover on a policy. The law compelled the companies to write the exceptions in red ink. The result of it was that almost the entire policy was in red ink. Year after year the legislatures struggled to protect the policyholders from the schemes of the insurance companies, with the result that ultimately in almost every State in the Union the right of making a contract of insurance has been taken away from the insurance companies and the law prescribes a standard policy of insurance. The law has taken away from the insurance company the power of making a private contract.

Mr. ELLIS. Oh, no. The gentleman surely does not mean that. The gentleman is entirely right in saying that the statutes of the several States, nearly all of them, prescribe a form of contract, but the statutes do not prohibit the insurance company from making the contract.

Mr. LONDON. I said, or at least intended to say, that the terms of the contract are made by the States, and no company can make a modification of those terms without getting the consent of the superintendent of insurance.

Mr. ELLIS. That is true.

Mr. LONDON. In other words, the life and fire insurance companies are not trusted with the power of making the terms of the contract. We have introduced that degree of socialism into the insurance business. But we have not taken away the profit-making power from them. The insurance companies are now the principal depositories of the people's savings. Their financial power is almost unlimited. Their funds—the savings of the people—are at the disposal of the moneyed aristocracy.

What is the situation so far as this little bill is concerned? There are not many hazardous occupations in the District of Columbia. We have no factories worth mentioning here. We have no mines. We have no dangerous employments. The field is limited. This bill does not permit private companies to compete with the State funds. To permit private companies to compete with the State funds would make the operation of the State funds almost impossible. The State can not go into advertising to present the benefits of insurance to the individual as the private companies can. The companies are interested in preventing the State from looking into the question of insurance, in preventing the State from coming near it, from approaching it.

Why do the insurance companies fight this little bill? Is it on account of the business involved? No. It is because they do not want the States to take up the subject of insurance. Because when the States do approach the subject of insurance it will become clear to every thinking man that this particular field of human endeavor belongs solely to organized society and should not be a field of private exploitation. That is their principal objection to this bill.

Mr. WYANT. Will the gentleman yield?

Mr. LONDON. Yes.

Mr. WYANT. Is it not true that in almost all lines of business under Government control such business can not compete with private enterprise?

Mr. LONDON. Oh, well now, is that true?

Mr. WYANT. Is it not true?

Mr. LONDON. That is too big a question to discuss in this limited time; but let me tell the gentleman that I know of a company that competes with the post office. I will not mention its name. It competes with the United States Government in transporting little packages and circulars, and such things. How does it do it? While the Government pays a man a regular salary with reasonable hours, and employs him every day in the year and pays him for his vacation, and pays him now a certain pension, that private company works its men 12 or 14 hours a day and pays one-half the salary that is paid by the Government.

The CHAIRMAN. The time of the gentleman from New York has expired.

Mr. LONDON. I should like five minutes more.

Mr. UNDERHILL. I have no time unpromised.

Mr. FITZGERALD. I yield to the gentleman five minutes.

Mr. LONDON. The post office furnishes the cheapest and most reliable method of communication in spite of the fact that we have to pay too much to private railroad companies for transportation.

Take the socialist institution, the public schools. The greatest philosopher of his day, Herbert Spencer, not a fool or an ignoramus, not a man who used the word "socialism" as a term of abuse, in his book The Coming Slavery, argued that the establishment of the public schools would enslave society.

There is an element of truth in that, because the molding of the child's mind by a governmental institution may result in establishing a certain uniform and rigid standard; but while there is that germ of truth in it, it will be agreed by all that the foundation of democracy is the common school.

Mr. ELLIS. Does the gentleman from New York agree with the gentleman from Kansas [Mr. LITTLE] that there is a parallelism between the public schools and governmental insurance?

Mr. LONDON. Yes. You see, as I pointed out, insurance should not be the sphere of the private individual. If a calamity occurs, it is a public affair. If somebody dies, it is a public loss; and because death is a certainty, why should private interests benefit by it? Why should somebody be accumulating profit and benefit because everybody must die? Why should not the State, that collective agency which is the government, see to it that when somebody dies the family should be protected from distress? The basis should be the payment of a premium at actual cost. It is conceded that one-third of the premiums paid to the private insurance companies goes for expenses and that the State funds are conducted at an almost nominal expense. If we can get insurance for one-third less, I would rather have the family of the insured benefit by receiving a larger benefit when the breadwinner dies. That is how I would utilize the difference in cost of insurance.

There can be no serious objection to the State-fund feature of the Fitzgerald bill except the old, old objection, the fear of the extension of the power of Government. Gentlemen, whether you want it or not, it is absolutely true—although the gentleman from Kansas said it—[laughter] that the problem to-day is between unrestrained individualism and cooperation. He employed the phrase, "between corporations and cooperation." Modern industry is cooperative at least so far as production is concerned. It is because of the cooperative production that we are coming to have cooperative thinking and cooperative action.

Mr. GERNERD. Does the gentleman believe in any competition?

Mr. LONDON. I believe that the law of civilized society to-day will tend toward inducing cooperation wherever and whenever competition is injurious to society. That is the inevitable tendency; and the mission of thinking men is to make the process of transition less bitter and less cruel.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LONDON. I would like 2 minutes more.

Mr. FITZGERALD. I yield to the gentleman 2 minutes more.

Mr. GERNERD. Is it not true that without competition there is no incentive in life?

Mr. LONDON. Competition in what?

Mr. GERNERD. Competition in any endeavor.

Mr. LONDON. Now, let us see about that. I have only two minutes, but let me answer the gentleman. The principle of competition and the struggle for the survival of the fittest—which some people believe to be the same thing—have been splendidly explained by Mr. Wallace, one of the best students of Darwinism, in a very concise way.

Mr. GERNERD. Darwinism is a subject that is rather beyond me.

Mr. LONDON. He said that the survival of the fittest is supposed to represent the triumph of individualism. In the polar regions the white bear and the black bear are engaged in competition. The white bear, white as snow, has a better chance to approach its victim without being discovered than the black bear. The white bear will survive, but it does not follow at all that the white bear is a gentleman. [Laughter.] Under competitive conditions, where greed and selfishness are rewarded, the meanest scoundrel will survive.

Mr. LAYTON. Will the gentleman yield?

Mr. LONDON. Yes.

Mr. LAYTON. The gentleman is a student of abstruse subjects, but he would not call that a scientific answer to the gentleman from Pennsylvania?

Mr. LONDON. Whether it is a scientific answer or not, it is mathematically correct. [Laughter.]

Mr. UNDERHILL. Mr. Chairman, I yield to myself sufficient time to tell a story on Colonel LITTLE. We are members of the same committee before which come numerous claims for damage, many of which are backed up by lawyers of this city who are more or less acute. I do not care to give any names, and I do not wish to reflect on the legal profession. The suggestion was made by me in one case of a poor workman as to whether or not an attorney was being paid out of the pocket of this workman for presenting the case to Congress when the Committee on Claims was supposed to do all the work. Colonel LITTLE came to the defense of his colleague and said, "What of it; if we are entitled to it, are they not?" As he stood here and told us that there should be no competition between business and the insurance companies, that they should not be allowed to make any profit, I wondered where his consistency lay in the defense of the attorney who, according to my experience down here, acts as a bloodsucker on these individuals who have an honest claim against the Government, and when we endeavor to do justice to a citizen and give him some relief, the attorney takes the most of it.

Mr. LITTLE. Mr. Chairman——

Mr. UNDERHILL. I yield to the gentleman two minutes.

Mr. LITTLE. I want to say that I did not say anything of the kind. [Laughter.] I said "What of it? They are as much entitled to hire a lawyer and come here as the biggest millionaire in the country, and your claim is going to be decided upon its merits by the committee, whether you hire a lawyer or not." I did not say the lawyer ought to have all he could get out of it. [Laughter.]

Mr. UNDERHILL. I say that the insurance companies are entitled to come here in Washington and make a profit as much as a man has to hire a lawyer. Why should you oppose a law that would permit a legitimate business to do business in Washington?

Mr. LAYTON. Mr. Chairman, I have been a Member of the House for three years, and I never had the privilege of rising and making the point of no quorum, but I am going to do it now, and I make the point of no quorum.

The CHAIRMAN. The gentleman from Delaware makes the point of no quorum. The Chair will count.

Mr. LAYTON. Mr. Chairman, I would like to ask the gentleman from Pennsylvania, the chairman of the committee, if he intends to finish general debate this afternoon?

Mr. FOCHT. I did intend to finish general debate and then will move that the committee rise.

Mr. LAYTON. Mr. Chairman, I withdraw the point of no quorum.

Mr. UNDERHILL. Mr. Chairman, I wish to say that I make no agreement to that effect. I believe I have used about half of my time.

The CHAIRMAN. The gentleman from Massachusetts has 32 minutes remaining, and the gentleman from Pennsylvania has 18 minutes remaining.

Mr. UNDERHILL. There are some gentlemen who are away and who want to speak on the bill, and I do not care to close general debate until they have been heard.

Mr. FOCHT. Does the gentleman mean to keep us here? The time for general debate will expire about 5 o'clock.

Mr. UNDERHILL. Mr. Chairman, I move that the committee do now rise.

The question was taken; and on a division (demanded by Mr. UNDERHILL) there were 20 ayes and 34 noes.

So the motion was lost.

Mr. LAYTON. Mr. Chairman, I make the point of no quorum.

The CHAIRMAN. The gentleman from Delaware makes the point of no quorum. The Chair will count. [After counting.] Sixty-two Members present, not a quorum.

Mr. GARRETT of Tennessee. Mr. Chairman, I move that the committee do now rise.

Mr. RAMSEYER. Mr. Chairman, I make the point of order that that motion is dilatory.

The CHAIRMAN. The point of order is overruled. The question is on the motion of the gentleman from Tennessee that the committee do now rise.

The question was taken; and on a division (demanded by Mr. GARRETT of Tennessee) there were 18 ayes and 32 noes.

So the motion was lost.

Mr. FOCHT. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. WALSH having resumed the chair as Speaker pro tempore, Mr. TOWNER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10034, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent leave of absence was granted to—

Mr. BUCHANAN, at the request of Mr. GARNER, indefinitely, on account of important business.

Mr. MORGAN, for five days, on account of illness in his family.

ENROLLED BILL PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. RICKETTS, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following bill:

H. R. 9981. An act making appropriations for the Executive and for sundry independent executive bureaus, boards, commissions, and offices for the fiscal year ending June 30, 1923, and for other purposes.

ADJOURNMENT.

Mr. FOCHT. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to, and accordingly (at 4 o'clock and 23 minutes p. m.) the House adjourned until to-morrow, Tuesday, June 13, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

634. Under clause 2 of Rule XXIV, a communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Department of Justice for the fiscal years ending June 30, 1922, and June 30, 1923, in the amount of $39,000 (H. Doc. No. 338), was taken from the Speaker's table, referred to the Committee on Appropriations, and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. LANGLEY: Committee on Public Buildings and Grounds. H. R. 11040. A bill to amend an act entitled "An act authorizing the sale of the marine hospital reservation in Cleveland, Ohio," approved July 26, 1916; with an amendment (Rept. No. 1089). Referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. CHINDBLOM: Committee on Public Buildings and Grounds. H. R. 11579. A bill to amend section 1 of an act approved January 11, 1922, entitled "An act to permit the city of Chicago to acquire real estate of the United States of America"; with an amendment (Rept. No. 1090). Referred to the Committee of the Whole House.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. EDMONDS: A bill (H. R. 11985) to amend and reenact subdivisions (a) and (b) of section 209 of the transportation act, 1920; to the Committee on Interstate and Foreign Commerce.

By Mr. PORTER (by request): A bill (H. R. 11986) for the relief of the Royal Italian Government; to the Committee on Foreign Affairs.

By Mr. DEMPSEY: A bill (H. R. 11987) to authorize the purchase of a site and the construction of a public building at Tonawanda, Erie County, N. Y.; to the Committee on Public Buildings and Grounds.

By Mr. LAYTON: Joint resolution (H. J. Res. 346) proposing an amendment to the Constitution of the United States; to the Committee on Ways and Means.

By Mr. FOCHT: Joint resolution (H. J. Res. 347) authorizing the transfer to the jurisdiction of the Commissioners of the District of Columbia of a certain portion of the Anacostia Park for tree nursery purposes; to the Committee on Public Buildings and Grounds.

By Mr. TINCHER: Resolution (H. Res. 364) for the immediate consideration of House bill 11843; to the Committee on Rules.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ALMON: A bill (H. R. 11988) for the relief of Lucy L. Wheeler; to the Committee on Claims.

By Mr. ANTHONY: A bill (H. R. 11989) to place Col. Ezra B. Fuller, retired by operation of law, on the retired list of the Army as a brigadier general; to the Committee on Military Affairs.

Also, a bill (H. R. 11990) for the relief of Stanton & Jones, contractors, of Leavenworth, Kans.; to the Committee on Claims.

By Mr. BURROUGHS: A bill (H. R. 11991) granting a pension of Charles B. French; to the Committee on Pensions.

By Mr. CONNOLLY of Pennsylvania: A bill (H. R. 11992) granting a pension to James Donnelly; to the Committee on Pensions.

Also, a bill (H. R. 11993) granting an increase of pension to Eloise Wilkinson; to the Committee on Pensions.

By Mr. DEMPSEY: A bill (H. R. 11994) granting a pension to Malvina Cost; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11995) granting a pension to Lovinia A. Griswold; to the Committee on Invalid Pensions.

Also, a bill (H. R. 11996) granting a pension to Mary E. Few; to the Committee on Invalid Pensions.

By Mr. FULLER: A bill (H. R. 11997) granting an increase of pension to Rosamond Barker; to the Committee on Invalid Pensions.

By Mr. LINEBERGER: A bill (H. R. 11998) granting a pension to Julia I. Foster Stuart; to the Committee on Invalid Pensions.

By Mr. NEWTON of Minnesota: A bill (H. R. 11999) granting a pension to Ardella M. Farnsworth; to the Committee on Invalid Pensions.

By Mr. RAINEY of Illinois: A bill (H. R. 12000) for the relief of Pietro Lococo; to the Committee on Claims.

By Mr. ROBSION: A bill (H. R. 12001) granting an increase of pension to Mary A. Campbell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 12002) granting an increase of pension to Elizabeth Stinson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 12003) granting a pension to Z. B. Blanton; to the Committee on Pensions.

By Mr. SHAW: A bill (H. R. 12004) granting an increase of pension to Margaret D. Wise; to the Committee on Invalid Pensions.

Also, a bill (H. R. 12005) granting an increase of pension to Melissa D. Ellis; to the Committee on Invalid Pensions.

By Mr. TAYLOR of Tennessee: A bill (H. R. 12006) granting an increase of pension to Bradford R. Sartin; to the Committee on Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5975. By the SPEAKER (by request): Resolution of the Maui Chamber of Commerce, Territory of Hawaii, relative to the control of telephone and telegraph companies within the Territory; to the Committee on Territories.

5976. By Mr. ANSORGE: Petition of Capt. George L. Darte, a member of the American Legion, protesting against the reduction of the officer and enlisted personnel of the Regular Army below 150,000 men and that the Reserve Officers' Training Corps and the National Guard and the Organized Reserves be maintained on a basis of real national defense; to the Committee on Appropriations.

5977. By Mr. KISSEL: Petition of Chamber of Commerce of the United States of America, Washington, D. C., relative to various matters of present national importance; to the Committee on Rules.

5978. Also, petition of American Paper and Pulp Association, New York City, N. Y., relative to paragraph 17a of House bill 7456; to the Committee on Ways and Means.

5979. By Mr. LYON: Petition of Churches of Duke, N. C., asking that Congress take some action for the relief of the Armenian people from the persecutions and cruelties of the Turks; to the Committee on Foreign Affairs.

5980. By Mr. A. P. NELSON: Petition of Eddy G. Lund Post of American Legion together with people of community of Siren, Wis., protesting against any treaty looking toward entrusting the Armenians to the sovereignty of the Turk; to the Committee on Foreign Affairs.

5981. Also, petition of county board of supervisors of Manitowoc County indorsing the St. Lawrence Deep Waterway Project; to the Committee on Interstate and Foreign Commerce.

5982. By Mr. NEWTON of Minnesota: Petition of Mrs. G. Oakvik and other residents of Minneapolis, Minn., petitioning the Congress not to pass House bills 9753 and 4388 or Senate bill 1948; to the Committee on the District of Columbia.

5983. By Mr. RAKER: Petition of George H. Morrill Co. of California, San Francisco, Calif., urging support of House bill 10159, a bill to further support interstate and foreign commerce against bribery and other corrupt practices; to the Committee on Interstate and Foreign Commerce.

5984. Also, petition of American Paper and Pulp Association, of New York City, relative to the proposed tariff duty on casein; to the Committee on Ways and Means.

5985. Also, petition of the California Bankers' Association, at annual meeting held at Del Monte, Calif., urging immediate aid and assistance relative to control of the Colorado River; to the Committee on Irrigation of Arid Lands.

5986. By Mr. YOUNG: Petition of members of the Ebenezer Danish Evangelical Lutheran Congregation of Flaxton, N. Dak., declaring their opposition to having the Armenian people under the sovereignty of the Turkish Empire; to the Committee on Foreign Affairs.

SENATE.

TUESDAY, *June 13, 1922.*

(Legislative day of Thursday, April 20, 1922.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. CURTIS. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	France	McKinley	Rawson
Borah	Frelinghuysen	McLean	Sheppard
Brandegee	Gerry	McNary	Shortridge
Calder	Glass	Nelson	Simmons
Cameron	Hale	Newberry	Smoot
Capper	Harris	Nicholson	Spencer
Caraway	Johnson	Norbeck	Sterling
Culberson	Jones, Wash.	Oddie	Sutherland
Cummins	Kendrick	Overman	Underwood
Curtis	King	Pepper	Wadsworth
Dial	Ladd	Phipps	Warren
Dillingham	La Follette	Pittman	Watson, Ind.
Edge	Lenroot	Poindexter	Willis
Elkins	McCormick	Pomerene	
Fernald	McCumber	Ransdell	

Mr. UNDERWOOD. I wish to announce that the senior Senator from Florida [Mr. FLETCHER] is absent on account of illness. I ask that this announcement may stand for the day.

Mr. KENDRICK. I desire to announce the absence of the Senator from Nebraska [Mr. NORRIS], the Senator from New Hampshire [Mr. KEYES], and the Senator from Alabama [Mr. HEFLIN], who are engaged in a hearing before the Committee on Agriculture and Forestry.

The PRESIDENT pro tempore. Fifty-eight Senators have answered to their names. There is a quorum present.

PROHIBITION ENFORCEMENT.

Mr. STERLING. Mr. President, on last Saturday I submitted for printing in the RECORD a digest of a survey made by the Manufacturers' Record with reference to the value of prohibition. I was asked at the time by the Senator from Alabama [Mr. UNDERWOOD] who made the digest, and I was unable to inform the Senator. It is proper to say that I have since been informed that the digest, as well as the survey, was made by the Manufacturers' Record.

DISTRICT OF COLUMBIA APPROPRIATIONS.

Mr. PHIPPS. Mr. President, I desire to give notice that when the Senate convenes to-morrow morning I shall ask unanimous consent to take up for consideration the amendment reported by me from the Committee on Appropriations to the amendment of the House of Representatives to the amendment of the Senate numbered 1 to House bill 10101, the District of Columbia appropriation bill.

PETITIONS AND MEMORIALS.

Mr. BALL presented a memorial of the president of the Delaware State Federation of Women's Clubs, protesting against the food, tableware, and women's wear schedules of the pending tariff bill, which was referred to the Committee on Finance.

Mr. CAPPER presented a petition of sundry citizens of Kansas City, Kans., praying for the enactment of legislation creating a department of education, which was referred to the Committee on Education and Labor.

He also presented a resolution of the North Washington Citizens' Association, of Washington, D. C., indorsing the Capper bill for reorganizing the District of Columbia public-school system, but suggesting that under this proposed bill the estimates for school funds be submitted by the Board of Education through the District Commissioners, to be transmitted by them to the Bureau of the Budget, and so forth, which was referred to the Committee on the District of Columbia.

HOSPITAL FACILITIES FOR DISCHARGED SICK AND DISABLED SOLDIERS.

Mr. FERNALD, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 11588) to amend an act entitled "An act to authorize the Secretary of the Treasury to provide hospital and sanatorium facilities for discharged sick and disabled soldiers, sailors, and marines," reported it without amendment.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HALE:

A bill (S. 3703) for the relief of William Sands; to the Committee on Military Affairs.

By Mr. WADSWORTH:

A bill (S. 3704) to amend an act entitled "An act making appropriations for the support of the Army for the fiscal year ending June 30, 1922, and for other purposes"; to the Committee on Military Affairs.

By Mr. SUTHERLAND:

A bill (S. 3705) granting a pension to Mary E. Cline; to the Committee on Pensions.

By Mr. ODDIE:

A bill (S. 3706) to place on the retired list of the United States Army George B. Sharon, former lieutenant colonel of Infantry; to the Committee on Military Affairs.

By Mr. RANSDELL:

A joint resolution (S. J. Res. 209) to establish a national hydraulic laboratory; to the Committee on Commerce.

CLAIMS OF HOBOKEN, N. J.

Mr. FRELINGHUYSEN. I ask unanimous consent to have the Committee on Commerce relieved from the further consideration of the resolution (S. Res. 254) to investigate the claim of the city of Hoboken, N. J., for losses as result of the occupation by the United States of certain docks, etc., on the Hudson River, formerly the property of the North German Lloyd Dock Co. and Hamburg-American Line Terminal & Navigation Co., and that the resolution be referred to the Committee on Claims. I make this request at the suggestion of the Senator from Washington [Mr. JONES], the chairman of the Committee on Commerce, who feels that this claim is of a character that should be considered by the Committee on Claims.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and it is so ordered.

TARIFF BILL AMENDMENT.

Mr. LADD submitted an amendment intended to be proposed by him to House bill 7456, the tariff bill, which was ordered to lie on the table and to be printed.

ADJUSTED COMPENSATION FOR WORLD WAR VETERANS.

Mr. LADD submitted an amendment intended to be proposed by him to the bill (H. R. 10874) to provide adjusted compensation for veterans of the World War, and for other purposes, which was ordered to lie on the table and to be printed.

TREATMENT OF LEONARD KAPLAN AT THE NAVAL ACADEMY.

Mr. SUTHERLAND. Mr. President, I would like to have read by the Secretary an editorial which appeared in the News of last evening, June 12, entitled "The cruelty of youth." I then wish to submit a few remarks.

The PRESIDENT pro tempore. Without objection, the Secretary will read as requested.

The reading clerk read as follows:

[From the Washington Daily News, Monday, June 12.]

THE CRUELTY OF YOUTH.

An amazing instance of the heartlessness of youth has come to the attention of the News.

It comes in the 1922 issue of The Lucky Bag, a handsome, leather-bound, 600-page book, prepared by members of the graduating class at the United States Naval Academy, Annapolis. The Lucky Bag is always the souvenir most cherished by students and graduates. Filled, as it is, with the wit and humor of school life, tales of athletic prowess, personal quips, attractive pictures, and complete records of every member's activities during the four years, it will remain a part of the graduate's library as long as he lives.

But in the 1922 Lucky Bag class members and their friends will find a page that is a blot on the class record. How serious a blot it is they will appreciate more and more as later years serve to balance their present youthful judgment.

Three hundred pages of the book are devoted to biographies of the individual members—two members to a page. Beneath each photograph is a humorous characterization of the embryo naval officer, the sort of affectionate razzing dear to the heart of the one who is razzed.

The last of these pages is devoted to Leonard Kaplan. Opposite his photograph is a crude caricature of a fictitious member of the class. The effect is as follows:

LEONARD KAPLAN.
AN AUTOBIOGRAPHY.

Born in the township of Weston, county of Lewis, State of West Virginia, Monday, the 26th of November, 1900. Educated in the public schools of Weston 1907–1912; Weston High School 1912–1916; department of civil engineering, school of applied science, Carnegie Institute of Technology, Pittsburgh, Pa., 1916–17 and 1917–18; Midshipman, United States Navy, July, 1918.

A student above the average and a mathematician of marked ability. Has always maintained that the prime factor in good scholastic work is application rather than genius—application, which includes first, the mental effort or coercive force to exert the brain; second, the knowledge of how to study.

Unmarried. For further information see "Who's Who in America, 1950–1952."

P. A. LIST.
"PORKY"

Born in the township of Zion, county of Cork, state of Ignorance, Sunday, the 17th day of March, 1900. Educated in the Convent of Zion, 1906–1911; Zion City College, 1911–1915; department of geological engineering, school of reductive science, United States naval rock college, Portsmouth, N. H., 1916–1918. Midshipman, U. S. N. R. S., Fourth of July, 1918, until death do us part.

A stewed gent below the average, and a poker player of marked ability. Has always maintained that the prime factor in good academic standing is grease rather than genius—grease, which includes, first, the mental effort or coercive force to bone out of hours and before reveille; second, the knowledge of one's own importance.

Unsat. For further information see the list of those denied special privileges until by positive action on their part they show that they merit further consideration.

No trouble for any person in the least familiar with school life to read between the lines the treatment that young Kaplan has undergone throughout his four years at Annapolis.

But the boys responsible for the expensive book were not satisfied with thus lampooning and setting him apart from themselves.

They left the page number off this page and perforated it along the edge next the binder, so that it might be torn out without leaving a trace. The number that should have been given it appears on the page following. The boy's name is not listed in the index of biographies. Complete arrangements apparently were made to permit any member who desired a yearbook minus Kaplan's name to have such a one.

That the youngster from West Virginia survived four years of this treatment and came through equipped for a commission in the United States Navy is something of a tribute to the stuff that is in him.

But that he had to do it is a sad commentary on the spirit of those in the class who made it necessary.

Mr. SUTHERLAND. Mr. President, I can not too strongly characterize the circumstances which have been set forth in the article which has just been read at the Secretary's desk. It relates to a boy from my State by the name of Leonard Kaplan, who is of Jewish extraction. Throughout the four years of his career at Annapolis young Kaplan maintained a very high standing; in fact, I understand he was second highest man of his class, which has just been graduated; but because of his nationality he has been subjected to a refinement of cruelty, such as has been set forth in this article. It appears that his biography was printed on a page by itself, which was unnumbered and perforated along the line of the binder in such a way that it could be torn from the yearbook of the academy for the current year, 1922, so that those who wished to do so could tear off the page containing this boy's biography without defacing the book.

Mr. POMERENE. Mr. President, I desire to ask the Senator from West Virginia, with his permission, was the academy yearbook to which reference is made printed by the authorities of the academy or by the midshipmen themselves?

Mr. SUTHERLAND. As I understand, it is printed by the midshipmen themselves; but a course of training that will permit such a condition of affairs to exist in one of our governmental schools, or, indeed, in any school in this country, discriminating against a man who has maintained such high standing and subjecting him to such treatment as has been indicated, is utterly un-American and can not be too scathingly condemned.

Mr. KING. Mr. President, will the Senator from West Virginia yield to me?

The PRESIDENT pro tempore. Does the Senator from West Virginia yield to the Senator from Utah?

Mr. SUTHERLAND. I yield.

Mr. KING. Have any steps been taken by the Naval Academy authorities to discipline those who have been guilty of this great wrong?

Mr. SUTHERLAND. I propose to ascertain that fact.

Mr. KING. I hope the Senator will bring this matter up when the Senate is considering the naval appropriation bill, and I am sure it will then receive very sympathetic consideration.

Mr. McCUMBER. Mr. President——

The PRESIDENT pro tempore. Does the Senator from West Virginia yield to the Senator from North Dakota?

Mr. SUTHERLAND. I yield to the Senator.

Mr. McCUMBER. I wish to ask the Senator, if I correctly understood him to give the impression that the publication of this yearbook, which is known as The Lucky Bag, is entirely without the control of the authorities of the Naval Academy? I can not imagine such a condition.

Mr. SUTHERLAND. I assume that it can not be entirely without the control of the academy authorities.

Mr. McCUMBER. Then the academy must be responsible for it?

Mr. SUTHERLAND. The authorities of the Naval Academy must be responsible for this book.

Mr. President, a few days ago I had occasion to call the attention of the naval authorities to the cases of four or five boys at the Naval Academy who had been punished for some boyish prank. In a way the offense was serious enough, for, as college boys sometimes will, possibly they indulged in liquor and were cutting up as boys in colleges all over the land sometimes do. Their actions, of course, were contrary to the rules of the academy and contrary, perhaps, even to law; but, after all, the offense of those four or five boys was of a minor character compared with the offense that has been committed in stigmatizing the young midshipman of the Jewish race, as he has been stigmatized, because of his nationality. The four or five boys to whom I have referred were punished by being set back an entire year, because, as I have said, at the close of the school year they loosened up a little and indulged in such pranks as boys full of life and spirit will sometimes indulge in, but at the same time showing qualities not at all inconsistent with the attributes of sterling young manhood. I repeat, their offense was much to be deplored and not to be condoned, perhaps, but it was slight, indeed, as compared to the offense committed by the boys who were members of the recent graduating class in thus stigmatizing one of their number, for their conduct evidences a spirit which should not be manifested at any institution, and certainly not at an institution under control of the Government.

Mr. President, if such is to be the attitude of our Naval Academy, or of any other governmental institution, then we have come to a sad pass. In my opinion, we should not allow such an offense as this to pass by uncriticized and uncorrected, nor should those guilty of it be allowed to go unpunished. If such incidents as these are to continue to occur and to pass by unnoticed, then it is better that our Navy should be scrapped, because they show how far we have departed from the tenets and principles which have made this country great and powerful. Regardless of nationality, regardless of race, in this country every man should stand on an equality before the law.

Mr. POMERENE. Mr. President, may I ask the Senator a further question?

Mr. SUTHERLAND. I yield.

Mr. POMERENE. Has the character of this publication and the plan of its printing and binding been called to the attention of the authorities at the Naval Academy?

Mr. SUTHERLAND. I have no knowledge as to that, I will say to the Senator; but I presume that attention will be called to it through the medium of this discussion, and I shall make careful inquiry to ascertain what steps have been taken by the academy to punish the young men who have been guilty of this offense.

Mr. President, I felt it to be my duty to call the attention of the Senate and of the country to this incident, in the hope that there may be no recurrence, and that no such spirit may be allowed to prevail at the academy. It may have been an act of thoughtlessness; but it goes beyond that. It shows a lack of consideration, due to a narrow and un-American prejudice, for an American-born boy, who was reared in the State of West Virginia, where he went through the public schools and acquitted himself well, and, being anxious for further education, he went to Pittsburgh and qualified there for entrance to the Naval Academy. As I have said, at the academy he maintained a standing, both with reference to conduct and scholarship, that would do credit to any American boy.

Mr. President, I was not willing to let this incident pass without calling attention to it.

ADJUSTED COMPENSATION FOR WORLD WAR VETERANS.

Mr. KENDRICK. Mr. President, I am not unmindful of the fact that the chairman of the Finance Committee is anxious to proceed with the bill under consideration, and I do not desire at all to delay it, but rather to promote and facilitate its disposition. I desire, however, to take a few moments this morning to discuss briefly House bill 10874, the soldiers' adjusted compensation bill. Later on, possibly in a few days, I desire also to discuss an amendment to this bill which will provide what I believe to be a very necessary modification of it in the way of a land-settlement feature. It is my opinion that we should not pass the bill without some such provision, and, from my viewpoint, the Smith-McNary bill will prove the most satisfactory of all the forms of land settlement which have heretofore been brought forward.

Mr. President, within the last few months I have listened to many able arguments for and against the so-called "adjusted

compensation bill." While I have genuine respect for the opinion of those who oppose such legislation, I do not agree with them in their conclusions.

From my viewpoint "adjusted compensation" is a misnomer for such form of legislation. It would be better named "just compensation." In simple justice to the ex-service men it should be said that the soldier boys are not clamoring for a bonus, as has been contended, but a sense of obligation has compelled and is compelling Congress and the country constantly to dun themselves like a delinquent debtor in behalf of his creditor.

The two fundamental principles underlying this question are, first, whether there is an obligation, and second, if there is an obligation, whether the Government is able to meet it.

Mr. President, in the light of all the facts involved in the assembling of our Army and in the prosecution of the war, no form of reasoning sanctioned by logic can be employed that will justify a refusal or failure on the part of our Government to compensate our soldiers adequately for service during the World War.

My convictions on this question are not of a recent or pre-election character. They were formed during a visit to the battle lines of France and Belgium during the late fall of 1917, while meeting and conferring with the advance guard of our Army in the training camps just away from the battle line and within easy sound of the booming of the cannon. When I came in contact and talked personally with our boys five and six thousand miles away from home, and glimpsed from them the high spirit of patriotism which animated them in their sense of duty; when I saw them in training with rain-soaked garments during the chill autumn days, and visited them in their billets in stables, in haymows, in every improvised place, and every kind of a place except a comfortable one, I mentally concluded then and there, and said to my friend and colleague, Senator Kenyon, "the demands of these boys upon their country and their Congress in the years to come are to be very unreasonable, indeed, if they are in excess of my idea of what the country and Congress should grant them."

When I saw these boys, and talked with them, and gained an insight into their attitude of mind, it was evident to me that not many of them ever expected to return to their native land; and when, homeward bound, the different divisions marched down Pennsylvania Avenue, the placards of their respective divisions, indicating losses of 30, 40, 50, or even 60 per cent, told the story, "they were not to return; 75,000 had made the last great sacrifice."

Never in the history of a nation has there been more of the zeal of crusaders than was evidenced in this advance guard of the great expeditionary force sent to France.

The very principles under which this Army was assembled were at variance with anything theretofore employed by the Nation. Of the millions called, but a limited number was chosen. To those best fitted, because of their youth and the years of life in their veins, were assigned the hazards and hardships of the trenches. To the great majority were assigned the necessary vocations of civil life. To the one we agreed to pay a dollar per day and board; to the other the most unusual compensation ever known in the history of this country. The men to whom were assigned the necessary vocations and the comforts of everyday life were accredited with contributing as much to the winning of the war as those who assumed the risk and hardship and who occupied the front-line trenches. The one man traveled four, five, and even six thousand miles from home to fight for the honor of his flag and for the ideals of a Christian Nation; the other proceeded in the even tenor of his way, and with even increased enjoyment of everyday life.

If the Government assumed the right to assign one man to one task and another man to another task, then in simple justice it should have equalized the form of compensation to each man. No one can consistently claim that the service of the man in the necessary vocation was a higher form of service than that of the man who assumed all of the risk and all of the hardships of the camp, the trench, and the battle field. If it were right and proper to say to the man who defended his country with his life that his compensation should be a dollar a day, how can we justify the payment of the enormous compensations of the war period to the man who remained at home in the enjoyment of every comfort? If we were justified in calling to military service the manhood of the Nation, why should we have hesitated to enlist for service during the war the property of the Nation?

I assume to say here and now that in any world war in which this Nation will ever again be involved there will be no hesitation in conscripting the wealth of the Nation in its defense, on the ground that property is not more sacred than persons. If it be consistent to limit the amount our soldiers may receive as compensation, why not in justice and equity limit the amount that wealth may earn during the same period of distress?

It is not too much to say that many of those who are now clamoring against adjusted compensation were among the most conscienceless profiteers of the war. Net profits to the extent of $40,000,000,000, nearly twice the total amount of our war debt, have been wrung from the people of this country since 1916. These figures graphically illustrate the effect that the conscription of wealth would have had on the present situation. What would have been the result if these earnings had been limited to a reasonable return on the capital invested? There would have been no enormous debt, no orgy of profiteering, and no wild extravagance. The country would have to-day been proceeding on an orderly, normal basis. The Government would long ago have been in a position to have discharged this obligation to the Nation's defenders.

In the speeches delivered in opposition to this legislation there has been one unfailing contention running through them all, that you can not buy patriotism. To this statement no one will take exception. The spirit which leads a man to offer his service, even unto death, in defense of his country can not be measured in dollars and cents; it can not be paid for, and by the same token it is not for sale. The mere pittance which we here offer to the individual soldier is in no sense a payment for that service; it is a small recognition granted out of common decency in partial compensation for the time these soldiers lost from the ordinary pursuits of life.

If we are to follow the process of reasoning advanced against the granting of an adjusted compensation, the inquiry is pertinent as to what was the object of the dollar a day paid these men? Was it intended that this should be sufficient compensation? If so, it may easily be shown that no nation in the history of civilization ever paid as beggarly a compensation to its troops as this Nation did in the World War, in proportion to its ability to pay; and up to this time, among all the nations engaged in the World War, none has asked more of good faith of those who served in defense of the country and has offered less in the way of compensation. Canada paid adjusted compensation ranging from $70 to $600, France from $74.21 to $187.21, Great Britain a maximum of $140.94, Australia $98.42, Italy $64.69, and these nations which have paid their soldiers a bonus have been financed by our own country; and while financing other countries to make just compensation to their soldiers, we have declined so far even to recognize such a responsibility on the part of our own Government.

Mr. STERLING. Mr. President——

Mr. KENDRICK. I yield.

Mr. STERLING. I should like to ask the Senator, if he has any information on that point, as to what these several countries paid the men while in the service?

Mr. KENDRICK. I have not the figures. I think their compensation was somewhat lower than our own.

We have reason to believe and reason to be proud of the fact that but for our men there would have been a German victory. In this event the payment of the amount now asked as an adjusted compensation to our soldiers would have been a bagatelle to the levies made by the Central Powers in the way of reparations. It has been contended that a cash bonus would not prove a benefit. I am inclined to agree with this statement, but only because the amount it is proposed to give is so small. In this particular I agree with the Senator from Idaho [Mr. BORAH] when the says, "If we are going to compensate the soldier for the loss of his time, we might at least pay him the wages of an ordinary day laborer." In view of all the circumstances, one can not forego the conclusion that the amount is parsimonious in the extreme.

These men when called to service were, in the majority of cases, earning in their individual capacities amounts equivalent to three and four times the compensation paid by the Government. Every employer of labor in any capacity found it necessary to increase greatly the wages paid his employes. Almost every man engaged in every kind of business found his profits increased with the advance of the war, and these men who were making the great sacrifice had their compensation reduced at a time when they were giving life and limb to the defense of those at home. In addition to the loss sustained through decreased compensation received during the period of service, there is the disruption of plans, the loss of positions, and the general unsettling of preconceived and prearranged programs of individual vocations; and it may also be pointed out that while the civilian who did not go to war had the advantage, when the industrial collapse came after the war, of the unprecedented earnings he

made during the conflict, the soldier was discharged from the Army practically in the midst of the depression, with nothing to sustain him. The soldier bore the brunt of the war and he bore the brunt of the industrial disorder and economic chaos which followed the war. Surely he has earned the meager consideration it is here proposed to give him. Surely it is our solemn duty to attempt in some manner to balance the scales of justice for him.

Mr. President, this is no revolutionary proposal that is made now for the first time in the history of our Government. To the great glory of the statesmen of the past be it said our Government has always recognized generously the service of the soldier. The principle was applied during our Civil War in a system of bounties paid for voluntary service. Twenty-three States paid about $260,000,000, while the Federal Government paid $363,000,000 in cash, land, and other bounties, making a total of $650,000,000 paid an Army of two and one-quarter million men at a time when the wealth of our country was not more than one-tenth of what it is to-day.

It is inconceivable that anyone at all apprised of the facts or familiar with the Nation's resources could credit the statement that the Government's finances would be seriously crippled by the payment of this compensation. The war expenditures of France equaled 78.8 per cent of her total wealth; Italy, 78.5 per cent; Great Britain, 54.8 per cent. The United States expended only about 9.6 per cent of her national wealth. These other nations have already paid their soldiers adjusted compensation; and it may be worthy of note here that these nations that have paid their soldiers adjusted compensation owe this Government $10,150,401,305.49, of which even the interest is and was unpaid at the time they discharged this obligation to their soldiers. In other words, we have loaned money to these other nations to meet an obligation toward their soldiers, and we are threatened with financial disaster if we attempt to meet such a responsibility to our own men.

The record is too recent and the ending of the war too fresh in the minds of the people for us to forget that the zeal and enthusiasm and fighting spirit of our soldiers ended this war two years before it otherwise might have ended. Such a consummation represented a saving to the Nation of from fifteen to twenty billion dollars, three or four times the amount required for adjusted compensation if paid in cash. With an estimated wealth of $275,000,000,000, does anyone believe that if it had been necessary in order to defeat Germany this country would have hesitated to spend a hundred billion, or that even such an outlay would have meant repudiation?

Much has been said as to the means and methods of raising the money to meet this obligation. In this connection I insist that this Nation can discharge its every legitimate obligation by paying cash. It is easy to understand that there might be an honest difference of opinion as to whether or not the Government should undertake to pay adjusted compensation; but, if the obligation be admitted, it is inconceivable how anyone could be reconciled to a plan under which the payment could be delayed or deferred. If the obligation be admitted, it at once becomes sacred in character, and should be met with the least possible delay, and with not too much regard for our convenience in discharging it.

The plan proposed in the present bill of deferred payments of amounts in excess of $50 impresses me as being subject to more than one objection. First, it can not be satisfactory to the soldier; second, it is a most expensive form of adjustment to the Government itself. In the prosecution of the war we found no difficulty, when necessary, in borrowing an amount sufficient to meet our needs. I venture the statement that we could do the same thing without upsetting our finances if it meant the payment of every dollar in cash, but if this bill were drawn with discretion it would not impose the cash payment of even the greater part of the amount involved.

In order more fully to meet the needs of different men, no doubt the different forms of payment are very desirable, and will prove satisfactory.

The paid-up insurance plan is a highly satisfactory one, and will probably prove greatly beneficial to a large number of our soldiers; but the form of adjustment, if properly planned and prosecuted, which will prove more widely beneficial to both the soldiers and the Nation as well, is the land-settlement plan. Without intending to condemn the work of those who have given much thought to this question, I am constrained to believe that the plan as outlined by the House bill will not meet the needs of the situation. As it looks to me, this bill gives authority without direction for reclamation, and will be lacking in both immediate and permanent results. As I read the bill, no appropriations or provisions are made for raising the funds with which to finance the reclamation.

It will be unfortunate, indeed, if this law is not framed with some definite purpose of specializing in a land-settlement scheme for the soldiers, such as is provided in the Smith-McNary bill. No single act of the Government has ever contributed so much to the wealth and citizenship of the Nation as did the homestead law, and the opportunity is here presented to us to repeat in part this great success of the past. The man who takes a Government homestead and converts it into agricultural land performs a real service to the Nation. He earns a clear title to the land.

Within the past few months the urban population of the country has exceeded the rural population by several thousands, and this is a warning that the Nation might heed at this time. No legislative action by Congress would prove more popular, and in the end more widely beneficial than by writing into this bill such provisions in the way of land settlement as would guarantee the occupation of farm lands by the largest number of soldiers of the World War. The soundest and most conservative business principles should characterize the settlement of these lands. Congress would be easily justified in granting greatly increased compensation to the soldiers who would make such settlement.

Any plan that will meet the situation must be national in scope, and in order to prove at all beneficial it must provide means to initiate reclamation work immediately and on a broad scale, and guarantee a revolving fund that will make continuous reclamation both by drainage and by irrigation. At the close of the Civil War our Government was fortunate enough to hold in fee simple millions of acres of the most fertile lands of the Nation. These were given outright to the soldiers in the way of homesteads, and hundreds of thousands of veterans took advantage of the opportunity. It is unfortunate that we do not now possess such great areas of lands to give to the soldiers of the World War; but we are in possession of untold millions of acres of land that if reclaimed would serve just the same purpose as the rich farm lands of the last generation, and at the same time add to the wealth of the Nation vastly more than the cost of development.

Just as during the last generation the Government gave the soldier who was willing to undertake the conquest of the prairie 160 acres or more of rich, valuable land in fee simple, and considered itself well compensated when the soldier-settler transformed the land from buffalo pasture to productive farms and built new communities and States to enrich the Nation, so to-day it should not hesitate to give with equal generosity, if in smaller tracts, reclaimed desert and swamp lands to the veterans of the World War. They will repeat the triumphs of their fathers, and the Nation will be well repaid.

Under every plan of land settlement employed heretofore on reclamation projects, the settler, even though he be a soldier, has been required to pay the full value of the land. Such payment has been provided under an amortization plan extending over a long period of time. Any land-settlement bill intended as a substitute for soldiers' bonus must be framed so as to give the soldier an opportunity to receive an unfailing benefit to the amount of his bonus. Under the system provided in the adjusted compensation bill it would be easily possible for him to accept the land with a credit of the amount of his compensation and an obligation for the balance of the cost of the reclamation; and with such an obligation upon the entire tract, extending over a long period of time, this plan would involve the settler in too many cases beyond his ability to pay, even though he employed every diligence in his efforts to establish a home and to meet his payments according to his contract with the Government. The vicissitudes that have attended the farming interests of this Nation for the past 40 years will all attest to the unquestioned hazards of such an undertaking, and failure would result simply in the forfeiture on the part of the soldier of his bonus, in addition to the long years of effort and toil made by him in discharging the lien or obligation on his farm. In order to meet this situation, the law should include a dual plan of relief to be employed in case the soldier is unable to make full and final payment on his land. First, one by which the soldier might select from his tract such an acreage as, computed on the basis of per-acre reclamation cost, would be equivalent to the amount of his adjusted compensation plus any additional payments made on the land, the selection of such acreage to be made by the ex-service man subject to the approval of the Secretary of the Interior; or, second, he should be paid in cash, without interest, the amount of his compensation. Through failure to make such provision the soldier, if unable to make payment in full, not only loses his farm but he loses his bonus, and it will be difficult for the Government to convince him that it has failed to benefit by his misfortune.

Under the present plan the Government, which is honestly endeavoring to confer a benefit upon these men, might be placed in the position of a land agent who had made a sale conditioned upon an advance payment and the forfeiture of that advance payment when the purchaser failed to make payment in full.

The provision suggested would make certain that the plan and intention of Congress to recognize the obligation to the soldier would not miscarry or fail. Such development on the part of the Government would not constitute an expense. It would represent in the highest sense of the term a profitable investment. Millions of acres of land involved in the development are at present waste lands, entirely unproductive. Reclamation of these lands would add to the national taxable and productive wealth several times the amount expended in such reclamation. If initiated without unnecessary delay it would provide profitable employment for hundreds of thousands of men who are now idle, and the increased thousands of rural homes and producers of agricultural products would easily justify every dollar expended in such a plan of national reclamation. It would be an investment laid upon the strongest foundation in all the world—faith in the future of America and confidence in the character of her sons. That which is spent in building in America is never lost. Useful labor is always beneficial, and if for no other reason than that they would provide us useful labor for thousands of men, the sums expended in reclaiming lands for the use of the soldier would be money well spent.

Here within our grasp is a great opportunity to perform a great service for the country, while at the same time liquidating the obligation we owe to the boys who were our representatives on the battle line in the Great War. I sincerely hope it will not be allowed to pass. If by actually reclaiming the land we show our good faith and prove to the soldier that we intend to deliver it to him on reasonable terms and at the same time guarantee to him his equity in the land, I confidently venture the prediction that thousands of the veterans, instead of taking cash or insurance certificates or any of the other proposed forms of compensation, will decide to take the land. This in itself would answer the argument of those who say that the payment of a bonus will impoverish the Treasury.

It will be a pity if through lack of courage we fail to meet this situation, and yet, while failing to meet it, pass a bill which only holds out a promise to the ear, but breaks it to the hope. We have not hesitated to provide adjusted compensation for every real and imaginary loss suffered by industries that were called upon for war service. Three billions of dollars were appropriated under the Dent Act, approved March 2, 1921, for the relief of war contractors; two billions have been given to the railroads; fifty millions have been appropriated for the producers of war minerals; and millions have been appropriated to feed Europe.

Our purse has been open to every appeal to our bounty, but this demand of simple justice alone meets opposition. So it is to be said of this Congress that while rushing generously to the support of every claimant who could show the approval of the financial powers, it will decline to recognize the Nation's obligation to the men whose patriotic self-sacrifice and heroic energy saved the financial structure from a burden many times greater than it now bears by bringing the war to an end at least a year before anyone expected a cessation of hostilities?

We shall, of course, pass a bonus bill. Mr. President, let it be an honest one. Let us not approach the duty in any captious, critical, or ungenerous spirit. The same spirit which moved us in the heat of war should inspire us now. The same generous patriotism that prompted us to cheer these boys as they went away and to welcome them as they came home should prompt us now to do them justice. The question is whether we shall ask these boys to crystallize their faith, their loyalty, and their devotion to the country into deeds, and insist at the same time that they accept as convincing evidence of our gratitude for such service, simply an expression in words. It may be we can not buy patriotism with money, but it will perhaps be admitted that it is a splendid medium through which to express a nation's gratitude. It is indisputable that these men owed the Government every service they gave. It is also true they rendered this service cheerfully, even happily, and gave themselves life and limb without reservation. In so doing they made enduring everything in our national life worth while. When we entered the war the proud boast of our allies to the Central Powers was, "You are now up against an undefeated Nation." Through the valor and fighting spirit of our soldier boys we are still an undefeated Nation, and to the men who made enduring our liberty and institutions we owe something more tangible than fine phraseology.

Mr. President, with all due respect for those who entertain different views, the people of this Nation are not only conscious of this obligation but they are committed to its prompt discharge, and the time has come when the Congress should act without further delay. In its action there should be no suggestion of a gratuity or donation but a recognition of a clearly defined obligation. In its action there should be no assumption that the amount here involved is in payment for patriotic service but simply compensation for time lost in other vocations. Though such payment has been already too long delayed, it should now be undertaken and discharged in the same generous spirit in which the soldiers of the World War answered the call of their country in its time of real need.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

The PRESIDENT pro tempore. Will the Senator from North Dakota point out the amendment which he desires to have the Senate consider?

Mr. McCUMBER. I ask the Senate to proceed to the consideration of paragraph 383a, on page 87.

The PRESIDENT pro tempore. The Secretary will state the amendment of the committee.

The ASSISTANT SECRETARY. On page 87, after line 4, the committee propose to insert a new paragraph to read as follows:

PAR. 383a. Azides, fulminates, fulminating powder, and other like articles not specially provided for, 12½ cents per pound.

Mr. KING. Mr. President, I observe that this is an amendment offered by the committee. I presume the committee felt constrained to lay a duty upon these products because of the fact that a duty of 25 per cent had been imposed upon quicksilver.

Mr. SMOOT. I will say to my colleague that these fulminates consist of 80 per cent quicksilver. Eighty per cent of 25 cents would be 20 cents compensatory duty, but the committee took into consideration that the transportation of the items is very dangerous and very costly and, therefore, they only gave 12½ cents per pound. But the Senator will see that on account of the duty of 25 per cent on quicksilver a compensatory duty would be 20 cents, because 80 per cent of all of the products is quicksilver. The reason why 20 cents a pound was not given was, as I stated, that the transportation is costly and rather hazardous, and the committee felt that 12½ cents a pound would be sufficient.

Mr. KING. I concede that if we lay a duty upon quicksilver there would be some justification for the imposition of a duty upon azides, fulminates, and fulminating powder. However, it does not necessarily follow that having placed a duty upon quicksilver it is in the interest of the public to impose a duty upon detonating caps and those products which come within the paragraph and which are so necessary in the use of explosives. My colleague will see that this is a tax upon the miners, upon those who use explosives in road building, upon farmers in the extirpation of stumps from their lands, and upon many of our citizens and in very many industries.

It does seem to me that wherever it is possible even our friends who believe in a protective tariff ought to free from the burdens of taxes those commodities which are so indispensable to the great mass of the people.

We have placed a tax upon the primary product of explosives, and when we reach explosives that compensatory duty will be carried to all forms of explosives. I am not speaking now of gunpowder, but nitroglycerin and the forms of explosives that are used by the farmers, the miners, the road builders, the grade builders, the railroad builders, and so on. It is increasing the burdens of the farmers for clearing their lands, of the State, county, and city governments that are expending tens, if not hundreds, of millions of dollars for road building, of the mine operators who are going down into the bowels of the earth for the purpose of bringing out the precious metals and the other minerals and metals so important to our progress, industrially and otherwise.

We now come to this item and we impose a duty upon it. It is a duty that is passed to the great mass of the people, and there are no corresponding benefits. I concede there are importations, although the importations are diminishing. In 1911 there were importations of the value of $42,000. During the war the maximum value of imports under this paragraph reached the sum of $1,782,000. Of course, the high prices during the war were reflected in that very large sum. In 1919 the imports dropped to the value of $275,000, in 1920 to $479,000, and in 1921 to $107,000. It is impossible to get any statistics of the domestic

production, because these products are manufactured in the immense explosive factories and powder factories of the country. The Du Pont de Nemours Co., the Atlas, and other great corporations of the United States produce these products in very large quantities. We are giving the opportunity to them to take toll of the people.

The tax—12¼ cents per pound—is rather heavy, because the present value is $1.77 per pound. The pre-war price was very much less. Of course, measured by the average rate found in the bill, this is not an extravagant tax, but it is a tax, a tax upon industry, a tax upon the farmers, a tax upon the road builders, a tax upon the miners and upon the mine operators, a tax upon coal, because these products are made in the extraction of coal from the earth. It does seem to me that we ought, as far as possible, even if we are protectionists, to lay burdens upon those products which can bear them and where the products are not so universally used and are not so indispensable to the industrial life of the people.

The PRESIDENT pro tempore. The question is upon agreeing to the amendment of the committee.

The amendment was agreed to.

Mr. McCUMBER. I ask that we may go next to paragraph 387, on page 87.

Mr. KING. Does the Senator desire to pass over paragraph 384 for the present?

Mr. McCUMBER. Yes.

Mr. KING. Very well.

The ASSISTANT SECRETARY. In paragraph 387, bottle caps, collapsible tubes, etc., on page 87, in line 20, the committee propose to strike out "25" and insert "45," so as to read:

Bottle caps of metal, collapsible tubes, and sprinkler tops, if not decorated, colored, waxed, lacquered, enameled, lithographed, electroplated, or embossed in color, 45 per cent ad valorem.

Mr. KING. The Underwood law gives a rate on these products of 35 per cent ad valorem. I think the rate proposed is entirely too high.

Mr. SMOOT. Mr. President, before the Senator continues his remarks, will he yield to me?

Mr. KING. I am very glad to yield to my colleague.

Mr. SMOOT. In the amendment of the committee just stated, I move to strike out "45" and insert "30."

The PRESIDENT pro tempore. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. The Senator from Utah proposes to amend the committee amendment in line 20 by striking out "45" and inserting in lieu thereof "30."

The PRESIDENT pro tempore. The question is on agreeing to the amendment proposed by the Senator from Utah to the amendment of the committee.

Mr. KING. Of course, that is a very great reduction. I am sure my colleague and the committee have reached the conclusion that our criticisms of some of these schedules were well founded and that a rate of 45 per cent ad valorem upon the products embraced in this paragraph was entirely too high. Before I make an observation upon that, may I ask my colleague what reduction will be made in line 22 in the same paragraph?

Mr. SMOOT. That applies to the same articles if decorated, colored, waxed, and so forth, and I shall move to strike out "55" and insert "45," so as to make the rate 45 per cent ad valorem.

Mr. McCUMBER. If the Senator will allow me, I desire to say with reference to the statement he made a moment ago, without doubt the committee would listen with great interest to any suggestion that might be made by the junior Senator from Utah, and his suggestions would undoubtedly have good influence upon the committee. It is but fair to say, however, that the committee try to consider these matters before they come up on the floor, and they do not, therefore, have the benefit of the Senator's criticisms at a time when they act upon them.

Mr. KING. I am very sure there was no hidden sarcasm in the remarks of my distinguished friend?

Mr. McCUMBER. Oh, no.

Mr. KING. Therefore I accept with graciousness his statement. I compliment the Senator and the committee upon their exhibition of good common sense in tendering some of these amendments.

Mr. SMOOT. I will say to the Senator that the last part of the paragraph applies to nothing but luxuries of the highest kind. There is a basket clause carrying 45 per cent. The committee thought it ought to be at least 45 per cent for the luxuries when the basket clause carries that rate. The existing law carries rates of 30 and 40 per cent. We simply want to make this rate conform to the rate in the basket clause.

Mr. KING. I am making no criticism of the action of the committee with respect to the second subdivision of the paragraph.

Mr. SMOOT. Thirty per cent is the rate carried in the existing law. I will say to the Senator that the items there covered are nearly all luxuries, outside of the collapsible tubes, and, as the Senator knows, they are used for toothpastes, and so forth. I need not enumerate the other articles which they are used to contain.

Mr. KING. One of the principal objections I have to the first duty laid in the paragraph is that it deals with comparatively cheap materials which are used very extensively in connection with many products very important to the people. For instance, take collapsible tubes. All the little leaden tubes used for pastes of various kinds, tooth powders, and so forth, are covered by this rather high tariff. I am not able to state just what the domestic production is, although in 1913 there were quite a number of domestic factories manufacturing these products. In 1913 there were seven large factories engaged in making collapsible tubes, two in the manufacture of sprinkler tops, and a number of others engaged in the manufacture of both collapsible tubes and sprinkler tops. The production of sprinkler tops was estimated to be about $300,000 in 1913 and several million dollars in 1920. As a matter of fact, there has been a remarkable development in the domestic production of all of the items embraced within this paragraph.

The importations in 1921 amounted to only $109,000. In 1918 they were $64,000, in 1919 only $11,000, and in 1920 they were $94,000. Our importations bear a very small ratio to the production. With the production of several million dollars' worth, our imports, as I have stated, last year were only $109,000 worth. Probably about 5 per cent of the consumption comes from imports.

I think for the good of the country and in the interest of reasonable prices—and reasonable prices mean an advantage to all the people, manufacturers as well as consumers—it is important that there should be some foreign competition. I think it would be a most disastrous thing not only for manufacturers but for consumers if there was absolutely no foreign competition, disastrous in the sense that it leaves the domestic manufacturer unlimited opportunity, except such as may be developed from domestic competition, to charge just such prices as he may see fit to charge.

Unfortunately we have embarked upon an era of combination and confederation upon the part of manufacturers. There is a tendency for the small producer to be swallowed up, and ofttimes he seeks the process of being swallowed up by the larger one. Manufacturing enterprises gravitate together and we have huge aggregations of capital devoted to the various industries of the United States. It is unfortunate, in a way, but perhaps it is in harmony with the economic advancement of our country that domestic competition should be reduced to the minimum. The best condition in the economic and industrial world results from competition. Competition is not only the life of trade but competition spurs and develops trade and makes for the general advancement of all the people. I have had occasion to say three or four times during the debate upon the pending tariff bill that nothing could be so disastrous to big business itself as for it to have no competition and to give to the public unchallenged figures and prices upon its products. Even if the prices charged were reasonable, if there is no competition and the business is a big concern, the resentments of the people are aroused and they attribute to the corporation or to the big business oppression and intolerance of which perhaps it is not guilty; but our skepticism, our suspicions, our jealousies, and our resentments are immediately aroused when a huge concern dominates any particular commodity. So our big enterprises, for their own good and for the perpetuity of a fair and proper industrial system, ought to welcome some form of competition. If we can not get it from within let us get it from the competition from abroad. A healthy, wholesome condition will more nearly be found in the industrial world when there is foreign competition. I do not mean, even from a protective standpoint, such competition, of course, as would be absolutely destructive, assuming that were possible, of the domestic industry.

Here we have in these particular items an illustration of the point for which I am contending. We are producing here millions of dollars' worth and importing $100,000 worth. It would be better for the domestic market and better in the long run for manufacturers of these articles if there were a little more competition. If producers of any product have no com-

petition, first they charge extortionate prices, or that is their disposition, and that condition leads to stagnation. The greatest development in our industry has resulted from acute and active competition. If I am engaged in business and a bright and active competitor is upon my trail, then I am reaching out for scientific men, for men of ability, of genius, and skill, and competency that they may aid me in bringing my business to a high state of efficiency, that I may meet the active and aggressive competitor who is upon my trail.

This tariff, in my opinion, is too high; we have now no competition from abroad that influences the market; the competition is negligible; and yet, in view of that, it is proposed to impose what I conceive to be too high a duty.

I move, therefore, Mr. President, to amend the committee amendment by striking out "30" and inserting "25."

The PRESIDENT pro tempore. The amendment of the junior Senator from Utah to the amendment offered by the senior Senator from Utah on behalf of the committee will be stated.

The ASSISTANT SECRETARY. On page 87, line 20, before the words "per centum," it is proposed to strike out the numeral "30" and to insert the numeral "25."

Mr. HARRISON. Mr. President——

Mr. SMOOT. Will the Senator from Mississippi not allow us to take a vote on these two items? I do not think they will lead to any further discussion.

Mr. HARRISON. Very well.

The PRESIDENT pro tempore. The question is on the amendment of the junior Senator from Utah to the amendment offered on behalf of the committee by the senior Senator from Utah.

The amendment to the amendment was rejected.

The PRESIDENT pro tempore. The question now is upon the amendment proposed by the senior Senator from Utah [Mr. SMOOT] as a modification of the committee amendment.

Mr. KING. On which amendment does my colleague now desire to vote?

Mr. SMOOT. On the amendment which I have offered to the committee amendment, striking out "45" and inserting "30."

The amendment was agreed to.

The PRESIDENT pro tempore. The next amendment of the Committee on Finance, as proposed to be modified, will be stated.

The ASSISTANT SECRETARY. On line 22, page 87, before the words "per centum," it is proposed to strike out the numeral "55" and to insert in lieu thereof the numeral "45."

The PRESIDENT pro tempore. The question is on the amendment of the Committee on Finance as modified.

The amendment as modified was agreed to.

NAT GOLDSTEIN.

Mr. HARRISON. Mr. President, some weeks ago there came before the Senate the nomination of Nat Goldstein for collector of internal revenue at St. Louis, Mo. The committee to which that nomination was referred considered it, but it is uncertain whether or not any report was ever made upon the nomination. At any rate, Nat Goldstein's nomination was discussed for many days in the open sessions of the Senate. The only facts that were revealed touching that nomination were those that were developed by the activities of the select committee of the Senate two years ago when investigating campaign contributions. The facts thus revealed by that investigation were so glaring and some thought disclosed such corruption that they contributed to defeat the nomination for the Presidency of one very strong candidate of the Republican Party. They did more than that, for when it was shown that Goldstein took $2,500 of the Lowden so-called "slush fund," my recollection is that it defeated Goldstein's election as a delegate to the Republican National Convention; or, at least, Mr. Lowden, a Republican candidate for President, came out and stated that, even though Goldstein was committed to his candidacy, he did not desire his vote. Goldstein was denounced throughout the country not only by the Democratic press but by the independent and Republican press; there was an odium that attached even to his name. In view of those facts it was surprising both to the other side of the Chamber as well as to this side when Nat Goldstein's name came to the Senate at the instance of President Harding.

It was natural, even in the circumstance of an overwhelming Republican Senate, when all the facts were revealed, that that name should have been withdrawn from the Senate; and it was withdrawn from the Senate. I am sure that many Senators on the other side of the aisle and Republicans and Democrats and Progressives throughout the country were more surprised this morning when they read, under a St. Louis headline, a letter, couched in most laudatory terms, written by President Harding to this same Nat Goldstein, who had been repudiated by the Senate—unanimously I might say—his nomination having been withdrawn.

So I am going to incorporate in the RECORD, or have read to the Senate the remarkable letter written by President Harding to Nat Goldstein, who has been denounced as a slush-fund taker. The facts show him to have taken $2,500 to be used in advancing Mr. Lowden's candidacy for the Republican nomination for President, but the letter written by the President of the United States to Nat Goldstein appears to be an effort to take away from him all the odium that may have attached to his name by reason of that incident which defeated Lowden's nomination. Evidently the President is not satisfied with appointing corruptionists to office, but he lauds them and says that "attacks" made upon them "are undeserved," even after the facts have come to his knowledge.

Mr. KING. Mr. President——

Mr. HARRISON. I yield to the Senator from Utah.

Mr. KING. My recollection is—I ask the question for information—that after Mr. Goldstein had taken this slush fund, so called, from the Republican candidate for the Presidency from the State of Illinois, he supported Mr. Harding, the competitor of Mr. Lowden.

Mr. HARRISON. Yes; he afterwards supported Harding. When money was first offered him by Lowden's representative he said he did not know whether he was for Harding or for Lowden. I am really sorry that the Senator has brought that out, because it might give the impression to the country that the President is still standing by Goldstein and saying that the attacks upon him were "undeserved" because of the fact that he laid down on Lowden and took up Harding, as many others did when they saw that Harding had a chance to be nominated at Chicago.

Lowden, $2,500 of whose money went to Nat Goldstein, does not speak of it the same as Harding does. I quote:

> Lowden denounces Goldstein as unfit; gave false testimony on the campaign fund, says ex-governor, nearing here on *Olympic*.
> Ex-Governor Frank O. Lowden, of Illinois, returning home from Europe on the *Olympic*—

I read an excerpt from a newspaper clipping of a few weeks ago, which was published on Mr. Lowden's return from Europe—

> Ex-Governor Frank O. Lowden, of Illinois, returning home from Europe on the *Olympic*, sent a wireless message to the St. Louis Globe-Democrat last night condemning the nomination of Nat Goldstein to be internal revenue collector of the St. Louis district, and declaring to be "absolutely false" the testimony which Goldstein gave before the Senate investigating committee in 1920 in connection with the $2,500 check given him by a Lowden agent while he was seeking to be elected a delegate to the Republican National Convention.
> The former governor and former presidential candidate says he was told at the time that Senator SPENCER of Missouri had Goldstein give his testimony before the committee.

Notwithstanding that repudiation by the man in whose interest the money was given and notwithstanding the opposition of the Senate, the President of the United States in his letter to Goldstein still holds him up as a pure man, and states that the attacks against him were undeserved. In view of that letter, I am wondering if the President wrote Ambassador George Harvey a letter commending his course. After Harvey had stated that "our boys in the late war were fighting because they were afraid not to fight" and because "they wanted to save their own skins," when the press of the country denounced that utterance and the Republicans and Progressives and Democrats alike condemned it, I am wondering, in view of this letter, if President Harding then wrote to Ambassador Harvey and said "The attacks upon you are of an undeserved character."

Here is the letter. It comes out from St. Louis. I do not know whether the President gave permission for Nat Goldstein to publish the letter or not. I presume that he did or it would not have been published; but it is carried in full by the Associated Press.

Here is what President Harding said to Nat Goldstein, following the action of the Senate in turning down his nomination:

> CRITICISM OF GOLDSTEIN UNJUST, SAYS PRESIDENT.
>
> ST. LOUIS, MO., June 12 (by the Associated Press).—President Harding has written Nat Goldstein that the criticism produced by the nomination of Goldstein for internal-revenue collector here, caused by Goldstein's acceptance of $2,500 of Lowden campaign funds, was of an "undeserving character."
> Goldstein to-day made public the letter, which was in reply to one he sent the President May 10 asking that his nomination be withdrawn as a result of the criticism.

Goldstein did not ask that his nomination be withdrawn until he knew that that nomination would be repudiated by the Senate and turned down.

The letter follows:

MY DEAR MR. GOLDSTEIN—

How affectionately does the President write—

MY DEAR MR. GOLDSTEIN: I have been intending for some days to make an acknowledgment of the very gracious and considerate letter which you addressed to me under date of May 10.

I suppose that was the letter that was handed to the President by the Senator from Missouri [Mr. SPENCER].

You very promptly—

Says the President—

recognized a difficult political situation, for which neither of us is responsible, and you took yourself out of it in a very prompt and considerate way.

Let me read that again:

You very promptly recognized a difficult political situation, for which neither of us is responsible.

If Goldstein was not responsible and President Harding was not responsible, who was responsible for that very "difficult political situation"? But, anyway, the President says to Goldstein:

You very promptly recognized a difficult political situation—

It took him a long time to recognize it, because the nomination was before the Senate for weeks—

for which neither of us is responsible, and you took yourself out of it in a very prompt and considerate way. I should like you to know of my understanding of your feelings and my appreciation of your thoughtfulness in helping to solve it—

That was one of the great and delicate problems that was pressing upon President Harding, and it took "promptness," it took considerate action, it took "thoughtfulness" upon the part of Nat Goldstein to help the President to solve it.

though you were fully conscious of the undeserving character of the attack which your nomination brought out.

Lowden says his testimony was false. Lowden repudiated Goldstein. The papers of St. Louis repudiated Goldstein. The Senate of the United States repudiated Goldstein; and yet the President does not repudiate him, but says that the attacks were of an "undeserving character."

What attacks that were made upon Goldstein were of an "undeserved character"? The only attacks that were made upon him were from the bare facts of the record as disclosed in the investigation. The only facts that the Senate had was line after line of testimony before that committee as given by Goldstein and by his friends of the Republican organization in Missouri. Goldstein did not deny taking the $2,500. Goldstein did not deny that it came out of the Lowden slush fund. Goldstein admitted that he placed it in the bank to his credit, and that he was checking on it the same as he was checking against his other funds; and the facts show that Goldstein got the $2,500 because he was a delegate to the Republican National Convention, and with the implied understanding that he was to work for Lowden's nomination. Then what does the President of the United States mean by saying that the attacks made upon Goldstein were of an "undeserving character"?

I am wondering if there is anyone else in the whole United States who believes in the purity of elections and the sanctity of the ballot box who has the same view that President Harding has, that the attacks made upon Goldstein were of an "undeserving character."

I can assure you—

Says the President in this letter—

that Senator SPENCER has said only the most pleasing things concerning you—

If the Senator from Missouri said to the President only the "most pleasing things" concerning Nat Goldstein, evidently the Senator from Missouri did not tell him everything that the record disclosed touching the $2,500 of slush fund that Nat Goldstein took in order to promote Lowden's candidacy for the Republican nomination for President; and I take that as an indictment by the President of the United States against my good friend the amiable Senator from Missouri, when he said—

I can assure you that Senator SPENCER has said only the most pleasing things concerning you, else I should not have so readily approved of your nomination.

And so in the last few words, while it seems that the President lauds Mr. Goldstein he excuses himself from the responsibility of naming Goldstein. He was named evidently upon the sole responsibility of the junior Senator from Missouri, because the junior Senator from Missouri spoke to the President only in "the most pleasing manner," telling him only the "pleasing" things about Nat Goldstein.

With very best regards, I am,
Very sincerely, WARREN G. HARDING.

Mr. SPENCER. Mr. President, I apologize to the Senate for even for a moment lending assistance to the very manifest and often repeated interferences of the Senator from Mississippi with the tariff bill which is now before the Senate for discussion. The purpose is too obvious, and the manner is manifest; and yet in a moment I do want to correct some of the many misstatements which my good friend from Mississippi has been inadvertently led into making.

The Senate never did repudiate the nomination of Mr. Goldstein.

Mr. HARRISON. Mr. President, will the Senator yield?

Mr. SPENCER. I did not interrupt the Senator from Mississippi. Perhaps he will let me finish my statement, because it will be but for a moment.

Mr. HARRISON. Very well; I will not interrupt the Senator.

Mr. SPENCER. The Senate never did repudiate the nomination of Mr. Goldstein. The Committee on Finance, to which the nomination was sent, never did adversely report that nomination. That nomination never was before the Senate for weeks of consideration, as the Senator from Mississippi has stated. The truth of the matter is, as the Senator from Mississippi knows if he will but turn his attention to it for a moment, that when that nomination was made—and I may say here that it was made upon my recommendation—I had known that man for 25 years. A more honest, clean, efficient public official and individual does not exist. I have no sympathy with those who stab in the dark, from the back, when the man who is attacked has no opportunity of answering the things that are said. It is a cowardly thing to do. On the hustings in the city of St. Louis the Senator from Mississippi would not dare to speak where the man whom he attacks has an equal right to respond to the things which were said.

Mr. HARRISON. Mr. President——

The VICE PRESIDENT. Does the Senator from Missouri yield to the Senator from Mississippi?

Mr. SPENCER. Here in the Senate, with the privileges of the floor, a man may say what he likes.

Mr. HARRISON. Mr. President——

The VICE PRESIDENT. Does the Senator yield?

Mr. HARRISON. I raise a point of order. I only want the Senator to be courteous.

Mr. SPENCER. I do not yield.

Mr. HARRISON. I raise a point of order.

The VICE PRESIDENT. The Senator will state his point of order.

Mr. HARRISON. I say that the Senator has violated the rules of the Senate.

The VICE PRESIDENT. In what respect?

Mr. HARRISON. I just want an explanation of whom he is referring to by "cowardly attacks." He can employ language in debate that might be interpreted as insulting to a Senator.

The VICE PRESIDENT. The Senator will state his point of order.

Mr. HARRISON. My point of order is that the Senator's language should be taken down and reported to the Senate. He may speak, of course, in generalities about "cowardly attacks," but not personally.

The VICE PRESIDENT. It has been taken down.

Mr. HARRISON. I want it to be read to the Senate to see whether or not I have the right to make a point of order. I do not know whether he was referring to me or not. I simply want to know that; that is all.

The VICE PRESIDENT. Does the Senator wish the language read?

Mr. HARRISON. Yes; I do.

Mr. SPENCER. Mr. President, if I may repeat, I first preface it by saying that an attack upon a man from a place to which the man who is attacked has no access, and in a manner so that the man has no opportunity to reply, is a cowardly attack.

Mr. HARRISON. All I want to know is, Does the Senator mean that I made a cowardly attack upon Goldstein?

Mr. SPENCER. I mean to say that the things which the Senator said—and he knows how I love him personally——

Mr. HARRISON. That may be true, but——

Mr. SPENCER. The things which the Senator has said about an absent man, in a forum where that man has not access and from which he can not speak, is a cowardly mode of attack.

Mr. HARRISON. Mr. President, I submit that the Senator has not any right to say that I have made a cowardly attack.

Mr. SPENCER. May I ask the Senator from Mississippi whether he thinks it is a brave way of attacking a man?

Mr. HARRISON. The Senator knows that I would not any more fear Nat Goldstein, or saying what I have said to his face, than I would the Senator himself, and the Senator must remember that when this nomination came in I made a motion

to have it considered in open session of the Senate. The Senator tried to cover it with darkness. He would have employed every cloak of secrecy. He wanted to shut the doors, so that what might be said would not reach the public.

Mr. SPENCER. Mr. President——

Mr. HARRISON. My whole action in this matter has been in the open, on the square, and the Senator knows it. I abhor the consideration of nominations for public office in secrecy. No nominee whose skirts are clean can fear it, and none but whose record is stained dread it.

Mr. SPENCER. I hope the Senator will not get away from the point we are now discussing. Does the Senator think it is a brave thing to attack a man on the floor of the Senate, where he has no opportunity to answer, under a privilege which does not extend to the individual attacked? It is not unusual on this floor——

Mr. HARRISON. The Senator is asking me a question——

Mr. SPENCER. But it is not a brave thing to do. It is a cowardly thing to do.

Mr. HARRISON. Of course, the Senator knows that accusations of "braver" and "cowardly" can be settled outside the Senate Chamber; but the Senator has asked me a question. When a nomination comes in, such as this, which stenches to high heaven—and the Senator has admitted recommending this nomination—the people will never know, unless it is discussed in the open, and they are informed of the manner of man being nominated. That is what I have attempted to do in the Goldstein matter. If the Senator had thought that he could possibly put over this nomination, he would to-day be fighting here for the confirmation of Nat Goldstein. It was only when he saw that there was no chance of his confirmation that he persuaded Nat Goldstein to write to the President and have the nomination withdrawn.

Mr. SPENCER. Mr. President, the statements just made by the Senator from Mississippi are as mistaken as his others. I long to hear some statement that bears the foundation of fact. I never yet thought, nor do I think now, such is my confidence in the fairness of the Senate, that if all the facts had been known there would ever have been any failure to confirm that nomination. More than that, I did not persuade or attempt to persuade the gentleman to withdraw his nomination. The fact of the matter was that when he was subjected to the public criticism, which was as unfounded as it was unjust, he took a stand precisely like that taken by the President in that manly, frank letter, of which I had not heard until the Senator just read it upon the floor of the Senate, and he said:

> My nomination seems to have produced a great deal of criticism from over the country. I would not be an embarrassing factor. I know how unjust and unfair the criticism is, but I ask that my nomination be withdrawn.

The withdrawal followed immediately when Mr. Goldstein was informed of the criticism his appointment had aroused, and before either the committee or the Senate had acted upon it.

It was infinitely a braver, more manly thing to do than, without foundation, to attack that man behind his back, with the privileges of the Senate floor protecting.

Mr. HARRISON. I have never asked any privileges of the Senate floor, and never will.

Mr. SPENCER. It was a manly thing to do. He sacrificed himself; and I want to say again to my good friend the Senator from Mississippi, as I take my seat, that from an acquaintance of 25 years, the man whom he delights to attack is as clean as a hound's tooth and as fair in battle as he is upright in life. Twice that man has been elected by the people of the city of St. Louis to the position which he now holds, viz, clerk of the circuit court of that city, with a record in office unequaled for efficiency, honesty, and courtesy. The Senator can attack him if he likes, and the Senator's words of attack, with the wings which carry evil report far more rapidly than the slower wings that carry good report, will reach 10,000 where what I say will reach only a hundred, but the fact remains that the Senator is unjustly and unfairly attacking a man who neither deserves it nor ought to receive it.

Mr. HARRISON. Of course, the Senator thinks the attacks are unjust, unfair, and undeserving, but others do not. May I ask the Senator, if he is through, whether Nat Goldstein was in the city of Washington on the day the letter was given to the President asking him to withdraw his nomination?

Mr. SPENCER. He was here on that day.

Mr. HARRISON. When was the letter written?

Mr. SPENCER. Is the Senator cross-examining me?

Mr. HARRISON. Oh, no; if the Senator does not want to be examined.

Mr. SPENCER. I see no occasion to be cross-examined on the floor of the Senate.

Mr. HARRISON. The Senator has stated that I have not been dealing with this matter in the open. He says Goldstein was here when I made an attack on him in the Senate that day.

Mr. SPENCER. When we are speaking of a Senator's cowardly attack on a man, why question as to whether he was or was not in the city of Washington on a given day? Let there be no quibble of words. Why depart from the issue? If the Senator wants any light I can give him upon the facts of the case, I will give it to him with pleasure. I am always glad to do anything I can for my distinguished friend from Mississippi.

Mr. HARRISON. I thank the Senator. My reason for asking whether Nat Goldstein was here on the 10th of May was that not only did I discuss the Nat Goldstein case on that day, the day on which the letter of withdrawal was handed to the President, but I discussed it on numerous occasions before that. I never attempted to do it behind closed doors.

If Mr. Goldstein has a personal matter with me, I am here in Washington all the time, and I assure the Senator no special privileges by me or the Senator have ever or will ever be invoked. The Senator knows I would not make a cowardly attack upon Nat Goldstein, the Senator, or anyone else, and I have only repeated from the record here the facts touching this whole matter.

The Senator seems to be offended this morning because I have read a letter from the President of the United States to Nat Goldstein. If these facts roil the Senator and cause him embarrassment as well as anxiety, or make him mad, I can not help it, but the Senator——

Mr. SPENCER. May I say to the Senator from Mississippi that I hope they do not make me mad; I know they do not cause me embarrassment. The feeling that surges in my heart is one of infinite regret, not for Mr. Goldstein, nor for the President of the United States for the manly letter which he has written, but for that in the character of the Senator from Mississippi—and he knows how I love him—which would lead him to read, as he has read, with the accent and manner and jeer of his presentation, the letter from the President of the United States in answer to a letter which was written him by a citizen of the United States. I dislike to see it in my colleague, the distinguished Senator from Mississippi; and he knows how I love him.

Mr. HARRISON. The Senator is very kind.

Mr. SPENCER. It affects my judgment of him. It makes me cringe when I hear him speak and act as he does, because he knows how I love him. [Laughter.]

Mr. HARRISON. Mr. President, I did not, however, think it would cause the Senator so much embarrassment. I think he is callous to embarrassment. If this incident of Nat Goldstein's appointment on the Senator's recommendation does not cause him political embarrassment, as well as heart hurt, in view of all the revelations, then I think he is beyond redemption. If the Senator thinks his friends are proud of his constancy and devotion to Nat Goldstein, and, in view of what has happened, persists in his defense, then they will feel the touch of humiliation, if not the Senator. I asked whether Nat Goldstein was here on the 10th of May, the day the letter was given to the President asking for the withdrawal of his nomination, because the sweet expressions of the letter of Nat Goldstein are so much the style and have to such a degree the sweet essence of the Senator from Missouri, that I feared very much Goldstein was not here. I am glad to know that Nat Goldstein was in the city on the 10th day of May, the day the letter was handed to the President, and the day on which the nomination was withdrawn from the Senate. I hope now that the Nat Goldstein nomination and withdrawal is a closed incident——

Mr. SPENCER. I am sure it is not.

Mr. HARRISON. The Senator feels that anything I have said involving the character of Goldstein has been undeserving. The President does, but the people of St. Louis do not, and I am sure the American people will not, but on the contrary indorse the action of the Senate in forcing the Senator to have the President withdraw the Nat Goldstein nomination.

Mr. SPENCER. Mr. President, I am sure the incident is not closed, unless an event should happen, which I hope will be postponed many years, and that is that the Lord in His wisdom should call the Senator from Mississippi home, for as long as the Senator from Mississippi lives and honors the Senate with his presence, as he does, I am perfectly sure that the incident, particularly if the tariff bill is up for discussion, will be repeated over and over again by the distinguished Senator who has just spoken.

Mr. HARRISON. And not very much to the delight of the Senator from Missouri.

THE TARIFF.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7456) to provide revenue, to regulate commerce with foreign countries, to encourage the industries of the United States, and for other purposes.

Mr. McCUMBER. Mr. President, if Nat Goldstein has been sufficiently discussed, I shall be pleased to have the Senate return to paragraph 384, providing for a rate on "new types."

The VICE PRESIDENT. The Secretary will state the next amendment.

The ASSISTANT SECRETARY. On page 87, line 8, the committee proposes to strike out "15" and insert "25," so that if amended it will read, "New types, 25 per cent."

Mr. KING. Mr. President, the item we are now considering is called "new types." It is not a new type in this bill. It is an old type, because it is an attempt to impose, as I conceive, a rate of taxation that is entirely too high and wholly unjustifiable.

The existing law imposes a duty of 15 per cent ad valorem. The House in its wisdom accepted the existing law, but for some reason the able members of the Finance Committee have recommmended an increase to 25 per cent. I shall ask that the Senate disagree with the recommendation of the committee and that the rate fixed by the House be agreed to in the Senate.

To show the lack of justification for this increase, and, indeed, for that matter, for any tariff at all, it is only necessary to invite attention briefly to the production of type, the uses to which it is put, and the obvious and certain fact that it is produced in such large abundance in the United States, and produced for export. This item will strike the smaller newspaper man, the country newspaper, and it will particularly be injurious to the foreign-language newspapers published in the United States.

There are some Senators and some other people who believe that we ought to forbid the publication of foreign-language newspapers in the United States. I wonder if this item is aimed at the destruction of the foreign-language press of the United States or designed to create further obstacles to the publication of foreign-language newspapers.

I believe that foreign-language newspapers serve a fairly useful purpose. I wish the day might come when all of the people within the United States would speak and read the English language. We have hundreds of thousands, if not millions, of people in the United States to-day who do not speak or read the English language. They have come from southern Europe and from other countries of the world. They want some mental pabulum. They must have some mental food, and we have in the United States a large number of foreign-language newspapers, a great many Yiddish, Polish, Slav, Spanish, and Italian newspapers, and various others. I do not think we ought to make the publication of those newspapers more difficult, particularly in the manner described in the bill.

As stated, I hope the day will come when all of our citizenship will be able to read and write the English language, but since we have now in the United States millions of people who may not, I think it would be a mistake to deny them the right to read in the language of their native countries the news and such matters of general interest as are published in the newspapers.

In 1914 there were 31 establishments engaged in the manufacture of these types. The types were slugs of metal containing on one end raised dies of letters, figures, or typographical signs. They are used for setting up type composition for printing or as a form from which a stereotype or electrotype impression is made. Of course, the great metropolitan newspapers have a higher grade of machinery, and since the development of the linotype machines they are not interested particularly in this paragraph. But the small newspapers, which use the special fonts, and particularly the foreign-language newspapers, are tremendously interested in the item now before us.

To show how little the importations were, I will state that they amounted in 1918 to 15,600 pounds, in 1919 to 17,657 pounds, in 1920 to 35,000 pounds, and in nine months of 1921 to 22,633 pounds. It can not be said that revenue is sought, because the revenue derived during the years just mentioned was $610 in 1918, $862 in 1919, and $1,604 in 1920. The cost of collecting it and of the overhead and incidental expense would almost absorb the entire amount that was collected.

As against the imports of from 15,000 to 22,000 pounds per annum, we find that we exported type amounting to 614,421 pounds in the year 1914; in 1918 we exported 256,000 pounds; in 1919, 626,000 pounds; in 1920, 646,000 pounds; and for the year 1921 we exported 514,024 pounds. The imports would be less than 1 per cent of the exports, and yet it is proposed now to penalize the country newspaper and the small newspaper by imposing a tariff of 25 per cent upon this product so important to them. For whose benefit is it?

As stated, we not only manufacture substantially all that is consumed in the United States, but we expect from 300,000 to 600,000 pounds per annum. Obviously, the purpose is to increase the price. For whose benefit? For the benefit of the 31 manufacturing plants, or, if not for their benefit, for the benefit of those who produce antimony and lead, which form the principal constituent parts of the product.

Is it because we put a duty upon lead and a duty upon antimony that the committee feel constrained to impose 25 per cent upon the finished product, which is so important to the country newspapers? Are we further to contribute to the lead interests and to the antimony interests or are we further to contribute to the prosperity and the advantages and profits of the 31 or more manufacturing plants engaged in the production of this article?

I submit that with the record which is before us there can be no justification for the imposition of this tariff rate. The Tariff Commission said in their survey:

> The domestic type-founding industry is firmly established and competent to fill the domestic demand. Extensive competition with the European article either here or abroad is prevented by the difference in type standards. The exports to the other American markets are due to the prevalence of American-made printing presses in those countries.

We are exporting, as I have said, hundreds of thousands of pounds per annum. We go into the markets of the world and compete with them. We supply substantially all of the domestic consumption, and yet, in the light of that, in the face of the fact that we have less than 1 per cent of foreign importations, it is proposed now to impose this tariff rate. If the committee can justify it, then it can justify anything, it seems to me.

As I have stated, I move to strike out the numeral "25" and insert in lieu thereof the numeral "15." I am ready for a vote.

Mr. McCUMBER. Mr. President, when the senior Senator from Mississippi [Mr. WILLIAMS] is absent from the Chamber, I must always look to the junior Senator from Utah [Mr. KING] as being the exponent of what constitutes real Democracy. But even in that case I find great difficulty at times in determining where to draw the line between that which is sacred to the Democratic mind and that which becomes profane literature in a tariff bill.

On this particular item I observe that the Democratic rate is 15 per cent ad valorem. The Republican rate is 25 per cent ad valorem. At what particular point do we leave the sacredness of the Democratic rate and enter into the realm where it at least excites the profanity of those upon the other side of the Chamber? Will a 5 per cent additional rate or a 1 per cent additional rate or a 10 per cent additional rate make all the difference in the world between whether it is fair or unfair, just or unjust? I do not know where to draw the line.

Mr. KING. Mr. President, will the Senator yield?

Mr. McCUMBER. Certainly.

Mr. KING. Does not the Senator know that in metaphysics, in philosophy, in morals, and in law it is sometimes difficult to draw the dividing line, but there is a dividing line where interest becomes usury and where it is not usury, where an act becomes a wrong and where it is justified by the public conscience. Of course, there are acts which are malum prohibitum and malum in se, where probably the view I am expressing is not quite accurate. It is difficult to see where daylight begins and darkness ends. It is hard to conceive where the tariff rate should end and where the free list should commence. Here, if I could have my way, I would put the article upon the free list.

Mr. McCUMBER. I think I understand the Senator, that 15 per cent is right in everything and 16 per cent is wrong in everything, and, of course, every per cent added but adds to the wrong. But I wish to correct the Senator from Utah on the basis of his argument. He says this is striking at the interests of the little country newspaper in the United States. I think I am correct in saying that not one line of English-language type is imported into the United States. There is a considerable quantity of Chinese characters and Japanese characters and other foreign-language type imported, but my understanding is that that is all that is imported into the United States.

I agree with the Senator from Utah that it is not an important matter. The amount of the importations is low. The tariff duty collected under the Underwood law is small; but if the Senator will look over the importations he will find that, with a 25 per cent ad valorem duty upon this foreign type, we

received in quantity just about as much as we did under the 15 per cent ad valorem duty. It is my opinion that when we return again to the 25 per cent ad valorem duty the result will be practically the same. But it is not a matter of importance. If I knew exactly where to draw a line that would satisfy everyone in the Senate, I think I would be inclined to recommend it, but I believe we will get a little more revenue out of a 25 per cent ad valorem duty than we could out of a 15 per cent ad valorem duty.

Mr. KING. Mr. President, the Senator proceeds upon the theory that a tariff is of no benefit, or rather that it is innocuous, in so far as it would affect the domestic price. Of course, the Senator does not take that position. Everybody admits that the tariff is imposed for the purpose of raising prices or permitting the domestic producer to raise prices up to the limit which the tariff wall permits.

Mr. McCUMBER. If the Senator will allow me, in this instance I do not think it is anything but a tariff for revenue only, and it will not affect the price at all of the ordinary type used in this country, but may have some slight effect upon the foreign type. Remember, we are manufacturing German type and Slavic type and every other kind of type in this country in immense quantities, and I doubt if the little importations would affect even that price. I think a closer scrutiny will satisfy the Senator that most of this type comes from countries having a type so very different from that ordinarily used in this country that it will not in any way affect the price of the type made here.

Mr. KING. Mr. President, the imports of type consist, as I have indicated, of a very few thousand pounds annually, and consist mainly of special fonts for foreign-language publications. They are derived principally from Germany and from some of the Slavic countries of Europe and from China and Japan. But the 25 per cent rate fixed by the bill is not limited to foreign-language type. It applies to all type—to English-language type. It is clear that the imposition of the tariff rate of 25 per cent ad valorem will permit the domestic manufacturer, if he wishes to do so, to raise the price not only of foreign-language type but of English-language type to the limit which the 25 per cent tariff would permit him to reach.

Why, of course, the child upon the street knows that the tariff is a tax. Everybody knows that the tariff is imposed for the purpose of permitting the domestic producer to increase the price of his products. Of course, in this instance we produce type perhaps more cheaply than almost any other country in the world, or we can do so; but because we do or may or can is no guarantee that we will, and that producers will not take advantage of the tariff and raise their prices if there is no competition from abroad.

The imports are less than 1 per cent per annum of the domestic production, but suppose there should be foreign competition because of the high prices of type in the United States. The prices in 1921 were 68 cents per pound as against approximately 19 cents per pound in pre-war times. Suppose the domestic manufacturer should continue those high prices, and foreign manufacturers of type should see that they could come into the United States and engage in competition and find a market for some of their products under the 15 per cent tariff, it is clear that the American producer, if he had a 25 per cent tariff, would undoubtedly take advantage of it and raise the domestic price to the limit to which the 25 per cent rate or tax permitted him to raise it. In other words, the tariff is a dike, and the water of the domestic producer is lifted in the reservoir to the top of the dike. The domestic producer raises his prices ordinarily to the point where he can do so under the dike or dam which the tariff exactions erect.

I agree with the Senator that many of these little items contained in the bill are not very important. A pair of shoes is not very important to a rich man, although a pair of shoes may be very important to a poor man; but taxes on thousands and tens of thousands of unimportant items, if each tax increases the price, in the end make the aggregate burden beyond computation and make it oppressive to bear.

The trouble with this tariff bill is that it reaches almost every article that enters into the lives of the people; it is a tariff bill that covers the entire people and all of their products; which rests upon the rich and the poor, upon the high and the low, upon the farmer, and upon all other classes of people; and yet many of the schedules are so drawn that the rates lie more heavily upon the poor than upon the rich, and the burdens will be felt by the masses rather than by the rich people of the United States.

The Senator from North Dakota very properly comments upon the difficulty in determining just where the rates should be raised and where the increase in the rates should be stopped. There is a practical difficulty there; I concede it very readily, Mr. President. I agree with the Senator in his rather ironical inference that there is some point where the tariff becomes a vice and ceases to be a virtue. Wherever a tariff rate becomes so oppressive as to make for the advancement of any special interest unquestionably it becomes a vice. If tariff duties are imposed for revenue purposes, it can not be said that they are a vice. They constitute a legitimate method of obtaining revenue, but it seems to me that the dullest student of political economy can appreciate the fact that there is a point at which the tariff rates ought to stop. Up to that point they may be justified, they may be legitimate, but beyond that point they are illegitimate and it becomes a moral wrong as well as an economic fallacy to impose such rates. I think in this instance there ought to be no tariff. When we are importing less than 1 per cent of the domestic production, and the revenue to be derived is merely three or four hundred or a thousand dollars a year, it seems to me that it is folly to levy a tariff for revenue purposes. If the tax is not laid for revenue purposes, then it is clear that it is laid for the purpose of permitting the domestic manufacturer to have an absolute monopoly in the market. Therefore I say it is indefensible.

Personally, I should move to put the commodity on the free list; but, in view of the fact that it has borne or bears now a rate of 15 per cent, I shall ask that the Senate disagree to the committee amendment. There is no reason suggested why the Senate should increase the rate over the amount fixed by the House. The House was satisfied with 15 per cent ad valorem, accepting the rate found in the Underwood law, but the Senate committee, without any reason, I submit, has recommended almost double the House rate. I am ready for a vote.

The PRESIDING OFFICER (Mr. PEPPER in the chair). The question is on the committee amendment.

The amendment was agreed to.

The READING CLERK. The next committee amendment is on page 87, line 9.

Mr. McCUMBER. I ask that the Senate next consider paragraph 393, on page 91.

The PRESIDING OFFICER. The Secretary will state the amendment of the Committee on Finance in paragraph 393.

The READING CLERK. On page 91, line 5, before the words "per cent," the committee propose to strike out the figures "45" and to insert "60," so as to read:

PAR. 393. Articles or wares not specially provided for, if composed wholly or in chief value of platinum, gold, or silver, and articles or wares plated with platinum, gold, or silver, or colored with gold lacquer, whether partly or wholly manufactured, 60 per cent ad valorem.

Mr. KING. Mr. President, I wish to inquire of the Senator from North Dakota as to the propriety of considering the omnibus clause, the basket clause, of this subject in advance of considering the other paragraphs which fix specific or ad valorem rates.

Mr. McCUMBER. I think we have covered about all of those, except some few which have been passed over at the special request of Senators.

Mr. KING. I beg the Senator's pardon. I understood that paragraphs 390, 391, and 392 had not been disposed of.

Mr. McCUMBER. That is true; but those contain certain specifications and I do not think they in any way affect the basket clause. The first part of paragraph 393, as the Senator will observe, refers to—

Articles or wares not specially provided for, if composed wholly or in chief value of platinum, gold, or silver, and articles or wares plated with platinum, gold, or silver, or colored with gold lacquer, whether partly or wholly manufactured.

In this case we have followed the usual rate of duty which has been placed upon luxuries or wares of gold or silver, which is 60 per cent ad valorem upon the foreign value. It is an increase of only 10 per cent compared with the present law.

Mr. KING. Did the Senator by recommending an increase over the House bill have in mind only the difference between the foreign and the American valuation?

Mr. McCUMBER. No; I can not say that that alone was controlling at all, but all these articles are considered as luxuries, and it has always been thought that they are legitimate sources of revenue and that we should derive from them the most revenue possible.

Mr. KING. I should like to ask the Senator, in view of the fact that nearly all the gold in the world—that is putting it rather too strong, perhaps, but we do have by far the greater part of the metallic gold used for monetary purposes——

Mr. McCUMBER. About two-thirds of it, I think.

Mr. KING. A little more than two-thirds now, and $34,000,000 came in yesterday. We are draining the nations of Europe and of other continents because of their necessities, and, of course, as we drain them we disturb their fiscal systems. They

can not maintain a sound fiscal policy unless they have gold reserves under the gold standard which obtains in the world. So we are contributing by this draining process to the demoralization of the fiscal systems of the nations of the world. Of course, Russia never can have a fiscal system when she has no gold; and the gold of Russia will soon be exhausted. That, however, is not important to discuss now. The question I was going to ask the Senator is, Does he feel, in the light of the great plethora of gold in the United States and the limited quantity in Europe or in other countries which possibly may produce or do produce the articles embraced in paragraph 393, that there is very much danger of any serious competition from those countries? I am willing upon these articles to obtain a very handsome revenue; I think some of them are objects that could legitimately be taxed for revenue purposes.

Mr. McCUMBER. Gold is one thing in the world that has a stable value; it costs just as much in the United States as it costs abroad. It can be purchased for the same price abroad as it can be purchased in the United States. Therefore, considering the raw material, the cost is exactly the same; but when we come to jewelry and articles of similar character, and gold and silver plated ware, the item of labor is more important than anything else. The artisan in this country is being paid from 5 to 10 times what the artisan is being paid on the other side of the water. Therefore, as the raw material can be purchased at the same price and it is a question of labor only, I am inclined to think that in the future there will be more danger of heavy imports of these articles than ever before, because the foreign manufacturers are selling not gold, but they are selling labor that costs $1 as compared to labor that costs 10 times that in the United States, and therefore are selling their commodities at ten hundred per cent profit.

Mr. KING. Mr. President, this paragraph is rather important, and, unless it is studied very carefully and with many documents before the student and investigator, it will be impossible to determine just how all-comprehensive it is. What is meant by articles that contain "silver" or "wares plated with platinum, gold, or silver, or colored with gold lacquer, whether partly or wholly manufactured"? What class of articles are embraced within that category?

Then in the next three or four lines we find articles "composed wholly or in chief value of iron, steel, lead, copper, brass, nickel, pewter, zinc, aluminum, or other metal, but not plated with platinum, gold, or silver, or colored with gold lacquer, whether partly or wholly manufactured," upon which a duty of 40 per cent is proposed to be levied.

I fancy that a stove would be composed wholly or in chief value of iron or steel. Many of the household commodities, many of the articles with which we daily come in contact in our lives, are composed wholly or in chief value of iron or steel or lead or copper or brass or nickel or pewter or zinc or aluminum. The Senator knows that there is an enormous production of aluminum products in the United States to-day. Aluminum enters into kitchen ware, it enters into the construction of automobiles, and its use is becoming greater and more pervasive in the industrial world every day. Does the Senator intend by this paragraph to embrace stoves and the multitude of articles that are composed in part of steel or brass or any of these metals?

Mr. McCUMBER. Mr. President, the Senator knows the purpose of a basket clause. We take out about everything that we can think of in the matter of manufactured articles that have designated names and we give them a duty, either specific or ad valorem; but as there might be others that would be of equal value that might escape if not specifically mentioned, we therefore include them in what we call a basket clause. All of these other matters that the Senator is speaking of are specifically mentioned, and of course would not fall under the basket clause.

Mr. KING. Are stoves and ranges specifically mentioned in some of the paragraphs?

Mr. McCUMBER. Oh, yes; all of these manufactured products. I do not know that anybody is manufacturing aluminum stoves at present.

Mr. KING. No, no; but the Tariff Summary states under paragraph 393 that it refers to stoves, ranges, gas and oil stoves, steel springs, cars, and carriages——

Mr. McCUMBER. Those are not made of precious metals.

Mr. KING. No, no; but if the Senator will answer my question I shall be very much obliged. Does the Senator mean that these articles which the Tariff Summary classifies as coming under this paragraph have been dealt with specifically in other paragraphs of the bill?

Mr. McCUMBER. Almost all have been covered specifically in other portions of the bill. I can not pick them out and enumerate them at the present time, but the basket clause is only to cover those that we have not specifically mentioned. The only difference between this paragraph and the present law, so far as the wording is concerned, is that there have been added after "gold or silver" the words "or colored with gold lacquer." The House committee thought those words should be inserted in this paragraph. In other respects, as I now recall, there is no difference whatever between this language and the present law, and the present law has been construed, and I have not heard of stoves or any of those articles being imported under it.

Mr. KING. The Senator knows that the present law might have taken stoves, oil stoves, and some of these steel products that I have read out of the omnibus or basket clause and put them in some other clause and given them a different rate, and the committee in drafting this bill may have eliminated the items that I have just referred to from those specific clauses and intended to embrace them within this basket clause.

Mr. McCUMBER. If the Senator speaks of stoves as such, ordinary iron stoves, I will say that they would come under this clause, because they are not mentioned elsewhere.

Mr. KING. That was what I understood.

Mr. McCUMBER. But there have been no importations whatever of stoves, and undoubtedly there will be none.

Mr. KING. I know that, and that is exactly the reason why I am challenging attention to the matter. There are items that the Senator now proposes to tax at 40 per cent, stoves and oil stoves and steel springs and a multitude of products used by the great mass of the poor people of the United States, of which the domestic manufacturer has had a monopoly, because we could produce them cheaper than almost any other country in the world; and yet, if we now fix this high tax of 40 per cent ad valorem, it puts it in the power of the domestic manufacturer to charge the poor people of the United States and those who buy stoves and springs and the steel products to which I referred a higher price than should be charged.

Mr. McCUMBER. Inasmuch as no stoves are being imported under the present law, and inasmuch, therefore, as the manufacturers might have raised their prices under the present law, and taking into consideration the fact that there are a great many manufacturers of stoves, I do not think the Senator can believe that this duty will affect in any way the price of stoves. I do not think they will come in.

Mr. KING. If none are coming in, if we may trust the domestic producers not to charge too much, and if we get no revenue, let me suggest in all good faith to my learned friend that we put these stoves on the free list.

Mr. McCUMBER. We are not on the free list now. If the Senator thinks they ought to be place upon the free list, when we come to the free-list section we can consider the matter. This is a mere basket clause. We can specify any particular article that we desire to put elsewhere in the bill, and, of course, it will not then fall under this particular clause. I really do not think myself that stoves should be upon the free list, but I do not think it would make much difference whether we had a 10 per cent duty or a 50 per cent duty; none would come in.

Mr. KING. Passing now from these steel and iron products which are so commonly used by the people, let me direct the Senator's attention to the aluminum products that are covered by this basket clause.

Mr. McCUMBER. The Senator will bear in mind what I stated a moment ago, that practically all aluminum manufactured articles that we could think of are taken care of by the specific provisions. It may be possible that some new thing could be manufactured in aluminum that we have not heard of before that would fall under this clause. If we have left out any, I think it was through error, not through intention; but we have not fixed the aluminum duties as yet, and therefore I do not want to discuss aluminum rates at this time. We have not passed upon that matter yet.

Mr. KING. I shall not invite the Senator's attention to it, then.

Mr. SMOOT. Mr. President, I will say to the Senator, though, that if they fell under this basket clause there would be a lower rate upon them than there would be in the paragraphs where they are provided for as the bill was reported to the Senate.

Mr. KING. That might be true as to aluminum. I am not so sure as to some of the steel products.

Mr. SMOOT. I thought the Senator had reference only to aluminum.

Mr. KING. In this last observation, yes; but I have been discussing the stoves and iron and steel products, which in some of the specific paragraphs perhaps bear in some instances

a higher and in some instances a lower rate than the basket rate.

Mr. McCUMBER. Let me say to the Senator that if he will look in paragraphs 339 and 374 and find any aluminum product that is not included within those two paragraphs and will call our attention to it, we will give it specific consideration.

Mr. KING. Mr. President, I have no doubt that the able chairman of the committee intended, and perhaps he had good reasons, to cover in the specific paragraphs of the bill all of the aluminum products; and of course there is the utmost propriety, and I find no fault with that, in attaching to a bill an omnibus clause, a basket clause, for fear that some items may escape taxation under the specific provisions of the bill.

Mr. McCUMBER. Escape revenue.

Mr. KING. Escape taxation. There is a little difference in the terminology and perhaps some difference in the meaning ascribed to the process by the Senator from North Dakota and that ascribed to it by myself; but, Mr. President, I feel that the rates fixed for aluminum products in the other paragraphs to which the Senator from North Dakota has called my attention are entirely too high in view of the fact that we have an aluminum trust in the United States; but I shall not digress for the purpose of discussing the Aluminum Trust and its great production now. When we come to a discussion of the aluminum product we will take that up. I shall pretermit any elaborate discussion now of the products embraced in paragraph 393, but I want to say that when we discuss the paragraphs dealing with aluminum and its products and stoves and other articles that might come under paragraph 393 I may revert to this paragraph again and offer further amendments, or move to reconsider. I shall content myself now with merely asking that we disagree to the committee amendment found in line 5, page 91, wherein the committee recommends striking out the numerals "45" and inserting in lieu thereof the numerals "60."

Mr. SMOOT. Mr. President, just a word. I wish to say that the existing law on those particular items is 50 per cent, and the committee proposes a rate of 60 per cent on them. I do not think it is necessary for me to repeat what the Senator from North Dakota has already stated, as I understand.

Mr. KING. Yes; he discussed that matter.

Mr. SMOOT. I simply want to add to what has already been said that the Tariff Commission goes through the tariff acts, and wherever an article has been invented and placed upon the market and the production of that article is of a quantity sufficient to justify a specific mention of it in a tariff bill, it is put specifically in the next tariff bill that is passed after the arrival of that time, if there is any likelihood of importations.

I will say frankly to my colleague that there are items included in this bill of which we export many, many times more than we import; but that happens in nearly every schedule, and this schedule is no different from the others, with the exception that the production of the goods falling in these brackets is larger than perhaps in the case of any other bracket that there is in the whole bill—even larger than the agricultural implements, and that, I think, is the next basket clause. The rest of the basket clauses, as far as the amount of dollars and cents is concerned, is very limited, indeed.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The next amendment of the committee will be stated.

The READING CLERK. The next amendment is, on line 9, where it is proposed to strike out "35" and insert "40," so as to read:

if composed wholly or in chief value of iron, steel, lead, copper, brass, nickel, pewter, zinc, aluminum, or other metal, but not plated with platinum, gold, or silver, or colored with gold lacquer, whether partly or wholly manufactured, 40 per cent ad valorem.

Mr. KING. Mr. President, I move to amend the committee amendment by striking out the numerals "40" and inserting in lieu thereof the numerals "25."

Mr. President, of course, it is almost impossible to discuss this amendment and this part of the paragraph in a comprehensive or in an intelligent way unless you have before you the preceding schedules which deal with the multitude, perhaps thousands, of items, articles, commodities that are composed in part of iron, or steel, or lead, or copper, or brass, or nickel, or pewter, or zinc, or aluminum, or other metal.

Of course, as my colleague has said, this is the basket clause. An attempt has been made to deal in other clauses and paragraphs of the bill with substantially all of the products composed of these metals if the products are of any particular importance. However, my colleague will bear me out when I say that it has been discovered over and over and again that the basket clauses cover items the consumption of which in the United States amounts to millions and millions of dollars, and because items may be transferred to or included in the basket clause does not argue that those items are unimportant either in value or in quantity. Indeed, the basket clauses oftentimes cover some of the most important commodities and products that are consumed by the people. It is impossible, I repeat, to state just what items composed in part of iron, steel, lead, copper, or these other metals are embraced within this basket clause. It is obvious to any person who stops to think for a moment that unless the other clauses are very comprehensive, then there are transferred to this omnibus paragraph not hundreds but thousands of articles, and I have no doubt that if a catalogue of the commodities which are composed in part of the metals which I have just stated were prepared, and reference then was made to the preceding or to the following paragraphs of the bill dealing with those commodities, it would be found that there are hundreds, if not thousands, of commodities which must be found within this basket clause and covered by the rates found herein. So that this basket clause becomes an important part of the bill, and it ought to receive the utmost consideration.

I can easily conceive that some of the products which are found within this basket clause might easily bear a rate of duty of 35 or 40 per cent ad valorem, first because of the revenue, and, secondly, if you believe in protection, because they may relate possibly to some commodities being produced under very strong competitive conditions, and, indeed, may be produced by a new industry. But to say that all of the thousands of items that may come within this basket clause should bear a high rate of duty is inconceivable. When we know of the products of aluminum, of steel, of iron; when we think of stoves and all of the cast-iron products, wrought-iron products, and steel products which form such an indispensable part of the lives, of the economy, of the industry, of the work of the great mass of the people, then it becomes important for us to determine whether we shall impose burdensome taxes upon them, and I am not willing to vote for a tax of 40 per cent upon this great multitude of items which inevitably must find lodgment under the provisions of this omnibus section.

Therefore, Mr. President, without further analyzing the matter, and having given notice that upon further examination of the special schedules dealing with cognate articles I might recur to it and move to further amend, I ask for a vote.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Utah [Mr. KING] to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now recurs on the committee amendment.

The amendment was agreed to.

Mr. SMOOT. I ask that we now take up Schedule 4, wood and manufactures of wood.

Mr. KING. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The Secretary will call the roll.

The reading clerk called the roll, and the following Senators answered to their names:

Ball	Glass	McLean	Sheppard
Bursum	Hale	McNary	Shortridge
Calder	Harris	Nelson	Simmons
Cameron	Harrison	Newberry	Smoot
Capper	Heflin	Nicholson	Spencer
Culberson	Jones, N. Mex.	Norris	Sterling
Cummins	Jones, Wash.	Oddie	Sutherland
Curtis	Kendrick	Overman	Swanson
Dial	King	Owen	Townsend
Dillingham	Ladd	Pepper	Underwood
Edge	La Follette	Phipps	Wadsworth
Elkins	Lenroot	Poindexter	Warren
Ernst	McCormick	Pomerene	Williams
Fernald	McCumber	Ransdell	Willis
Frelinghuysen	McKinley	Rawson	

The PRESIDENT pro tempore. Fifty-nine Senators having answered to their names, a quorum of the Senate is present. The Secretary will state the next amendment.

The next amendment was, under "Schedule 4, Wood and Manufactures of," on page 91, after line 15, to strike out:

PAR. 401. Timber, hewn, sided or squared otherwise than by sawing (not less than 8 inches square) and round timber used for spars or in building wharves, one-half of 1 cent per cubic foot.

Mr. SIMMONS. That is stricken out?

Mr. SMOOT. The committee strikes out paragraph 401, and carries it to paragraph 1683, on the free list.

Mr. SIMMONS. Is any countervailing duty proposed?

Mr. SMOOT. No; not in connection with this item.

Mr. UNDERWOOD. Mr. President, I want to say just a word in reference to the pending amendment. The bill as it came from the House to the Senate provided a tax on timber,

hewn, sided, or squared, of 1 cent per cubic foot. Under the existing law timber of this kind is on the free list. I congratulate the committee on the fact that they have returned this item to the free list, where it belongs. There is no injury done to the industry with timber of this kind on the free list, and I hope that when the bill goes to conference, the Senate conferees will be firm in maintaining their position that timber and shingles, the latter in another portion of this schedule being also taken off the tariff list and put on the free list, in conformity with existing law, shall remain on the free list.

In the debate heretofore the fact has been referred to that the Finance Committee has not taxed these necessities of home building, and that they have put this heavy class of timber and shingles on the free list, which is entirely satisfactory to me. The only thing I want to be assured of is that when the bill goes to conference the Senate conferees will not yield and bring in a conference report we can not change, in which we will find that they have yielded to the House and placed these articles on the tax list.

Of course, there can be no objection that I can see to agreeing to the committee amendment, as it is certainly a move in the right direction.

Mr. SMOOT. All I can say to the Senator from Alabama is that I do not think there is any intention on the part of any member of the committee who may happen to be on the conference committee of yielding on this item.

Mr. POMERENE. Mr. President, I wish to say just a word in confirmation of what has been said on the subject by the Senator from Alabama. One of the troubles in our section of the country is to get lumber for house building. That includes all kinds of lumber. It has been truly amazing that anyone would think of adopting a policy in this country which would encourage the destruction of our own forests when there is such a vast quantity of building lumber to be had in the great forests of Canada and elsewhere. I know that the placing on the free list of this kind of lumber, with shingles, weatherboarding, and all kinds of lumber used in the building of houses and barns, would be a great boon, not only to the farming community, but to the laboring element as well. I do indulge the hope that these items will not be restored to the dutiable list.

The PRESIDING OFFICER (Mr. LADD in the chair). The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, on page 91, at the beginning of line 22, before the word "logs," to strike out "class of"; at the beginning of line 25, before the word "no," to strike out "has," and insert "has"; on page 92, line 1, after the word "United," to strike out "States," and insert "States,"; and in line 5, after the word "such," to strike out "class of"; so as to make the paragraph read:

PAR. 402. Logs of fir, spruce, cedar, or western hemlock, $1 per thousand feet board measure: *Provided*, That any such logs cut from any particular class of lands shall be exempt from such duty if imported from any country, dependency, province, or other subdivision of government which has at no time during the 12 months immediately preceding their importation into the United States maintained any embargo, prohibition, or other restriction (whether by law, order, regulation, contractual relation or otherwise, directly or indirectly) upon the exportation of such logs from such country, dependency, province, or other subdivision of government, if cut from such class of lands.

The amendment was agreed to.

Mr. UNDERWOOD. Mr. President, the amendment of the committee made in the paragraph just agreed to does not in any way change the rate. It merely makes a change in the wording of the section. The rate is the material thing in which we are involved, and, of course, under the rule under which we are now proceeding we can not move to change the rate in the paragraph. When the proper time comes and opportunity is given, a motion will be made to rectify the rate, but in passing I merely wish to say——

Mr. SMOOT. I wish to say in this connection that if Canada takes off her duty these items will automatically go to the free list, but the Senator, of course, desires that they shall go to the free list now.

Mr. UNDERWOOD. I want them to go back where the existing law has them. We discussed the question of these provisions against Canada some time ago. I shall not take the time of the Senate to reargue that question, because Canada has clearly indicated her desire for a reciprocal tariff arrangement, which has been denied by our Government at the present time. Of course, putting in the provision with reference to logs without going into a general reciprocal arrangement means nothing. It means that the tax will continue on logs probably during the life of the tariff law.

We have talked a good deal during the discussion of the bill about a compensatory duty, about the necessity, for instance, of taxing ferromanganese because we tax manganese ore. There may be some reason in the proposition, but here we find the committee putting timber, hewn, sided, or squared, on the free list, to which I do not object, and at the same time taxing $1 per thousand feet logs out of which hewn or sided timber is made.

Under the existing law logs of this kind are on the free list. Even under the act of 1909, known as the Payne-Aldrich law, logs were on the free list. The production of this class of logs in the United States has been very great. The importation has been very small. In addition to that there has been some exporting of logs of this kind into foreign countries. In 1920 the exports amounted to $454,000. So there is really no danger of seriously injuring the logging business by allowing logs to come in free. It is only a question of profit or holding down excessive profits in some neighborhoods.

If the committee thinks it is perfectly safe and wise to put timber, hewn, sided, or squared, on the free list and to put a tax of $1 a thousand on logs, of course, it is for the Senate to determine. As I said in the beginning, we can not make a motion to put this item on the free list until after the committee amendments are disposed of. I merely want to make this statement in passing to show that the question has not been overlooked.

Mr. SMOOT. All I wish to say is that if Canada wants the logs from Canada to come into the United States, all she has to do is to allow the same articles to go free into Canada, and then they will come in free.

Mr. UNDERWOOD. Of course, we discussed that proposition the other day. I realize that if Canada wants her logs to come in here free she can put logs of ours on the free list. I am not concerned and I do not think the Senate is concerned about what Canada wants. What the American people want is cheaper material out of which to build their homes. The people who want lumber, the people who live in the great States along the northern border, such as Minnesota and Iowa and the Dakotas, who have not much lumber of their own and are desirous of having reasonable priced timber for building their homes, are not concerned with what Canada wants. They are concerned with what they themselves want. If the committee thinks it is all right to put squared timber made out of logs on the free list, I can not see any reason whatever why they should tax the shipment of logs into the United States. I do not think, so far as the American people are concerned, that the attitude of Canada in the matter concerns them at all.

The next amendment was, on page 92, line 8, after the word "wood," to strike out the comma after the word "ivy," so as to make the paragraph read:

PAR. 403. Brier root or brier wood, ivy or laurel root, and similar wood unmanufactured, or not further advanced than cut into blocks suitable for the articles into which they are intended to be converted, 10 per cent ad valorem.

The amendment was agreed to.

The next amendment was, on page 92, after line 11, to strike out:

PAR. 404. Cedar commercially known as Spanish cedar, lignum-vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, Japanese white oak, and Japanese maple, in the log, 10 per cent ad valorem; in the form of sawed boards, planks, deals, and all other forms not further manufactured than sawed, 15 per cent ad valorem; veneers of wood and wood unmanufactured, not specially provided for, 20 per cent ad valorem.

And in lieu thereof to insert:

PAR. 404. Sawed boards, planks, deals, and all forms of sawed cedar, commercially known as Spanish cedar, lignum-vitæ, lancewood, ebony, box, granadilla, mahogany, rosewood, satinwood, Japanese white oak, Japanese maple, and all other cabinet woods not further manufactured than sawed, 15 per cent ad valorem; veneers of wood, and wood unmanufactured, not specially provided for, 20 per cent ad valorem.

Mr. UNDERWOOD. I inquire of the chairman of the committee if this is an increase over the present rate?

Mr. McCUMBER. I understand that it is an increase.

Mr. SMOOT. As I remember, it is a 5 per cent increase.

Mr. McCUMBER. In veneers it is proposed to make the rate 15 per cent, and it is 10 per cent under the present law.

Mr. UNDERWOOD. This is one of the items which the committee have reported which to a certain extent may be classed as luxuries, and although the increased rate will increase the tax on the American people, I do not think it will make a prohibitive rate, and it may increase the revenue somewhat. So I am not disposed to resist this particular amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The next amendment was, on page 93, line 7, after the words "wagon blocks," to strike out "car" and insert "oar," so as to make the paragraph read:

PAR. 406. Hubs for wheels, posts, heading bolts, stave bolts, last blocks, wagon blocks, oar blocks, heading blocks, and all like blocks or sticks, roughhewn, sawed, or bored, 10 per cent ad valorem.

The amendment was agreed to.

The next amendment was, on page 93, after line 11, to strike out:

PAR. 408. Shingles, 50 cents per thousand.

Mr. McCUMBER. I ask that this paragraph may go over on account of the absence of the Senator from Minnesota [Mr. KELLOGG], who desires to be present when it is considered.

Mr. UNDERWOOD. May I ask if the desire is to return shingles to the tax list?

Mr. McCUMBER. The desire of the committee is to leave them as they are and the Senator from Minnesota desires to leave them as they are, on the free list, but there are Senators who desire to put a duty of 50 cents per thousand on them. As the paragraph may later come up in the Senate for separate consideration, I have agreed with those Senators to let the paragraph be passed over until the return of the Senator from Minnesota.

Mr. UNDERWOOD. I do not object at all to the paragraph being passed over, because shingles are a necessity in home building. I am very anxious that they should be kept on the free list as they are under the present law. I do not intend to ask for a roll call now, but if we are going to have a fight over it we might as well settle it and the record vote may make the committee stronger when they go to conference in maintaining shingles on the free list, because I fear they may have some combat, and I do not see any reason why the committee should yield in conference on these two items in the bill. I have no objection to the proposal of the Senator that the paragraph go over.

The PRESIDING OFFICER. Paragraph 408 will be passed over.

The next amendment was, in paragraph 410, page 93, line 18, after the word "limes," to strike out "grape fruit" and insert "grapefruit"; and, in line 19, before the words "per cent," to strike out "20" and insert "25," so as to read:

PAR. 410. Boxes, barrels, and other articles containing oranges, lemons, limes, grapefruit, shaddocks or pomelos, 25 per cent ad valorem.

Mr. ASHURST. Mr. President, the Senate is now considering paragraph 410, which proposes an increase in the duty on boxes containing oranges, lemons, and grapefruit. I do not perceive from the very short examination which I have made any sufficient reason why the tariff should be increased on the boxes in which grapefruit, oranges, and lemons are shipped.

The orange and lemon industry, it seems to me, ought not to be burdened with an additional tariff upon the boxes in which the shipments to the consumer are made. In one part of our country the orange and citrus fruit industry has sustained a severe loss by frost and otherwise, and I see no reason why the duty should be increased. I should like to ask the Senator in charge of the item briefly—I do not want to engage his time but for a moment—to explain the proposed increased rate. I do not understand the reason for it.

Mr. SMOOT. I will say to the Senator from Arizona that, taking into consideration the rate of duty that is now placed upon citrus fruits, a little increase of 10 per cent on the boxes over existing law amounts to so small a sum that it would never be felt upon a box of oranges or a box of grapefruit or a box of lemons. I have not heard any one of the producers of citrus fruit complain of this rate at all. It is only a 25 per cent rate, I will say to the Senator from Arizona.

Mr. ASHURST. The present law imposes a 15 per cent ad valorem duty?

Mr. SMOOT. The present law imposes a 15 per cent duty and the House provided a duty of 20 per cent on the American valuation. The Senate Committee on Finance decided to place the duty at 25 per cent ad valorem on the foreign valuation.

Mr. ASHURST. I do not want to take up time merely for the purpose of delaying the bill, but I do not believe that the committee amendment, which involves a total increase of 10 per cent ad valorem, should be adopted. It seems to me that if it is necessary to increase the rate the committee ought to be content with an increase of 5 per cent. I ask for a yea-and-nay vote on the amendment, as I desire to be recorded against the increase.

Mr. SMOOT. Very well; let us have the yeas and nays.

Mr. UNDERWOOD. Mr. President, I desire to say a few words before the vote is taken.

Mr. POMERENE. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Ohio.

Mr. POMERENE. Mr. President, I shall vote against any increase in this item. I know of the great appeal that has been made on behalf of the citrus fruit industry in southern California, but there are some other interests that ought to be cared for to some extent. I want to call the attention of the Senate very briefly to the situation as I know it.

After the Spanish-American War Cuba was given her liberty and organized a new Republic. At the time of the treaty with Spain there was some uncertainty as to whether the Isle of Pines, which is a very considerable island lying south of Cuba, was territory belonging to the United States or whether it belonged to the island of Cuba. A great many Americans, and particularly many people from the State of Ohio, went to the Isle of Pines and invested in lands there, planted large orchards, and entered upon the cultivation of tropical fruits, with the belief that the island belonged to the United States. Later on the question was taken up by the State Department. Of course, Senators understand that it was a political rather than a juridical question, and the State Department held that the Isle of Pines belonged to Cuba.

Practically the only market that the people of the Isle of Pines have for their citrus and other fruits is the American market, and by increasing this tariff Congress will be placing itself in this anomalous position: It will be voting to give the market almost entirely to the California fruits, and to the Florida fruits as well, and increasing the burden of every American who is unfortunate enough to have invested a little money in the Isle of Pines. I have been told by some of those who are interested that the fruits from the Isle of Pines usually come in here at a season when they do not materially compete with the Florida fruits. That is a statement which is made to me, and I accept it until it appears to the contrary.

I remember very distinctly a discussion of this general subject some years ago when former Senator Root, of New York, was a Member of this body. At that time he made a very vigorous argument against any increase in the tariff on citrus fruits. I know of no reason why we should change our policy in that behalf. It does seem to me that with the duty as it is under the present law, the other citrus-fruit industries of this country ought to be content without adding to the burden which will devolve upon every consumer of citrus fruits by increasing this tariff at this particular time.

Of course, I understand that the tariff is probably going to be increased because an increase has been asked, and those who are interested in the different subjects which are embraced in the bill have joined hands and the one is going to get an increase on his particular product if the other gets an increase on his particular product; that is the situation. I recognize the fact, also, that the people in Ohio who were unfortunate enough to invest in the Isle of Pines are not worthy of consideration by some of those who are interested in some particular plantation to the exclusion of others.

Mr. SHORTRIDGE. Mr. President——

The PRESIDING OFFICER (Mr. LADD in the chair). Does the Senator from Ohio yield to the Senator from California?

Mr. POMERENE. I yield.

Mr. SHORTRIDGE. If the rates on certain citrus fruits are increased, as we hope they will be, I assume it will not be because the increase is asked for but because it is needed.

Mr. POMERENE. Of course, I should expect the Senator from California to make that statement, but there has been no demonstration that increased rates have been needed. Of course, an increase of tariff duty is going to increase the cost of every orange and every lemon which the public consumes.

I think that is all that I care to say at the present time, because I know the increase will be granted.

Mr. ASHURST. Mr. President, I respectfully ask for the yeas and nays on the amendment on line 19.

Mr. UNDERWOOD. Mr. President, before the roll is called I desire to say a few words.

I see no reason in the world for an increase in the rate on this article. As I understand the facts in the case, the bill as originally reported to the House provided the same rate of duty on this commodity as existing law, namely, a tax of 15 per cent.

Mr. SMOOT. The House bill imposes a duty of 20 per cent.

Mr. UNDERWOOD. But I think the bill as reported to the House originally provided a rate of 15 per cent, the same as existing law. It was changed in the House, I think, to 20 per cent. Now, the committee of the Senate proposes to increase the rate to 25 per cent ad valorem, thus adding an additional tax of 10 per cent.

There is some revenue derived from this article, but very little. When the present law was written the tax in this para-

graph was very materially reduced. It could have been reduced more without seriously increasing the imports; but I wish to call the attention of the Senate to what the committee is doing in proposing this increase from 15 per cent ad valorem to 25 per cent.

We are the great producers of boxes and barrels and other articles of this kind in which fruit is packed and shipped. I think we make more than any other country in the world. The information that I have in reference to this article as shown by the report of the Tariff Commission is that—

Previous to 1909 a considerable business had developed, especially in Maine, of manufacturing wood fruit-box shooks (sides, tops, and bottoms) and exporting them in a knocked-down condition. They were assembled by foreign fruit merchants, the ends and the middle piece added, and then filled with fruit. Estimates of the manufacturers placed the business at about 3,000,000 bundles, which were valued at $150,000. This business has greatly declined in recent years.

The imports coming in of this class of article are not shown to jeopardize in any way the business in this country. As has been stated, it is proposed to increase the tax to 25 per cent, and that must necessarily increase the tax on the consumption of what has grown to be an absolute necessity of life. With the pyramiding freight rates in this country it is difficult now for the consumers of fruit of this kind in the great cities to get the desired quantity at reasonable prices. I can see no reason whatever for an increase such as is proposed by the committee; and I hope that the desire of the Senator from Arizona that we may have a roll call on this article and fix the responsibility for the increase at this time may be realized.

Mr. McCUMBER. Mr. President, I think if the Senator had read the paragraph upon imports, following what he did read upon the matter of production, he would see in the very rapid growth of the imports that there was reason for some concern on the part of the manufacturers.

Under the head of "Imports" we have the following:

Imports, "when of the growth and manufacture of the United States," in 1907 were valued at $109,088; in 1909, at $64,323; in 1913, at $15,815; in 1914, at $2,778.

Showing the rapid decrease under the old Payne-Aldrich bill. Then:

"When of foreign growth and manufacture," in 1907—

Comparing the growth even under the old bill, the Payne-Aldrich bill—

"When of foreign growth and manufacture," in 1907, $204,160; in 1909, $247,819; in 1913, $348,620; in 1914, $535,974.

Turning to the later dates, of course the war ensued; but we come to 1919, when the quantity of barrels or boxes was 1,444,217, and 1920 when it was 1,632,805. We see therefore a most rapid increase in the importations, and with that rapid increase, as I have stated, I think the manufacturers might view it with very considerable apprehension. Inasmuch as the proposed duty differs by only 10 per cent from the present law, I believe, under present conditions, that the trade will easily absorb that 10 per cent added ad valorem duty without injury and without raising the prices.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee, which will be stated.

The ASSISTANT SECRETARY. On page 93, line 19, the committee proposes to strike out "20" and insert "25," so that, if amended, it will read:

Boxes, barrels, and other articles containing oranges, lemons, limes, grapefruit, shaddocks or pomelos, 25 per cent ad valorem.

The PRESIDING OFFICER. On this question the yeas and nays have been called for. Is the demand seconded?

The yeas and nays were ordered, and the Assistant Secretary proceeded to call the roll.

Mr. HALE (when his name was called). I transfer my pair with the senior Senator from Tennessee [Mr. SHIELDS] to the junior Senator from Maryland [Mr. WELLER] and will vote. I vote "yea."

Mr. SIMMONS (when his name was called). I transfer my pair with the Senator from Minnesota [Mr. KELLOGG] to the Senator from Massachusetts [Mr. WALSH] and will vote. I vote "nay."

Mr. STERLING (when his name was called). I transfer my pair with the senior Senator from South Carolina [Mr. SMITH] to the Senator from Oklahoma [Mr. HARRELD] and will vote. I vote "yea."

Mr. UNDERWOOD (when his name was called). I transfer my pair with the Senator from Massachusetts [Mr. LODGE] to the Senator from Nebraska [Mr. HITCHCOCK] and will vote. I vote "nay."

The roll call was concluded.

Mr. BALL. Transferring my general pair with the Senator from Florida [Mr. FLETCHER] to my colleague [Mr. DU PONT], I vote "yea."

Mr. SUTHERLAND. I transfer my pair with the senior Senator from Arkansas [Mr. ROBINSON] to the senior Senator from Pennsylvania [Mr. CROW] and will vote. I vote "yea."

Mr. ERNST. I transfer my general pair with the senior Senator from Kentucky [Mr. STANLEY] to the junior Senator from Vermont [Mr. PAGE] and will vote. I vote "yea."

Mr. FRELINGHUYSEN. I transfer my pair with the Senator from Montana [Mr. WALSH] to the Senator from Oregon [Mr. STANFIELD] and will vote. I vote "yea."

Mr. CURTIS. I have been requested to announce the folfowing pairs:

The Senator from Rhode Island [Mr. COLT] with the Senator from Florida [Mr. TRAMMELL];

The Senator from Indiana [Mr. NEW] with the Senator from Tennessee [Mr. MCKELLAR]; and

The Senator from Indiana [Mr. WATSON] with the Senator from Mississippi [Mr. WILLIAMS].

The result was announced—yeas 36, nays 24, as follows:

YEAS—36.

Ball	Ernst	McCumber	Poindexter
Broussard	Fernald	McLean	Shortridge
Bursum	France	McNary	Smoot
Calder	Frelinghuysen	Nelson	Spencer
Cameron	Hale	Newberry	Sterling
Capper	Johnson	Norbeck	Sutherland
Curtis	Jones, Wash.	Oddie	Townsend
Dillingham	Ladd	Pepper	Wadsworth
Edge	Lenroot	Phipps	Warren

NAYS—24.

Ashurst	Glass	Myers	Ransdell
Borah	Harris	Norris	Sheppard
Caraway	Harrison	Overman	Simmons
Culberson	Heflin	Owen	Swanson
Dial	Jones, N. Mex.	Pittman	Underwood
Gerry	King	Pomerene	Willis

NOT VOTING—36.

Brandegee	Hitchcock	Moses	Stanfield
Colt	Kellogg	New	Stanley
Crow	Kendrick	Nicholson	Trammell
Cummins	Keyes	Page	Walsh, Mass.
du Pont	La Follette	Rawson	Walsh, Mont.
Elkins	Lodge	Reed	Watson, Ga.
Fletcher	McCormick	Robinson	Watson, Ind.
Gooding	McKellar	Shields	Weller
Harreld	McKinley	Smith	Williams

So the amendment of the committee was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment.

The next amendment was, in paragraph 410, page 93, line 20, to strike out "orange and lemon" and insert in lieu thereof "fruit"; in line 21, after the word "growth," to strike out the word "and" and insert in lieu thereof the word "or"; in line 22, to strike out "orange and lemon" and insert in lieu thereof the word "fruit"; and in line 24, to strike out the words "oranges and lemons" and insert in lieu thereof the word "fruit," so as to make the proviso read:

Provided, That the thin wood, so called, comprising the sides, tops, and bottoms of fruit boxes of the growth or manufacture of the United States, exported as fruit box shooks, may be reimported in completed form, filled with fruit, by the payment of duty at one-half the rate imposed on similar boxes of entirely foreign growth and manufacture; but proof of the identity of such shooks shall be made under regulations to be prescribed by the Secretary of the Treasury.

The amendment was agreed to.

The next amendment was, in paragraph 411, page 94, line 4, to strike out the word "rattans" and insert the word "rattan."

The amendment was agreed to.

The next amendment was, on page 94, line 8, to strike out the words "in this section, 20" and to insert in lieu thereof "15," so as to read:

Reeds wrought or manufactured from rattan or reeds, whether round, flat, split, oval, or in whatever form, cane wrought or manufactured from rattan, cane webbing, and split or partially manufactured rattan, not specially provided for, 15 per cent ad valorem.

Mr. KING. May I inquire of the Senator having it in charge as to the proportion this raw material bears to the finished product?

Mr. SMOOT. A very small proportion, indeed. This is a tariff for revenue entirely. There is none of it produced in this country. The rate in existing law is 10 per cent ad valorem. This is the raw material, and I take it for granted my colleague knows that there is only one country in the world where any real quantity of it is produced, and they could not be producing it there unless they had the kind of laborers found there.

Mr. KING. That was my understanding. Yet the Tariff Summary seems to indicate that there are certain willows and rattans either grown or, at least, if not grown, reduced to usable form, in the United States.

Mr. SMOOT. That is the willows used by the basket manufacturers and what we may term coarse goods, but it takes a rather strong reed to make a serviceable article of furniture.

The Senator knows also that the freight on the article is a great deal on account of the space occupied and the weight of the article. It has always been the policy in all tariff bills to get some revenue out of the importations of the rattan or reeds coming from foreign countries.

Mr. KING. I do not know that I should object to a reasonable duty on imported rattan and reeds. However, that import duty which is collected would be immediately carried to the finished product, and the Furniture Trust of the United States is now, as it has been for years, especially during the war, charging prices wholly indefensible because of their enormousness. The people are being robbed by the furniture producers of the United States, and if we can do anything to strike at the Furniture Trust and bring the price of furniture down we ought to do it.

Mr. SMOOT. If you want to help them, put this on the free list and it will help them that much.

Mr. KING. I am not sure about that. I am sure that if we add a duty to it that duty will be carried to the finished product.

Mr. SMOOT. But if they are selling the product for all they can get for it to-day, as the statement made by my colleague would indicate, then why not let the Government of the United States say: "These rattan and reeds which come in go into the articles for which you are charging all you can get, and why should not the Treasury of the United States receive 15 per cent?"

Mr. KING. I am not making any complaint about a reasonable tariff upon these imports, as I indicated, but I do aver again that it will be carried on to the finished product, and the people will have to pay for it. I am inclined to think we could afford to put a reasonable tariff upon these products. When we come to dealing with the finished product, however, I hope the committee will have in mind the needs of the people and not the cupidity and the greed of the furniture manufacturers of the United States.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, in paragraph 411, page 94, line 9, to strike out the words:

For the purpose of assessing duties, handmade reeds or cane shall be held to be comparable in value to machine-cut reeds or cane of corresponding size.

The amendment was agreed to.

The next amendment was, on page 94, line 12, after the word "bamboo" and the comma, to insert the words "osier or willow"; and in line 14, after the word "grass" and the comma, to insert the words "osier or willow."

The amendment was agreed to.

The next amendment was, on page 94, line 14, to strike out "50" and insert "60," so as to read:

PAR. 411. Reeds wrought or manufactured from rattan or reeds, whether round, flat, split, oval, or in whatever form, cane wrought or manufactured from rattan, cane webbing, and split or partially manufactured rattan, not specially provided for, 15 per cent ad valorem. Furniture made with frames wholly or in part of wood, rattan, reed, bamboo, osier or willow, or malacca, and covered wholly or in part with rattan, reed, grass, osier or willow, or fiber of any kind, 60 per cent ad valorem.

Mr. SIMMONS. Mr. President, I did not quite approve of the increase made in the duty on the raw material, but it was not very great, and I did not see fit to make any special contest over it. The duty now imposed upon the furniture made out of these reeds and rattan, bamboo, osier or willow is to my mind wholly unwarranted. The House fixed the rate on this class of furniture—for that is what it is—at 50 per cent, and the Senate committee proposes to increase it to 60 per cent.

Mr. SMOOT. That is a great decrease from the House rate on the American valuation.

Mr. SIMMONS. We need not discuss the American valuation or the foreign valuation in connection with it, because the Senate committee now proposes a 60 per cent rate upon the foreign valuation, and that is the valuation we have always heretofore followed in framing our tariff bills.

This class of furniture has in recent years become exceedingly popular in the United States, and that is especially true in regard to people of moderate, limited means, who are not able to buy the fine mahoganies which have become the fancy and the fashion of the day. Years ago our cheap furniture was made out of ordinary wood. Then we began to use maple for making our cheaper furniture, then we advanced from that to walnut, and now the better-to-do people of the country do not think that anything except mahogany will do.

The class of our people who like to have nice things, and who like to make a good show in their homes, unable to buy these high-priced mahoganies, have in recent years shown a disposition to content themselves, in furnishing their sitting rooms and so on, with this willow furniture, bamboo furniture, and things of that sort. I will not say it has become the furniture of the poor man, but it has become the furniture of the man of moderate means, as distinguished from mahogany, which is the furniture of the man of wealth.

It does not seem to me that we ought to be adopting duties which increase, as these do, the prices of the things used in the homes of the people all the way from 50 to 100 per cent. This is a mere illustration of what has been going on. You start in the kitchen and impose heavy duties upon kitchen ware. Then you come to the table and impose heavy duties upon tableware. Now, you come to the furniture, and it is proposed to impose a duty of 60 per cent upon furniture in common use throughout the country. You increase your duties enormously upon clothing; you add duties to nearly all the food products that are not made on the farm and many of those that are made on the farm; you increase the duties upon the material out of which the house is made; you increase the duties upon the articles with which the fire is lighted.

You can not tell me anything of consequence, inside of the household, the duty upon which has not been increased by this bill. There is nothing which enters into the building of a home the duty on which has not been increased in the bill; there is nothing which goes upon the back of the dweller in the home the duty on which has not been increased, and nothing except the common things produced on the farm that enters into the food which the householder consumes the duty on which has not been increased in the bill. I have sought to discuss the bill in the concrete, and looking at it in that way the bill seems to me to be a drive against the ability of the American people to earn a living, and when I find an item like this, while I do not want to consume time in its discussion, I feel like somewhat vigorously protesting.

Fortunately, in connection with this item we do not have to deal with Germany. It is a matter of extreme relief to me to reach one item, out of the three or four hundred we have already considered, where we are not confronted by the other side with the specter of Germany.

I do not know whether we are to be told or not to be told that when the present law was made imposing much more moderate duties upon these things wages were low in the Asiatic countries from which they came, and that though they were low then they are very much lower now. If, since the passage of the Underwood law, there has been any change in the scale of wages in the country from which the raw material comes, I have not heard of it. I think, even in Asia, as the result of conditions produced by war and otherwise, during the last 10 years there has been a substantial increase in the cost of living and in the labor charges of the toilers of those countries. So with reference to this article we are not confronted with the condition of declining labor or a condition with respect to labor substantially different from that which existed when we enacted the present law.

We have in reference to this item to deal with the labor of Asia, but with reference to the raw materials about which we are talking labor constitutes an exceedingly small part. These raw materials are in some particulars the natural growth of the country. Where they require any manipulation prior to shipment, that manipulation is very small. It is substantially a product as it comes from the hands of God, slightly changed from its natural condition, and yet we are putting 15 per cent on it, and when it is worked into furniture it is proposed to increase the duty to 60 per cent.

I do not know whether it is claimed that this duty is for revenue purposes or not. If it is for revenue purposes, I will say to my friends on the other side of the Chamber, do not go into the homes of the people and tax their necessaries in order to raise revenue through the tariff. I have no respect for a duty for revenue levied upon things of this sort if that is the sole purpose of the duty. There are a great many duties in all our tariff laws that have been levied partly for revenue and partly for other purposes. If this rate is levied for the purpose of protection, then, Mr. President, I do not see anything to justify it in the conditions of the importation of this class of furniture, for I am talking about furniture. It is not imported into this country to any considerable extent. The raw material is practically all of it imported, but the furniture itself is not.

Here we have a production in 1914 of rattan and willow furniture in 85 factories, working only 2,559 laborers, with a capital of $3,371,000, and a value of product of $5,000,000 in round numbers, with a value added by manufacture of $3,000,000, which makes $8,000,000, representing the domestic production of this character of furniture, as I read the figures.

I am confining my observations to willow furniture and rattan furniture. I find that the imports in 1918 of willow furniture were valued at $1,813; in 1919, $3,040; in 1920, $28,114; for nine months of 1921, $52,276. Rattan is not given separately. That is so far as the Tariff Commission report enlightens us about the extent of our imports of willow furniture, $52,000 in nine months of 1921. With a total output of about $8,000,000 in this country, there seem to be no exports.

Now, upon what principle a 60 per cent duty can be justified as a protective duty is beyond my comprehension. If those facts justify the protection, then there is not a single article which is produced in this country, in my judgment, without reference to whether it is imported or not or exported or not, that would not be equally entitled to a protective duty. I had understood that the Republican Party was pledged not to impose tariff taxes, for they are really taxes, either for revenue or otherwise, for the purpose of protection unless the domestic market was being overrun to a greater extent than it is thought good policy to justify, and then that the duty fixed should be a specific measurement, that it should not be the result of a guess, that it should not be because some persons wanted it imposed for their benefit so as to protect them against any possible future condition that might conceivably exist, but that it should be levied with reference to a definite and fixed rule and that the rule would have relation to the difference in the cost of production here and abroad. So far as I am informed, we have no information as to what is the cost of production of willow furniture in any other country. In fact, I do not suppose there has been any investigation, because there have been no importations of willow furniture into this country probably to justify the Tariff Commission in making an investigation.

Mr. ASHURST. Mr. President, the argument of the Senator from North Carolina who has just taken his seat has proceeded upon the theory that paragraph 411 deals with and refers wholly to willow or bamboo furniture. Am I correct about that?

Mr. SIMMONS. I was simply arguing willow furniture because we have the figures as to that item.

Mr. ASHURST. I am going to ask the attention of the Senator who has charge of the schedule——

Mr. SIMMONS. I will state to the Senator that there do not seem to be any imports of any other kind of furniture, so far as I can find, but we do have some imports of willow furniture, and, therefore, I confined my argument to that item.

Mr. ASHURST. I am not finding fault. The Senator has given me information, and I want to be sure that I am accurate and that I correctly appraise it. On page 94, in line 11, the language reads as follows:

Furniture made with frames wholly or in part of wood—

Then, of course, there is a comma, and it continues with the words "rattan, reed, bamboo, osier, or willow."

I ask for information. Is not the particular language dealing with household or cabinet furniture confined within that language? Does not that refer to the ordinary household furniture or what we call cabinet furniture?

Mr. SMOOT. Yes; I would say that it falls under this clause and the rates that we finally decide upon, but there is no importation of furniture. It would not make any difference whether the rate was 100 per cent or whether it was 10 per cent. The freight is absolutely prohibitive on wood furniture.

Mr. ASHURST. That was not my point. I ask the Senator to look now at paragraph 414. We have decided that on furniture made with frames wholly or in part of wood, rattan, or reed, the rates shall be 50 per cent or 60 per cent. Adverting to paragraph 414 on page 95 of the bill we find "house or cabinet furniture wholly or in chief value of wood," and then dropping down to line 10 we find a rate of 35 per cent ad valorem. Obviously there is a conflicting statement there which ought to be cleared up.

Mr. SMOOT. One is on frames of wood; in other words, where the rattan is used in making the chair, as the Senator has referred to it, there will be the rattan bottom and there may be the wood that is in the frame. The rattan is all around the wood frame, and that is what it means in paragraph 411.

Mr. ASHURST. The Senator may be right and I am glad he has enlightened me, but lines 11 and 12 go on to state, pretermitting the parenthetical matter, "furniture made with frames wholly or in part of wood."

Mr. SMOOT. That is the frame. Whether it is made wholly or in part of wood, it refers to the frame. The Senator knows there could be no chair made of rattan unless it had a wood frame.

Mr. ASHURST. That is true.

Mr. SMOOT. That is all it means.

Mr. ASHURST. I think it might mean that the frame would be of wood, upholstered with leather or hair. It seems to me a chair upholstered in hair or leather would fall within this paragraph.

Mr. SMOOT. No; this is the frame, wholly or in part of wood.

Mr. ASHURST. I understand.

Mr. SMOOT. And paragraph 414 is house or cabinet furniture.

Mr. ASHURST. Then paragraph 414 does go ahead and say "house or cabinet furniture, wholly or in chief value of wood." It seems to me there is a conflicting provision that ought to be cleared up.

Mr. SMOOT. It does not conflict in any way, I will say to the Senator. The wood frame in a rattan chair is not the item of chief value. It is the work that is put upon the frame and the rattan which goes around that make it a rattan chair.

Mr. ASHURST. This has just been suggested to me. I ask the Senator to look at page 582 of the Summary of Tariff Information, which reads as follows:

Conflicting provisions: The omission from H. R. 7456 of the specific provision in paragraph 173 of the act of 1913 for willow furniture—

Now—

raises a doubt whether such furniture will come within paragraph 411 as a manufacture of willow or within paragraph 414 as house or cabinet furniture.

That is the very point I was trying to make.

Mr. SMOOT. If the Senator will examine paragraph 411, line 14, he will see that one of the amendments provides for "osier or willow."

Mr. ASHURST. If the Senator from Utah feels that there is no conflict in the provision in the bill, I have nothing further to say in regard to the matter.

Mr. SMOOT. I am quite sure there is none.

Mr. ASHURST. But I wish to be heard later on paragraph 414.

Mr. SIMMONS. Mr. President, I wish to call the attention of the Senator from Utah to the fact that in paragraph 411 the provision dealing with "furniture made with frames wholly or in part," and so on, is qualified in lines 13 and 14 by adding the words "and covered," and so forth. It must not only be made of but covered wholly or in part with rattan, reed, grass, osier, or willow.

Mr. ASHURST. I accept the explanation and I am ready to vote on the question.

The PRESIDING OFFICER. The question is on the committee amendment.

Mr. SMOOT. Had the Senator from North Carolina concluded?

Mr. SIMMONS. I am through. I merely wish to offer an amendment after the Senator from Utah shall have concluded.

Mr. SMOOT. The Senator from North Carolina refers to the fact that this is one item in which we may not refer to "the cheap labor of Germany." In answer to that I desire to say that this is one of the items as to which we may refer to "the cheap labor of China and Japan."

Mr. SIMMONS. Mr. President, I said something of that kind; but I am glad to have the music changed. The other tune had become quite monotonous.

Mr. SMOOT. We could not play any music on earth that would satisfy the Senator from North Carolina, no matter what tune might be played. If we propose a rate which is lower than the existing law, it is all wrong; if the rate is higher than the rate of the existing law, it is all wrong. If the article comes from Germany, and Germany is mentioned, it is all wrong; and if it comes from Japan, and Japan is mentioned, it is all wrong.

Mr. SIMMONS. Mr. President, I know it is true that the Senator from Utah can not sing any music that is pleasing to me, because unfortunately the Senator has not any music in his soul. Although it is full of other splendid qualities that I admire very much, there is no music there.

Mr. SMOOT. If the Senator from North Carolina had referred to the lack of music in the Senator from Utah, the Senator from Utah would have immediately acknowledged his charge, but the Senator from North Carolina did not refer to the Senator from Utah, his reference was general. I know that there are some wonderful singers in this body, because I have heard the Senator from North Carolina speak in such a tone that I know he is a great singer; I know that he has a wonderful voice. Why, it is a wonder to me that he has not been in

all the countries of Europe singing Wagner and other grand-opera selections.

Mr. SIMMONS. Mr. President, if I had felt that I was possessed of such a wonderful gift of music as the Senator intimates, after I learned through the newspapers that a certain distinguished Senator had won his case before the Finance Committee when he was asking for very high rates of duty, I think I should have gone before the Finance Committee and sung a few songs in an effort to try to persuade them to cut these duties down a little bit in the interest of the people.

Mr. SMOOT. The Senator from North Carolina might have been successful; I will not say that he would not have been; but I am fearful if the same song which he sings here daily had been sung before the Finance Committee, there would have been no change made in the rates.

Now, getting back to this item, Mr. President, I desire to call attention to the report made by the Reynolds Commission concerning Chinese furniture. In the instance set forth the cost of the item was $2.92; the landing charges were $2.95. The landing charges were more than the cost of the piece of furniture in China. The selling price of the imported article was $12.25. Note the profit which was made by the importer. The selling price of a comparable domestic article was $16.41. Allowing a reasonable profit of 20 per cent—not of 76 per cent which the importer took—it would require 248 per cent to equalize the production costs.

The Committee on Finance took into consideration the fact that the selling price of the domestic article also included a high rate of profit, and we did not allow 248 per cent on that class of goods, but the committee did allow 60 per cent.

Remember that we have decided in this paragraph that we would collect some money from the importation of the reeds and rattans——

Mr. ASHURST. The wicker furniture.

Mr. SMOOT. That go into the wicker furniture. We say that on importations of those articles into this country we want 15 per cent of their value to go into the Treasury of the United States. The American manufacturer has to pay that money into the Treasury before he can get the material, because none of it is produced in the United States; it can only be produced by Chinese and Japanese labor. The 60 per cent rate covers the duty imposed upon the raw material for revenue purposes only.

Mr. ASHURST. Mr. President, let me interrupt the Senator at that point.

Mr. SMOOT. Certainly.

Mr. ASHURST. My interrogatory was simply to ascertain whether this paragraph could by any means be construed or tortured to include the ordinary household cabinet furniture. The Senator assures me that it can not be.

Mr. SMOOT. There can be no doubt as to that, I will say to the Senator.

Mr. ASHURST. I think the Senator is right; but, notwithstanding, I find in the Summary of Tariff Information, on page 582, which has been furnished to Senators, a statement which indicates that whoever wrote that summary believed there may be some doubt. I agree with the Senator; there is no doubt.

Mr. SMOOT. We have corrected that, as the Senator will notice, in paragraph 411, line 14, by adding the very words that the Tariff Commission suggested should be added, namely, the words "osier or willow." I assure the Senator from Arizona there can be no conflict.

Mr. ASHURST. That is all I desire to know about this item.

Mr. SIMMONS. Do I understand the Senator to argue that the bracket of paragraph 411 to which the 60 per cent duty applies does not apply to the furniture made of these materials?

Mr. SMOOT. I said it covered the manufactures made of them, and that the American manufacturer had to pay a duty that was imposed upon reeds and rattans.

Mr. SIMMONS. On the raw material?

Mr. SMOOT. Yes.

Mr. SIMMONS. And the duty on the raw material is 15 per cent?

Mr. SMOOT. Yes; and therefore there has got to be taken into consideration the duty placed upon the raw material in fixing the rate upon furniture.

Mr. SIMMONS. I understand the Senator now says that this is a revenue duty.

Mr. SMOOT. The duty on reeds and rattans is for revenue absolutely.

Mr. SIMMONS. That is the 15 per cent duty?

Mr. SMOOT. Yes.

Mr. SIMMONS. And as to the difference in the 15 per cent and 60 per cent, which is 45 per cent?

Mr. SMOOT. That is the protective duty for the manufacturer in America.

Mr. SIMMONS. That is the protective duty for the manufacturer in America. The manufacturer in America is making about $8,000,000 worth of this furniture, and only about $52,000 worth of it came in from China in nine months of 1921.

Mr. SMOOT. I presume in 1921 the furniture stores in the United States from one end to the other were not buying willow furniture or any other furniture; they were trying to sell what they had on hand. That was the trouble. Mr. President, while the duty of 60 per cent seems high, and, perhaps, under conditions to-day it could be fixed at not more than 50 per cent, yet it is one commodity, I will say to the Senate, in the production of which the American laboring man is right up against the labor of the Chinaman, the laboring man in America working 8 hours and the Chinaman working 16.

Mr. SIMMONS. The Chinaman, however, does not seem to have been sending many of his goods over here.

Mr. SMOOT. That is not saying that he can not send them over here.

Mr. TOWNSEND. Mr. President——

The PRESIDING OFFICER (Mr. WILLIS in the chair). Does the Senator from Utah yield to the Senator from Michigan?

Mr. SMOOT. I yield the floor.

Mr. TOWNSEND. Mr. President, I merely wish to make a brief statement. There is no question about the difference in the cost of production here and abroad in the case of the commodity now under consideration. It has been shown very clearly that a gentleman purchased from three to four thousand pieces of this character of furniture in China and shipped it to Grand Rapids, Mich. He found that he could multiply his cost price by three. For instance, a chair for which he paid $3 he could sell for $9, and even that price would be less than it cost him to make a similar grade chair in the United States.

There has been a great deal of this kind of furniture shipped into the United States. I heard a Senator on the other side a few moments ago make a suggestion as to there being a furniture trust in the United States. Of course, that is a common phrase, and it is used so frequently that I pay no attention to it. I know of no such trust, but I do know that there is strong competition. China is our competitor; China is where these reed chairs are made; and I know that the 60 per cent rate proposed does not measure the difference in the cost of production of these chairs in China and the United States, to say nothing about profit or selling prices. This is one item where it is clear that the duty is a protective one, and I am in favor of protection. I can not see how there can be any possible complaint as to the rate of duty on this particular class of goods.

Mr. McCUMBER. Mr. President, I think it proper to enter into the RECORD at this point a paragraph from the Summary of Tariff Information, under the head of "Production in 1914—Rattan and willow furniture":

Factories, 85—

Quite a number to constitute a trust—

Production in 1914—Rattan and willow furniture: Factories, 85; persons engaged in industry, 2,559 (2,262 laborers); capital $3,371,218; wages, $1,281,141 ($566 average per capita); value of products, $5,022,089; value added by manufacture, $3,008,310. Baskets and rattan and willow ware: Factories, 419; persons engaged in industry, 5,302 (4,574 laborers); capital, $4,590,515; wages, $1,922,965 ($421 average per capita); value of products, $6,578,468; value added by manufacture, $3,579,183.

Now, I want to call attention to the imports in the last few years. Remember, this was back in 1914.

The imports for the fiscal year 1914 were $1,210,390.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from North Dakota yield to the Senator from North Carolina?

Mr. McCUMBER. I do.

Mr. SIMMONS. The Senator left out a very important word—"rattan and reeds (unmanufactured)."

Mr. McCUMBER. Yes; but I am reading the unmanufactured statistics. I do not think I would intentionally leave out anything.

Mr. SMOOT. But the Senator did not read the word "unmanufactured," and it makes all the difference in the world. The Senator from Utah admits that the duty levied upon unmanufactured reeds is a purely revenue duty.

Mr. McCUMBER. I am intending to give the whole. I am taking first the unmanufactured material.

In the case of rattan and reeds, unmanufactured, in 1914 the imports were $1,210,390; in 1918, $1,781,239.

The imports of chair canes or reeds wrought from rattan or reeds, without giving the figures, I think amounted to about $200,000 in 1918.

The imports of rattan and reeds, unmanufactured, for the calendar year 1918 were $1,308,465; for the calendar year 1920, $2,466,617; for the first nine months of 1921, $887,647.

Now, take chair cane or reed, wrought or manufactured from rattan or reeds: In 1918 the imports were $244,268; in 1919, $269,265; in 1920, $1,166,538; and in nine months of 1921, $431,021.

Mr. SIMMONS. Mr. President, will the Senator please tell me where he has been reading from recently?

Mr. McCUMBER. I am reading on page 581 of the Summary of Tariff Information. If you will read for the same calendar years the statistics on osier and willow prepared for basket-makers' use, willow furniture, and manufactures of osier and willow, except willow furniture, you will find that, taking them all, there was a very big importation. We have already considered the difference in the cost of labor in Japan and China and the United States, and, as stated by the Senator from Michigan, we have shown that even a duty of 60 per cent will nowhere near measure the difference in the cost of placing the foreign article in the principal markets of the United States as compared with the cost of placing the American article in the same markets.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 15, it is proposed to strike out "2 cents" and insert "1 cent," so as to read:

Split bamboo, 1 cent per pound.

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 17, it is proposed to strike out "maker's" and insert "makers'."

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 17, it is proposed to strike out "25" and insert "35," so as to read:

Osier or willow, including chip of and split willow, prepared for basket makers' use, 35 per cent ad valorem.

Mr. SIMMONS. Mr. President, I have in large measure discussed that matter already, but I am going to read the figures of imports as they appear to me in the book from which the Senator from North Dakota was reading a few minutes ago.

This last duty applies to furniture of osier or willow. The book that I have before me, at page 581, deals first with imports of rattan and reeds, unmanufactured. There is quite a heavy import of those, because we do not produce them in this country to any extent, and the Senator from Utah admits that and says that the duty of 15 per cent which this paragraph levies on the unmanufactured product is for revenue.

Mr. SMOOT. No; those are the wrought and manufactured materials.

Mr. SIMMONS. These are the unmanufactured materials that I am reading from now.

Mr. SMOOT. Then I want to say to the Senator that when we reach the free list I expect to offer an amendment to the free list taking care of the unmanufactured materials. They are not taken care of in this paragraph at all, and if it is left the way it is now they would fall in the basket clause, which would be a higher rate than even here with the wrought and manufactured cane or reed.

Mr. SIMMONS. But the Senator admits that he is not undertaking to put a protective duty on the unmanufactured materials.

Mr. SMOOT. Yes; although they are not mentioned in this paragraph; but when we reach the free list I shall want to offer an amendment to that.

Mr. SIMMONS. But the Senator did not do it in this paragraph.

Mr. SMOOT. No.

Mr. SIMMONS. The only two things that are involved in this paragraph are osier and willow furniture.

In 1919, according to the book that I have before me, the imports of willow furniture amounted to only $26,000, and in 1918 they amounted to only $2,844. The imports of osier and willow prepared for basket makers' use were $95,000 in 1914, and $144,000 in 1918. Manufactures of osier or willow, except furniture, amounted to $25,000 in 1914, and $10,000 in 1918, so that in 1914 and 1918 the imports of willow furniture and osier furniture were nominal.

Mr. SMOOT. There is not so much of the willow furniture manufactured as there is of the rattan furniture, either in this country or anywhere else in the world. The willow furniture is somewhat cheaper than the rattan.

Mr. SIMMONS. The importations of chair canes or reeds, wrought or manufactured from rattan or reeds, in 1921 were less than half a million dollars.

Mr. SMOOT. In 1914 they were $450,000.

Mr. SIMMONS. The imports of osier and willow prepared for basket makers' use were only about $105,000 in nine months of 1921.

The willow furniture, I think, is the furniture that is used especially by the poorer class of people. I think it is willow furniture that they buy, and a good many well-to-do people also buy it for summer use. It was as to rattan and willow furniture that the Senator was reading these statistics showing the value of the domestic product as being about $11,000,000—rattan and willow furniture; not baskets, but furniture—and the best I can make out of these figures is that, in round numbers, there was only $1,800 worth of willow furniture imported into this country in 1918; in 1919, $3,000 worth, in round numbers; in 1920, $2,800 worth, in round numbers; and in nine months of 1921, $52,000 worth.

I do not know—no mortal man can tell—how much will be imported into this country in the next year, or any one of the next 10 years; but these figures show that there has been no special increase in the importations of this furniture into this country for many, many years past, and I know of no change of conditions in this country or in China that would justify the belief that these importations, now negligible, are so threatening that it becomes necessary in advance to impose these high duties of 35 and 60 per cent.

Mr. President, I intended to move to amend by inserting "30 per cent" instead of "60 per cent" in the other part of the bill that was just voted upon, but the Secretary went so fast that I could not quite keep up with him. I now move, in place of the 35 per cent proposed by the committee, to insert "15 per cent."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. On line 17, page 94, in lieu of "35," the amount proposed to be inserted by the committee, it is proposed to insert "15."

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from North Carolina to the amendment of the committee.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now is on the committee amendment.

The amendment was agreed to.

The PRESIDING OFFICER. The Secretary will state the next amendment of the committee.

The ASSISTANT SECRETARY. On line 19 it is proposed to strike out the word "osier" with a comma and to insert the same word without a comma.

The amendment was agreed to.

The ASSISTANT SECRETARY. On line 20 the committee proposes to strike out "40" and to insert "45," so as to read:

All articles not specially provided for, wholly or partly manufactured of rattan, bamboo, osier, or willow, 45 per cent ad valorem.

Mr. SIMMONS. Mr. President, that amendment has been discussed already in connection with the other two. I move to strike out "45" and insert "20."

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The ASSISTANT SECRETARY. In lieu of the sum "45," proposed to be inserted by the committee, it is proposed to insert "20."

Mr. KING. Mr. President, may I make an inquiry of the Senator from North Carolina?

Mr. SIMMONS. Yes.

Mr. KING. The paragraph now under consideration, and particularly the last lines, which are now being considered, relate to various kinds of furniture in common use by what might be called people not of large means.

Mr. SIMMONS. I have discussed osier and willow furniture.

Mr. KING. For my own information, I want to ask the Senator a question. The facts are that this furniture is used very extensively in the United States?

Mr. SIMMONS. Oh, yes; by people of very moderate means and poor people.

Mr. KING. And there are a number of very large manufacturing establishments engaged in its production, which have made and are making very large profits, and it will force the prices up?

Mr. SIMMONS. In the case of that and willow furniture it seems that the annual output in this country is something around $11,000,000, with the insignificant importations that I have just stated to the Senate.

Mr. KING. I regret that I was called from the Chamber. I should like to ask either the Senator from North Carolina or any member of the majority what justification there is for the

imposition of these high rates—or, for that matter, any rates, unless it be for revenue—upon furniture, when, as we know, there is a shortage of houses, a shortage of homes, a shortage of home furniture, and if we have a building boom—as we ought to have—there must be the furnishing of the homes, and therefore there is bound to be a tremendous increase in the quantity of furniture purchased in the United States. It seems to me that in the interest of the people we ought to encourage home building and the purchasing of furniture for home. We ought not to cast impediments, as this provision will, in the way of the accomplishment of an end so worthy and so deserving. I ask the committee why they do not revise the rates upon furniture that is in such common use?

Mr. SMOOT. Mr. President, I do not want to take the time of the Senate now in giving the reasons. We went into the details while the Senator was out of the Chamber. In substance, I will say that the American manufacturer is compelled to pay the duty imposed upon his raw material, as we do not impose it as a protective tariff whatever, but as a revenue measure. That rate is 15 per cent. Then, as a compensatory duty, we impose this 60 per cent on the furniture, but not the items under consideration at this time.

The Senator must know that China is the great manufacturing country of the world for this article. The Chinese have the raw material at hand. Chinamen work 16 hours a day. They are paid about one-fifteenth or one-sixteenth what laboring men in the United States are paid. If it were not for the rate of freight upon those articles into the United States, this would not be protection enough. I showed also by the Reynolds report that to equalize conditions existing on the 1st day of August of last year would take a rate of 248 per cent.

Mr. KING. The Reynolds report has been adverted to repeatedly during the discussion of the bill; if not as the basis for some of these rates, at least it has been used as a basis for comparison, and to support many of the high rates which have been levied. I believe that the use of that report is improper to the extent to which it has been employed and any argument flowing from its use is fallacious.

In the first place, it is known that the American workingman does more than any workingman in any other country in the world. I think a study of the facts discloses that in many of our manufacturing plants the product of the American workingman is greater than that of two, three, four, and five in other countries.

With respect to the making of this furniture, our machines and our plants are very much superior to those of any other country, and of course, in efficiency of plants, China could not begin to compare with the United States. In my opinion, we can produce furniture as cheaply as it can be produced in almost any country in the world.

The dividends which have been paid by the furniture manufacturers, the enormous profits which have been made, testify to the fact that we do not need to tax the American people in order to make legitimate and reasonable profits. I am against a system which taxes the people upon the necessities of living unless it be purely for revenue purposes. It does seem to me that we are piling the taxes upon the necessities rather than upon the luxuries. The articles embraced within this paragraph are not necessities as much as are food and clothing, but they are necessities if we are to have homes, and if we are to have all the concomitants of an enlightened and a civilized people.

It seems to me that the amendment offered by the Senator from North Carolina to the amendment ought to be unanimously agreed to.

The PRESIDING OFFICER (Mr. WILLIS in the chair). The question is on agreeing to the amendment offered by the Senator from North Carolina [Mr. SIMMONS] to the committee amendment.

The amendment to the amendment was rejected.

The PRESIDING OFFICER. The question now is on the committee amendment.

The amendment was agreed to.

The next amendment was, in paragraph 413, page 94, line 25, to strike out the word "screens" and to insert in lieu thereof "screens, any of the foregoing wholly or in chief value."

The amendment was agreed to.

The next amendment was, on page 95, line 1, after the word "straw" and the comma, to insert the words "papier-mâché, palm leaf."

The amendment was agreed to.

The next amendment was, on page 95, line 2, to strike out "25" and insert in lieu thereof "45," so as to read:

Porch and window blinds, baskets, curtains, shades, or screens, any of the foregoing wholly or in chief value of bamboo, wood, straw, papier-mâché, palm leaf, or compositions of wood, not specifically provided for, 45 per cent ad valorem.

Mr. SMOOT. I move to substitute "40" for "45" in line 2.

The amendment to the amendment was agreed to.

Mr. SIMMONS. Mr. President, this is another article of constant use in every home in the land. There is not a man who is able to afford these shades and screens who does not use them. Of course, in the wealthier homes they use fancy shades, made of textiles, but in the humbler homes, on account of the cost of cloth at this time, it has become the fashion to use these screens.

Mr. SMOOT. It is just the reverse.

Mr. SIMMONS. No; I do not think so.

Mr. SMOOT. The fancy homes use these screens painted and decorated.

Mr. SIMMONS. Yes; they use them painted, generally, when they can, because they do not look well unless they are painted, but they are used chiefly by people of small means. They are not expensive, compared with the textile shades.

Mr. SMOOT. It is just the reverse.

Mr. SIMMONS. I use them myself, and I use them as a matter of economy, which I have to practice.

Under the present law these shades are taxed at 20 per cent ad valorem. That tax has been extremely protective in operation, whatever may have been the intent when it was imposed. It has been a failure as a revenue duty. The revenue under it in 1918 amounted to only $1,146, and in 1920 to only $4,655.

It has been a failure as a revenue duty, I say, but it seems to have been extremely effective for the purpose of excluding the foreign product. Let us look at this item. It is one of the most enlightening little items we have had as indicating the recklessness with which our friends on the other side have lavished their duties.

The Tariff Commission did not take the trouble to find the production in this country. They said it was a little too difficult to find out, and contented themselves with saying that "Observation, however, indicates that the annual production is very large and an element of much importance in the woodworking industry."

It does give us the figures as to the imports, however. It says:

Imports of porch and window blinds, curtains, shades, or screens of bamboo, wood, straw, or compositions of wood in 1914 were valued at $543,500, and in 1918, $29,320.

What I read just a while ago related both to the painted and the unpainted. I repeat that in 1914 the imports amounted to $543,000 worth, and in 1918 to $29,000 worth, of both kinds, painted and unpainted. Now I shall deal with the plain or unpainted screen. In 1918 the imports were only $5,747. In 1919 they were $10,000, in 1920 they were $23,000, in the nine months of 1921 they were $10,000.

Now we come to the stained, dyed, painted, printed, polished, grained, or creosoted. We have not reached that yet, but under the bill it is taxed at 60 per cent; the unpainted, the figures of which I have just read, is taxed 45 per cent. I am going to read the figures as to the 60 per cent duty on imports. In 1918 the imports amounted to $7,930. In 1919 they amounted to $21,000. In 1920 they amounted to $46,800. In the nine months of 1921 they amounted to $22,667, making of both the painted and the unpainted about $33,000 in 1921 as the total imports of both kinds, as compared with $543,000 in 1914. They are disappearing instead of increasing, and that happened under a 20 per cent rate on the plain and a 25 per cent rate on the painted, stained, and polished. We are making them in great quantities here and can furnish them to the people at moderate prices. Perhaps the German makes it, although I do not know.

Mr. SMOOT. Yes; they are made in Germany.

Mr. SIMMONS. Even the German has not since 1914 been sending it into this country in any quantity at all. It is a perfectly negligible quantity. The present importations are not one-tenth as much as they were in 1914. They are growing less every year and will soon reach the vanishing point. Yet the proposition is to grant double the duties, to raise one from 20 to 45 per cent and the other from 25 to 60 per cent. I can not understand why it is done.

The trouble is that Senators will not stay in the Chamber and hear these questions debated. They will not stay here in order that they may ascertain the facts, and I know enough about those on this side of the Chamber to speak with reference to those on the other side of the Chamber. Senators who are not participating in the debate have not examined the books in order to ascertain the facts, and they will not stay here when we are discussing the matter.

I have enough confidence in the sense and fairness and judgment and patriotism of Members of the Senate to believe that they would not sustain the committee in these high rates if they would stay in their seats and hear an item like this

discussed and ascertain the facts as they appear in the case and as I have presented them; and I believe I have presented them correctly. I do not see how I could miss presenting them correctly when I have taken the statistics from that impartial body, the Tariff Commission. I do not believe we would find vote after vote sustaining the high duties imposed by the committee if Senators would listen to the discussion. I think instead of overruling the committee now and then, as has occurred as we have gone on with the schedules, they would have been overruled many, many more times; and before this time the committee, instead of bringing in amendments cutting the rates down slightly, would have brought in amendments cutting them down radically.

But there is no necessity in this case to do more than state the facts plainly and directly that they may go into the RECORD. Nothing else is accomplished in cases of this sort. It could not be accomplished. How can we convince the Senate when the Senate is not in the Chamber? If Senators will not stay here and listen to the discussion, I want the facts to go into the RECORD. That has been one of my chief objects and aims in asking for a discussion of the items. I believe enough public interest has been aroused in the question to start the people of the country to studying and trying to ascertain for themselves the facts upon which to base an independent judgment. We are going to put the facts in the RECORD so that they will be open to the newspapers of the country, and the students of the country, and to everybody who wants to know the facts about the rates and the taxes that are being imposed upon the people through the bill.

Mr. LENROOT. Mr. President, it so happens that a majority of the factories producing this kind of window shades are in Wisconsin, and I have therefore given some special attention to the subject. I want to read a paragraph of a letter from the president of the Hough Shade Corporation, of Janesville, Wis. In his letter, dated January 12, 1922, he said:

> We surely hope that our letter has reached you before this time, as this tariff matter as presented in the Senate brief, copy inclosed, is a matter of life and death with us. We have to-day just had a report from one of our salesmen, who called upon a very big dealer whom we have sold for years, and was informed by this dealer that his buyer was now in Germany and he expected to buy German wood slat porch shades, and we find through a letter received a short time ago from a German exporter, Hugo Klemm, Heidelberg, Germany, that this buyer can get German shades laid down at New York, with American duty paid and all duties paid and freight paid, for only $2.77, the very same shade that we have to get $4.10 for. As you will see from this comparison it means closing our factory if we do not get protection against the labor of men in Germany, which, according to the Government's own report (we have confirmed this through one of our employees who has relatives in Germany) is 52 cents per day, for labor which costs us from $2.70 to $4 per day, and the labor of women in Germany, which is 25 cents per day, and for which we are compelled to pay (Wisconsin minimum wage law) $2.25 for nine hours.

Mr. President, I have declined to be persuaded to any course of action simply upon statements of differences in wage cost. I believe the test generally as to whether a duty is too high or not, is, first, are importations large; and, second, are exportations of the domestic product large? If the importations be nominal and our exportations large, the conclusion follows that an increase, or at least a large increase, in duty is not justified. But in this particular case we find, first, that we have practically no exportations of this product.

While it is true, as the Senator from North Carolina [Mr. SIMMONS] has stated, that importations since the war have been nominal, it is also true that prior to the war importations from Germany were very large, so large as to be a menace to the industry here. In 1913, just before the war, the imports of the two classes of shades described in the paragraph amounted to over $1,000,000, and that was upon a rate of duty of 35 per cent for the uncolored or unpainted shades and 40 per cent for the painted shades; that is to say, under the rates of the Payne-Aldrich law the imports then were over a million dollars a year.

I do not believe it can be successfully contended by anyone upon the floor of the Senate that what Germany could do before the war in the way of exports and competing with American manufacturers she can not do much better since the war. I think the answer to the fact that up to this time the importations have not been large is that Germany has not happened yet to renew that particular line of production. But it is a fair assumption that when she was able before the war to export over a million dollars a year to us—and, remember, the total volume is not very large in dollars in this country of this particular item—she is able to do very much better now.

In this item I believe the original recommendation of the committee would have been fully justified, but realizing as I do that the imports up to this time have been only nominal and that the justification must be based upon what Germany did before the war and what Germany can do again, I insist that the rate imposed by the committee is fully justified by the facts.

The VICE PRESIDENT. The question is on the committee amendment as modified.

Mr. SIMMONS. I desire to offer an amendment to the committee amendment. I move to amend, in line 2, by striking out the numeral "40" and inserting "20."

The amendment to the amendment was rejected.

The committee amendment as modified was agreed to.

The ASSISTANT SECRETARY. The next amendment of the committee is, on page 95, line 4, where the committee proposes to strike out "30" and insert "60."

Mr. SMOOT. I move to amend that by striking out "60" and inserting "50."

The amendment to the amendment was agreed to.

Mr. SIMMONS. I move to amend by striking out "50" and inserting in lieu thereof "25."

The amendment to the amendment was rejected.

The amendment as amended was agreed to.

The next amendment of the Committee on Finance was, in line 5, page 95, to strike out "House" and insert "Spring clothespins, 15 cents per gross; house," so as to read:

> PAR. 414. Spring clothespins, 15 cents per gross; house or cabinet furniture wholly or in chief value of wood, etc.

Mr. SIMMONS. Mr. President, that is a new insertion. It does not appear in the House text. I would be very glad to have some Senator explain to the Senate why it was necessary to put 15 cents per gross on spring clothespins.

Mr. DILLINGHAM. Mr. President, it will be observed that paragraph 414 is a basket clause which takes care of "manufactures of wood or bark, or of which wood or bark is the component material of chief value, not otherwise specially provided for." The value of the spring clothespin is in the wood at the present time rather than in the steel which constitutes the spring used in the manufacture of the article as coming under this paragraph. It was the view of the committee that a 25 per cent ad valorem rate would not properly protect the industry in this country.

I will say to the Senator from North Carolina that these clothespins are an American invention and until recently have been an American production. They were patented in the beginning, but the patents expired, and now they are manufactured in various States of the Union and in many places are a sort of by-product of manufactures of larger types of woodenware, because the pieces of wood required in the clothespins are so small that they can be taken from what would otherwise be waste. But it appears that in 1912 and 1914 the American manufacturers began to have a very sharp competition from Norway and Sweden.

The cost in this country of producing these spring clothespins is, upon an average, about 40 cents per gross. They have been sold in this market from about 48 cents to 52 cents a gross, according to the size of the order; those in carloads being sold for 48 cents and those in smaller quantities for 52 cents per gross.

In 1912 the industry in this country had to meet foreign competition for the first time, the imported pins coming from the Scandinavian countries, Norway and Sweden. They were placed upon the market here at from 18 to 23 cents per gross, just about one-half of the present cost of manufacturing them in this country. The war coming on, of course, created an embargo.

Mr. SIMMONS. If the Senator will pardon me, do I understand him to say that the spring clothespins which came in here were manufactured in Norway and Sweden?

Mr. DILLINGHAM. Yes; in Norway and Sweden.

Mr. SIMMONS. At what percentage of the American cost?

Mr. DILLINGHAM. They were sold here as low as 18 cents per gross; from that up to 22 cents per gross.

Mr. SIMMONS. As against what American price?

Mr. DILLINGHAM. The American cost of manufacture is about 40 cents; and the American selling price is about 48 cents per gross in carload lots.

Mr. SIMMONS. The Senator from Vermont has named two countries in Europe where I have been under the general impression that labor is pretty well paid. Certainly labor is not low priced in those countries.

Mr. DILLINGHAM. I will say in reply to the Senator that my attention was called to the matter at that time by the Vermont manufacturers, there being three extensive establishments manufacturing these pins in the county in which I live. They wrote to me, and I took the matter up with the Department of State. The American consuls in those countries

were requested to make an examination, which they did, and they reported—I have not the figures before me—in substance, that the production was increasing there and that the cost of labor and material was such that the manufacturers were able to sell the goods in this country at the prices quoted.

Mr. SIMMONS. What is the material out of which these clothespins are made?

Mr. DILLINGHAM. The pin consists of a steel spring connecting the two wooden clips. This one [exhibiting] happens to be a cheap one; it is made of beech wood.

Mr. SIMMONS. I hardly see how there could be very much difference in the material cost.

Mr. DILLINGHAM. I think it is a question whether the article should fall under the wood schedule or under the steel schedule. The duty carried in the basket clause of the wood schedule is 35 per cent, and in the basket clause of the steel schedule it is 40 per cent.

Mr. SIMMONS. The process of manufacture must be so simple that, unless there is some peculiar differentiation in material costs, I could hardly account for the great difference in price upon the theory of a difference in the labor cost.

Mr. DILLINGHAM. There is a very marked difference in the labor cost. In my section we pay about $3 a day for mill labor, which is not a high price as prices go in the United States, and yet to produce that article by the gross costs, according to the best computation which can be made, 40 cents.

Mr. SIMMONS. I should not imagine there was any very great labor cost in the manufacture of this article. It looks like it would be largely a matter of machine work.

Mr. DILLINGHAM. The spring is made by machinery; the wood is cut and polished by machinery.

Mr. SIMMONS. The spring is made by machinery.

Mr. DILLINGHAM. Exactly; it is made by machinery; but the pins, then, have to be assembled, which can not be done by machinery. Assembling them is handwork. The manufacturers have a small hand machine in which they put the wood and the steel, and the combination is made in that way, which materially increases the cost.

Mr. SIMMONS. I believe the Senator stated that these pins were made in Norway and Sweden?

Mr. DILLINGHAM. Yes.

Mr. SIMMONS. I have been under the impression that the wages paid in Norway and Sweden were very good as compared with those paid in other European countries. I have been under the impression that they were better than those paid in France or even in Great Britain.

Mr. DILLINGHAM. I can only tell the Senator that the reports we received from our consuls were of the character that I have already indicated.

The World War operated as an embargo; but immediately after the war it was found that the Germans had gone into this business and were beginning to ship this class of goods into this country. The manufacturers in this country sent an agent to Germany in order to ascertain what the prospects were, and he found that Germany was selling these pins at 8 marks per gross. That was in 1921. So the Senator can see what the cost of the manufacture in Germany is.

Germany has come in and claims this market and is advertising some of these goods in the United States for 30 cents a gross, free on board the cars in New York. The German producers, after manufacturing the clothespin, paying the cost of transportation, of insurance, the landing charges, and the duty which is now imposed by law, and also after paying the commission of their agents in New York, and, adding their profit, are selling these clothespins at 30 cents a gross in this country.

Mr. SIMMONS. Do I understand the Senator from Vermont to say that they were selling, in 1921, in Germany at 8 marks?

Mr. DILLINGHAM. They were selling at 8 marks.

Mr. SIMMONS. What was the measure at that time of the German mark in American money?

Mr. SMOOT. Eight marks would be a little over 12 cents.

Mr. DILLINGHAM. The Senator from Utah [Mr. SMOOT] states that it was a little over 12 cents.

Mr. SMOOT. The mark was worth 1.52 cents at that time.

Mr. SIMMONS. There are no recent statistics in reference to the matter which seem to be available. It is a new item, and I suppose what statistics we have were published long before the item was put in the bill by the Senate committee. Can the Senator from Vermont tell us anything about what the production here is and what the imports of the particular commodity are?

Mr. DILLINGHAM. I am not able to give those statistics. I know there are manufacturers of these pins in five or six of the States of the Union. The importations only began last year, and I do not know how considerable they were, although I know that the foreign producers are competing very actively with the American manufacturers, and the American manufacturers have put down their price to cost to themselves. They have been doing that for the last six months, because they wanted to retain their old customers until the pending bill should be considered, when they could ascertain whether they were to have anything like adequate protection against the foreign manufacturer.

Now, I desire to call attention to the effect of this amendment. If spring clothespins are included in the basket clause of the wood schedule which we are now considering, and which carries a rate of 35 per cent ad valorem, they could be delivered on this side, with landing charges of 10 per cent, but without profit added, at 22 cents per gross, provided the cost price of manufacture in Europe is 15 cents.

I may say that an estimated cost price of 15 cents is larger than the facts will warrant. It is undoubtedly true, however, that the pins can be produced in Norway, in Sweden, and in Germany at 15 cents, and, under this clause, they could be imported here at 22 cents a gross, which is substantially one-half of the cost of production in this country. But, taking the specific rate of 15 cents per gross, which is asked for by the committee, that rate will make it possible for the European made pins to be delivered on this side at 31½ cents a gross, provided the cost of manufacture is 15 cents, and less than that sum if the cost of manufacture is smaller than that. So it looks to us that the contention is entirely reasonable that the duty proposed is hardly fair to the manufacturer in this country. They are satisfied, however, to take that, because they say they have the market now, and, if they are accorded anything like reasonable protection, they can carry on their business successfully. I trust that the amendment may be adopted.

Mr. SIMMONS. Mr. President, I know nothing about this article, but, when the committee made up its mind to put a tax of 15 per cent upon these little pins, which are used by every washerwoman in the land with which to hang out clothes to dry, I think they ought to have taken the trouble to ascertain the facts for the enlightenment of the Senate and Congress as to the production in this country and the imports. I strongly suspect from what the Senator from Vermont has said with reference to the failure to get these data, that at this time the imports are probably negligible and that the rate proposed is based not upon actual importations but rather upon apprehended importations, which is a very doubtful basis for legislation of this character.

I think, Mr. President, that we are going very far in taxing the homes of the people of the country when we begin to tax the little things such as we have been dealing with here to-day, comprising small articles of household necessity and imposing rates upon them which in many instances nearly equal the value of the product.

In this particular instance the product that is exhibited to us upon which this duty is asked in the name of labor looks very much like it could be standardized so that one man, with proper machinery, could probably produce in a day a sufficient quantity to supply the demand of a State.

I took occasion some time ago in talking about stockings, I think it was, or, perhaps, shoes, to state that certain machinery had been invented by which one man could make 150 pairs of shoes—if it were shoes—in an incredibly short time, a mere fraction of a day. That man might be paid a pretty large wage, and yet the labor cost entering into the production of those shoes be nominal. American inventive genius is such that when an article of this kind is to be made a machine invariably is invented by which it can be made almost entirely, with merely the direction of the human hand, and I imagine that there is mighty little labor in the little article which the Senator from Vermont has exhibited to the Senate.

The item is so small that I do not want to consume any time about it. I am perfectly willing that we shall vote.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The VICE PRESIDENT. The next amendment of the committee will be stated.

The READING CLERK. On page 95, line 7, after the word "finished" and the comma, it is proposed to insert "wood flour."

Mr. SMOOT. I will say that this would fall under this paragraph, but it was desired to have it specifically mentioned.

The VICE PRESIDENT. The question is on agreeing to the amendment of the committee.

The amendment was agreed to.

The ASSISTANT SECRETARY. On page 95, line 10, it is proposed to strike out "in this section, 25" and insert "35," so as to read:

house or cabinet furniture wholly or in chief value of wood, wholly or partly finished, wood flour, and manufactures of wood or bark, or of which wood or bark is the component material of chief value, not specially provided for, 35 per cent ad valorem.

Mr. SIMMONS. Mr. President, as I understand this section now, it covers house or cabinet furniture wholly or in chief value of wood, wholly or partly manufactured, wood flour, and manufactures of wood or bark, or of which wood or bark is the component material of chief value, not specially provided for, and a duty of 35 per cent is proposed. That is a clause that would catch all furniture that is not taxed in some other paragraph; so that as a result we will have in this country, when this bill passes, a tariff tax upon all kinds of furniture ranging from 35 to 60 per cent. To my mind it is a frightful picture, that of taxing everything that goes into the furnishing of the mansion and the palace and the cottage.

The Tariff Commission says:

The furniture industry takes high rank among domestic manufactures. The following table, giving figures for 1914, segregates material and certain kinds of articles, such as metal, rattan, and willow, to show the relative importance of these "substitutes." Store and office fixtures and refrigerators are included, though not always classified as furniture.

Bearing out what I have just said, that all furniture of every kind or description, wherever used, in the office as well as in the mansion and the cottage, is included in this paragraph.

The establishments are given, and the value. The totals are very high. The value of the product, including everything, is $280,000,000.

Imports fell in value from $1,017,201 in 1914 to $333,358 in 1918 (fiscal year). The chief sources are France, Italy, the United Kingdom, Canada, Hongkong, and Japan. Formerly Austria-Hungary and Germany exported largely the cheapest grades, France and Italy the finest grades.

In 1918 the imports were $219,000, in round figures; in 1919, $469,000, in round figures; in 1920, $1,866,000, in round figures; in nine months of 1921, $1,395,000, in round figures.

Exports of nonmetal furniture in 1914 were valued at $6,529,249; in 1915, at $2,923,203; in 1918 (fiscal year), at $3,938,778. Exports fell off greatly during the war, reaching low ebb in 1915.

Later statistics for the calendar years show that the exports of chairs amounted in 1918 to $1,201,000, in 1919 to $1,503,000, in 1920 to $2,400,000, and in nine months of 1921 to $935,000. Exports of office and store furniture amounted in 1920 to $1,744,000, and in nine months of 1921 to $899,000, in round figures.

Exports of all other nonmetal furniture amounted in 1920 to $4,416,000, and in nine months of 1921 to $1,909,000.

It will be seen—

Says the Tariff Commission—

that imports are considerably smaller than exports, indicating—

I want to call this to the attention of Senators on the other side—

indicating ability of American manufacturers to compete, but that imports are increasing relatively to exports—about 6 per cent in 1918 to about 37 per cent in 1921 (nine months). This gain in imports may be due in part to the rapid depletion of our hardwood forests and consequent increase in price of domestic hardwoods.

If the latter is the cause of the increase, then, Mr. President, the diminishing quantity of our basic supply would seem to indicate that we ought to get some assistance in supplying the demand from abroad instead of cutting it off altogether.

It will also be noted—

Says the Tariff Commission—

that exports and imports, while considerable in the aggregate, are both small as compared with domestic production. In 1919 exports are less than 1 per cent of production.

Foreign trade in furniture is small compared with the domestic trade, because (1) furniture is bulky and, rates being charged by space, expensive to transport.

They have another table here of manufactures of wood or bark. The imports are very small. I shall not stop to read them. The exports are very much larger than the imports in the case of manufactures of wood or bark, just as in the case that I have been reading about, and it would therefore merely multiply the facts to read the figures.

Upon the showing of the Tariff Commission as to imports and exports and domestic production, there would seem to be no justification for this duty; and the Tariff Commission, deviating from its usual course in these summaries, stresses the fact—because, I suppose, it was so forcibly borne in upon it by these conditions—that the American producer of the furniture embraced within this paragraph seemed to be amply able to protect himself against foreign competition.

I wish very much the Senator from Wisconsin [Mr. LENROOT] were in the Chamber. If he were, and if he applied the rule which he said to-day and said a few days ago also would govern him in voting on these duties, he would undoubtedly vote either against this duty or for its material reduction.

The duty in the present law is 15 per cent, and that 15 per cent has kept out imports to the point where the Tariff Commission itself—and I do not think anybody would say that the commission as now constituted is a free-trade body; I think everybody will admit that its membership is composed largely of advocates of protection, and I do not mean by that to say that its reports are colored by partisan considerations—the commission itself tells us that the American producer can take care of himself with the present rate of duty, 15 per cent. Then why, Mr. President, multiply that more than twice?

I do not wish to take the time of the Senate in further discussion. I merely want to get the facts in the record.

Mr. SMOOT. Mr. President, just a word for the record.

Every schedule in a tariff bill has a basket clause. Those items that are not specifically mentioned and provided for, falling within the class of the schedule, fall in the basket clause. So it is in this case; and the only goods that will be imported under this paragraph will be novelties. The high-priced goods will come from France if they are in the shape of furniture, and I do not care whether they pay 35 or 50 per cent on that kind of goods. If American manufacturers can not manufacture furniture in the United States that is good enough for American citizens, and they have to go over and get furniture that has a foreign brand upon it, I do not care whether they pay 25 or 35 per cent; as long as we can get that money into the Treasury of the United States, so much the better. Let them pay a part of the expenses of our Government if nothing on earth will suit them besides a foreign brand of furniture.

As far as household furniture is concerned, and as far as the production of the items following in this basket clause is concerned, there are millions of dollars' worth produced, and if the rate were 10 per cent there would be no more importations than there are now; if it were 25 per cent there would be no more than there are to-day, and if it were 35 per cent there would be no more importations than there are to-day. It is only a question of getting something in this basket clause which we know not of, an invention of some kind which may be taken out or be put into commerce, which would fall under the basket clause. I am not speaking particularly of this schedule, but of all the schedules in the bill.

Mr. NORRIS. Mr. President, I may be mistaken, but my understanding is that the Senator is discussing paragraph 414.

Mr. SMOOT. That is correct.

Mr. NORRIS. Does not ordinary household furniture, such as chairs and that kind of furniture, fall under this paragraph, and is not that covered by this rate?

Mr. SMOOT. It would not come in if the rate were 10 per cent. The freight itself is such that the manufacturers can not ship that sort of furniture into this country.

Mr. NORRIS. What I am trying to get at is whether this is not the provision which would cover ordinary furniture, such as kitchen chairs?

Mr. SMOOT. Yes; if any of it came in. The only thing that will come in under this bracket is some specially made furniture, or some style of furniture manufactured in some foreign country, and if it comes in, then why not make the importers of it pay a duty?

Mr. NORRIS. I would not have any objection to any tariff on that kind of furniture, but I asked the question because the statement of the Senator rather indicated to me that there is probably some provision in the bill which would cover household furniture.

Mr. SMOOT. My statement was that there were millions of dollars' worth of furniture made that would fall under this paragraph which, even if it bore a rate of 10 per cent, would not come into this country, and then I went on to state what kind of furniture does come in and will come in under it. They are novelties, pure and simple, and we can get 35 per cent out of them just as well as we can get 15 per cent. Anybody who goes to France or any other country in the world to get furniture of some special design ought to pay a fair duty upon it.

Mr. NORRIS. I have no objection to that. At the same time I would like to leave the way open to impose a good deal lower rate on the ordinary, common furniture.

Mr. SMOOT. It is just the same as with stoves, and articles falling under the basket clause in the iron and steel schedule, and machinery falling in the basket clause.

Mr. NORRIS. There is a good deal of difference in the freight. Suppose an ordinary kitchen table, or kitchen chair,

were shipped in here knocked down. I suppose it would probably come in that form, although I do not know. Under this provision it would have to pay a tariff of 35 per cent.

Mr. SMOOT. That is true; but it would not come in.

Mr. NORRIS. I think that rate is too high.

Mr. SMOOT. It does not come in, and it would not come in if the rate were only 10 per cent.

Mr. NORRIS. It probably will not come if you make it so high.

Mr. SMOOT. It has not come in heretofore.

Mr. NORRIS. That would enable the furniture manufacturers of our country to put the prices up too high on the kind of furniture the Senator is speaking of. I would not have any objection to almost any kind of a tariff on the novelty furniture or mahogany furniture, or something of that kind; but this covers both kinds, and it should not be drawn so as to cover both.

Mr. SMOOT. It has been that way in all tariff laws, and it covers them both in the existing law. If there were any chance at all of importing the class of furniture to which the Senator refers, I would try in some way or other to divide it.

Mr. NORRIS. We can not get any chance unless we put the rates down.

Mr. SMOOT. If we did that, we would lose the revenue altogether.

Mr. NORRIS. I should think it could be easily separated by a description. For instance, if you were providing for a rate on upholstered furniture, or furniture made of a certain kind of wood, mahogany, or something like that, you could put it in a different classification from the ordinary household furniture, such articles as people in ordinary circumstances have to buy and pay fabulous prices for.

Mr. SMOOT. I have thought of it many times, and tried to devise some language which would take care of novelty furniture, household furniture—because it is household furniture—and get it separated from household furniture, and I can not think of any words which will do it. I do not know how it can be done. The chief value of the most costly furniture is wood. It is not upholstered furniture; it is carved furniture. I do not know that I can say anything more. I want to get 35 per cent out of this class of articles, which have been coming into this country ever since the furniture industry was established in the United States.

Mr. SIMMONS. I move to strike out "35," in line 10, and insert "15."

The VICE PRESIDENT. The question is on agreeing to the amendment of the Senator from North Carolina to the committee amendment.

The amendment to the amendment was rejected.

The VICE PRESIDENT. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The next amendment was, in schedule 5, on page 95, line 11, before the word "molasses," to strike out "Sugar" and insert "Sugar," so as to read: "Schedule 5.—Sugar, molasses, and manufactures of."

The amendment was agreed to.

The next amendment was, on page 95, after line 22, to strike out:

PAR. 502. Any person manufacturing or refining in the United States sugar, testing by the polariscope over 99 degrees, produced from beet or cane grown in the continental United States, shall for each pound so manufactured or refined during any month in any State, Territory, or the District of Columbia, be permitted to import, at any time before the expiration of nine months after the last day of such month (for the sole purpose of being manufactured or refined by him in such State, Territory, or District), 2 pounds of sugar testing by the polariscope not above 96 degrees at three-fourths of the rate of duty to which such sugar would otherwise be subject. The Secretary of the Treasury shall make all regulations necessary for the enforcement of this paragraph, including the taking of bonds to secure compliance with its provisions.

The amendment was agreed to.

The next amendment was, on page 96, line 13, after the word "and," to strike out "sirups" and insert "sugar sirups, not specially provided for," so as to make the paragraph read:

PAR. 503. Molasses and sugar sirups, not specially provided for, testing not above 48 per cent total sugars, twenty-five one-hundredths of 1 cent per gallon; testing above 48 per cent total sugars, two hundred and seventy-five one-thousandths of 1 cent additional for each per cent of total sugars and fractions of a per cent in proportion.

Mr. BROUSSARD. Mr. President, I wish to call the attention of the Senate to the reading of paragraph 503 as it passed the House. It provided:

Molasses and sirups, testing not above 48 per cent total sugars, twenty-five one-hundredths of 1 cent per gallon; testing above 48 per cent total sugars, two hundred and seventy-five one-thousandths of 1 cent additional for each per cent of total sugars and fractions of a per cent in proportion.

To which the committee proposes an amendment, so as to make it read:

Molasses and sugar sirups, not specially provided for.

The amendment proposed by the Finance Committee has reference to a paragraph under the free list, paragraph 1615a, which reads as follows:

PAR. 1615a. Molasses testing not above 56 per cent total sugars not imported to be commercially used for the extraction of sugar or for human consumption.

There was long consideration of this paragraph before the Finance Committee. Before entering into the merits I wish to say that I have here letters and circulars which were issued by Penick & Ford (Ltd.), manufacturers of molasses and sirup, of New Orleans, La., and circulars issued by the soap manufacturers of this country, all of them directing the attention of dairymen and stock feeders to the importance of having free blackstrap molasses, so as to cheapen the cost per ton of feed.

The Soap Trust use large quantities of cotton seed, which they crush and from which they extract the oil, and there is left with them the residue, composed of the cottonseed meal and cakes. They have made the same propaganda here they made against the vegetable oils of the cotton growers and against the peanut and other vegetable oils produced in this country. Apparently at one time they demonstrated to the satisfaction of the people who feed stock that any duty imposed upon blackstrap molasses would increase the cost of the feed. I believe the argument is absurd and ridiculous. I am glad to see the Senator from Illinois [Mr. MCCORMICK] on the floor at this time, because the grain growers of his State were the first to realize how the feeders, the cattle people, and the dairy people of this country had been imposed upon.

Mr. MCCORMICK. Mr. President, I think it fair to say in this connection that, as far as I know, there is rather a sharp division of opinion in my State on the subject. The dairy people and the feeders, so far as my correspondence indicates, hold to one view.

Mr. BROUSSARD. I shall demonstrate to the Senator, I think, if he has any doubt as to the merits of this, that the people who grow grain which enters into competition with the compounds of feeds put up by the manufacturers of feedstuffs have a perfect right to ask that a duty be imposed on this blackstrap.

I wish to remind the committee of this fact: We must take into consideration that we are now passing a tariff bill in which all the rates as carried under the existing law have rightly been increased. This bill is being framed upon the theory of a protective tariff, whereas the Underwood-Simmons bill was framed merely as a revenue producer. I wish to call attention to the fact that in the act of 1913, known as the Underwood-Simmons law, a duty of 15 per cent ad valorem was imposed on blackstrap molasses up to 40 degrees, and above 40 degrees there was a duty of 2½ cents per gallon.

Under the Payne-Aldrich law of 1909 there was a 20 per cent ad valorem duty on blackstrap molasses up to 40 degrees, and above 40 degrees there was 6 cents per gallon duty imposed. It was perfectly natural that when the House passed the present paragraph, 503, it imposed a duty upon blackstrap molasses; that is, it made no distinction between the blackstrap molasses imported for feedstuffs, or for use in the manufacture of industrial alcohol, or for use in human consumption. I find it very singular that the committee took the view that there should be made exceptions of the imports of molasses from Cuba.

In view of the fact that the committee agrees with the rate adopted by the House on sugar, the only justification the committee can have for standing by the duty there imposed by the House is the disparity between the cost of production of the Cuban producer and the American producer of sugar. If blackstrap molasses is a by-product of the Cuban manufacturer of sugar in Cuba, and the sugar in Cuba must pay a duty to this Government in order to compete with the American sugar, there is no reason at all for not imposing a similar duty on a by-product of sugar, blackstrap, which would be compensatory, or one which would enable us to meet the blackstrap producer in Cuba on an equal basis of justice and equity, in order to equalize the cost of production here and in Cuba.

Mr. NORRIS. Mr. President——

Mr. BROUSSARD. I yield to the Senator from Nebraska.

Mr. NORRIS. I would like to ask the Senator to state where the dividing line is between molasses used for human consumption and the other kind to which he referred.

Mr. BROUSSARD. I shall come to that in a moment if the Senator will permit me to continue now. I may take more

time than is necessary to discuss this matter, but I was unable to get the committee to agree with me. I feel thoroughly convinced I am correct on the proposition. There is to my mind no justification for the action of the committee in making a difference between the blackstrap produced in Cuba and the sugar produced in Cuba, but I shall cover the subject thoroughly, and I think I may satisfy the Senator on every point about the question. I wish to take it up in the order I have it in my mind, if that will answer the purpose of the Senator from Nebraska.

I may read into the RECORD at this point the definition of what blackstrap molasses is, because I think that in a measure it will answer the question propounded by the Senator from Nebraska. I have here the report of the committee on cane sirup and molasses to the Food Administrator during the war. The men who comprised that committee were experts in this line. The chairman was Mr. R. E. Milling, of New Orleans, La.; Mr. N. W. Taussig, of the Tariff Commission, and I think he was chairman of the commission at that time; Mr. G. R. Bunker, of New York; Mr. C. D. Kemper, of New Orleans, La.; and Mr. W. L. Petrikin, of Denver, Colo.

By the way, I wish to call attention to the fact that the greatest propaganda against the small duty, which I shall demonstrate is what it amounts to, on blackstrap molasses imported from Cuba was conducted by the Penick & Ford Co., which is really a part of the Sugar Trust. It was one of the independent refineries years ago when the American Sugar Refining Co. began to organize in order to control sugar prices in this country, came down to New Orleans and took it over. It was so small and the needs of their operations there so large that they decided to build the Chalmette refinery, and they converted this small refinery into the Penick & Ford (Ltd.). We had been working for 100 years to establish the reputation of Louisiana molasses. Louisiana molasses was known throughout the United States. Those people came there and did not use the Louisiana molasses, but they used our blackstrap and they imported blackstrap from Cuba at 3 cents a gallon and filtered it, mixed it with other sirups and molasses, and put it on the market and sold it throughout the United States as Louisiana molasses at from 95 cents to $1.25 a gallon. Those people have been interested in bringing sugar and molasses into this country free of duty.

Mr. WILLIS. Mr. President——

Mr. BROUSSARD. I yield to the Senator from Ohio.

Mr. WILLIS. I simply want to get some information. I was looking at the Summary of Tariff Information, which indicates that blackstrap molasses is not at all suitable for human food. I understand the Senator is saying now that it is so used.

Mr. BROUSSARD. I desire to say that if the people who advocate free molasses conceded that it was not fit for human consumption, they would not ask that any clause be put in here providing that if sugar is extracted from the molasses it shall pay a duty. There would not have been any demand for the clause to be inserted if they held that view. The Penick & Ford people did not want any such clause inserted. But after the fight started and we made our case, the committee had some consideration for the cattle breeders and cattle feeders and dairy people, and they put the provision in so as to exclude from the provisions molasses used for human consumption and molasses from which, not that sugar may be excluded, but from which sugar is actually extracted.

I want to revert back to the report of the committee on cane sirup and molasses which was appointed by the Food Administrator for the purpose of fixing a maximum price on blackstrap molasses. As Mr. Taussig's report shows, some of this stuff was being sold at 95 cents a gallon at that time and the Food Administrator found the case so serious that he appointed this committee in order to establish a maximum price for blackstrap molasses, and here is what the committee did. It will be found on page 10 of their report that the committee recommended that the pre-war value be first taken, to which was added 50 per cent, because of increases in all products at that time, and they fixed the maximum price of blackstrap molasses at 18 cents per gallon and they stopped the imposition by which some people were fleecing the American people and foreigners.

But now I wish to come back to the proposition as to what blackstrap molasses is. Here is their definition, as given at page 13 of their report. This is the definition which this board of experts has given of blackstrap molasses:

> Whereas final molasses, which is above standard blackstrap—say, 55 per cent combined sugars—while frequently sold as blackstrap, is of superior quality and should be classed as Louisiana third molasses. Blackstrap is used generally for animal feed and for distilling purposes.

So that under the definition which they adopted in order to fix the regulations which were to apply for the fixing of the price and the importations, and the manner in which it should be put upon the market, this committee reported that—

> Whereas final molasses, which is above standard blackstrap—say, 55 per cent combined sugars.

When they referred to the final molasses they referred to molasses which is of a superior quality to the blackstrap, and they state the final molasses begins at 55 per cent of combined sugars. But final molasses is a higher grade than blackstrap.

Now, what has the Finance Committee done here? The committee proposes to let in all blackstrap molasses which contains total sugars of 56 per cent, so that under this definition as applied to the Senate amendment, the amendment proposed by the Finance Committee, all of the blackstrap and final molasses of one degree above blackstrap will be admitted into this country without duty. I do not think anybody can dispute that proposition.

This report goes thoroughly into the question of the blackstrap molasses as it confronted the Food Administration at that time.

Mr. WILLIS. Mr. President, does the Senator have before him the Summary of Tariff Information?

Mr. BROUSSARD. Yes; I have it.

Mr. WILLIS. At page 602—I am asking this because the Senator has special technical detailed information about it—is this language, which to me is not at all clear:

> Paragraph 503 is faulty as it stands, as the dividing line—48 per cent—cuts into the blackstrap instead of separating all blackstrap from the next general commercial grade, edible molasses and sirups.

It says it "cuts into it." What is the proper dividing line? How should it be stated not to do that? There is no suggestion made in the Summary of Tariff Information.

Mr. BROUSSARD. I will say to the Senator that he can take the lowest grade of Cuban blackstrap molasses and filter it and convert it into an article that can be used for human consumption. That is being done, and that product is being sold in competition with all of the sirups and molasses manufactured in this country.

Mr. WILLIS. Then, I understand the Senator's contention to be that really there is no dividing line, that it can be filtered and used as a molasses product?

Mr. BROUSSARD. Yes; filtered and used with other molasses sirups. As a raw product as it is imported, I would accept the definition which the committee gave, and to which I have referred, the definition given by the committee appointed for that purpose, that the final molasses, which is a grade above blackstrap, begins at 55, but blackstrap cuts down as low as 40, and it all depends on the quantity of sugar left there. If we had only one refinery in the world, we might establish the percentage of the sugars which would determine what was molasses and what was blackstrap, but the by-product depends upon the efficiency of the equipment and the machinery and the sugar house. It also depends upon the quality of the sucrose which is converted into sugar.

Mr. WILLIS. Then, does the Senator from Louisiana contend that the test ought to be 55 per cent instead of 48 per cent?

Mr. BROUSSARD. No; I think it ought to start at 48 per cent, because I shall show the Senator after awhile that 98 per cent of all the Cuban blackstrap molasses which was imported into this country in the year 1920 was below 40 degrees. I am coming to that, if the Senator will only have a little patience until I get to that part of it. It will be found on page 600 of the Summary of Tariff Information that the importations of molasses testing not above 40 degrees were 139,289,062 gallons, valued at $5,670,762; of blackstrap molasses, testing above 40 degrees and not above 56 degrees, there were imported 1,555,771 gallons; and above 56 degrees there were imported only 10,642 gallons of molasses, valued at $5,268.

So I submit to the Senate that the action of the Finance Committee has simply been to throw into the free list nearly 99 per cent of the molasses imported into this country if used for the making of feeds and the manufacture of alcohol and not for human food. I have here some data which, Mr. President, I should like to insert in the RECORD without reading.

The VICE PRESIDENT. Without objection, it is so ordered.

The matter referred to is as follows:

> Added cost per ton of feed if entire amount tariff, as in Fordney rate, on blackstrap molasses be reflected.
>
> In mixed feed containing 20 per cent molasses (the amount used in actual practice) 2,000 pounds. Feed, 20 per cent molasses, contains 400 pounds molasses. Weight of molasses 11.7 pounds per gallon (171 gallons molasses=1 ton).
>
> Twenty per cent of 171=34.2, which represents the number of gallons of molasses contained in 1 ton of mixed feed.

Fordney rate 0.25 of 1 cent per gallon for molasses testing 48 degrees total sugars plus 0.275 of 1 cent per gallon for each additional degree of total sugar, less 20 per cent Cuban preferential.

Test.	Rate on Cuban molasses per gallon.	Number gallons in 20 per cent feed.	Duty cost per ton of feed 20 per cent molasses.
48 per cent.....	0.20 of 1 cent.	34.2	0.0684 (6.8 cents per ton of feed).
49 per cent.....	0.42 of 1 cent.	34.2	0.14364 (14.36 cents per ton of feed).
50 per cent.....	0.64 of 1 cent.	34.2	0.21888 (21.89 cents per ton of feed).
51 per cent.....	0.86 of 1 cent.	34.2	0.29412 (29.41 cents per ton of feed).
52 per cent.....	1.08 of 1 cent.	34.2	0.36936 (36.94 cents per ton of feed).

Hay sells at $28 per ton, equal 1.4 cents per pound.

Under present duty he buys molasses at less than 3 cents per gallon. Therefore he buys 11.7 pounds of molasses for less than 3 cents. He sells the 11.7 pounds at 1.4 cents per pound=16.38 cents. Subtract cost per gallon 3 cents, profit 13.38 cents per gallon.

Twenty per cent of 2,000 pounds=400 pounds=34.2 gallons at profit of 13.38 cents per gallon=a net profit of $4.57½ on blackstrap alone on each ton of feed sold by the feed manufacturer.

Mr. SHEPPARD. May I ask the Senator from Louisiana a question at that point?

Mr. BROUSSARD. Yes.

Mr. SHEPPARD. What is the duty on the molasses that is not used as an element of human food?

Mr. BROUSSARD. On molasses used for human consumption, or the manufacture of sugar, the duty would be one-quarter of a cent per gallon up to 48 per cent of total sugars, and above 48 per cent of total sugars it would be two hundred and seventy-five one-thousandths of 1 cent for each additional degree. That was the duty which the House adopted in connection with this bill as to all molasses and which the Committee on Finance still wishes to have apply to blackstrap molasses which is imported for human consumption, but they have placed on the free list the blackstrap which is used for feeding stock or the manufacture of alcohol testing not above 56 per cent, which, to my mind, does not permit of any duty at all on blackstrap, because 56 per cent is above the total sugar content of any Cuban blackstrap molasses.

Reverting to paragraph 501, the Senator from Texas will find that the committee there impose a duty on "all mixtures containing sugar and water testing by the polariscope above 50 sugar degrees," and so forth. Blackstrap contains sugar and water. The two provisions overlap.

Mr. SHEPPARD. If I understand the Senator correctly, the form of blackstrap which the Senate committee has put on the free list is only that form which is used for feeding animals?

Mr. BROUSSARD. It is the same molasses as that used for the manufacture of industrial alcohol and for stock feeding and also for human consumption after being filtered; but the provision proposed by the committee does not put on the free list the molasses which is used for human consumption or for the extraction of sugar, while it does put on the free list that which is used for the feeding of cattle and the manufacture of alcohol. In other words, to illustrate it to the Senator, there is more consideration given to cattle in this paragraph than there is to human beings, because the blackstrap molasses imported to feed cattle is to be imported free, but on that which the Senator and I buy in the shape of molasses we are forced to pay a duty.

Mr. SHEPPARD. Is it the same article?

Mr. BROUSSARD. It is the same article except that we do not eat it in that form, but it is used as an adulterant, as a compound in the manufacture of molasses and sirups. The manufacturers use corn sirup, they use sugar-cane sirup, they use other forms of sirups. I notice the Department of Agriculture is now making a sweet-potato sirup, which is flavored to some extent with cane juice. So the manufacturers of molasses if they use this blackstrap molasses will be able to filter it and use it with sweet-potato sirup and put it on the market.

Mr. SHEPPARD. How can it be told at the customhouse whether the imported blackstrap is to be used for human food or for animal food or for the manufacture of industrial alcohol?

Mr. BROUSSARD. I am very thankful to the Senator for that question, because I desire to say that the amount of duty to be collected on blackstrap will not be an enormous sum, for the duty proposed is only a quarter of a cent per gallon, and under the provision presented to the Senate by the committee the cost of administration will, in my opinion, be so great as to more than absorb the amount of duty collected, if any effort is made to enforce its collection with any degree of justice and fairness. In other words, if the Government is simply going to take the word of the importer as to what he expects to do with the commodity, then the Government will get a certain small revenue; but if the Government expects to see that every man is made to pay the duty so as to protect every other man who does pay the duty, then the administrative features in the law, in order to determine that and to have it effectually enforced, will cost more than the duty which will be paid on this article.

Mr. SHEPPARD. How is it proposed to determine the use to which the imported article is to be put—by the word of the importer only?

Mr. BROUSSARD. I do not know; there are no administrative provisions presented to the Senate in connection with this matter; but, as I understand—and I will ask the Senator from Utah [Mr. SMOOT] to verify my opinion about it—the collector will have to decide as to how that question shall be determined.

Mr. SMOOT. Of course, it is not known whether or not the imported molasses is for human consumption. There is only one way in the world to find that out, and that is to trace it to the place where it is made into food for consumption. When the molasses arrives, of course it will be taxed according to the rules and regulations prescribed by the Secretary of the Treasury, and I presume there will be some declaration made and some affidavits executed stating to what use the importations are to be put, but it will not be known whether the molasses will be used for that purpose unless it is followed to the place where it is manufactured, and then traced virtually to the person who consumes it.

Mr. SHEPPARD. Is the article in practically the same form for every purpose?

Mr. SMOOT. No; but it all comes in as molasses and none of it is fit for human consumption. Then it is refined; but if it contains less than 40 per cent saccharine content it does not pay to refine it.

Mr. BROUSSARD. That is true.

Mr. SMOOT. But if the saccharine content runs up to 56 per cent there is no doubt that the molasses can be refined and made into a sirup that is fit for consumption and millions of gallons of it will be used for that purpose.

Mr. SHEPPARD. Is there not some way to test the saccharine content at the customhouse?

Mr. SMOOT. Yes; that may be done in a few moments. I referred to the 56 per cent of saccharine content because the test has been raised from the present percentage of 40 to 56 per cent. If the saccharine content were only 40 per cent the molasses could not be refined successfully; that is, it could not be refined cheaply enough to make it into a sirup fit for human consumption.

Mr. SHEPPARD. That is the article which is put on the free list?

Mr. SMOOT. It is on the free list if it tests up to 56 per cent, provided it is unfit for human consumption.

Mr. GERRY. Mr. President, I should like to ask the Senator from Utah a question if the Senator from Louisiana will permit me.

Mr. BROUSSARD. I should like to proceed for a moment. I think I have found an answer supported by an authority. I will again read from the report which the committee on cane sirup and molasses made to the Food Administration.

Mr. GERRY. I merely wanted to ask a question for information, if the Senator will yield to me.

Mr. BROUSSARD. Very well; I yield.

Mr. GERRY. I should like to know if the 40 per cent molasses to which the Senator from Utah referred is not tested by another method rather than by the polariscope method?

Mr. BROUSSARD. An altogether different test is employed.

Mr. GERRY. So that the 40 per cent grade as provided by the Underwood law represented a different degree of saccharine content than 40 per cent under this test.

Mr. SMOOT. That is true, but it does not amount to 56 per cent.

Mr. GERRY. I am not stating that it does; but apparently, from the statement of the Senator from Utah, it would appear that the degree of saccharine content has been increased from 40 per cent to 56 per cent. The difference, however, is by no means so great as that.

Mr. BROUSSARD. Mr. President, I think the two Senators to whom I yielded have digressed from the question asked by the Senator from Texas. I wish to revert to the question of how the difference can be told between the molasses imported for human consumption and molasses imported for the purpose of manufacturing industrial alcohol or for feeding purposes.

I quote from the report of the committee of experts on molasses to the Food Administration, to which I have referred:

Refiners' sirup is produced from the refining of raw sugar. Such raw sugar, of a standard polarization of 96°, usually produces about 93 pounds of granulated sugar and 5 pounds of refined sirup, or if blackstrap is produced instead of refined sirup, somewhat more than 5

pounds. These refined sirups are sold on sample and their value depends so entirely on their color and flavor that it is not practicable to establish standard grades. When sold for export they are graded as filtered or unfiltered, according to whether they have or have not received a final filtration. The proportion of final filtered sirups and blackstrap produced by the refinery depends upon—

First, whether or not the refinery is equipped to produce filtered sirups; and

Second, the relative price of each.

Refineries that are equipped for making the highest quality of refined sirup may produce blackstrap by simply failure to filter the sirups. Of course, it costs more to produce the filtered sirup than the blackstrap, and this added cost may or may not be proportional to the extra value added to the sirup by the filtration process; this is difficult to determine. But the essential fact is that the refiner produces by this extra refining a very high grade of table sirup, whereas if he produces blackstrap it is used only as animal food or for distilling.

So here is what happens in Louisiana, say: We improve our blackstrap, and it is a very much higher grade article than that produced by the Cuban factories, and the Senator will readily understand that. Our sugars are not refined, but we can put them on the market and obtain a sale for them. They are in usable shape. During the war the food administrator of my State accommodated people in various parts of the United States where our Louisiana plantation sugars were sold to the public and used the same as the refined sugar; so that when you go to clarify that, to bring the sugar to that state, you are making a higher degree of article than the Cuban raw sugar which comes here, and which most of you would not recognize to be sugar if you saw it. Then when the molasses people who prepare this molasses for human consumption here get it they filter it, and when they have done that they have simply added that much labor which the Cuban producers fail to do, and then instead of having blackstrap molasses fit for animal consumption they sell it for human consumption. That is the difference.

Mr. President, I wish to call attention to the source from which we imported all this blackstrap molasses in 1920. On page 600 of the Summary of Tariff Information we find this, about the middle of the page:

A comparatively small quantity, 20,792 gallons in 1920, is imported free of duty—all from the Virgin Islands. Of the dutiable imports by far the greater part is from Cuba—148,084,934 gallons out of the total of 161,156,639 gallons in 1920. The imports from Cuba, however, are a low-grade molasses, blackstrap, used largely in the manufacture of industrial alcohol and as an ingredient of cattle feed.

So that when you consider, Mr. President, that this blackstrap molasses imported from Cuba—this large quantity, nearly 98 per cent of it imported into this country—is to come in free of duty unless it has a total sugar content of over 56 per cent, my contention is that you are landing all of this molasses free, and the only excuse that you can have for doing that is that you are doing some good somewhere. That is from the Democratic viewpoint of it; but it is absolutely indefensible from the Republican viewpoint to deny a duty upon the blackstrap molasses produced by Cubans, and at the same time to grant $1.60 per hundred pounds on the sugar, which is the primary article, produced both in Cuba and in the United States. There is no logic and no sequence of reasoning in the action of the committee, and the committee certainly should change this committee report.

Mr. President, I wish to refer to the Monthly Crop Reporter of December, 1921, page 146. After that I shall take up the objections which the grain growers of this country have to permitting this molasses to come in free of duty. I wish to say—and I think that concerns a number of Senators here on the floor—that this blackstrap molasses is refined by a molasses factory in New Orleans, which is owned by the American Sugar Trust and by others, is filtered, and then it is mixed with other sirups and molasses made in this country, and then sold as a Louisiana molasses. That article, which they produce in that way, they sell at a considerably higher price than it costs them, in view of the fact that they buy this blackstrap, which forms a large portion of their sirups and molasses, at 3 cents a gallon, and they are objecting to a duty of one-quarter of a cent a gallon, but they sell that molasses in competition with the pure molasses and sirup produced in South Carolina, for instance, or in Georgia, or in Florida, Alabama, Mississippi, Texas, or Arkansas. For instance, it is astonishing to most of you to know that Georgia in 1920 made 9,697,000 gallons of molasses and sirup. It was the leading State, and after that came Louisiana and Alabama and Mississippi; but these refined blackstrap products are then put on the market and sold in competition with the real, genuine article that we think we are buying when we buy the other. So I can see no reason, from that standpoint, to exempt them from the payment of a much larger duty than a quarter of a cent per gallon.

To show exactly what the propaganda was that brought about this condition, I wish to say that the industrial alcohol people, who use most of this blackstrap, have never raised their voice against the imposition of this duty. There were converted into industrial alcohol in Louisiana for the year ended June 30, 1919, of this blackstrap molasses, 27,073,185 gallons. These people are not asking that the blackstrap be put on the free list. I do not think that the Senator from Alabama [Mr. UNDERWOOD], when he was writing his bill, was ever asked to put blackstrap upon the free list. It never was on the free list before in any bill that I know of. This propaganda was started by the soap manufacturers, who are interested in buying cheap molasses, to dispose of their cotton-seed hulls and cotton-seed meal in competition with good, sound grain that your own farmers are producing everywhere throughout the United States, and pressed here by the sweet-feed manufacturers, and by Penick & Ford, who are interested in crushing the American sugar industry, and they do not want us to get this little protection.

I should like to state to the chairman of the committee that I do not care how much the difference may be between what you need actually to permit you to market your article and a less duty or no duty at all. It may be one-tenth of 1 cent, but if it is one-tenth of 1 cent it prevents you from putting it on the market.

Here is the situation that faces the farmers in my State: Here is a by-product. We were not able to sell it on an average for 3 cents per gallon last year. It cost us something to get it to market. It cost us something to put it on the cars to take it to market. We need as a minimum the House rate in order to permit us to put it on the market without loss; but if we are denied this protection, what is the result? We can not economically take money out of our pockets to market this stuff in order to rid the plantation of it, and unless you do that here is the condition, which most of you do not appreciate: It must remain on the plantation. It ferments. The United States Government will not permit us to throw it into the streams, because it sours the water, kills the fish, and makes it almost dangerous to live on any stream in which there is this decaying fish and fermenting molasses. So that we are up against the proposition that unless we are allowed sufficient duty to permit us to put it on the market without loss we must keep it on the plantation, and then we are again put to a cost in order to prevent injuring our neighbors' property, because this molasses will ferment, and if you permit it to go into the drains it gets out into your neighbors' farms and it sours the soil and makes it unfit for cultivation until you have limed it. Before we began the use of this blackstrap molasses in the manufacture of industrial alcohol and in the feeding of cattle, it is a matter within my own knowledge that some of the plantations had as much as 30 acres of land which was absolutely set aside for the purpose of receiving this fermenting molasses. In order to save the rest of the plantation that amount of property had to be sacrificed, because every time it broke through the levee or got into a drain or got into the stream the United States marshal came around and arrested the proprietor of the plantation for having polluted the stream.

That is the situation which confronts us. We need this duty; and I shall demonstrate in a few moments that the excuse which Penick & Ford and the other people put over the feeders and the dairy people of this country was absolutely a purely selfish instrument, which they used to serve their own purposes and at the same time to destroy us; and I will show that these dairymen will not have the price of the feedstuff which they buy for their dairies or that the rancher will not have the price of the feedstuff which he buys increased by more than 6 cents per ton, and yet that is the excuse which was submitted to the committee in order to deny us a duty on this blackstrap imported from Cuba.

I do not think anybody will deny the fact—and I have the figures here, which I could insert in the RECORD—that last year we were unable to get as much as an average of 3 cents per gallon for our entire output of molasses.

Now, I want to get to the practical side of this matter, to discuss with the committee and the Senators here the effect which they claim this duty would have upon the price of feedstuffs. I have here a statement, which I ask to insert without reading, but I wish to comment upon it, which figures out absolutely the additional cost which a duty proposed as the House paragraph went through the House would add to the cost per ton of feedstuff.

Added cost per ton of feed if entire amount of tariff, as in Fordney rate, on blackstrap molasses be reflected.

I wish to state, too, before proceeding with that, that I am absolutely disregarding the fact that there is at present a duty of 15 per cent ad valorem on importations into this country of blackstrap up to 40°, and that above 40° and up to 56° there is a

duty of 2½ cents, so that the figures I am about to submit should be reduced still further. In other words, to illustrate, I am now assuming that blackstrap is on the free list, and I want to demonstrate how much will be added if this provision which passed the House should be agreed to in the Senate.

In mixed feed containing 20 per cent molasses, which is the average amount feedstuffs have, the 20 per cent of molasses would be 400 pounds of molasses. The weight of the molasses is 11.7 pounds per gallon, so that 20 per cent of 171 gallons of molasses, which you will find to be contained in a ton, would be about 400 pounds.

The Fordney rate is one-fourth of 1 cent per gallon for molasses testing 48 per cent total sugars plus two hundred and seventy-five thousandths of 1 cent per gallon for each additional degree of total sugar.

Then we find that fully 95 per cent of this blackstrap molasses is imported from Cuba, so that when you add the additional cost due to the Fordney rate you must also deduct the 20 per cent preferential which under the treaty is allowed to Cuba, and on that basis you will find this difference. So with molasses testing 48 per cent the rate of Cuban molasses per gallon will be twenty-five one hundredths of a cent, less 20 per cent, which would be twenty one hundredths of 1 cent against Cuba. The number of gallons in 20 per cent feed would be 34.2. The duty cost per ton of feed for 48 per cent molasses would be 6.84 cents.

That is what would be added to the cost of a ton of feed due to the rate of duty under the Fordney rate, as compared with free blackstrap molasses. This table demonstrates the increase which will occur if stock feeders use 49 per cent stuff. The increase will be 14 cents per ton. With 50 per cent total sugars, the increase would be 34 cents per ton. So on up to 52 per cent, where the increase would be 34.2 cents per ton, as against Cuba, after making allowance for the preferential in its favor.

What does the manufacturer of feedstuffs do with this blackstrap? He buys it at 3 cents per gallon. There is an average of 20 per cent of blackstrap molasses in a ton of feed. He buys this molasses at 3 cents per gallon. He sells his feedstuff at $28 per ton, which is 1.4 cents per pound. He uses 34.2 gallons in a ton of feed, and on each gallon he makes a profit, out of this very blackstrap, of 13.38 cents; so that instead of claiming to the cattle feeders and the dairy people that one-fourth of 1 cent per gallon on this blackstrap would force him to increase the price, he should admit that he buys 11⅛ pounds of blackstrap molasses for 3 cents a gallon, but after he mixes it up with other feedstuffs that he draws down 16.38 cents, making a clear profit on every gallon of blackstrap which he uses in the manufacture of this mixed feed of 13.38 cents net.

As I stated before, he uses 34.2 gallons per ton, so that on the quantity of blackstrap which he mixes to make a ton of feed, on the blackstrap molasses alone, he makes a profit of $4.57½. This is his profit when he uses 20 per cent, but he frequently uses 40 per cent, which doubles his profit.

It is a very simple problem. He can buy all the blackstrap molasses he wants at 3 cents a gallon. He puts 20 per cent of molasses in every ton of feed, and he sells that at 1.4 cents per pound, making a net profit of 13.38 cents for every gallon of blackstrap he uses, and he now objects to our having one-fourth of 1 cent per gallon on this blackstrap.

I wish to say this, in addition—and this is where it concerns the people who grow grain: These feed manufacturers will take a grain that is unfit for consumption. They will take the sweepings out of their barns and out of the warehouses. They will take mildewed grain. They will take a food that is not fit for consumption in its natural state. They will take cobs and shucks. They will take straw, and they will mix that with a smaller percentage of grain, and without the blackstrap molasses the stock would not touch it, but when they put 20 per cent of this blackstrap molasses with it, they can even put shavings in it, and the stock will eat it; and by the use of blackstrap molasses they are converting foodstuffs that animals will not consume into a product with which they are competing and underselling the man who is selling straight corn or straight oats, and they are driving those people out of the market, as the farmers of Illinois have discovered, as I shall show presently.

I wish to read a letter I have received from the Peoria County Farm Bureau, of Peoria, Ill. When the committee made its report I had occasion to talk with gentlemen who knew some of these agriculture associations and farm bureaus, and I imparted to them the facts which I have just stated, and told them that the use of this blackstrap molasses was a great drawback to them. They immediately wrote for information, and after having corresponded with me I referred them to Mr. Rodgers, who is an expert on this subject. They have written me several letters, the last of which is, in part, as follows:

We wish you would do us the honor to read the inclosed brief prepared by the American Farm Bureau Federation and presented to Senator MCKINLEY and Senator MCCORMICK to be substituted for the brief presented to the Senate Finance Committee during the last week in March, as published in Schedule 5, proposed tariff act of 1921, H. R. 7456, and urge you to support a duty on blackstrap molasses as shown therein, equal to the import duty of not less than 15 cents per bushel on corn.

It is within the power of Congress and the Senate to create an additional demand for from 34,000,000 to 40,000,000 bushels of corn and several hundred thousand bushels of barley, and create a supply of concentrated protein, and when mixed with other rations equals 3,000,000 to 4,000,000 tons of protein dairy feed annually, and raise a revenue for the Government of from $5,000,000 to $6,000,000 per annum, by placing an import duty on blackstrap molasses at least equal to the proposed import duty on corn.

Here is shown the value of the blackstrap molasses:

For distilling purposes, 6 gallons of molasses equals in production 1 bushel of corn.

For feeding purposes, 4⅘ gallons of blackstrap molasses displace 1 bushel of corn.

So that the argument is made that there should be a duty placed on blackstrap molasses because it displaces grain, both in the production of industrial alcohol and in the feeding of live stock, and, as it displaces, by underselling, perfectly sound and perfectly assimilable grain which the stock would relish, because they are getting this blackstrap molasses so cheap, the farmers are beginning to realize that unless they accept this blackstrap molasses on its scientific basis, its caloric value for feedstuffs, that it will displace, as they claim here, between thirty and forty million bushels of corn. I am presenting that merely for the purpose of showing their viewpoint, and I ask unanimous consent that the rest of this letter be inserted in the RECORD without reading it all.

There being no objection, the letter referred to was ordered to be printed in the RECORD, as follows:

PEORIA COUNTY FARM BUREAU,
Peoria, Ill., May 25, 1922.

Hon. EDWIN S. BROUSSARD,
United States Senate, Washington, D. C.

DEAR SIR: We wish you would do us the honor to read the inclosed brief prepared by the American Farm Bureau Federation and presented to Senator MCKINLEY and Senator MCCORMICK, to be substituted for the brief presented to the Senate Finance Committee during the last week in March, as published in Schedule 5, proposed tariff act of 1921, H. R. 7456, and urge you to support a duty on blackstrap molasses as shown therein, equal to the import duty of not less than 15 cents per bushel on corn.

It is within the power of Congress and the Senate to create an additional demand for from 34,000,000 to 40,000,000 bushels of corn and several hundred thousand bushels of barley, and create a supply of concentrated protein, and when mixed with other rations equals 3,000,000 to 4,000,000 tons of protein dairy feed annually, and raise a revenue for the Government of from $5,000,000 to $6,000,000 per annum by placing an import duty on blackstrap molasses at least equal to the proposed import duty on corn.

For distilling purposes 6 gallons of molasses equals in production 1 bushel of corn.

For feeding purposes 4⅘ gallons of blackstrap molasses displaces 1 bushel of corn.

As shown by the brief presented by the feed manufacturers they use 95,000,000 gallons of blackstrap molasses, and that 4⅘ gallons of blackstrap molasses displaces 1 bushel of corn for feeding purposes. The Internal Revenue Department shows a production of 82,331,687 gallons of alcohol during 1920, and as 1 bushel of corn produces 2½ wine gallons of alcohol, blackstrap is to-day displacing for feed and alcohol purposes from 34,000,000 bushels to 40,000,000 bushels of corn annually. From 1916 to 1919 the feed manufacturers paid from 9½ cents to 15 cents per gallon for blackstrap molasses free on board New Orleans (see Schedule 5, p. 2368, Exhibit B, of the hearing before Committee on Finance, H. R. 7456), and their testimony shows they would have used double the amount had they been able to obtain it.

In their brief they claim if a duty in excess of one-half cent per gallon is assessed on blackstrap molasses it can not be used for feed purposes. During the past year or more blackstrap molasses sold from 2½ cents to 3 cents per gallon, f. o. b. New Orleans, equal to a reduction since the peak of from 500 to 600 per cent. Mixed feed for dairy purposes have not declined 500 to 600 per cent. Blackstrap molasses is only a carbohydrate, and not a concentrated protein. It is being used for the masking and sweetening of ingredients in the manufacture of mixed feed to enable the manufacturer to use a wide range of by-products that the live stock would otherwise not relish. For milk production blackstrap molasses has very little, if any, value. The corn-belt farmers and the dairy farmers are producers of large quantities of carbohydrates on the farm, and in order to balance their rations they are in need of a cheap protein instead of blackstrap, a carbohydrate.

The corn-belt farmer knows only too well to fatten steers for quick turnover, corn is the main cereal ration used, combined with high protein feed such as cottonseed and linseed meals, and by permitting hogs to run with the steers the hogs are fattened at a very little additional expense, and blackstrap molasses, a carbohydrate, would not improve the ration, as there is already a sufficient quantity of carbohydrates in corn and other roughage.

Before blackstrap molasses was substituted for corn in the distillation of alcohol, there was produced a sufficient amount of distillers' dried grains, consisting of 32 to 36 per cent protein, that would produce over 4,000,000 tons of a balanced dairy ration for milk production.

The brief of the American Farm Bureau Federation, asking for a duty on blackstrap molasses equal to the import duty on corn, is for the protection of the American farmer, who produced last year

3,281,000,000 bushels of corn, with a value of approximately $1,968,600,000. This corn must find an outlet outside of the corn belt, either through feeding or export. History shows that practically 85 per cent of the corn raised in the United States must be fed on the farm. The competition of blackstrap molasses in displacing corn for feeding and distilling purposes is greatly increasing our surplus and has a very depressing effect on our market. The import duty will have a very beneficial effect of restoring the value of our product.

When this amendment comes up on the floor of the Senate, we urge you to support it, thereby protecting the products of the American farmer instead of permitting the waste products from foreign countries to enter this country free of duty and depress the market of our farmers' main crop—corn.

Respectfully submitted.

Peoria County Farm Bureau, per Zealy M. Holmes, president; The American Distilling Co., Pekin, Ill., per E. M. Wilson, president, per J. Young, traffic manager; McLean County Farm Bureau, per Harrison Fahrnkopf, farm adviser; Tazewell County Farm Bureau, per Chester G. Starr, farm adviser; Association of Commerce, Pekin, Ill., per W. J. Reardon, president, per J. H. Brancht, secretary; Champaign County (Ill.) Farm Bureau, per Kathryn B. Kennedy, assistant secretary; Sangamon County Farm Bureau, per I. A. Madden, farm adviser; Vermilion County Farm Bureau, per Arthur Lumbrick, farm adviser; Woodford County Farm Bureau, per J. Frank Felter, president; Stark County Farm Bureau, per E. E. Brown, farm adviser; Mason County Farm Bureau, per T. A. Isaacs, farm adviser; Marshall-Putnam Farm Bureau, per F. E. Fuller, farm adviser.

[At this point Mr. BROUSSARD yielded the floor for the day.]

Mr. McCUMBER. Mr. President, I ask unanimous consent that when the Senate closes its session on this calendar day it shall recess until to-morrow at 11 o'clock.

The PRESIDING OFFICER (Mr. ODDIE in the chair). Is there objection? The Chair hears none, and it is so ordered.

RULES AND REGULATIONS, STEAMBOAT INSPECTION SERVICE.

The VICE PRESIDENT laid before the Senate a communication from the Acting Secretary of Commerce, transmitting, pursuant to law, the general rules and regulations prescribed by the Board of Supervising Inspectors, Steamboat Inspection Service, at its meeting of January, 1922, and approved by the Secretary of Commerce, which was referred to the Committee on Commerce.

MISSOURI RIVER BRIDGE.

Mr. CALDER. I report back favorably without amendment from the Committee on Commerce the bill (H. R. 8785) granting the consent of Congress to the Mobridge Bridge Co., of Mobridge, S. Dak., to construct a pontoon bridge across the Missouri River, and I submit a report (No. 767) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole, and it was read, as follows:

Be it enacted, etc., That the consent of Congress is hereby granted to the Mobridge Bridge Co., of Mobridge, S. Dak., and its successors and assigns, to construct, maintain, and operate a pontoon bridge and approaches thereto across the Missouri River at a point suitable to the interests of navigation, at or near Mobridge, in the county of Walworth, in the State of South Dakota, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

LAKE ST. CROIX BRIDGE.

Mr. CALDER. I report back favorably without amendment from the Committee on Commerce the bill (H. R. 10330) to extend the time for the construction of a bridge across Lake St. Croix at or near the city of Prescott, in the State of Wisconsin, and I submit a report (No. 768) thereon. I ask unanimous consent for its present consideration.

There being no objection, the bill was considered as in Committee of the Whole, and it was read, as follows:

Be it enacted, etc., That the times for commencing and completing the construction of a bridge and approaches thereto authorized by an act of Congress approved February 15, 1921, to be built by the Prescott Bridge Co., across Lake St. Croix at or near the city of Prescott, in the county of Pierce and State of Wisconsin, are hereby extended one and three years, respectively, from the date of approval hereof.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

ALLEGHENY RIVER BRIDGE.

Mr. CALDER. I report back favorably without amendment from the Committee on Commerce the bill (H. R. 11345) authorizing the construction of a bridge across the Allegheny River at or near Freeport, Pa., and I submit a report (No. 769) thereon. I ask unanimous consent for the present consideration of the bill.

There being no objection, the bill was considered as in Committee of the Whole, and it was read, as follows:

Be it enacted, etc., That the State of Pennsylvania be, and it is hereby, authorized to construct, maintain, and operate a bridge and approaches thereto across the Allegheny River at a point suitable to the interests of navigation at or near Freeport, in the State of Pennsylvania, in accordance with the provisions of the act entitled "An act to regulate the construction of bridges over navigable waters," approved March 23, 1906.

SEC. 2. That the right to alter, amend, or repeal this act is hereby expressly reserved.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

EXECUTIVE SESSION.

Mr. JONES of Washington. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to; and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session the doors were reopened; and (at 6 o'clock and 5 minutes p. m.) the Senate, under the order previously entered, took a recess until to-morrow, Wednesday, June 14, 1922, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate June 13 (legislative day of April 20), 1922.

MEMBERS OF UNITED STATES SHIPPING BOARD.

Admiral William S. Benson to be a member of the United States Shipping Board for a term of six years.

Meyer Lissner to be a member of the United States Shipping Board for a term of six years.

UNITED STATES ATTORNEY.

Henry M. Holden to be United States attorney, southern district of Texas.

UNITED STATES MARSHAL.

James E. McClure to be United States marshal, southern district of Illinois.

POSTMASTERS.

COLORADO.

Susan L. Clark, Blanca.
Richard H. Brown, Silverton.

ILLINOIS.

William A. Kelley, Jonesboro.
Daisy F. Lynk, Mokena.
Luella H. McCoid, Venice.

MISSISSIPPI.

Henry C. Majure, Newton.

OHIO.

Arthur L. Behymer, Cincinnati.
Sage P. Deming, Rocky River.

SOUTH DAKOTA.

Frank C. Clegg, St. Lawrence.

TEXAS.

James F. Painter, Wolfe City.

HOUSE OF REPRESENTATIVES.

TUESDAY, *June 13, 1922.*

The House met at 12 o'clock noon and was called to order by the Speaker pro tempore [Mr. WALSH].

The Chaplain, Rev. James Shera Montgomery, D. D., offered the following prayer:

Almighty God, we are grateful that we are not lost and far away, and that the tabernacle of the Lord is with men. As the heavens are high above the earth, so are Thy ways higher than our ways. We bless Thee that in death there is life, in sacrifice there is forgiveness, and out of evil Thou canst bring good. With resolute courage and faith we would in a common vow pledge anew our devotion to the Christian institutions of our land. O hear the voices that are broken by the sobs of sorrow and comfort them with fatherly tenderness. In Thy holy name. Amen.

The Journal of the proceedings of yesterday was read and approved.

REERECTION OF STATUE OF ABRAHAM LINCOLN.

Mr. KING. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Illinois rise?

Mr. KING. I ask unanimous consent to take from the Speaker's table House Joint Resolution 127 and agree to the Senate amendments.

The SPEAKER pro tempore. The gentleman from Illinois asks unanimous consent to take House Joint Resolution 127 from the Speaker's table and agree to the Senate amendments. The Clerk will report the resolution and Senate amendments.

The Clerk read as follows:

H. J. Res. 127. Joint resolution to reerect the statue of Abraham Lincoln upon its original site.

The Senate amendments were read.

The SPEAKER pro tempore. Is there objection?

Mr. GARNER. Mr. Speaker, reserving the right to object, may I make inquiry of the gentleman whether any members of the Committee on Appropriations or anyone else who has knowledge of the subject has made inquiry as to the $5,000 being necessary to replace the monument?

Mr. KING. I will say to the gentleman from Texas that the Senate committee investigated the matter and received a letter from Colonel Sherrill stating that said sum would be necessary, and the Architect of the Capitol, Mr. Elliott Woods, has informed the gentleman from Wyoming [Mr. MONDELL] of the probable cost by letter, which is in harmony with the opinion of Colonel Sherrill. I have also had this matter up with the gentleman from Georgia [Mr. CRISP], on the Democratic side, and one or two others who have been interested in the matter, and also with the chairman of the Committee on Appropriations [Mr. MADDEN], and there is no objection to concurring to the Senate amendments.

Mr. GARNER. It looks like that is sufficient.

Mr. KING. I thank the gentleman.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none. The question is on agreeing to the Senate amendments.

The Senate amendments were agreed to.

EXTENSION OF REMARKS.

Mr. WINGO. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Arkansas rise?

Mr. WINGO. To submit a unanimous-consent request.

The SPEAKER pro tempore. The gentleman will state it.

Mr. WINGO. I ask unanimous consent to print in the RECORD in 8-point type Bulletin No. 1521, Treasury Department, issued from the office of the Comptroller of the Currency on Monday, June 12.

The SPEAKER pro tempore. The gentleman from Arkansas asks unanimous consent to print in 8-point type in the RECORD Bulletin No. 1521 of the Treasury Department, issued on June 12. Is there objection? [After a pause.] The Chair hears none.

The bulletin is as follows:

[Bulletin No. 1521.]

TREASURY DEPARTMENT,
OFFICE OF COMPTROLLER OF THE CURRENCY,
Monday, June 12, 1922.

APPLICATION TO ORGANIZE RECEIVED.

June 8.	Capital.
The Vale National Bank, Vale, Oreg. (correspondent, Ralph A. Holte, Vale, Oreg.)	$50,000

APPLICATIONS TO ORGANIZE APPROVED.

June 5.	
The Planters National Bank, Clarksdale, Miss. (correspondent, Oscar Johnston, Clarksdale, Miss.)	600,000
June 7.	
The West Side National Bank, Yakima, Wash. (correspondent, F. A. Duncan, Yakima, Wash.)	100,000
June 8.	
National Bank of Marietta, Marietta, Ga. (correspondent, James T. Anderson, Marietta, Ga.)	100,000

APPLICATIONS TO CONVERT RECEIVED.

June 8.	
The First National Bank, Kenbridge, Va. (conversion of the State Bank, Kenbridge, Va.; correspondent, State Bank of Kenbridge, Kenbridge, Va.)	45,800
The Farmers National Bank, Independence, Oreg. (conversion of the Farmers State Bank, Independence, Oreg.; correspondent, C. W. Irvine, president Farmers State Bank, Independence, Oreg.)	25,000

APPLICATION TO CONVERT APPROVED.

CORPORATE EXISTENCE EXTENDED.

6321. The First National Bank, Dawson, Minn. Until close of business June 5, 1942.

6330. The Citizens National Bank, Springville, N. Y. Until close of business June 5, 1942.

6314. The First National Bank, Elmwood Place, Ohio. Until close of business June 6, 1942.

6320. The First National Bank, Floresville, Tex. Until close of business June 6, 1942.

6369. The First National Bank of Jasper, Mo. Until close of business June 6, 1942.

6384. The First National Bank of Falls Creek, Pa. Until close of business June 6, 1942.

6312. The First National Bank of Leeds, N. Dak. Until close of business June 8, 1942.

6322. The First National Bank of Norwood, Ohio. Until close of business June 8, 1942.

6329. The First National Bank of Groveton, Tex. Until close of business June 8, 1942.

6342. The Taylor National Bank of Campbellsville, Ky. Until close of business June 9, 1942.

6308. The Marion National Bank, Marion, Ohio. Until close of business June 11, 1942.

6356. The First National Bank of Madisonville, Tex. Until close of business June 11, 1942.

CORPORATE EXISTENCE REEXTENDED.

66. The First National Bank of Lyons, Iowa. Until close of business June 6, 1942.

1. The First National Bank of Philadelphia, Pa. Until close of business June 9, 1942.

18. The First National Bank of Iowa City, Iowa. Until close of business June 11, 1942.

2752. The First National Bank of Miles City, Mont. Until close of business June 11, 1942.

CHANGE OF TITLE.

June 6.

66. The First National Bank of Lyons, Clinton, Iowa, to "First National Bank of Lyons at Clinton," to conform to change in the name of place in which bank is located.

VOLUNTARY LIQUIDATIONS.

June 5.	Capital.
5483. The First National Bank of Wylie, Tex. Effective May 31, 1922. Liquidating agent, V. G. Gallagher, Wylie, Tex. Absorbed by the First State Bank of Wylie, Tex	$25,000
10969. The First National Bank of Kimberly, Idaho. Effective May 31, 1922. Liquidating agent, John W. Hardin, Kimberly, Idaho. Absorbed by the Bank of Kimberly, Kimberly, Idaho	25,000

CONSOLIDATION.

June 10.	
5046. The Riggs National Bank of Washington, D. C.	1,000,000
12194. The Hamilton National Bank of Washington, D. C. Consolidated under the act of Nov. 7, 1918, and under the charter and corporate title of "The Riggs National Bank of Washington, D. C." (No. 5046), with capital stock of $1,000,000. The consolidated bank has three branch banks at the following locations: Seventh and Eye Streets NW.; 734 Fifteenth Street NW.; and Twentieth and P Streets NW. The main office is located at 1503 Pennsylvania Avenue	200,000

Mr. WILLIAMSON. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from South Dakota rise?

Mr. WILLIAMSON. To prefer a unanimous-consent request.

The SPEAKER pro tempore. The gentleman will state it.

Mr. WILLIAMSON. I ask unanimous consent to extend my remarks upon agricultural legislation.

The SPEAKER pro tempore. The gentleman from South Dakota asks unanimous consent to extend his remarks in the RECORD upon agricultural legislation. Is there objection? [After a pause.] The Chair hears none.

THE PRESENT CONGRESS AND THE FARMERS.

Mr. WILLIAMSON. Mr. Speaker, no Congress in a generation, if indeed in the entire history of our country, has been in so complete accord or in such sympathetic touch with the aspirations of the farmers of America as the present Congress. The farm problem has been studied in minute detail in all its aspects. Nothing has been too trivial or too difficult of solution to receive the attention of our ablest statesmen. A sincere effort has been made to get to the bottom of the causes that have all but brought disaster to the agricultural industry of the Nation. Systems and practical means of establishing adequate agricultural credits, the marketing of farm products, and the relation of agriculture to other industries have been studied as never before. Members of Congress representing agricultural sections have with compelling force and irrefutable logic pressed their measures of relief with unflagging energy. They have convinced their colleagues that without a reasonable return to the tillers of the soil, who are our Nation's largest purchasers of manufactured goods, there can be no general prosperity for others, and that when agriculture is strangled all other lines must necessarily languish.

The result has been the enactment of a series of laws whose beneficial influence will become increasingly apparent. Already agriculture has been lifted to its feet. Despair and pessimism are giving away to hope, and the farmers are again on the highway to better times and solid prosperity, not an ephemeric, speculative hysteria that leads only to disaster, but a prosperity that shall bring substantial and adequate returns upon capital invested and labor expended.

THE EMERGENCY TARIFF.

Before the Republican Party came into power on March 4, 1921, millions of pounds of wool and mutton from Australia, great quantities of corn from South America, and wheat from Canada had been dumped upon our market. A Republican Congress had attempted to stem the deluge of imports by passing an emergency tariff bill, but this was vetoed by President Wilson. Had an adequate tariff been imposed upon these importations shortly after the signing of the armistice agriculture would never have suffered the terrible slump that overtook it. Wool became so cheap that it was largely substituted for cotton. Cotton in turn slid to the bottom of the toboggan.

One of the first acts of the new administration was to reenact the emergency tariff law. This was approved on May 27, 1921. The good effects of the law soon became apparent in the advancing price of both wool and cotton. It also put a stop to the importation of other staple farm products, and as the surplus, largely created by heavy importations, was gradually worked off, prices commenced to improve all along the line. The Russian relief measure added further stimulus to the upward trend of corn and grain prices by still further reducing our domestic surplus and has helped bring on an era which promises better things for our farmers.

FARM CREDITS.

Other laws of special importance to our rural population may be briefly summarized, as follows:

A law reviving the War Finance Corporation and so amending it as to enable it to extend credits for not to exceed three years to any person, firm, or corporation in the United States dealing in or marketing farm products, or to any association composed of persons engaged in producing such products, including live stock, and to any bank, banker, or trust company which makes or has made advances to persons engaged in the production of agricultural products, or in the breeding, raising, fattening, or marketing of live stock. But for the credits extended under this law tens of thousands of farmers would have been involved in irretrievable ruin, as it would have been impossible for the local banks to have extended their agricultural paper. The huge advances made to marketing and exporting agencies have had their reflex in better prices for farm products and have been a large factor in bringing about better conditions generally.

A law increasing the interest rate on farm loan bank bonds to 5½ per cent, so as to make the sale of the bonds possible, but without advancing the rate to the farm borrower.

A law diverting $25,000,000 from the Federal Treasury for additional working capital for the farm loan banks.

A law amending the Federal reserve act so as to make provision for placing a "dirt" farmer on the Federal Reserve Board. Had agriculture had representation in that body in 1920 it is unlikely that the price of farm products would have suffered the tragic collapse that resulted from the drastic deflation policy of the board. It is the first time that agriculture has been given definite recognition on such a board and marks a new era in its development that promises much for the future.

THE PACKERS AND FUTURE TRADING ACTS.

The packers and stockyards act prohibits packers from engaging in any unfair or deceptive practices, or giving any preference or advantage to any person or locality, or engaging in any act in restraint of trade or such as would tend to control prices or create a monopoly. This act also requires stockyards to render the same service to all comers for the same charge and to file a schedule of such charges, which must be kept open for public inspection.

The future trading act abolishes all trading in "privileges," "bids," "officers," "puts and calls," "indemnities," and "ups and downs" in grain exchanges, and making such exchanges freely accessible to farmers' cooperative organizations, and generally subjecting them to publicity and Federal control. A portion of this act has recently been held unconstitutional. A new bill, drawn with a view to meeting the constitutional objections, has been introduced, which it is expected will be passed at this session of the Congress.

The regulation and enforcement of the two acts last mentioned are left with the Secretary of Agriculture, who is also required to investigate marketing conditions of grain and grain products, including supply and demand, cost to the consumer, and handling and transportation charges, and to make such information public for the benefit of producers and consumers alike.

"FILLED MILK," GOOD ROADS, AND COOPERATIVE MARKETING BILLS.

The "filled milk" act, making it unlawful for any person, partnership, corporation, or association to ship or deliver for shipment in interstate or foreign commerce any filled milk. The sale of milk substitutes was rapidly reaching such proportions as to seriously threaten the market for the genuine article. What was even worse was that there was being foisted upon the public at practically the price of condensed milk a substitute that had very little of nutritive value and that was positively dangerous as a diet for children. This traffic has now been effectively stopped.

The good roads bill, making $75,000,000 available for road construction work in the several States, with special provision for farm-to-market highways.

And last, but very important from the standpoint of the future development of agriculture, a law taking farmers' cooperative marketing organizations out from under the antitrust provisions of the Sherman-Clayton Acts. This bill will enable the farmers through their own organizations to market their produce in an orderly manner, thereby stabilizing the market and making more certain a fair price for what they have to sell. To enable the producers to fully avail themselves of this measure an adequate system of credits should be worked out. A number of bills are now pending with this object in view, and it is confidently hoped some plan will be worked out that shall prove fully adequate to meet every situation. With ample credits and the sales agencies in their own hands, the farmers are in a fair way to work out their own salvation.

AMBITIOUS AND PROGRESSIVE PROGRAM NOT YET COMPLETED.

The above constitute only a part of the ambitious program outlined by those upon the Republican side who are seeking to help agriculture rise to the same plane as that enjoyed by other business enterprises.

There remains of this program still to be enacted a number of bills, including the following:

A bill regulating cold storage in such a manner that none but producers of certain agricultural products may keep them in cold storage beyond a specified period.

A bill to increase the maximum of individual Federal farm loan bank loans from $10,000 to $20,000.

A bill to authorize farm loan banks to extend medium time commodity credits to farmers on the security of their products and live stock.

Relief measures.—While not distinctly a part of the above program, it is worthy of note that the present Congress has done much in the way of extending relief to settlers upon Government irrigation projects and in extending the time for payment of moneys due upon homestead entries and Government-land purchases upon Indian reservations.

In addition to these measures of relief Congress provided a fund of $1,500,000 from which the Secretary of Agriculture might make seed grain loans to farmers in the crop-failure areas of the United States. Without this aid thousands of farmers would not have been able to crop their lands this year. It has also voted $350,000 with a view to stamping out the black rust by the eradication of the barberry bush, which harbors the spores and disseminates them in the spring and summer, causing millions of damage to growing small grains.

Other accomplishments.—It is also reasonably to be expected that much good will develop as a result of the labors of the Joint Commission of Agricultural Inquiry, headed by Representative SIDNEY ANDERSON (Republican), of Minnesota. The Great Lakes-St. Lawrence deep-waterway project is also in a fair way to be put into concrete form for definite action by the Congress. Should this project materialize it will rest as an achievement second only to the construction of the Panama Canal. It will not only virtually make ocean ports of our Great Lakes cities, but will result in greatly reduced transportation rates on export grains and other farm products from all that great region which constitutes the main food-producing section of the United States.

While it is not within the purview of these remarks to review the achievements of the present Congress outside of the subjects treated above it is only fair to state that in spite of a critical and obstructive Democratic minority it has enacted into law more measures of solid merit than any Congress in a generation. Time fails us to analyze the immense constructive worth and the strides forward represented by such measures as the budget and accounting act, the restriction of immigration act, the bill consolidating the various bureaus dealing with ex-service men into the United States Veterans' Bureau, the revenue act, the hygiene and maternity and infancy act, and the foreign debts funding bill.

Vast economies have been effected in every department of the Government, efficiency has been restored, taxes have been materially reduced, and a great international conference has been held which for the standard and quality of statesmanship exhibited and the magnitude of its accomplishments will not only endure as the outstanding achievement of the Harding administration, but as one of the most notable of all history.

The immediate effects of its deliberations, so far as the United States is concerned, will be the saving of hundreds of millions of dollars annually in the reduction of armaments and preparation for war and the assurance it brings of permanent peace on the Pacific.

CALL OF THE HOUSE.

Mr. DOWELL. Mr. Speaker, I make the point of order there is no quorum present.

The SPEAKER pro tempore. It is clear there is no quorum present.

Mr. MONDELL. Mr. Speaker, I move a call of the House.

The motion was agreed to.

The Clerk called the roll, and the following Members failed to answer to their names:

Anderson	Drane	Kendall	Perkins
Andrew, Mass.	Drewry	Kennedy	Perlman
Ansorge	Driver	Kiess	Petersen
Appleby	Dunn	Kindred	Pringey
Arentz	Dyer	Kinkaid	Rainey, Ala.

Vare	Wason	Woods, Va.	
Volk	Watson	Woodyard	

The SPEAKER pro tempore. On this call 247 Members have answered to their names, a quorum.

Mr. MONDELL. Mr. Speaker, I move to dispense with further proceedings under the call.

The motion was agreed to.

The SPEAKER pro tempore. The Doorkeeper will open the doors.

Mr. HERRICK. Mr. Speaker——

The SPEAKER pro tempore. For what purpose does the gentleman from Oklahoma rise?

Mr. HERRICK. To ask unanimous consent to speak out of order for five minutes.

The SPEAKER pro tempore. The gentleman from Oklahoma asks unanimous consent to proceed out of order for five minutes. Is there objection?

Mr. MONDELL. Mr. Speaker, the gentleman from Kansas has a rule to present to the House——

The SPEAKER pro tempore. Is there objection?

Mr. BEEDY. Mr. Speaker, I object.

The SPEAKER pro tempore. The gentleman from Maine objects.

EXTENSION OF REMARKS.

Mr. HAWES. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of a duty on hides.

The SPEAKER pro tempore. The gentleman from Missouri asks unanimous consent to extend his remarks in the RECORD on the subject of a duty on hides. Is there objection?

Mr. WINGO. Mr. Speaker, reserving the right to object, what gentleman from Missouri?

The SPEAKER pro tempore. The gentleman from Missouri, Mr. HAWES.

Mr. WINGO. On hides. I have no objection.

The SPEAKER pro tempore. Is there objection? [After a pause.] The Chair hears none.

The extension of remarks referred to are here printed in full as follows:

Mr. HAWES. Mr. Speaker, a duty of 2 cents a pound on green hides and 4 cents a pound on dressed hides, such as is proposed in the tariff bill now pending in the Senate, is the equivalent of more than 15 per cent ad valorem and would produce an estimated revenue of $16,000,000; but would cost the citizens of our country, in an increased shoe bill upon 330,000,000 pairs of shoes and an additional 40 cents upon each pair, a total of $132,000,000 annually.

The estimated revenue is undoubtedly high, as it does not allow for a drawback on hides made into leather for export, but, at the most, the Government would receive $16,000,000 and the people would pay an additional $132,000,000—a net loss to the people of the United States on the one item of shoes of $116,000,000.

Every one of our 110,000,000 people wear shoes. They are essential to health, comfort, and are of first necessity for human locomotion and transportation.

A man may move without a hat and with only a primitive body covering but he must protect his feet. Even the Indians did this.

It is conservatively estimated that each person uses three pairs of shoes a year, so that to move in the ordinary activities of life Americans must purchase 330,000,000 pairs of shoes each year.

There are 21,472,772 horses in the United States. Each horse has a bridle and either a saddle or a harness.

It has been stated that the Commercial Travelers' Association alone numbers 600,000 men. Each has a satchel, trunk, and strap. Each uses, at a minimum, at least three articles made in whole or in part of leather, or a total of 1,800,000 pieces.

If only one person out of each 200 travels during the year, it would mean carrying 550,000 trunks or traveling accessories made wholly or in part of leather.

Nearly every man's hat has a leather hatband, which would mean approximately 5,000,000 leather hatbands.

In the summer both men and women wear belts. This would make an additional 5,000,000.

Women carry purses, and nearly every man owns a razor strop.

Ten million automobiles use leather, and practically all machinery, both for manufacture and farm use, is driven by a leather belt.

The horse is controlled and directed by leather; the cow must have her halter; and man's best friend and companion, the dog, is entitled to his collar—all made of leather.

This duty will tax a man's shoes, his belt, his hatband, his razor strop, his trunk, his horse, his cow, his dog, his automobile, the belt that moves his machinery, his pocketbook, and, most of all, his patience!

There is not a single citizen of the whole 110,000,000 who does not use leather in two or more forms, so we find that it would be a direct tax upon every human being in the United States—not only on one article but on many articles.

The advocate of the duty on hides may advise shooting the dog, wearing wooden shoes, or going barefooted. He could not escape from the other things.

The population of Missouri is 3,404,055. Each person using three pairs of shoes at an increased cost of 40 cents a pair would put a total shoe tax on Missouri of $4,084,866. It would put a shoe tax on the city of St. Louis of $1,027,576.40; would put a total shoe tax upon the citizens of my congressional district of $268,926 and upon the United States of $132,000,000.

It must be remembered that in addition to this shoe tax would be the tax on the other articles I have enumerated, especially upon harness, saddles, automobiles, and trunks—all necessities.

In addition to the cost to the citizens in a leather tax and the unprofitable business undertaking it would be for the Nation, we find it would affect a business of first magnitude.

There is invested in shoe factories in the United States $612,625,075.

There were employed in these factories 236,244 working men and women in 1920.

We have discussed the manufacturer and the consumer, but in between these two there are tens of thousands of retail dealers in shoes who must be considered; the numerous retail agencies of automobiles, saddles, belt and leather goods. The duty will mean a disarrangement of the business of each of these retailers, and so far no satisfactory reason has been assigned for changing a Government policy of free hides which has existed from its infancy, with the single interruption of a 12-year experiment which proved a failure.

FOOLING THE FARMER.

The proponents of this tax on shoes and leather goods very loudly assert that it is to be done for the benefit of the farmer.

It will be noted in this connection that the American Farm Bureau Federation—one of the most powerful of the farm organizations—filed with the Senate Finance Committee a brief containing its opposition to a duty on hides. It had this to say:

> Cattle hides are a by-product of the production of animals for meat or dairy purposes in the United States. Animals are not produced for their hides alone, and the variation in the price of the hide has little influence on the rate of cattle production.
>
> * * * * * * *
>
> Most of the hides produced in the United States are sold by the producer on the animal, and not as hides but as part af an animal, the price being largely determined by the value of the meat on the animal. The hides taken off by packers comprise, roughly, two-thirds of the domestic supply, and hides sold by cattle producers amount to a very small part of the total.
>
> * * * * * * *
>
> Since two-thirds of the domestic hides are taken off by packers, and they also control about one-third of the tanning business, they are in a position to be a dominant factor in the hide and leather market. At any given time they have a large part of the stock of hides under their control and are in a position to sell or withhold them from the markets as they choose.
>
> * * * * * * *
>
> Cattle production needs stimulation, but the increased return from 15 per cent on 6½ per cent of the weight of the animal is so small as to be of no importance as a means of increasing cattle production.
>
> * * * * * * *
>
> Therefore, we believe that hides, leather, and leather products should remain on the free list.

These are some extracts from a comprehensive statement by a scientific organization devoted to the upbuilding of the farm and for the benefit of the farmer.

The value of a hide is approximately one-fifteenth part of the value of a steer.

Let some expert figure what 15 per cent of one-fifteenth would mean in real money.

Farmers do not sell hides; they sell beef. This is indicated by the fact that branded cattle bring the same prices as those without brands, although branded hides bring less.

The average farmer does not take three hides a year to market.

Proponents of the leather tax claim the farmer would receive a benefit of $34,000,000 per annum. It is contended that, even if this is true, it would be the packer, not the farmer, who would receive this amount.

It is estimated that there are 6,800,000 farm operatives in the United States, with an average of 4.5 persons, each of whom uses two and one-half pairs of shoes a year, at an increased cost of 40 cents a pair. This would cost the farmer $30,600,000, taking into consideration bridle, harness, saddle, automobile, and various other essentials for farm industry, estimated at $8,000,000. In shoes, the farmer would lose $4,000,000 a year. This considers the farmer alone.

When we add our other citizens, who do business with the farmer and are his friends and customers, the amount would reach $132,000,000 a year, or an annual tax of more than $1 a year upon each person.

And this tax would fall as heavily upon the poor as upon the rich.

The only way the farmer could defeat this tax would be to go barefooted or wear wooden shoes.

A curtailment in demand for hides does not stop the production or continuation of supplies. This runs with the slaughter of cattle for food, and unlike other productions it can neither be increased nor checked. The only manipulation that can be done is holding in the cellar of the packer for a rising market. The farmer can not hold them.

Hides represent only 5 per cent of the value of a steer.

The average citizen certainly does not gain by a tax upon leather.

It has been shown that the farmer as a class will not profit by it.

So the only certain beneficiary would be the packer, and he, of all people in America, does not at this time need either protection or a bounty.

The farmer knows that if we place a duty on hides we raise the cost of shoes, which will mean foreign competition, then followed logically by a demand for another tariff on shoes or an additional tax on both leather and shoes, all of which will go out of the pockets of the farmers.

HIDES A WORLD PRODUCT.

McKinley said, "We can not sell if we do not buy," and no one will accuse McKinley of not being a protectionist.

We know that cattle are decreasing and our population is increasing, so we have gone to those countries which have a surplus production of hides—such as the Argentine, Uruguay, Brazil, Mexico, South Africa, India, and countries of large areas of undeveloped land—to buy that proportion of hides necessary for our domestic use which is not produced by our cattle raisers.

Hides are a world product free from duty in every country, and now our people are asked to place a duty equivalent to more than 15 per cent on hides, which will of necessity be offensive to some of our best customers, and will be a flat denial of reciprocity in trade just at a time when the energies of our entire country are engaged in promoting friendly relations with the Latin-American countries.

The importation of hides from foreign countries from 1911 to 1920 averaged 39.20 per cent. The indications are that it will increase rather than diminish, as the production of cattle is decreasing not only in this country but throughout the world.

We buy from foreign countries nearly $70,000,000 in hides, but we sell to foreign countries foodstuffs in crude condition and animal food amounting to $979,443,058, and foodstuffs partly or wholly manufactured $779,194,765.

To hold trade we must buy where we sell.

Of this total export it has been estimated that 80 per cent of two and one-half billion dollars represents the work of labor.

To lose our markets is a blow to our merchant ships. It is an assault upon labor, because one out of every ten men employed on the farm or in manufactures is engaged in producing export.

Not only will we offend some of our best customers for our manufactured products but we will at the same time check the manufacture of shoes and leather goods, thus decreasing the use of capital and the employment of labor.

Our chief competitor, England, would gain both in volume of business and profits from the business.

It looks like a bid for the farmer's vote more than a congressional vote for his benefit.

I doubt whether the farmer can be deceived, but I am sure the housewife, who knows how many shoes the youngsters wear in a year and who knows the amount of the shoe bill, can not be fooled—and we must remember that this year she votes.

WHO WILL BENEFIT BY THE TAX?

The object of a tariff on hides is to advance the price of hides.

The only possible purpose for putting a duty on hides is that it may advance the price of hides, for if it does not do this, then it is useless.

An advance in the price of hides means an advance in the price of leather of all kinds.

An advance in the price of leather means an advance in the price of shoes, harness, automobiles, furniture—if upholstered in leather—trunks, bags, straps, and many other articles.

An advance in the price of hides has not in the past and will not in the future advance the price of cattle sold on the hoof. The advance or decline in the price of cattle is caused by supply and demand for food purposes.

An advance in the price of leather means an advance in the cost of living to all of the 110,000,000 of people in the United States.

No part of the advance in hides resulting from a duty on hides will be received by the farmer, except by the relatively few farmers who slaughter one animal a year for home consumption.

The few dollars which farmers may receive for the one hide they sell, due to the duty on hides, will be many times offset by the increased cost of their shoes, harness, and so forth.

The only people to be benefited by a duty on hides are a few packers and hide dealers, and these will be unduly enriched and the 110,000,000 will suffer loss due to the increased cost of living.

If a duty is placed on hides, hides will in time advance much more than the amount of the duty placed on hides, as this duty is a protection to the packers and hide dealers who control the market, and this will enable them to create a monopoly and manipulate the market.

Stability in the price of hides, leather, and the finished products, made in whole or in part from leather, is to be desired. Such stability leads to a constant and low price to the ultimate consumer.

CREATES UNCERTAINTY AND A HIGH PRICE.

Under a duty on hides the packers and hide dealers will be enabled to manipulate the market and make prices uncertain and fluctuating, and such conditions make for higher prices of shoes and other articles made from leather much higher than the mere duty on hides, because the manufacturers of such articles must protect themselves against a constantly threatened advance in the cost of their materials. They operate with uncertainty and under the fear of advance, not justified by conditions, but made possible due to manipulation, and this fear of loss and this lack of stability in prices will be and must be provided for, and this makes for higher costs.

STABILITY NECESSARY.

Some of the objections stated are apparent, but they do not cover those intangible influences which bear directly upon the question of cost to both the manufacturer of shoes and the public.

Stability and confidence in industry, with the ability to anticipate fairly accurately from season to season uniform prices, based on supply and demand, are very necessary factors in commerce. If influences over which manufacturers and merchants can have no control are injected into a given situation, a speculative uncertainty follows. Each man has to figure safely for the simple reason that he does not know what may happen.

Unsafe estimates of cost mean increased cost. Where the element of risk enters into the situation, the cost will be figured high enough to give full protection against the risk.

Confronted with a tariff duty upon hides with a confined and limited market for raw materials, the manufacturer and merchant both suffer because of an uncertainty created by the tariff limitation.

Advance information of prices for fall and spring delivery can not be made by the manufacturer without charging a rate which secures him against loss by market manipulation of price.

THE INDEPENDENT TANNER RUINED.

The United States does not supply enough hides for American consumption—a protective tariff will enable a few packers and hide brokers to control the markets of the world and subject the market to manipulation which no man can anticipate, all of which will have a material effect in raising the price.

Foreign markets get cables daily about the hide market of the United States, and the prices in foreign markets respond to our domestic prices.

This tariff on hides can not be supported by sound reason, and the very people whom it is intended to protect must carry the load. The manufacturer does not pay the tariff; there is but one man who can pay it, and he is the consumer.

To-day the tanning industry is already largely dominated by the packers, who of late years have engaged most extensively in that business.

If a duty is placed on hides, it will in a few years enable the packers to drive the independent tanners out of business and leave the packer in almost absolute control of both hides and leather. Under free hides the independent tanners may secure their supply of hides from South America and other markets, and are not forced to buy from the packers, who are their competitors in tanning.

A CONFERENCE REPORT.

In reporting the tariff bill to the House it was brought in with a rule which permitted amendment only upon five articles. The rest of the bill, containing hundreds of paragraphs, was voted upon "yes" or "no," with no opportunity of amendment.

It is a notable fact that of these five items all were eliminated by the House when permitted to vote.

If an opportunity had been afforded, many hundreds of other items would have been eliminated.

Among the items defeated was the duty of 15 per cent on hides. The vote was 174 for the duty and 240 against.

The Fordney tariff bill has been sent to the Senate, where it is now being debated, and an active effort is again being made to place upon hides a duty even greater than the House defeated.

If a majority in the Senate supports this proposed duty, the bill will be returned to the House and a conference committee of 5 members will be instructed to represent the 435 Members of the House. Who will represent the House on this conference committee is uncertain, and when the final report is made to the House, as usual, debate will be either limited or eliminated.

As the subject is of great importance to the citizens of my district and my State, I have availed myself of the privilege of making this statement, hoping to forestall the eleventh-hour adoption of a duty which can not be successfully defended either upon the principle of protection or for the purpose of raising revenue.

PANAMA CANAL.

Mr. CAMPBELL of Kansas. Mr. Speaker, I submit a privileged report from the Committee on Rules.

The SPEAKER pro tempore. The Clerk will report it.

The Clerk read as follows:

House Resolution 365 (Report No. 1091).

Resolved, That immediately upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 11872, a bill amending the Panama Canal act. That there shall be not to exceed four hours of general debate on said bill, one-half to be controlled by the gentleman from Illinois, Mr. DENISON, and one-half by the gentleman from Alabama, Mr. HUDDLESTON, whereupon the bill shall be read for amendments under the five-minute rule. At the conclusion of the consideration of the bill for amendments it shall be reported back to the House, whereupon the previous question shall be considered as ordered upon the bill and all amendments, if any, to final passage without intervening motion except one motion to recommit.

Mr. CAMPBELL of Kansas. Mr. Speaker, the Committee on Interstate and Foreign Commerce had before them a great many bills relating to Panama. These were all consolidated and reported in the bill that is made in order by this resolution. They relate largely to the government of the Canal Zone.

I yield 10 minutes to the gentleman from Tennessee [Mr. GARRETT].

Mr. GARRETT of Tennessee. I would like to have 15 minutes, if the gentleman will yield them to me, with the right to yield part of the time.

Mr. CAMPBELL of Kansas. I yield 15 minutes to the gentleman from Tennessee [Mr. GARRETT].

Mr. GARRETT of Tennessee. Mr. Speaker, I have no objection to the adoption of this rule, and I hope that in a few days we may be able to adopt another rule of considerably more importance, but whether we can or not I am unable to say, because in the morning paper I note an item by the Associated Press which reads as follows:

HARDING OPPOSES HASTY ACTION NOW ON MUSCLE SHOALS.

[By the Associated Press.]

President Harding is understood to have taken a determined stand yesterday against the action by Congress at this time on pending bills for disposal of the Government's nitrate plant at Muscle Shoals, Ala.

The views of the President, as outlined, it was stated, to Representative MONDELL, Wyoming, the Republican leader, at the White House, were conveyed to the Republican steering committee, charged with the task of framing the legislative program of the House. Members of the committee declined to indicate whether they would recommend action on the bills or let the whole question go over until the December session.

There was no intimation as to how the President regarded the proposal of Henry Ford for lease of the property beyond the statement that he felt the matter was too big to be considered hurriedly, and in what Members regard as the closing period of the present Congress.

Mr. MONDELL. Will the gentleman from Tennessee yield to me to make a brief statement in regard to that matter right at this point?

Mr. GARRETT of Tennessee. I think I should yield to the gentleman, and I will.

Mr. MONDELL. I can not understand how the Associated Press, which is generally accurate, could have sent out that report. I do not like to criticize a press report. I am sure gentlemen who occupy responsible positions in the matter of sending out news try to be accurate, but the statements made in the dispatch that the gentleman has just read are wholly apart from the facts as I know them and understand them.

I talked with the President yesterday morning, and very briefly discussed and very briefly referred to the Muscle Shoals matter. I expressed no opinion with regard to when or how the measure would be taken up. The President expressed no opinion on the subject whatever to me. Up to this time the President has not at any time expressed to me any opinion whatever on the Muscle Shoals matter. Neither have I said anything to anyone at any time or anywhere suggesting that I had had any talk with the President in regard to the matter nor that he had expressed any opinion on the question of whether we should take up the Muscle Shoals legislation. The article is surprising to me, because, first, there was no expression whatever on the part of the President in my presence, one way or the other. Further, I have not suggested to anybody, I could not have suggested to anyone, that the President had expressed any opinion to me on the subject.

There was a meeting of the steering committee yesterday morning. I certainly said nothing at that meeting to the effect that the President had expressed an opinion on Muscle Shoals. I could not have said anything to that effect, because the President had not expressed an opinion on the subject.

Mr. GARRETT of Tennessee. Well, Mr. Speaker, of course that which caused me to give the matter immediate attention was the fact that it bore the imprint of the Associated Press, and the Associated Press very seldom makes a mistake. If it has made a mistake at this time in quoting the President of the United States or the attitude of the President of the United States, I am going to venture to say that it is the first time it has done so in quoting any President of the United States. Of course, I know nothing about the facts.

Mr. MONDELL. Will the gentleman yield just a moment?

Mr. GARRETT of Tennessee. I do.

Mr. MONDELL. The gentleman has read that article carefully?

Mr. GARRETT of Tennessee. Yes.

Mr. MONDELL. The gentleman will notice the item did not quote the President but did quote me. That is why I feel responsibility in regard to it. If the gentleman from Tennessee had not called the attention of the House to this Post article I intended to do so when we got into the debate, because I am quoted as quoting the President. I never thought of such a thing. In the first place, the President expressed no opinion on the subject. I do not recall having referred to having spoken with the President even incidentally about it.

Mr. GARRETT of Tennessee. Of course, I was not present. It is probably a pity I was not. [Laughter.]

But here is another article that I will read.

By the way, I might say that the substance of that Associated Press article which I have just read is also in a special article in this morning's New York Times. I do not believe the gentleman from Wyoming is quoted in connection with the Times article.

Here is another article, and this is not by the Associated Press, but it is in the Washington Post. It says:

SPEED SHIP SUBSIDY BILL TO MEET HARDING'S VIEW—HOUSE LEADERS WILL SUBMIT BILL TO-DAY—HOPE FOR PASSAGE BEFORE END OF SESSION.

President Harding's demand for speed in the framing of the administration ship subsidy bill resulted last night in announcement by the Merchant Marine Committee that the measure would be submitted to the House to-day.

Meanwhile the Republican steering committee was considering the President's urgent request that the bill be put to a vote as a party measure, if necessary, prior to any adjournment of Congress. At a conference yesterday with Representative MONDELL, of Wyoming, the Republican leader, the President reiterated belief that the measure was of vital interest to the business welfare of the country, and that it should not go over until the short session, beginning in December.

Reports were current at the Capitol that the President had informed members of the Merchant Marine Committee that Congress would be called in special session solely to consider the shipping bill if it failed to reach the voting stage before adjournment.

The steering committee, it was said, reached no conclusion as to its program, although leaders, after telling the President of some opposition in the party to the subsidy bill, assured him that efforts would be made to comply with his suggestion.

I do not hear any denial of the accuracy of this last article that I have read.

I will, therefore, venture to say this, that it is going to be a very interesting time for those gentlemen from certain sections of the country who see fit to permit the bringing of a ship subsidy bill before this House at the behest of the President and then, whether at the behest of the President or upon their own initiative, refuse to permit the consideration of a measure to dispose of this Muscle Shoals nitrate plant, which has the greatest fertilizer possibilities of any plant in the world and in which such a very large number of people, not confined by any means to a single section of the country, are interested. [Applause on the Democratic side.]

I yield five minutes to the gentleman from Texas [Mr. GARNER].

Mr. GARNER. Mr. Speaker, when I asked the gentleman from Tennessee [Mr. GARRETT] to yield me 5 or 10 minutes' time on this rule, I had in my mind the same thought he had—to ascertain the facts with reference to what occurred at the White House, as I had heard two stories about it. One thing is certain, Mr. Speaker, that there are three outstanding measures before this House demanding consideration from a very respectable element of this House and the country at large. One of them the President is pressing; the other two he is either holding back or taking no interest in, apparently. One of them refers to a special interest that is putting its hand in the Treasury at the expense of all the people. The other two are for the building up of the country and making it more prosperous and desirable to live in. One of them is the ship subsidy, of which he says it is very important that it should be considered before the next session of Congress. Then we have the Muscles Shoals proposition, and we have the Western States demanding a reclamation bill. Those are the three outstanding measures before this House at the present time awaiting consideration.

Now, which one is our President interested in mostly? It is the ship subsidy bill. What is the effect of the ship subsidy bill? It is to take from $75,000,000 to $100,000,000 each year from the taxpayers and place it in the hands of a special interest engaged in a certain business; whereas the Muscle Shoals proposition involves less than $100,000,000, and has for its purpose the cheapening of the production of farm products of this country, and your reclamation project has for its purpose putting into employment thousands of people in this country and reclaiming millions of acres of arid and overflowed land.

Now, what is the position of the Republican Party? So far as we can ascertain, the President is in favor of one and indifferent as to the other two. If your organization had any courage, if this majority had any courage, it would go out and bring in a rule for the purpose of securing the consideration of the Smith-McNary bill. You have not the courage. Your control bureau, your steering committee, is opposed to that kind of legislation, and you are afraid to run over them.

How is the Congress made up? I see the gentleman from Iowa [Mr. GREEN] and others from the West over there, and I remember when they used to speak about the South being in the saddle. Oh, you went back to Ohio and Massachusetts and Indiana and shouted "The South is in the saddle." I want some of you western gentlemen to say in the next campaign who is in the saddle now. Massachusetts is in the saddle. Massachusetts presides over this House; Massachusetts presides over the body at the other end of the Capitol; Massachusetts controls the business in the Senate; and Massachusetts has a member on the steering committee in the House. But you are not satisfied with that.

When the Speaker has occasion to leave, he substitutes in his place the gentleman from Massachusetts [Mr. WALSH], a very good man. [Applause, the Republican Members rising.]

Why, one would conceive from this performance just now that you would rather substitute the "Little Giant" from Massachusetts than take the one you put in the chair by your votes. [Laughter.] I think the gentleman from Massachusetts who now occupies the chair occupies it with great credit to himself. [Applause.]

But I mention that merely to illustrate to you that you have not sufficient capacity on your side of the House outside of Massachusetts to preside over the House. [Laughter.] Why, we recall, and it will be recalled a number of times between now and the ides of November, the famous remark of the

gentleman from Illinois [Mr. MADDEN] when he described who was in charge of the Congress and who was going to make its laws—a body of gentlemen from east of the Mississippi and north of the Ohio, numbering 247, a famous number. He said you were going to run this Government, and you are. But you centralize it in Massachusetts. [Applause.]

The SPEAKER pro tempore. The time of the gentleman from Texas has expired.

Mr. CAMPBELL of Kansas. Mr. Speaker, I yield 10 minutes to the gentleman from Wyoming [Mr. MONDELL]. [Applause.]

The SPEAKER pro tempore. The gentleman from Wyoming is recognized for 10 minutes.

Mr. MONDELL. Mr. Speaker, I agree with the gentleman from Texas [Mr. GARNER] that Massachusetts is a great State. If all of the States of the Union had always been as true to the fundamental principles upon which the fathers founded the Republic as Massachusetts has been, we would have had a happier time during some of our history, and we would be better off as a people than we are. [Applause.]

The gentleman from Texas is not very well informed about the steering committee. Massachusetts does not happen to have a member on the steering committee.

Mr. GARNER. Mr. Speaker, will the gentleman yield?

Mr. MONDELL. Yes.

Mr. GARNER. Is not the Speaker an ex officio member of the steering committee?

Mr. MONDELL. The Speaker attends the meetings of the steering committee.

The Speaker, by invitation of the steering committee—a rule established at the beginning of the last Congress—attends the meetings of the steering committee and gives us the benefit of his very excellent judgment. It is a very proper arrangement.

The Lord only knows when we shall be rid of, when we shall get out from under the shadow of the awful problems laid upon us during the war and under the administration of Woodrow Wilson. I do not say that it was not important that we should bend the energies of the Nation toward building that bridge of ships that we at one time thought might be essential to carry our boys across the seas to save civilization.

I do know that we spent $3,500,000,000 of the people's good money in the building of the fleet, and I do know—and I say it with regret—that it was spent in the most wasteful way that public money ever was spent. Under your administration you laid that awful burden of cost on the people, and we had our responsibility in it, because we went along and agreed to the building of a great fleet. In my opinion under another management than that of the Democratic Party as then constituted and officered we would have spent very much less money in the building. We would have checked that building sooner than was done. But the Nation spent the $3,500,000,000. We have the fleet, and what are we going to do with it?

The gentleman from Texas [Mr. GARNER] says that the ship subsidy bill is a proposition to subsidize private interests. The gentleman knows that it is not an accurate or fair statement. The question before the American people is, "What are we going to do with this great fleet that cost us $3,500,000,000? Shall we sell it to foreigners, taking what price we can get, to be sailed under foreign flags?"

Are you ready to do that? We could try to sell it to Americans to sail under our flag, with all the handicaps that our laws and wage rates place on shipping, and we would not get far, because no one can afford to organize fleets unless we make it possible to operate them.

In trying to work out the problem of what shall be done to preserve and enlarge the American merchant marine, instead of getting any assistance from the representatives of the party who are responsible for the problem, the gentleman from Texas [Mr. GARNER] characterizes the effort as a purpose to give great privileges to private individuals. We propose to work out the problem that was bequeathed to us, and to work it out to the best of our ability; and if you gentlemen had any sense of responsibility touching the problem your party has placed upon the American people you would try to assist in the working out of that problem. [Applause.]

Now, in regard to Muscle Shoals——

Mr. GARRETT of Tennessee. Mr. Speaker, will the gentleman yield?

Mr. MONDELL. Yes; I yield briefly.

Mr. GARRETT of Tennessee. Do I understand the gentleman, then, to take the position that the shipping bill proposed by the President is only necessary because of the fact that during the war we built ships?

Mr. MONDELL. That is what makes it necessary at this time; we have a great fleet which cost a vast sum of money, and something must be done with it. That is the real problem before us. What are we going to do about it? Are we to allow the fleet to rot, to have American shipping driven from the seas? Shall the entire $3,500,000,000 be a total loss and we receive no permanent benefit from it?

Mr. GARRETT of Tennessee. Will the gentleman yield now as to Muscle Shoals?

Mr. MONDELL. If the gentleman will be brief, because my time is short, unless the gentleman from Kansas [Mr. CAMPBELL] will give me more time.

Mr. GARRETT of Tennessee. Then, if we did not have the ships the gentleman's position would be different?

Mr. MONDELL. At least a very different situation would be presented to us. We have the ships. It is a condition, not a theory, that confronts us. What are we going to do with them?

Mr. GARRETT of Tennessee. Then the gentleman does not favor a ship subsidy?

Mr. MONDELL. That question is not now before either the House or the country. The question that will be before the House and is now before the country is what are we to do with the great fleet we have builded with the people's money? Are we going to keep the flag on the seas, or are we going to allow those ships to rot and rust out the enormous investment—a total loss? Are we to realize no benefit to the shippers of the country from the great war investment? Are we to abandon our hope of a merchant marine? Now so much for that.

I was quoted in the paper that the gentleman from Tennessee quoted as having made some statement touching the view of the President with regard to Muscle Shoals. As I have said to the House, the President expressd no opinion to me with regard to that legislation one way or the other.

In due time and in the comparatively near future the majority, after those consultations which the majority are accustomed to have touching matters of this sort, will decide what is to be done with regard to the Muscle Shoals proposition.

Mr. POU. Will the gentleman yield?

Mr. MONDELL. I yield to the gentleman from North Carolina.

Mr. POU. I just want to ask the gentleman if he favors giving the House an opportunity to vote on that proposition?

Mr. MONDELL. It is not a question as to what I may favor. I am going to try and discover the opinion of the responsible majority and follow that opinion. That is what I try to do with regard to all legislation that is reported. That is what I shall try to do in this case.

Now, with regard to reclamation legislation. Of course, the gentleman from Texas [Mr. GARNER], knowing my interest in reclamation, remembering, perhaps, that I had charge of the original reclamation bill on the floor of this House many years ago and that I have always been for reclamation, imagines he can embarrass me as the floor leader by asking why we have not brought up a reclamation measure. We have brought up a reclamation measure.

Mr. GARNER. Will the gentleman yield?

Mr. MONDELL. Yes; briefly.

Mr. GARNER. The gentleman from Texas did not refer to the gentleman from Wyoming. He merely referred to the President of the United States and his position on these matters.

Mr. MONDELL. Oh, no; the gentleman from Texas did not refer to the gentleman from Wyoming, but the gentleman from Texas had the gentleman from Wyoming in his mind all the time. [Laughter.] We have passed a reclamation bill. The soldier bonus bill contains a reclamation measure of the broadest character, under which reclamation development could and would be carried on in practically every State in the Union. It is the broadest and most comprehensive reclamation measure that has ever been presented to this House, and it has passed the House twice on the bonus bill. It is now before the Senate.

Mr. LONGWORTH. Will the gentleman from Wyoming yield?

Mr. MONDELL. I yield to the gentleman from Ohio.

Mr. LONGWORTH. Does the gentleman recall how the gentleman from Texas [Mr. GARNER] voted on that measure?

Mr. CAMPBELL of Kansas. He voted against it.

Mr. MONDELL. On the bonus? I do not want to embarrass the gentleman——

Mr. GARRETT of Tennessee. No; on the reclamation measure. The gentleman from Texas [Mr. GARNER] voted like the gentleman from Ohio [Mr. LONGWORTH] wanted to but would not. [Laughter.]

Mr. MONDELL. Of course I would not want to embarrass the gentleman from Texas after he has gotten up here and made a speech in favor of reclamation by saying that he voted against the broadest and most comprehensive reclamation measure that has ever been presented to any Congress. I would

not want to embarrass the gentleman from Texas in that way. [Laughter.]

Mr. GARNER. Will the gentleman yield?

Mr. MONDELL. Briefly.

Mr. GARNER. The gentleman is well aware that the reclamation project embraced in the so-called soldiers' bonus bill has no more relation to the Smith-McNary bill that the western people have said will solve their problem than night has to day. One of them will cost the Government nothing. The other will cost something like $20,000,000,000.

Mr. MONDELL. Which will cost the Government nothing?

Mr. GARNER. The Smith-McNary bill will cost the ultimate taxpayer nothing for its administration, whereas under the scheme you propose in the bonus bill it would cost the people, if every soldier took advantage of it, over $18,000,000,000.

Mr. MONDELL. All of which proves that the gentleman from Texas has evidently read neither bill. [Laughter.] The Smith-McNary bill carries with it an authorization of $350,000,000. Of course that may be nothing in the opinion of the gentleman from Texas.

Mr. GREENE of Vermont. Will the gentleman yield?

Mr. MONDELL. I can not yield right now.

Mr. GARNER. Every dollar of which is to be returned to the Treasury without one dollar of expense to the taxpayers of this country. Is not that true?

Mr. MONDELL. Under both bills—and I want to say again that the gentleman has evidently read neither one of them—under both bills the sums expended for reclamation are to be returned, and the bills are practically identical in that regard. The Smith-McNary bill authorizes a total ultimate expenditure of $350,000,000; the soldier settlement provision on the bonus bill does not fix a limit. Under both bills the sum spent would be the amount the Congress saw fit to appropriate.

Mr. GARNER. Will not the gentleman yield for one more question?

Mr. MONDELL. I do not care to carry on a primary or kindergarten class in reclamation. I think the gentleman ought to read the bills before he makes a speech.

Mr. GARNER. Will the gentleman yield?

Mr. MONDELL. If the gentleman will be very brief.

Mr. GARNER. Does the gentleman intend to give us a chance to vote on the Smith-McNary bill?

Mr. MONDELL. The House has passed a reclamation bill and it is now in the Senate. A Senator has proposed the Smith-McNary bill as an amendment. Some Senator ought to have appeared before the Senate committee and offered the Smith-McNary bill as a substitute if they prefer that bill.

Mr. GARNER. Now will the gentleman answer my question—does he intend to give the House a chance to vote on the Smith-McNary bill at this session?

Mr. MONDELL. I think it is quite enough for the House of Representatives to pass one reclamation bill at a time. I do not think the House ought to be asked to pass a second reclamation bill until the Senate has acted one way or another on the bill that we sent over to the Senate.

It is entirely within the power of the Senate and those Senators who are favorable to reclamation to put any kind of a reclamation measure they seek to pass on the bonus bill. The Smith-McNary measure would not in all respects provide for the soldiers, and the soldier is the man we must provide for in the bonus bill. But that measure could be amended by adding to it the provisions now on the bonus bill, so that the general plan of reclamation could be carried out for the soldier and broadened sufficiently to take in any project anywhere. But let me repeat that the reclamation measure on the bonus bill is a broad and comprehensive measure and could be utilized in every State in the Union. It is legislation halfway through Congress, and the Senate has not as yet passed on it one way or the other.

In conclusion, let me say to the gentleman from Texas and his colleagues not to get worried or disturbed, but if he will possess his soul in patience in due time we will endeavor to solve all of these problems to the satisfaction of the American people. We do think that the Democratic side that was responsible for placing most of these problems on our doorstep ought to be a little more generous in helping solve them. [Applause.] However, we do not expect much help from the Democratic side. We realize we must solve most of the problems without their help and in spite of their opposition.

The SPEAKER pro tempore. The time of the gentleman from Wyoming has expired.

Mr. GARRETT of Tennessee. Will the gentleman yield me one minute?

Mr. CAMPBELL of Kansas. I yield to the gentleman from Tennessee one minute.

Mr. GARRETT of Tennessee. The gentleman from Wyoming refers to this side's responsibility for opposing certain matters and says that we ought to take some part in solving the problems. We are ready to vote on Muscle Shoals now; are you? [Applause on the Democratic side.]

Mr. MONDELL. We generally do those things after we have consulted in regard to them and are prepared to vote intelligently.

Mr. GARRETT of Tennessee. We have consulted and we are prepared. [Applause on the Democratic side.]

Mr. MONDELL. Oh, no; you have not consulted and you are not prepared. [Applause on the Republican side.]

Mr. CAMPBELL of Kansas. Mr. Speaker, the merits of this rule having been thoroughly discussed and I hope generally understood by Members of the House, I move the previous question.

The question was taken, and the previous question was ordered.

The SPEAKER pro tempore. The question is on agreeing to the resolution.

The resolution was agreed to.

THE PANAMA CANAL ZONE.

Mr. DENISON. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 11872.

The motion was agreed to; accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. LONGWORTH in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 11872, which the Clerk will report.

The Clerk read as follows:

A bill (H. R. 11872) to amend sections 7, 8, and 9 of the Panama Canal act; to amend sections 288, 289, 342, 343, 368, and 461 of the Penal Code of the Canal Zone; and section 2 of the Executive order of July 9, 1914, establishing rules and regulations for the opening and navigation of the Panama Canal and approaches thereto, including all water under its jurisdiction; to amend section 6 of an act entitled "An act extending certain privileges of canal employees to other officials on the Canal Zone and authorizing the President to make rules and regulations affecting health, sanitation, quarantine, taxation, public roads, self-propelled vehicles, and police powers on the Canal Zone, and for other purposes, including provision as to certain fees, money orders, and interest deposits," approved August 21, 1916; and to regulate divorces in the Canal Zone, and for other purposes.

Mr. DENISON. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Illinois asks that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

Mr. DENISON. Mr. Chairman, there has been pending on the calendar for some months four separate bills for legislation touching the Panama Canal and the Panama Canal Zone. These bills are numbered H. R. 9202, H. R. 9101, H. R. 9051, H. R. 9201. In order to expedite their consideration at the same time, it was thought advisable that all four bills be consolidated and reported as one bill, and that has been done, and it is now before the House under the rule as H. R. 11872. It is my purpose, when this bill shall have been passed, to table all the other bills now on the calendar that I have mentioned. At first sight this bill seems rather formidable because of its length, but as a matter of fact there is very little new legislation in it. The legislation consists principally of certain amendments to existing laws that have been heretofore in force in the Canal Zone. In making these amendments the provisions of the present law as thus amended have been repeated in the bill, and it is because of the fact that these provisions are repeated that the bill appears to be rather long. However, as I stated, as a matter of fact, the amendments which are embodied in the bill are very short, and there is very little new legislation. The new legislation consists principally in the provision for divorces in the Canal Zone. I shall try to explain to the House briefly what the changes in the law are that are proposed in this legislation, and in doing that I would be grateful if I can proceed without interruption until I have completed my statement.

In the beginning, let me say that the laws that now govern in the Panama Canal Zone have been enacted from time to time since the year 1904.

In 1904, when we took over the Canal Zone by treaty with the Republic of Panama, President Roosevelt issued a proclamation in which he put into effect the laws of the land to which the inhabitants thereof were accustomed, except in so far as those laws were inconsistent with the fundamental principles of our Constitution. Thereby the civil code and the criminal code of Pamana that existed at that time were by the President's proclamation made the law of the Canal Zone. Afterwards the

Isthmian Canal Commission was appointed by authority of Congress and given legislative authority. From time to time that commission made laws, and those laws or orders of the commission were ratified by the Panama Canal act, and since 1912, when the Panama Canal act was passed, Congress has passed a few laws. The President has also at various times issued Executive orders which before 1912 had the effect of law. So that we have a body of laws for the Canal Zone consisting of these various orders of the President, the acts of the Isthmian Canal Commission, and the executive order of President Roosevelt when the Canal Zone was taken over, and in addition thereto a few acts of Congress. In these various orders and acts are found the laws now in force on the Canal Zone. Some day it is going to be necessary to revise, rewrite, and simplify these laws.

This legislation simply provides a few amendments which have been found by experience in the course of recent years to be necessary and important in connection with the government of the Panama Canal. They are not of any importance particularly to you and to me or to the people of the United States here at home, but they are of very great importance to the people on the Canal Zone. This legislation was recommended during the former administration by the Secretary of War, through whom the President governs the Canal Zone. Bills were introduced for this purpose by the various Members, particularly by Mr. ESCH, the chairman of the committee which has reported this bill, and by other members of that committee; but no action was taken by the House, although the committee reported favorably upon nearly all of the bills. During this Congress these bills to which I refer were reintroduced.

This legislation is also recommended by the present Secretary of War and by the present Governor of the Canal Zone. I may say that it has been carefully considered and was reported by the committee without any minority report.

Some of these amendments are to correct what have been found to be oversights and errors in the original laws. For instance, the first change is in section 7 of the Panama Canal act. The Panama Canal act was enacted in 1912 about the time of the completion of the Canal, and is the main act of Congress which provides the law for the government of the Canal Zone. Section 7 of the Panama Canal act has reference, among other things, to the jurisdiction of the magistrates on the Canal Zone. It provides for the creation of the office of police magistrate, as we would call it in this country, defines the jurisdiction of the court, and, among other things, the magistrates were given jurisdiction in all criminal cases wherein the punishment that may be imposed should not exceed a fine of $100, or imprisonment not exceeding 30 days, or both. Then the magistrates were given the additional jurisdiction of holding preliminary trials in cases of felony and committing those charged with the felony to the circuit courts. It happens that there are a number of offenses under the laws there which are misdemeanors but for which the fine may be assessed as high as $500, and the result is that in that kind of a case the magistrate can not try the case nor can he commit the defendants to the circuit court, because they are not charged with felony. In that class of offenses there is no court to either hold a preliminary trial or to try the case, unless the circuit court happens to be in session. That results in hardship, so that the law ought to be amended so as to give the magistrates jurisdiction to hold preliminary trials in those cases of misdemeanors in which fines may be in excess of the jurisdiction of the magistrates. That is accomplished by the first amendment of section 7 of the Panama Canal act, and it is found in lines 5 to 8 on page 3 of the bill. We add the following language to the law as it is now:

And charges of misdemeanor in which the punishment that may be imposed is beyond the jurisdiction herein granted to the magistrate court.

So that that part of the section as amended will read as follows:

Such magistrates shall also hold preliminary investigations in charges of felony and offenses under section 10 of this act and charges of misdemeanor in which the punishment that may be imposed is beyond the jurisdiction herein granted to the magistrate courts and commit or bail, in bailable cases, to the district court.

The second amendment is on page 4 of the bill. The present law allows appeals in civil and criminal cases from judgments and rulings of the magistrates' courts to the district court in all cases. In other words, the law as originally drafted gives the right of appeal in all civil and criminal cases to the district court. There are a great many West Indians on the Canal Zone. They like to go into court, because it gives them a certain distinction and attention; they commit some minor offense and are brought into the magistrate's court and fined from one to five or ten dollars. They invariably take an appeal to the circuit court, because they want to get into the circuit court, and very often they do it so as to gain delay until the circuit court meets, with the hope that the witnesses in the meantime will have disappeared and they can not be convicted. It has been thought advisable to limit this right of appeal to cases where the fine exceeds $25. We have therefore added to the law the following proviso:

Provided, however, That there shall be no right of appeal in criminal cases, except in those cases wherein the defendant has been sentenced to jail or has been fined in amount exceeding $25.

Section 8 of the Panama Canal act defines the jurisdiction of the district courts of the Canal Zone. There is one district court on the Canal Zone and there are two divisions of the district. However, no provision is made wherein the district court is given jurisdiction in cases of divorce. In other words, we have a district court in the Canal Zone, and it has practically the same jurisdiction that the district courts of the United States have by virtue of the Panama Canal act, but in granting jurisdiction Congress did not grant to the court jurisdiction to try cases of divorce.

Now, it has been found desirable that the district court of the Canal Zone be given jurisdiction over cases of divorce.

Mr. HILL. Will the gentleman yield?

Mr. DENISON. I will.

Mr. HILL. I would like to ask the gentleman in charge of the bill if the situation is that there is no possible way for residents of the Canal Zone to obtain a divorce at the present time?

Mr. DENISON. That is the case.

Mr. HILL. And this bill corrects that condition?

Mr. DENISON. Yes. When we took over the Canal Zone, as I stated some time ago, the President by proclamation put into force the law of the land. Now, there was no provision for obtaining a divorce under the Colombian law. There is no such thing known under the Colombian law, and that law was put into effect on the Canal Zone and has remained from that time until this. So, under the existing law there is no right of divorce. The Panama act did not confer that jurisdiction on the district court. What has been the result? The necessity for divorces has arisen frequently on the Panama Canal Zone. We have had many thousands of American citizens living there and working on the Canal Zone during construction days and also since then in the operation of the canal. Causes of divorce have arisen there the same as elsewhere. A former judge of the district court has heard quite a number of divorce cases and assumed jurisdiction, without having any justification for it in the law, and has granted a number of divorces, and it has resulted in complications. [Laughter.] Now, there was a new judge appointed down there at the beginning of the present administration—Judge Kerr, of Kentucky. Some divorce cases came up before him as they had heretofore done, and he entered into a study of the subject and delivered a very learned opinion in which he held that the court was absolutely without jurisdiction to grant divorces because Congress had never conferred that jurisdiction upon it, and therefore he dismissed the case pending before him.

The governor has recommended that such jurisdiction be conferred upon the court and the Secretary of War has recommended it, and this bill, on page 4, line 24, simply adds to section 8 of the Panama Canal act, where the other jurisdiction is conferred upon the district court, language appropriate to confer jurisdiction in divorce cases.

Mr. OGDEN. Will the gentleman yield?

Mr. DENISON. I will.

Mr. OGDEN. Was not the question of the jurisdiction raised until recently in these divorce cases before Judge Kerr?

Mr. DENISON. I am not able to answer that question. I do not know whether the former judge expressed an opinion on that subject or not. I think the former judge seemed to take the view that under the general equity jurisdiction of the court he had the right to hear and administer justice in cases of divorce. I do not know whether the question of jurisdiction was considered or not, but it was never tested by any appellate proceedings.

Mr. WILLIAMSON. Will the gentleman yield?

Mr. DENISON. I will.

Mr. WILLIAMSON. What about the question of guardianship and settlement of estates, and the like? Are those matters taken care of down there under the present law?

Mr. DENISON. Yes, sir; they are provided for in existing law.

Now, the next amendment will be found on page 6 of the bill. It is a minor matter, but it is thought worthy of the recommendation to the Congress for a change. That is the question of fixing the compensation of jurors in the trial of

cases. Under the present law the judge fixes the compensation of jurors. I do not know, of course, why the provision was originally put in the law, but it had no place there. It is no part of the functions of the court to fix the compensation of jurors. That ought to be provided for by the legislative authority, and the bill is amended on page 6 by inserting the following language to the language of section 8 of the Panama Canal act:

The compensation of jurors shall be prescribed by order of the President.

That allows the President to fix the compensation by authority of this act.

Now, the next amendment to which I wish to call attention is this, and it is an important one. The present Panama Canal act——

Mr. WILLIAMSON. May we have the reference?

Mr. DENISON. It is at the bottom of page 6 and on the top of page 7. The present Panama Canal act contains the following provision, speaking of the district judge:

During his absence or during any period of disability or disqualification from sickness or otherwise to discharge the duties the same shall be temporarily performed by any circuit or district judge of the United States who may be designated by the President, and who during such service shall receive the additional mileage and per diem allowed by law to district judges of the United States when holding court away from their homes.

This original provision was enacted in 1912. Now, it has been found that you can not get a United States district judge to go down to Panama and hold court during the vacation or the temporary absence of the district judge. It is a long journey down there, and the average district judge is a busy man and he has enough to look after at home.

It is a long trip to the Canal Zone, and it has been found impracticable to secure a judge to go down and hold court. It has never been done but once, and that was when the district judge was disqualified by the fact that he was an interested party in the lawsuit then pending, and Judge Clayton, I believe, of Alabama, was sent down there. The result is that when the judge has to leave there and take his vacation for 30 or 60 days or more they have no court, the jail becomes clogged with offenders who can not get trials, and it is an expense and a wrong condition that ought to be remedied. Now, that is taken care of by the following provision in this bill. The provision I have just read is stricken out and this is inserted in its place:

During the absence of the district judge or during any period of disability or disqualification from sickness or otherwise to discharge his duties, the same shall be temporarily performed by a special judge, to be designated by the President, which designation may be made by cablegram or otherwise, and who shall be an attorney at law qualified to practice before the courts of the Canal Zone or any of the United States district courts or any of the superior courts of any State, Territory, or possession of the United States, and who during such service shall be paid at the same rate of compensation and the same mileage and per diem as that paid the district judge of the Canal Zone.

In other words, this amendment to the Panama Canal act authorizes the President, during the absence or disability of the district judge of the Canal Zone, to appoint a special judge, by cablegram or otherwise, from among the members of the bar of the Canal Zone or from among the members of the bar of the United States, if necessary, to act as district judge. That is the rule that is found in the laws of a number of the States. And it is an amendment that has been recommended by the district attorney and by the Governor of the Canal Zone, and by the Secretary of War.

Mr. ROACH. Will the gentleman yield?

Mr. DENISON. I yield.

Mr. ROACH. I did not hear the statement as to what the amendment contained. Will it be mandatory on the President to so designate or may he still designate some of the acting judges in the United States?

Mr. DENISON. The language reads:

During the absence of the district judge his duty shall be temporarily performed by a special judge to be designated by the President.

Mr. ROACH. He can designate anyone, either here or down there?

Mr. DENISON. Yes. Now, the district attorney for the Canal Zone came before the committee and testified in the hearings, and after full hearings and careful investigation the committee has concluded that that would be a wise provision. The district judge down there is living in the Tropics. A man can not live there very long without a change in climate now and then and taking a vacation, and he is allowed one under the law, anyhow. The court ought not to stop, and the defendants ought not to be compelled to remain in jail on account of the absence of the judge from the Canal Zone. And so it was thought wise that this provision should be added to the canal act.

Then there is another amendment to the Panama Canal act. The Panama Canal act, in section 8 as originally drafted, provides for a district judge, for a district attorney, and for a marshal, and the marshal and the district attorney and the judge each receive $5,000 a year. Now, there may have been some justification for the office of marshal in former years. But conditions have changed on the Canal Zone. Things have become more settled there now as the population is gradually decreasing, because they are from time to time reducing the number of employees. The canal has been completed, and there are only sufficient men there now on the Canal Zone to operate the canal. I think there are some 12,000 employees on the canal at this time—11,000 or 12,000. It has been found that the office of marshal is entirely useless. He draws a salary of $5,000 for doing practically nothing except living there in comfort. The President this last year appointed a special commission to go down to the Canal Zone and make an investigation of conditions there. The commission made an investigation, and among other things they recommended that the office of marshal be abolished.

The governor has made the same recommendation in a communication to the Secretary of War, and the Secretary of War has made a special recommendation to our committee that this provision be embodied in this legislation. And so we have amended section 8 of the Panama Canal act so as to abolish the office of marshal entirely after 60 days from the passage of this act. The amendment will be found on page 7 of the bill, and is as follows:

Effective 60 days from the passage of this act the position of marshal is hereby discontinued, and the duties of marshal of said court shall be performed by the chief of police of the Canal Zone and such members of his force as he may deputize for that purpose, with the approval of the court.

That amendment carries out the purpose of doing away with the office of marshal.

Now, another amendment to the Panama Canal act—that is, section 9 of the act—is found on page 9 of the bill. I think I can explain it very briefly. It is very short, but it is of great importance. Section 9 of the Panama Canal act provides as follows:

The Circuit Court of Appeals of the Fifth Circuit of the United States shall have jurisdiction to review, revise, modify, reverse, or affirm the final judgments and decrees of the District Court of the Canal Zone and to render such judgments as in the opinion of the said appellate court should have been rendered by the trial court in all actions and proceedings in which the Constitution, or any statute, treaty, title, right, or privilege of the United States, is involved and a right thereunder denied, and in cases in which the value in controversy exceeds $1,000, to be ascertained by the oath of either party, or by other competent evidence, and also in criminal causes wherein the offense charged is punishable as a felony. And such appellate jurisdiction, subject to the right of review by or appeal to the Supreme Court of the United States as in other cases authorized by law, may be exercised by said circuit court of appeals in the same manner, under the same regulations, and by the same procedure as nearly as practicable as is done in reviewing the final judgments and decrees of the district courts of the United States.

Now, it was not the intention of the Congress in the enactment of the original law to limit the right of appeal to one side in the controversy, namely, those whose rights were denied under the Constitution, treaties, and so forth. But the language has been so construed, and under that construction the right of appeal in those cases was only given to one person, and that is the person whose rights are alleged to have been denied. Now, important litigation has arisen in the Canal Zone in which that question was involved, and it is to remove that ambiguity that we strike out that phrase "a right thereunder denied." So it is made clear and plain that in all actions and proceedings in which the Constitution or any statute, treaty, title, right, or privilege thereunder is involved, and in cases in which the amount in controversy exceeds $1,000, and so forth, the right of appeal to the United States circuit court is given to both sides of the controversy. That removes an ambiguity and corrects what was apparently an error in phraseology in drafting the original bill.

Then there is this additional amendment to section 9 of the Panama Canal act. The right of appeal exists where the amount in controversy exceeds $1,000, and it sometimes happens that a case may arise in which the jurisdiction of the district court itself is challenged, and under existing law that question of jurisdiction can not be tested unless the amount in controversy exceeds $1,000. Now, it is apparent that that is not the way it should be. Wherever the district court, the trial court, assumes jurisdiction and a party desires to question the jurisdiction entirely of the court, there ought to be a right to test that question in the appellate court without regard to the amount in controversy, because the question of jurisdiction of the court ought always to be open to review.

So section 9 of the Panama Canal act is amended by adding the words at the bottom of page 9 of the bill, as follows:

But whenever any such case is not otherwise reviewable in said appellate court the question of jurisdiction alone shall be reviewable by said appellate court.

That corrects that error in the law.

Now, I call the attention of the committee to the next amendment of the existing law, which appears on page 10 of the bill. That is paragraph (c), which is as follows:

(c) That it shall not be necessary in the district court of the Canal Zone to exercise separately the law and equity jurisdiction vested in said court; and the code of civil procedure of the Canal Zone and the rules of practice adopted in said zone, in so far as they authorize a blending of said jurisdictions in cases at law and in equity, are hereby confirmed.

That amendment has been suggested because of the fact that there is some uncertainty among members of the bar in the Canal Zone as to whether or not the court has the right to exercise what is called a blended jurisdiction of law and equity. Prior to the passage of the Panama Canal act the court exercised law and equity jurisdictions separately, as is done in many of the States. That is done particularly in my own State of Illinois now. But after the passage of the Panama Canal act, from that time until this, the court has been exercising equity and law jurisdiction blended, following the rules now practiced in a number of the States. That right of the court has been questioned by some of the members of the bar, and it leaves it uncertain; and so, in order to remove that uncertainty and if possible avoid the litigation growing out of it, it has been thought wise to make the provision clear in the law, and so we have provided for what is called blended jurisdiction in the Canal Zone.

Mr. WILLIAMSON. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. WILLIAMSON. I notice in section 9 of the bill that you provide—

Whereupon all the existing courts, except the Supreme Court of the Canal Zone, shall cease to exist. The President may continue the Supreme Court of the Canal Zone and retain the judges thereof in office for such time as to him may seem necessary to determine finally any causes and proceedings which may be pending therein.

Is not the supreme court discontinued now?

Mr. DENISON. Yes; certainly. That is simply repeating the existing law.

Mr. WILLIAMSON. The supreme court, as a matter of fact, does not exist now?

Mr. DENISON. No. That is abolished. We are amending that section of the Panama Canal act in another particular, and in order to do that we repeat the present law with the amendment. We are not undertaking to make any change in that particular part of the law now.

The next amendment embodied in this bill is an amendment to section 288 of the Penal Code. That section forbids all kinds of prize fights or exhibitions of all kinds.

Mr. LONDON. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. LONDON. Are they prevalent, these prize fights, on the Canal Zone?

Mr. DENISON. No. I was going to say that when the Penal Code was enacted there was, of course, in that country a tendency to gambling and having fights of all kinds, and particularly there was a tendency to have prize fights down there; it was in order to stop prize fighting or anything resembling prize fighting that this section 288 was originally drafted. It was very stringent. It provided that—

A person who engages in, instigates, aids, encourages, or does any act to further a fight commonly called a ring or prize fight, or who engages in a public or private sparring exhibition, with or without gloves, within the Canal Zone, who sends or publishes a challenge or acceptance of a challenge for such an exhibition or fight, or trains or assists any person in training or preparing for such an exhibition or fight, shall be guilty of a felony, and upon conviction shall be fined not more than $5,000, or be imprisoned in the penitentiary not more than three years, or both.

We now have on the Canal Zone Army camps and naval stations, and the fleets go down there for maneuvers, and a part of the physical training of the men in the Army camps and in the naval stations is training in boxing. They teach boxing and have wrestling contests, and particularly boxing contests. It is part of the recreation and training, the physical training in the Army camps; and under the present law that is not permitted. We thought that this law ought to be amended. The Government has recommended that the law be amended so as to permit these friendly boxing contests among the men, which is a part of their physical training. So we have added to that provision this language:

Provided, however, That the provisions of this section shall not apply to voluntary boxing or sparring exhibitions conducted under rules and regulations to be promulgated by the President of the United States, or by the Governor of the Panama Canal Zone by authority of the President of the United States.

The committee saw no objection to permitting such friendly sport and recreation in the Army camps, and therefore we put this provision in the law, leaving it entirely under the control of the President, under such regulations as he may prescribe.

Mr. LONDON. In other words, boxing will be permitted?

Mr. DENISON. Yes; under regulations prescribed by the President.

Mr. RAMSEYER. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. RAMSEYER. That does not limit it to the Army and Navy?

Mr. DENISON. No. It does not limit it to those, but that is the reason why the law is being amended.

Mr. RAMSEYER. What is the population of the Canal Zone, if the gentleman has the figures at hand?

Mr. DENISON. About a year ago there were some 20,000 or 21,000 employees on the Canal Zone. That number has been reduced now to about 12,000.

Mr. RAMSEYER. Are they Americans?

Mr. DENISON. No. A great many of them are West Indian colored people, who do the common labor. I do not know how many of them have families there, but the gentleman can make an estimate based on the general average. But there are about 12,000 employees on the Canal Zone at the present time, with such families as they have.

Mr. RAMSEYER. Can the gentleman state what native population there is there that were there when we took over the Canal Zone?

Mr. DENISON. There are none there now except those who are working on the canal or the Panama Railroad.

Mr. CHALMERS. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. CHALMERS. In removing to the Canal Zone an American does not lose his citizenship in the State from which he comes, does he? Our official connection with the Canal Zone, as I understand it, differs materially from our connection with the Territories?

Mr. DENISON. I would say to the gentleman from Ohio that that is a question of law and a question of fact. It is largely a matter of intention. Some of the employees have gone down there with the intention of staying there, and if they remove their families and stay there it is often with the intention of becoming residents there. If they go down there temporarily and do not cut loose from their connection here they are not understood to be residents there.

Mr. LONDON. I understood the question of the gentleman from Ohio to be whether a citizen of the United States would lose his citizenship by residing there.

Mr. DENISON. No. He would not lose his citizenship. I thought the gentleman from Ohio meant his residence.

Now, another amendment of importance is found on page 11 of the bill, and that has reference to another section of the Penal Code, defining grand larceny.

The original Penal Code defined grand larceny, among other things, as the stealing of anything with a value in excess of $25; in other words, the limitation on grand larceny under the original Penal Code was $25. Anything below that was petit larceny. Afterwards that was amended so as to reduce the limit to $10, so that the present law provides that the stealing of any property of a value in excess of $10 is grand larceny; and the present law also provides that if the thing stolen is the property of the Government or of the Panama Canal or of any of the municipalities on the Canal Zone, without regard to its value, it is grand larceny; a very unreasonable and harsh law. While there may have been some justification for it in the construction days when the Government had so much property there, certainly there is no justification for continuing such a harsh provision of law now. For instance, the district attorney testified that colored men would sometimes be caught stealing a cement sack that belonged to the Government, and under the present law that is a felony, and the man can be sent to the penitentiary for it, and he loses his rights as a citizen.

Mr. ROACH. Does not the gentleman believe that when property is taken from a dwelling, regardless of its value, the punishment should be more serious? Property taken from a dwelling may have a particular value and yet its cash value may be very small.

Mr. DENISON. I do not know that that distinction is made when it is taken from a dwelling.

Mr. ROACH. I know it is when taken from the person, and also certain live stock, but it occurs to me also that it should be made grand larceny where the property is taken from a dwelling house.

Mr. DENISON. Where a person is robbed and his property taken from his person in that way, that makes it a more serious offense. But, however, the only amendment which this bill makes is to increase the value limit of the property to $50, so that if this bill passes, the value of the property taken must be as much as $50 in order to constitute grand larceny. If it is below $50 it will be petit larceny.

Mr. NEWTON of Minnesota. As I recall the definition and penalty of larceny, there is no change, except what the gentleman has stated, as to the limitation in the amount. Of course it is grand larceny if it is taken from the person without regard to the amount taken.

Mr. DENISON. The gentleman is correct.

Mr. BEEDY. Doubtless when property is stolen from a dwelling there must be some other provision that would bring it within the offense of breaking and entering.

Mr. DENISON. Yes; that is taken care of in another provision of the Penal Code. When they break into a house, that constitutes burglary.

Now, the next amendment is found on page 11 of the bill, and that is the new provision in regard to embezzlement. The present law in regard to embezzlement on the Canal Zone provides that if the property embezzled is the property of the Government or of the Panama Canal, or of any of the municipalities there, it is embezzlement without regard to the amount of money involved. We have stricken out that distinction entirely, and we make no distinction between property belonging to the Government and property belonging to private individuals. The committee could not see any reason for carrying that distinction in the law, and therefore we have stricken it from the law.

Section 343 of the Penal Code is amended in this particular with regard to petit larceny: Having raised the limit of the amount necessary to constitute grand larceny, having made it $50 instead of $10, thereby making the stealing of property of less than $50 in value petit larceny, we had to increase the penalty in cases of petit larceny. Under the existing law the highest penalty for petit larceny is a fine of $25. Of course it would not be consistent to fine a man only $25 for stealing as much as $50. So we have amended the law with reference to petit larceny by increasing the maximum penalty to $100 instead of $25.

On page 13 of the bill will be found an amendment to paragraph 2 of the Executive order of the President of July 9, 1914, establishing rules and regulations for the operation of the canal. Section 2 of that order originally read as follows:

> Any person violating any of the provisions of the rules and regulations established hereunder shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine not exceeding $500 or by imprisonment in jail not exceeding 30 days, or by both such fine and imprisonment.

In other words, under existing law a person who violates any of the regulations governing the operation of the canal may be fined in any amount not exceeding $500. Now, it has been found in actual practice that most of the offenses that come within the provisions of this law are petty offenses. For instance, the natives will come into the entrance to the canal from up the coast of Panama, bringing their produce to market, and they may sometimes fail to have a light on their canoe, or something of that kind, which is a violation of these regulations governing the operation of the canal, and they may be fined as much as $500. The result of it is that all offenses of that kind are taken out of the jurisdiction of the magistrates, because the magistrates are given jurisdiction of those offenses only in which the offenders may be fined not exceeding $100.

It is in order to relieve that condition and let the magistrates go ahead and dispose of these petty offenses and in order to prevent the clogging of the district court's docket that the committee has thought it wise to make the maximum penalty $100 instead of $500.

Mr. WILLIAMSON. Will the gentleman yield?

Mr. DENISON. Yes.

Mr. WILLIAMSON. This may not have any direct bearing upon the bill, but I desire some information relating to the procedure in the Canal Zone. Do the magistrates, who correspond to justices of the peace in this country, have the right to hold preliminary hearings and bind the defendant over directly to the United States district court, or simply to hold such person for action by a grand jury?

Mr. DENISON. There is no provision in the Canal Zone for a grand jury. These magistrates under the law have jurisdiction to hold preliminary trials in all cases of felony and commit the offenders to the circuit court. By one of the amendments I referred to awhile ago we are providing that the magistrates may hold preliminary trials in those cases of misdemeanor in which the maximum penalty exceeds the jurisdiction of the magistrates' court. For instance, take one of the provisions of the Volstead Act as an illustration to show how we legislate unwisely for distant places like the Canal Zone.

Under the Volstead Act if a man is caught with whisky or liquor in his possession in the Canal Zone he may be fined not exceeding $500. Sailors come ashore, go over to Panama and have a good time, and in order to get back to their vessels have to come back through the Canal Zone, and they go back frequently with a bottle in their hip pocket. They are arrested and searched, and perhaps found with half a pint of liquor in their pockets. They are thereby subject to a fine not exceeding $500, which takes it out of the jurisdiction of the magistrate, who only has jurisdiction in cases where the maximum fine is $100, and so his case has to go to the district court; and under existing law the magistrate can not even hold a preliminary trial and allow bail. The man has to go to jail and stay there until the district court meets and can hear his case. These things ought to be remedied, and that is the purpose of this legislation, to remedy such mistakes in existing law and provide a remedy where there is none provided by existing law.

Now, I call attention to another change we are making in existing law. On August 21 Congress passed an act to extend certain privileges of the Canal Zone to other officials in the Canal Zone, and certain privileges to the canal employees.

Mr. RAMSEYER. Will the gentleman yield before he goes to that question?

Mr. DENISON. I will yield to the gentleman from Iowa.

Mr. RAMSEYER. The gentleman stated that there is no grand jury in the Panama Canal Zone. There is a provision in the Constitution of the United States that no person shall be held to answer for a capital or otherwise infamous crime unless on the presentment or indictment by a grand jury except cases arising in the land or naval forces or in the militia when in actual service in time of war or public danger. This Canal Zone is governed by the War Department, but there are civilian employees there; suppose one of them commits an offense, how do you get around that provision in reference to a grand jury in the Constitution of the United States?

Mr. DENISON. The courts there are not United States courts; they are what we used to call Territorial courts. The Constitution does not apply there in that sense. We have never had provision for a grand jury in the law of the Canal Zone.

Mr. RAMSEYER. Who presents the indictment there?

Mr. DENISON. The Supreme Court has held that that provision of the Constitution does not apply to State courts but only to United States courts. There are a number of States that have no provision for a grand jury. The question has been tested out in a case that went up from the consular courts in China, where a man was tried for a capital offense and there was no indictment by a grand jury. The Supreme Court held that that provision of the Constitution was not applicable to those courts, as I recall it.

Mr. RAMSEYER. What officer is authorized to file what amounts to an indictment against a defendant who is supposed to have committed an offense in order to get the case properly tried before the district court?

Mr. DENISON. It is done in the Canal Zone as it is done in South Dakota and in those States that have no grand-jury system; the district attorney prepares an indictment and files it in the court. In my State he files what is called an information.

Mr. WILLIAMSON. In South Dakota there is a preliminary information filed before the justice of the peace and the party is bound over to the circuit court when the State attorney files an information which in legal effect is the same as an indictment by a grand jury.

Mr. RAMSEYER. Have you no grand jury?

Mr. WILLIAMSON. Provision is made for a grand jury in South Dakota, but it is very seldom used in practice.

Mr. DENISON. Now, I call attention to another change in existing law. It has been found that vessels frequently call at canal ports with men on board who have committed crimes on the high seas. Members of the crew or others on board the vessel have perhaps broken into parts of the vessel and stolen property, or have attempted to commit murder, or actually committed murder on the high seas. The question has arisen as to what they should do with this class of offenders. Under the present law all such offenders who commit offenses on

vessels of the United States on the high seas may be tried in any district court of the United States in which the offender may be found, or in which he was first brought to port; that is the present law.

So that when a man commits an offense upon a United States vessel on the high seas he is immediately brought into one of the ports of the United States, and the district court has jurisdiction to try him, and that is the only court that does have such jurisdiction. The district court in the Canal Zone is not a United States district court, however; it is a Territorial court, and that court at present has no jurisdiction to try offenses committed on the high seas upon vessels of the United States entering those ports. There is urgent need there for a court having that jurisdiction, because Panama is one of the great gateways of the world. American vessels are calling there continually from day to day, and they very often have men on board who have committed offenses on the high seas. They want to land them and try them or dispose of them in some way. It is important that the district court should have that jurisdiction, and by this bill we are conferring that jurisdiction upon the court.

I started to discuss another subject when I was interrupted, and that was one of the provisions of the act of August 21, 1916. By that act authority was given in the Canal Zone to the employees to deposit their money in the post office. It is called a post-office deposit and deposit money orders are issued. That provision was carried in order to encourage thrift and saving on the part of the canal employees. They are down there, over 2,000 miles from home, and are making very good wages. The Government wanted them to save and accumulate. So provision was made that the employees might deposit their money in the post office and take a certificate for it. The law provided that they should receive 2 per cent interest on the money deposited. The governor recommends that that rate of interest be raised; the committee thought that it ought to be raised, and this bill on page 14 amends the law by providing that the Government shall pay the employees who make these deposits in the post office 3 per cent interest.

The Government will not lose any money by it, because the canal government deposits that money in the banks of this country while they have it in their possession, and collects from the banks from 3 to 3½ per cent interest.

Mr. KING. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. KING. Would it not be advisable to make it 4 per cent. That is the rate that one-half of the savings banks in the country now pay the depositors.

Mr. DENISON. That would mean that the Government would lose money on the deposits. We do not want the Government to make any profit and we do not want the Government to lose by this system of accepting deposits. This amendment is suggested in order to give the employees a little higher rate of interest on their deposits.

This concludes my discussion of all of the amendments to existing laws that are made by this bill, unless I have inadvertently overlooked some of them.

Mr. CHALMERS. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes; I yield to the gentleman from Ohio.

Mr. CHALMERS. In opening the discussion of the matter of divorce, the gentleman spoke of the practice followed by a former court, and that the following judge ruled that he had no such right. What about the standing of the decisions of the former court as to children, and so forth?

Mr. DENISON. That is a very pertinent question. Section 22 of the bill provides as follows:

SEC. 22. That all proceedings in the district court of the Canal Zone, wherein and whereby a decree of divorce has heretofore been granted upon legal service, and wherein other orders have been made affecting the status of the parties or their children, are hereby legalized.

Mr. CHALMERS. Yes; but there is the question of legal service.

Mr. DENISON. That means legal service under the practice of the courts. They had proper service. The defendants were properly served and brought before the court. That is a question of law. Personally I consulted some very good lawyers, and it is the view of many of the best lawyers that Congress can by this act legalize divorces that have been granted by a court which had no jurisdiction to grant them, if there was proper service and the parties were properly before the court.

Mr. CHALMERS. If this act does not do that, it seems to me that it ought to be amended so that there would be no question about it.

Mr. DENISON. That is the view of the committee, and we undertake to do that. When you undertake to deal with questions of property, a different question is involved; a great many good lawyers think that Congress could not pass an act that would be retroactive with reference to the status of property. However, divorce is a proceeding in the nature of a proceeding in rem; it pertains to the status of persons and Congress has the power to pass a law legalizing invalid divorces where the parties were properly before the court.

Mr. LONDON. Mr. Chairman, will the gentleman yield?

Mr. DENISON. Yes.

Mr. LONDON. I notice that section 12, on page 14, enumerates nine causes for divorce.

Mr. DENISON. Yes.

Mr. LONDON. Is not the language rather peculiar? Would it not be better to begin the section by saying:

It shall be lawful for the injured party to obtain a divorce and dissolution of a marriage contract in the district court of the Canal Zone in every case where—

And so forth.

In other words, the way the sentence reads now it is very cumbersome and language is used that is almost incomprehensible. Here is a section that begins with—

That in every case in which a marriage has been or hereafter may be contracted—

and then follow 22 lines.

Mr. DENISON. I think that is very clear. I shall read it for the benefit of the gentleman.

Mr. LONDON. Oh, I have read it, but I think it would be so much more clearly stated if you were to say—

It shall be lawful for the injured party to obtain a divorce and dissolution of a marriage contract in every case in which—

And so forth.

Mr. DENISON. Oh, that is only a difference of phraseology.

Mr. LONDON. I do not see why lawyers and legislators insist on framing laws in language that is not understandable; language that makes very disagreeable reading. I know that it is not the fault of the gentleman from Illinois, because I am sure that he has followed the precedents, but that is one of the dangerous habits of a lawyer.

Mr. DENISON. I think it is very plain as it is. It enumerates the various causes for divorce.

Mr. LONDON. There is one other thing that I want to ask the gentleman, and it is in reference to the illegitimacy of children. Section 18, on page 20, provides that no divorce shall in anywise affect the legitimacy of children of the marriage except in cases where the marriage shall be declared void on the grounds of a prior marriage. Why should the child be penalized in any case?

Mr. DENISON. Oh, that is a question which the gentleman will have to put to the parents. We do not penalize the child.

Mr. LONDON. Oh, yes, you do. You stamp the child as illegitimate where there has been a prior marriage.

Mr. DENISON. We do not do it; the parents do it. Where a man has a wife living and he marries a second woman, this bill will grant the second woman a divorce.

Mr. LONDON. I understand that, but assume a case where a woman innocently marries a man who is proven to have been married at the time to somebody else and the marriage is declared void. Why should the child of that woman be stamped as an illegitimate child?

Mr. DENISON. Is not that done everywhere?

Mr. LONDON. Well, no. I am under the impression where a divorce is given on account of a prior marriage that the child does not suffer in most of the States. In any event, it ought not to suffer.

Mr. DENISON. The gentleman will find, I think, that a man can not have a legitimate child by one woman when he has another living wife and when there has been no divorce.

Mr. LONDON. Well, assume that one or both parties are innocent. I take a case where one married under the belief that the former spouse is dead?

Mr. DENISON. Let me say this in regard to the provision with reference to divorces. As I said awhile ago in the beginning of my remarks there is no law in the Panama Canal Zone for granting a divorce on any ground. It has led to certain conditions of immorality there. The authorities down there—the people, the governor, the law officers, the judge—all feel that there ought to be some provision of law for granting divorces—a divorce code. The Secretary of War has recommended it. We are enacting this provision here for the Panama Canal Zone. I do not suppose there are any two Members of the House who exactly agree upon what a divorce code ought to be, but we are not enacting this law for our own States. We are enacting this for the people down there, and this bill has been presented to them, and it meets with the approval of the officials of the Canal Zone, who know the conditions down there; it has the approval of the district attorney,

who is familiar with those conditions, and it has the approval of the governor.

Mr. KING. How about the people?

Mr. DENISON. Without regard to whether it might meet the approval of all people up here, the committee presents it as the best judgment of the committee upon the subject of providing for divorces for the Panama Canal Zone. Each of us are more or less inclined to take a provincial view of this subject. We are inclined or prejudiced in favor of the divorce laws of our own respective States. It would be almost impossible for us to agree on a divorce code for this country. But here we are legislating for the limited number who are compelled to live on that little zone of land 10 miles wide running across the Isthmus of Panama. Those who are familiar with the conditions down there and who are responsible for the administration of the laws there approve the pending bill. I think, therefore, we will make no mistake in accepting it as it is presented.

Mr. RAMSEYER. Will the gentleman yield?

Mr. DENISON. I will.

Mr. RAMSEYER. Now, the committee is composed of good lawyers, and I am not going to discuss the various grounds for divorces enumerated in this bill but the reason for arranging it the way it is. All writers on domestic relations make a distinction between annulment of marriages and divorces. There is a very clear line of distinction between the two. Annulments are based on causes which exist at the time the marriage contract is entered into. Divorces are granted for causes which arise after the marriage contract is entered into, and there is quite a difference as to the property rights under the two statutes, as well as the legitimacy of children. The codes of the various States differ; I know my State has a section on divorces and giving grounds for divorce, and it has a different section for annulment of marriages and the grounds for such annulments.

Now, here the committee reports in a bill all under the head of divorces. For instance, the first two grounds are discussed by writers on domestic relations and by the code of my State as grounds for annulment—first, if impotent; second, if he or she had a wife or husband living at the time of such marriage. Undoubtedly the committee had some reason or reasons which were forcible enough to cause them to arrange it in this way, and I should like to know why you did not make the distinction between annulment of marriage and divorce that the law writers universally do; and so far as I know the codes of most of the States make such distinctions.

Mr. DENISON. Well, of course, the gentleman from Iowa has in mind the law of his own State. The gentleman's statement of the codes of the different States is not exactly correct, because a great many of the States contain this provision as we have it here. For instance, take the law of the State of Illinois, with which I am more familiar, as the gentleman is more familiar with the law of his State, and you will find this provision is identical with the law of Illinois, and with the laws of some of the other States. In the preparation of this bill we endeavored to be as brief as possible. We consulted—I did, rather—in drafting the bill Judge Frank Feuille, who was the special attorney for the Panama Canal for some 12 or 14 years, I think. I think he understands the situation down there better than any other man on the Canal Zone. I think he understands the law in force down there better than any other man I know. He is a student of the Spanish language and Spanish laws, and his experience as special attorney for the canal government for a number of years brought him in contact with the people and gave him a splendid opportunity to become familiar with the needs of the people better than any man I know of. This bill was prepared and submitted to Judge Feuille and it meets with his approval; it follows the laws of a number of States, and I do not think it is subject to the objection which the gentleman makes.

Mr. RAMSEYER. Is it not true that writers always make that distinction between annulment of marriage and divorce, and the property rights of the parties are different? Now, Congress is supposed to be composed of leading legal lights of the country, and would it not furnish a better model—probably as this is the first divorce law Congress ever passed—I am not sure about that statement, but would it not be more logical to have written in here—it would not take any more space—that the grounds for divorce are so and so, and that the grounds for annulment of illegal marriages are so and so?

Mr. DENISON. There is some ground for difference of opinion on that question. I am perfectly familiar with the distinction the gentleman refers to, as I have noticed it in the textbooks.

Mr. RAMSEYER. I asked why you did not follow the logical course of text writers and most of the State codes?

Mr. DENISON. We were not attempting to draft this bill as a model divorce code, but as a brief, concise divorce code for the Canal Zone; it meets with the approval of those who are familiar with conditions there, and for that reason we thought it ought to meet with the approval of Congress.

Mr. RAMSEYER. The grounds here for divorce I know are more liberal than the grounds for divorce in my own State. The gentleman is doubtless familiar in a way with the divorce laws of the various States. Are not the grounds for divorce in this bill more liberal than the average of the States of the Union? What does the gentleman know about that?

Mr. DENISON. My investigation shows it is more liberal than some of the States and less liberal than others.

Mr. RAMSEYER. In the opinion of the gentleman it will not create a Reno down there or an Alexandria?

Mr. DENISON. I am very glad the gentleman mentioned that. We have put in this bill ample safeguards to prevent the Canal Zone from being used as a place to which to go to get a quick divorce. They can not do it under this bill. The courts will not be open to anybody except those who have official residence there or who are employed there. We have considered that question with great care in drafting this bill.

Mr. KLINE of Pennsylvania. I want to state that in Pennsylvania there is no distinction between annulment and divorce. It is all divorce. And that is true in many of the Eastern States, if not in most of them.

Mr. RAMSEYER. In case the divorce is granted on the ground of impotency at the time of marriage, does that dissolve the union as of date of marriage or of date of decree—that is, is it retroactive?

Mr. KLINE of Pennsylvania. No.

Mr. RAMSEYER. An annulment decree, in fact, decrees that marriage never existed.

Mr. KLINE of Pennsylvania. Pennsylvania has never made any such distinction between annulment and divorce.

Mr. BANKHEAD. The gentleman states that this creates a divorce code only for Government employees and officers?

Mr. DENISON. Yes.

Mr. BANKHEAD. Does this mean that the wife of one of those would not have jurisdiction?

Mr. DENISON. Oh, no.

Mr. KING. If the gentleman please, are there no other people down there that live in the zone that ought to have this privilege extended to them?

Mr. DENISON. I will state to my friend from Illinois that no one is permitted to live on the Canal Zone except officers and employees, and of course their families. There are one or two exceptions. For instance, there is an oil company that sells gasoline, I think, that has an employee or a few employees there, but otherwise there is no one living on the Canal Zone except employees and officials. The Government owns all the property there. No one can acquire a home there except from the Government, and the purpose of the Government is to limit the Canal Zone to those who have business there for the Government. We have depopulated the Canal Zone entirely for that reason.

Mr. WILLIAMSON. I assume that the courts in the Canal Zone have the correlative power of adjusting the property rights between husband and wife at the time of the divorce?

Mr. DENISON. Have the power?

Mr. WILLIAMSON. I assume they have the right to settle their property rights?

Mr. DENISON. Yes; certainly.

Mr. WILLIAMSON. If that is true, it may be that the distinction the gentleman from Iowa made is important. If a woman marries a man who is already married, she can acquire no property interest in what he possesses, while she would acquire a property interest if he was lawfully married.

Mr. DENISON. That is all within the control of the court when the decree is entered.

Mr. RAMSEYER. The court would have the right to make the distinction?

Mr. DENISON. Yes; the court would have that right.

Mr. Chairman, if there are no other questions now, I will make any further explanations of the bill that may be necessary when we read the bill under the five-minute rule. [Applause.]

Mr. HUDDLESTON. Mr. Chairman, if I were authorized by the Committee on Interstate and Foreign Commerce to make a report on its proceedings of this day, I should, after addressing the Chair, say, "The committee, having had under consideration the Hoch bill and the Sweet bill, intended to give the people some relief from certain oppressive provisions of the transportation act, 1920, have instructed me to report that we have given about six weeks' consideration to those measures

and have come to no resolution thereon." The people of the country who have been suffering so much because of the transportation act of 1920, and particularly because of sections 13 and 15a, which were intended to be amended by the bills to which I have referred, are entitled now to know that this Congress will take no action for their relief.

The transportation act of 1920 has now been a law for over two years. For the first six months of that time the Treasury of the United States bore the burden of the mismanagement and inefficiency and the wickedness of railroad management. At the end of the six months that burden was passed to the people by an increase in railroad rates averaging about 33⅓ per cent. Under that burden, intended to yield to the railroads from fifteen to eighteen hundred millions of dollars, the people have reeled until this time. Their complaints have been met by the majority in control of Congress by the promise of the passage of bills designed to remedy the wrong that was done them. The irritation of the people has been quieted by the statement that these bills are under consideration. They have looked forward to the time when relief should come to them.

Now they find that after all their forbearance and suffering the committee has declared itself incapable of dealing with the subject. It has deferred consideration of these measures until such time—mark you the gentle sarcasm—"until such time after the beginning of the session of Congress in December next as the committee may see proper to bring the subject forward."

We know what that means. All of us know that there will be no time at the next session of Congress to consider these matters. All of us know that by taking that action the committee has interposed a plea of bankruptcy to the claim for relief that the people have upon them.

"Oh," they say, "the law has not been thoroughly tried. We have not tested out the transportation act of 1920. We do not know how it is going to work. Let us give it a little more time for operation."

The same gentlemen are saying that now who said, when the Esch-Cummins bill was being considered in the House, "It is a great constructive measure." It comes from the same source. Not time enough! Oh, for those who have not yet been able to see the wrong that was done to the American people by that act there will never be time enough for them to see, because they are blind. The act has not only grievously oppressed the people, but I call your attention to the fact that this enormous increase in the cost of transportation was imposed upon the country at the very time when it was most oppressive to us. It had its inception when the business conditions of this country were on a sharp decline. But the railroads needed the increases; they wanted the money and so, of course, they got it. Now the committee and this Congress and this administration lack courage and intelligence enough to be able to produce the remedy.

Mr. ANDREWS of Nebraska. How much money has been paid out of the National Treasury, if anything, under section 15a of the transportation act of 1920 to the railroads?

Mr. HUDDLESTON. Under the transportation act of 1920 we guaranteed that the earnings should be equal to the standard return for a period of six months. I presume that is what the gentleman refers to.

Mr. ANDREWS of Nebraska. No.

Mr. HUDDLESTON. What does the gentleman refer to?

Mr. ANDREWS of Nebraska. Under section 15a has the Government paid a single dollar to a railroad?

Mr. HUDDLESTON. What particular clause of section 15a?

Mr. ANDREWS of Nebraska. Either one. Or take the whole of it.

We have incurred a liability to the railroads under the guaranty clause for the six months' period after the transportation act was enacted of an amount variously estimated at from $600,000,000 to $900,000,000. The exact amount which has been paid I am not able to say at this time. The last time I had the figures it was between $300,000,000 and $400,000,000.

Mr. GRAHAM of Illinois. It is about $700,000,000.

Mr. HUDDLESTON. You gentlemen may remember the harrangue I indulged the House with when the Winslow bill was passed. I then said that that act would cost the Treasury some $300,000,000. I then insisted that the railroads should be required to bring in their claims then and have a settlement. The answer was made that the total aggregate amount could not be over $635,000,000. Yet we have already paid, so the gentleman from Illinois [Mr. GRAHAM] informs me, about $700,000,000, and there are yet perhaps hundreds of millions that remain to be paid.

Let me say this: Our committee does not know what the trouble is. Our committee has not yet found out that the transportation act of 1920 needs to be remedied. Our committee has not found out the iniquities of the way in which rates are made, of the grouping system or of the incomes allowed to the railroads under section 15a. But the people of this country have found out. They know what was done to them.

As we came from the committee this morning one of the ablest members remarked to another as they walked out, referring to those members who had voted to postpone further consideration of the remedial measure, "Well, they will take more interest in these bills after the 1st of next November." He referred to the November elections which are coming along. The other member made a reply to him, "Oh, I don't know; when Members lose their seats in Congress they usually take very little interest in things afterwards. It is very likely that we can not get a quorum of this committee next December." The people know, if the committee and Congress do not know.

I listened with emotion to the piteous plea made by the gentleman from Wyoming [Mr. MONDELL] this morning, when he complained of the burdens which have been imposed upon this Congress. I suppose he meant upon the Republican administration and the Republican majority in both Houses of Congress; he spoke of the grievous burdens that have been imposed on Congress by the administration of the previous Democratic President.

Mr. KING. What hope or expectation is there in the Democratic Party to remedy the railroad situation?

Mr. HUDDLESTON. The gentleman has asked me to enter upon a subject that in the minutes remaining of the time that I have allotted to myself I can not hope to take up. But I will say a little something to the gentleman along that line if he will just listen now for a moment. The gentleman from Wyoming did not say so, but it is a fact just the same, that every one of those measures that has imposed a burden upon the American people was supported by a practically unanimous vote of the Republicans who were Members of Congress. Every error that the Democrats committed, if they committed errors, the Republicans are equally guilty of. I guarantee, gentlemen, that if you examine the records of the votes, you will find that every vote that was passed during the war that tended to impose a burden upon the people of the United States was supported with greater unanimity upon that side of the House than upon this. And if men are ever estopped from criticism, if they are ever bound to stand by their guns, if they are ever expected to stand by the burdens which they themselves have created, then the Republican majority are bound to meet without complaint the burdens and duties of solving the problems arising out of the war. It was as much your war as ours.

But I want to offer you Republicans a little ray of hope. Only a little while longer, gentlemen. Be patient; bear the burden the best you can. The people will relieve you of it the very first chance they get. [Applause on the Democratic side.]

Mr. Chairman, I reserve the balance of my time. I yield one hour to the gentleman from Tennessee [Mr. DAVIS.]

The CHAIRMAN. The gentleman from Tennessee is recognized for one hour.

Mr. DAVIS of Tennessee. Mr. Chairman, I ask unanimous consent to revise and extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Tennessee [Mr. DAVIS] is recognized for one hour.

Mr. BANKHEAD. Mr. Chairman, I understand the gentleman from Tennessee is going to discuss a very important question now pending before Congress and the country, to wit, the ship subsidy bill. I think that on that subject, to which he has given great attention, he is entitled to a hearing by more gentleman than are here, and I make the point of no quorum present.

The CHAIRMAN. The gentleman from Alabama makes the point of no quorum present. The Chair will count. [After counting.] Sixty Members present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, when the following Members failed to answer to their names:

Almon	Barkley	Bland, Va.	Britten
Anderson	Beck	Blanton	Brooks, Pa.
Andrew, Mass.	Bell	Boies	Buchanan
Ansorge	Bixler	Bond	Burke
Appleby	Black	Brand	Burtness

Gorman	Madden	Sanders, Ind.	
Gould	Maloney	Schall	
Graham, Pa.	Mann	Sears	

The committee rose; and Mr. WALSH having resumed the chair as Speaker pro tempore, Mr. LONGWORTH reported that the Committee of the Whole House on the state of the Union finding itself without a quorum, he directed the roll to be called, when 216 Members, a quorum of the committee, answered to their names.

The SPEAKER pro tempore. The committee will resume its sitting.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union, with Mr. LONGWORTH in the chair.

Mr. DAVIS of Tennessee. Mr. Chairman and gentlemen, an article in the New York Evening Post, by Harold Phelps Stokes, stated in part:

> On no subject now before Congress has there been more consistent and sustained propaganda than on the administration's ship subsidy bill. * * *
>
> In the case of the ship subsidy bill newspaper bureaus at the Capital have been fairly swamped with such publicity material, Chairman Lasker's opening speech of 59 pages being supplemented by frequent "hand outs" from the National Merchant Marine Association. Over and above that, Mr. Lasker and President Harding have made special efforts in a personal way to explain the features of the legislation to the correspondents and to bring home to them the urgency for its passage.
>
> As a result, the prosubsidy side of the controversy has been placed before the public effectively. The other side has been virtually ignored.

There has perhaps never at any time been as much propaganda, certainly not as much false and misleading propaganda, in favor of any bill as that in favor of the pending ship subsidy bill. Consequently, it is about time for the presentation of some facts to show the defects and iniquities of this bill, so that I shall devote the time allotted to me to-day to a discussion of this subject.

I am heartily in favor of a real constructive solution of this merchant marine problem. Whatever I say upon the subject will be sincerely with that end in view. In order to do that, it will be necessary to candidly deal with some aspects of the situation and to brush away some of the débris of misinformation with which the Congress and the people have been flooded. This is a large, intricate problem possessing innumerable angles. It can not be intelligently discussed in a brief period. To-day I shall only be able to discuss some features of the question, largely along the line of clearing away débris. However, if granted the opportunity, I shall present an array of cold facts which can not be controverted, and which will prove that this bill not only does not present a correct solution of this problem, although it would impose upon the people tremendous additional burdens, but also that it is the most extraordinary and most vicious bill ever presented for your consideration. This bill is an expression of the demands of the selfish interests which alone will benefit from its passage.

In opposing the pending bill, I shall accept the challenge of its proponents and in due time present what I conceive to be a correct analysis of the difficulties and a real solution in lieu of the pending bill.

Lasker and his cohorts and the private shipping interests have persistently tried to make it appear that the issue involved is whether we shall have permanent Government ownership of merchant vessels, or as to whether they shall be gotten into the hands of private owners. They have set up a "man of straw," because this is not the issue. I do not believe that there is a member of either the Merchant Marine and Fisheries Committee of the House or the Senate Committee on Commerce who favors permanent Government ownership of the Shipping Board vessels. Those of us opposed to the pending ship subsidy bill are in favor of the Shipping Board vessels being sold as soon as possible, consistent with the proper protection of the public interests and the preservation of a real American merchant marine. I believe that what is true with respect to the membership of said committees is likewise true with regard to the membership of Congress in general.

Furthermore, the propaganda in favor of this bill disseminated all over the country by the Shipping Board and shipping interests insists that the pending bill presents the only solution; that this bill, and it alone, will enable the Government to dispose of its ships and insure the establishment and maintenance of a privately owned American merchant marine. I emphatically deny this contention. The controversy is not as to whether we shall have Government ownership or private ownership; nor as to whether we want or do not want an adequate American merchant marine. My discussion of this question shall be based upon my own position, which I believe is in accord with the views of this House—that is, that we favor an adequate privately owned American merchant marine. However, this bill is predicated upon an incorrect diagnosis of the case and it prescribes an improper and futile remedy.

In addition to the false issues raised, as just explained, the chief arguments advanced in favor of the passage of this bill may be summarized as follows:

1. In order to stop the $50,000,000 annual expense of the Shipping Board.

2. In order to get the Government out of the shipping business.

3. In order to make possible the sale of our Government-owned ships.

4. In order to make it possible for ships under the American flag to compete with those under foreign flags.

It is insisted by the proponents of this bill that American-flag ships can not now successfully and profitably compete with foreign-flag ships for the following reasons:

(a) Because of differential in capital cost in favor of the foreign shipowner.

(b) Because of differential against American operators in the wage and subsistence cost of manning the ships.

5. That it is necessary to pass this bill in order to have an adequate naval auxiliary in case of future war.

All of these arguments are utterly fallacious, as an examination of the facts will disclose. I shall later discuss these arguments in detail, if given the opportunity.

However, in this connection I do wish to call attention to a statement made by the distinguished majority leader [Mr. MONDELL] to-day which indicated that he had fallen a victim to some of the propaganda that has been put forth by the friends of the ship subsidy bill. He gave as a reason why it is probably necessary to pass a bill of this kind the fact that we now have a very large American fleet of merchant vessels. We have. That is one reason why subsidies are unnecessary. Heretofore one of the chief arguments, and in fact, with the exception of the complaint about the seamen's act, about the only argument in favor of a subsidy was that American ships cost more to construct than foreign ships. But now we have an immense fleet, which the Shipping Board are proposing to sell to private interests at the present world-market price, even at a time when there is the worst depression in the history of shipping, and at a price that is about a third of what those ships could have been constructed for before the war, and perhaps at a less than one-third of what they can ever be constructed for again. Consequently that has removed the chief argument that has been made heretofore in favor of ship-subsidy legislation, as the shipping companies can buy the ships at such a price that the differential on capital investment will be in their favor as compared with the foreign shipowners, and the value of them will greatly advance as soon as world conditions improve and commerce increases.

The proponents of this bill having seen that such is necessary, a tremendous drive is now being made to get this bill

reported out and passed through the House during the present session.

An article in a recent issue of the Washington Star by Will P. Kennedy stated in part:

> The only new legislation that has any chance of passing the House is the ship subsidy bill, and that only because of the insistence of President Harding.
>
> This disposition on the part of the House is based on two considerations: First, the House has already sent to the Senate more measures of prime importance than the Senate can pass at this session. Second, with a threatened deficit of $250,000,000 to $400,000,000, the House Members do not want to take the responsibility for initiating legislation that would call for vast expenditures, such as the Smith-McNary reclamation bill, the Towner-Sterling bill for a department of education, and the ship subsidy bill. If any big appropriation was possible, the one most needed, and for which there is the greatest pressure is for an omnibus public building bill. Since they can not have that, the House Members are set against any of the new measures calling for appropriations. * * *
>
> House Leader MONDELL admits that there is some disposition on the Republican side not to take the matter up, at least until after the House membership is here in larger numbers, for consideration of conference reports on the tariff and soldiers' bonus measures and until they have had an opportunity of studying the bill as it is reported to the House from the Merchant Marine Committee. This feeling does not relate entirely to the ship subsidy measure itself, but is in accordance with the general sentiment that the House has already passed more legislation than the Senate can possibly take care of, and, therefore, there is no special rush. * * *

In this connection I wish to state that it would be manifestly unfair at this time to take the bill up in the House, when there is an attendance of but little more than half of the House membership. The absent Members in near-by States, including all of those on the Atlantic seaboard, could be gotten here on short notice, whereas those in the Middle West, the Northwest, and the Southwest, as well as those in the extreme West, are so far away that they would probably not be able to return, even if they should in time receive notice as to when the bill would be considered, which is unlikely.

I also indorse the suggestion that Members should be given an opportunity to study the bill as it may finally be reported to the House. They should also be given an opportunity to read the hearings upon this important bill. Such hearings have not been available except to a very limited extent, I think only a hundred copies being distributed through the House committee, and they were quickly exhausted without copies being furnished to many people who desired them. I know that numerous Members of the House and others have been wanting to procure copies of the hearings. It is understood that the hearings are to be indexed and reprinted. If so, I certainly hope that the Members of this House will read those hearings, and particularly the cross-examinations, in order that you may not only know the important facts there developed but may see the efforts of the Shipping Board representatives and the shipping interests to evade, to conceal important facts, and their absolute refusal to disclose important facts within their knowledge reflecting upon this problem. I certainly trust that you will not reach a conclusion in this matter upon the strength of the false propaganda with which you have been flooded and with which you are being daily regaled in the press.

The article referred to concluded with the following:

> And it is only the persistent insistence of President Harding that can force the West to allow the ship subsidy bill to pass at this session.

Another article in a recent issue of the Washington Star contained the following:

> At a White House conference with House leaders the President was informed that the bill probably would be ready for submission to Republican members of the Merchant Marine Committee the latter part of this week, but that many Republicans were not disposed to take up new legislation toward the fag end of the session.
>
> The leaders, it was understood, frankly told the President there was opposition to subsidy legislation among Republicans from Middle Western States, and that there was the certainty of almost solid Democratic opposition. * * *
>
> One of the members with whom the President talked—a strong advocate of the bill—is said to have told Mr. Harding that once the bill is reported it will be necessary for him to get behind the leadership and demand its prompt passage as a party measure.

On June 5 the Washington Post had one of its double-column editorials in behalf of this ship subsidy bill, which stated, in part:

> The New York Times, Democratic, but reputed accurate in its news reports, publishes a dispatch from Washington stating that President Harding has bluntly and emphatically informed the leaders of the House that he expects the ship subsidy bill to be taken up and passed at this session. The report adds that the leaders intimated that they were opposed to acting upon the bill before election, whereupon the President became "very emphatic" and made it clear that he desired ship subsidy legislation above anything else; that it was an administration measure, promised by him and the party platform, and must be enacted before election. The dispatch states that the leaders changed their views after the conference and promised their support. The bill is now to be reported to the House within 10 days.
>
> There is no reason to doubt the substantial accuracy of this report.

As a matter of fact, neither the Republican platform nor that of any other party has ever declared in favor of this or any other ship subsidy legislation. On the contrary, the Republican national platform of 1920 declared as follows:

> MERCHANT MARINE.
>
> The national defense and our foreign commerce require a merchant marine of the best type of modern ship flying the American flag, manned by American seamen, owned by private capital, and operated by private energy.
>
> We indorse the sound legislation recently enacted by the Republican Congress that will insure the promotion and maintenance of the American merchant marine.
>
> We favor the application of the workmen's compensation acts to the merchant marine.

Your attention is called to the fact that the Republican national platform indorsed and stood upon the merchant marine act of 1920, known as the Jones Act, and not only did not make any intimation as to subsidies, but did not even suggest the necessity of any additional legislation except the application of the workmen's compensation act to the merchant marine, which is intended to be for the benefit of the seamen and not the shipowners.

The question of ship subsidies was not an issue and was not even discussed during the last campaign, and the people had no opportunity to express their views relative thereto.

In the beginning of his prepared statement read at the hearings on this bill, Chairman Lasker said:

> The question of subsidy to American ships has hardly ever been treated as a partisan one, in spite of the fact that we hear favorable consideration has been a Republican policy and opposition a Democratic one. The fact is that for practically half a century neither party has given life to a policy of direct aid to American ships. The Republican Central West has ever joined with the Democratic South in distaste and revulsion to subsidizing our shipping.

There is really no good reason for treating this bill as a partisan or party measure at this time; it should be fully and carefully considered and settled upon its merits. The extracts I read and other quotations from proponents of the bill make it quite clear that the only reason that they favor making the bill a party measure is because they realize that it is impossible for it to win upon its merits, and that the only chance to put it through is by wielding the party whip.

Having the welfare of the whole country at heart, as I view it, and disregarding the question of political advantage or disadvantage, I very much hope that this infamous bill will never be enacted. However, if it is to be passed, I hope that it will be put through as a party measure, feeling confident that the party responsible for such action will be rebuked by the American people. Furthermore, if the bill is to be passed during this Congress, I hope that it will be passed during the present session, in order that the people will have an opportunity in the coming election to return a Congress that will repeal it before the Shipping Board has had time to carry out their design of lending the $125,000,000 loan fund, and making so many 10-year subsidy contracts that the bill could not be repealed.

So far as I have been able to find, President Harding is the only President who has ever declared in favor of ship subsidy legislation. In the very nature of things it was impossible for him to make an independent investigation of this complicated problem, and, consequently, it was necessary for him to rely upon the information and advices of others upon the subject. Apparently having the President's full confidence, Lasker has misinformed and misled him. According to newspaper reports from time to time Lasker made repeated visits and appeals to the President to come out in favor of this legislation. Lasker stated at the hearings and otherwise that he submitted to the President for his information and as the recommendations of the Shipping Board this elaborate study entitled "Government aid to merchant shipping—a study prepared under direction of the United States Shipping Board." It was stated that the President's message to Congress on the ship subsidy bill was based in large measure upon the contents of said study. That being true, his support of the bill was induced by the grossest sort of misinformation, because this study is full of misstatements and misleading and deceptive statements. I wish I had time to discuss some of the various and devious methods employed by Lasker in his efforts to further this bill.

The President is said to have told Members of the House that this was his pet bill and he wanted it put right through. It is even reported in this morning's Washington Post, which is recognized as the official organ of the administration, that on yesterday the President demanded of Republican Leader MONDELL and the Republican steering committee that the ship subsidy bill be speedily reported out and brought to a vote, and that he had threatened to call an extra session solely to consider this bill if it did not come to the voting stage before adjournment. He is perhaps taking a more active interest in

behalf of it than any measure since he has been in the White House.

According to all reports he impatiently spurned the counsel and advice of the leaders of his party in the House, clinging alone to the advice of Lasker—of a man who a few months ago knew absolutely nothing of the subject and who now knows even less, because the most that he has since acquired has been misinformation instead of information, having acquired same from those bent upon bleeding the Government and not aiding it.

I can well understand that these reports of the President's activity and intended activity to whip the Members of the House into line in support of this bill may be very disconcerting to those Members of the House who are against the bill and who know that their constituencies are against it. Consequently, I wish to relieve them of any embarrassment incident to such reports by calling attention to the fact that there appeared in the Washington Evening Star on a date later than any of the articles from which I have quoted an article by N. O. Messenger under the heading, "President may veto bonus bill." After discussing the status of the soldier bonus bill and the President's reputed opposition to it and the prospect of him vetoing it, the article continues:

If it is asked why the President does not then use his presumed influence to head off the legislation, the President's friends reply that he declared at the outset of his administration he would not seek to dictate to Congress. There is a difference, it is contended, between coercion of Congress during the pendency of legislation and its subsequent veto. The latter is a power vested in the Chief Executive by the Constitution of the United States, and can not be classed as dictation.

The President's position, as analyzed by his friends in Congress, is dignified and consistent. He will not seek to sway Congress in the exercise of the constitutional functions of the legislative branch, not even to the extent of indicating intention to use the veto, and in an entirely legitimate way has allowed his views upon the subject to be known.

According to this article, apparently inspired from the White House, the President having expressed his views on the ship subsidy bill in a message to Congress, the manner prescribed by the Constitution, surely "he would not seek to dictate to Congress" or to "seek to sway Congress in the exercise of the constitutional functions of the legislative branch."

Although this bill is presented as the only solution, yet it is by the merest accident that it is presented at all, at least with the indorsement of the Shipping Board and the President. It is a matter of common knowledge that the President first tendered to James A. Farrell the chairmanship of the Shipping Board and held up the appointment several weeks in an effort to persuade Mr. Farrell to accept. Lasker himself said at the hearings:

Well, the President wanted Farrell ahead of me for chairman of the Shipping Board, and was very much disappointed when he had to take me and did not get Farrell. He [Farrell] is one of those factors that makes for the ships being operated under the American flag.

The assumption is that the President desired to appoint Mr. Farrell, not only because of his great business and administrative ability but also because of his experience with and knowledge of ship construction and ship operation.

Had Mr. Farrell accepted the appointment, it is natural to presume that the President would have been guided by his counsel and advice as to our shipping problem; and it is safe to say that this bill and this program would not have been presented at all. When I take up the discussion of the difficulties and remedies, I shall present Mr. Farrell's analysis and recommendations.

It may be argued that while the 1920 Republican national platform indorsed the merchant marine act of 1920 as "sound legislation recently enacted by the Republican Congress that will insure the promotion and maintenance of the American merchant marine," and without the recommendation of further legislation except a merchant marine workmen's compensation act, yet that the situation was changed because of the failure to enforce section 34 of the said act. However, the pending bill by no means stops with presenting a substitute for said section 34 of the Jones Act.

The substitute for said section 34 is embodied in section 301 of the pending bill authorizing a deduction from net Federal income taxes of 5 per cent of the freight paid on goods imported or exported in American-flag vessels. In discussing this provision of the bill and comparing it with section 34 of the Jones Act, Chairman Lasker declared in his prepared statement read at the hearings:

It is the belief of the Shipping Board that the proposed deduction from net Federal income tax of 5 per cent of the freight paid on goods imported or exported in American-flag vessels may do more to aid in the upbuilding of the American merchant marine than any proposal which is herein submitted to the Congress.

Section 34 provided preferential tariffs for American-flag ships, but this could only be applicable to dutiable imports. The operation of section 34 gave no preference to American ships on exports and no preference to American ships on nondutiable imports. The proposed 5 per cent deduction from taxes of the freights paid on goods imported or exported in American-flag vessels now made should insure a preference to American shippers on every ton of goods sold abroad or bought for consumption at home. This 5 per cent deduction is made in substitution of section 34, but we of the Shipping Board believe it is possible that this section will accomplish at less cost to the Treasury much more than might have been accomplished by section 34. * * *

Nothing that can be devised, the Shipping Board feels, will so greatly insure volume to American ships as the 5 per cent tax deduction here proposed.

And on cross-examination the following occurred:

Mr. LAZARO. Mr. Lasker, you stated if the Jones law could have been carried out as a whole it would have given us an American merchant marine without asking for further legislation.

Mr. LASKER. In my belief.

Likewise, Winthrop L. Marvin, in an article entitled "The merchant marine bill of 1922 analyzed—One of the experts who assisted the Shipping Board in framing the bill outlines its merits," appearing in the April issue of Marine Engineering declared:

A wholly new feature of American maritime law is that provided for in section 301 of the new shipping bill for a deduction from the amount which would otherwise constitute the income tax of a sum equivalent to 5 per cent of ocean freight money paid for transportation of merchandise in American ships in the foreign trade. This is an ingenious new departure intended to serve the purpose of a part of the preferential duty of the original Jones Act, but, as a matter of fact, it is far more valuable and effective, for it would apply to all merchandise, dutiable or free, inward or outward.

This is treaty-proof. It is not a subsidy, but an indirect aid. Its potential importance is incalculable. It will appeal to all shippers, small and large, and will have the effect of making all American vessels first-preferred bottoms.

He confirmed this at the hearings, and stated specifically that he had reference to section 34 of the Jones Act and "would very greatly prefer" this substitute provision to section 34 of the Jones Act.

Mr. Marvin is the vice president and general manager of the American Steamship Owners' Association, which embraces practically all of the American shipowners. He is paid a large salary by said organization, and devotes all of his time to promoting the interests of the members of said association, especially with respect to legislative matters. He has played a large part in the preparation of this bill and the propaganda in its behalf. If any one man could be singled out as the father of this bill, he is that man.

The said study prepared under the direction of the Shipping Board states:

The policy of Congress with regard to the national merchant marine has been positively and definitely determined in the shipping act of 1916 and the merchant marine act of 1920. * * *

The act of 1916 created the Shipping Board and the Emergency Fleet Corporation and provided for the construction and operation of Government-owned ships. It was passed under the stress of the extraordinary conditions produced by the war in Europe, and so far as its provisions for the construction and operation of ships by the Government are concerned, it was intended to give only emergency relief.

The merchant marine act (of 1920), on the other hand, was passed about 18 months after the close of the war, and in the light not only of the results of the policy established by the earlier act but also of the changed economic conditions produced by the war. The latter act may therefore be considered as the expression of the permanent policy of Congress.

The act of 1920 is an excellent, well-considered, and comprehensive piece of legislation, which was designed not only to foster the development of a large and well-balanced merchant marine but also to insure the operation of that marine under private ownership. Accordingly, the act provided for a number of indirect aids which it was thought should prove ample to develop American shipping on a sound and permanent basis and should restore the American merchant marine to the proud position it enjoyed in the first half of the nineteenth century.

Then the said study refers to the fact that section 34 of the Jones Act had not been put into effect, and states that supplementary legislation was necessary.

Yet the pending bill not only provides a substitute which both Lasker and Marvin stated will be much more valuable and effective than section 34 of the Jones Act, but the pending bill also amends the Jones Act in several vital respects, and in addition provides innumerable other direct and indirect aids. In addition to the costly direct aids provided in the bill, Lasker himself stated that they embodied "every practical indirect aid possible to give." They incorporated about every character of aid that had ever been granted in any other country and devised some additional schemes to favor the shipping interests at the expense of the people.

This bill is not constructed along scientific lines, but is simply a hotchpotch of every conceivable method by which it was thought the shipping interests could be favored.

The direct charges upon the Public Treasury carried in this bill, even if they amount to no more than the figures conceded by Chairman Lasker at the hearings, will amount to more annually than the combined subsidies, subventions, and State aid of every character and description paid by all of the nations on earth combined.

Some years ago the Commissioner of Navigation collected and collated the amounts of every character of aid granted to shipping interests by all the foreign maritime nations, which he set forth in his report and which he summarized as follows:

The aggregate amount paid by foreign nations in the form of subsidies, ocean mail pay, navigation and construction bounties, admiralty subventions, naval reserve appropriations, fisheries bounties, refund of Suez Canal tolls, and other forms of contributions which directly or indirectly add to the volume of business under their respective national flags, is upward of $46,000,000 a year.

During the hearings Chairman Lasker conceded that the pending bill included direct charges on the Public Treasury of $52,125,000, not taking into consideration the exemptions from Federal taxes allowed shipowners and other indirect aids, the amounts of which Chairman Lasker declined to estimate. The pending bill would cost the American people at least $75,000,000 per year.

Winthrop L. Marvin, previously mentioned, during his statement at the hearing referred to this bill as "a shipping bill such as has never been dreamed of before." In this he is undoubtedly correct. This bill stands in a class by itself, not only as to substance but as to form.

Chairman Lasker stated at the hearings that he had given instructions to those drafting the bill that it should be so drafted as to give the Shipping Board "very wide latitude; in fact, almost absolute discretion in determining to whom they shall sell ships and also to whom they may see proper to grant the various forms of subsidy." He further stated that "if it doesn't contain it that way, I hope to have it changed so that it will." They certainly carried out his instructions, because the pending bill confers the most autocratic power and the widest discretion, perhaps, ever conferred upon any board. It affords boundless opportunities for favoritism, graft, and corruption. Under its provisions the Shipping Board is authorized to usurp powers properly belonging to and now exercised by the President, the Secretary of State, the Secretary of the Treasury, the Secretary of War, the Secretary of the Navy, the Secretary of Labor, the Secretary of Commerce, the Postmaster General, and the Congress. The bill authorizes the Shipping Board to declare valid or invalid existing agreements between common carriers by water and common carriers by land, although some such contracts have been sustained by the courts and others have been declared invalid; so that the Shipping Board is authorized to usurp the power of the judiciary, including the United States Supreme Court, if it so wills.

The pending bill proposes to so amend the present law as to eliminate competitive biddings, and also to authorize the sale of ships without advertisement if authorized by five members of the board.

Such sale shall be made at such prices and on such terms and conditions as the board may prescribe, but the completion of the payment of the purchase price and interest shall not be deferred more than 15 years after the making of the contract of sale, nor shall the interest be at less than 2 per cent per annum.

This bill provides for a revolving fund of $125,000,000, to be known as the construction loan fund, and the Shipping Board is authorized to lend this fund at 2 per cent interest, without any limit as to time, and without any restriction as to the amount to be loaned any person or corporation, except that no loan shall be made upon any one ship "for a greater sum than two-thirds of the cost of the vessel to be constructed or of the value of the vessel thus reequipped."

The bill provides for the payment of certain basic voyage subsidies, and authorizes the board to increase such subsidies up to the extent of doubling them, or to decrease the amount below the basic subsidies to whatever extent they see proper. The board is authorized to make contracts for the payment of subsidies "for a period not exceeding 10 years from the date when contract is made"; it will be noted that such period does not date from the passage of the bill, so that it would be practically impossible for a future Congress to repeal the law, for the reason that there would always be numerous such contracts outstanding. The Shipping Board is given absolute discretion to grant such subsidies or to withhold them. Under such extraordinary discretionary powers it was admitted at the hearings by a representative of the Shipping Board that it was within the power of the board to grant the owner of the *Leviathan* an annual subsidy of $1,800,000 or to refuse to grant such owner any subsidy, or to grant a subsidy in any amount between nothing and said maximum figure.

Can it be that the unprecedented power and discretion given the Shipping Board under the provisions of this bill account for the feverish, unseemly activity in behalf of the bill by some members of the Shipping Board?

This bill creates a "merchant-marine fund" for the payment of the voyage subsidies, "which shall be subject to withdrawal by the United States Shipping Board on requisition approved by the chairman of the board." This fund is to be derived from 10 per cent of our customs receipts, which Chairman Lasker estimated will amount to about $30,000,000 per annum; by tonnage taxes, which he estimated will amount to about $4,000,000 per annum, and by the amounts which would otherwise be paid for carrying the mails, which he estimated at $5,000,000, making a total of $39,000,000; and all of which amounts the Secretary of the Treasury is directed to pay into said merchant-marine fund without any appropriation by Congress.

Chairman Lasker considers the indirect aids provided in the bill to be of much greater value than the direct aids, as evidenced by his statement at the hearings on the ship subsidy bill, as follows:

Happily the Shipping Board, after long and careful study, came to the conclusion that a proper measure of Government aid to accomplish the purposes in mind could only come through the use of both direct and indirect aids, throwing the burden onto the indirect aids. * * * Thus the burden of the aid is thrown on the indirect. Thus the proponent of indirect aid can have no occasion to quarrel with the proposals; for the Shipping Board recommends every practical indirect aid possible to give. * * * Because of the great value it places on the indirect aid, the Shipping Board figured a very modest sum of direct aid.

It will be noted that Chairman Lasker figures $39,000,000 per annum as "a very modest sum." As a matter of fact, the amounts will be considerably larger than he concedes. Mr. Lasker stated that he was unable to give any estimate as to the amounts that would be received by the ship operators under the various indirect aids.

Another direct charge on the Public Treasury is involved in the provision authorizing deductions from net Federal income taxes of 5 per cent of the freight paid on goods imported or exported in American-flag vessels, which Chairman Lasker and the Shipping Board report estimate would amount to about $10,000,000 per annum when the program gets into operation; as a matter of fact, it would amount to much more than that.

Mr. Lasker also conceded that in lending the $125,000,000 at 2 per cent interest the Government would be losing at least 2½ per cent, which would amount to $3,125,000 per annum. Furthermore, the 2 per cent interest, amounting to $2,000,000 annually, if collected, will go into this loan fund and not the General Treasury.

It will be noted that these different items involving a direct charge on the Treasury aggregate $52,125,000, according to Mr. Lasker's admissions and figures, and not including the $2,000,000 annual interest, which should also be counted.

Furthermore, this bill exempts the operators of vessels from the payment of "war profits and excess profits taxes imposed by Title III of the revenue act of 1918 or any and all taxes on income, corporate or individual, imposed by the revenue act of 1921, or by any subsequent revenue act, an amount equivalent to the net earnings of such vessel during such taxable year," provided the owner "invests or sets aside in a trust fund for investment" for the construction of new vessels.

The bill further provides for the exemption from taxation of the profits made upon the sale of vessels built prior to January 1, 1914, provided such owner "invests or sets aside in a trust fund for investment for the building of new vessels." I do not know why this advantage is accorded to privately owned vessels but not to those built by the Shipping Board.

Of course, it is impossible to state the extent of the charge upon the Public Treasury of these tax exemptions and none of the representatives of the Shipping Board would give any estimate thereon. However, it is certain that the amount would be very large. In speaking of these provisions Marvin said:

Thus these features of the Jones Act are made distinctly more valuable.

The bill further provides for the elimination of the Army and Navy transports so as to require our troops, munitions, and supplies to be carried in privately owned vessels without any distinction in time of war. Chairman Lasker and the Shipping Board report estimated that the income to privately owned ships from this source would amount to $7,500,000 per annum in the Pacific alone, of which amount they state that approximately $5,000,000 would be net profit to the ship operators. It will be noted that this amount does not include the Army and Navy transport service to the Canal Zone, Porto Rico, the Virgin Islands, Haiti, and so forth.

One of the provisions of the bill provides that 50 per cent of the immigrants to this country shall be transported in American vessels. Mr. Thomas H. Rossbottom, a representative of the Shipping Board, who testified at the hearings, estimated that under the present 3 per cent quota law "this traffic would

give the transporting companies a gross income of $17,600,000 per year, of which one-half, or $8,800,000, should come to American owners." He further stated that one-half of this sum would be net profit.

There are various other indirect aids carried in the bill, which I shall not now discuss.

Mr. NOLAN. Will the gentleman yield?

Mr. DAVIS of Tennessee. I will yield to the gentleman for a brief question.

Mr. NOLAN. I should like to inquire in reference to our Army Transport Service. Is it proposed in this bill that we dispose of the ships that are now being used by the Army Transport Service?

Mr. DAVIS of Tennessee. Yes.

Mr. NOLAN. At the same price they are putting on the others; of about $20 a ton?

Mr. DAVIS of Tennessee. The fact of the business is that the Shipping Board is authorized to sell ships without any limit as to price, but this bill authorizes the doing away with the Army Transport Service for the purpose of giving business to private ships.

Mr. NOLAN. In other words, it is proposed by the Shipping Board to dispose of vessels which cost $240 a ton, which are now used by the Army Transport Service, on which they expect to realize about the same amount that they realize on their other ships. Is that a fact?

Mr. DAVIS of Tennessee. Of course, if they sell them, they will have to sell them at the current prices, and everybody knows that there is the worst depression in the history of shipping, and that ships at this particular time can not be sold for scarcely anything.

Mr. NOLAN. Is your committee in a position at this time to give any information as to what the Shipping Board have accomplished in disposing of ships? I note that the newspapers have carried expensive advertisements about the sale of the whole fleet, and what response have they got for that?

Mr. DAVIS of Tennessee. On February 21 the Shipping Board did advertise the entire fleet and received some bids, and Mr. Lasker said at the hearings, and also stated in the press, that the bids received were jokes; that they were facetious. And yet Commissioner Lissner admitted at the hearings that they had made that advertisement of sale for two reasons; one was that the Jones Act compelled them to advertise for sale, and they advertised the entire fleet in compliance with the law, so that after that they could sell any of the ships at private sale without further advertisement. He further admitted that another reason they had in mind was that they might treat the bids, which Lasker designated as jokes, as a criterion, and that they would be justified in selling at such prices without further advertisement and at private sale.

I wish the membership of the House knew all that is at the bottom of this proposition. If you would investigate the movements and actions of the Shipping Board, you would deprive them of what power they now have instead of giving them any more extraordinary power.

Mr. MOORE of Virginia. Will the gentleman state whether Mr. Lasker was a shipping expert before he came into this business?

Mr. DAVIS of Tennessee. He said before the Appropriations Committee last July that he was not an expert on shipping, but that he did take a pride in being an expert in publicity. That was the reason he was appointed chairman of the Shipping Board. He was recommended, according to charges made in the press, by certain big shipping interests. He could not have been recommended because he knew anything about shipping, but they thought that they could supply the misinformation and that he was the proper man to put over the ship subsidy bill by his publicity methods—intensive propaganda.

Chairman Lasker stated that when he came to the Shipping Board he held the idea that the chief trouble with the American merchant marine was the seamen's act, and that the remedy lay in either the repeal or modification of that act, but that he had found upon investigation that the seamen's act had been very much misrepresented in that regard. The shipping interests had been misrepresenting the seamen's act ever since its passage, just as many of them are now misrepresenting the other phases of the question. They jump from pillar to post in an effort to present excuses for subsidies.

A bold and unusual feature of the bill is that all of the direct and indirect aids are so cunningly devised as to avoid the necessity of any congressional appropriations. This was done deliberately.

Members of the Appropriation Committees are frequently of an inquisitive mind and sometimes ask embarrasing questions as to the expenditures of past appropriations and the intended expenditures of future appropriations; and then when the bills are under consideration in the Congress there is more inquiry and discussion. Consequently, the Shipping Board is anxious to avoid all such embarrassment, and is unwilling to come to Congress annually for necessary appropriations as all other departments are required to do. However, entertaining the opinion he does of Members of Congress, perhaps Chairman Lasker is fully justified in endeavoring to avoid the necessity of having to be worried with mere Members of Congress.

The gentleman from Texas [Mr. HARDY] has been intelligently studying shipping matters for about 12 years, and has more real sound knowledge of such matters than Chairman Lasker and all the members of the Shipping Board combined [applause]; and yet during the time Judge HARDY was questioning Chairman Lasker at the hearings in regard to the proposed legislation the following was said:

Mr. LASKER. May I say this, Mr. Congressman: The Members of Congress are not expected to understand it, and that is why I welcome your questions, because we want to give illumination.

Mr. HARDY. We are expected to understand it.

Mr. LASKER. You may be expected to, but I am afraid you do not; that is why I wanted to give this information.

The avoidance of appropriations is not only deliberate but in accordance with the instructions of the shipping interests.

There was published as an appendix to a study prepared and distributed by the Shipping Board, which was inserted in the hearings, a statement of recommendations by the Council of American Ship Builders (Inc.), New York, which had been filed with the Shipping Board, and the seventh recommendation of said organization was, in part, as follows:

This council believes that any subsidy measure passed at this time should either avoid appropriations, or, if this is necessary, promise continuance.

This bill not only avoids appropriations but also insures continuance, because an extraordinary feature of the bill is that if it is enacted it can not be repealed or be materially changed by a subsequent Congress, because of the various contract periods authorized in the bill.

The large study compiled by the Shipping Board and before referred to contains the following statement:

To provide an assurance that the policy of direct aid to shipping will be continued for a reasonable length of time, it should be provided in the proposed legislation that the Shipping Board may enter into contracts with private shipping companies for periods up to 10 years, the rate of payment to be in accordance with the plan proposed above.

Winthrop L. Marvin, in an article in the April Marine Engineering, entitled "Merchant marine bill of 1922 analyzed; one of the experts who assisted the Shipping Board in framing the bill outlines its merits," declares:

A very important clause is section 702 authorizing the Shipping Board to conclude a 10-year contract with shipowners on behalf of the United States. Therefore, the bill if fully enacted can not be easily set aside.

In this connection it is important to note that this bill does not require the Shipping Board to make any report or accounting at any time to either the President, to the Congress, or to anybody else. Neither does it provide any appeal from any decision or action of the Shipping Board to any other tribunal. Proponents of the bill also concede that there would not be any recourse in the courts.

In other words, the Shipping Board is all powerful and all supreme under the provisions of this most extraordinary bill, "such as has never been dreamed of before."

It would be the height of folly for the elected Representatives of the people to thus strip themselves and their successors of the power of legislation and appropriations which will aggregate three-quarters of a billion dollars in 10 years and confer such extraordinary power upon a board which owes no responsibility to the people or to Congress. By reason of the grasping ambition and demands of departments and the influence of the selfish interests who can more easily obtain special favors from departmental officials than from Congress, one of the most dangerous tendencies in our Government is the evil growth of bureaucracy and officialism, and this ship subsidy bill presents the most flagrant and arrogant instance of it ever devised. They say they want to get the Government out of the shipping business. I, too, am anxious to get the Government out of the shipping business as soon as possible, but when it does get out I want it to get out entirely. This is a splendid time to apply the slogan "less Government in business and more business in Government," as well as more business in private shipping circles.

In accordance with the Constitution all the Members of the House of Representatives and one-third of the Senators are elected every two years, in order that the sovereign will of the people may be expressed and executed. Under the letter and spirit of our Constitution and institutions each Congress is in-

tended to be supreme in itself, but it is not intended for it to tie the hands of the people in the future or encroach upon the authority of any succeeding Congress.

To enact this bill as it stands would be nothing short of a betrayal of the rights of the people and an usurpation of the authority and responsibility of future Congresses.

The Members of the House have wisely and repeatedly shown by overwhelming votes that they were unwilling to trust the Shipping Board to the extent of permitting them to pay employees such salaries as they desire, and the House has properly restricted them to certain specified employees at specified maximum salaries, much below the number of such employees and the amounts of the salaries desired to be paid by the Shipping Board.

The privilege of expending money received by it from sales, and so forth, without specific congressional appropriation had been so abused by the Shipping Board that the merchant-marine act of 1920 provided that all net proceeds derived by the board from sales or any activities, with certain specified exceptions, "shall be covered into the Treasury of the United States as miscellaneous receipts." In spite of this specific statutory provision and expression of the will of Congress Lasker has persistently endeavored to have inserted in the independent offices appropriation bill a provision authorizing the Shipping Board to spend $55,000,000 out of proceeds of sales, and so forth. The House only recently emphatically refused to adopt such a provision.

However, the authority thus refused the Shipping Board was a mere bagatelle as compared with the unprecedented power and authority sought in this bill.

This extraordinary bill confers more power on the Shipping Board than good men ought to want and more power than bad men ought to be given. [Applause.] It confers infinitely more power than any kind of men ought to be given. There is all the more reason for refusing to grant such power to men who are employing every conceivable method to promote a bill which confers upon them such unprecedented powers and opportunities. Chairman Lasker and the other representatives of the Shipping Board had a perfect right to fully present their views at the hearings on this bill, and I do not question their right to make personal appeals to Members of Congress. However, I do emphatically deny that any bureau of this Government has any right to carry on an extravagant propaganda program at Government expense in an effort to create a sentiment with regard to pending legislation and to have pressure brought to bear upon Members of Congress. Chairman Lasker is an expert professional advertiser and publicity man, and in his efforts to further this bill he has played with consummate skill the game he knows so well. The $1,715,000 advertising fund being spent during the current year by the Shipping Board is not being spent in vain. During the hearings repeated requests were made of the Shipping Board officials to file an itemized statement of disbursements from this advertising fund, and, although this information was promised, it was never filed. The propaganda in the press is only a part of the program. Every conceivable method is being employed to promote the passage of this bill. The social lobby has been worked overtime. A large part of the Shipping Board organization has practically abandoned its regular duties so as to work for this bill under the direction of Commander in Chief Lasker.

I hold in my hand a document entitled "Government aid to merchant shipping—A study prepared under direction United States Shipping Board" which contains fallacious arguments in favor of this bill. It contains 306 sheets of expensive paper, the contents being in duplicating print on one side of the sheets; it is expensively bound. I am reliably informed that Chairman Lasker had an enormous number of these very expensive documents made by Shipping Board employees, and at Government expense, and sent them throughout the United States to newspapers, business organizations, individuals, and others; that a very large number of the employees of the Shipping Board were engaged in this work for weeks, during which time they were compelled to neglect their regular duties, Chairman Lasker having given orders that this work should take precedence over everything else. Of course, it would have been much less expensive to have had these documents printed in regular form, but I presume that it was thought they would not be so effective.

Just one more example: I hold in my hand an—

Address of Albert D. Lasker, chairman of the United States Shipping Board, before the tenth annual meeting of the United States Chamber of Commerce, Washington, D. C., May 18, 1922.

This address of 12 pages is mimeographed on Shipping Board stationery with these words printed in large red type:

Caution! Advance release.

There is also printed at the head of said paper the following:

United States Shipping Board, Washington. Division of information.

And so forth. The heading is followed by—

For release on and after 1 p. m. Thursday, May 18, 1922.

Although this address in advocacy of the ship subsidy bill was not delivered before any official gathering, yet the addresses were copied and sent out at Government expense. That sort of business has been going on for months. In other words, a board in the executive department of the Government is engaged in a propaganda program in favor of legislation, same being done by Government employees and at public expense. Such efforts on the part of the Shipping Board to have pressure brought to bear upon Congress are unseemly, reprehensible, and should be severely rebuked by Congress.

The worst feature about it all is that the propaganda being sent out in behalf of this bill is full of false and deceptive statements.

Other members of the Shipping Board are traveling around at Government expense and making speeches in behalf of this bill. It was shown at the hearings that speakers in behalf of this bill had been sent out through the Middle West in the name of the Merchant Marine Association, which has been conducting an active lobby in behalf of this bill.

Aside from the indorsements of the bill that have been given by the organizations and individuals engaged in shipping and who expect to profit by receipt of a part of the bounties provided in the bill, practically all of the other indorsements have been procured by and predicated upon misrepresentations of the facts.

However, it is doubtless true that the Shipping Board has not overestimated the importance of extensively propagandizing not only Congress but also the country in order to allay opposition to this bill sufficiently to be able to carry out their purpose of putting same through Congress. The first report compiled by the Shipping Board on the subject, filed as Exhibit A to the testimony of Chairman Lasker, contains the following significant statement:

It is not unreasonable to suppose that effective publicity might easily persuade the American people to tolerate a subsidy of, say, $20,000,000 annually instead of losses of much greater amount.

As the pending bill requires the people to pay and tolerate subsidies of several times the amount mentioned, the Shipping Board seems to have concluded that very "effective publicity" was necessary.

If the pending bill becomes a law and the different provisions are put into effect, it is a conservative estimate to state that it will cost the American people $75,000,000 per year, not taking into consideration the indirect aids to the shipping interests, which are not susceptible of calculation. And yet the shipping interests are not satisfied and say that these subsidies are not large enough and will have to be either increased now or later in order for them to be able to successfully compete with foreign ships. Some of them say the subsidies should be doubled, and one leading ship operator stated that they should be at least trebled. Some of them stated that the contract periods should be increased to 15 years and some to 20 years. One ship operator stated that it would probably take 50 years to establish an American merchant marine. Another proponent of the bill testified that he thinks the chances are that "this will be a subsidy in perpetuity."

Consequently no Member should support this bill under the delusion that we are entering upon a temporary program or one of decreasing cost. The very opposite is true.

Judging from the history of such legislation in other countries where it has been enacted, if this vicious policy is once grafted into our institutions it will not only be perpetual but the drain on the Public Treasury will increase from time to time, because the powerful and influential shipping interests will be continually returning to Congress with the claim that the bounties paid them are insufficient and must be increased. In fact, as has been shown, we have already had a concrete example of such a result right here. Two years ago we were told that the merchant marine bill of 1920, since known as the Jones Act, would insure the successful establishment and maintenance of a privately owned American merchant marine, and yet the shipping interests, with the active cooperation of the Shipping Board, boldly come forward with the most elaborate and expensive ship subsidy bill ever devised by man, and at the same time the president and the general manager of the American Steamship Owners' Association and other shipowners tell us that even this bill is not sufficient.

What does all of this mean?

Our Government-owned merchant tonnage cost the people about $3,000,000,000. It is estimated that we will probably sell the ships for $200,000,000. Consequently the people will stand a loss by deflation of $2,800,000,000. Furthermore, it is contemplated that either existing shipping companies or companies to be organized, who buy the ships, will capitalize the ships largely in excess of their cost to them, and sell the stock and bonds to the American people—so that the people will be standing the war inflation, the post-war deflation, and then the promotion inflation.

The people, through their Government, will sell the ships for approximately $200,000,000, lend $125,000,000 to recondition those ships or build others, and then pay the owners approximately $750,000,000 in subsidies and aids within the next 10 years. In other words, we will be giving the ships away and paying the recipients over half a billion dollars to operate them for the next 10 years, not to speak of the fact that they will probably be coming back at each succeeding Congress asking for more.

As the American people revolted to such an extent as to prevent the passage of the Hanna ship subsidy bill, which carried an estimated annual expenditure of only $3,222,268, and later the Gallinger bill, which carried an estimated annual expenditure of $5,109,355, which the report on the bill stated would be covered by ocean postage collected and the increased tonnage taxes provided in the bill, it is hardly conceivable that they will tolerate this proposed monstrous raid on the Treasury.

Certainly no reasonable expectation that this bill will do what its proponents claim for it can be predicated upon the experience of other maritime countries. I shall not at this time enter into any extended discussion of the experience of other countries, but I shall quote briefly from the first report prepared at the instance of the present Shipping Board entitled "Report on the history of shipping discrimination and on various forms of Government aid to shipping, compiled by the United States Shipping Board," and which was inserted in the record of the hearings as Appendix A. This report states, in part, as follows:

GREAT BRITAIN.

Great Britain has never granted general navigation bounties nor construction bounties, with the exception of the early Elizabethan subsidies above mentioned in 1662–1694.

Which said report states—

had no noticeable effect on ship construction. Practically the only money aid given by Britain to its marine is in the form of postal subventions. * * *

The net postal subvention, after deductions, paid by England to its various services amounts to about two and a half million dollars.

All the writers seem to agree that the growth of the British merchant marine is in no sense due to the small subsidy paid, admitting that the payments are in excess of the postal service rendered. The growth of the British marine was probably due to the early development of British industry, the acquisition of extensive colonial possessions, and the monopolistic or preferred position in colonial trade. The cheapness of construction and the concentration on the business account for most of its success.

In this connection it is interesting to note that last year the United States paid over $6,085,000 as compensation for the carriage of its ocean mails to foreign countries.

NORWAY.

Norway ranks third among the merchant shipping of the world, being exceeded now only by Britain and the United States. It rose from 1,022,000 tons in 1870, almost exclusively sail, to 1,717,000 tons in 1912, two-thirds of which was steam.

The small shipping subsidies which Norway has granted to its merchant marine can not have had a material effect on this growth, which is due to other circumstances, namely, geography, seafaring ability, liberal navigational laws, and low costs of production.

SWEDEN.

Sweden's merchant marine is about half that of Norway and ranks ninth among the merchant navies of the world. It rose from about 350,000 tons in 1870, almost all sail, to about 900,000 tons in 1914, of which one-sixth only was sail. This growth is not due, probably, to Government aid but to the growth of the industries of the country.

DENMARK.

The Danish merchant marine has risen from about 178,000 tons in 1870 to about 560,000 tons in 1914. The almost exclusive sail tonnage in 1870 had dropped to 20 per cent of the total tonnage in 1914.

Denmark has not given much State aid, but no particular conclusions can be drawn from Danish experience.

THE NETHERLANDS.

Government aid is largely confined to postal and colonial subventions for the maintenance of regular communication between the home country and the Dutch colonies in the Far East and the West Indies.

After describing the comparatively small mail subventions paid certain lines, the report on the Netherlands concludes:

The very successful Royal Dutch Steamship Co., operating between ports in Europe, receives no postal subvention or other State aid. Its profits have increased greatly from 1890 to 1913.

The same is true of the Holland-American Line, which ranks second in the Dutch merchant marine.

GERMANY.

The merchant marine of this country has, of course, been almost annihilated by the treaty of Versailles. Prior to the war, however, Germany had reached perhaps the greatest growth in her merchant marine. This was not due to subsidies or to any other form of Government aid that can be established. The greatest line in the world, the Hamburg-American, is said never to have received a cent of Government subsidy.

From 1870 to 1912 Germany's shipping rose from about 1,000,000 tons in 1870, of which 90 per cent was sail, to over 3,000,000 tons in 1912, of which one-sixth only was sail.

FRANCE.

France appears to be the country of subventions par excellence, although in 1910 its merchant marine was outranked by Great Britain, the United States, Germany, Norway, and Japan. * * *

There seems to be a general agreement that the French subsidy system, which has been more or less the model for Italy, Spain, and Japan, has been a failure.

ITALY.

The results of a subsidy in Italy have not been any more successful than in France, although Italy has a long seacoast, a dense population, efficient marine workers, and low wages. She is handicapped, however, by a lack of coal and a highly developed iron and steel industry.

In 1870 Italy had a tonnage, mostly sail, of about 1,000,000 tons. In 1911 they had 1,100,000 tons, an increase of only 100,000 tons, although the proportions between sail and steam were over 700,000 for steam and 400,000 for sail.

JAPAN.

Japan aids shipping somewhat on the system of France, but being more industrially favored than France the system has been far more successful in Japan. * * *

It thus appears that the subsidy system has been of great aid in the development of Japanese shipping. The success of Japan as against the failure of France under somewhat the same system may therefore be attributed to the greater efficiency of the Japanese or, what is somewhat more correct, to the difference in the industrial development of Japan.

The said report in its final conclusion states in part:

A study of the authorities on subsidies, taking into account the policies adopted by various countries, would seem to indicate that with the exception of Japan the policy has not been important in the building up of a merchant marine.

The quotations which I have given from this Shipping Board report are in accordance with the standard authorities on the subject, except that many of them are even more positive that subsidies have not materially aided in building up a merchant marine anywhere.

In view of the fact that Japan is the only nation in which the Shipping Board report makes any claim that subsidies have been beneficial in building up a merchant marine, I wish to call to witness two authorities who are highly recommended by the Shipping Board.

This Shipping Board report states that—

It may be said that the best discussion of the subject is to be found in Dr. Royal Meeker's History of Shipping Subsidies, printed in the third series, volume 6, No. 3, of the publications of the American Economic Association.

The said work, after reciting the growth of the Japanese merchant marine, continues:

Those who possess a deep and abiding faith in the efficacy of subsidies and who use statistics merely as food to nourish this faith derive much strength and comfort from the above figures. To attempt overthrowing this faith is useless. A closer scrutiny of the history, however, compels an impartial mind to recognize that the testimony of the facts is not at all in favor of the subsidies.

Shipping grew as rapidly before the law of 1896 as after, in spite of the monopolistic power of the Nippon Yusen Kaisha. Since 1868 Japan has experienced an economic revolution even more astounding than its political revolution. The methods and machinery of production were changed with incredible rapidity. In a few years the nation rushed from barbarism into civilization through the power of its imitative genius. But the progress was not swift enough to satisfy the leaders, and they imitated the protective methods used in western lands to stimulate progress. The first experiment with State-aided steamship navigation created a monopoly that exploited both Government and people. The attempt to fight the devil with fire by creating another State-supported steamship company to compete with the first led to a community of interests arrangement that must excite the admiration of the king of Wall Street promoters. * * *

Shipping would have developed anyhow; in fact, was developing with great rapidity. The Government merely gave form to the maritime undertakings of the capitalists. It will always be a question if the Government gave the best direction, whether the development would not have been sounder, though less rapid, had the capitalists been left to decide for themselves what lines to establish.

The following extracts are taken from a publication by the Department of Commerce, published in 1916, and entitled "Government aid to merchant shipping—Study of subsidies, subventions, and other forms of State aid in principal countries of the world," by Grosvenor M. Jones, commercial agent. Mr. Jones is now with the Department of Commerce, and was appointed by the Shipping Board on the committee that prepared the data for this bill and the studies thereon.

The industrial development of Japan since that country adopted European methods of manufacture and commerce has been truly remarkable and accounts in a large measure for the development of the merchant marine. * * *

The expenditures of Japan for mail subventions and subsidies have been very liberal. The fact that the merchant marine of Japan has developed very rapidly since the institution of the subsidy policy has been attributed by many to the liberal State aid which it has received, but account should be taken of the fact that Japan has had a remarkable industrial and commercial development during this period. Although the principal Japanese steamship companies have been in receipt of Government aid since 1888 and have developed rapidly, their

financial statements for recent years show that they have not got beyond the need for financial assistance from the State. In other words, the "infant industry" has never grown up.

Attention is called to the fact that in spite of long and liberal subsidies the subsidized lines are not yet on a sound and permanent basis. As further evidence of this, and also of my insistence that one subsidy law calls for another and another and more liberal subsidies, I call attention to the following extract from the New York Tribune of May 8, 1922, inserted in the hearings at the instance of Commissioner Lissner:

The Japanese Government plans to use the money saved as a result of the action of the Conference on Limitation of Armament to provide greater subsidies for her merchant marine, according to a dispatch published by the Japan Advertiser. It is estimated that about $125,000,000 will be made available for the use of the steamship companies. * * *

Among the reasons given for this action are the enforced idleness of many shipyard workers, and also the fact that many of the Japanese ships now in operation are inferior to those owned by foreign lines. No reference is made directly to United States competition.

This article is also significant in that the proposal made is identical in amount with the $125,000,000 loan fund provided in the pending bill. An amusing thing about ship subsidies is that the shipping interests in each nation argue that they must have a subsidy because other nations pay subsidies. Japan, with the cheapest labor of any maritime nation, pays large ship subsidies, and it is insisted that subsidies must be paid to the United States shipowners because of the high American wages.

Another important feature of the Japanese merchant marine situation is given in the following additional extract from the said book by Grosvenor M. Jones:

Although the overseas trade of Japan has increased rapidly, the merchant shipping flying the Japanese flag is occupied chiefly in trade between points in the Far East. In this connection the following extract from the article by Dr. W. Muller will be of interest:

The growth of Japanese shipping, both absolute and relative, is certainly striking, but nevertheless the importance of Japanese shipping in the world's traffic should not be placed too high. It must even be said that Japanese shipping, for the present, exhibits a local character, inasmuch as the principal field of its activity lies in the Far East. Let us consider, e. g., a circle described with a radius of about 1,180 miles, reaching as far as Hongkong, around Kobe, the largest and most centrally located port of Japan. It will be found that hardly one-sixth of the total Japanese steamer traffic lies outside such circle. To be sure, Japan sends its own ships even to Europe, North and South America, and Australia, but still the share of Japan's flag in the traffic of the greatest ports of the world, such as New York, Antwerp, Hamburg, Rotterdam, London, as well as the important Suez Canal, is negligible.

A typical example of the false and deceptive propaganda that has gone forth through the country and the concealment from the public of the real facts is shown in the reports that have been published widespread that the farmers are for the present ship subsidy bill and had indorsed the bill; this was predicated upon the claim that J. R. Howard, president of the American Farm Bureau, had pledged farmers' support for the bill. Doubtless but few of you know, as practically no mention of same was made in the daily press, that T. C. Atkeson, representative of the National Grange, with over 800,000 bona fide members, and B. C. Marsh, managing director of the Farmers' National Council, with about 600,000 members, appeared at the hearings against the bill, stated that Howard did not represent the views of the American farmers, and gave irrefutable evidence to the effect that the American farmers are unalterably opposed to the pending ship subsidy bill, just as they have been opposed to all ship subsidy bills in the past. Neither did the press say anything of the fact that Howard appeared in person at the hearings in behalf of the bill and on cross-examination admitted that the American Farm Bureau in national convention had adopted resolutions declaring against any subsidies and had never taken any contrary action. Instead of representing their views, Howard misrepresented the views of the members of the American Farm Bureau.

In discussing this matter an editorial in the May 12, 1922, issue of Wallace's Farmer, owned and published by Secretary of Agriculture Wallace, stated:

We wonder if the members of the American Farm Bureau Federation are really as much in favor of ship subsidy as President Howard thinks. As a result of Howard's letter in support of ship subsidy, the newspapers of the East now seem to think that the farmers are now lined up solidly behind the subsidy. This is not true.

Then the editorial continued with arguments against the ship subsidy bill.

It is proper to explain that while his name appears at the masthead as one of the editors, yet it is followed with a note that while Mr. Henry C. Wallace is Secretary of Agriculture he is relieved from responsibility for what appears in the paper. His son is one of the editors and is understood to be in charge, and I suppose he wrote the editorial.

Likewise the Iowa Homestead contained the following editorial:

A dispatch states that Chairman Lasker, of the United States Shipping Board, has announced the receipt in Washington of a telegram from President J. R. Howard, of the American Farm Bureau Federation, in which approval is given to the Federal-aid plan for the upbuilding and development of the American merchant marine through Government aid. The telegram from President Howard, as quoted, is as follows:

"While the American Farm Bureau Federation is opposed to any subsidy on principle we realize the necessity for developing the American merchant marine as a naval auxiliary and as an agent in the development of foreign trade. We approve aid temporarily until our flag can be established on the high seas, but no longer. Subsidies, like tariffs, should be flexible and not continue after industry becomes self-supporting. If subsidy be supported on naval grounds, it is essential that merchant ships be available and used for training of naval reserves."

Commenting upon the Howard telegram, Chairman Lasker said:

"It marks the end of half a century of opposition by the American farmer, and to me there is great encouragement to be found in the fact that this telegram indorses what President Harding has repeatedly said to the effect that no one interest in the country is more interested in the development of an established merchant marine than the great American farmer."

Notwithstanding what Mr. Howard is said to have set forth in his telegram, I do not believe that one farmer in ten or one farm bureau member in ten is in favor of a subsidy for wealthy shipowners. Mr. Lasker is wrong when he imagines that the Howard telegram marks the end of half a century of opposition to a ship subsidy on the part of the American farmer. No such optimism is justified. My guess is that before the question is finally settled it will be found that the American farmer, if once he gets at the facts, has only started to fight. This same American farmer, who for the last year or more has passed through an experience which he hopes never to see repeated, is in no mood and in no financial condition to sanction subsidies, whether they be to railroad owners or to shipowners. What would Chairman Lasker, of the Shipping Board, say to a proposition to subsidize the American farmer to relieve him of taxes to make available appropriations so that he—this man who feeds all—might prosper?

I hope that every farmer will at once acquaint himself with the terms of the proposed ship subsidy, and if he does not favor this form of gift to the rich, this gross favoritism for the few, this expenditure of public funds for private gain, that he will communicate with his Congressman. Let the farmer speak for himself. He is entitled to speak for himself. Until he has delegated this authority to others no one can properly speak for him. I can not believe that the farmers are for a subsidy. I will never believe it until they themselves say so.

Mr. T. C. Atkeson inserted these editorials in the record and stated:

Wallace's Farmer and the Iowa Homestead represent a very decidedly different state of mind out there in Iowa, but as far as I can discover both represent a Republican state of mind, and both these papers seem to have a common state of mind on the question of ship subsidy.

J. R. Howard, president of the American Farm Bureau, appeared at the hearings and read a prepared statement, "which," he said, "I claim no credit for having prepared, except having made a few suggestions." It was not necessary for him to explain that he had not prepared the statement, because it became very apparent upon cross-examination that he knew nothing about the bill and nothing about most of the things contained in his statement.

Howard said that he sent that telegram to the President "at the request of the Shipping Board."

He stated that Chairman Lasker delivered to him "some data and studies, and so forth, in favor of the bill," and asked him for an opinion on the bill.

In that connection attention is called to the following testimoney from the hearings:

Mr. DAVIS. I know, but I am asking you whether Chairman Lasker furnished you, yourself, at the time he furnished the other studies, with a copy of this report which had been prepared at the instance of the Shipping Board giving a history of ship subsidies and subventions in the various other countries?

Mr. HOWARD. I think I never have seen that. I don't recall ever seeing it. Mr. Lasker gave me a copy of his own address before this committee and a digest of material which must have consisted of three or four hundred pages prepared by the Shipping Board on the general subject, which I did not read but turned over to this committee who did the work for me. He might have sent that bulletin to the committee.

Mr. DAVIS. You don't know, then, that this report not only shows, but states, that ship subsidies and Government aid has not resulted in materially aiding in the upbuilding or maintenance of a merchant marine in any country on earth, with the possible exception of Japan, do you?

Mr. HOWARD. Well, I don't know that that book stated it. I heard Professor Hall make a similar statement. I don't know where he got his material.

Mr. DAVIS. He was one of the gentlemen you had make that study, and he made that statement in the light of his studies on the subject?

Mr. HOWARD. I understand so. I don't know where he got his information.

Howard said that Professor Hall, of Northwestern University, was "an expert on shipping," but it will be noted that he did not follow Professor Hall's advice.

Howard stated that he referred the question of this ship subsidy bill to their research and transportation department and to a committee of manufacturers, of which he mentions the vice president of the John Deere Plow Co. and the president of the Advance Rumley Co., and the president of the Avery Manufacturing Co. He explained that the head of the research

and transportation department was a lawyer, and he had selected his assistants. In other words, he seems to have referred it to most everybody except farmers. As to why he should call upon the International Harvester Trust to make up his mind for him I do not know, but it seems that he acted upon their advice instead of that of the shipping expert who was called into conference.

However, it is only fair to Mr. Howard to state that he did recognize his obligations to the bureau which he was pretending to represent to the extent of making the following statements:

Let me say right here that the American Farm Bureau Federation is opposed to a subsidy as a matter of principle. We believe that in the end the economic interests of the country will be best served by the minimum of interference on the part of the Government, regardless of whether that interference is expressed in the form of repression, regulatory legislation, or direct aid. Government assistance is an artificial aid taken out of the pockets of all of us to assist the business of a few of us.

I have already said that we object to a subsidy in principle. The American Farm Bureau Federation has also gone definitely on record in its opposition to tax exemption, including tax exemption on Federal farm loan bonds. We stand foursquare to the world, asking no exemption in cases where it would be to our advantage to have that exemption, because the whole principle is unsound. We can not conceive that the American exporter or importer is entitled to deduct freight money from his income tax because he ships on an American vessel rather than a British. His act is no more meritorious than that of the shipper by land who sends his goods from Chicago to Buffalo over the New York Central instead of the Grand Trunk, or who ships from the Twin Cities to Vancouver by way of the Great Northern instead of the Soo line and Canadian Pacific. We can not do other than oppose the tax-exemption provisions of the present bill.

The following occurred on cross-examination:

Mr. DAVIS. Now, Mr. Howard, you spoke of the fact that you were opposed to the tax-exemption provision of the bill, and said that under the resolutions that had been adopted by your bureau and the instructions given you you could not do otherwise than go on record in opposition to it. Now, do you mean resolutions adopted by the bureau in national convention?

Mr. HOWARD. Yes.

Mr. DAVIS. When was that done?

Mr. HOWARD. Well, now, I couldn't give you the exact date and the exact wording, but we have gone definitely on record with regard to tax-exempt securities.

Mr. DAVIS. That has been your uniform policy?

Mr. HOWARD. Yes. Yes, sir; and it didn't seem consistent to advocate a tax exemption in one specific case, such as this would be, when we were on record against other—possibly more important—tax exemptions. We are simply trying to take a consistent attitude.

Mr. DAVIS. I think you are quite correct. I did not mean to criticize your position. I am in accord with it. Now, when did you hold your last national convention?

Mr. HOWARD. Last November.

Mr. DAVIS. At that time, of course, no action was taken upon this bill, which had not been introduced?

Mr. HOWARD. No.

Mr. DAVIS. Now, you also stated in your testimony and in the telegram to the President which you read "that the American Farm Bureau is opposed to any subsidy on principle." Now, is it not also true that the farm bureau in national convention has gone on record against subsidy?

Mr. HOWARD. I don't know whether there was specific mention at the last meeting of subsidy or not.

Mr. DAVIS. Well, at some previous meeting?

Mr. HOWARD. Yes; we have always taken that stand. It has been our general attitude as a rule—as a general proposition.

Upon having his attention called to the different provisions of the bill, Howard repeatedly either expressed disapproval of same or withheld his approval, using such expressions as:

That must be safeguarded, Mr. Congressman, in some way, and it is up to you to devise the way.

Upon being questioned about a certain proposed amendment to safeguard the public interest, he said:

Why, I should think you ought to convince the committee of the reasonableness of that.

Upon being questioned about another proposed safeguarding amendment, the following was said:

Mr. HOWARD. Why do you not include those in the bill, Judge?

Mr. DAVIS. I do not know whether I will be permitted to include anything or not. [Laughter.] I am speaking about the bill as it is.

Mr. HOWARD. Well, we have not indorsed the bill as it is; we are just simply indorsing the general principles.

So that Mr. Howard places himself in the inconsistent attitude of excusing himself for having indorsed this proposed legislation on the ground that the American Farm Bureau in national convention had only declared against subsidies "on general principles," and yet he winds up by saying that—

We have not indorsed the bill as it is; we are just simply indorsing the general principles.

Mr. Thomas C. Atkeson, who, by the way, is a brother of the gentleman from Missouri by that name, appeared at the hearings as a representative of the National Grange against this ship subsidy bill. Mr. Atkeson stated that his organization had an—

actual bona fide, paid-up membership of about 800,000, more than 100,000 more membership than any other farm organization in the United States.

He stated that they had granges in all the States in the Union except a few of the Southern States, having a membership of 134,000 in the State of New York, 108,000 in Ohio, and so forth.

Mr. Atkeson stated that the National Grange in national convention had gone on record against ship subsidies in nearly every session from 1899 to 1914; that they had had as many as 20,000 farmers in their annual meetings; and that the action against subsidies was always unanimous. He inserted in the record abstracts of the reports, resolutions, and so forth, adopted by the National Grange in the different years, and they constitute an exceedingly strong indictment against ship subsidies.

The report of the legislative committee on the subject in the 1906 convention, which was unanimously approved, contained the following:

The committee met in Washington, April 3, to represent the grange before the Committee on Merchant Marine and Fisheries against the ship subsidy bill.

Senate bill 529, commonly known as the ship subsidy bill, had been passed by the Senate and was then pending in the House. This measure is the same old scheme of taking money from the people by taxation and bestowing it upon a small number of shipbuilders, which the efforts of the National Grange had defeated at a previous session of Congress. The present bill differs from its predecessors in that its authors have tried to cover up the ugly words "subsidy" and "bounty" by the use of the term "subvention." That is, instead of providing for the payment of bounties to shipbuilders or owners of steam or sailing vessels, the bill provides for the payment of "subventions" in amounts proportionate to the size of the vessels, the nature of the trade in which they are engaged, etc. But a subsidy by any other name is as objectionable, and your legislative committee protested as earnestly against the use of public revenues for subventions to a few persons as against bounties or subsidies to the same class of citizens.

I also wish to call attention to the following extract from Mr. Atkeson's statement:

At the forty-first annual meeting of the National Grange, held in Hartford, Conn., in 1907, the master, N. J. Batchelder, made the following reference to ship subsidy legislation in his address:

"The power of organized selfish interests working to secure appropriations by Congress of public funds for private purposes was shown again by the action of the House of Representatives in passing the notorious ship subsidy bill. Notwithstanding the fact that it was made clear to the Members of Congress that the farmers of the country are strongly opposed to legislation granting subsidies or bounties for private ends, the bill was passed by the House, though in a form unsatisfactory to its originators and with many of its worst features eliminated. It failed of ratification in the Senate.

"The action of many Members of Congress in defying the wishes of their constituents in this matter is evidence of the urgent necessity for the members of the grange keeping a vigilant watch over their Representatives, and for advising them in no uncertain manner that they are uncompromisingly opposed to subsidy or bounty legislation in any form.

"I am advised that the ship subsidy advocates are planning to begin another campaign of misrepresentation in favor of their scheme, and as their project for securing millions of public funds is evidently well financed, they will doubtless be able to get a certain following in Congress. To keep the hands of the subsidy hunters out of the United States Treasury it is necessary that the members of this order take immediate action by writing to their Senators and Representatives that a vote for subsidy legislation is a vote against the public interests."

Apparently referring to a statement that had been made by J. R. Howard, Mr. Atkeson said:

It has been said before this committee that the farmers did not know anything about a subsidy or shipping, but I will guarantee that you can go out at random, outside of Congress, of course—but you can go out anywhere in this country and take the first 100 men you meet in the country and compare them with the first hundred men you meet on the streets of Washington, and the men from the country will know more about this question than the hundred men you will find in Washington at random.

Two weeks ago the first notice I saw in an agricultural newspaper discussing this matter appeared. Within a week I have seen three or four hundred farm papers, agricultural newspapers, scattered from Maine to Oregon. A great many of them have discussed this subsidy within the last week, and I have seen but one paper that favored it.

The June, 1922, issue of the National Grange Monthly contains the following significant statement:

At the request of Worthy Master Lowell copies of this ship subsidy bill have been sent to the masters of all of the State granges and the State masters have been asked to express their opinion as to the advisability of Congress voting ship subsidy at this time. The replies as reported to the Washington office by National Master Lowell are almost unanimously in opposition to the subsidy, only one reply thus far reported being favorable and one noncommittal.

Mr. Benjamin C. Marsh, managing director of the Farmers' National Council, appeared at the hearings against the ship subsidy bill. Mr. Marsh analyzed the bill by sections from the farmers' standpoint, displaying a surprising mastery of the subject. His arraignment of the bill was intelligent and terrific. He riddled the claim that the farmers are for this bill.

I shall now take up the specific discussion of the arguments in favor of this bill. As stated in the outset, one of the chief arguments in favor of the passage of this bill and one which seems to be quite effective is that the passage of this bill will

stop the present Shipping Board expense of about $50,000,000 per annum. Another argument which I shall discuss in connection with the one just mentioned is that it is necessary to pass this bill in order to get the Government out of the shipping business. There never were more fallacious arguments than these. Not to speak of the fact that this bill would involve a much heavier burden upon the public Treasury than the said expense, as well as many additional burdens upon the masses of the people through the indirect aids in favor of shipping interests; as a matter of fact, the passage of this bill would not result in any saving of said annual $50,000,000 expense any time soon, and perhaps but little saving of same in the future unless the shameful extravagance of the Shipping Board is curtailed, and that can and should be done whether this bill passes or not.

In the first place, only a small portion of this $50,000,000 annual expense of the Shipping Board represents the loss on voyage operations.

The net profits from the operations of the Shipping Board vessels from the beginning to June 30, 1919, was $166,493,994.85 and the net revenue from the beginning of operations to March 31, 1920, was $132,783,781.29, as reported by the Shipping Board and as incorporated in the report on the merchant marine bill of 1920 filed by Chairman JONES for the Senate Committee on Commerce.

According to the report of the Shipping Board the excess of cash outgo, Division of Operations, for May, 1921, was $6,500,000 and for June $1,714,000. The present Shipping Board took charge as of July 1, 1921, and according to their reports the net operating losses and expenses, including voyage losses, administrative expenses, repairs and betterment, insurance, and the lay-up expenses of vessels not in operation, for the first three months of the present year averaged $3,413,021.19 per month; however, the net voyage losses for those months averaged only $792,178.91 per month.

On April 30, 1922, there were 1,582 employees in the operating department of the Shipping Board Emergency Fleet Corporation—that many employed and paid by the Government. And yet the Shipping Board Emergency Fleet Corporation is only actually operating 13 ships—those of the United States lines managed by Thomas H. Rossbottom. Of the remainder of the Shipping Board vessels in operation a small number are operated under bare-boat charters, under which the charterers have absolute control and sustain any losses incurred; the charter-hire receipts paid the Shipping Board for February were $65,411 and for March were $88,139; the remainder are operated under managing-agent agreements, by which the managing agents operate the vessels on a commission of the gross revenues. They have their own organizations. There are only about 46 companies and individuals operating Shipping Board vessels. However, this very large number of employees is retained by the Shipping Board to supervise these lessees of Shipping Board vessels.

This is a considerably larger number than was so employed last June, although there are less than 60 per cent as many vessels in operation in April of this year as there were in operation in June of last year and only 36 per cent as many vessels in operation this year as there were in January of last year. It must be borne in mind that those employees in the operating department constitute less than a fifth of the total number of employees of the Shipping Board and Shipping Board Emergency Fleet Corporation. The total number of employees as reported by the Shipping Board as of July 15, 1921, at the hearings before the Appropriations Committee was 8,280, with annual salaries aggregating $15,755,799. While I do not know the exact number of the present employees, I think I am safe in saying that there has been no material reduction in the aggregate number nor in the total amount of salaries paid; while there has been a reduction in the salaries of some of the clerical and subordinate employees, yet there has been an increase in the salaries of many of the higher officials.

The chairman and other representatives of the Shipping Board in testifying at the hearings on the appropriation bill for the coming year, when they asked for the $50,000,000 appropriation for expenses and losses, estimated that same would be made up as follows:

Net voyage losses	$5,497,561
Other expenses:	
Repairs and betterment, insurance, expenses during permanent lay up, advertising	29,502,439
Administrative expenses	15,000,000
Total	50,000,000

Martin Green, staff correspondent of the New York Evening World, summed up the situation as follows:

It costs 43 cents to spend a dollar in administration of the affairs of the Shipping Board Emergency Fleet Corporation, according to figures submitted to Congress in connection with the request for an appropriation of $50,000,000 for vessel losses and administration expenses for the fiscal year ending June 30, 1923.

They are going to lose $5,497,561 in vessel operations, lay out $29,502,439 in accumulating the loss, and sink $15,000,000 in supervising the operation.

Comparison with the operations of another department of the Government should be in order here. The department selected is that which takes care of the internal revenue of the country.

The total internal-revenue receipts for the fiscal year ending June 30, 1921, amounted to $5,408,075,468. The net expense of collecting this money was $27,043,000. It costs the Government 50 cents to collect each $100 of the money resulting from internal revenue and 43 cents to spend $1 disbursed by the Emergency Fleet Corporation in handling the people's ships.

Mr. Lasker was questioned as to why it was that there was not a reduction in the Shipping Board expenses in view of the fact that there had been such a large reduction in the number of ships in operation, in connection with which attention is called to the following testimony at the hearings:

Mr. DAVIS. Well, you are only operating less than one-third of the vessels now.

Mr. LASKER. Well, as a business man, you know this: That whether we are operating 400 ships or 1,200 ships, there isn't much difference in your overhead.

I emphatically insist that the overhead expense connected with the operation of 400 ships should be decidedly less than the overhead expense connected with the operation of 1,200 ships, especially when the larger number were operated by a much larger number of operating companies.

Chairman Lasker further testified as follows:

Mr. DAVIS. Even under the operation of this law, and at least until the ships that are sold on time are paid for, will it not be necessary to continue a very substantial Shipping Board force?

Mr. LASKER. Do I understand you to ask "until the ships are paid for will it be necessary"?

Mr. DAVIS. Yes.

Mr. LASKER. The answer to that is no; but if your question means as long as we have to operate ships, where we have to keep substantially the same organization as now, the answer is yes.

It being conceded that the present expenses of the Shipping Board will continue until our ships are disposed of and the Shipping Board ceases to have same operated, the query naturally arises as to when that time will arrive. Chairman Lasker's zealous and questionable activity in behalf of this bill is such that it may be reasonably inferred that he will give as strong assurances as possible as to any good results that might accrue therefrom. During the course of cross-examination he made the following statement:

It will be a good many years before we do not have any stuff left, with most favorable legislation. I want to make it plain here that I do not think the proposed legislation is going to, by the wave of a magic wand, give us a merchant marine.

In his direct statement at the hearings Chairman Lasker said:

The Shipping Board wishes to emphasize to your committee and to Congress that world shipping is now more depressed than it ever has been in proportion to world tonnage.

We believe that of the 700 good freight ships we have, the Shipping Board would feel very happy if, within 30 months from the time of the passage of this bill, it could dispose of sufficient ships to take care of the routes it is now operating and put the Emergency Fleet Corporation out of business as an operating company.

He makes no prediction as to the disposition of the remainder of the 1,700 vessels owned by the Shipping Board.

This was said on cross-examination:

Mr. DAVIS. Now, you stated yesterday that if this bill should pass you estimated it would take 30 months within which to dispose of the 400 vessels owned by the Shipping Board now in operation. I want to ask you how long it would take you to dispose of the balance of the Government fleet and other shipping property?

Mr. LASKER. That is a very difficult thing to answer. First, we would have to solve what is to be done with the figures 5,000,000 dead weight of questionable ships, because as long as they are in existence it hangs as a pall over the whole market for the good ships, and whether or no the last 300 would sell very fast would be determined by world conditions, on the one hand, and how successful we were in building up an American merchant marine, on the other hand.

Mr. Lasker later admitted there are a number of expenses of the Shipping Board that have no connection whatever with the operation of ships, and would not be affected by the fact as to whether this bill passes or does not pass, as will be seen from the following testimony:

Mr. DAVIS. Mr. Lasker, right on the question of the muddled accounts and the claims and the pending suits and things of that kind, of course it is going to be necessary to maintain a sufficient force to dispose of and wind up all those matters, whether this bill passes or not.

Mr. LASKER. Let us put it the other way; whether this bill passes or not won't affect how long we have to keep the force for that purpose. I hope to have that straightened out within a year.

Mr. DAVIS. That is the point I want to get at exactly. There are various activities now, including those dealing with the claims and accounts and suits and those dealing with the uncompleted construction and those dealing with other features of your work that are temporary.

Mr. LASKER. Yes, sir.

Mr. DAVIS. And will sooner or later be wound up?

Mr. LASKER. Yes, sir.

Mr. DAVIS. Whether this bill passes or doesn't pass?

Mr. LASKER. Absolutely. It has nothing to do with it.

On the question of the expense after all the ships have been disposed of, Chairman Lasker testified as follows:

After we quit operating we would then only have to keep a ships' disposal department. Our vast accounting would end, and I would say after we disposed of the ships by that time a few hundred people would be all the employees the Shipping Board would need.

However, according to Lasker's own fondest dream, that is many years off. The functions of the Shipping Board at that time should require the services of a less number of employees than he estimated; that is, if the pending bill should not pass. However, if this bill passes and the extravagance of the Shipping Board is continued you may rest assured that there will be no substantial reduction in the number of employees and the expense of the Shipping Board. I say that because the pending bill provides numerous activities, the execution of which would require a large organization.

As before stated, the passage of the pending bill will not avoid the present expenses of said board, but it will place upon the American people additional heavy burdens for the sole benefit of a few men engaged in the shipping industry.

As before shown, the Shipping Board has laid up a large number of Shipping Board vessels formerly in operation. They took off all the Shipping Board vessels that were in competition with privately owned American vessels. Although this reduction did not result in any saving of expense or reduction in appropriations, yet it did have another decided effect. During the year of 1921 the average amount of our imports and exports carried in American vessels was 51.6 per cent. The percentage was larger than this during the first half of the year, but less during the last half of the year on account of the reduction of the number of vessels in operation. The result of such laying up of the Shipping Board vessels is explained as follows:

The Department of Commerce recently made the rather depressing announcement that American ships are carrying a decreasing percentage of our export and import trade, the Shipping Board vessels making the worse showing.

The reports of the Department of Commerce give the exact figures by months which show the decided decrease in the amount carried in Shipping Board vessels and an increase in the amount carried by privately owned American vessels and an increase in the amount carried by foreign-owned vessels, as the American privately owned vessels did not get all the business that had formerly been carried by Shipping Board vessels.

The situation is briefly summarized in an article in the Annalist, as follows:

Foreign ships are rapidly regaining control of our import trade. In July, 1920, they carried only 36 per cent of the total, while in July, 1921, they carried 54 per cent. During the same period American independent vessels increased their tonnage from 32 to 36 per cent, while the Shipping Board lost 22 per cent. The Shipping Board vessels handled only 10 per cent of the total in July, 1921, a record low figure, and only one-sixth of the total carried in July, 1920.

The present showing is even worse. Chairman Lasker was asked what he had to say with respect to that situation; that is, that the Shipping Board vessels have very materially lost their proportionate percentage of business since he took charge, and the foreign vessels are carrying a large percentage of our imports and exports, and at the same time the private American vessels were increasing their percentage of our imports and exports carried. He very candidly replied that there was not enough business, he did not think, to make it profitable for both the private American vessels and the Shipping Board vessels, so they pulled off the Shipping Board vessels in order to give the business to the private vessels. It seems that they got some of it and the foreign vessels get a good deal of it. In other words—and that is the chief trouble about the whole situation, and has been from the beginning—that those in charge of our Shipping Board affairs have never at any time regarded the American taxpayer; they are not regarding him now. They are regarding the American taxpayer less than ever before; they are very much concerned about the private shipping interests, but whenever there is a choice between the shipping interests and the public interests they resolve it in favor of the private interests and boldly announce it as their policy. We can not get this thing properly solved as long as that situation obtains. The so-called experts, those controlling the affairs and operations of this board, are men taken from the competitive interests. Now, to whom do they owe allegiance? All we can judge of is by the way they act and by the way they talk.

Not only have Chairman Lasker and other members and officials of the Shipping Board made every effort to show that the Shipping Board vessels are not being operated successfully and can not be, but there are many things to indicate that they are making no sincere efforts to have them operated successfully and profitably.

Chairman Lasker himself stated at the hearings that—

The Shipping Board is not trying to establish trade. * * * We are only taking such trade as is offered, and you can not build up an American trade that way. We get only the plusage of the trade, as is proved by the fact that now we have tied up much more than Great Britain has.

Although it has taken off a large number, the present Shipping Board has not established a single new line.

Any proof or suggestions of ships making profits invariably caused a commotion among the representatives of the Shipping Board. They seem to absolutely resent any such proof. As before stated, the Shipping Board is only actually operating 13 vessels—those of the United States Lines, of which Thomas H. Rossbottom is general manager, on a salary paid by the Shipping Board. Mr. Rossbottom was called as a witness at the hearings by the Shipping Board. On cross-examination he was asked about the success of the operations of the United States Lines, and testified in part as follows:

Mr. ROSSBOTTOM. The United States Lines is the creature of the Shipping Board. The Shipping Board owns the steamers. They were the steamers that had been chartered and sold on partial-time payments, I believe, to the United States Mail Steamship Co. to be operated between New York and European ports. Then when the United States Mail went into the hands of a receiver these steamers were thrown back on the Shipping Board, and the Shipping Board requested the Secretary of War to transfer me from the Panama Line to the United States Lines to manage the United States Lines until such time as the lines could be sold.

Mr. Rossbottom further testified that the vessels he was operating might be called—

a horse and a mule and a jackass team.

Two of them, the *George Washington* and the *America*, being real steamers, some of the others being only fairly suited to the trade, but expensive of operation, as they were originally—

cargo steamers, and then the passenger accommodations were installed as a sort of an afterthought—

With the result that the operating expense was as much as a first-class passenger steamer, but the operating revenue was greatly reduced because of the lack of adequate accommodations for passengers. Four of the vessels, which he classed as—

full-fledged jackasses—

were old German tubs about 21 years old. In further describing them he said:

Their operating expenses are enormous, and I can not get any operating revenue out of them, because people will not travel in them. The third-class accommodations are not fit for pigs to be stowed in, the ships are old, the steel is crystallizing, and I have all kinds of expenses for repairs on them.

Mr. Rossbottom testified that during the last four months of 1921 they operated the *George Washington*, the *America*, and three of the old German vessels in the New York-Bremen service, and operated three of the said converted cargo vessels in the New York-London service. He furnished full figures showing that the net operating revenue on those ships during the said four months was $535,259.43; he explained that this did not include any deductions for insurance, interest, and depreciation, nor repairs which had been made by the Shipping Board, but that it did include all expenses incurred by the United States Lines; also coal, oil, and advertising paid by the Shipping Board, as well as office rent and wharfage bills paid by the Shipping Board. Mr. Rossbottom further showed that the good vessels made very large profits, which were partially offset by the losses on the old and unsuitable vessels. Mr. Rossbottom stated:

There are three steamers that I have in mind that if I had them in the United States Lines with the *America* and *George Washington* I would not take off my hat to anybody.

It must be borne in mind that this profit was made during what is generally conceded to be the worst depression in the history of shipping. Furthermore, the four months for which the figures were given were about the worst part of the year. In speaking of this North Atlantic service, W. J. Love, vice president of the Emergency Fleet Corporation, in charge of traffic, said:

This is the time of the year when they are making money. Well, I mean to say May, June, and July eastbound; July, August, and September, and the early part of October westbound. That is their harvest. * * * All of the larger ships are booked full eastbound, I am informed, well into July, and the passengers are now turning their attention to the smaller ships and to the ships of lesser grade.

He further stated that our ships are running full ladened eastbound on the Atlantic and are booked very well coming home, too, in the same months above referred to.

It is a recognized fact that the lines being operated by Mr. Rossbottom encounter as strong foreign competition as any lines in the world.

During the examination of a witness on a subsequent day of the hearings I referred to the above testimony of Mr. Ross-

bottom as to operating said lines at a profit, and Meyer Lissner, a member of the Shipping Board, interjected the following statement:

Mr. Chairman, in that regard, I do not think it is just to the Shipping Board to allow the statement that was made and the question that Judge Davis asked the witness in regard to the lines managed by Mr. Rossbottom to stand without explanation. Mr. Rossbottom, it is true, did testify that there was a net of something like $500,000 out of the operation of the fleet under his management but he also distinctly stated that that did not include any allowance for insurance, interest, and depreciation.

Lissner not only resented the suggestion that the Shipping Board was profitably operating some of its vessels, but stated that he did not think it was "just to the Shipping Board" to allow a statement to stand to the effect that the Shipping Board has successfully performed its duty.

This incident is typical of the spirit manifested by him all during the hearings.

It is a fact that some of the shipowners are operating their own vessels at a profit but are operating at a loss Shipping Board vessels, which they are operating under managing agent contracts. Reference was made to this matter and to the fact that one steamship company was operating its own vessels at a profit and operating Shipping Board vessels at a profit which it had under bare-boat charter, but was operating at a loss Shipping Board vessels which it had under a managing agent contract; and the inquiry was made as to why that was. Lissner interjected the explanation that the Shipping Board exercised a certain control and direction over vessels operated under managing agent contracts, but did not as to those under bare-boat charters. And thereby hangs an interesting tale.

During the hearings Lissner was the master of ceremonies on the part of the Shipping Board, his chief function being to muddy the waters and prevent the development of important facts.

Members of the committee insisted upon the Shipping Board inserting in the hearings a statement of the operating losses and profits of each of the concerns operating Shipping Board vessels, but the Shipping Board refused to furnish this information. In fact, they refused to furnish a great deal of important information which was asked for at the hearings.

In this connection I wish to call attention to an article that appeared in the March 22, 1922, issue of the Nautical Gazette, America's oldest shipping weekly, with the following title and opening paragraph:

Is Shipping Board really trying to further an American merchant marine? Question raised by its course in refusing to allocate additional tonnage in Levant trade and forcing millers to patronize foreign ships.

Is the Shipping Board sincere in its efforts to establish an American merchant marine? To the man on the street the question may seem superfluous, for, he argues, what other intent could actuate a band of patriotic citizens to give up their personal business and expend their time and services in handling of Government tonnage at salaries ranging from $12,000 to $35,000 per year. But to the genuine shipping man the query has become so pertinent that mere generalities will not suffice as an answer. It has become especially timely by reason of certain recent acts of officials of the board. An analysis of their attitude toward certain of our shipping problems leads to some very disquieting conclusions.

Then the article discusses at length the question thus raised.

The Nautical Gazette, in its issue of May 13, 1922, contains a most illuminative article entitled:

Board's red-tape methods preclude development of American shipping; managing operators of Fleet Corporation's ships are hampered by all sorts of official regulations and can not act on their own initiative.

I wish I had time to read this very instructive article, in order that you might fully understand why it is that ship operators can operate their own vessels successsfully and profitably, but at the same time can not do so with Shipping Board vessels. A reading of the article fully discloses what Lissner had in mind when he interjected the explanation referred to a few moments ago.

Of course, Albert D. Lasker was not chosen as chairman of the Shipping Board because of any knowledge of the shipping business, for he knew absolutely nothing about it. At the Appropriations Committee hearings last July Lasker himself said:

I am not an expert in shipping, but I take a little pride in being an expert in publicity.

It has been charged in the press that his appointment was suggested by certain large private shipping interests. They doubtless desired his appointment because, in view of his success as an advertiser and publicity man, they thought he was the proper man to carry out an elaborate propaganda program in favor of a ship subsidy bill. Soon after his appointment Chairman Lasker requested the American Steamship Owners' Association, embracing practically all of the American private shipowners, to suggest the names of experts to assist him in his work. As admitted by the general manager of that association at the hearings, they recommended W. J. Love, E. J. Frey, and J. B. Smull, who were promptly appointed, Smull and Love at salaries of $35,000 each per annum and Frey at a salary of $25,000 per annum. Love was made vice president of the Emergency Fleet Corporation, in charge of traffic; Frey was made vice president of the Emergency Fleet Corporation, in charge of operations; and Smull was made vice president of the Emergency Fleet Corporation, in charge of chartering, allocations, and contract department. At the time of his appointment Love was assistant manager of the American offices of Furness, Wythe & Co., the largest British shipping concern in the world, and not having a single ship under American registry. Mr. Love came direct from this British concern to the Shipping Board. Frey was chief assistant to the president of the Pacific Mail Steamship Co. at the time of his appointment to the position with the Shipping Board. Smull is a member and half owner of Winchester & Co., one of the largest, if not the largest, American shipping brokerage firms. Of course, all of these men know that their employment with the Shipping Board is only temporary, after which they will return to their former employers or other private shipping concerns. Besides, they naturally came saturated with the views of the private shipping interests with which they had grown up and been associated. One of the chief troubles of the Shipping Board affairs from the beginning has been that its policies have been largely determined and managed by representatives from private shipping interests. But few of the members of the Shipping Board have had practical knowledge of shipping affairs, and they have permitted the representatives from the private interests to direct and manage the affairs of the Shipping Board.

Private shipowners fought the enactment of the 1916 shipping act providing for the establishment of the United States Shipping Board and a merchant marine. Ever since they seem to have been obsessed with the idea that if the Shipping Board vessels should be operated successfully there was a likelihood of permanent Government ownership and operation. Consequently they have been very hostile to Government-owned vessels and the operation thereof, and have continuously advocated a policy of the Government getting rid of its fleet at once in whatever manner was necessary to do so; most of them advocate scrapping a large part of the Government fleet. They soon converted Chairman Lasker to their views. Consequently from the time he was appointed chairman of the Shipping Board he has been persistently denouncing the character and quality of the Shipping Board vessels, and proclaiming the failure of their operation and the impossibility of them being successfully operated.

The general attitude of the shipowners was expressed at the hearings by H. H. Raymond, president of the American Steamship Owners' Association, who expressed himself in part, as follows:

Mr. BLAND. Can you give us the benefit of your reason for that opposition?

Mr. RAYMOND. I feel that if the Government is to rid itself of ships, or, in other words, if we are to get rid of Government owned and operated vessels, the sooner they are sold the better. * * *

Mr. DAVIS. And you think the vessels ought to be sold at once to whoever is able to buy them?

Mr. RAYMOND. That is my personal opinion. I am not speaking for the association in opposition to that amendment. I am opposed to it as an owner and operator.

Later in his testimony Mr. Raymond said, in speaking of the Shipping Board vessels:

What I would like to see done, personally, is to see every one of them tied up and not taken out until they are sold. * * * I would sooner see them absolutely and entirely out of operation under Government ownership.

The attitude of Chairman Lasker and Mr. J. B. Smull, vice president Emergency Fleet Corporation and Director of Operations, one of the $35,000-a-year experts, was expressed at the hearings before the subcommittee of House Committee on Appropriations last July as follows:

Mr. LASKER. If we find—and I am also asking this for the enlightenment of the board—that we can not get enough operators to share with us the risk of operating, do you think that the operating vice presidents would recommend to the board that, rather than keep on with the present system, we should tie the boats up until such time as we could allocate them upon a proper profit-sharing and loss-sharing basis, even though it might increase the immediate loss to the Government to tie the boats up?

Mr. SMULL. I would tie them up.

Mr. LASKER. Therefore, in order to make the thing helpful to this final ultimate situation, we might have to perforce increase the loss, knowing that we were doing it by tying the boats up, in order to end this vicious system?

Mr. SMULL. Yes, sir.

The Shipping Board started tying up the boats to such an extent that the shippers in the Middle West called a meeting that was held in Cincinnati on October 7, 1921, and there

adopted the platform and sent Mr. Malcolm Stewart, manager of the foreign trade department of the Cincinnati Chamber of Commerce and chairman of the Middle West merchant marine committee, to Washington to enter with the Shipping Board a protest against destroying the trade routes which had been established from the Gulf and South Atlantic ports, upon which the shippers of the Middle West were dependent.

Mr. Stewart stated at the hearings that—

It looked like the only business they had in hand was destroying the trade routes.

He further stated:

The new Shipping Board was just getting its bearings, of course. Those are past things now, but it did frighten us considerably as to the future of our American merchant marine. Of course, we were not prepared to know all these emergency fleet men knew about ship operations; but when we heard they were going to tie up the ships as fast as they could, that that was their policy, and when we read Mr. Lasker came down here and told you he had on his hands the most colossal wreck in the world's history and he did not know what he was going to do with it and, in fact, did not believe anything could be done with it, why we began to worry about the thing to see if we could not give some help in this situation.

This protest had the desired effect, for the time being at least.

However, Mr. Stewart, upon behalf of the Midwest Merchant Marine Committee and the Mississippi Valley Association, as well as others, advocated an important amendment designed to protect their interests in the future. Furthermore, I note in the press that Mr. Stewart and other shippers in the Middle West are saying some pretty salty things about the North Atlantic Conference of Steamship Lines having induced the Shipping Board to approve its action, resulting in discrimination against the shippers of the Middle West by making it impossible for them to ship through Gulf and South Atlantic ports.

The Cincinnati Inquirer of May 4, 1922, in discussing the subject, stated:

New York influences got busy, it is said, and put the 7½ to 15 per cent handicap on the rates, and the Shipping Board completed the destruction until now neither Cincinnati nor any of the other cities of the midwest territory can do otherwise than route their business through North Atlantic ports. Chairman Stewart said that he was unable to tell how much the action of the Shipping Board in upholding the North Atlantic conference was costing the midwest shippers. * * * He was satisfied that the saving in ocean freights would be great if the South Atlantic and Gulf ports were allowed to handle their own rates.

"The trouble with the whole situation is that we are crippling ourselves and destroying our own merchant marine," said Mr. Stewart last night. As soon as business commences to move we will be bringing on untold trouble by congesting exports in New York and North Atlantic ports. In addition to the saving that we are entitled to, we ought as freight originators to be allowed to route our exports in the way that will give us the best, quickest movements. We must have the South Atlantic and Gulf ports open to our business. If we are barred from exporting through New Orleans it makes the Ohio River useless as an outlet and destroys the possibility of developing cheap water transportation by the Ohio and Mississippi Rivers. Our exporters will never stand for that.

At a meeting of the Foreign Trade Department of the Cincinnati Chamber of Commerce, on May 2, 1922, Malcolm Stewart was given carte blanche to investigate the situation and register a protest against the continuance of the Shipping Board in its affiliation with the North Atlantic conference, and it was suggested that a congressional investigation might be instituted. During the discussion Mr. Robert S. Alter, former president of the department, said:

I have returned recently from 30 days spent in New York in an investigation of this very matter, and I want to say that this action is timely. The Shipping Board is allowing itself to be dominated by the same interests which formerly controlled the old Foreign Steamship Line conference, and the North Atlantic conference is merely a continuation of the old domination of Liverpool-Hamburg interests.

At the same meeting Mr. Stewart read a statement showing the higher freight rates the South Atlantic and Gulf ports were compelled to charge because of the said action of the Shipping Board, and his statement showed that—

the effect of these rates made a discrimination against Cincinnati and midwest producers of 11.75 per cent on cardboard, 17.27 per cent on tanning extracts, 11.75 per cent on fiber boards and phosphate of lime, 16.58 per cent on condensed milk, 11.61 per cent on automobile parts, and 11.75 per cent on packing-house products.

We are cutting our own throats—

Said Mr. Stewart—

by permitting this domination to continue. The railroads have been compelled to give the lines to the Gulf and South Atlantic ports a parity in rates with those to the North Atlantic ports, but the Shipping Board killed the effect of this by allowing a condition to exist which forced the freight originators of the midwest States to send their business to New York.

If we do not remedy this condition our business will be congested in New York when freight activities resume, and we will be unable to have the advantage of trade outlets which are our normal export gateways.

It is further explained that the lines from the Gulf and South Atlantic ports were willing to make as low rates as the North Atlantic lines, and explained that they could do so as they have no berthage charges to pay in comparison with the tremendous charges that are made at the New York and eastern port wharves. [Applause.]

Mr. DENISON. Mr. Chairman, I yield 10 minutes to the gentleman from Massachusetts [Mr. GALLIVAN].

Mr. HUDDLESTON. Mr. Chairman, I also yield 10 minutes to the gentleman from Massachusetts [Mr. GALLIVAN].

The CHAIRMAN. The gentleman from Massachusetts is recognized for 20 minutes.

Mr. GALLIVAN. Mr. Chairman, everyone within the sound of my voice has at one time or another heard of the Rev. Dr. Charles H. Parkhurst, one of the most eminent divines in America.

Expressing his belief that the eighteenth amendment is in the Constitution to stay, and declaring that he would be "exceedingly disappointed" to see it eliminated, Doctor Parkhurst, in a recent public utterance, used some very plain language in describing the injury done by the Volstead Act. He says that he has taken especial pains to consult men especially qualified to have an opinion upon such matters, men who are not drunkards or drinkers, or personally affected by the act, and that these men agree with him almost unanimously.

The good doctor emphasizes his belief that the Volstead Act goes far beyond the eighteenth amendment, that it meddles with matters that should be left to individual determination, that it renders criminal that which is not criminal, and substitutes a "superimposed national conscience" for "personal conscience," causing unnecessary hardship to working people who "are temperate in the honest sense of the term"; the doctor repeats that the act has a tendency to impair respect for law, and that it is "distinctly and definitely un-American."

I agree with Doctor Parkhurst that the Volstead law is a piece of legislation superimposed upon the prohibition constitutional amendment; it has opened up a new chapter of American history; it has demonstrated the futility of constitutions, political principles, and judicial decisions. In my judgment, these things necessarily happen when the Government of a people passes out of their hands and into the keeping and administration of a body of determined and unscrupulous fanatics, aided and abetted by a panic-stricken and terrorized Congress.

There is another thing that occurs to me right here. One of the supposedly unchanging principles of the United States Constitution is the absolute separation of church and state. And yet the prohibition amendment and its monstrous offspring, the Volstead Act, are the handiwork of certain sectaries who have eliminated true Christianity from their pulpits and have made the use and disuse of wines and liquors the test of conduct and the standard of religious faith, and every effort made to prevent the use and stop the persecution of the users of wine in those churches which regard wine as a vital element in the most sacred sacraments of their faith is hailed with acclaim by these fanatics.

As far as possible the administrators of the law are selected from these fanatical sects who have set up the odious and anti-American doctrine that criticism of the law is sedition and a refusal to obey it treason.

Its most prominent advocates, its most active lobbyists, and its most aggressive terrorists are selected from the ranks of these sectaries, which in their meetings, sessions, and conferences demand that no official shall be nominated and no judges appointed to administer the law that are not indorsed by them. In other words, the reign of American law has been displaced by a reign of sectarian terror and violence, and the principle that animated George Washington and the fathers and founders of this Republic have been supplanted by the preachments of Titus Oates, of infamous memory, and the practices of the dancing dervishes of Islam.

Life, liberty, and the pursuit of happiness, guaranteed to the free citizens of America, have passed out, and a program of political lies, sectarian license, and the pursuit of persecution by fanatical harpies of free American principles has been substituted. The enemies of political, social, and religious liberty through the scandalous maladministration of this monstrous law have assumed the functions of the judge and jury, have invaded the sanctity of the home, attacked the personal liberty of the citizen, abridged the functions and perverted the profession and practice of medicine, and have assailed the rights and insulted the faith of every church not in communion with them.

They have succeeded in placing in the hands of their partisans and parasites the sale and distribution of wines and liquors that medical advice and the necessities of sickness deem needful and which are grudgingly permitted by the law, to the end that the American public is victimized and plundered by the conscienceless dealers now purveying a quality and character of liquor dangerous to the health and disgraceful to the char-

acter of a civilized people; they have enormously increased the death rate; they have multiplied crime and insanity, and have made the Government a partner in these odious offenses against humanity.

Their blind fanaticism has given birth to an atrocious traffic in the manufacture and sale of the deadliest form of alcoholic compounds, so that even the legalized Volstead dealer in spurious and low-grade liquors and the illegitimate dealer in every form of liquid abominations—the bootlegger, so called—are growing rich upon the necessities and disabilities of the citizens of this fantastically termed "free America."

Every American citizen who has in mind the dangers that are inherent in this law to American liberty and the integrity of the Republic and dares to protest against it is assailed in the bitterest forms of vilification and vituperation by the paid agents of professional prohibition and their press, and the self-respecting dignitaries of the churches which still cling to the ancient principles and teachings of Christianity are not free from the shameless attacks of the ministers and the minions of the Volstead "Camorra" if they plead for a return to the standards and ethics of Christianity and the ideals of human freedom.

The toiling millions are ruthlessly deprived of the comforts of life, the solaces of their domestic living, and the safeguards of health by sectarian fanaticism, while the wealthy still laugh at the obstacles the law sets up; and the rich and leisurely tourist finds the law a negation and a farce on the ships that sail the sea under the American flag.

Its open violation on the ships of the United States Shipping Board makes one laugh when he reads so much about law and order now that the eighteenth amendment has been adopted. Here and now I desire to call attention to and emphasize the barefaced hypocrisy of a government appropriating money to enforce this bastard child of prohibition and at the same time appropriating more money to advertise the violation of its own laws on its own ships the minute they get outside the 3-mile limit.

We have the lovely Volstead idea as interpreted by VOLSTEAD'S friend Lasker, which is a paradox—we may not get drunk on land but we can get drunk on water. [Laughter.] Do you know what I mean?

I hold in my hand the wine list of one of Mr. Lasker's sailing delights. It was formerly known as the steamship *Peninsula State*, and now bears the name of one of our former Presidents—*President Pierce*. It is one of the most prominent trans-Atlantic ships of the United States lines. When I read its reminiscent and at times exasperating details it is not with any intention of giving pain or sorrow to those Members of Congress who voted for the Volstead law. Rather is it to let Congress and the country know how on American territory, under Federal appropriations, the law is violated daily. Listen to the list, men of intelligence, and those men who were frightened when the Volstead finger was pointed at them and were driven to vote for this law:

United States Lines, S. S. "Peninsular State."

WINE LIST.

CLARETS AND BURGUNDIES.	Per bottle.
Barsac	$2.00
Haute sauternes	3.00
Moulin au Vent	2.50
Pommard	2.75
St. Emilion	2.00
Pontet Canet	1.50
CHAMPAGNES.	
Cordon Rouge, 1911, quarts	7.00
Cordon Rouge, 1911, pints	3.75
Moet & Chandon, Imported, quarts	7.00
Moet & Chandon, Imported, pints	3.75
Mercier, quarts	5.00
Heidsick, quarts	6.00
Heidsick, pints	3.25

Melachrino 9—do	.30
Melachrino 4—do	.40
Pall Mall—do	.30
Tuxedo, Lucky Strike, Velvet, and Prince Albert tobaccos—per tin	.20

How do you like that, men of America, men who preach law and order, men who say that there is no favoritism anywhere that the flag flies?

The morals of the American people have been lowered by the law, and it is time for the people of this great country to wake up to the true character and purposes of the pseudo-religionists who have, by a vindictive and un-American propaganda, inaugurated a reign of terror in and out of Congress. They are a body whose ideal is a practical union of church and state—their church and a state run by them according to their peculiar ideas—so that the American Republic of free men and sane laws may be supplanted by a quasi religious autocracy superior to the Constitution and administered directly and indirectly by them, their parsons, partisans, parasites, plunderers, and press.

It is time for Americans to rouse themselves before their rights and liberties are stolen and destroyed by a body of men and women whose perverted morals and distorted religions have almost wrecked these United States.

To your tents, O Israel!

[Applause.]

Mr. DENISON. Mr. Chairman, I yield five minutes to the gentleman from Oklahoma [Mr. HERRICK].

Mr. HERRICK. Mr. Chairman and gentlemen of the committee, we have up here this bill which is supposed to be discussed, but which nobody has discussed, and in view of that fact I may be pardoned perhaps for digressing upon another matter instead of speaking upon the bill. I am sorry to say that the rules of the House compel me to refer to the Member who objected earlier in the day when I wanted to get this matter into the RECORD as a gentleman, and I am frank to say that I could not call him that outside. The matter he objected to was matter pertaining to the compensation, the hospitalization, the vocational training, and war-risk insurance adjustments that I have been able to procure adjudication upon for numerous crippled soldiers and dependents of soldiers of the late World War.

I want to say further, I will not say that I am, but I will say that perhaps I am the only Member of Congress that pays an extra clerk out of his own pocket for this kind of work in order that it may be properly attended to with dispatch. I am paying an extra clerk $100 a month out of my own pocket. Some people may have the notion that the Congressman has nothing to do except to take part in the consideration of legislation on the floor of the House, and that he can spend the rest of his time in having a good time and enjoying the emoluments of his position. They do not seem to realize that he is a sort of glorified errand boy and general all-around trouble shooter. Therefore the value of a Member of Congress to his constituents is not to be measured entirely by his record of voting and speech making. It is important that he should vote, of course, and still more important that he should vote right. It may even serve a good purpose for him to make an occasional speech on the floor of the House; but there are other times and places where a Representative may be of value besides roll calls and filling the pages of the CONGRESSIONAL RECORD. He must be the servant of those who have business with the departments and the bureaus of the Federal Government. The makers of the Constitution may not have contemplated that he should render such service, but, just the same, it has developed into one of the most valuable functions of a Congressman and one that occupies much of his time. It means hard work, and lots of it, and it is not nearly so spectacular as the big stuff on the floor of the House, but it is real service. I have found much satis-

faction in the fact that I have been able to render some service of this kind.

Most prominent among the opportunities to give assistance have been the cases of ex-service men in need of compensation and hospitalization and vocational training. Theoretically, it should not be necessary for Congressmen to interest themselves in compensation claims, since we have enacted a law creating the Veterans' Bureau and clothing it with full authority and ample personnel for this work. But the many complaints of delay and injustice have made it plain that some one must look into these cases, and, as usual, the Congressman is the "trouble shooter." I have handled more than 600 such claims since the beginning of this Congress. I must say frankly that I have found that the greatest difficulty has been to get proper cooperation from the claimants and their friends in the way of promptly securing and submitting the necessary evidence. However, the bureau has not been free from blame. I have great respect for the director of the bureau, but he seems to be handicapped by having a lot of employees who lack the energy or the sympathy or the intelligence to render the service for which the bureau was created. I deem it quite proper that the bureau should help the disabled soldier in the establishing of his claim, but I have found it too often the rule that claims are rejected without any intelligent explanation, and when I write for detailed information my requests are sometimes ignored and at other times are replied to in stereotyped phrases that leaves one none the wiser. I find that the decentralization plan has not resulted in the advantages that had been claimed for it. Since the folders of the Oklahoma claimants have been sent to the Dallas office the delays are apparently increased and the results less satisfactory. There is delay because of information that must be had from the War Department or from the central office of the bureau; some matters have to be referred to Washington for adjudication, which consumes further time; and district officers seem prone to approve former findings with little regard for new evidence that may have been submitted. The increasing number of requests for congressional aid is a very poor tribute to the efficiency of the district office.

With the consent of the House, I wish to place in the RECORD a list of some of the claims with which I have been privileged to assist and with reference to which final and satisfactory action has been had. In the handling of the matters in the following list I have had to write an average of 10 letters to the case. I have 262 cases pending, and I have been working upon some of these for more than a year.

WORLD WAR VETERANS AND THEIR DEPENDENTS.

Harry Adkins, Oklahoma City, $95 per month compensation.
John Allen, Wichita, Kans., total permanent disability award and payment of life insurance at $57.50 per month.
Granville B. Allen, Oklahoma City, compensation $90 per month.
John G. Allen, Oklahoma City, compensation $100 per month.
Dewey G. Arnold, Chandler, Okla., award of $9 per month reinstated.
Joe P. Babek, Oklahoma City, award increased to $22.50 per month.
Adlai S. Baker, Oklahoma City, compensation $80 per month.
Lloyd C. Ball, Oklahoma City, compensation $90 per month.
King B. Benson, Madill, Okla., compensation $100 per month.
Lillian B. Bickers, Oklahoma City, adjustment of claim for $329.75 due on allotment.
Burney P. Bodard, Carnegie, Okla., compensation $80 per month.
Raymond P. Bollinger (deceased), Oklahoma City, accrued compensation due soldier in amount of $213.88 paid to mother.
Ira E. Bonnell, Goltry, Okla., compensation $80 per month.
Donald R. Bonfoey, Oklahoma City, award of compensation at $10 per month reopened.
Alger R. Bradley, Chickasha, Okla., total permanent disability rating $100 per month.
Leo J. Brand, Oklahoma City, compensation $100 per month.
James M. Brewer, Oklahoma City, compensation $10 per month.
Howard A. Bryce (deceased), Oklahoma City, award of compensation from date of discharge till death and payment of accrued compensation to parents.
Leonard P. Brown, Ardmore, Okla., compensation $60 per month.
Ralph E. Brown, Oklahoma City, award of compensation reinstated at $30 per month.
Orville Bryan, Oklahoma City, compensation $22.50 per month.
Edward L. Buddy, North Enid, Okla., compensation $8 per month.
Joseph S. Burgess, Oklahoma City, compensation $80 per month.
Stephen Carney, Oklahoma City, permanent total disability at $100 per month.
Willie H. Carroll, Oklahoma City, award of compensation reinstated at $61.75 per month.
Thomas H. Carter (deceased), Oklahoma City, insurance claim for $10,000 reconsidered and approved in favor of brother.
James H. Cary, Oklahoma City, award of compensation at $9 per month reopened.
Elmer J. Caywood, Oklahoma City, rating of permanent total disability $100 per month.
Bill Emery Chaffee, Oklahoma City, award of compensation at $8 per month reinstated.
Oscar Chambers, Oklahoma City, award of compensation $90 per month.
Valda DeHaven Chase, Alva, Okla., compensation $8 per month.
Cyrill Chrastek, Oklahoma City, compensation $80 per month.
Otis L. Clark (deceased), Eufaula, Okla., settlement of insurance claim effected in favor of widow for $10,000.
Ralph H. Clark, Oklahoma City, compensation $90 per month.
Cecil C. Colbert, Guthrie, Okla., compensation $8.75 per month.
Wiley Cook, Stroud, Okla., compensation at $72 per month during hospitalization.
George E. Colley, Oklahoma City, award of compensation reinstated at $47.50 per month.
Percy Lee Critchfield, Oklahoma City, compensation $71.25 per month.
David B. Crowley, Fairview, Okla., compensation $18.40 per month.
Earl Cunningham, Oklahoma City, compensation $20 per month and section 2 vocational training.
Ollie H. Cuthbert, Kingfisher, Okla., award of compensation reinstated at $9 per month.
Carles Dalbey, Oklahoma City, compensation $100 per month.
Lorenzo D. Darnell, Oklahoma City, compensation $60 per month.
Vivian K. De Bord, Perry, Okla., adjustment of claim for Army pay and recovery of Victory bond.
W. R. Deese, Duncan, Okla., payment of discharge bonus effected.
Walter Delaney (deceased), Oklahoma City, compensation $35 per month for widow.
George O. Demke, Oklahoma City, compensation $80 per month.
Washington W. Dennard, Oklahoma City, compensation $80 per month.
Charles F. Dickens, Durant, Okla., refund of deduction for allotment covering 10 months.
Ralph Dooley, Guthrie, Okla., compensation $9 per month.
Vernie G. Dowell, Stroud, Okla., compensation $80 per month.
Louis W. Dollarhide, Wright City, Okla., compensation $12 per month.
Miss Darthulia Duel, Fairview, Okla., compensation $80 per month.
Dow Dunaway, Drumright, Okla., payment of discharge bonus effected.
Don Dunn, Chickasha, Okla., compensation $8 per month.
Ewing W. Early, Atoka, Okla., award of compensation at $95 reinstated.
Charlie C. Ebbs (deceased), Oklahoma City, award of compensation $15 per month for each of parents.
Carl Edmonds, Antlers, Okla., section 2 vocational training secured.
George B. Edwards, Madill, Okla., compensation $8 per month.
John R. Ellis, Oklahoma City, total disability award of $100 per month.
John E. Falkenberg, Medford, Okla., compensation $19 per month.
Marvin Farr, Oklahoma City, compensation $9.50 per month.
Miss Ida Ferguson, El Reno, Okla., award of compensation increased from $40 to $60.
Joseph O. Fielder, Guthrie, Okla., compensation $100 per month.
William F. Finn, El Reno, Okla., compensation increased from $23.75 to $31.35.
Charles D. Folke, Oklahoma City, reimbursement for lost check, $134.84.
Lorentz H. Foremmling, Oklahoma City, compensation $80 per month.
Andrew J. Forester, Payson, Okla., compensation $8 per month.
Clancy Ford, Kingfisher, Okla., compensation $8 per month.
Paul J. Fournier, Quinlan, Okla., compensation $80 per month.
Odus C. Francis, Oklahoma City, total permanent rating $100 per month.
Clarence O. Gillespie, Oklahoma City, compensation $100 per month.
Herbert B. Ginn, Oklahoma City, insurance settlement $109.32.
Forrest B. Gore, Carlinville, Ill., compensation $100 per month.
Foy H. Graves (deceased), Okarche, Okla., rejection of claim for $10,000 life insurance reconsidered and claim approved.
Bonner Green, Wagoner, Okla., compensation $100 per month.
Speed Gregory, Watts, Okla., compensation award of $10 per month reinstated.
Marvin L. Grimes, Kingfisher, Okla., compensation $90 per month.
Joseph T. Grimsley, Pawnee, Okla., compensation award at $8 per month reinstated and section 2 training authorized.
Joel Grissom, Oklahoma City, compensation reinstated at $8 per month.
Claude D. Hadden, Oklahoma City, compensation $80 per month.
Harry G. Hale, Oklahoma City, compensation $16 per month.
Andrew Hamlin, Oklahoma City, compensation at $23.75 per month.
James B. Harley, Enid, Okla., section 2 training authorized.
Wm. J. Hayes, Oklahoma City, compensation, $12 per month.
Fay O. Heminger, Oklahoma City, refund of deductions for allotment, $195.64.
John C. Hill, jr., Kingfisher, Okla., adjustment of pay account, $13.
Curtis K. Hillbrant, Lamont, Okla., compensation $8 per month.
James J. Hobbs, Chandler, Okla., compensation increased to $24 per month.
Roy Hoffman, Oklahoma City, payment for medical attendance allowed.
Ace Hogland, Geary, award amended to include allowance for dependent father.
Oliver R. Holbrook, Ardmore, Okla., transfer from Houston Hospital to Oklahoma City authorized.
Austin W. Hoover, Oklahoma City, award of compensation reopened at $16 per month.
Otto A. Howard, Nash, Okla., compensation $15.75 per month.
Wm. R. Howe, Oklahoma City, payment for medical treatment authorized.
Wm. D. Howl, Chandler, Okla., compensation at $100 per month.
James Hudspeth, Mulhall, Okla., compensation at $95 per month.
Geo. R. Hughes, Elk City, Okla., compensation $15.20 per month.
Martin G. Hundorf, Woodward, Okla., compensation $20 per month.
Benj. Jones, Fairland, Okla., compensation increased to $20 per month.
Ezekiel Jones, Oklahoma City, award of compensation reopened at $52 per month.
Birtrus Kemmerer, Oklahoma City, compensation $80 per month.
Thomas J. Kern, Sallisaw, Okla., compensation $90 per month.
Albert Keuhne, Oklahoma City, compensation $80 per month.
Lee Ucal Kincannon, Oklahoma City, refund from allotment of $40.82.
Samuel Q. Kinyon, Seminole, Okla., compensation $90 per month.
Joseph E. Kirchner, Perry, Okla., compensation $80 per month.
John Kirk, Holdenville, Okla., compensation $80 per month.
Thomas S. Kizer, Cache, Okla., compensation $80 per month.
Herman M. Kroeger, Ponca City, Okla., compensation and hospitalization.
Harold B. LaBree, Ames, Iowa, compensation and section 2 vocational training.
Grady M. Lassetter, Oklahoma City, compensation $90 per month.
Walter Leach, Wagoner, Okla., award of $9 per month reinstated.
Mrs. Josephine LeBron, Oklahoma City, claim for $523.26 approved.

Robert E. Lee, Oklahoma City, compensation $22.50, section 2 vocational training
James L. LeGate, Oklahoma City, compensation $90 per month.
Carl Claude Leseney (deceased), Temple, Okla., adjustment of awards of compensation and insurance in favor of widow effected.
John W. Livingston, Wynnewood, Okla., compensation $9 per month.
Charles A. Lowe, Enid, Okla., compensation $22.50 per month.
James Henry Lyons, Oklahoma City, compensation $47.50 per month.
Hugh H. McBride, Oklahoma City, refund of deduction for allotment, $178.50.
Preston H. McCormick, Shamrock, Okla., compensation $8 per month.
Robert J. McDill, Oklahoma City, compensation $9 per month.
J. S. McKay (deceased), Okeene, Okla., accrued insurance paid to widow.
Milton H. McLiman, Guthrie, Okla., award of total temporary disability during hospitalization.
Oscar McNabb, Davis, Okla., compensation $80 per month.
Sam. Makler, Oklahoma City, payment of $331.50 due on allotment and allowance.
Arley V. Malone, Oklahoma City, correction of payments under amended rating.
V. Rue Marichal, Whitesboro, Tex., compensation $80 per month.
John Marston, Wetumka, Okla., compensation $40 per month and section 2 vocational training.
David J. Meade, Kingfisher, Okla., award of compensation at $18 per month.
Ernest L. Meador, Covington, Okla., compensation $90 per month.
Anton Mentag, Oklahoma City, award of compensation at $80 reinstated.
Joe E. Meese, Beaver, Okla., compensation $9 per month.
Ed. A. Mercer, Oklahoma City, compensation $8 per month.
William C. Miller, Oklahoma City, compensation $60 per month.
Martin L. Mills, Ardmore, Okla., compensation $80 per month.
Fred. Misak, Oklahoma City, reimbursement $30 allotment money.
Kenneth D. Mitchell, Oklahoma City, vocational training, section 2, authorized.
Otto W. Moore (deceased), Duncan, Okla., rejection of claim for $10,000 life insurance reconsidered and claim approved.
Ray Morgan (deceased), Oklahoma City, award of compensation $35 per month in favor of widow.
Clyde W. Morrisette, Oklahoma City, compensation $18 per month.
Benj. F. Mullins, Stratford, Okla., compensation $90 per month.
Howard A. Murphy, Oklahoma City, compensation increased from $20 to $25 per month.
Hiram E. Myers, Chandler, Okla., compensation $8 per month and section 2 vocational training.
Roy L. Myers, Hayward, Okla., compensation increased to $10 per month.
Fred E. Neese, Carmen, Okla., compensation $14.25 per month.
Edward C. Newer, Kingfisher, Okla., award of compensation reinstated at $14.25 per month.
Elias G. Nicholson, Oklahoma City, award of total temporary disability reinstated
Oscar Noak, Atoka, Okla., award of permanent total disability of $100 per month.
William W. Norman, Wynnewood, Okla., readjustment of awards at $8 per month.
Oscar Oakley, Ardmore, Okla., compensation $46.80 per month.
Clarence J. Oliver (deceased), Oklahoma City, compensation $25 per month for widow and $15 per month each for parents.
Arthur T. Page, Oklahoma City, award reinstated at $24 per month.
George Parish, Oklahoma City, request for special hospitalization approved.
Kline Patterson, Oklahoma City, total permanent disability $100 per month.
John F. Peaslee, Oklahoma City, compensation $100 per month.
Don L. Phelps, Wetumka, Okla., compensation $45 per month.
Virgil Guy Presson, Norman, Okla., award of compensation increased to $80 per month.
Gilbert Purvis, Albany, Okla., compensation $9 per month.
William V. Ray, Durant, Okla., adjustment of allotment effected, $118.17.
Vernor R. Ramsey, Ada, Okla., compensation increased from $44 to $70.40 per month.
Jiles C. Raymer, Texhoma, Okla., settlement of $111.67 due on allotment and allowance effected.
William L. Rellihen, Chandler, Okla., award of $90 per month during hospitalization.
Clarence R. Renfro, Oklahoma City, compensation $90 per month.
Harry E. Reynolds, Duncan, Okla., compensation $40 per month.
Roy B. Rice, Kingfisher, Okla., allowance for dental treatment approved.
Ed. P. Richardson, Madill, Okla., award of compensation reinstated at $13.50 per month.
Frank J. Riner, Chandler, Okla., compensation $20 per month.
Clay Rizenhoover, Seminole, Okla., compensation $95 per month.
J. Cooper Robertson (deceased), Ada, Okla., compensation award of $25 per month in favor of widow.
John M. Roebuck, Kingfisher, Okla., compensation $9 per month.
Reginald R. Rogers, Oklahoma City, securing of $100 Liberty bond paid for while in the service.
Alman Russell, Geary, Okla., compensation $80 per month.
Don H. Sackrider, Enid, Okla., compensation $90 per month.
John M. Salvini, Oklahoma City, compensation award reopened, $6.30 per month.
Jesse G. Sartin, Cherokee, Okla., compensation $20 per month.
Leo J. Schoenfelder, Durant, Okla., compensation $22.50 per month.
Mrs. Floe E. Simmerman, Riverside, Okla., settlement of allotment claim, $218.33 effected.
William F. Simpson, Broken Bow, Okla., section 2, vocational training.
Elonzo Sinclair, Oklahoma City, Okla., compensation $95 per month.
Arval Sissons, Sparks, Okla., compensation $80 during hospitalization.
Theodore F. Sitton, Oklahoma City, section 2 training granted.
Eden Slaughter (deceased), Durant, Okla., award of $35 to widow.
Stacy Sloss, Drumright, Okla., settlement of claim on account of allotment effected $49.
Claude Smith, Durant, Okla., compensation $80 per month.
Ronald Reed Smith, Oklahoma City, compensation $12 per month.
Shirley Steele Smith, Oklahoma City, compensation $80 per month.
Nathan O. Smith, Oklahoma City, allowance for dental treatment approved.
Lester W. Stanley (deceased), Duncan, Okla., adjustment of life insurance, $1,685.15, paid to mother and monthly awards.
Frank Sternberg, Fairview, Okla., compensation $80 per month.
George C. Spain, Fay, Okla., compensation $80 per month.
Vernon K. Stafford, Oklahoma City, compensation $80 per month.
Edward Stetler, Kingfisher, Okla., award amended to include allowance for wife.
Charles C. Stevens, Oklahoma City, payment of $146.20 to soldier on account of deductions for Liberty bonds.
James H. Stewart, Akins, Okla., compensation $8 per month.
Turner M. Sumter, Atoka, Okla., compensation $90 per month.
Harry C. Sweat, Fort Gibson, Okla., compensation $9 per month.
Emmette R. Talley, Hobart, Okla., compensation $80 per month.
Brough N. Tanner, Alva, Okla., compensation $9 per month.
James W. Teague, Marble City, Okla., compensation $80 per month.
Charnold D. Terrell (deceased), Prague, Okla., adjustment of soldier's insurance among his heirs effected.
Frederick Thompson, Oklahoma City, compensation increased from $9 to $22.50 per month.
Roland A. Thompson, McAlester, Okla., compensation $80 per month.
Thomas R. Thompson, Ardmore, Okla., total permanent rating at $100 per month.
Ralph B. Thornton, Blackwell, Okla., compensation $80 per month.
Martin L. Tomlinson, Oklahoma City, compensation $9 per month.
John H. Trotman, Phoenix, Ariz., total permanent rating at $100 per month.
John P. Tyson, Davidson, Okla., payment of $90 reenlistment bonus effected.
James L. Turner (deceased), Oklahoma City, payment of accrued compensation, $228, to father of deceased soldier.
Charles F. Valentine, Fort Gibson, Okla., compensation $60 per month; section 2, vocational training.
George Van, Picher, Okla., section 2, vocational training.
Virgil Van Arsdale, Oklahoma City, Okla., compensation $90 per month.
John E. Wade, Kingfisher, Okla., claim for Army pay due allowed, $118.80.
Jacob Walls, Chandler, Okla., compensation $13.68 per month.
Charles O. Whitaker, Tulsa, Okla., total disability rating at $100 per month.
Ernest Wilcher, Caddo, Okla., section 2, vocational training, granted.
Lester W. Williams, Stroud, Okla., award increased from $51 to $56.10.
William Leonard Wilson, Oklahoma City, Okla., payment of discharge bonus effected.
Montie D. Wilson, Depew, Okla., compensation reinstated at $13.50 per month.
Robert W. Wood, Oklahoma City, Okla., readjusted award of compensation.
William H. Wood, Oklahoma City, Okla., compensation $16 per month.
Elmer Woodruff, Stillwater, Okla., compensation $95 per month; section 2, vocational training.
Robert E. Woods, Guthrie, Okla., adjustment of claim for $34.53 effected.
James B. Young, Kingfisher, Okla., compensation $8 per month.
Arthur Zimmerman, Billings, Okla., compensation $8 per month.
John B. Zuck, Stillwater, Okla., compensation $80 per month.

It has also been my pleasure to assist a considerable number of veterans of the Civil and Spanish-American Wars and their widows. I have handled in all 154 such claims, of which 88 have been closed and 66 are now pending. In all, 59 pensions have been granted in the cases in which I have been interested. The service of the Bureau of Pensions has been very satisfactory, aside from some difficulty in getting reports as to evidence that was required in support of claims.

I am appending a list of the pensions that have been granted in the cases to which I have given my attention:

TOTAL DISABILITY PENSIONS FOR CIVIL WAR VETERANS.

George Blanchard, Enid, Okla., $72 per month.
Nathan M. Brewer, Enid, Okla., $72 per month.
William P. Brunner, Enid, Okla., $72 per month.
William H. Burchfield, Enid, Okla., $72 per month.
Jonathan W. Covey, Enid, Okla., $72 per month.
Henry C. Davis, Enid, Okla., $72 per month.
Pleasant Foster, Enid, Okla., $72 per month.
David Giltner, Enid, Okla., $72 per month.
Allen Hensley, Pond Creek, Okla., $72 per month.
Thomas J. Hughes, Newkirk, Okla., $72 per month.
Charles H. McDermond, Enid, Okla., $72 per month.
Jacob P. Martin, Ponca City, Okla., $72 per month.
Samuel L. Patrick, Chandler, Okla., $72 per month.
Josiah W. Reeser, Cheyenne, Okla., $72 per month.
James Reppeto, Ponca City, Okla., $72 per month.
Samuel Sproat, Enid, Okla., $72 per month.
Henry H. Swim, Enid, Okla., $72 per month.
Le Roy T. True, Liberal, Kans., $72 per month.
John L. Walton, Enid, Okla., $72 per month.
William B. Williamson, Ames, Okla., $72 per month.
John Wortmann, Enid, Okla., $72 per month.

PENSIONS FOR SPANISH-AMERICAN WAR VETERANS.

Fred. L. Berry, Laverne, Okla., $18 per month.
William T. Bogert, National Military Home, Kans., $30 per month.
Fred Brabson, Enid, Okla., $15 per month.
Charles P. Gilbert, Laverne, Okla., $15 per month.
Ernest E. Hanks, Enid, Okla., $12 per month.
Fred. Hornbeck, Charleston, Okla., $12 per month.
James A. Howell, Ponca City, Okla., $18 per month.
Fred T. Kirby, Ponca City, Okla., $12 per month.
Lawrence McCabe, Beaver, Okla., $30 per month.
Martin W. Marcoot, Enid, Okla., $12 per month.
William H. Quick, Perry, Okla., $18 per month.
Benjamin F. Rector, Enid, Okla., $15 per month.
Bert K. Smith, Oklahoma City, $8 per month.
Wilber A. Tharp, Enid, Okla., $12 per month.
William P. Wofford, Laverne, Okla., $18 per month.

PENSIONS FOR SOLDIERS' WIDOWS.

Amanda E. Burlison, Billings, Okla., $30 per month.
Rose M. Butcher, Blackwell, Okla., $30 per month.
E. Ellen Carpenter, Cherokee, Okla., $30 per month.
Mary E. Casteel, Perry, Okla., $30 per month.
Ada E. Cole, Billings, Okla., $12 per month.
Margaret Cook, Billings, Okla., $30 per month.
Fannie C. Crane, Orienta, Okla., $12 per month.
Mathilda J. Dagne, Perry, Okla., $30 per month.
Mary L. L. Emerson, Perry, Okla., $30 per month.
Sarah Ann Major Foster, Fairview, Okla., $30 per month.
Martha E. Hughes, Ames, Okla., $30 per month.
Adelia A. Hyle, Morrison, Okla., $30 per month.
Hester A. Jack, Byron, Okla., $30 per month.
Elizabeth Kennel, Riverside, Okla., $30 per month.
Abbeline Mathis, Enid, Okla., $30 per month.
Nancy U. Musser, Cherokee, Okla., $30 per month.
Ida M. Ruby, Ponca City, Okla., $30 per month.
Pamelia A. Sherwood, Supply, Okla., $30 per month.
Lizzie J. Thomson, Enid, Okla., $30 per month.
Ora S. Walsh, Fairview, Okla., $12 per month.
Mary A. Weeden, Elmwood, Okla., $30 per month.
Maggie Wells, Kiowa, Kans., $30 per month.
Mary E. Wey, Fairview, Okla., apportionment of one-half her husband's pension, $25.

Mr. HUDDLESTON. Mr. Chairman, I yield 10 minutes to the gentleman from Alabama [Mr. BANKHEAD].

Mr. CRAMTON. Mr. Chairman, pending that I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Michigan makes the point of order that there is no quorum present. The Chair will count. [After counting.] Fifty-five Members present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Anderson	Echols	Kunz	Rossdale
Andrew, Mass.	Edmonds	Lampert	Rouse

The committee rose; and Mr. WALSH having resumed the chair as Speaker pro tempore, Mr. LONGWORTH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 11872 and, finding itself without a quorum, he had caused the roll to be called, whereupon 207 Members answered to their names, and he handed in the list of the absentees.

The committee resumed its sitting.

The CHAIRMAN. The gentleman from Alabama [Mr. BANKHEAD] is recognized for 10 minutes.

Mr. BANKHEAD. Mr. Chairman and gentlemen of the committee, I desire to call to the attention of this House and the country some features of the legislative situation affecting the disposition of the Government property at Muscle Shoals, Ala. I was very glad, indeed, to hear the distinguished majority leader this morning disclaim on his own account and on the part of the President of the United States the alleged statement given out in the press this morning that it was not the purpose of the administration or of the Republican Party leaders in Congress to undertake to take up for final disposition at this session of Congress the matter of the offer of Henry Ford for the purchase and lease of the Government properties at Muscle Shoals. I was glad to hear it, because, as I know it to be, this is the greatest public question now undetermined by the action of this session of Congress; and in my judgment is of greater importance to the people of America than any matter that has been acted upon by this session of Congress.

This body has disposed of much important legislation of national concern, but in the taking up and disposition of this problem there is involved a larger measure of real national concern than in any other question now upon the calendar of the House for action, and it is upon that phase of the case that I am undertaking in this speech to make an appeal, not by way of threat, not in criticism of what has transpired in the past in connection with this matter—although, God knows, there has been too much delay already—but to make an earnest appeal on the part of those who are so gravely interested in the problem, to the Republican organization in this House, to the Republican Rules Committee of the House which alone can give us an opportunity to have the membership of the House pass upon this question, to take it up for immediate action, and to give the Congress a speedy opportunity to pass upon the merits of the Ford proposal.

Agriculture, as has been demonstrated in the hearings before the Military Committee, as represented by the National Grange, the American Farm Bureau Federation, and the Farmers' Union and every other great agricultural organization in the United States, is tremendously and zealously interested in this Ford proposition. Not only that but the great business organizations of the Mississippi Valley are tremendously interested in it. I received a day or so ago, as did every other Member of the House, a letter from the president of the great Mississippi Valley Association, representing States, agricultural and industrial, constituting 55 per cent of the population of the American Union. The executive of that great industrial and commercial organization appeals to the Congress of the United States not for further delay but for immediate action upon the Ford offer.

I shall quote only one or two sentences from the letter of Mr. James E. Smith, president of the Mississippi Valley Association. The letter is dated June 9, 1922. In that letter Mr. Smith says, referring to the completion of the Wilson Dam:

> We believe its completion and operation, under the plans submitted by Mr. Ford, will do more to assist in the development of our valley resources and bring greater and more beneficial results to our valley territory than any one thing that can possibly be done at this time.
>
> We believe that it is a great national proposition and that the accomplishment of Mr. Ford's plans will benefit every portion of the United States.

Mr. Chairman, the great Military Committee of this House for three months has had under consideration, most careful and conscientious consideration, every possible phase involved in connection with the disposition of these great properties.

They have considered, upon the suggestion of the Secretary of War, all of the plans proposed for the lease or purchase of these properties. That committee, practically by unanimous action, has submitted their report and say to the Congress of the United States that after consideration of every possible element of public policy, public safety, and public prosperity involved in these propositions, that they regard the offer of Henry Ford as the only one worthy of consideration and urge immediate action upon their favorable recommendation to the House of Representatives. Hear the concluding request of the majority report upon this proposition:

> We respectfully recommend favorable action on the bill at the earliest date possible.

The minority report concludes—and the minority report is really in substance the same as the majority report with the exception of one detail involved in the offer of Mr. Ford—

> In conclusion we feel justified in urging upon the membership the desirability of early action upon the Ford offer which if accepted would render possible the utilization of the vast properties involved and stop the present enormous expense and waste to the Government.

I am making this appeal not to the general membership of this House because I believe you are ready to take action upon this proposition, but the only way we can register action upon it is through the machinery of the organization of the House of Representatives which is controlled by the majority steering committee and by majority control of the Committee on Rules, and it is to them we are making this appeal upon the part of

those who are interested in this problem from the standpoint of national defense, from the standpoint of the production of fertilizer that will be sold to the farmers of America everywhere at probably 50 per cent of its present price, that will make possible the development for navigation of the wonderful Tennessee River from Chattanooga to its mouth, and that will bring about these results without any further ultimate expense to the Government of the United States more than that already expended in the construction of the plant and that portion of the dam now built. This House has practically concluded with the serious business program before it. We hear nearly every day of an early agreement for three-day recesses so that Members may disperse and go home and attend to their campaigns throughout the United States. The House under the leadership of the distinguished gentleman from Wyoming has brought its business to a conclusion, with this exception as to the major matters as far as the calendar of the House now stands.

And so we urge and appeal to them, not as an argument upon the merits of the proposition here now, but merely to give this House an opportunity under the rules and regulations that govern it for the representatives of the American people to express their opinion upon this great question of national concern. This appeal is not made myself individually, but is voiced as being the expression, yea, almost the prayer, of a great many millions of American people, especially all the farmers of the country. Will you heed their demand? The responsibility for action is yours.

A SHORT HISTORY OF THE MUSCLE SHOALS DEVELOPMENT.

Under the provisions of section 124 of the national defense act of 1916, Congress appropriated $20,000,000 to be used in the construction of a water-power plant at a site selected by the President for the production of explosives in time of war and fertilizer in time of peace for the benefit of farmers of America. When we got into the World War in 1917 President Wilson ordered such a plant constructed at Muscle Shoals, Ala. The Government proceeded to construct nitrate plant No. 1 at Sheffield, plant No. 2 at Muscle Shoals, a power plant at Gorgas, Ala., and transmission line thereto, and to acquire the limestone quarry at Waco, Ala., near Russellville. Plant No. 1 proved to be an experimental failure. It cost nearly $13,000,000. Plant No. 2, for the making of nitrogen from the air by the cyanamid process, is a proven and established success in every particular. It cost $67,000,000.

The steam plant at Gorgas, on the Warrior River, built for the Government by the engineers of the Alabama Power Co., with Government money, cost $5,000,000. To secure the necessary water power for the economical operation of plant No. 2 work was commenced on the great Wilson Dam across the Tennessee River, and work progressed rapidly on same until a year ago, when by the failure of a Republican Congress to make further appropriations, the work was stopped on the dam, and it now stands in that condition—one-third completed—the Government having expended $17,000,000 already on its partial construction. The nitrogen plant is also standing in an idle and useless condition, costing $300,000 a year for maintenance and protection.

THE OFFERS MADE FOR THE PLANTS.

On February 1, 1922, Secretary of War Weeks sent to the Speaker of the House a letter in which he stated that the properties of the Government at Muscle Shoals should be disposed of either by lease, sale, or otherwise, and submitted to Congress proposal of Henry Ford, which had been made by Ford at the invitation of the War Department in June, 1921, and amended by him on January 25, 1922. The whole offer was referred to the House Committee on Military Affairs for investigation and report. There is such deep interest in the Ford offer that I here incorporate a synopsis of it as shown in the report of the Military Committee:

THE HENRY FORD PROPOSAL.

Mr. Ford asks the Government, acting through Congress, to advance the money to complete Dam No. 2, on which there has been expended, approximately, $17,000,000, and also to advance the money for the construction of Dam No. 3, the cost of which completion and construction, according to the estimates of the Chief of Engineers of the United States Army, would be in round figures $50,000,000. but which according to the estimates made by Mr. Ford's engineers would be, approximately, $42,000,000.

He further asks that the Government shall purchase the necessary flowage rights at both the dams, the cost of which is estimated at $1,500,000; also that the Government convey to him by deed nitrate plant No. 1, which cost $12,887,941.31, and nitrate plant No. 2, including the Waco quarry, which cost $67,555,355.09; also all the land connected with these plants, being 4,666 acres; also all the interest of the United States Government in the Gorgas Warrior steam plant, situated on the Warrior River, 88 miles distant from Muscle Shoals, on which the Government expended $4,979,782.33.

Mr. Ford further proposes that the Government, through the Secretary of War, lease to him Dams No. 2 and No. 3, together with all their appurtenances, for a lease period of 100 years. He also proposes that at the end of the lease period the company shall have the preferred right to negotiate with the United States Government for such lease or purchase of the property and upon such terms as may be then prescribed by Congress.

In consideration of the foregoing, Mr. Ford agrees:

First. That he is to form a corporation with capital stock of $10,000,000 or more, of which at least $10,000,000 shall be paid in in cash.

Second. The company shall complete for the United States, subject to the approval of the Chief of Engineers of the United States Army, Dam No. 2, its locks, power house, and all necessary equipment, all in accordance with the plans and specifications prepared or to be prepared or approved by the Chief of Engineers of the United States Army, and progressively install hydroelectric equipment in said power house adequate for generating approximately 600,000 horsepower, all work aforesaid to be performed as speedily as possible at actual cost, without profit to the company.

Third. He further proposes that as soon as the release of suitable construction equipment and labor forces at Dam No. 2 will permit, or at an earlier date, if desired by the company, the company shall construct and complete, subject to the approval of the Chief of Engineers of the United States Army, for the United States, Dam No. 3, its lock, power house, and all necessary equipment, all in accordance with the plans and specifications prepared and to be prepared by the Chief of Engineers of the United States Army, or by the company, at its option, and approved by the Chief of Engineers of the United States Army, and progressively install the hydroelectric equipment in said power house adequate for generating approximately 250,000 horsepower, all the work aforesaid to be performed as speedily as possible at actual cost and without profit to the company.

He further proposes that the company will lease from the United States Dam No. 2, its power house, and all the hydroelectric and operating appurtenances, except the locks, together with all lands and buildings owned or to be acquired by the United States connected with or adjacent to either end of said dam, for a period of 100 years from the date when structures and equipment of a capacity of 100,000 horsepower are constructed and installed and ready for service; and will pay to the United States as annual rental therefor 4 per cent of the actual cost of acquiring lands and flowage rights and of building the locks, dam, and power-house facilities, payable annually at the end of each lease year, except that during and for the first six years of the lease period the rental shall be in the following amounts and payable at the following times: $200,000 one year from the date when 100,000 horsepower is installed ready for service, and thereafter $200,000 at the end of each year for five years.

Fourth. Also, the company will lease from the United States Dam No. 3, its power houses, and all of the hydroelectric and operating appurtenances, except the lock, together with all lands and buildings owned or to be acquired by the United States connected with or adjacent to the end of the said dam, for a period equal to the lease term of Dam No. 2 and its hydroelectric power equipment thereat, and that the said lease terms of the two dams and the hydroelectric thereat shall expire at the same time, the said period to begin at the date when said structures and equipment of a capacity of 80,000 horsepower are constructed and installed and ready for service, and will pay to the United States as annual rental therefor 4 per cent of the actual cost of acquiring the lands and flowage rights and of constructing the lock, dam, and power-house facilities, payable annually at the end of each lease year, except that during and for the first three years of the lease period the rentals shall be for the following amounts and payable at the following times, to wit: $160,000 one year from the date when 80,000 horsepower is installed and ready for service, and thereafter $160,000 annually at the end of each year for two years.

Fifth. He further agrees that the company will pay to the United States during the period of the lease of Dams No. 2 and No. 3, $20,000 annually in installments quarterly in advance for repairs, maintenance, and operation of Dam No. 3, its gates and lock, and $35,000 annually in installments quarterly in advance for repairs, maintenance, and operation of Dam No. 2, its gates and locks, it being understood that all necessary repairs, maintenance, and operation thereof shall be under the

direction, care, and responsibility of the United States during the said 100 years lease period. The company, at its own expense, will make all necessary renewals and repairs incident to the efficient maintenance of the power houses, substructures, superstructures, machinery, and appliances appurtenant to said power houses, and will maintain the same in efficient operating condition.

Sixth. He further proposes that at all times during the period of the lease of Dam No. 2 the company will furnish to the United States free of charge, to be delivered at any point on the lock grounds indicated by the Chief of Engineers of the United States Army, electrical power to an amount necessary for the operation of the locks, but not in excess of 200 horsepower, and shall also furnish power for the same purpose at Dam No. 3, but not in excess of 100 horsepower.

Seventh. He further proposes to provide a sinking fund covering the lease period, which at the end of the same will amortize the cost to the Government of the cost of completing Dam No. 2, the construction of Dam No. 3, and the cost of the flowage rights in connection therewith.

Eighth. He further proposes to pay to the Government for the conveyance to him or the company of all the property constituting nitrate plant No. 2, including lands, power plant, buildings, materials, machinery, fixtures, equipment, apparatus, appurtenances, tools, and supplies, and the right, license, and privilege to use any and all of the patent processes, methods, and designs which have been acquired and may be transferred or assigned to a purchaser of nitrate plant No. 2 by the United States, together with the sulphuric-acid units now in storage on the premises; also all of the property constituting nitrate plant No. 1, including power plant, buildings, materials, machinery, fixtures, equipment, apparatus, appurtenances, tools, and supplies, and the right, license, and privilege to use any and all of the patent processes, methods, and designs which have been acquired and may be transferred to a purchaser of nitrate plant No. 1 by the United States; also all of the property constituting the Waco quarry, including the rights of way and buildings, material, quarry tract, machinery, railroad tracks, appurtenances, tools, and supplies; also all of the property constituting the steam power plant built and now owned by the Government at Gorgas, Ala., on the Warrior River, including lands, rights of way, buildings, machinery, material, apparatus, appurtenances, tools, and supplies, and the transmission line from the Gorgas steam plant to nitrate plant No. 2 at Muscle Shoals, and all other transmission lines belonging to the United States and connected with any of the aforesaid Government properties, the sum of $5,000,000 in five installments, as follows: $1,000,000 upon the acceptance of this offer, and $1,000,000 annually thereafter until the purchase is fully paid, with interest at the rate of 5 per cent per annum on deferred payments, with the privilege of anticipating any or all of the payments, possession to be delivered upon the payment of the first of said installments and deeds of conveyance to be delivered when full payment for such property has been made.

It is further provided that each of said deeds shall refer to or contain the provisions of the offer, and said deeds shall be so drawn as to make these provisions covenants running with the land.

Ninth. The proposal further provides that the company shall maintain nitrate plant No. 2 in its present state of readiness or its equivalent, for immediate operation in the manufacture of materials necessary in time of war for the production of explosives, during the entire lease period, and it is further provided that whenever, in the national defense, the United States shall require all or any part of the operating facilities of nitrate plant No. 2 for the production of any material necessary in the manufacture of explosives or other war materials, then the United States shall have the immediate right upon five days' notice to the company, to take over and operate the same, and the company will supply the United States with the hydroelectric power necessary for such operation, together with such complete patented processes which the company owns or has the right to use; and, further, when required for national defense, any of the company's personnel and operating organization necessary for operating any part of nitrate plant No. 2 in the manufacture of materials for explosives or other war materials shall be at the disposal of the United States, to be reasonably compensated for such use by the Government.

Tenth. It is also proposed that the company shall be obligated during the lease period to manufacture nitrogen and other commercial fertilizers, mixed or unmixed, with or without filler, according to demand, at nitrate plant No. 2 or its equivalent, or at such other plant or plants adjacent or near thereto as it may construct, using the most economical source of power available. The annual production of these fertilizers shall have the nitrogen content of at least 40,000 tons of fixed nitrogen, which is the present annual production of nitrate plant No. 2, and, further, that if said plant is destroyed during the lease period to restore the plant within a reasonable time to its former capacity. Guaranties are included in the proposal for carrying out this important provision, and a limitation of 8 per cent profit is fixed on the production of said fertilizer.

Eleventh. It is further provided in the proposal that the Government of the United States shall have the right to enforce all of the provisions of the contract to be entered into between the Government and the company by the exercise of all usual legal remedies, and in addition thereto the company will agree that the Attorney General of the United States may, upon the request of the Secretary of War, institute proceedings in equity in the District Court of the United States for the Northern District of Alabama for the purpose of canceling and terminating the lease of Dam No. 2 or Dam No. 3, or both of them, because of such violation, or for the purpose of remedying or correcting by injunction, mandamus, or other process any act of commission or omission in violation of the terms of this proposal or any contract made in furtherance thereof.

The Alabama Power Co. also, but long after the Ford offer was made, made an offer for the plants and the power plant at Gorgas. They only wanted to get the power from Wilson Dam; they made no proposal to make fertilizer. Their claim to an option to buy the steam plant at Gorgas has been denied by a recent opinion rendered by the Attorney General of the United States, who held that they had no legal rights to it under their contract with the Government. The Alabama Power Co. has already received a fee of $285,000 for building the Gorgas steam plant.

I have from the beginning been in favor of the Ford offer and against all other offers. I favor it for the following reasons:

1. It is fair to the taxpayers and the Government.

2. It relieves the Government of any further ultimate expense in completing the Dams 2 and 3 and installing the electrical energy to be generated by over a million horsepower of water. Ford will repay all that expense.

3. It keeps the nitrate plant in going condition, subject to the use of the Government for 100 years in case of war to make explosives.

4. It will open up the Tennessee River to navigation from Chattanooga to its mouth, thereby giving competition to oppressive railroad rates now charged.

5. It will give employment at high wages to tens of thousands of laboring men who are now out of work and whose families are suffering.

6. It will build up a great industrial center in Alabama, to increase the State and national wealth, and add taxes for the public benefit.

7. Over and above all else, and upon this is founded my greatest interest in this whole business, it will cut the fertilizer bills of the farmers of Alabama and of the Nation half in two. The Fertilizer Trust is fighting Ford's offer to the last ditch, but we who are fighting for the interests of agriculture see in this Ford offer the only chance we have ever had to break forever the oppressive strangle hold that this trust now has upon the necks of the farmers of America.

I have personal confidence in Henry Ford. I believe he will do for the farmers what he has promised to do. In their behalf it has given me pleasure to have advocated at all times and to advocate now the offer of Henry Ford. Give us a vote and we will do the rest. [Applause.]

Mr. DENISON. Mr. Chairman, I yield 10 minutes to the gentleman from Indiana [Mr. BLAND].

Mr. BLAND of Indiana. Mr. Chairman, I am told by those most familiar with the original Panama Canal act that there was no governing body in the world given such autocratic power as was given to the Governor of the Canal Zone, and that power maintains until this day. I have studied conditions down in the zone considerably, and I find a very unusual condition prevails there. We had had civilian Governors of the Panama Canal Zone. Even under a civilian governor the extraordinary autocratic power given by the act occasioned much complaint as to the manner in which they governed the zone. Now, imagine the conditions down there now when the Secretary of War has appointed a military man as governor of the zone, when he is attempting to apply military rules to a civil administration. The people down there who work on the Panama Canal are good American citizens, and they want to exercise the rights and privileges of American citizens. The original Panama Canal act gave the governor the right, if a man opened his mouth about the administration, to deport him.

This bill being considered to-day gives him more power than he ever had before. It is brought in here for the purpose of

giving the governor more power over his subjects than any executive ever had in any government in the history of free people. Let me show you what they are doing down there. Here is a manifesto—a ukase, if you please—issued by the acting governor reprimanding an American citizen not subject to military rule. These fellows are put to the goose step down there. Here is what they posted on the walls and trees and billboards of the zone against a person that has been there for 20 years, and a mighty good citizen he is. This fellow who was reprimanded was over at Colon, outside of the zone. As I remember it, he is superintendent of construction. He was not satisfied with the present administration of the Canal Zone, and one of the things that he made complaint of down there was that Secretary Weeks sent a commission there to make an investigation, and one of the recommendations of the commission was to stop the fight against mosquitoes which had made the zone habitable for white men. They recommended that these activities of the health department should cease until the death rate equaled certain other cities in the United States. The governor was in sympathy with this military commission who had displeased the zone people. The people generally complained about that report, and Mr. Boyd, over in a restaurant in Colon, said that the present governor would be fired in 48 hours, and ought to be. The governor came to the United States, and while he was gone the acting governor issued this manifesto, and I want to read it to you. It is as follows:

THE PANAMA CANAL ZONE EXECUTIVE DEPARTMENT,
Balboa Heights, February 1, 1922.

All concerned:

The following letter of this date is published for the information of all concerned:

Mr. A. S. BOYD,
Pedro Miguel, Canal Zone.

SIR: Some days ago it was brought to my attention that on January 7, 1922, you announced to a group of gentlemen in the Strangers' Club in Colon that you personally had received authentic information that the present Governor of the Canal Zone would be removed and his successor announced within 48 hours.

From your own statement in regard to this matter it is apparent to a person of any judgment that your source of information was anything but authentic, and it is hard to conceive your attaching any importance to a rumor emanating from such a source.

After carefully reviewing your statement and the statements of others who are conversant with this matter—incidentally the statements of all others agree in differing widely from your version—I am inclined to believe that your action in this matter was brought about, not by intentional disloyalty but by your inability to resist the temptation to attain notoriety by posing as the exclusive possessor of the information which you gave out.

In view of your long and satisfactory service with the canal and your personal circumstances as explained to me, I have decided not to insist upon your resignation, but continue you with the organization with this letter of reprimand, which will, of course, be placed upon your personal file.

Respectfully,
M. L. WALKER,
Acting Governor.

Gentlemen, I want to know what you think about such a manifesto, of such a reprimand of a civil employee under a civil government; a public reprimand upon an American citizen made in true military style? I wrote to Secretary Weeks and asked him what he thought about it, and asked him if he approved of putting the goose-step on American citizens and permitting a military autocracy there to hold an American citizen up to scorn and shame because he manifested a spirit of American independence. For fear I may neglect it, I ask unanimous consent to put a portion of the correspondence between the Secretary and myself into the RECORD. Here is my letter to him:

FEBRUARY 15, 1922.

Hon. JOHN W. WEEKS,
Secretary of War, War Department, Washington, D. C.

DEAR MR. SECRETARY: I am inclosing copy of an order or notice published broadcast in Panama by the acting governor concerning the conduct of Mr. A. S. Boyd.

It will be noted that Mr. Boyd was charged with having said that the present governor of the Canal Zone would be removed and that his successor named within 48 hours. It seems that Mr. Boyd has been published and reprimanded and that he is now on "good behavior."

I have been to Panama twice in the last two years, and I do not think any too much of the military control of that place. It seems to reach the limit of military autocracy. Suppose Mr. Boyd had said the words charged. What right has any official to punish him or investigate his statement or publish him to the community? This letter only indicates the extent to which an Army officer will go in connection with administration of civil affairs.

I know Mr. Boyd very well, but I hold no brief for him. He is regarded as one of the most intelligent and efficient servants in the zone. He has spent the best part of his life there and he is well thought of by all. He has not communicated with me directly or indirectly in connection with this matter, but has come to me through nonmilitary friends. I would like to have you tell me if this order, ukase, manifesto, edict, or military order is with your knowledge and consent. Do you view it in harmony with the spirit of American independence in thought and speech? I am deeply interested in this matter and will expect a personal answer giving me some notion as to whether or not the officer issuing the order has exceeded his authority under his authorization and the law.

Yours very truly,

———.

FEBRUARY 24, 1922.

Hon. J. W. WEEKS,
Secretary of War, Washington, D. C.

DEAR MR. SECRETARY: On February 15 I wrote you a letter inclosing a copy of some kind of a reprimand letter by the Governor of the Canal Zone, directed toward A. S. Boyd. I addressed the letter to you personally and inquired only for your personal attitude, and I would naturally suppose that it would not call for reference to the zone.

Might I have an answer to this letter within some reasonable length of time?

Very sincerely yours,

———.

On the 24th of February, 1922, the Secretary of War replied as follows:

WAR DEPARTMENT,
Washington, February 24, 1922.

Hon. OSCAR E. BLAND,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: I am in receipt of your letter of February 15 in reference to the action of the Acting Governor of the Panama Canal in making public a letter addressed to Mr. A. S. Boyd, Pedro Miguel, Canal Zone, reprimanding him for having announced in the Strangers' Club, in Colon, on January 7, 1922, that he had received authentic information that the present Governor of the Canal Zone would be removed and that his successor would be announced within 48 hours.

I have no information regarding the incident referred to by you, except what is contained in your letter under acknowledgment. It is believed the action taken by the acting governor is not inconsistent with the broad powers conferred upon the Governor of the Panama Canal under the Panama Canal act and by the President. I have no particular comment to make regarding the matter, except to say that at the present time conditions on the Isthmus are rather unusual, causing considerable unrest there, due to the reductions in force and the reductions in wages from the excessive rates paid during the war period and the two years following the armistice. Another contributing influence to this unrest in the Canal Zone is an active propaganda on the part of the employees to retain certain privileges heretofore unwisely allowed them, but which they are now being properly deprived of. Under these conditions loyal employees of the canal should not aid in spreading idle rumors regarding changes in canal officials when there is no foundation for them and the spreading of which would only cause continued unrest.

Sincerely yours,
JOHN W. WEEKS,
Secretary of War.

On March 2 I addressed him as follows:

MARCH 2, 1922.

Hon. JOHN W. WEEKS,
Secretary of War, War Department, Washington, D. C.

DEAR MR. SECRETARY: Your letter of February 24 in answer to my two letters of previous date is at hand.

I asked you specific questions as to how you viewed the conduct of the Governor of the Canal Zone in publishing a letter of reprimand sent to an employee of the Government. You evaded the question by saying you had no particular comment to make regarding the matter. You also said that you believed the action taken by the acting governor is not inconsistent with the broad powers conferred upon the Governor of the Zone under the Panama Canal act and by the President.

Admitting the powers granted by Congress are broad on account of it being necessary in times of great danger to exercise unusual power, will you contend that there is such an emergency at this time as to warrant putting into effect the strict military regulations as applicable to civil employees of the Zone? The situation is, Mr. Secretary, that you have appointed a military officer as Governor of the Canal Zone. I am not denying your right to do so, nor am I denying the technical authority of the acting governor to put into force the goose step if he so desires, but I am questioning the policy of the Secretary of War or the President or the Congress that permits these things to continue.

You have not indicated to me as to whether this was done with your authority or consent or whether you approve of it or not. This matter is a matter of administration and you are the administrator. If you favor a military, autocratic government of this Canal Zone, Congress should take steps, if it deems it advisable, to prevent you from so governing the zone.

I may not have the correct view of this matter. I am certainly anxious to have information, and if I am convinced that I am wrong about the matter I certainly am not inclined to want agitation for its own sake.

Do you think the act of the acting governor is justified in peace times? Do you approve of this military kind of government by an Army officer appointed to a civil position as affecting civilian employees?

Trusting I may have an early reply, I remain,
Sincerely yours,

———.

The Secretary on March 24 wrote me as follows:

WAR DEPARTMENT,
Washington, March 24, 1922.

Hon. OSCAR E. BLAND,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN: Your letter of March 2, referring to my letter of February 24 in answer to your previous letter of February 15, relative to the reprimand addressed to Mr. A. S. Boyd, an employee of the Panama Canal, by the Acting Governor of the Panama Canal Zone and published in a memorandum to "All concerned" by the acting governor, was received during my absence from the city, and I understand my secretary telephoned you that a reply would necessarily be delayed until my return.

My previous letter was written as I was about to leave the city and perhaps was not phrased entirely to meet your criticism. However, whether that is correct or not, I do approve of the action taken by the acting governor. The facts seem to demonstrate that Mr. Boyd publicly made a statement relative to the imminent removal of the Governor of the Panama Canal Zone and stated that he had it from authentic authority. This, if true, would have implied that the governor had given some cause for such action, such as incompetency, negligence, or possibly some other more serious offense, for such removal, and any such statement or rumor quite naturally produces an impression in the minds of those who hear it, even if untrue, which would be harmful

to the governor in the performance of his duty. There was never any basis whatever for any such statement. The information imparted by Mr. Boyd was not authentic, and there is every reason for the reprimand administered. It was not military or autocratic and would apply with equal force if such a rumor had been started by a civilian employee in any department of the Government.

Sincerely yours,

JOHN W. WEEKS,
Secretary of War.

Suppose I make a statement against President Harding to-day that gravely reflects upon his administration of affairs or even questions his ability or honesty. Do you think he would have the right to hold me up to ridicule and scorn by reprimanding me publicly and posting it on the trees? Does he have the right to put military shackles on me? I do not believe that anybody would attempt to do it but a governor who could not forget that he was an Army officer.

Mr. NEWTON of Minnesota. Will the gentleman yield there?

Mr. BLAND of Indiana. Yes.

Mr. NEWTON of Minnesota. But the gentleman is not an employee of the Government. As I understand it, the man reprimanded was an employee of the Government in the Canal Zone.

Mr. BLAND of Indiana. Who is not an employee of the Government?

Mr. NEWTON of Minnesota. You are not.

Mr. BLAND of Indiana. No; I am not, in the sense he was.

Mr. NEWTON of Minnesota. Then, is your illustration in point?

Mr. BLAND of Indiana. However, I do think I am an employee of the Government at this time.

Mr. NEWTON of Minnesota. I can not look at it in the same light.

Mr. BLAND of Indiana. I draw a salary from the same source that he does or any other citizen in the employ of the Government, and we are not going to subscribe to the doctrine that a man who comes to a civil life from a military life is going to put military shackles upon American citizens. Mr. Boyd had a right to free speech; he had a right to criticize the governor, as every American citizen has the right to criticize Congress, which they do freely. If we fellows tried to put military shackles on the fellows who criticize us, we would have the whole country in shackles all the time.

Mr. DENISON. Will the gentleman yield?

Mr. BLAND of Indiana. Yes.

Mr. DENISON. I know the gentleman wants to be fair. The governor has a responsible position down there, and this man was employed in work for the Government. What do you think ought to be done?

Mr. BLAND of Indiana. The Governor of Indiana has a responsible position, sir, and men every day go on the platform and criticize what he is not doing, and severely criticize him. Do you think he has the right to publicly reprimand him and say, "I will let you go this time; I will reprimand you publicly and give you the military goose step, but I will not let you go free again"? This bill proposes to give them more power. If you listen to the military oligarchy, my friend, in amending the law for the Panama Canal Zone, you will have it so that the liberty of no man there will be safe, before you get through, and this is only a cry for more power, and God knows they have got more than any men who govern should have. In the first place, I do not believe a military man ought to be appointed as a civilian executive. I would not want to detract from the military record of any good military man——

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. BLAND of Indiana. I would like to have three minutes more.

Mr. DENISON. Mr. Chairman, how much time have I?

The CHAIRMAN. The gentleman has 13 minutes.

Mr. DENISON. I yield to the gentleman from Indiana three minutes more.

The CHAIRMAN. The gentleman from Indiana is recognized for three minutes more.

Mr. BLAND of Indiana. I would not want to detract from the reputation of any good military man, but I say it is a mistaken policy to appoint a military man to control civilian employees, especially under such a law as grants abnormal powers, as this bill grants. I have not had the time to analyze this bill very carefully, and I have not the time to discuss it if I had examined it, but if you will look it over you will see that the purpose of this bill is to put more power in the hands of men who are now seeking to stifle liberty and free speech on the Canal Zone.

They want to take from the Department of Justice the power to appoint United States marshals. They want the governor to be intrusted with power to appoint United States marshals down there. Some one has said it will save expense. My God! They will have a deputy to do it. They will appoint more officers down there than they have already. The governor will appoint a man of his own ilk, of his own kind, to do it. They want to take the power away from the civilians.

I was down there when the present military governor treated the present United States marshal with scant courtesy. Military trained men are enraged at civilian interference. That is military autocracy. Why not let the Army do everything else in the way of administering justice down there? Let us do away with our courts there and have military tribunals instead to try American citizens. Why do you want to deprive American citizens of their rights? Because the War Department asks for it?

Mr. NEWTON of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. BLAND of Indiana. Yes.

Mr. NEWTON of Minnesota. Who is the gentleman who is marshal, and where is he from?

Mr. BLAND of Indiana. The marshal is a mighty fine fellow, and he comes from Indiana, and I know him. I know he is a fine fellow, and he is not getting too much money for it. It is a very poor job, and he says he is going to get out of there. He is at present living in an atmosphere of hostility to his office.

But that is not what is worrying me. I say the principle involved is wrong. You should not give more power to these military men than they already have. You will regret it if you do it. [Applause.]

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. CRAMTON. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN. The gentleman from Michigan makes the point of order that there is no quorum present.

Mr. DENISON. Will not the gentleman wait for five minutes?

Mr. CRAMTON. Yes. I will withdraw the point.

The CHAIRMAN. The point of order is withdrawn.

Mr. DENISON. Mr. Chairman, of course I do not blame the gentleman from Indiana [Mr. BLAND] for manifesting some feeling because one of the provisions of this bill abolishes the office of marshal of the Canal Zone, which, he says, is now held by one of his personal friends; but I do not think the gentleman's remarks are justified. I do not think he is going to frighten anybody by raising the bugaboo of "militarism" on the Canal Zone. We have a governor there, appointed not by the Secretary of War but by the President himself, and the Secretary of War has nothing to do with it. The President appointed Colonel Morrow, who was a very distinguished Army engineer and who served throughout the late war in France and rendered faithful and distinguished services to his country. He is an able military engineer, he has worked on the Canal Zone for a number of years, and he knows as much about the Canal as any man living. He is wonderfully well equipped for the position, and he is managing the Canal Zone with efficiency and with great credit to himself.

We have an officer down there known as the chief of police of the Canal Zone. He has subordinate officers who can easily serve writs, and so forth, like any other officers serving under a superior officer. We also have the useless position of marshal, whose duties can be performed by a deputy just as well.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield there for a question?

Mr. DENISON. Yes.

Mr. CRAMTON. Does the gentleman understand that the Committee on Rules really understood that this bill would abolish a useless officer?

Mr. DENISON. I do not know about that. I do not know that they went into the merits of the bill.

Mr. CRAMTON. Some of us get the impression that the Committee on Rules opposes the abolition of useless offices. [Laughter.]

Mr. DENISON. But, Mr. Chairman, this bill does abolish an office that has been found to be useless.

Mr. RAKER. Will the gentleman yield for a question right there?

Mr. DENISON. I will yield in a moment. It provides that the duties that have been performed heretofore by the marshal shall be performed by the present chief of police and such deputies as he may assign to that work with the approval of the court. Now, that provision in this bill has aroused the ire of my good friend from Indiana [Mr. BLAND], and I will say that

when that provision was put in the bill I did not know that it was a friend of his whose job was being abolished. I have no doubt the marshal is a good man, but I am thinking first of the interests of the country; the Secretary of War, who administers the affairs of the Canal Zone for the President, not as Secretary of War but as the representative of the President, has recommended that this office be abolished. The governor has recommended it and the special commission which the President appointed and sent to the Canal Zone to investigate the situation down there have investigated the subject and have recommended that this position be abolished. Now I yield to the gentleman from California.

Mr. RAKER. In reading the bill and report I notice that it is proposed to abolish the office of marshal and to have the chief of police take charge of the marshal's work. Does not the marshal have to serve all of the writs and summonses out of the Federal court there?

Mr. DENISON. In the first place, there is no Federal court. There is a district court.

Mr. RAKER. The district court of the Canal Zone.

Mr. DENISON. It is the district court of the Canal Zone. The marshal theoretically serves the papers, but he does not as a matter of fact do it in person. He has deputies under him to do that work.

Mr. RAKER. Somebody has to do that work, and I understand there is a great deal of litigation, and that a good many arrests are made and that a good many writs must be served. Now, why transfer those duties from the marshal to the chief of police?

Mr. DENISON. Perhaps the gentleman from California did not understand what I was trying to say.

Mr. RAKER. I heard it clearly.

Mr. DENISON. The purpose of it is to abolish a useless position and in the interest of economy save the Treasury $5,000 a year and the other emoluments that go with the job.

Mr. RAKER. Under your report it appears that there is a great deal of litigation, and that there are many arrests which are attended to by the marshal. Now, if it requires a marshal, and as you say police deputies will be required to do it, how do you save anything?

Mr. DENISON. If the gentleman can not understand what I have been saying to him, I do not know how I can make it any plainer. There is a chief of police there now, and he has his deputies; he can just as well perform all these duties that are now performed by the marshal. At present there are two officers—a chief of police, whose duties are principally to preserve peace and order, and a marshal, whose duties are to serve the processes of the court. The chief of police could just as well perform all the duties of the office of marshal.

Mr. RAKER. But if additional deputies are required, who will have to be paid an additional amount of money to do the work that the marshal is now doing, why take the work away from a high-class officer, recognized all over the United States as a proper officer to enforce the law in the Federal courts, and give those duties to a policeman?

Mr. DENISON. The error of the gentleman from California is in assuming that additional deputies will be required. I have been telling the gentleman, or trying to tell him, that the duties of this office can be performed by the present chief of police and his present deputies, so that the office of marshal is wholly unnecessary, and we can abolish it and save that much money. I do not know whether the gentleman from California believes in doing away with useless offices and saving the Government that much money, but it seems to me to be a very wise policy in view of the present cost of government.

Mr. RAKER. Surely.

Mr. BLAND of Indiana. Will the gentleman yield for a question?

Mr. DENISON. Yes.

Mr. BLAND of Indiana. Who appoints the chief of police?

Mr. DENISON. The Governor of the Canal Zone, Governor Morrow.

Mr. BLAND of Indiana. Who was at the head of the commission that went down there and recommended that this thing be done?

Mr. DENISON. I do not know; but I think it was a Mr. Fry.

Mr. BLAND of Indiana. General Conner. It was a military commission, and General Conner made a military recommendation. Is not he the same fellow who recommended that we abolish the health regulations down there?

Mr. DENISON. The men to whom the gentleman refers are capable men who have been serving their country very well; they are all men of high character and high standing. I do not assume that the gentleman from Indiana will dispute that at all.

Mr. BLAND of Indiana. No, sir; not at all.

Mr. DENISON. Now, I am not going to take any time of the House in replying to this big talk about military rule. There is no such thing on the Canal Zone. While Governor Morrow was an officer in the Army when he was appointed governor, he is not governing the Canal Zone as a military man any more than Gen. Leonard Wood is now governing the Philippines as a military governor. He is performing the duties of governor just as any civilian would. And all I have to say about the action of Acting Governor Walker, in connection with the incident referred to by the gentleman from Indiana, is that I think the acting governor acted with more grace, more leniency, and more consideration toward the party referred to than any military governor would have done, and perhaps than was justified under the circumstances related.

Governor Morrow was appointed by the President. His appointment was confirmed by the Senate. The fact that he has been a colonel in the Army ought not to discredit him.

Mr. NEWTON of Minnesota. Will the gentleman yield?

Mr. DENISON. Yes.

Mr. NEWTON of Minnesota. I take it the situation is this: The marshal himself serves no papers to speak of.

Mr. DENISON. Not at all.

Mr. NEWTON of Minnesota. You abolish that office involving a charge on the Treasury of $5,000 where the work is ordinarily done through the deputies and which will be done hereafter by the police officers.

Mr. DENISON. This is correct.

Mr. RAKER. Where does the gentleman get the idea that the marshal does not personally serve the papers?

Mr. BLAND of Indiana. He does serve the papers; I have been there and seen him.

Mr. RAKER. You will find that the important work, notwithstanding he has deputies, is done by the marshal himself.

Mr. DENISON. The Secretary of War gives us the information. The Governor of the Canal Zone and various individuals on the Canal Zone have given me the information that the marshal does not himself serve the papers. He may do so in certain instances, in some important cases, but as a rule he performs no official duties whatever.

Mr. RAKER. The gentleman gives the impression abroad that the marshal does not do the work. I know by personal observation that the important work is done by the marshal personally in other courts, and I am asking the gentleman if it is not so in the Canal Zone?

Mr. DENISON. That is not the case in that court.

Mr. BLAND of Indiana. If you are going to do away with the United States marshals and leave it to the military governor——

Mr. DENISON. We are not doing that.

Mr. BLAND of Indiana. If you are going to leave it to the military governor, why not do away with the Federal court and let the drumhead court take care of the litigation?

Mr. DENISON. That question answers itself. I am sure that when the gentleman reads over his remarks he will correct them and not let them stand in that way in the RECORD.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DENISON. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and Mr. WALSH, Speaker pro tempore, having resumed the chair, Mr. LONGWORTH, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 11872 and had come to no resolution thereon.

LEAVE OF ABSENCE.

Mr. SANDLIN. Mr. Speaker, I ask unanimous consent for leave of absence of my colleague Mr. DUPRÉ, for the balance of the week.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Louisiana?

There was no objection.

EXTENSION OF REMARKS.

Mr. LONDON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the workmen's compensation act for the District of Columbia.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

ADJOURNMENT.

Mr. DENISON. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 21 minutes p. m.) the House adjourned until to-morrow, Wednesday, June 14, 1922, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

635. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental and deficiency estimate for the Post Office Department for the fiscal year 1922 and prior fiscal years amounting to $1,167,000 (H. Doc. No. 339); to the Committee on Appropriations and ordered to be printed.

636. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate for the Department of Agriculture for the fiscal year ending June 30, 1923, amounting to $50,000, to enable the Secretary of Agriculture to collect moneys due the United States on account of loans made to farmers under the seed grain loan acts of March 3, 1921, and March 20, 1922 (H. Doc. No. 340); to the Committee on Appropriations and ordered to be printed.

637. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Treasury Department for the fiscal year ending June 30, 1923, for the Public Health Service, National Home for Lepers, in the sum of $650,000 (H. Doc. No. 341); to the Committee on Appropriations and ordered to be printed.

638. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Treasury Department for the fiscal year ending June 30, 1923, amounting to $24,700, for salaries of employees in the Washington office of the director special agent service, United States customs (H. Doc. No. 342); to the Committee on Appropriations and ordered to be printed.

639. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the War Department for the fiscal year ending June 30, 1922, amounting to $698,031.56, for completion of acquisition of land for military purposes at Camp Bragg, N. C. (H. Doc. No. 343); to the Committee on Appropriations and ordered to be printed.

640. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Department of Commerce for the fiscal year ending June 30, 1922, for Colorado River Commission, $10,000 (H. Doc. No. 344); to the Committee on Appropriations and ordered to be printed.

641. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Treasury Department for the fiscal year ending June 30, 1923, amounting to $26,500, for salaries and expenses, Dye and Chemical Section, Division of Customs (H. Doc. No. 345); to the Committee on Appropriations and ordered to be printed.

642. A communication from the President of the United States, transmitting, with a letter from the Director of the Bureau of the Budget, a supplemental estimate of appropriation for the Treasury Department for the fiscal year ending June 30, 1923, for pay of personnel and maintenance of hospitals, Public Health Service, $500,000 (H. Doc. No. 346); to the Committee on Appropriations and ordered to be printed.

643. A letter from the Acting Secretary of War, transmitting a letter from the Acting Chief of Engineers, United States Army, together with a compilation of river and harbor laws, covering the period from June 23, 1913, to March 4, 1921, made under the direction of the Secretary of War, in compliance with section 6 of the river and harbor act approved June 5, 1920 (H. Doc. No. 347); to the Committee on Rivers and Harbors and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. PARKER of New York: Committee on Interstate and Foreign Commerce. S. 3458. An act to authorize the Niagara River Bridge Co. to reconstruct its present bridge across the Niagara River between the State of New York and the Dominion of Canada, or to remove its present bridge and construct, maintain, and operate a new bridge across the said river; with amendments (Rept. No. 1092). Referred to the House Calendar.

Mr. HAWES: Committee on Interstate and Foreign Commerce. H. R. 11827. A bill granting the consent of Congress to the county courts of Howard and Saline Counties, in the State of Missouri, to construct a bridge across the Missouri River; with an amendment (Rept. No. 1093). Referred to the House Calendar.

Mr. MILLER: Committee on Military Affairs. H. R. 10913. A bill to amend sections 4826 and 4827 of the Revised Statutes of the United States relating to Board of Managers of National Home for Disabled Volunteer Soldiers; without amendment (Rept. No. 1094). Referred to the Committee of the Whole House on the state of the Union.

Mr. TINCHER: Committee on Agriculture. H. R. 11843. A bill for the prevention and removal of obstructions and burdens upon interstate commerce in grain, by regulating transactions on grain future exchanges, and for other purposes; with amendments (Rept. No. 1095). Referred to the Committee of the Whole House on the state of the Union.

Mr. WINSLOW: Committee on Interstate and Foreign Commerce. S. 848. An act to amend section 22 of the act entitled "An act to regulate commerce," approved February 4, 1887, as amended; with amendments (Rept. No. 1096). Referred to the Committee of the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 11525) granting a pension to Emma W. Mitchell, and the same was referred to the Committee on Invalid Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. SMITH of Idaho: A bill (H. R. 12007) providing for the conveyance of certain land to the city of Boise, Idaho, and from the city of Boise, Idaho, to the United States; to the Committee on Public Buildings and Grounds.

By Mr. WILSON: Joint resolution (H. J. Res. 348) to establish a national hydraulic laboratory; to the Committee on Flood Control.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. CANNON: A bill (H. R. 12008) granting a pension to John Gilroy; to the Committee on Pensions.

By Mr. FISH: A bill (H. R. 12009) granting an increase of pension to Annie M. Owen; to the Committee on Invalid Pensions.

By Mr. HAYDEN: A bill (H. R. 12010) granting an increase of pension to Sarah A. Radell; to the Committee on Invalid Pensions.

By Mr. KUNZ: A bill (H. R. 12011) for the relief of Dennis Sweeny; to the Committee on Claims.

By Mr. McPHERSON: A bill (H. R. 12012) granting an increase of pension to Willis P. McCampbell; to the Committee on Pensions.

Also, a bill (H. R. 12013) granting a pension to James Patterson; to the Committee on Invalid Pensions.

By Mr. MUDD: A bill (H. R. 12014) granting a pension to James F. Davis; to the Committee on Pensions.

By Mr. TAGUE: A bill (H. R. 12015) for the relief of John E. Anderson; to the Committee on Claims.

By Mr. TAYLOR of New Jersey: A bill (H. R. 12016) for the relief of Augusta Sulzer; to the Committee on Claims.

By Mr. TINKHAM: A bill (H. R. 12017) granting an increase of pension to Chester A. Waite; to the Committee on Pensions.

By Mr. WILLIAMS of Illinois: A bill (H. R. 12018) for the relief of Ben M. Ellis; to the Committee on Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

5987. By Mr. CHALMERS: Petition of Volunteer Relief Corps, No. 89, Mrs. Isaelle French, secretary, in re Morgan pension bill; to the Committee on Pensions.

5988. By Mr. CONNOLLY of Pennsylvania: Resolutions from the following organizations, all of Philadelphia, Pa., favoring the enactment of an adequate tariff law based on the American valuation plan: Philadelphia Hat Makers' Association; Labor Lyceum Association; Beer Drivers' Union No. 132; Brewery Firemen, Oilers and Helpers' Union, Local No. 285; International Union of United Brewery, Flour, Cereal, and Soft Drink Workers of America, Local No. 5; and Journeymen Barbers' International Union of America, Local No. 104; to the Committee on Ways and Means.

5989. Also, evidence in support of House bill 11993, granting an increase of pension to Eloise Wilkinson; to the Committee on Pensions.

5990. Also, evidence in support of House bill 11992, granting a pension to James Donnelly; to the Committee on Pensions.

5991. By Mr. FAIRFIELD: Petition of M. F. Kann and others, of Fort Wayne and Kendallville, Ind., protesting against the passage of House bills 9753 and 4388, and Senate bill 1948; to the Committee on the District of Columbia.

5992. By Mr. KISSEL: Petition of the George M. Jones Co., Toledo, Ohio, urging the bringing about of State conferences between mine operators and the United Mine Workers; to the Committee on Labor.

5993. Also, petition of the Order of the Holy Cross, West Park, N. Y., urging action be taken to help the cause of the Armenians; to the Committee on Foreign Affairs.

5994. By Mr. MAPES: Petition of members of the Brotherhood Bible Class of South Congregational Church, members of South Congregational Church, and members of the faculty of Central High School and Junior College, of Grand Rapids, Mich., protesting against the return of Armenia to Turkish sovereignty; to the Committee on Foreign Affairs.

5995. By Mr. SPEAKS: Papers to accompany House bill 11982, granting an increase of pension to S. Harriett Morris; to the Committee on Invalid Pensions.
